**8176-110 CELLULOSE FILM SOLUTIONS TESTER(chem.,
n.e.c.) DPT:364**
GED: 4 SVP: 5 EC: I PA: L 4 7

Samples and performs laboratory tests on process solutions used in the manufacture of cellulose film, for purposes of process and quality control:

Collects periodic samples of process solutions such as, coagulating, purification and bleach baths using beakers and bottles. Tests strength of solutions by standardized processes such as titration, coagulation, precipitation and filtration using reagents, test solutions and apparatus such as, flasks, filters, pH meter, thermometer and refractometer. Calculates salt index of viscose solution using saline solution, distilled water and stirrer. Tests strength and quality of incoming chemicals such as sulphuric acid, glycerine, sodium sulphide and hypochlorite bleach. Records results of tests and informs production supervisor of deviation from standard so that solution adjustments can be made. Washes and cleans laboratory equipment.

**8176-112 TEST ANALYST, TITANIUM PIGMENTS(chem.,
n.e.c.) DPT:364**
GED: 4 SVP: 5 EC: I PA: L 4 7

Performs any combination of the following laboratory tests on slurries, solutions, liquors and finished product in the manufacture of titanium oxide pigments, to verify conformance to specifications, and to determine chemical and physical characteristics:

Collects samples for test purposes at specified stages of production process, using scoops, buckets or special sampling equipment. Performs standard chemical and physical tests to determine stabilities, iron content, specific gravity, amount of residues and pH readings, using laboratory equipment, such as flasks, retorts, agitators, condensers, filters, thermometer and scales. Places sample in chamber and operates X-ray diffraction and fluorescent unit to measure rutile and anatase content. Prepares small test batches of oil paint, latex paint or plastic by mixing pigments into oil, latex or resin, using laboratory equipment. Performs tests on paint and plastic samples; such as cowles grind test, cowles tinting test, opacity test and plastisol dispersion test to determine physical properties of pigments. Records test results for quality- control purposes, and makes oral reports to process operators.

May make adjustments to calciner, by turning valves, to regulate air and gas flow and temperatures. May be identified according to area of tests performed, or nature of analysis, and be designated accordingly; for example,

Test Analyst, Black Section
Test Analyst, Calciner Control
Test Analyst, Pack

**8176-114 TESTER, PLASTIC-MATERIALS(plastic prod.)
DPT:382**

GED: 3 SVP: 5 EC: I PA: L 4 5

Tests sample batches of plastic materials for conformance to manufacturing standards:

Weighs and pours amounts of resin, rubber, filler, plasticizer and other ingredients into mixing bowls. Adjusts equipment, such as roll mills and calenders used to process sample batches, by setting clearances between mill and calender rolls. Actuates controls to regulate temperature of equipment. Places sample batch in mixer and mixes for specified time. Runs batch through calender to form sheets. Vulcanizes sheets at specified time and temperature. Cuts strips from sheets, using knife. Performs tests to determine stress and strain properties, flexural strength, abrasion resistance and impact strength, using mechanical-test equipment. Records data, such as temperatures, processing times, batch numbers and test results.

**8176-116 CARBON AND GRAPHITE INSPECTOR(non-
metal. min. prod., n.e.c.) DPT:384**
furnace-and-kiln inspector; furnace-stock inspector.
GED: 3 SVP: 5 EC: I 7 PA: L 3 4 7

Tests and inspects industrial carbon products before and after baking and graphitizing processes, to determine density, resistance and quality of product:

Marks samples of green stock before graphitization or baking to indicate their position in the furnace. Receives marked samples after processing is complete and furnace is unloaded. Cleans samples with scraper and emery cloth. Weighs and measures samples, using scales, measuring tape and calipers. Places samples on resistance testing device (Wheatstone bridge), turns controls to specified settings, and reads and records resistance of each sample. Calculates averages of density, weight, dimensions and resistance of samples, using charts, slide-rule and formula. Marks balance of furnace lot with resistance grade number. Inspects cleaned stock for pits, cracks, burrs and bends, and grades and marks them accordingly.

**8176-118 COMPRESSED-GASES TESTER(chem., n.e.c.)
DPT:384**

gas-house tester; gas tester.

GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Tests compressed gases for moisture content, purity, ratio of gases in mixture, and cylinder pressure, by following specified procedures:

Draws gas samples from cylinders or lines. Adjusts test equipment; such as, combustion and absorption tester, burette, conductometer, and pressure gauges, according to gas chart specifications. Records test procedures and results in log. Prepares and places identifying tags on cylinders. Notifies supervisor of deviations from specifications. Tests for presence of explosive conditions in lines, vessels and near operating equipment prior to and following repairs.

May test accuracy of calibrations on pressure gauges, using dead-weight tester.

**8176-122 ASPHALT-ROOFING-MATERIALS
INSPECTOR(asphalt roof.) DPT:367**
quality-control inspector.

GED: 3 SVP: 5 EC: I PA: H 3 4 7

Tests and inspects samples of asphalt roofing materials for conformance to specifications:

Weighs bundles of shingles and rolls of asphalt-coated roofing felt, to verify gross weight with label weight. Examines surface of shingles for colour conformity, and feels surface to determine that granules are evenly distributed. Cuts strips from shingles, using knife, and actuates scratch tester to determine if granules are embedded to specifications. Calculates percentage of granule loss after scratch test, using balance scales, and notifies production operator of results. Measures shingles

as they pass on conveyor, using tape rule. Writes inspection and test reports to record findings.

8176-126 CARGO INSPECTOR(oil & nat. gas; petrol. & coal prod.) **DPT:387**
loading inspector.
GED: 3 SVP: 5 EC: B 6 7 PA: L 2 4 7

Samples and inspects crude or refined petroleum in terminal tanks and ship tanks, to determine if it meets prescribed standards:
Lowers container into tank, or opens bleeder valve on pipeline, to obtain oil or residue sample. Determines amount and type of sediment, water and other foreign substance in sample, using centrifugal tester and following standard formulas. Lowers thermometer into tank to take temperature reading. Determines quantity of oil in ship tanks, using calibrated tape and conversion tables. Inspects tanks and valves to verify suitability to receive cargo. Prepares, verifies or examines bills of lading, export records and transportation and delivery records. Writes daily reports for quality control purposes.
May perform density tests of petroleum, using hydrometer, or viscosity tests, using viscometer. May assist in loading or unloading petroleum.

8176-130 LABORATORY TESTER(petrol. & coal prod.) **DPT:364**
GED: 3 SVP: 4 EC: I PA: L 4 7

Performs chemical tests of a routine nature on petroleum and petrochemical products, to provide control data for processing unit operators:
Assembles and prepares equipment; such as, flasks, retorts, agitators, columns, condensers, filters, pyrometers, thermometers and burners. Tests processing unit samples and calculates percentages of ingredients, by procedures such as, distillation, filtration, purification, titration, extraction and fractional distillation. Tests samples, to determine such factors as, specific gravity, viscosity and asphalt penetration. Records test results for quality control purposes, and makes oral reports to process operators. Tends equipment; such as, hotplate, Bunsen burner, electric furnace and electric oven, to dry or treat materials. Washes or cleans bottles and other laboratory equipment.

8176-134 RUBBER TESTER(rubber) **DPT:384**
millroom tester.
GED: 3 SVP: 4 EC: I PA: L 4 7

Tests physical properties of milled rubber compounds for conformance to specifications:
Collects samples of rubber compounds from millroom at prescribed intervals. Mixes and blends sample stock in laboratory warmer mill to obtain desired consistency, and tests sample for plasticity, using plastometer. Cures rubber samples in heated mould at specified temperature for designated time, and tests for hardness, using durometer. Determines density of cured and uncured stock by weighing samples on scale, and testing sample in densimeter. Records test results for process control purposes.

8176-138 COKE SAMPLER AND TESTER(petrol. & coal prod.) **DPT:464**
GED: 3 SVP: 3 EC: I 7 PA: L 2 4 7

Samples and tests coke, coke products and by-products for process control, by performing any combination of the following duties:
Collects samples at specified points in coking, calcining or carbon processing. Crushes sample in laboratory crusher and makes screen analysis of product, using vibratory or hand screens. Weighs screen samples to determine such factors as density and friability. Dries sample in oven, and reweighs it to determine moisture content. Prepares samples of coke, tar and other ingredients, by mixing and blending in test apparatus, for trial and analysis purposes. Measures electrical resistance of mixed sample (paste), using ohmmeter. Collects samples of liquid and gaseous coke by-products, and labels them according to type and source for laboratory analysis. Calculates test results, using standard formulas, graphs and slide rule. Informs unit operators of test results. Records and maintains files of test results.

8176-142 MILL-ROLL TESTER(chem., n.e.c.) **DPT:564**
plastic-film tester.
GED: 3 SVP: 3 EC: I PA: L 4 7

Samples and tests plastic film for conformance to quality standards:
Collects samples of film being produced by machines. Trims sample to specified size, using papercutter. Weighs on balance scale and records weight. Smells sample to detect odour which signifies defective processing. Measures thickness of film, using electronic device. Places sample on illuminating table and examines it for defects, such as, bubbles, wrinkles and streaks. Informs machine operator of test results.

8176-146 SPONGE-RUBBER INSPECTOR(rubber) **DPT:664**
rubber-sheet inspector.
GED: 3 SVP: 3 EC: I PA: M 4 7

Inspects sponge-rubber sheeting at discharge end of moulding and curing machine:
Inspects material for defects; such as, tears, breaks, lumps, streaks and blisters, as material winds onto take-up core. Cuts out defective sections, using hand knife or shears. Cuts samples from ends, and measures thickness, using dial micrometer. Tests compressibility by squeezing sample in testing device, and records maximum compression pressure. Wraps paper around roll of sheeting and weighs on scale. Grades and marks each roll according to length and number of breaks, and enters data on form. Notifies machine operator of defects. May cut out areas containing minor defects, using mallet and cutting die, and cement patch in place. May butt-join cut ends, using adhesive tape, or by cementing ends together, using brush and latex cement.

8176-150 DIELECTRIC TESTER(chem., n.e.c.; rubber) **DPT:665**
GED: 3 SVP: 3 EC: I PA: M 4 7

Tests rubber or plastic sheet or tape for electrical insulation defects:
Loads roll of sheet or tape stock on feed rolls of dielectric testing machine, using hoist. Feeds end of stock through machine guides, electrically-charged testing rollers, static discharge brushes and onto wind-up device. Sets testing mechanism for type and thickness of stock being tested. Starts machine and observes stock moving through test. Stops machine when horn sounds, indicating a defect has been found. Cleans area of defect with solvent, and applies cement, using brush and precut patch. Retests repaired area, using portable gun-type tester. Records number of repairs made and length of stock tested. Informs quality-control supervisor if excessive defects are found.

8176-154 RECLAIMED-RUBBER INSPECTOR(rubber) **DPT:587**
slab inspector.
GED: 2 SVP: 3 EC: I PA: M 4 7

Inspects slabs of reclaimed rubber for defects and conformance to standards:
Inspects and feels slabs for defects; such as, lumps, roughness, ragged edges and irregular colour. Cuts lumps and foreign matter from acceptable slabs, using knife. Loads accepted and rejected slabs on respective pallets. Weighs loaded pallets on scale, and records weights on acceptance or rejection tag. Sorts slabs into specified grades to fill customer orders.
May cut samples from slabs for laboratory analysis, and record test results on stock identification tags, for classification and routing purposes.

8176-158 SAMPLEMAN(chem., n.e.c.) **DPT:587**
GED: 2 SVP: 3 EC: B 7 PA: L 2 4

Collects samples of industrial chemicals and chemical products, for laboratory analysis and process-control purposes:
Collects samples from such places as storage bin, railroad car, mixing, blending or processing unit or bagging area, using auger, scoop, metal or glass container. Places sample in bottle, bag or other container, and attaches identifying information, such as date, source and nature of contents. Enters record of sample in log and delivers sample to laboratory for analysis.
May manually blend samples as required. May relieve operators of process equipment as required. May be designated according to type of material sampled; for example,

Sampleman, Acid
Sampleman, Fertilizer

8176-162 SAMPLER(petrol. & coal prod.) DPT:587
GED: 2 SVP: 3 EC: O PA: L 2

Collects samples of petroleum products, during processing and in storage, for laboratory analysis:
Obtains samples from vats, tank cards, processing units, stills and pipelines by lowering sample bottle or metal container into contents at various depths, or by opening bleeder valves to release flow of products into containers. Pours samples from containers into sample bottles. Ties identification tags to bottles or marks identifying information on them. Delivers sample to laboratory for analysis. Records collection time, nature of contents and source of each sample in log.
May drive truck to gather samples.

8176-166 ROLL INSPECTOR, PLASTIC FILM(chem., n.e.c.) DPT:667
slit-roll inspector.
GED: 2 SVP: 2 EC: I PA: L 4 7

Examines finished rolls of cellulose film for defects, and verifies accuracy of roll labels:
Observes and feels rolls passing on conveyor to detect defects, such as, wrinkles, streaks or torn edges. Measures width and diameter of rolls, using tape measure. Compares identification labels with specifications to ensure correct labelling. Removes rejected rolls from conveyor. Keeps record of quantities of accepted and rejected rolls. Reports recurrent defects to foreman.

8176-170 INSPECTOR, VINYL FABRICS(plastic prod.) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4 7

Inspects vinyl fabrics for defects; such as, turned edges, off colour, coating scratches and wrinkles:
Pulls end of fabric from roll on let-off rack across inspection table. Moves metal plate between rollers on wind-up rack to align vinyl fabric, and to facilitate insertion of cardboard core. Winds fabric around roll, and depresses pedal to start material moving across inspection table. Examines material to detect any defect in print, colour and relief. Cuts fabric in specified lengths as indicated by dial following table guide lines and using scissors. Writes code number and length of material on roll.

8176-199 OTHER INSPECTING, TESTING AND SAMPLING OCCUPATIONS: CHEMICAL, PETROLEUM, RUBBER AND PLASTIC PROCESSING

This group includes chemical, petroleum, rubber, plastic and related materials processing inspectors, testers and samplers, not elsewhere classified; for example, those who test special grades of alumina, sample batches of plastic materials, inspect plastic sheets for imperfection in product, and test dispersing qualities of lacquer. Typical examples of occupational titles covered by this residual group definition are:

Alumina Tester(chem., n.e.c.)
Disperser Tester(paint & varn.)
Plastic-Materials Sampler(plastic prod.)
Plastic-Sheet Inspector(plastic prod.)

8178-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: CHEMICALS, PETROLEUM, RUBBER, PLASTIC AND RELATED MATERIALS PROCESSING

This unit group includes occupations in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), concerned with feeding, offbearing and handling activities in the processing of chemicals, petroleum, rubber, plastic, and related materials.

8178-110 LABOURER GENERAL, CHEMICAL PLANT(chem., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: B 7 PA: H 4

Performs any combination of the following tasks in a chemical processing plant:
Unloads materials from vehicles and containers by shovelling, dumping, scooping materials, or opening flow valves. Delivers bulk or packaged materials to other workers or processing areas, using hand truck, hoists, conveyors or wheelbarrow. Selects, measures out and weighs materials according to requisition instructions. Dumps ingredients into mixers, blenders, kettles, mills or feed hoppers. Opens valves to heat, cool or agitate chemical compositions or solutions. Obtains and delivers samples to laboratory for testing. Fastens caps or covers on containers, and stencils, paints or attaches labels to them. Cleans machines, processing equipment and work areas, using brushes, scrapers, detergents and air or water hose. Fills containers with processed material. Loads containers into trucks or railcars for shipping.
May operate industrial truck to move containers and materials.

8178-114 LABOURER GENERAL, PETROLEUM REFINERY(petrol. & coal prod.) DPT:687
GED: 2 SVP: 2 EC: O 3 5 6 7 PA: H 2 3 4

Performs any combination of the following tasks in an oil refinery:
Digs ditches and repairs roads. Cleans equipment and work areas. Loads or unloads trucks or freight cars and uncrates equipment. Changes hoist cables and rigs chain hoists, rope blocks, power winches and gin poles, used to move or raise equipment. Dumps chemicals and catalysts into tanks as directed. Paints pipelines and structures, using brush or spraying apparatus.

8178-118 GUIDER(linoleum prod.) DPT:666
GED: 1 SVP: 2 EC: I 7 PA: M 4 7

Feeds and guides floor covering material into rollers that convey it through saturation, coating and curing machines:
Pushes sheet material onto rollers that convey it through saturating, coating, consolidating or air-drying machines. Observes material to detect defects or misalignment with marginal markings on roller guides, and aligns material by hand. Signals lacquering-machine operator when to lift coating rollers to avoid coating defective areas.

8178-122 STOVE-CARRIAGE MAN(linoleum prod.) DPT:666
stove hanger
GED: 1 SVP: 2 EC: I PA: VH 4 6 7

Feeds and drapes floor covering in hanging racks of curing stoves, working as member of a team:
Turns crank to position stove carriage over hanging-rack battens. Moves controls, in response to signals from other workers, to feed uncured coated floor covering onto hanging rack, and to form bights (loops) in vertical draped convolutions of material. Places spacing strips over battens to form cushions for additional layers of floor covering.

8178-126 STOVE-BOTTOM MAN(linoleum prod.) DPT:667
GED: 1 SVP: 2 EC: I 6 PA: L 4 5 7

Checks convoluted draping of floor-covering in curing process:
Observes folded lengths of floor covering hanging in loops in stoves, and signals other workers at top of stoves to adjust length of curves for required spacing. Covers floor of stove with paper to prevent dips from touching floor. Places cone (hollow cylinder) inside each bight (loop) to prevent kinking and to separate faces of floor covering.

8178-130 ELECTRODE CLEANER(chem., n.e.c.; electric equip.) DPT:686
GED: 1 SVP: 2 EC: I 7 PA: M 4

Cleans surface of graphitized electrodes to remove encrusted carbon, using either of the following methods:

1. Pushes electrode on roller conveyor into cleaning machine. Starts machine to rotate electrode against wire brushes that remove excess carbon. Stops machine when cleaning is completed and removes electrode from machine. 2. Scrapes loose material from electrode surface, using chipping hammer, scraper and abrasive materials. Examines cleaned electrodes to ensure removal of surplus carbon.

8178-134 GASKET COATER(asbestos & min. wool) DPT:686
GED: 1 SVP: 2 EC: I PA: L 4

Feeds and offbears machine that coats asbestos gaskets or sheets with rubber compound:

Attaches asbestos gaskets or sheets to rod in machine that automatically dips them into liquid rubber to acquire protective coating. Removes coated gaskets or sheets from machine and places them in electric drier.

8178-138 RACKMAN(linoleum prod.) DPT:686
GED: 1 SVP: 2 EC: I 7 PA: H 2 3 4

Loads floor covering onto drying-oven racks, working as a team member:

Threads pull-in cable and clamp through slots to front of rack. Attaches clamp to end of linoleum sheet protruding from printing machine, and starts winding machine to draw floor covering onto rack. Stops winding machine and detaches clamp and cable from floor covering, using wrench. Repeats operation until drying rack is filled. May help printer to set up printing blocks in machine. May clean dried paint from printing machine and blocks.

8178-142 REELER(asphalt roof.) DPT:686
GED: 1 SVP: 2 EC: I 5 7 PA: M 4 7

Feeds asphalt-coated roofing felt into machine that winds rolls to specified dimensions:

Threads felt through feed rollers by hand and inserts end in take-up reel. Adjusts alignment of sheet on winder and sets automatic yardage counter. Presses button to start winder that automatically weighs and ejects completed roll after specified weight has been wound. Observes felt and cuts out defects, such as tears, holes or splices. Depresses pedal to actuate knife that severs completed roll from continuous feed, or cuts sheeting by hand, using knife, after specified weight has been attained.

8178-146 SIFTING-MACHINE FEEDER(rubber) DPT:686
GED: 1 SVP: 2 EC: I 5 7 PA: H 3 4

Feeds sifting machine that breaks up or screens out lumps and foreign material in ingredients used to make rubber compounds:

Pours specified ingredients from containers into machine hopper. Starts sifting machine that uses vibrating screens to sift ingredients and discharge them into containers. Stacks containers onto hand truck or pallet and identifies material by affixing labels. May feed machine that sifts and discharges ingredients into chute leading to holding bin.

8178-150 SLUG-PRESS FEEDER(chem., n.e.c.) DPT:686
GED: 1 SVP: 2 EC: I PA: M 3 4

Feeds machine that compresses moist welding-rod-coating mix into cylinder-shaped slugs:

Breaks up cakes and dumps mix into forming chamber of slug-press, using pick, fork and shovel. Presses button to close press and actuate ram that automatically forms and ejects slugs. Slips plastic bag over slug or places it in container to prevent crusting or dehydration. Cleans machine, using brush, scraper and air hose.

8178-154 SPLICER(linoleum prod.) DPT:686
GED: 1 SVP: 2 EC: I 5 7 PA: M 4 7

Splices rolls of felt paper to provide continuous sheeting for use in production of hard surface floor covering, working as member of team:

Positions roll of felt paper on stand, using hoist. Cuts ends of material with hooked knife, and attaches ends to new roll, using tape. Pushes buttons that operate festoon device to maintain continuous operation during splicing. Examines material for kinks and tears. Pours paint into wet-body well to lubricate felt paper prior to printing. Cleans work area and equipment, using solvent and brushes.

8178-158 SPREADER-OPERATOR HELPER(plastic prod.; rubber) DPT:686
GED: 1 SVP: 2 EC: I 6 7 PA: M 4

Helps spreader-machine operator to coat or impregnate fabrics with thermoplastic material, by performing any combination of the following duties:

Moves rolls to and from machine and scales, using hoist. Helps operator to mount rolls on machine and thread fabric through machine rollers and on to take-up reel. Sews leader onto fabric, using sewing machine. Fills liquid cement tank and adjusts valves and spreader blade to regulate flow. See also definition for term title, 02-160 HELPER (any ind.)

May record weight of coated material.

8178-162 BULLET-LUBRICANT MAN(explosives) DPT:687
bullet-lubricant mixer.
GED: 1 SVP: 2 EC: I 5 6 PA: L 3 4

Melts wax and other ingredients to make compound for lubricating lead bullets:

Weights specified amount of ingredients, such as wax and oils, and loads them into kettle manually. Turns valve to regulate heat, and stirs mixture with wooden paddle. Drains melted compound from kettle into moulds. Empties cooled moulds and moves cakes into storage bins, using hand truck. Conveys cartridge component parts, such as shells, heads and bullets to production departments to fill requisitions. Lubricates and packs parts into containers.

May inspect parts for general appearance, defects and gauge, using micrometers and fixed gauges.

8178-166 COMPRESSED-GAS-PLANT WORKER(chem., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: I 6 7 PA: H 4 7

Performs any combination of the following duties in compressed and liquefied gas plant:

Rolls cylinders onto vehicles and records type and quantity of cylinders. Examines returned cylinders for surface defects, such as dents, cracks and burns, and rolls cylinders to designated work area. Connects exhaust manifold to cylinders and turns valves to draw off residual gas. Cleans exterior of cylinders, using wire brush to loosen rust and scale. Inserts nozzles into cylinders and turns valves to admit water, steam and air to scour and dry interior of cylinders.

May weigh filled cylinders on platform scale and record weight.

8178-170 ELECTROLYTIC-CELL CLEANER(chem., n.e.c.; non-ferrous metal) DPT:687
cell flusher.
GED: 1 SVP: 2 EC: I 4 5 6 7 PA: M 4

Cleans electrolytic cells to remove scale accumulation and prevent blockages, by performing any combination of the following duties:

Connects water hose or steam lines to orifices of cell to flush pipe lines, pumps and drip cups. Skims accumulated chemicals from cell ends and side outlet boxes to prevent blockages and collect materials for further treatment, using scoop. Scrapes underside of cell covers and anodes to remove dirt, scale, and encrusted salt, using hand scrapers and wire brushes. Washes exterior of cells and pipe lines to remove caked dirt. Cleans cell interior, using scraper and water hose. Transfers cathodes to and from washrack, using wheeled cart, hoist or chain block. Covers pans with water to prevent evaporation of volatile materials. Flushes cathodes and screens to remove residue. Cleans sight glasses and glass tubing by dipping in acid, solvent and water.

8178-174 PAINT POURER, LINOLEUM(linoleum prod.) DPT:687
GED: 1 SVP: 2 EC: I 5 7 PA: M 2 3 4 7

Pours paint in troughs of machine that prints colours and designs on linoleum:

Mixes paint to attain required viscosity, using electric mixer. Pours paint in troughs of machine, and replenishes during printing operation as required.

May wash printing blocks and machine troughs, using solvent. May assist in setting up printing blocks to change printing patterns. May mix paint to attain required colour.

8178-178 WAX-POT TENDER(iron & steel) DPT:687
GED: 1 SVP: 2 EC: I 6 PA: M 3 4

Melts wax for use in lost wax casting process:

Breaks slabs of wax, using sledge hammer, and deposits them in melting pot, manually or using shovel. Adjusts thermostat to maintain specified temperature of liquid wax. Dips wax from melting pot, using hand ladle, and pours it into receiving pot, preparatory to pouring into mould.

8178-182 WHARFMAN, COKE PLANT(iron & steel; petrol. & coal prod.) DPT:867
coke-conveyor tender.
GED: 1 SVP: 2 EC: 0 4 7 PA: M 4 7

Receives hot coke on wharf and controls flow of coke onto conveyor belt:

Signals other worker to dump coke onto wharf. Quenches hot spots in dumped coke to prevent burning of conveyor belt, using water hose. Pushes and pulls levers to control flow of coke from wharf onto conveyor belt for screening. Shovels spilled coke onto conveyor.

May operate signal lamp to indicate when to start and stop conveyor. May clean work area, using broom and shovel.

8178-186 CALENDER FEEDER(plastic prod.; rubber) DPT:886
GED: 1 SVP: 2 EC: I 3 4 6 7 PA: H 4

Feeds milled plastic or rubber stock into calendering machine to produce smooth sheeting of specified thickness:

Lifts roll of stock from warm-up mill, using hoist. Inserts mandrel through centre of roll, and mounts roll on feed end of calendering machine. Feeds end of stock between heated calendaring rollers. Assists operator to turn capstan wheel that adjusts rollers to produce sheeting of specified thickness. Returns pieces of scrap to warm-up mill.

May assist operator to change rollers, using block and tackle. May connect steam line to rollers, using wrenches. May mount roll of backing material in cradle and feed it through rollers to be faced with rubber or plastic.

8178-190 COATING-MACHINE FEEDER(any ind.) DPT:886
GED: 1 SVP: 2 EC: I 7 PA: L 4

Feeds materials, such as leather, plastic, foam rubber or cloth, into machine that coats materials with adhesive:

Covers one side of material with protective sheet and feeds material through machine rollers or revolving brush to coat exposed surface. Fills reservoir with adhesive as required.

May carry material to coating machine from storage area. May apply adhesive to materials by hand. May assemble coated parts and package articles.

8178-194 SLASHER HELPER(chem., n.e.c.) DPT:886
GED: 1 SVP: 2 EC: I PA: M 4

Helps slasher operator to cut cellulose film to specified lengths:

Transports rolls of film from storage, using hand truck. Helps operator to position rolls on roll stand. Splices breaks in film, using tape and heat-sealing iron. Turns handwheel on large drum, to unreel material onto cutting table. See also definition for term title, 02-160 HELPER (any ind.).

8178-198 WAX MOULDER(petrol. & coal prod.) DPT:886
GED: 1 SVP: 2 EC: I 6 PA: M 4

Castes petroleum wax to form moulded wax cakes:

Opens valves to fill moulds with molten wax. Places moulds on conveyor that moves moulds through chilling compartment to solidify wax.

May move controls to heat wax to pouring point or to maintain specified temperature in chilling area. May load wax cakes into curing autoclave. May unload wax cakes from moulds.

8178-202 LABOURER, PAINT PLANT(paint & varn.) DPT:887
GED: 1 SVP: 2 EC: I 5 7 PA: H 3 4

Performs any combination of the following duties involved in the production of paints and varnishes:

Dumps calcined and metallic pigments into hopper of automatic grinder to reduce pigments to powdered form. Pumps pigment slurries and paints through filters to remove lumps and impurities. Fills cleaning tank with water and caustic, and turns steam valve to heat tank. Places equipment to be cleaned, such as pails, chutes, and mixing pans, in tank. Removes equipment from cleaning tank after specified time, and rinses equipment, using water hose. Unloads drums, barrels and raw materials from freight cars and trucks, and stacks them in warehouse or work areas. Cleans work areas, using broom, rags and solvent.

8178-206 LUTERMAN(petrol. & coal prod.) DPT:887
GED: 1 SVP: 2 EC: 0 3 6 7 PA: M 3 4

Seals coke-oven doors with lute to prevent escape of gases during coking of coal, by performing any combination of the following duties:

Mixes mud, clay, coke-ashes and water to make lute, using bucket and rod. Shovels lute into pails, and carries them to ovens. Chips old lute, carbon and residue from oven doorway, using chisel. Seals crack around oven door with lute, using trowel and tamping bar. Shovels excess lute, oven spillage and coal from working area. Opens and closes chuckhole door, damper and steam valve, as directed.

May turn valve to spray water on hot coke moving through cooling shed on conveyor. May open gates manually to allow coke to slide from chute onto conveyor for loading into railway car and be designated accordingly, Lidman

8178-210 SCREEN CLEANER(rubber) DPT:887
GED: 1 SVP: 2 EC: I PA: L 4

Cleans and repairs screens used for reclaiming rubber:

Brushes rubber particles and other foreign material from metal screens. Softens embedded material with solvent, and wipes screens with cloth. Removes dents and straightens screens, using hammer. Repairs holes in screens by cutting screen patches to size and riveting them to screen

8178-214 TAR CHASER(petrol. & coal prod.) DPT:887
tarman.
GED: 1 SVP: 2 EC: O 6 7 PA: H 2 4

Removes tar, pitch and carbon accumulated in coke-oven-collecting mains:

Lifts plugs from collecting main, using hook. Places disk over plug hole, and shoves chisel bar through center hole of disk. Twists bar to pry tar from walls of main. Removes tar and pitch from traps, using spooning bar. Sweeps and cleans work area.

May burn tar from walls and traps, using gas flame. May open and close valves to regulate flow of tar into collecting tanks. May tend electric pump to transfer tar from collecting tank to railroad tank cars.

8178-218 SCRAP-RUBBER GRINDER AND DUMPER(rubber) DPT:886
GED: 1 SVP: 1 EC: I 7 PA: M 3 4

Loads, grinds and dumps reclaimed rubber:

Opens bales of scrap rubber stock, such as tires, tubes or rubber mats. Loads stock into pans for grinding or devulcanizing. Moves pans or loaded skids to processing area. Feeds pieces of scrap rubber into

machine that grinds them into pulverized form for pillow filling or further processing. Dumps pans of ground or devulcanized rubber into storage bins, mixing machine or chute. May blend oil or carbon black into ground rubber. May adjust temperature in mixing mill by turning steam valve. May change choked filter screens.

8178-299 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, CHEMICALS, PETROLEUM, RUBBER AND PLASTIC PROCESSING

This group includes chemicals, petroleum, rubber and plastic processing labourers and other elemental workers, not elsewhere classified; for example, those who tie protective cotton caps over igniter end of propellant charges of artillery shells, shovel charcoal from retorts onto conveyors for shipping, dump coal or limerock into hoppers that feed limestone kilns, shakers or hammer mills, heat and filter pitch used to block optical lens blanks, and cut plastic and rubber stock into slabs, using guillotine-type machine. Typical examples of occupational titles covered by this residual group definition are:

Banbury-Takeoff Man(plastic prod.; rubber)
Hopper Man(petrol. & coal prod.)
Igniter Capper(explosives)
Pitch Worker(scient. & ind. equip., n.e.c.)
Retort Unloader(petrol. & coal prod.)
Towerman(pulp & paper)

8179-CHEMICALS, PETROLEUM, RUBBER, PLASTIC AND RELATED MATERIALS PROCESSING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned primarily with operating and tending equipment to process chemicals, petroleum, rubber, plastic and related materials.

Chemical Processing Operators and Tenders

8179-110 through 8179-142

8179-110 CHIEF OPERATOR, CONTINUOUS PROCESS(chem., n.e.c.) DPT:162
GED: 4 SVP: 8 EC: B 5 6 7 PA: L 2 3 4 5 6 7

Co-ordinates, directs and controls operation of continuous chemical process equipment systems from control panel or other control station: Monitors recording instruments, flowmeters, panel lights and other indicators, and listens for warning signals and sounds to verify process conditions and conformance to plant standards of safety and efficiency. Co-ordinates operation of various units in the system to assure production requirements, referring to run sheets, test books, operating manuals and log books. Interprets chemical reactions by recording instrument readings, process conditions and operating data in shift log. Calculates material requirements or product yield from standard formulas, using slide rule. Adjusts control settings or notifies unit operators to make control adjustments on equipment units affecting speed of chemical conversion, output quality and product yield. Confers with engineering and technical personnel to report or resolve conditions affecting safety, efficiency and product quality. Manually regulates or bypasses malfunctioning equipment and adjusts conditions to produce alternate streams. Maintains equilibrium of systems until equipment function is restored.

May perform supervisory duties in the absence of a foreman. May be designated according to conversion system co-ordinated; for example, Chief Operator, Alkylation
Chief Operator, Aromatization
Chief Operator, Diazotization
Chief Operator, Hydrogenation
Chief Operator, Hydrolysis
Chief Operator, Isomerization
Chief Operator, Nitration

Chief Operator, Polymerization
Chief Operator, Pyrolysis
Chief Operator, Reformation
Chief Operator, Synthesis

8179-114 CHIEF OPERATOR, BATCHING PROCESS(chem., n.e.c.) DPT:162
GED: 4 SVP: 7 EC: I 5 6 7 PA: L 4 6 7

Co-ordinates and participates in activities of operators engaged in single or multi-step batching processes, using manually operated or semi automatic equipment that converts chemical substances into industrial or consumer products:

Obtains list of output requirements from supervisor and organizes chronological production steps. Schedules sequence of processing for batching of raw materials. Directs activities of operators controlling batching equipment. Observes chemical reactions, monitors gauges, signals and recorders to assess state of conversion. Turns valves or resets controls to maintain process equilibrium during critical stages. Identifies irregularities in processing procedures and takes corrective action to maintain operating efficiency. Patrols area to detect malfunctions of equipment. Performs minor maintenance, using hand tools and arranges for major or urgent repairs. Maintains shift log by compiling recorded information, such as test results and chart readings from individual unit log sheets. Provides continuity of information and process standards from one shift to the next. Trains new workers in safe, correct working procedures, handling and processing of chemicals, and the nature of chemical reactions on a variety of equipment.

8179-118 OPERATOR, CATALYTIC CONVERSION(chem., n.e.c.) DPT:162
converter-unit operator.
GED: 4 SVP: 7 EC: B 5 6 7 PA: L 2 3 4 5 6 7

Co-ordinates operation of continuous catalytic converter units to alter chemical compositions of liquid or gaseous substances according to knowledge of processes and sequence of operations:

Operates controls to admit feed stocks to converter units at specified rates and recycle unreacted products or by-products to auxiliary equipment. Monitors rate, time and extent of reaction and adjusts controls to regulate temperatures and pressures according to gauge readings and chart recorders. Maintains efficient operation within specified limits according to operating manuals and processing requirements. Operates auxiliary equipment; such as, heaters, scrubbers, vapour compressors, filters, distillation units, condensers and humidifiers to prepare, or further process, materials. Controls equipment to purge and reuse catalyst. Patrols area to inspect equipment for leaks and other hazards. Listens for abnormal sounds and observes equipment to detect malfunction. Performs minor repairs and maintenance, such as changing catalytic screens. Records gauge readings, draws and marks samples for laboratory analysis. Sets up and operates alternate product streams to bypass malfunctioning equipment. Maintains log of gauge and on-stream analyzer readings, shift production and equipment performance. Analyzes test results, laboratory analyses and instrument readings to assess process yield, facilitate regulation of production and to detect malfunctions.

May demonstrate correct work methods to trainees. May be designated according to system operated or product produced; for example, Alkylation Operator
Dehydrogenation Operator
Hydrogenation Operator
Isomerization Operator
Polymerization Operator
Synthesis Operator

8179-122 OPERATOR, CHEMICAL PROCESS UNIT(chem., n.e.c.) DPT:162
GED: 4 SVP: 7 EC: B 5 6 7 PA: L 2 3 4 5 6 7

Co-ordinates operation of continuous-systems units that convert chemical substances into specified industrial or consumer products according to knowledge of operating procedures and chemical

reaction, laboratory test results and correlation of instrumentation data:

Reads plant specifications to ascertain product ingredients and any prescribed modification of plant procedures. Moves controls to regulate flow of liquids and gases through equipment in specified timing or sequence or starts automatic feed of solid or semisolid materials through equipment, such as heating vessels and mixing tanks. Observes gauges, signals and recording instruments. Turns valves and moves controls to regulate temperatures, pressures and flow of steam, coolant and chemical constituents through system to reflect prescribed reaction, within critical limits. Patrols area to inspect equipment for leaks and other hazards. Listens for abnormal sounds. Performs minor repairs and records gauge readings. Draws samples at prescribed stages of synthesis and performs litmus, titration refractometer, gas analysis and other routine tests to determine if reaction is conforming to plant standards. Maintains log of gauge readings, shift production and equipment malfunctions. Analyzes test results, laboratory analysis and instrument readings to facilitate regulation of process and production of standardized product.

May demonstrate correct work methods to trainees. May control equipment; such as, stripping, wash or recovery towers, neutralizers, condensers, heat exchangers and reflux systems to remove or recover solvents or other specific chemicals. May be designated according to type of system operated; for example,

Absorption Operator
Acidizing Operator
Esterification Operator
Fermentation Operator
Halogenation Operator
Hydrolysis and Hydration Operator
Ion Exchange Operator
Neutralization Operator
Nitration Operator
Oxidation Operator
Purification and Reaction Operator
Thermal Cracking Operator

8179-126 CHEMICAL-PROCESS OPERATOR, BATCHING(chem., n.e.c.) DPT:562
GED: 3 SVP: 6 EC: 1 5 6 7 PA: M 2 4 7

Controls one or more chemical processing units or interrelated semi automatic systems; such as, autoclaves, dryers, grinders, kettles, precipitators, reactors, stills, vacuum blenders or mixing vessels in a single or multi-step batching process that convert substances into industrial or consumer products:

Reads plant specifications to ascertain product ingredients and prescribed modifications of basic plant procedures. Charges vessels with specified quantities of solids or liquids, and turns valves to feed liquid or gaseous materials into units, or sets controls in specific sequence on panelboard to start automatic feed. Adjusts valves or moves controls to maintain specified temperature, pressure and vacuum levels. Monitors gauges, signals, recorders and observes colour changes in product to ascertain rate of reaction. Performs simple, physical or chemical tests on products during processing, to ensure conformance to specifications, using standard test equipment and procedures. Collects and identifies samples of product by standard methods for detailed laboratory analysis. Receives notification from control laboratory, supervisor, or other workers to make specified operating adjustments, required to control or complete chemical processes. Maintains log of operating conditions for correlation of chemical processes and shift production.

May use catalysts, accelerators, and short stops to advance, retard and control time, rate and extent of reaction. May be known by type of equipment operated or activity performed and be designated accordingly; for example,

Blender Operator
Still Operator

8179-130 SULPHONATOR(chem., n.e.c.; soap) DPT:582
GED: 3 SVP: 6 EC: 1 7 PA: L 4 7

Controls chemical processing equipment to heat animal or vegetable oil to produce water-soluble fat liquor for use in leather tanning, textiles or detergent base stock, by performing any combination of the following duties:

Reads production order to determine materials to be used and method of processing. Opens valves and starts pumps to transfer base materials, such as sulphuric acid, alkyl benzene and animal or vegetable oils to weighing tanks. Transfers specified quantities of

chemical ingredients into sulphonator. Starts agitators and flow of refrigerant in cooling coils to reduce exothermically generated heat. Operates pumps and valves to transfer sulphonic acid to wash tanks, meter fatty alcohol to control wash cycle, transfer compound to settling tank and to run off spent acid from settled solution. Prepares neutralizing solution by mixing controlled quantities of water and caustic alkali. Opens valves to feed sulphonic acid into caustic solution to form detergent paste and starts pump to transfer paste to storage tanks for further processing into powdered detergent. Concentrates sulphonic acid by removing impurities, using steam vacuum ejector unit, and pumps acid through deodorizer to tanks for production of liquid detergent. Draws off samples of solutions at specified process points for laboratory testing. Records gauge and chart readings and maintains production log.

8179-134 OPERATOR, CHLORINATION PLANT(chem., n.e.c.) DPT:682

GED: 3 SVP: 5 EC: 1 6 7 PA: L 4 7

Controls operation of equipment in which chemicals or other materials are chlorinated by reaction with chlorine gas:

Loads chlorinator with specified amounts of chemicals or other materials by operating equipment, such as pumps or conveyors. Turns valves and reads flowmeter to regulate flow of chlorine and rate of chlorine reaction. Reads temperature gauges and adjusts steam and coolant valves to maintain chemical reaction within specified temperature range. Tests sample of chemical product for specific gravity, boiling or freezing point, using laboratory test equipment. Looks through sightglass to detect colour change that determines when chlorination is completed. Maintains record of shift production and other data, such as chlorinator temperature and pressure.

May operate related equipment; such as, vaporizer, filters, stills and stripping columns.

8179-138 PILOT-PLANT TENDER(chem., n.e.c.) DPT:385
GED: 3 SVP: 5 EC: 1 7 PA: M 4 7

Performs routine testing and processing duties in a chemical pilot plant:

Turns valves and switches to pump chemical solutions through various processing units, such as reactors, distillers and scrubbers. Adds reagents and catalysts to solutions as directed. Patrols equipment and draws samples at specified processing stages. Carries out standardized tests, such as titration, pH level, concentration and specific gravity, using a variety of test apparatus. Reads charts and gauges and compiles process operational data.

May control processing equipment, such as coagulators and dryers by regulating temperatures, pressures, rates of flow and liquid levels. May clean and maintain equipment, using hose, detergents and hand tools.

8179-142 ALUM-LIQUOR-PLANT OPERATOR(chem., n.e.c.) DPT:562

GED: 3 SVP: 4 EC: 1 7 PA: L 4 7

Controls equipment to produce alum liquor (aluminum sulphate) in continuous process reaction of sulphuric acid with powdered bauxite:

Directs other workers to start conveyors to transfer bauxite into hopper of crusher. Manipulates valves and presses switches to start crusher, mill and conveyors to replenish storage supply of powdered ore. Observes meters, vacuum gauges and level indicators. Turns valves to regulate flow of materials, such as powdered ore, sulphuric acid, and hot air to produce mixture of prescribed specific gravity, and through other digesters where chemical reaction occurs and resultant aluminum sulphate liquor is settled and diluted to specified concentration. Draws and tests samples from each digester to verify specific gravity and temperature, using hydrometer and thermometer, or forwards samples to laboratory for tests. Turns valves to adjust flow of steam through digester jackets to regulate temperatures. Pumps processed alum liquor into storage tanks for subsequent use or further processing. Records temperatures, specific gravities and flow rates of materials in operating log, and level of alum liquor in storage tanks on inventory records.

May operate dust collecting equipment to recover dust from crusher.

8179-162 REAGENT MIXER, CELLULOSE FILM(chem., n.e.c.) DPT:462
GED: 3 SVP: 5 EC: I 4 5 7 PA: M 4 7

Controls equipment to mix and transfer chemicals used to coagulate viscose solution into transparent cellulose film:

Starts pumps, mixers, and evaporators that mix bath chemicals; such as, sulphuric acid, sodium sulphate, softener and bleach to form chemical solutions of precise composition. Observes gauges and controls factors; such as, pressure, temperature, flow rates and acidity to ensure that chemical solutions of specified strength are produced. Performs mathematical calculations to determine efficiency of evaporating unit and to define cause of faulty operation or production of sub-standard solution. Turns valves to transfer solution to storage or circulation tanks. Obtains solution samples for laboratory analysis. Maintains operating log, detailing conditions, such as temperatures, acidity levels and specific gravity. Advises film casting machine operators of variations in solution strength or composition so that mechanical adjustments can be performed.

8179-166 CELLULOSE-FILM CASTER(chem., n.e.c.) DPT:665
GED: 3 SVP: 4 EC: I 4 7 PA: L 2 4 7

Tends equipment to pump viscose from storage tanks and force it between adjustable metal bars into acid bath to coagulate fluid and form continuous sheet of cellulose film:

Pumps chemical solutions to or from casting machines and storage tanks. Presses switches, turns valves and starts pumps to force viscose fluid between metal bars and into acid bath that coagulates fluid into continuous sheet of cellulose film. Adjusts gap between bars, using wrenches, to produce film of desired thickness. Threads film between rollers, using hook, cable and lead weights and smooths sheet to remove slack and wrinkles. Regulates metering pump settings and chemical solution strengths by reading gauges and moving valve handles to produce film of specified strength and quality. Observes moving film sheet to detect defects in film or machine malfunctions. Drains casting machine, tanks and pipelines when required and cleans equipment, using brushes, scrapers, air and water jets.

May inspect material for thickness and clarity, using illuminated viewing panel. May direct wet-end operator to thread film sheet through immersion baths.

8179-170 DRY-END TENDER, CELLULOSE FILM(chem., n.e.c.) DPT:565
cellulose film dryer and winder.
GED: 2 SVP: 3 EC: I 3 6 PA: M 4 5 7

Tends dry end of cellulose film casting machine that dries and winds continuous sheet of film into rolls:

Threads film from processing tanks through drying rollers onto core of take up reel. Presses switch and turns knobs to regulate winding speed and film tension according to specifications. Regulates heat of drying rollers and air circulation systems by turning valves. Rotates spider section of machine when take up reel is fully wound and cuts film sheet to transfer to new take up reel, using knife. Removes wound reel from mandrel, using hoist. Observes film and records visual imperfections. Requests film casting operator to vary speed of film formation to avoid breaks and wrinkles. Records dry end conditions on log sheets and identifying information on mill roll tickets.

May adjust controls to maintain moisture content of film at specified level.

8179-174 WET-END TENDER, CELLULOSE FILM(chem., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 4 6 7 PA: M 4 7

Tends wet-end baths of forming machine that treats continuous web of regenerated viscose to produce transparent cellulose film:

Threads film sheet through rollers of machine wet-end bath, using hook, cable and lead weights. Smooths moving sheet to remove wrinkles by adjusting support tubes and scrapers. Regulates chemical solution strength by metering supply of ingredients, such as caustic soda, bleach and lactic acid. Drains tanks when required and moves waste products to salvage area, using hand truck.

May signal dry-end workers to remove faulty sections from film sheet.

8179-178 CELLULOSE-FILM REWINDER(chem., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine to wind cellulose film from reel to reel to remove wrinkles and slack, and examines film for defects:

Mounts roll of cellulose film on mandrel, using hoist. Wraps film end around empty core on take-up reel. Starts machine to wind film onto take-up reel and adjusts machine speed and tension of film by moving levers. Observes moving film sheet and passes hands over surface to detect holes and blisters. Cuts defective sections from film, using shears and splices cut ends, using heated splicing device. Removes rewound roll from mandrel, using hoist, weighs roll and places it in rack.

May record weight and length of film wound onto spool and number of spools wound.

Explosives Processing Occupations, n.e.c. 8179-198 through 8179-218

8179-198 WASH-HOUSE AND RECOVERY OPERATOR(explosives) DPT:682
GED: 3 SVP: 5 EC: I 5 6 7 PA: L 4 7

Controls equipment to produce, separate and wash trinitrotoluene (T.N.T.) explosive and to recover spent acids from residue:

Determines strengths of toluene and acids by performing specific gravity tests and reviewing results of laboratory titrations. Turns dials or valves to regulate flows of water, acids and steam to processing chamber and heating coils. Admits metered quantity of chemicals to facilitate formation and purification of T.N.T. Adjusts valves and switches to maintain required temperatures in washers, separators and denitrator. Recovers acids and purifies water by regulating water flow into settling tanks to balance volume fed into nitrator. Draws acid samples, for testing, and pumps recovered acid to storage tanks. Pumps liquid T.N.T. to finishing house for further processing. Observes operation of washing and recovery units to detect malfunctions. Maintains daily log detailing production and recovery levels. May dismantle liquid delivery lines for cleaning, using wrenches.

8179-202 GRAINING-PRESS OPERATOR(explosives) DPT:682
GED: 3 SVP: 4 EC: I 6 7 PA: M 4 7

Operates hydraulic press to extrude blocks of propellant powder into ropes, preparatory to cutting, drying, blending and bagging:

Attaches specified dies to compression cylinder, using wrenches, and tightens thumb screws to lock cover in place. Turns ram control valve to extrude powder slowly to avoid explosion. Examines extruded material for dirt, streaks and malformation. Changes mesh filter screens when extruded material shows indications of impurities escaping through screen. Positions empty fibre containers under discharge chute of each die hole and removes filled fibre containers.

May operate extrusion press in a specific area of smokeless powder production and be designated accordingly; for example, Finishing-Powder-Press Operator, Macaroni-Press Operator, Powder-Press Operator

8179-206 DRY-HOUSE MAN(explosives) DPT:585
GED: 2 SVP: 3 EC: I 6 7 PA: L 4 7

Tends equipment that controls moisture content of stored explosive mixtures and ingredients according to prescribed standards:

Scoops chemicals from rubber containers into paper- or cloth-lined trays. Places trays on racks in steam-heated drying or humidity conditioning rooms for specified time to dehydrate or moisten chemicals. Observes recording instruments and turns valves to maintain temperature and humidity of rooms within prescribed limits. Records storage time to identify material of specified moisture content for further processing. Turns valves to drain explosive material from mixing-room waste collection tank into vat in which it is cooked to render it harmless for disposal. Shovels specified amount of caustic soda and aluminum chips into vat and closes loading hatch. Turns valves to admit steam into heating coils and sets automatic timer for prescribed cooking period. Drains vat of cooked material and flushes out sediment. Cleans utensils, floors, and walls, using water hose, to

remove accumulations of explosive material in accordance with safety regulations.

May fill acid reservoirs from tank cars by connecting hose lines and opening valves. May mix acid to desired strength for washing cartridge cases, by filling acid tank to level and adding water. May dip wire baskets of cartridge cases in acid solution for satin-fining.

8179-210 NITROCELLULOSE MAKER(explosives) DPT:585
nitratior tender.

GED: 2 SVP: 3 EC: I 6 7 PA: M 4 7

Tends battery of nitratior in which purified cotton linters are treated with acid to produce nitrocellulose, and centrifugal wringers to remove excess acid:

Turns valve to transfer specified amount of acid mixture from acid measuring pot to nitratior, and presses button to start nitratior agitators. Dumps pre-weighed charge of cotton linters into nitratior, using shovel or hoe, submerges linters at once to prevent fire and closes cover, using hoist and hand tools. Opens valves and starts pumps after nitration cycle is completed to transfer nitrocotton into centrifugal wringer. Sets timer to indicate end of wringing cycle, adjusts controls to regulate speed of wringer, and opens valves to remove excess acid. Stops wringer as indicated by timer. Opens water valve to flush wringer basin; loosens nitrocotton from walls, using scraper. Opens discharge gate and pushes nitrocotton through aperture into containers, using rake or hoe. Turns valves to flush and clean wringer with acid and water. Inspects equipment for flaws or defects and keeps records on wringing schedules and acid mix.

8179-214 BLACK-POWDER-PRESS TENDER(explosives) DPT:685

GED: 2 SVP: 2 EC: I 6 7 PA: M 3 4 7

Tends wheel-mill and hydraulic-ram press to process black powder ingredients prior to graphiting:

Dumps bag of powder ingredients into wheel-mill to work and mill them for pressing. Positions plates and spacers in powder press to prepare it for loading. Shovels powder from wheel-mill into press, until plates are filled. Starts motor and engages clutch on ram to compress powder in press. Stops motor and loosens press plates. Fills resultant voids in plates with additional powder, using shovel. Starts press and exerts pressure for second compression of powder. Stops press when required pressure is indicated on gauge.

8179-218 FUSE MAKER(explosives) DPT:685

GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine to make fuses for explosives and pyrotechnics:

Screens black powder to desired texture, using hand sifter. Scoops screened powder into machine feed hopper. Starts winding machine, by pressing button, to spin strands of cotton yarn around black powder core to form fuses, and wind fuses onto bobbins. Unloads bobbins from machine. Places bobbins in controlled-temperature room for specified time to dry and cure fuses. Unwinds cured fuses from bobbins and cuts fuses to required lengths, using knife.

Soap and Toiletries Processing Occupations, n.e.c.

8179-238 through 8179-264

8179-238 PHARMACEUTICAL OPERATOR(pharm. & toil.) DPT:682

GED: 3 SVP: 6 EC: I 5 7 PA: M 4 7

Controls equipment and tends machines to produce variety of pharmaceutical and toilet products or ingredients, performing any combination of the following duties:

Weights and measures ingredients, using scales. Presses switches to start or stop various machines. Tends machine that coats medicinal tablets. Operates mixing machine and heated kettles to prepare specified ingredients for ointments, creams, pastes, liquid medications, powders, gums and similar drug products, adding ingredients according to formulas. Operates milling and grinding machines or uses mortar and pestle to reduce materials to designated sized particles. Prepares granulated products for compressing into tablets. Operates filter presses, sifting machines, autoclaves, water stills, and related equipment to prepare ingredients for further processing. Inspects, weighs, and tests hardness of tablets according to specifications.

Cleans and sterilizes pumps, filters, pipes, and mixing machines, using hot water and steam.

8179-242 STERILE-PRODUCTS PROCESSOR(pharm. & toil.) DPT:682

GED: 3 SVP: 5 EC: I 5 PA: M 4

Operates water still, mixer, clarifier, and filtering unit to process liquid and powder ingredients into sterile medications:

Turns valves to admit de-ionized water and steam to still and circulate water through condenser for distillation. Pours metered or measured amount of distilled water into container, weighs out or dumps pre-weighed ingredients into water and lowers mixing head into solution to dissolve and mix ingredients. Tests acidity of mixture, using pH meter. Adds acid or alkali as required to achieve prescribed acidity. Pours mixture into clarifier unit to remove insoluble material. Connects sterile filter to clarifier and turns valve to filter mixture under pressure.

8179-246 PLODDERMAN(soap) DPT:682

GED: 3 SVP: 4 EC: I 7 PA: M 4 7

Operates plodder machine to process raw soap noodles into slab form: Attaches forming plate to machine that shapes and sizes extruded soap log. Wheels empty soap loading buggies under discharge and scrap outlets of forming machine and delivers filled buggies to weigh station. Replaces filter and screens in machine, using hand tools. Starts machine by turning switches and opening valves to allow entry of soap noodles into compression screw, steam and ice water into heating and cooling coils, and application of vacuum to remove air from soap as it is drawn through machine. Observes flow of soap shavings through screens and compression screw and examines extruded soap slabs for specified colour, odour, size and consistency. Adjusts speed of compression screw rotation and steam and water flow to maintain production standards.

May weigh sample soap bars or filled buggies, using scales. May change soap cut-off blade and dismantle, clean and reassemble machine components, using hand tools. May feed soap slabs into machine that cuts them into bars, and be designated accordingly, Slabber

8179-250 GRANULATOR-MACHINE OPERATOR(pharm. & toil.) DPT:682

GED: 3 SVP: 3 EC: I PA: M 4

Operates mixing and milling machines to granulate powdered ingredients preparatory to compressing into medicinal tablets:

Weights and measures ingredients according to formula and size of batch to be mixed. Presses switch to start mixing machine to blend ingredients, and adds starch paste, gelatine, or water and alcohol to mixture to bind ingredients. Breaks up lumps in mixture, using spatula. Spreads mixture onto trays, and places trays in oven or steam drier at preset temperature. Removes trays and feels material to determine whether batch requires additional mixing or drying. Sets up and operates oscillating or comminuting mill to force mixture through sieves and produce product of specified fineness. Tends blenders, tumbling barrel or other equipment to mix binders, flavouring oils, and lubricating agents for use in compounding tablets.

8179-254 TOILETRIES MOULDER AND COMPRESSOR(pharm. & toil.) DPT:685

GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Tends equipment to mould or compress prepared ingredients to form products; such as, lipsticks, deodorizer cakes or powder compact refills by either of the following methods:

1. Fills heated kettle with cosmetic ingredients and adjusts control to heat contents to desired pouring temperature. Places mould or rack loaded with lipstick cases under pouring spout of kettle. Opens valve to release metered quantity of molten material into mould cavities or lipstick cases. Sets mould or cases aside to cool and congeal lipsticks. Opens mould to release lipsticks. 2. Examines bulk cosmetic powder in tray and removes lumps, using spatula. Loads metal or plastic powder cake bases into indentations in mould board. Spreads glue onto bases and scoops powder or crystals into them. Tamps and levels powder in moulds, using scraper, to ensure even surface and texture of product. Loads mould board onto press bed. Presses powder into cakes or sticks by depressing buttons. Removes mould board and dumps compressed products onto drying tray. Examines products and discards those

showing obvious imperfections, such as cracks, bubbles or discoloured areas.

May glaze lipsticks by passing them through gas-flame. May assemble lipsticks into retractable containers. May insert products into compacts or shipping cartons. May set up press by selecting and fitting specified dies.

8179-260 SCREENER-PERFUMER(soap) DPT:685

GED: 2 SVP: 2 EC: 1 5 7 PA: H 4 7

Tends equipment that screens detergent or soap powder and impregnates it with perfume:

Adjusts screw and belt conveyors to regulate flow of powder onto screens over hopper. Regulates flow of perfume to hopper. Turns valve to pump perfume through jets onto powder as it enters hopper. Observes spraying action and level of powder flowing into hopper and hoes powder frequently to ensure uniform perfuming. Shovels powder into barrels and transports them to crutching machine for reprocessing.

May measure specific gravity of powder, using gram balance and standard containers and notifies foreman of deviations from specifications.

8179-264 SOAP CUTTER AND STAMPER(soap) DPT:685

GED: 2 SVP: 2 EC: 1 5 7 PA: H 4 7

Tends equipment that cuts and stamps soap bars:

Moves controls to regulate machine speed and maintain uniform flow of soap through extruding, cutting and stamping machine. Examines embossed bars for defects, such as mottled colouring, unsymmetrical shape and poor reproduction of embossed design or trade mark. Stops machine when unsatisfactory bars are detected.

May move soap trucks to and from drying room. May maintain equipment by cleaning and lubricating machinery, replacing worn cutting heads and filling feed tanks.

Miscellaneous Chemical Processing Occupations, n.e.c.

8179-284 through 8179-399

8179-284 DRY-ICE MAKER(chem., n.e.c.) DPT:682

GED: 3 SVP: 6 EC: 1 5 6 PA: M 4 7

Operates equipment; such as, hydraulic press, saws, conveyors, and compressor to make dry-ice blocks from liquid carbon dioxide:

Monitors meters, gauges, and recording instruments to ensure specified temperature, pressures and flow of liquified carbon dioxide from tank car and gas recovery system. Observes operation of equipment to detect malfunctions and records operational data in logbook. Turns valves to transfer liquid carbon dioxide into expansion chamber where snow is formed by release in pressure. Operates hydraulic ram that compresses snow into blocks of dry ice. Pushes blocks onto conveyor that carries them under saws that cut blocks to specified size and transfers them onto scale. Records block weight on ticket. Places blocks in insulated bags, using tongs, seals bag and attaches weight ticket. Loads blocks into insulated bins for storage or shipment.

8179-286 FLAT-BED PRESS OPERATOR(linoleum prod.) DPT:662

floor-covering-machine operator.

GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Operates flat-bed presses that consolidate carrier and colour mix into moulded hard-surface floor covering:

Starts mechanism that moves carrier (felt backing) over table and initiate colour-depositing cycles. Turns knob or opens air valve to move goods from table into flat-bed presses. Reads temperature on recording instruments to ascertain specified temperature and makes adjustments as necessary. Observes operations from control panel to detect equipment malfunctions, and stops table movement to allow for necessary adjustments. Determines from specification data, length of goods required for storing and affixes register slip on material to guide storing workers. Gives instructions to material handlers to remove material from machine.

May take signals from table crew in cases of malfunctions. May operate machine that automatically cuts specified lengths of goods for storage.

8179-288 LATEX-COAGULATION OPERATOR(chem., n.e.c.)

DPT:682

GED: 3 SVP: 5 EC: 1 3 4 7 PA: L 4 7

Controls equipment used to coagulate synthetic latex into rubber-crumbs slurry and to prepare rubber crumbs for further processing:

Starts feed pumps and turns valves to supply proportioned quantities of latex and chemical solutions to creaming and coagulating tanks. Turns switches and valves to direct flow of creamed latex to coagulating tank and flow of coagulated slurry to soap conversion tank, to convert soap to fatty acid and extract fatty acid from slurry. Regulates speed of tank stirring mechanisms, temperature and acid-concentration levels. Observes appearance of rubber crumbs through sight-glass apertures. Monitors operation of filters, shaker screens, hammer mills and dewatering extruders to dry and pelletize rubber crumbs. Records on log sheets data, such as temperature and acid concentration. Cleans shaker screens, using water spray. Tests acid or brine samples, using burette, hydrometer and pH meter.

8179-292 OXIDIZER, LINOLEUM OILS(chem., n.e.c.)

DPT:682

GED: 3 SVP: 5 EC: 1 PA: M 4 7

Controls one or more units of oxidizing equipment to process oils and prepare them for use in production of hard-surface floor covering:

Turns valves to admit prescribed amounts of ingredients into equipment according to formula. Adjusts valves to regulate air supply, as specified, to obtain oxidation. Sets thermostat to maintain prescribed temperature during oxidizing cycle. Observes colour of batch through sightglass to determine completion of oxidation, according to process specifications. Opens bottom door to discharge mixture from oxidizer or starts pumps to remove material for further processing.

May test viscosity of mixture, using viscometer.

8179-296 PHOSPHORIC ACID EXTRACTOR(chem., n.e.c.)

DPT:682

GED: 3 SVP: 5 EC: 1 7 PA: L 4 7

Operates rock-grinding mills and acid reactors to produce phosphoric acid from phosphate rock:

Operates ball mill to crush phosphate rock to desired particle size. Feeds specified quantities of crushed rock and sulphuric acid of known strength to attack tank, by moving controls on panelboard. Adds chemical reagents to tank at established process points and maintains specified levels of vacuum, temperature, and feed rates of acids, water and chemicals, by observing gauges and moving valves and switches. Draws solution samples and performs centrifugal and specific gravity tests to determine proportion of sulphur trioxide and adjusts process reaction accordingly. Examines process equipment, such as pumps and valves to detect leaks and malfunctions. Maintains production log and reports defects.

May tend filters to separate phosphoric acid from gypsum or regulate flow of material to filter operator, to co-ordinate output and maintenance requirements.

8179-300 BLEACHER, OILS(chem., n.e.c.) DPT:682

GED: 3 SVP: 4 EC: 1 7 PA: H 4 7

Operates equipment to bleach and filter crude vegetable and animal oils:

Dumps desired quantity, of oil decolourizing medium, such as diatomaceous or fullers earth into feed hopper. Regulates oil feed and steam valves to obtain required viscosity and starts agitator to mix decolourizing agent and oil for prescribed time. Obtains samples of mixture for analysis, using colorimeter. Adds further quantities of decolourizing substances as required to produce dry oil. Transfers oil through filter presses to remove diatomaceous earth. Pumps bleached oil to cooling system that reduces oil temperatures to required level and crystallizes fatty acid derivatives. Pumps chilled oil through filters to storage tanks. Cleans filter presses and removes filter cakes.

May deodorize bleached oil by circulating live steam through it in deodorizer still.

8179-304 OPERATOR, TITAL LIQUOR PLANT(chem., n.e.c.; paint & varn.) DPT:682
titanium dioxide processor.
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Controls equipment used to produce crude liquor and nuclei used in production of titanium dioxide pigments:
Turns valves on central control panel to fill nuclei preparation tank with measured quantity of water and caustic alkali. Actuates mechanical feeders to admit metered amounts of pulp and chemicals in correct sequence. Heats batch to specified temperature by admitting steam into tank. Monitors instruments to control process. Transfers finished solution to settling vat and pumps settled nuclei material to storage tank. Opens valves to fill digester with desired volume of titanium oxide and sulphuric acid and dumps measured quantity of catalyst. Starts reaction in digester by opening steam valve and controls reaction from instrument panel. Pumps resultant crude tital (titanium tetrachloride) liquor through filters into storage vessel. Obtains solution samples and performs tests, such as specific gravity and pH level or sends samples to laboratory. Cleans tanks and filters, using hose and coats filter elements with absorbent compound. Records operating data in log.

8179-308 FURNACE COOLER(non-metal. min. prod., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: 1 3 6 7 PA: H 4 7

Cools charges of artificial graphite electrodes or abrasives in electrothermal furnace by removing insulation or spraying with water, to prevent damage to electrodes or control crystal growth:
Pokes holes in furnace insulation, using pick or rake and lowers side gates of furnace to hasten cooling of charge. Observes colour of charge to determine process temperature and tamps holes to prevent air infiltration and consequent oxidation of electrodes if charge is cooling too fast. Rakes or shovels insulating material from furnace and quenches with water spray to speed cooling, or retains insulation to prolong cooling.
May install or disassemble furnace water spray system. May sort firebricks from insulating material to recuperate firebricks, and shovel insulating material into containers.

8179-312 FERTILIZER MAKER, PHOSPHATE PROCESS(chem., n.e.c.) DPT:685
GED: 3 SVP: 3 EC: 1 5 6 7 PA: M 2 3 4 7

Tends pulverizing mill, screens and drum digester to process phosphate rock into fertilizer:
Tends pulverizing mill to produce crushed rock of required fineness for efficient use. Starts and stops conveyor feed in response to instrument readings that indicate abnormal stress on pulverizing mill. Pulls lever to supply pulverized phosphate through weigh-feeder to drum digester. Opens sulphuric-acid valve to designated setting and starts feed pump. Moves switch to rotate drum to tumble and cook mixture for specified period to disintegrate phosphate rock and produce fertilizer slurry. Starts vacuum pumps at indicated time and tumbles slurry under vacuum to produce dry fertilizer. Releases vacuum and opens discharge vent to drop fertilizer onto conveyor for transfer to storage.

8179-316 NUCLEAR-FUEL PROCESSOR(chem., n.e.c.; non-ferrous metal) DPT:685
GED: 3 SVP: 3 EC: 1 3 4 5 6 PA: H 4 7

Tends equipment to process refined uranium oxide powder into pellets, by performing any combination of the following duties:
Weights out specified quantities of fine thorium and uranium oxide powders, adds cohesive agent and dumps materials into hopper of mixing machine. Scoops mixed powder into feed hopper and starts machine that compresses fine powder into slugs and crushes slugs to produce coarse granulated material. Places sample of granulated powder in testing device and turns handle to verify consistency of granules. Shovels granulated powder into feed bin and starts press to compress powder into pellets. Observes discharge tray and removes malformed pellets. Measures and weighs sample pellets, using micrometer and scales, to ensure maintenance of quality standards. Places pellets in furnace trays and spreads insulation material over pellets. Loads trays into hydrogen sintering furnace and sets timers and switches controlling temperature and feed rates. Empties trays of sintered pellets into feed chute of centreless grinder. Adjusts controls

to specified feed and speed rates, starts grinder and pulls lever to drop pellets between grinding wheels to grind them to desired dimensions. Inspects ground pellets to detect chips, cracks and flawed areas and measures dimensions, using gauges. Washes pellets in trays to remove dust and chips and loads trays into drying oven. Stacks trays containing dried pellets. Maintains production log.
May insert pellets into fuel rods and measure radiation of fuel rods, using scanning unit.

8179-318 PIGMENT PRESSER(chem., n.e.c.) DPT:685
GED: 2 SVP: 4 EC: 1 3 7 PA: H 4

Tends equipment that mixes, purifies, and dries colour slurry used in the manufacture of organic and inorganic paint pigments to prepare slurry for pigment grinders:
Opens valve to admit liquid ingredients into mixing vat. Starts pump to transfer slurry from vat to filter-plate press. Opens pressure valves to force water and air through series of fabric covered panels to remove impurities, such as soluble salts, and moisture from mixture. Turns gear wheel to release tension of plates after completion of filtration and pressing cycle. Cuts mixture from press frames with spatula and drops mixture into container. Moves loaded container from press to holding area, using hand truck. Shovels pigment cake into trays. Places filled trays on dryer cart and pushes cart into oven for drying. Adjusts dryer temperature controls to dry pigment according to specifications. Fills steel barrels with dried pigment, using shovel.

8179-320 ACETYLENE-CYLINDER PREPARER(chem., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 6 PA: M 4

Mixes, packs, solidifies, and dries absorbent for compressed acetylene gas, performing any combination of the following duties:
Weights or measures water and powdered ingredients, such as asbestos, diatomaceous earth, charcoal and lime and dumps them into mixer. Starts agitator to mix ingredients for specified time. Connects cylinders to vacuum line and turns valves to transfer mixture into cylinders. Rolls cylinders into special kiln and sets temperature and pressure controls to solidify and dry mixture in cylinder. Installs valves and safety plugs. Weighs cylinders to ascertain amount of mixture packed. Connects acetone feed line, using hand tools, and turns valve to fill cylinder with acetone, according to specifications. Paints cylinder, using spray gun. Stencils serial numbers and tare weight on cylinders.

8179-322 DIPPING-MACHINE TENDER(rubber) DPT:665
GED: 2 SVP: 3 EC: 1 4 PA: M 4 5 6

Tends machine that dips forms into coagulant or liquid latex to mould rubber articles, such as gloves, soothers, nipples and balloons, by any of the following methods:
1. Mixes latex and other materials in drums, using electric mixer or wooden paddle. Transfers solution from drum into cans and conveys can with hand truck to holding tanks. Pours solution into machine tanks until specified level is reached and starts machine. Moves forms mounted on suspended conveyor, through vats, driers and ovens, in continuous operations, to form product by dipping, leaching and curing. Removes sample of product, weighs it and adds solution in tanks, as required. Changes filters in tanks. Replaces loose or broken forms on conveyor. Verifies temperature and humidity on instrument control panel. Cleans forms, conveyor and tanks, using pressure hose and scraper. Direct activities of machine feeders. Lifts form board from conveyor and fastens it to machine bed, using hinge clamps and slide bolts. 2. Inverts bed, manually, and moves lever to immerse forms in tank of solution. Raises and rocks bed to create movement that dries coagulant or equally distributes and sets latex on forms. Lifts boards to conveyor for further processing.

8179-324 PELLETIZER, PLASTICS(chem., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Tends machine to compress powdered plastics material into pellet or biscuit form:
Selects desired forming die. Cleans die, using brush and cloths, and installs die in press. Dumps powdered material into feed hopper. Turns valves to regulate feed rate, temperature and pressure of press to specified levels and to ensure maintenance of required density of

compressed product. Starts machine by pressing button and observes flow of compressed pellets from discharge chute. May weigh sample pellet to ensure adherence to specifications and adjust machine controls as required.

8179-328 REFINER-MILL TENDER(rubber) DPT:685
rough-and-finish refinerman.
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends rough-and-finish refiner mills that break lumpy, burned or reclaimed rubber to refine it into slabs: Adjusts distance between mill rolls and positions knife blades across front roll on refiners, using wrench. Feeds rubber into rolls of rough refiner, carries emerging sheet to finish refiner and feeds sheet into finish mill. Starts rotation of roll drum in front of finish mill, and starts sheet winding around drum as it drops from mill. Controls thermal expansion and contraction of mill rolls by turning water valves. Stops rotation of drum when several thicknesses accumulate. Cuts rubber across length of drum, using knife. Carries rubber slab to truck and dusts slab with soapstone to prevent tackiness.

8179-332 SPLASH-LINE TENDER(linoleum prod.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: H 4 7

Tends marbleizing equipment that mixes, rolls, cuts and grinds raw materials into chips used to produce desired appearance in floor tiles: Weighs specified quantities of materials, such as limestone, resins and asbestos fibres and dumps them into mixer hopper. Presses buttons to start mixer and adjusts temperature controls to attain required consistency of material for proper mixing. Dumps mixed material onto conveyor belt that conveys it into calendars for rolling to prescribed thickness. Presses pedal, to activate knife that automatically cuts material into slabs. Loads slabs on conveyor that moves them through drying oven for hardening and dumps hardened slabs into grinder to form chips.

8179-336 EQUIPMENT CLEANER(paint & varn.) DPT:684
GED: 2 SVP: 2 EC: 1 5 6 7 PA: H 2 3 4 7

Cleans tanks, vats, kettles and chutes used in production of paint products: Disconnects production supply lines and locks safety devices on agitator switch or removes agitator. Connects compressed-air hoses to purge toxic fumes. Obtains approval certificate from designated official when vessel is declared safe to enter. Enters tank and examines condition of interior to determine proper cleaning method. Pre-soaks interior with appropriate acid or alkaline solution to soften or loosen caked material. Pumps cleaning solution into storage tank after required interval, using portable electric pump. Hoses interior of vessel with water to remove surface acid or alkaline solution before re-entering. Connects air-compressor hoses to portable pneumatic chisel and ventilating equipment. Chips and scrapes caked material from walls, ceiling, agitator and bottom surfaces and loads into container for removal from vessel. Dumps scrapings into disposal drum, and removes it to refuse area. Hoses and scrubs tank interior, using water, solvents and scrubbing equipment. May haul kettles and chutes to burning area and burn off flammable residue.

8179-340 SLAB-OFF MAN(rubber) DPT:685
sheeter.
GED: 2 SVP: 2 EC: 1 5 6 PA: M 4

Tends slab-off machine and mill that process compounded rubber from banbury mixer into slabs or sheets: Adjusts knife on mill, using hand tools, or uses hand knife, to cut rubber to specified width for feed-off strip. Cuts feed-off strip with knife, rolls it into bundle and feeds it back into mill until specified consistency is obtained, or feeds strip onto conveyor of machine that dips strip in solution to reduce stickiness. Cuts strip into slabs and hangs slabs on cooling conveyor for further processing. Turns valve to fill tank of machine with slab-dip solution. May feed rubber strip into extruding machine, before slab-off, to obtain desired consistency. May cut rubber draped on hanger bars into slabs, using knife.

8179-344 BACKING-IN-MACHINE TENDER(linoleum prod.) DPT:685

GED: 2 SVP: 2 ED: 1 PA: H 4 7

Tends machine that feeds moulded floor covering into stove for heat treating:

Positions rolls of floor covering, such as felt-based or backed linoleum on spindle of machine, using power hoist. Threads floor covering through rollers, and attaches cable that pulls floor covering into heated stove to dry and harden on horizontal racks or in festoons. Presses foot pedal to control feed of material. Removes empty spindle from stand, replaces it with full roll, using hoist, attaches and seals material to end of previous roll, using press machine. May examine floor covering to detect and repair defects and cuts out damaged area, using knife.

8179-348 COMPOUND WORKER(plastic prod.) DPT:685
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Grinds, mixes and blends, new and recovered materials, for use in production of phonograph records, by performing any combination of the following duties:

Transports raw material from storage area with hand cart. Weighs specified quantities of ingredients such as lamp black and polyvinyl chloride and dumps them into blending machine hopper. Moves empty tote box to position near blender, using hand cart. Presses button to start blender. Starts suction pump or blower attachment to move blended material into tote box. Removes labelled section from defective records, using hydraulic punch press. Transports bins filled with scrap records to grinding machine. Starts grinder and loads scrap into hopper. Loads ground scrap into tote boxes, using vacuum pump. Moves tote boxes to record press, using hand cart and connects them to record blank press machines with rubber hose, using hand tools. Records weight of scrap and new material processed. May use fork lift truck to move materials.

8179-352 IMPRINTING-MACHINE TENDER, PLASTICS(plastic prod.) DPT:685
GED: 2 SVP: 2 EC: 1 6 PA: M 4 7

Tends machine, or unit of automatic machine, that imprints designs on plastic sheets or sheeting:

Turns valves to regulate heat of machine. Threads sheeting between machine and embossed rollers and adjusts tension of machine rollers, or positions sheets under embossed plate. Starts machine and inspects finished work to ensure proper imprinting of sheets and sheeting. May truck materials to and from work area. May remove rolls of material from windup rack, using hoist.

8179-356 PARADICHLOROBENZENE MAN(chem., n.e.c.) DPT:685

GED: 2 SVP: 2 EC: 1 7 PA: M 4 7

Tends equipment that cools, solidifies and crushes paradichlorobenzene preparatory to shipment, storage, or processing into moth repellent or deodorizer cakes:

Pumps liquid paradichlorobenzene into water-jacketed moulds, by pressing switch. Turns valve to circulate chilled water through mould jacket to solidify liquid material. Opens steam valve to heat jacket to loosen solidified product and facilitate removal. Dumps solidified material into crusher and starts crusher to granulate product. Fills shipping containers with granulated material, using rake. May fit suitable screen to sifting machine, load sifter with granulated product and tend sifter to segregate granulated material of various sizes.

8179-360 SPOOLER, LATEX THREADS(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends equipment that winds latex thread onto spools: Attaches latex threads from curing drum to spools. Starts equipment that revolves curing drum to unwind thread. Starts takeup reel and containing spools by pressing button. Observes operation and adjusts speed of takeup reel to regulate tension. Straightens bent thread guides and joins broken threads, by pressing ends together. Removes filled spools or rolls, and places them on rack. Weighs filled rack to determine yardage and records weight on production report. Pushes rack into drying cabinet.

8179-364 VARNISH-MAKER HELPER(paint & varn.)

DPT:686

GED: 2 SVP: 2 EC: I 5 6 PA: H 3 4

Helps in processing ingredients used in making varnishes:
Transfers ingredients, such as gums, resin, turpentine and oils from storage to work area by hand truck. Weighs specific amounts of dry materials and shovels or dumps them into kettles or supply tanks. Mixes ingredients in kettles, using paddle. Cleans kettles and other equipment, using high pressure hose, solvents and brushes. See also definition for term title 02-160 HELPER (any ind.).
May operate manual or power operated hoist.

8179-368 FORMULA WEIGHER(plastic prod.; rubber)

DPT:687

GED: 2 SVP: 2 EC: I 7 PA: M 3 4 7

Measures out and weighs crude rubber, chemical compounds and oils according to formulae and transfers materials to mixing machine:
Selects and dumps materials; such as, crude rubber, plastic compounds, chemicals and oils into designated storage containers. Pushes hand truck or moves levers to start and stop powered conveyor and move weighing bin to storage containers. Pulls lever to discharge materials from storage containers into weighing bin and observes scale until specified weights for ingredients are reached. Scoops small quantities of chemicals from storage boxes to weighing tray and

empties chemicals into storage containers or mixer chute. Positions weighing bin with specified ingredients over chute of mixing machine. May record weight and materials used and tag containers to identify ingredients. May tend pulverizing and mixing machines to reclaim plastic and rubber stock. May weigh out batches of plastic or rubber and be designated accordingly; for example,
Plastic Compounder(plastic prod.)
Rubber Compounder(rubber)

8179-399 OTHER CHEMICALS, PETROLEUM, RUBBER, PLASTIC AND RELATED MATERIALS PROCESSING OCCUPATIONS

This group includes chemicals, petroleum, rubber, plastic and related materials processing workers, not elsewhere classified; for example, those who cast liquid plastics material into sheet form in cellular glass moulds; cast resinous material used in the manufacture of linoleum and tiles; operate equipment to produce caustic alkalis, track signals and match heads for explosive detonators; and determine the disposition of salvaged, defective or obsolete paint products. Typical examples of occupational titles covered by this residual group definition are:

Interline Operator(explosives)
Match-Head Maker(explosives)
Mould Filler and Stripper(plastic prod.)
Salvage Man(paint & varn.)
Utility Operator(chem., n.e.c.)

821/822-FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS

This minor group includes occupations concerned with preparing food and related products for human or animal consumption. Includes all processing phases after harvesting and prior to marketing; recovering by-product materials; flour and grain milling and baking; slaughtering and meat cutting; meat and fish canning, curing and packing; fruit and vegetable preserving; milk, sugar, and beverage processing; preparation of pre-cooked foods, meals or ingredients; and marking and packaging when it is part of the production process. These occupations are classified in the following unit groups:

- 8210** Foremen: Food, Beverage and Related Processing Occupations
- 8211** Flour and Grain Milling Occupations
- 8213** Baking, Confectionery Making and Related Occupations
- 8215** Slaughtering and Meat Cutting, Canning, Curing and Packing Occupations
- 8217** Fish Canning, Curing and Packing Occupations
- 8221** Fruit and Vegetable Canning, Preserving and Packing Occupations
- 8223** Milk Processing and Related Occupations
- 8225** Sugar Processing and Related Occupations
- 8226** Inspecting, Testing, Grading and Sampling Occupations: Food, Beverage and Related Processing
- 8227** Beverage Processing Occupations
- 8228** Occupations in Labouring and Other Elemental Work: Food, Beverage and Related Processing
- 8229** Food, Beverage and Related Processing Occupations, n.e.c.

8210-FOREMEN: FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in preparing food and related products for commercial and domestic use.

8210-110 FOREMAN, BAKING, CONFECTIONERY-MAKING AND RELATED OCCUPATIONS (bake. prod.; confection.; food & bev., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in making bakery products, such as breads, cakes, pastries; dried-food pastes, such as macaroni and noodles; cooked cereals; and confectionery products, such as chocolate and cocoa confections, candies, chewing gum, popcorn, roasted and salted nuts, (Unit Group 8213): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Bakery(bake. prod.) Foreman, Candy Making(confection.) Foreman, Chocolate Candies(confection.) Foreman, Nut Processing(confection.)

8210-114 FOREMAN, BEVERAGE-PROCESSING OCCUPATIONS(distill., brew. & ferment.; food & bev., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in processing beverage products, such as coffee, tea, soft drinks, fruit juices, beer, wine and liquor, (Unit Group 8227): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Cellarmaster, Winery(distill., brew. & ferment.) Foreman, Coffee Roasting(food & bev., n.e.c.) Foreman, Distilling(distill., brew. & ferment.) Foreman, Tea Blending(food & bev., n.e.c.)

8210-118 FOREMAN, FISH-CANNING, CURING-AND-PACKING OCCUPATIONS (fish process.) DPT:138

Supervises and co-ordinates activities of workers engaged in preparing, preserving and packing fish and shellfish for use as food and by-products, (Unit Group 8217): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Fish Freezing and Storage

Foreman, Fish Preparation
Foreman, Fish Reduction

**8210-122 FOREMAN, FLOUR-AND-GRAIN-MILLING
OCCUPATIONS** (animal & veg. oil; feed & flour
mill.; food & bev., n.e.c.) **DPT:138**

Supervises and co-ordinates activities of workers concerned with cleaning, separating, crushing, grinding, blending, filtering, neutralizing, steeping and otherwise processing grains, corn and oil seeds to make flour, starches, vegetable oils, and related products including animal feeds, (Unit Group 8211):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Dry Starch(food & bev., n.e.c.)
Foreman, Feed Blending(feed & flour mill.)
Foreman, Feed Milling(feed & flour mill.)
Foreman, Flour Milling(feed & flour mill.)
Foreman, Grain Elevator(food & flour mill.)
Foreman, Vegetable-Oil Milling(animal & veg. oil)
Foreman, Wet Starch(food & bev., n.e.c.)

**8210-126 FOREMAN, FRUIT-AND-VEGETABLE-CANNING,
PRESERVING-AND-PACKING OCCUPATIONS**
(can. & preserv., n.e.c.) **DPT:138**

Supervises and co-ordinates activities of workers engaged in preparing and preserving fruit and vegetables by canning, dehydrating, freezing, pickling or using other preservatives, (Unit Group 8221):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Chief Cook, Jam
Foreman, Jelly Processing
Foreman, Pickles and Relish Processing
Foreman, Vegetable Soups

**8210-130 FOREMAN, INSPECTING, TESTING, GRADING-
AND-SAMPLING OCCUPATIONS: FOOD,
BEVERAGE AND RELATED PROCESSING**(distill.,
brew. & ferment.; food & bev., n.e.c.; whole. trade)
DPT:138

Supervises and co-ordinates activities of workers engaged in developing, inspecting, testing, grading and sampling foods and beverages, (Unit Group 8226):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Food Testing(food & bev., n.e.c.)
Foreman, Fruit Grading(whole. trade)
Foreman, Testing and Analysis(food & bev., n.e.c.)
Supervisor, Control Laboratory(distill., brew. & ferment.)

**8210-134 FOREMAN, LABOURERS AND ELEMENTAL
WORKERS: FOOD, BEVERAGE AND RELATED
PROCESSING**(distill., brew. & ferment.; food &
bev., n.e.c.) **DPT:138**

Supervises and co-ordinates activities of workers engaged in labouring or other elemental work concerned with preparing food and related products for commercial or domestic use, (Unit Group 8228):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Wash House(distill., brew. & ferment.)
Foreman, Yard(distill., brew. & ferment.)

**8210-138 FOREMAN, MILK-PROCESSING
OCCUPATIONS**(dairy) **DPT:138**

Supervises and co-ordinates activities of workers engaged in processing raw milk and cream to make pasteurized milk and cream, and butter, cheese, ice cream, frozen novelties and other dairy products, (Unit Group 8223):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Dairy Products
Foreman, Ice Cream
Foreman, Milk Production

**8210-142 FOREMAN, SLAUGHTERING-AND-MEAT-
PACKING OCCUPATIONS** (slaught. & meat pack.)
DPT:138
foreman, abattoir.

Supervises and co-ordinates activities of workers engaged in slaughtering animals and poultry; preparing, preserving and packing meats; and processing edible and inedible by-products for food or other uses, (Unit Group 8215):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Beef Boning and Cutting
Foreman, Beef Dressing
Foreman, Cook Room
Foreman, Ham Curing
Foreman, Hide Curing
Foreman, Pork Cutting
Foreman, Poultry Eviscerating
Foreman, Rendering

**8210-146 FOREMAN, SUGAR-PROCESSING AND
RELATED OCCUPATIONS** (sugar) **DPT:138**

Supervises and co-ordinates activities of workers engaged in extracting, refining and processing sugar, molasses and sugar by-products from materials such as raw cane sugar, sugar beets and corn, (Unit Group 8225):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Char-House Foreman
Filter-House Foreman
Pan-House Foreman
Pulp-Drier Foreman
Raw-Sugar Foreman

**8210-199 OTHER FOREMEN, FOOD-AND-BEVERAGE-
PROCESSING OCCUPATIONS**

This group includes food and beverage processing foremen, not elsewhere classified; for example, those who supervise and co-ordinate the activities of workers engaged in refining chocolate and processing potato chips.

Typical examples of occupational titles covered by this residual group definition are:

Foreman, Chocolate Refining(food & bev., n.e.c.)
Foreman, Potato-Chip Processing(food & bev., n.e.c.)

8211-FLOUR AND GRAIN MILLING OCCUPATIONS

This unit group includes occupations concerned with cleaning, separating, crushing, grinding, blending, filtering, neutralizing, steeping and otherwise processing grains, corn and oil seed to make flour, starches, vegetable oils, and related products including animal feeds. Occupations concerned with converting corn starch into glucose and processing corn sugar and corn syrup are classified in Unit Group 8225, SUGAR PROCESSING AND RELATED OCCUPATIONS.

Flour and Grain Processing Occupations 8211-110 through 8211-194

8211-110 RICE MILLER(feed & flour mill.) DPT:460
GED: 3 SVP: 8 EC: 1 5 PA: M 2 3 4 7

Sets up and monitors operation of rice-milling machines that clean, separate, hull and polish rice:

Determines amounts and grades of rice to be milled and prepares machine-production schedules. Selects and installs screens and augers in separators and hullers that abrade bran from grains to conform with specified grade, using hand tools. Examines and feels rice grains in feed hoppers and outlets of machines to assess progress of cleaning and polishing, and ratio of broken to whole grains. Turns wheels to adjust hullers and reduce amount of broken rice. Adjusts flow of desiccant powder from metering dispenser to reduce stickiness of bran and adjusts aspirators that remove dry bran from screens. Turns valve to adjust flow of polishing solution to tumbling screens used to polish rice. Changes grading screens in grinders that reduce broken grains into brewers' rice, using hand tools. Records production data. Directs activities of other workers engaged in storing and conveying rice and tending rice-milling machines. Cleans, lubricates and maintains milling equipment, bucket elevators and conveyors.

8211-114 MILLER(feed & flour mill.) DPT:562
GED: 3 SVP: 6 EC: 1 5 6 7 PA: L 2 4 7

Operates cracking rolls, hammer mills, high-speed grinder or buhr mill to grind flour, meal, grits or hominy, according to specifications: Opens and closes slides in spouts to route grain to required grinders. Turns wheels, or actuates panel controls to adjust pressure of rollers for each passage of grain, or adjusts pressure of grinding stones according to grain size, hardness and fineness specified for product. Adjusts feed chutes to regulate flow of grain to equipment. Reads dials and presses panel buttons to control humidity. Obtains and sends samples of ground grain to laboratory for analysis. Records production data. Replaces worn grinding rollers or stones, using chain hoist and hand tools, and lubricates machines. Directs workers engaged in cleaning grain, sifting or bolting meal or flour, or routing grain or products by conveyor to screening equipment and to storage bins. May be designated according to type of equipment operated, or according to kind of grain or cereal milled; for example, Buhr-Mill Operator
Dry-Corn Miller
Flour Miller

8211-118 MILLER, CUSTOM-FEED(feed & flour mill.) DPT:562
custom-feed preparer.
GED: 3 SVP: 6 EC: 1 6 7 PA: M 2 4

Operates grinding and mixing machines and related equipment to process and bag custom lots of animal and poultry feed, according to specifications:

Moves hand controls to adjust and start roll grinders to grind grain and other feed materials as specified. Weighs, and transfers ground feed on conveyor to mixing machine. Adds specified amounts of supplements, such as malt, salt, vitamins, antibiotics, proteins and minerals, using scoop or spray system. Actuates mixing-machine controls to mix feeds for required time. Inspects processed feeds for consistency and texture. Starts conveyors to transport mixed feeds to bagging and sealing machines. Shovels up excess feed or spillages and frees blockages in conveyors. Records production data. Directs workers engaged in mixing, bagging, shipping and storing feed. May compute charges and collect payments. May purchase supplies and keep financial records.

8211-122 FLAKE MILLER(feed & flour mill.; food & bev., n.e.c.) DPT:582
GED: 3 SVP: 6 EC: 1 6 7 PA: L 2 4 7

Operates drier, huller, separator, cutter, cooker, flake roller and auxiliary equipment to process grain into products such as rolled-oat flakes:

Adjusts slides in chutes and turns valves to regulate flow of grain to machines. Adjusts flow of drying and cleaning air, and routes grain to mechanical cleaner. Feels cleaned material to determine amount of hulling required. Observes hulling process and adjusts speed of

machines used to remove hulls from grain. Routes grain to drying units and to meal-cutting machine. Turns valves to regulate temperature and moisture in cooker, and adjusts tension on flaking-machine rolls according to condition and thickness of rolled flakes. Transfers flakes to humidifying bins for tempering when specified, and transfers tempered flakes through cooker and flaking rolls to produce instant cereals. Makes minor adjustments to system, and verifies loads on conveyors and rollers, using ammeter. Removes and weighs samples from cracking and flaking mills, using scoop and scales. Measures thickness of flake, using micrometer, and compares test results with specifications. Records test results, production data and ammeter readings in log book.

May tend machines to crack, flake and clean soya beans prior to extraction of oil. May be designated according to product milled; for example,

Miller, Oats(food & bev., n.e.c.)
Soya-Mill Operator(feed & flour mill.)

8211-126 GRAIN MILLER(distill., brew. & ferment.; feed & flour mill.) DPT:562
GED: 3 SVP: 4 EC: 1 6 7 PA: L 4 6 7

Controls machines and equipment to clean and grind whole grain for further processing:

Actuates panel controls to start automatic cleaning machine that blows and sifts foreign particles such as dirt, stones and twigs from whole grain, and conveys clean grain to storage tank. Starts pump to transfer clean grain from storage tank into scale-hopper, and records weight of grain prior to grinding. Adjusts plates in grinding machine, according to specifications, using hand tools. Opens valves and pushes switches on panel to start grinding machine and regulate flow of grain from hopper. Pumps ground meal into scale-hopper, and records difference in weight of material before and after grinding. Listens to operating machinery to detect malfunctions. Signals workers to clean or change screens on cleaning machine, to start and stop pumps, conveyors and machines, and lubricate machinery. Records production data.

May inspect carloads of whole grain to detect foreign material. May collect grain samples for laboratory analysis. May clean and grind grain for use in distilling and be designated accordingly, Grinder Operator, Distillery(distill., brew. & ferment.)

8211-130 CEREAL CLEANER(food & bev., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: 1 5 6 7 PA: M 4 7

Operates equipment to separate, clean, wash and moisten grain, such as wheat and corn, preparatory to milling to make breakfast food: Starts conveyors to transfer grain to vibrating screens in grading and cleaning equipment. Sets thermostat of water heater at specified temperature. Turns valves and moves controls to regulate flow of grain and water through washer and drier machines. Transfers grain to soaking bin for tempering to increase moisture content of grain, according to temperature of batch and precise laboratory instructions, preparatory to milling. Monitors movement of material on conveyors and through screens, and removes blockages.

8211-134 FEED MIXER(feed & flour mill.) DPT:585
batch mixer, feed; travelling-scale operator.
GED: 3 SVP: 4 EC: 1 5 7 PA: L 4 7

Tends machines that collect, convey, weigh, mix, test and bag livestock and poultry feeds, by performing any combination of following duties:

Starts conveyor to transfer batches of prescribed grains or by-products from storage to scale bin and weighs batches. Adjusts size of dump openings to synchronize emptying of bins with rate of flow of grain into mixing unit. Starts mixing machine, elevators and conveyors to mix and transfer feed to storage or bagging-machine hoppers, using push-button control panel. Moves electric powered travelling-scale bin along tracks, using hand controls, to collect prescribed quantities of feeds from overhead bins. Sets markers on scale face to aid in measuring cumulative quantities of feed to be mixed. Moves levers to open chute of specified overhead bins to allow prescribed quantity of each feed to drop into scale bin. Moves loaded bin into position over mixer and opens chute to drop feed into mixer. Operates feed mixer during specified interval and discharges contents into conveyor system. Transfers molasses from drum through piping to heating unit and regulates heater temperature. Adjusts speed of conveyor, nozzles and valve controls to spray specified amount of molasses into moving feed. Examines feed periodically to ensure prescribed quantity of molasses is added and to correct any malfunctioning in conveyor system.

Weighs and premixes additives such as vitamin or mineral supplements according to formulas, using scale and mixing machine. Collects samples of raw materials and finished feed products for laboratory analysis, or tests moisture content of feed and durability of pellets. Places bag under hopper spout, fills, weighs and sews top of bag shut, using scale and portable sewing device. Records weight of feeds mixed or grains used.

May be designated according to type of feed mixed or according to ingredient mixed with feed; for example,

Dairy-Feed Mixer
Molasses Mixer
Poultry-Feed Mixer

8211-138 RICE-MILL WORKER(feed & flour mill.) DPT:585
GED: 2 SVP: 5 EC: I 5 PA: L 4 7

Tends machines that clean, mill, brush, grade and polish cargo (brown) rice, to produce finished rice, performing any combination of the following duties, working as member of a team:

Removes sample of brown rice from shipments received, and verifies grade of grain using test mill. Transfers rice by conveyor to storage bins, according to grade of grain, and records quantities received. Turns valves to open feed pipes to transfer specified grades and quantities of rice from storage to designated milling machines, such as hullers, separating machinery and cleaner, and presses control buttons to start machines. Turns wheels and valves to adjust feeder equipment and regulate air suction in aspirator to cool rice and remove bran. Presses control to start machine that mixes ingredients to make polishing solution and turns valve to transfer polish into rice-polishing machine. Observes rice passing through separating machines, and moves lever to adjust rice grader to ensure proper separation of grain to meet production requirements and quality standards.

May be designated according to specific duties assigned; for example, Floorman, Rice Mill
Hullerman
Rice-Grader Tender

8211-140 GRAIN-SAMPLE MILLER(feed & flour mill.) DPT:585
laboratory miller.
GED: 2 SVP: 4 EC: I 5 6 7 PA: M 4 7

Tends machines that clean, grind and sift small quantities of grain to prepare samples of flour for laboratory testing:

Pours grain sample into cleaning machine that removes chaff, dirt and undesirable seeds. Places grain sample in closed container, adds water to give standard moisture content, and allows grain to stand for specified time. Dumps grain into milling-machine hopper and grinds it into flour. Cleans mills with brush during and after each run to obtain maximum flour yield. Dumps flour into sifting machine to make standard flour samples. Weighs and dumps flour sample into container, and records identifying data and weight for laboratory information.

May add water to flour sample to make flour and water slurry and compare colour with standard chart.

8211-142 FLOUR BLENDER(feed & flour mill.) DPT:685
GED: 2 SVP: 4 EC: I 5 6 7 PA: L 4

Tends machines that sift, blend and convey flour:

Starts pneumatic-flow or screw-feed conveyors, or turns chute valves to transfer flour from milling machine or storage bins to mixing-machine hopper. Starts mixing machine and moves lever or control switch to transfer blended flour to sifting machine that removes lumps. Actuates conveyor controls to transfer sifted flour to packing-machine bins. Feels sifted flour to detect unevenness in texture that may indicate damaged screens. Hammers conveyor chutes with mallet to dislodge blockages.

May gather flour samples from machines for laboratory analysis. May tend machine which grinds flour.

8211-146 MASH DRIER(distill., brew. & ferment.; feed & flour mill.) DPT:685
dry-house operator.
GED: 2 SVP: 4 EC: I 3 4 PA: L 2 4 6 7

Tends press and associated drying equipment from control panel to make animal feed from fermented grain mash:

Actuates panel controls to pump mash from storage tanks onto filter

screens that strain liquids and discharge solids into powered roller press that extracts residual moisture. Transfers pressed feed by conveyor to hopper of feed-bagging machine or bulk loader. Monitors signal lights and meters on panel and listens for alarm signals. Observes gauges and operation of equipment at various locations in drying house, according to instructions. Cleans and sterilizes screens and rollers of press using steam and water hose. Shovels and sweeps up spillages in work area.

May tend oil-fired drier to dehydrate pressed feed prior to conveying it to bulk loader. May record production data.

8211-150 FEED GRINDER(feed & flour mill.) DPT:585
miller, feed.
GED: 2 SVP: 3 EC: I 5 7 PA: M 4

Tends machines and related equipment to grind feed for livestock or poultry:

Opens chute to regulate flow of ingredients, and starts grinder rollers or hammer mill. Turns handwheel to adjust distance between rollers or adjusts control to regulate speed of mill, according to fineness required. Feels and inspects ground-feed sample to ensure conformity with grit and texture specifications, or sends samples to laboratory for analysis. Presses button to dump ground feed onto conveyors leading to scale tanks and specified storage or packing-machine bins. Records daily production of ground feeds.

May tend separator to clean grain prior to grinding, or to sift ground grain. May be designated according to type of machine used; for example, Hammer-Mill Tender
Roller-Mill Tender

8211-154 DRIER TENDER, GRAIN(distill., brew. & ferment.; feed & flour mill.; food & bev., n.e.c.) DPT:585
dehydrator, grain.
GED: 2 SVP: 3 EC: I 5 7 PA: L 2 4 6 7

Tends drying equipment to remove moisture from grain, prior to storage or processing:

Turns valves to control heat in drier. Starts pumps, fans and conveyors that carry material through drier and auxiliary equipment such as filters, shakers and separators. Reads thermometers, gauges and recorders to monitor process and maintain specified operating conditions. Listens for alarm indicating excessive temperature. Observes conveyors transferring material and adjusts rate of flow into machines to meet requirements. Prevents or removes conveyor blockages. Observes dried material and tests with moisture meter to ensure conformity with standards, or sends sample of dried product to laboratory for analysis. Records instrumentation readings and other production data in log book.

May be designated according to material dried or kind of drier tended; for example, Cleaner-Drier, Grain(feed & flour mill.; food & bev., n.e.c.)
Drum-Drier(distill., brew. & ferment.; feed & flour mill.)
Flash-Drier(feed & flour mill.; food & bev., n.e.c.)
Grain-Drier(distill., brew. & ferment.; feed & flour mill.)

8211-158 BOLTER(feed & flour mill.) DPT:665
GED: 2 SVP: 3 EC: I 5 6 7 PA: L 4 7

Tends sifting and purifying machines that separate flour, middlings or other fine grain products such as animal feeds, and screen out foreign material:

Opens spouts and adjusts feed slides to route flour or grain product to machines. Opens bags and dumps flour into sifter hoppers. Regulates flow of flour across sifters to avoid overloading and uses paddle to dislodge overloads. Feels sifted product to detect uneven texture resulting from breaks in screen or inadequate processing. Removes and replaces broken screens. Tallies weights of various grades of sifted products as indicated on automatic scales. Collects samples of sifted product for laboratory analysis.

May tend roll-grinding machine to make finely ground flour. May inspect dust-collecting equipment to detect malfunctioning. May remove metal and other foreign objects from scrap-removal devices. May be designated according to product separated, or machine tended; for example, Feed Sifter
Flour Sifter
Middlings Purifier
Sifter Tender

8211-162 GRAIN CLEANER(feed & flour mill.) DPT:685
cleaner man.
GED: 2 SVP: 3 EC: I 5 6 7 PA: H 4

Tends machines that remove foreign matter, separate and dry grain preparatory to milling:

Dumps bags of grain into cleaning machine hopper or adjusts slides in bin spouts, and starts elevators to route grain from storage bins to machines. Turns valves to adjust air suction to remove dust and moisture from separators and to regulate flow of air through drier. Adjusts separator screens according to specified rate of flow and amount of refuse. Replaces damaged screens. Hooks bag under end of screen to catch refuse. Monitors flow of grain entering machines to prevent overloading. Inspects processed grain to ensure cleanliness. Pounds chutes with mallet to dislodge minor blockages and turns off elevators or conveyors for major stoppages.

May weigh and bag cleaned grain and rejected material and record weight of bagged material on tally sheet. May tend separating and cleaning machines to remove foreign matter from such products as macaroni, beans, peas, and spaghetti prior to processing. May be designated according to particular machine tended or type of grain cleaned; for example,

Seed Cleaner

Separator Tender

8211-166 FEED-PRESS MAN(feed & flour mill.) DPT:685
germ-press tender.
GED: 2 SVP: 3 EC: I 4 PA: H 4

Tends filter press to remove water from corn fibre and gluten, or oil from corn germ, used to make livestock feed:

Turns valves to control flow of material to press. Observes gauges for increased pressure which indicates need for cleaning presses. Turns valve to release ram and permit opening of press for cleaning. Inserts tool to lift and separate plates to free filter cloths. Pulls cloths, loaded with solids from press and shakes material onto conveyor, or brushes residue into pan for further processing into feed. Places clean filter cloths between plates and closes press.

May pump steepwater, as directed, to alter consistency of material being filtered. May cut new filter cloths, using scissors.

8211-170 FLOUR MIXER(feed & flour mill.; food & bev., n.e.c.) DPT:685
blender operator.
GED: 2 SVP: 3 EC: I 5 PA: M 3 4

Tends machines that mix and sift flour and ingredients to produce pre-mixed flours or special cereal products:

Turns dial of machine that blows measured amounts of various kinds of flour into mixer. Reads formula and dumps pre-weighed ingredients, such as buttermilk solids, phosphate, soda, sugar, and vitamin fortifiers into bin. Presses button to blow ingredients from bin into mixing machine, sifting unit and back to storage bins.

May change sifter screens using hand tools. May record amounts of ingredients in each batch. May be designated according to type of flour mixed; for example,

Pancake-Flour Mixer(food & bev., n.e.c.)

Ready-Mix Maker(food & bev., n.e.c.)

8211-174 GRAIN MIXER(feed & flour mill.) DPT:685
GED: 2 SVP: 3 EC: I 5 6 7 PA: L 2 4

Tends equipment that mixes grain preparatory to milling into blended flour:

Starts belt conveyor and adjusts valve controls on automatic feeders to regulate proportions and single specified grades of grain flowing from storage tanks onto conveyor. Starts conveyors to transfer mixed grain to milling department. Inspects grain visually, for smut, rust, or other contaminants. Determines and records weight of test bushel of mixed grain, using standard measure. Extracts samples of mixed grain from conveyor-chutes for laboratory analysis. Patrols conveyor systems to clear blockages and clean equipment.

May assist in weighing railroad carloads of grain.

8211-178 CUSTOM-FEED-MILL HELPER(feed & flour mill.) DPT:686
GED: 2 SVP: 3 EC: I 6 7 PA: VH 3 4

Helps miller to mix, bag and ship custom lots of animal and poultry feeds:

Fills designated bins with feed materials. Loads and mixes specified feed materials in mixing machine. Holds bag under automatic weigher and releases processed feed grain into bag. Closes top of bag, using machine stitcher. Loads specified number of bags, or positions chute leading to vehicle and releases bulk feed for shipment, by moving gate lever. See also definition for term title, 02-160 HELPER (any ind.).

8211-182 FEED BLENDER(feed & flour mill.) DPT:585
blender and packer.
GED: 2 SVP: 2 EC: I 5 7 PA: M 2 4

Tends mixing tubs that blend wet or dry ingredients used for animal feeds:

Turns valves to admit measured amounts of materials such as bran, gluten and steepwater (starch in solution) into tubs, or weighs and dumps specified quantities of dry grain products and supplemental materials into tubs. Starts paddle agitators. Feels sample of mixture to test consistency, or removes sample of blended product for laboratory analysis to ensure conformity with specifications. Pulls lever to open sliding gate and drain mixture from tubs, or dumps dry mixture into bags or barrels. Records daily production in log book.

8211-186 BOLTER HELPER(feed & flour mill.) DPT:685
flour purifier.
GED: 2 SVP: 2 EC: I 5 6 7 PA: L 3 4

Helps tend conveying equipment, sifters and purifiers that separate flour, middlings or other fine-grain products:

Opens slides in chutes and starts elevators to convey flour to sifters, purifiers and grinding machines. Adjusts purifier-feed valve to regulate flow of flour through chutes to purifier machine. Pounds on chutes with mallet to keep flour in motion. Brushes cloth sieves in sifters and purifiers to prevent clogging. See also definition for term title, 02-160 HELPER (any ind.).

May visually inspect middlings to verify or adjust settings of purifier machine controls. May collect samples from conveyors and bins for laboratory analysis, using sample cups.

8211-190 PELLET-MILL TENDER(feed & flour mill.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machines that press ingredients into pellets for poultry and livestock feed:

Turns steam valves to regulate temperature of pellet-mill machine and materials. Observes ammeter and turns valves to regulate flow of material to machine. Adjusts flow of air to cool pellets in cooler. Adjusts nozzles to regulate flow of molasses into ingredients and turns steam valves to regulate temperature of molasses. Tends bucket elevator equipment or regulates flow of pellets down chutes, to transfer pellets to storage or packing areas.

May tend feed mixer to add molasses to ingredients.

8211-194 GRAIN-CLEANER HELPER(feed & flour mill.) DPT:686
GED: 2 SVP: 2 EC: I 5 7 PA: M 4

Helps tend conveyors and separator machines for cleaning and drying grain:

Starts conveyors to carry grain to machines and equipment that clean, dry and separate grain from unwanted material. Pounds on side of elevator chutes with mallet to relieve stoppages. Adjusts machines to regulate flow of grain through screens. See also definition for term title, 02-160 HELPER (any ind.).

May fill bags or other containers with cleaned or processed grains and load containers onto vehicles for shipment. May position and hold chute over trucks or railroad cars to load with bulk grain.

Starch-Processing Occupations
8211-214 through 8211-262

8211-214 DRY-STARCH MAKER(food & bev., n.e.c.) DPT:562
dry-starch operator.
GED: 3 SVP: 5 EC: I 6 7 PA: L 2 3 4 7

Controls equipment to mix chemical solutions with raw corn starch in suspension, and dry these mixtures to produce refined dry-starch blends:

Signals other worker to start pumps to transfer starch material into mixing or storage tanks and to dump or pour measured amounts of chemicals into mixing tanks. Reads specification charts and meters and turns valves to pump and blend solutions in tanks as specified. Actuates switches and turns valves to regulate heaters and mixing agitators and to pump starch mixtures into blending tanks and into drying equipment located on various levels or floors of building. Directs workers engaged in tending auxiliary processing equipment such as filters, shakers, centrifuges and driers. Observes gauges, thermometers and meters and inspects equipment to maintain standard production procedures. Draws samples of product and performs titration test to determine acidity or alkalinity of solutions. Tests solutions using hydrometer to ensure conformity with specifications. Records quantity and kind of chemicals used.

May grind and mix dried starches to make special starch blends and be designated accordingly.
Special-Starch Mixer

8211-218 DEXTRINE MAKER(food & bev., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I 7 PA: L 4

Controls operation of steam-jacketed cooker to convert mixture of corn starch and acid to dextrine paste or solution, for use in making adhesives, fillers and sizing:

Turns valve on control panel to open starch-feed gate or shovels starch into cooker. Opens valve to add amount of acid specified on chart to start conversion process. Injects live steam into cooker to accelerate reaction of starch. Switches on agitator to stir acidified starch while cooking. Observes temperature gauge and process to determine when conversion is completed. Turns valve to transfer dextrine to tanks for further processing.

8211-222 STEEPMAN(food & bev., n.e.c.) DPT:565
steeping-tank tender.
GED: 3 SVP: 4 EC: I 7 PA: L 2 4

Tends steep tanks to soften corn prior to grinding, and to produce steepwater used for making various products:

Opens hatch and chute gate and signals other worker to load tank with corn. Turns valves and starts pumps to fill tank to specified level with steepwater. Observes thermometers and opens steam valves to heat contents to specified temperature. Tends sulphur burner or opens valve to inject sulphurous acid into steepwater. Tests specific gravity of steepwater using hydrometer, or sends sample to laboratory for analysis to determine when steeping process is complete. Starts pumps to draw off steepwater for further processing. Records production data and laboratory test results for each batch. Washes steep tank after each batch, using water hose.

8211-226 STARCH-CENTRIFUGE TENDER (food & bev., n.e.c.) DPT:685
GED: 3 SVP: 4 EC: I 5 6 7 PA: L 2 4

Tends centrifugal separator and flotation cells that separate starch from gluten:

Turns valves and moves levers to control flow of steam, water, air and material into centrifuges and flotation cells, and to control temperature and specific gravity of material. Starts centrifuges to separate starch out of material and remove water from gluten. Inspects, cleans and lubricates equipment. Observes gauges and turns valves to maintain specified level of wash and dilution waters in supply tanks. May tend machine that washes separated, semi-refined starch.

8211-230 DRY-STARCH-MAKER HELPER(food & bev., n.e.c.) DPT:585
starch-mixer-and-drier helper.
GED: 3 SVP: 4 EC: I 5 7 PA: M 2 4

Tends equipment to help mix and dry raw corn starch suspensions to produce dry-starch blends:

Dumps pre-weighed quantities of chemicals into mixing tank to prepare specified treating solutions. Observes signals from next work station, and manipulates switches and turns valves to start pumps, heaters and agitators, and admit raw starch and chemical-treating solutions into blending tanks. Transfers mixture to filters and driers. Observes thermometers and gauges to ensure efficient operation of equipment. Draws samples of mixtures and sends to laboratory for analysis. Feels starch being conveyed from driers to verify moisture content. Records production data. Flushes and cleans equipment, using water hose and cloths. See also definition for term title, 02-160 HELPER (any ind.).

8211-234 WHEAT-STARCH MAKER(food & bev., n.e.c.) DPT:565
GED: 3 SVP: 3 EC: I 4 5 PA: L 2 4

Tends equipment that separates starch in liquid suspension with wheat flour, and purifies solution for conversion into sugar and glucose:

Flushes shaker screen containing wheat flour, using water hose to remove foreign matter and form crude starch suspension. Turns valves on various levels of plant to admit suspension and water to settling and wash tanks in which lighter impurities rise to surface, forming scum (brown starch). Turns valves to transfer scum to starch tables and settling tanks, to separate out white starch. Pumps white starch into vat, starts agitator and adds water to form white-starch suspension. Adds measured amounts of specified chemicals to further purify product. Removes samples of mixture from vat, sends to laboratory for analysis, and records results. Turns valves and starts pumps to transfer solution to storage tanks preparatory to conversion into sugar and glucose. Dismantles, cleans and reassembles piping and equipment using hand tools. Cleans work area using brush, mop and water hose.

8211-238 GERM-SEPARATOR(food & bev., n.e.c.) DPT:585
GED: 3 SVP: 3 EC: I 5 7 PA: L 2 4

Tends flotation machine to remove germs (embryos) from cracked grain:

Determines specific-gravity suspension of cracked-grain in steepwater, using hydrometer and charts, according to grain being processed. Turns valves at various levels of plant to add grain or steepwater to attain required density of grain suspension. Starts machine that agitates suspension to permit oil-laden germs to rise and float on surface. Turns valve to add liquid of specified density to cause remaining germs to float and to test residue for presence of germs. Removes floating germs using skimmer. Collects and sends samples of material to laboratory for analysis. Records production data. May turn valves to regulate flow of materials to reels and shakers to remove bran and other fibres from starch suspension. May separate germs from cracked grain using hydrocyclone (centrifugal cleaning equipment).

8211-242 MILLER, WET PROCESS(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 4 EC: I 5 7 PA: L 4

Tends mills that crack and grind steeped or degerminated grain, such as corn, to facilitate separation of starch, bran and gluten:

Turns hand wheels and moves levers to regulate spacing of buhrs (grindstones) and to control flow of grain through gates. Opens valve to start flow of liquid starch into mill to flush buhrs and separate materials. Feeds ground grain to ensure desired fineness is attained. May signal millhouse workers to ensure continuous flow of material to grinding mill. May tend shakers or filters to wash and remove residual starch and gluten from ground grain, and wash filters using water hose.

8211-246 NEUTRALIZER(food & bev., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I 7 PA: M 4 7

Neutralizes corn-starch liquor preparatory to making glucose:

Weighs prescribed amount of soda ash on scales and dissolves it in container of water. Pours solution into neutralizing tank containing corn-starch liquor and starts agitator. Obtains sample from tank and holds it up to light to detect formation of precipitate. Adds soda-ash solution, as required to form precipitate. Pumps neutralized liquor to holding tank.

May tend filter press to purify neutralized liquor. May acidify and

neutralize raw starch in solution, to make starch products on batch basis, according to formulas.

8211-250 STARCH SEPARATOR(food & bev., n.e.c.)

DPT:585

GED: 2 SVP: 3 EC: I 5 PA: M 2 4

Tends reels and shakers that separate and remove bran, gluten, or other insolubles from starch suspension:
Starts reels or shakers and turns valves to admit and regulate flow of liquid-starch suspension. Starts conveyor that carries off insolubles separated from suspension. Takes samples of liquid starch and tests specific gravity, using hydrometer, or sends sample to laboratory for analysis. Cleans shakers or reels with cleaning solution, water hose, rag and brush. Replaces worn or broken bearings, springs, and other parts, using hand tools. Records production data.
May maintain level of starch-supply tanks to shakers. May be designated according to type of separator tended,
Shaker Man

8211-254 BREAKERMAN(food & bev., n.e.c.)

DPT:685

GED: 2 SVP: 3 EC: I 4 5 PA: L 2 4

Tends equipment to maintain specific gravity of starch suspensions emerging from filter machines and starch-flushing system, and transfers solution for conversion into sugar and glucose:
Dips sample of starch materials from breaker tank and sends to laboratory for analysis. Turns valves to return suspensions for reflushing if density does not meet standards. Starts agitators in tank to prevent starch from settling. Turns valves and starts pumps to transfer solution to storage tanks. Cleans work area and floor using water hose and mop.

8211-258 STARCH WASHER(food & bev., n.e.c.)

DPT:685

filterman, starch.

GED: 2 SVP: 3 EC: I 4 5 7 PA: L 4

Tends filtering and washing equipment that separates cornstarch from undesirable protein solids:
Starts washing machine and turns valves to admit starch suspension from storage tank through filters, or transfers dry starch from storage tank into machine for specified washing process. Turns valve to control flow of wash water to filter-spray nozzles. Separates washed starch from water by pumping starch suspension through separator machine, and then into rotary drier to remove excess moisture. Reads thermometers and adjusts steam valve to maintain specified temperatures. Controls flow of water into standardization tanks to regulate specific gravity of starch suspension as determined by hydrometer and charts. Changes damaged filter cloths, using hand tools, and flushes soiled cloths with water hose. Clears obstructions in spray nozzles by inserting wire probe.
May invert filter boxes to remove solid starch cakes, or shovel out starch on to handtruck preparatory to further processing.

8211-262 GLUTEN-SETTLING MAN(food & bev., n.e.c.)

DPT:685

GED: 2 SVP: 2 EC: I 4 7 PA: M 2 4

Tends settling tanks that separate gluten from water:
Turns valves to discharge gluten and water from starch tables into tank. Adjusts inlet and outlet valves to maintain constant level in tank until water has drained from settled gluten. Starts pump that transfers gluten to plate press. Pushes remaining gluten from tank into drain outlet, using squeegee, and cleans tank with water hose.
May weigh and dump required amount of acid to acidify raw starch solutions according to formula, preparatory to cooking.

Vegetable-Oil Processing Occupations

8211-282 through 8211-302

8211-282 EDIBLE-OIL REFINER(animal & veg. oil)

DPT:562

GED: 3 SVP: 7 EC: I 4 5 6 PA: M 2 4 7

Controls equipment that refines vegetable oils for use in preparing foods:
Weighs, measures and compounds refining and neutralizing agents in mixing vessels, as specified by work orders. Actuates panel controls to

start pumps, and sets valves as specified, to adjust temperatures and pressures for equipment operation. Transfers oil and caustic solution from storage tanks through scale tank into neutralizer or other machine tank. Pumps refining agent into tank to separate free fatty acids (caustic-formed soap stock) from oil by mechanical or chemical action. Verifies neutrality of soap stock by titration, and pumps soap stock to holding tank. Sets thermostat, and observes gauges and regulates valves to maintain prescribed temperatures and pressures. Turns valve to pump mixtures to washing and drying tanks to remove by-products and impurities. Removes sample of oil for laboratory analysis, and reprocesses material as indicated by test results. Turns valves to pump refined oil to storage tanks. Cleans equipment and work area using steam, hot water, scrapers and rags. Records production and shift data in log book.
May pump oil through vacuum-heating equipment and inject superheated steam into oil to remove odours. May bleach oil by adding filtering agent, starting agitators and pumping oil through filter presses to cooling tank. May chill and filter oil to remove stearins. May unload crude oil and caustic from incoming tank cars into storage tanks and ship refined oil and soap stock. May be designated according to kind of oil or process used; for example,
Bleacher Operator
Deodorizer Operator
Peanut-Oil Refiner
Winterizer Tender

8211-286 VEGETABLE-OIL EXTRACTOR(animal & veg. oil)

DPT:682

GED: 3 SVP: 6 EC: I 5 6 7 PA: M 2 3 4 7

Controls machines that extract edible oils and by-products from oilseed, such as soybean, cotton seed, and corn germ:
Tests samples of incoming seed for moisture content, using analyzer to determine degree of drying required and machine settings for optimum rate of production of rolling, drying, cooking and oil expelling machines. Sets control mechanisms on seed-flattening rollers or oil-exPELLER machines. Sets temperature and air controls of driers to attain specified quantity and dryness of output. Turns steam valve of heater to cook dried oil seed or germ. Presses buttons to start machinery and turns gate valve to admit seed material. Observes temperature gauges, flowmeters and machinery during operation. Examines processed materials such as seed meats, seed hulls and dried germ, for adequate cracking, de-hulling, separation and oil extraction, and makes adjustments to machine controls as required.
May direct workers taking samples, bagging products for shipment, and cleaning, maintaining and repairing machines.

8211-290 VEGETABLE-OIL EXTRACTOR, SOLVENT

PROCESS(animal & veg. oil)

DPT:582

GED: 3 SVP: 5 EC: I 7 PA: L 2 4

Controls solvent-method extraction equipment to remove oil from crushed, or partly processed soybeans, sunflower seed or rapeseed:
Sets and adjusts controls on various levels of plant, to regulate temperature and flow vegetable material and solvent through oil of extracting and purifying equipment. Reads thermometers, pressure gauges and flowmeters to monitor process. Tests samples of material for conformity with standards, using scales, moisture meter and hydrometer, or by titration, or sends samples of material to laboratory for analysis. Records process and quality-control data.
May clean filter plates of extraction equipment, using scraper. May tend machines to press solid vegetable residue into pellets, and bag pellets for use as animal feeds.

8211-294 WEIGH-TANK TENDER(animal & veg. oil)

DPT:585

edible-oil pumper.

GED: 3 SVP: 3 EC: I 4 6 7 PA: M 4 7

Tends equipment to weigh and transfer oils and other ingredients used for making margarine or shortening, following standard formulas:
Inspects tanks and valve positions. Passes pressurized steam through system to verify flow pattern and find leaks. Starts pump and turns valve to admit oil or other ingredients through filter unit into scale tank until specified weight has been reached. Positions weights on scale bar to weigh smaller batches of ingredients. Turns valves to transfer weighed ingredients from scale tanks for processing or storage. Turns valves to admit steam into tanks to agitate, wash and

mix oils. Measures and records weight and temperature of filtered oils in holding tanks, reading thermometer and charts, and using dipstick. Cleans pumps, screens and pipe systems by flushing with hot water, and cleans equipment and work area using steam hose and scraper. Prepares daily production reports.

8211-298 CORN-GERM PREPARER(animal & veg. oil) DPT:685

GED: 2 SVP: 3 EC: I 5 6 PA: L 4

Tends machines that prepare corn germs for oil extraction: Presses button to start machine and turns valves to inject steam into dried corn germs to soften hulls. Observes steam gauges and thermometers and adjusts controls to keep temperature and pressure within specified limits. Shovels fallen corn germs back onto drier conveyor leading to steam-injection machine. Washes machine, using rags and water-hose.

8211-302 EDIBLE-OIL-REFINER HELPER(animal & veg. oil) DPT:587

GED: 2 SVP: 2 EC: B PA: H 2 3 4

Helps edible-oil processors to refine crude vegetable oils, by performing any combination of the following duties: Starts machines and adjusts processing-equipment controls as directed. Collects samples of seed, prior to processing, from trucks and railroad cars, using sampler probe. Fills cans with samples of material at various stages of processing for quality-control inspection or analysis. Packages seed meal by placing sack beneath automatic scales and releasing lever to fill bag, closes top of bag, using machine stitcher, and places bag on conveyor. Positions loading chute over railroad cars or trucks, or makes tank-car connections. Loads handtruck and moves filled bags to shipping area. Weighs bags on scales, and records quantity and weight of shipment. Cleans filters, chutes and feeders, and oils machinery. See also definition for term title, 02-160 HELPER (any ind.).

8213-BAKING, CONFECTIONERY MAKING AND RELATED OCCUPATIONS

This unit group includes occupations concerned with making bakery products such as breads, cakes, pastries; dried-food pastes such as macaroni and noodles; cooked cereals; and confectionery products such as chocolate and cocoa confections, candies, chewing gum, popcorn, roasted and salted nuts. Includes activities such as baking, blending, coating, cooking, decorating, drying, kneading and rolling. Chefs and cooks are classified in Unit Group 6121, CHEFS AND COOKS. Occupations concerned with preparing raw chocolate are classified in Unit Group 8229, FOOD, BEVERAGE AND RELATED OCCUPATIONS, N.E.C.

Baking, Cereal Making, Dried-Food-Paste Making And Related Occupations

8213-110 through 8213-222

8213-110 CAKE DECORATOR(bake. prod.) DPT:684
ornamenter.
GED: 4 SVP: 6 EC: I PA: L 4 7

Decorates cakes and pastries with coloured icings or pastry cream: Screws nozzle of specified size and shape into outlet of decorating bag. Fills icing bag with icing or pastry cream, using scoop. Squeezes bag to force material through nozzle forming decorations, such as lines, letters, figures or flowers. Spreads material with brush, finger-pronged instrument or spatula. Packages decorated cakes in cartons, using staples to secure cartons. May cut and shape cake to size, using knife. May mix icing. May be designated according to product decorated; for example, Wedding-Cake Decorator

8213-114 BAKER(bake. prod.; cater. & lodg.; food and bev., n.e.c.) DPT:461
GED: 3 SVP 6 EC: I 3 6 PA: M 3 4

Prepares ingredients and bakes bread, cakes, cookies, pies, and specialty foods according to recipes: Requisitions ingredients from storeroom and measures out specified quantities, using scales, measuring cups and spoons. Mixes ingredients to form batter or dough, using electric mixer or by hand. Shapes dough, using pie-dough roller or cookie cutters, or by hand. Places shaped dough portions in greased or floured pans, and inserts them in oven, using peel. Adjusts drafts or thermostatic controls to regulate oven temperature. Cleans and adjusts machines and equipment between production runs. Prepares ingredients and cooks pie fillings, puddings, custards, icings or other desserts and baked specialties. Tastes food to determine conformity with flavour specifications. May tend continuous-process machines that roll, cut and bake specialty foods such as tortillas. May perform supervisory duties in absence of head cook or baker. May bake a particular product and be designated accordingly; for example, Baker, Biscuit Baker, Bread Baker, Specialty Foods Pastry Chef

8213-118 CRACKER-AND-COOKIE-MACHINE OPERATOR(bake. prod.) DPT:682
GED: 3 SVP: 6 EC: I PA: M 4

Operates machine that rolls dough into sheets and forms crackers or cookies preparatory to baking: Turns crank to adjust space between rollers. Selects and installs stamping or extruding die in machine, according to work order, using wrench. Starts machine and inserts end of dough from hopper into roller. Observes operation and removes malformed cookies or crackers. Verifies weight of raw samples against standards, using balance scale. Scoops such ingredients as salt, sugar and nuts into hoppers located along conveyor belt. May tend machine that sprays crackers with oil to impart colour and prevent drying out, by pushing button to pump oil into reservoir and adjusting steam valve to heat oil to specified temperature. May weigh sampling of crackers to measure amount of oil being applied.

8213-122 BENCH HAND(bake. prod.) DPT:684
GED: 3 SVP: 6 EC: I PA: M 4

Forms dough for bread, buns and other bakery products by hand: Rolls dough to desired thickness with rolling pin, or guides dough through rolling machine. Sprinkles flour on dough and workbench to prevent sticking. Kneads dough to eliminate gases formed by yeast. Cuts dough into pieces with knife or band cutter. Adds spices, fruits, or seeds when making special rolls or breads. Weighs pieces on scales and keeps record of production. Places dough in baking pans. May cut dough into bun divisions by machine. May form dough into special shapes and add fillings or flavourings. May feed empty pans onto conveyors feeding dough-forming machines, and remove pans from conveyor after baking is completed.

8213-126 ROASTER, GRAIN(food & bev., n.e.c.) DPT:585
cooker, grain.
GED: 3 SVP: 6 EC: I 3 PA: L 4 7

Tends equipment that partly roasts and cooks milled grain preparatory to making breakfast foods: Lights gas jets under drum or pan, adjusts temperature regulator to required setting, and starts conveyor to transfer specified amount of grain to batch-scale bin for weighing. Moves control to transfer grain to drum or pan, and starts agitator that prevents sticking of grain to sides of vessel and ensures uniform roasting of grain. Moves lever at specified time to dump roasted grain into conveyor leading to cooling tower and tank. Records batch numbers and other production data. May admit metered quantity of water to drum, and start vacuum drying and roasting of cooked grain for specified time.

8213-130 NOODLE PRESSMAN(food & bev., n.e.c.) DPT:681
macaroni pressman.
 GED: 3 SVP: 5 EC: I 4 6 PA: M 4 7

Operates machine that blends ingredients and kneads, extrudes and cuts dough used for making products such as macaroni and noodles: Installs specified die in press, using hand tools. Adjusts press rollers to regulate thickness of dough, using micrometer and hand tool. Dumps pre-measured quantity of eggs into tub, sets meter and turns spigot to admit prescribed amount of water. Starts beater to mix eggs and water for specified time. Observes colour of dough and feels its consistency to ensure product conforms with specifications. Starts pump to transfer mixture to mixing unit of machine. Opens hopper to admit specified quantity of flour into mixing unit and starts mixer and press to knead and extrude dough. Turns screw to set speed of knives to cut product to specified length for drying. May patrol drying chambers to observe temperature and humidity chart readings for variances from drying procedures, and report observed deviations to production manager. May record production data.

8213-134 ALMOND-PASTE MAKER(ceonfection.) DPT:682
marzipan maker.
 GED: 3 SVP: 5 EC: I 6 PA: M 4

Controls equipment that grinds, blends and cooks almonds, sugar and essences to make almond paste: Feeds almond and sugar mixture between series of rollers and turns handwheels to progressively decrease clearance between rollers. Weighs and dumps specified quantities of blanched, ground almonds and sugar solution or sugar crystals and colouring essences into mixer. Starts mixer and mixes ingredients for specified time. Dumps mixture into steam-jacketed rotating cooker for required time and transfers cooked batch to water-cooled kettle. May collect trays of surplus paste from chocolate filling machine, and feed surplus paste through heated rollers to process paste for re-use.

8213-138 CEREAL-COOKER-AND-EXTRUDER OPERATOR(food & bev., n.e.c.) DPT:682
 GED: 3 SVP: 5 EC: I 3 5 6 PA: L 4 7

Operates variety of machines such as dough mixer, continuous cooker and extruding press to produce cereal pellets of various shapes: Cleans and installs perforated metal die, having various shaped openings, into extrusion-press-discharge outlet. Attaches blade that shears off product at discharge outlet, using wrench. Adjusts controls to regulate flow of water and other ingredients into mixing machine. Turns valves to supply steam and moisture to cooker. Regulates pressure controls to force mixture through cooker and into extrusion press to maintain specified moisture content, colour and consistency of product. Starts extrusion press and cutting blade to extrude dough and form pellets. Observes and feels pellets and adjusts controls, using knowledge of materials and equipment to produce standard cooked products. May observe extruder and cutter action through stroboscope to avoid interrupting continuous process. May operate conveyor to transfer pellets to coating drum.

8213-142 OVENMAN(bake. prod.) DPT:682
 GED: 3 SVP: 4 EC: I 3 PA: M 4 7

Controls oven to bake bread and other bakery products: Loads trays of bread or other bakery products from dollies and places them on conveyor belt leading to oven. Observes temperature and pressure gauges and turns valves to maintain oven heat and humidity at prescribed levels. Governs speed of conveyor to regulate baking time. Observes appearance of products during baking process to verify uniformity of finish. Removes trays of baked products from oven and places them on dollies. May load and unload ovens manually, using peel. May weigh cookies and count number per pound to ensure weight standards are met. May be designated according to type of oven tended; for example, Conveyor Ovenman Reel Ovenman

8213-146 GUNNER(food & bev., n.e.c.) DPT:682
puffed-cereal maker.
 GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Controls equipment that expands or puffs whole grain, such as rice or wheat to produce breakfast cereals: Presses button to admit preheated moist grain and water to heated pressure cylinder. Clamps lid in place and starts rotation of cylinders. Turns valves and moves controls to regulate air pressure and temperature inside cylinder to obtain kernels of specified colour, size and uniformity. Actuates automatic cycle by which lid is removed from cylinder after specified time allowing grain to expand as it escapes from cylinder. Starts fan systems to blow puffed grain to air-powered separator unit, inspection station and storage bins. Examines product visually and by feeling to determine need for adjustments to process conditions. May operate automatic boiler that generates steam for processing grain and an oven that preheats grain.

8213-150 COOKER, GRAIN(food & bev., n.e.c.) DPT:585
 GED: 3 SVP: 4 EC: I 3 6 PA: L 4 7

Tends steam-heated pressure cookers to cook grain for further processing into cereal products: Presses button to load cookers with measured amount of grain, and flavours such as salt, malt and sugar. Clamps lid of cooker in place. Moves dials and turns valves to attain specified temperature and pressure in cooker according to type of grain. Removes lid of cooker and dumps cooked grain onto conveyor, after determining that grain has reached specified colour and consistency. Records cooking time, temperature and number of batches prepared. May start automatic equipment that admits steam, rotates cooker and stops cooker after specified time. May tend drier to temper (dry) grain to the correct level to produce an even humidity content throughout the kernel.

8213-154 OVEN TENDER, CEREAL(food & bev., n.e.c.) DPT:585
 GED: 3 SVP: 4 EC: I 3 6 PA: L 4

Tends ovens and related equipment that cook and toast cereal products such as flakes, biscuits, and pellets: Lights gas burners and moves control levers to attain specified temperature in ovens. Starts conveyors or rotating wheels that move cereal product through oven. Inspects and feels products emerging from oven, to ensure colour, blister and consistency or shape conforms with specifications, and rejects unsuitable product. Adjusts gas- control lever, speed of conveyors and opens or closes doors on side of oven. Pushes lever to direct unsuitable product into bin. Records bulk and production rate of product, weight and time required to fill container. May inspect product as it enters oven. May push button to actuate banks of grain shredders and biscuit-forming machines. May adjust or clear belts, stops and rolls to remedy mechanical defects. May position conveyor gates to reroute tempered grain back to tempering bins when moisture penetration is incomplete.

8213-158 DEPOSITING-MACHINE TENDER(bake. prod.) DPT:685
icer, machine.
 GED: 3 SVP: 4 EC: I PA: L 4

Tends machine that deposits filling, icing or topping on confectionery products: Installs specified nozzles in machine, using wrench. Starts pump to load machine hopper with filling. Starts conveyor to position cookies under nozzles. Turns valve to deposit specified amount of filling on cookies. Pulls lever to feed product under refrigerated roller to spread filling over cookies. Wipes filling from roller, using wet cloth. Verifies weight of cookies on scale. Cleans filling hopper between production runs. Inspects cookies emerging from machine to ensure that they meet specifications. May assist in feeding cookies into machine. May melt and temper chocolate. May be designated according to product iced.

8213-162 FLAKING-ROLL TENDER(food & bev., n.e.c.)
DPT:685

GED: 3 SVP: 4 EC: I 5 6 PA: L 4 7

Tends machine equipped with rollers that form cooked grain into cereal products of various shapes:

Actuates controls to start rollers and conveyor to transport cooked grain to roll feeders. Turns handwheels and sets valves to adjust spacing, pressure and temperature of rollers to obtain specified thickness and consistency of formed product, as indicated by touch and visual inspection, and to control flow of grain through feeding mechanism. Replaces worn knives used to scrape cooked grain from roller surfaces, using hand tools.

May roll and form a particular cereal product and be designated accordingly; for example,
Roller, Corn Flakes

8213-166 BATTER AND DOUGH MIXER(bake. prod.)
DPT:685

GED: 3 SVP: 4 EC: I PA: M 4

Tends machines and equipment to mix batter for making sweet products such as cakes, or to mix dough for making bread products, according to formulas:

Positions mixing bowl under mixer and attaches water hose to water meter. Actuates controls and turns valves to adjust metering devices that weigh or measure water, flour and shortening into mixer. Measures and dumps yeast, vitamins, sugar, salt and other ingredients into mixing machine. Sets machine to mix for specified time and regulates speed according to directions. Feels dough to ensure consistency meets desired standards. Dumps dough into trough or pours batter into buckets and transports buckets to cooking area. Pushes troughs of dough into fermenting room to rise for making sponge dough. Dumps sponge dough into mixer, using hoist, adds ingredients and starts machine to complete mixing cycle.

May tend automatic machine that mixes and drops bread ingredients into pans preparatory to baking. May compile data from work orders and conversion tables to establish quantities of ingredients required for production. May set controls, fill dispensing units and start automatic machine that rolls (sheets), curls, and cuts sweet goods into specified size and weight for baking, to make rolls, coffee cake and other sweet goods.

8213-170 DOUGH-KNEADING-MACHINE TENDER(bake. prod.)
DPT:685
dough-brake-machine operator.
GED: 3 SVP: 4 EC: I PA: M 4

Tends machine that kneads dough to desired texture:

Fills hopper with flour that automatically sprinkles roller and catching apron of machine with flour to keep dough from sticking or sprinkles flour by hand. Starts machine and turns handwheels to adjust distance between rollers. Cuts off lump of dough in trough and inserts dough between rollers. Catches dough as it extrudes from machine and reinserts it at different angles until texture reaches desired consistency.

8213-174 DOUGHNUT-MACHINE TENDER(bake. prod.)
DPT:685
GED: 3 SVP: 4 EC: I 3 6 PA: M 4 7

Tends machines that mix dough, and form, fry and glaze doughnuts: Slides block of ejectors (cutters) into machine and tightens them with wingnuts. Starts machine. Turns switch to heat frying tank to desired temperature. Mixes prepared ingredients with specified amount of water in mixing machine to form batter. Dumps batter into doughnut machine hopper manually. Turns and adjusts valves to control air pressure for ejecting batter into frying tank, and to regulate size of doughnuts, temperature and feed of grease, and speed of conveyor. Observes colour and verifies weight of doughnuts to ensure conformity with standards. Cleans doughnut machine and appliances to keep them in good working order by dismantling and washing their component parts.

May melt and temper chocolate preparatory to icing doughnuts. May tend automatic cooking machine that fries doughnuts and equipment that glazes doughnuts with icing, syrup or sugar. May package and sell doughnuts and receive payment from customers.

8213-178 PRETZEL BAKER(bake. prod.)
DPT:685
GED: 3 SVP: 4 EC: I 3 PA: L 3 4 7

Tends automatic machines that mix, cut, twist, cook, salt, bake and dry dough to make pretzels, performing any combination of the following duties:

Adjusts rolls and cutters of machine to shape dough to specified dimensions. Loads dough into machine hopper and starts pretzel-forming machine. Observes progress of dough in machine to detect off-standard product or blockages, and clears blockages. Lights oven and sets thermostatic controls of cooker, oven and kiln at specified temperature. Dumps specified amounts of ingredients such as salt, soda and water into hoppers of oven. Observes progress of uncooked pretzels on moving conveyor to oven and straightens product using wire-hooked rod. Tastes baked pretzels, observes their colour and adjusts conveyor speed or temperature of cooker, oven and kiln to ensure conformity to standards.

May place unbaked pretzels on oven conveyor by inverting boards loaded with pretzels.

8213-182 INGREDIENTS SCALER AND DISPENSER(bake. prod.; confection.)
DPT:464
ingredients assembler; pantryman.
GED: 3 SVP: 3 EC: I PA: H 4 7

Measures, weighs, assembles and issues ingredients according to batch formulas, for use in making bakery and confectionery products:

Reads production orders and selects appropriate recipe cards. Weighs specified dry baking or confectionery ingredients on scales, and pours required fluid ingredients, such as flavouring extracts and syrups, into graduated containers. Attaches identifying label and recipe card to containers of measured ingredients and places containers, assembled by batches, on dollies for issue to other workers. Records number and kinds of batches assembled. Verifies kinds and quantities of incoming supplies of ingredients, and directs workers to dump bulk supplies into appropriate storage containers.

May dump batches of ingredients into mixing bowl. May test sample of finished batch to ensure conformity with standards.

8213-186 ICING MIXER(bake. prod.)
DPT:685
filler mixer.
GED: 3 SVP: 3 EC: I PA: H 4

Tends equipment that mixes ingredients for icings or fillings for bakery products:

Weights and measures ingredients, such as sugar, chocolate, food colouring, ground fruit and fat or shortening according to recipe. Dumps bags of sugar and other ingredients into mixing bowl. Starts machine. Pours measured amount of water from container into mixing bowl. Observes and feels mix to determine when desired consistency has been reached. Cooks some types of fillings in steam-jacketed kettles. Cleans mixing equipment and work area between batches. Selects and installs beater arms in mixing machine, using wrench.

May tend equipment that mixes and conditions chocolate and other ingredients to make icing. May transport icing to enrobing machine using buckets. May transport boxes of ingredients to work station using hydraulic-lift truck. May be designated according to product mixed or cooked; for example,

Chocolate-Icing Mixer
Cooker, Pie Filling
Fruit Mixer
Pie-Filling Mixer

8213-190 CONE-AND-WAFER-MACHINE TENDER(bake. prod.)
DPT:685
GED: 2 SVP: 4 EC: I 3 PA: L 4 7

Tends machine that automatically deposits and bakes batter in moulds to form wafers or cones:

Lights gas burners to heat baking moulds. Pushes button to start machine and turns setscrew to regulate amount of batter deposited in mould. Turns thermostat to adjust temperature of baking moulds and speed of conveyor. Observes colour of baked wafers being ejected onto conveyor to detect defects. Makes adjustments and minor repairs to wafer-and-cone oven. Changes parts to switch machine from cone to wafer production.

May weigh and mix batter in high speed mixer.

8213-194 ICER, HAND(bake. prod.) DPT:684
icer, baker.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Covers baked goods with icing or frosting by hand:
Spreads icing evenly over surface of baked goods by hand and using spatula, or cloth funnel filled with icing. Builds up layer cakes by spreading icing or filling between layers and then icing outer surface. Applies glaze or thin icing to sweet rolls, fruit cake, specialty breads, and other items, using brush, spatula or knife. Places small pieces of fruit on fruit cakes to form simple design.
May pack iced products in cartons. May be designated according to product iced; for example,
Bread Icer
Cake Icer
Roll Icer

8213-198 PIE MAKER, MACHINE(bake. prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machines that shape, flatten, cut dough and automatically fill pies, performing any combination of the following duties:
Loads dough into hopper of pie-dough scaling machine. Turns hand lever to adjust scaling cylinder of machine to produce lumps of dough of prescribed size. Removes lumps of dough deposited from scaling machine and places them in dough-rolling-machine hopper. Turns hand lever to adjust rollers of machine to produce dough disks of desired thickness. Catches dough emerging from rolling machine and places it in pie pan on rotating platform. Fills hopper of automatic pie filling machine with pie filling or fills pies by scooping filling from container. Catches dough disk emerging from rolling machine and places it over filled pies. Perforates pie covers to identify filling, using knife. Lifts pies from rotating platform and places them on rack or cart. Cleans machines and equipment used, using hand scraper, water and brushes.
May tend machine that forces dough through feed tube to cut-off mechanism and deposit tart shells, filling and topping into aluminum cups to make tarts. May be designated according to phase of operation performed; for example,
Pie-Dough Roller
Pie Filler
Pie Topper
Tart Maker

8213-202 COATING OPERATOR, CEREAL(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 3 6 PA: L 4 7

Tends coating and drying equipment that sprays cereal products such as flakes, puffed grain or extruded puffed cereal with syrup or coating mixture:
Lights gas burners or turns steam valves to attain specified temperature in drier and syrup kettle or storage tank. Moves controls to start revolving drum and conveyor that feeds cereal products into drum and through drier. Starts pump to spray liquid from storage tank onto cereal products in drum. Adjusts speed of conveyor and drum to coat cereal to specified thickness as indicated by feel, colour, weight or measure.
May make syrup in kettle by combining specified amounts of water and sugar, and observing kettle thermometer to determine when syrup is ready for spraying. May clean storage tank and supply lines.

8213-206 CURING-BIN TENDER(food & bev., n.e.c.) DPT:685
tempering-bin operator.
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends curing or tempering bins that spread moisture uniformly through cooked grain before being shaped into breakfast cereal, such as flakes or shredded biscuits:
Opens gate in conveyor duct to deflect incoming grain into first bin. Closes gate when bin is full, records time, and repeats filling operation with next bin. Squeezes soaked grain between fingers to determine moisture content of kernels, and checks that specified curing time is completed for each bin. Pulls lever to dump grain onto conveyor. Dislodges remaining grain from bin, using pole, or spray washes it down.
May start and stop water-spray units, fans or conveyors. May weigh grain and record weight.

8213-210 DIVIDING-MACHINE TENDER(bake. prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machines that automatically divide, round, proof and shape dough into units of specified size and weight preparatory to baking:
Starts machines and turns handcrank to set capacity of dividing compartments and speed of conveyor on dividing machine. Weighs units of dough, using balance scale and adjusts machine as required. Scoops flour or starch into hopper of sifter which automatically dusts units of dough to prevent sticking. Observes progress of units through machines that automatically divide, round, proof and shape dough. Turns rheostats to control speed of proofing-and moulding- machine conveyors. Inspects shaped units of dough as they are ejected into pans from moulding machine. Cleans moulding machines, using scraper and water. Oils conveyor rollers and machines as required.
May be designated according to machine tended; for example,
Moulder-Panner Operator

8213-214 SLICING-MACHINE TENDER(bake. prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machine that slices bakery products, such as bread and cakes:
Installs and tightens cutting blades and adjusts guides of machine to accommodate size of product to be sliced, using wrench. Starts machine and monitors slicing or product transported on conveyors. May place product on conveyors to slicing and wrapping machines. May be designated according to machine tended or product sliced.

8213-218 BAKER HELPER(bake. prod.; cater. & lodg.) DPT:686
GED: 2 SVP: 3 EC: 1 3 6 PA: H 3 4

Assists baker in the production of baked goods, performing any combination of the following duties:
Moves and distributes bakery supplies and products in and around production area of bakery, using hand trucks, dollies, and rack trucks. Lifts and dumps containers of materials to help load and unload machines, bins, hoppers, and racks. Cleans equipment, using brushes, cleaner and water. Greases, lines or dusts pans or boards preparatory to receiving product for baking. Mixes, kneads, or shapes dough for bread, rolls, muffins or biscuits. Cuts dough into uniform portions by hand or machines. Places pans of dough into oven to bake. Removes baked products from oven. Trims excess product from moulds and removes products, such as wafers, from opened moulds. See also definition for term title, 02-160 HELPER (any ind.).
May be designated according to specific duties performed; for example,
Cookie-Mixer Helper
Dough Weigher
Pan Greaser, Hand
Wafer Trimmer

8213-222 BATTER-DEPOSITOR TENDER(bake. prod.) DPT:685
cake depositor.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that deposits measured amount of batter into baking pans as they pass on conveyor:
Dumps batter from mixing bowl into machine hopper, using hoist. Attaches depositing dies to machine and tightens with wrench or by turning knurled knobs. Adjusts gauge on hopper to measure specified amount of batter. Weighs empty and filled pans on balance scale to ensure conformity to standards.
May remove filled pans from machine and place on racks.

8213-226 NOODLE-PASTE-MIXER TENDER(bake. prod.) DPT:685
slurry-tank tender.
GED: 2 SVP: 2 EC: 1 4 PA: H 4

Tends equipment to mix food paste ingredients preparatory to making macaroni and noodle products:
Weighs ingredients in batch quantities according to specifications. Dumps quantities of ingredients into blending tanks. Starts mechanical agitators in blending tanks to mix ingredients to form slurry or

paste. Opens valves upon completion of mixing cycle to transfer paste from slurry tank for further processing. Cleans equipment between production runs using cleansing solutions, cloths and brushes.

Candy Making and Related Occupations
8213-246 through 8213-314

8213-246 CANDY MAKER(confection.) DPT:362
GED: 3 SVP: 7 EC: I 5 PA: M

Mixes and cooks candy ingredients by following, modifying or formulating recipes to produce product of desired flavour, texture and colour:

Cooks ingredients at specified temperatures in open-fire or steam-jacketed kettles or in batch or continuous pressure cookers. Tends machine that casts candy in starch or rubber moulds. Spreads candy onto cooling and heating slabs. Kneads and machine-pulls candy. Spins or rolls candy into strips ready for cutting. Examines, feels and tastes product to evaluate colour, texture and flavour. Adds ingredients and modifies cooking and forming operations as needed.

May direct other workers. May be designated according to type of candy produced; for example,
Caramel-Candy Maker
Hard-Candy Maker
Toffee-Candy Maker

8213-250 CONFECTIONERY COOKER(confection.) DPT:682
GED: 3 SVP: 6 EC: I 6 PA: M 4

Controls open-fire or steam-jacketed kettles, or batch of continuous pressure cookers, to cook candy, gum, or other confectionery ingredients according to formula:

Weighs or measures ingredients such as sugar, corn syrup, butter and gum base, and adds them to cooking utensil. Starts agitators to mix ingredients. Turns valve to admit steam and sets pressure gauge and thermostat to cook ingredients at specified temperatures. Tests batch to determine consistency, and adjusts steam valve and heating element accordingly. Opens discharge valve and starts pump or tilts cooker or kettle to pour or dump confection into beaters or onto cooling belts or tables.

May verify percentage of sugar in syrup using refractometer or hydrometer. May partially cook batch in open kettle and pump it into pressure cooker. May beat or knead confection to attain specified consistency, as determined by colour and texture. May shovel fondant into remelt kettles and add measured amounts of flavouring and colouring. May be designated according to type of confectionery cooked or equipment used; for example,

Bonbon Warmer
Coconut Cooker
Crystal-Syrup Maker

8213-254 ENROBING-MACHINE OPERATOR(confection.) DPT:662
GED: 3 SVP: 6 EC: I 5 PA: L 4

Controls machines and equipment to enrobe (coat) confectionery products with chocolate or other coating:

Turns switches and valves on central control panel and pushes levers to start machine and conveyor that transfers candy or other products to devices which apply coating material, trim surplus, remove drippings, and cool enrobed products. Weighs products to ensure specified thickness of coating, and examines to determine conformity of hardness and gloss and uniformity of coating. Adjusts air blower, trimming rod, and flow rate of coating material, using hand tools, to correct product. Turns switches and valves to adjust steam and water flow in jacketed supply tank, conveyor belt speed, and temperature of cooling tunnel.

May produce hand-dipped effect on coated product by adjusting decorating devices on machine or by applying specially cut plastic sheet to tops of product. May clean and lubricate equipment. May be designated according to coating material; for example,
Chocolate-Machine Operator

8213-258 MOULDING-MACHINE OPERATOR(confection.) DPT:662
GED: 3 SVP: 5 EC: I 5 PA: L 4

Sets up and operates machine to mould soft candies such as gumdrops, orange slices, jellies, or centers for chocolates: Installs and tightens mould-printing board in machine, using thumbscrews or inserting wedges. Observes thermometer and turns steam valve to maintain specified temperature in candy-melting hopper. Opens valve and starts pump to fill hopper of depositing unit with fluid candy. Starts machine and turns handwheels to synchronize flow of candy from depositing spouts with speed of mould board as it passes beneath spouts for filling. Weighs formed candy for adherence to specifications and regulates flow from spouts accordingly.

May make minor adjustments to moulding machine, such as tightening belts and adjusting setscrews, using small hand tools.

8213-262 PANMAN(confection.) DPT:682
candy polisher; pan operator.
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates machines to coat items, such as candy, nuts, and chewing gum tablets, with syrup and wax colouring matter, or other material to provide specified finish or polish:

Dumps candy or other product into pan mixer and starts pan revolving. Pours specified quantity of syrup over whirling product, and passes hands through batch to spread syrup uniformly. Turns steam valve and observes thermometer to regulate pan temperature according to specification. Examines and feels product to determine adequacy of coating, and applies successive charges of syrup until specified coating thickness is attained.

May add specified flavouring and colouring ingredients in final coating or apply emulsified or dry ingredients such as gum solution, corn starch and sugar to product. May transfer contents to polishing pans and add specified ingredients to polish coating. May set temperature controls and start blower to dry syrup. May be designated according to product coated or polished; for example,

Almond-Pan Finisher
Chocolate-Peanut Panman
Gumdrop Coater

8213-266 SPINNER(confection.) DPT:682
GED: 2 SVP: 4 EC: I PA: M 4 7

Operates machine that rolls or spins hot candy into rope-like strip ready for cutting:

Kneads hot candy into cylindrical shape on steam-jacketed pouring plate with gloved hands. Turns water and steam valves to regulate temperature of plate. Actuates heating unit of batch roller and starts machine. Lifts candy from pouring plate and feeds it between rolls of batch roller. Pushes lever to reverse action of rollers to stretch and compact candy to required size strip.

May feed strip, discharged from batch roller, into cutting machine. May make specified types of hard candy, performing a combination of duties, such as flavouring or colouring batch; spreading soft-center mixture, such as peanut butter, jam, or paste, onto partially set candy; pulling candy prior to rolling and spinning; or applying varicoloured candy strips along cylinder to achieve mottled effect. May control battery of machines that roll or spin candy, pump soft centers into candy, size rope candy, cut candy to specified lengths, and pass it through cooling conveyors for wrapping and packing. May be designated according to type of candy prepared; for example,
Coconut-Jelly Roller
Hard-Candy Spinner

8213-270 CANDY-MAKING-MACHINE TENDER (confection.) DPT:685
GED: 3 SVP: 4 EC: I 5 6 PA: H 4 7

Tends candy-making machines and equipment that heat, mix and form candy products:

Weighs, measures and dumps specified quantities of ingredients such as chocolate liquor, milk and sugar into cooker and mixer. Turns valves and sets thermostat and timing controls to heat mixer according to specifications. Starts mixer and observes meters and gauges to regulate heating and mixing. Examines mixture to ensure proper colour and consistency. Opens discharge valve, starts pumps or tilts cooker or kettle to pour cooked candy onto tables or into beaters. Washes equipment after each batch.

May spread product onto cooling and warming slabs to form soft candy. May cut candy by hand or with powered knife. May form hard candies by hand or using pulling or spinning machines. May cast candy in starch or rubber moulds or tend extruding machine. May be designated according to type of machine tended or kind of candy produced; for example,
Caramel-Candy-Machine Tender
Nougat-Candy-Machine Tender

8213-274 CHOCOLATE-MOULDER, MACHINE(confection.) DPT:685

GED: 3 SVP: 4 EC: 1 5 6 PA: L 4 7

Tends machine and equipment that deposits tempered chocolate in moulds to form bars, blocks and assorted figures:
Transfers fluid chocolate from tempering equipment to depositor of moulding machine by turning valves. Maintains specified temperature of chocolate in depositor by turning valves that regulate flow of circulating water in jacket of depositor. Adjusts piston stroke of depositor that forces measured amounts of chocolate into moulds on moving conveyor, using hand tools, and sets speed of conveyor by turning handwheel. Observes thermometer and turns thermostatic controls and valves to regulate cooling-tunnel temperature. Starts depositor machine and weighs filled moulds to ensure compliance with weight specifications. Observes action of machine and conveyor to prevent blockages of moulds along conveyor.
May tend equipment to grind and mix nuts with other ingredients, and deposit and mould ingredients with chocolate to produce bars, blocks, chips, kisses and sprigs. May record production data.

8213-278 CUTTING-MACHINE TENDER(confection.) DPT:685

candy cutter.

GED: 2 SVP: 5 EC: 1 PA: M 4

Tends machine that cuts candy, such as caramel, nougat, or fudge, in pieces or strips of specified size:
Cuts slab of candy into sections, using knife. Selects cutting disks, to mount on shaft according to specified width of cut, and installs cutting disks in machine. Places candy on conveyor that carries it under rotating disks for cutting into strips. Repositions cut strips on conveyor or feeds strips against knife so that slicing occurs at right angle to first cut, forming square or oblong pieces of candy suitable for shipment, or further processing. Weighs random samples to ensure conformity of product with size and weight specifications. Dusts candy with flour or starch to prevent sticking.
May tend machine equipped with two cutting heads and device that changes feed angle so that candy is automatically sliced into strips and cut into pieces of specified size and shape. May be designated according to type of candy processed.

8213-282 CANDY PULLER AND ROLLER(confection.) DPT:685

GED: 2 SVP: 4 EC: 1 5 PA: M 4 7

Tends machine and equipment to shape and condition soft candy, performing any combination of the following duties:
Kneads and pulls batch of candy. Adds specified amount of colouring and flavouring agents and continues kneading to distribute agents uniformly and to harden candy for machine pulling. Hangs kneaded ribbon of candy on hooks of pulling machine, and starts machine that pulls candy to harden it sufficiently for spinning and cutting. Dusts surface of work table with powdered sugar to prevent adherence of candy. Kneads slab of candy into roll and cuts roll into slices of specified size. Shapes centers by hand preparatory to coating. Applies coloured candy stripes manually along outer surface of candy- roll. Places candy on heated canvas belt. Rolls candy into rope like shape. Starts machine and feeds candy into intake tube for cutting to specified length, for rolling into specified shape and for cooling preparatory to being wrapped and packaged.
May be designated according to specific task or machine tended; for example,
Ball-Machine Tender
Stick Roller
Toffee Puller

8213-286 CHOCOLATE TEMPERER(confection.) DPT:685
chocolate conditioner.

GED: 2 SVP: 4 EC: 1 PA: M 4

Tends water-jacketed kettles or automatic equipment, that tempers chocolate preparatory to moulding or coating confectionery products:
Transports boxes of chocolate to work area, using dolly. Dumps block chocolate into kettles. Observes thermometer and turns valves to admit steam or water into kettle jacket to heat or cool chocolate as specified by temperature-time chart. Starts agitators and scrapers in tank to mix chocolate. Pumps chocolate from melting kettle through water-cooled column of automatic tempering equipment. Sets thermometer dial to regulate temperature of chocolate in column to achieve specified temper.
May pour chocolate into enrobing-machine hopper, using pail, and adjust thermostat to regulate temperature of hopper contents.

8213-290 DIPPER, HAND(confection.) DPT:684
candy dipper, hand; icing dipper.

GED: 2 SVP: 3 EC: 1 PA: S 4 7

Dips candy centers, fruit, or nuts into coatings to coat, decorate and identify product:
Scoops liquid coating material onto slab of heated dipping table and kneads material, such as chocolate, fondant, or icing to attain specified consistency. Drops candy item into mass and swirls candy about until thoroughly coated, using fingers or fork. Removes candy and marks identifying design or symbol on top, using fingers or fork to identify type of center or brand.
May mix coating ingredients and dip candy into vat containing coating material, regulating vat temperature to maintain specified consistency. May mark top surface of coated candies with standardized identifying or decorative strokes to simulate hand-dipped appearance, using container equipped with specially shaped nozzle. May pour liquid chocolate into moulds to shape products. May be designated according to type of center dipped or coating used; for example,
Bonbon Dipper
Chocolate Decorator
Cream Dipper

8213-294 SANDING-MACHINE TENDER(confection.) DPT:685

GED: 2 SVP: 3 EC: 1 5 PA: H 4 7

Tends equipment that applies coating of sugar to candy, such as gumdrops and orange slices:
Dumps sanding sugar into hopper of rotating cylinder. Turns steam valve and starts conveyor that carries candy through steam bath for heating and moistening, and into cylinder for application of sugar coating. Examines sugared candy as it emerges on conveyor and adjusts flow of steam and sugar to correct imperfections in coating. Removes malformed or improperly coated candies.

8213-298 CANDY-CENTER MAKER(confection.) DPT:685

GED: 2 SVP: 3 EC: 1 5 6 PA: M 4 7

Tends machine that extrudes soft candy, such as fondant, to form centers of specified dimensions for candies, bars, chocolates and drops:
Inserts and secures appropriate die plate in machine, or adjusts extrusion bars to specified size of candy pieces, using hand tools. Examines and tests colour and consistency of candy mixture. Dumps candy mixture into machine hopper. Adjusts valve to regulate flow of steam into hopper jacket to maintain specified temperature of candy mixture. Moves lever and releases hopper gate to start machine that automatically feeds candy through openings in die plate or through extrusion bars and cuts off and deposits pieces on conveyor. Selects and weighs random pieces to ensure conformity with specifications. Adjusts wire or knife that cuts extruded candy to specifications, using hand tools.
May turn handwheel to synchronize speed of center machine with enrobing machine to coat cream centers with chocolate. May be designated according to product extruded; for example,
Chocolate-Bud-Machine Attendant
Fondant-Machine Tender

8213-302 SUCKER-MACHINE TENDER(confection.) DPT: 685
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that automatically forms lollipops of specified size and shape on ends of wooden sticks:

Turns steam valve to heat candy hopper and rollers of candy-spinning unit. Fills receptacle of machine with sucker sticks and pours liquified candy into hopper. Monitors and adjusts machine to prevent jamming. May roll, knead, and spin candy into strips by hand and feed strips into machine.

8213-306 COCOA-POWDER MIXER(confection.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: H 2 4

Tends machine that mixes dry ingredients to make cocoa blends and dairy-powder mixes:

Weights out amounts of ingredients, such as sugar, powdered milk and cocoa, according to formula, and drops ingredients into mixing machine. Starts machine that mixes ingredients for prescribed time. Opens machine valve and starts conveyor to transfer mixed batch to holding tanks prior to further processing. Collects and sends sample of mixture for laboratory analysis. Cleans equipment and work area, using water hose, brushes and cloths.

May add ingredients and remix batch to comply with laboratory instructions. May be designated according to product mixed; for example, Cocoa Blender

Dairy-Powder-Mixer Operator

8213-310 CONCHE-MACHINE TENDER(confection.) DPT:685
GED: 2 SVP: 2 EC: 1 3 5 PA: L 2

Tends conche machine equipped with agitators or rollers that agitate refined chocolate to improve its colour, flavour and texture for confectionery making:

Pumps specified amounts of chocolate mixture from stationary tanks or drums into conche machine. Pushes lever to start and regulate speed of agitators or rollers, according to specified time cycle. Observes mixture to evaluate conformity with standard and sends samples to laboratory for testing. Empties conche machines by pumping, shovelling and scraping liquid chocolate into trays. Places trays on trolley and pushes trolley into cold room to solidify chocolate.

May meter out and add to chocolate mixture, specified amounts of ingredients such as cocoa butter, lecithin and flavourings. May clean conches, pumps and equipment after use by scraping and washing, using spatula, pail and sponge.

8213-314 CANDY-MAKER HELPER(confection.) DPT:686
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Assists workers to make variety of cooked candies, performing any combination of the following duties:

Dusts pans, trays or slabs with powdered sugar, or greases with shortening, or covers with waxpaper to prevent sticking. Spreads candy to specified thickness, using spatula or roller. Positions trays under machine to receive moulded candy. Stacks filled trays, and transports trays to drying area, using hand truck or fork-lift truck. Selects assorted centers from boxes, trays, or base of chute and places them in rows on conveyor belt to conform with individual box or layer arrangement. Removes malformed or broken centers and places them in salvage container. Dumps trays of candy into hopper of machine that shakes starch from candy. Cuts candy into sections using hand knife or sets and presses cutter frames into candy to slice individual sections. Roughens surface with scraper to simulate homemade candy, or sprinkles chopped nuts or fruit over candy to decorate it, or cuts and spreads bar candy. See also definition for term title, 02-160 HELPER (any ind.).

May be assigned to specific duty and be designated accordingly; for example,

Bar-Candy Maker

Rougher

Starch Dumper

Miscellaneous Baking and Confectionery

Making And Related Occupations

8213-334 through 8213-386

8213-334 GUM-SHEETING AND SCORING-MACHINE OPERATOR (confection.) DPT:661
GED: 3 SVP: 5 EC: 1 7 PA: L 4 5 6 7

Operates one or more machines that roll chewing gum into sheets, and cut and score sheets to specified pattern:

Turns handwheels to adjust rollers, knives and scoring blades on machine to regulate size and thickness of sheet gum, and depth of scoring to specifications, using ruler or gauge. Starts machine and movement of gum through cooling tunnel into hopper of machine. Measures width, length, thickness and weight of scored sheets to ensure conformity with specifications, using devices such as gauge, micrometer, over/under shadowgraph and scale. Examines sheets for defective scoring and for amount of sugar coating. Directs other workers engaged in controlling flow of gum to machine, loading gum trays, unloading scoring machine and filling coater hopper with sugar.

8213-338 CONFECTION-SYRUP MAKER(confection.; food & bev., n.e.c.) DPT:682
syrup blender.
GED: 3 SVP: 4 EC: 1 PA: M 4

Tends equipment such as mixing kettles, pumps, pressure cooker and homogenizer to make chocolate and other flavoured syrups, according to formulas:

Weights and dumps ingredients such as cocoa powder, gelatin, pectin, water and sugar into mixing kettle. Admits metered amounts of invert sugar, syrup, cocoa butter and chocolate. Pushes buttons to start agitator to blend ingredients for specified time. Starts pump to transfer mixture to pressure cooker. Sets pressure cooker gauges and thermostat and adjusts steam valve to maintain required cooking conditions for specified time. Examines consistency of batch, using wooden paddle, and pumps mixture through homogenizer to ensure uniform consistency. Collects samples for laboratory analysis. Pumps finished product to holding tanks or drums.

May obtain daily requirements of flavouring extract from laboratory or storage area. May record number and kind of batches of syrup produced. May tend equipment to prepare flavouring mixtures used for food products such as breakfast cereal or ice-cream, and be designated accordingly; for example, Cereal-Flavouring Maker(food & bev., n.e.c.)

Flavour Man(confection.)

8213-342 NUT-MIXTURE MAKER(confection.) DPT:482
nut-mixer operator.
GED: 3 SVP: 3 EC: 1 5 6 PA: L 4 7

Controls automatic feeders, vibrators and conveyors that mix and transfer prescribed types, quantities, and sizes of edible nuts for processing or packaging:

Presses button that activates automatic vibrators and feeders to release and mix prescribed kinds, quantities and sizes of nuts from storage tanks onto conveyor. Measures rate of flow of nuts from each feeder, using volumetric cup and stopwatch, and compares results against specifications. Weighs sample of nuts taken from each feeder, using balance scale. Adjusts controls on feeders to attain required rate of flow of each kind of nuts onto conveyor so mixture meets quantity, quality and cost requirements. Starts conveyors to transfer mixed nuts to processing or packaging areas. Sends sample nut mixtures to laboratory for analysis and record purposes.

8213-346 NUT ROASTER(confection.) DPT:685
GED: 3 SVP: 3 EC: 1 PA: H 4 7

Tends equipment that roasts, blanches, and cleans shelled nuts:

Sets temperature and time controls on oven for roasting process. Dumps nuts into rotary drum in oven, or fills trays by hand and places them in oven. Removes sample of nuts from oven, using spoon, compares nuts with colour standard, and adjusts time and temperature controls of oven to ensure roasting specifications are met. Removes trays of roasted nuts from oven for further processing, or pulls lever to empty roasted nuts from oven into bin. Smooths out nuts in bin, using rake. Pushes bin over forced draft air vent to cool nuts. Tilts bin by hand or uses hoist to dump cooled nuts into hopper of machine that removes skins, sprouts, stones, shell particles, and dirt, and starts machine.

May immerse nuts in hot oil bath to roast them. May salt nuts. May pack nuts into bags or sacks. May be designated according to kind of nuts roasted or method used; for example,

Almond Roaster
Dry Roaster

8213-350 CHICLE-CENTRIFUGE OPERATOR (confection.) DPT:682

GED: 3 SVP: 3 EC: I 3 6 PA: M 4

Operates heated centrifuge machine to melt and filter chicle used in making chewing gum:

Loads gum base into steam-jacketed cooker of centrifuge. Reads gauges and turns air pressure and steam valves to regulate temperature and pressure in cooker to control melting of ingredients. Starts pumps that force melted chicle through strainers and into centrifuge that separates insoluble material and transfers chicle into holding tank. Washes strainers and centrifuge cylinders, using solvent, scrapers and brushes.

8213-354 COOK, CORN CHIPS(food & bev., n.e.c) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that extrudes and fries corn dough in hot fat to make corn chips:

Lifts roll of corn dough from table and places it in hopper of shaping machine. Starts machine that passes dough between flattening rollers, cuts and conveys dough through fry-tank to make corn chips. Inspects colour, texture and size of product, and regulates cooking temperature and conveyor speed as required.

May knead corn-meal dough into loaves. May tend oven to bake dough to make tortillas. May fill sprinkling device to shake salt over chips emerging from fry tank.

8213-358 CORN COOKER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: H 4

Tends equipment that cooks and softens corn, preparatory to grinding into corn-meal dough used for frying or baking products such as, corn chips and tortillas:

Dumps prescribed quantities of ingredients, such as shelled corn, water and lime into cooking vat. Turns valve to admit steam into jacket of vat, adjusts thermostatic controls of cooker and starts agitator to stir and cook ingredients for specified time. Tests softness of cooked corn by squeezing kernels between fingers. Drains corn from cooking unit into wheeled cooling-and-soaking tank.

8213-362 CORN-DOUGH-MACHINE TENDER(bake. prod.; food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 3 4 5 6 PA: L 4 7

Tends semi-automatic machine that hulls, crushes and rolls cooked corn into dough for use in making breakfast cereals and other food products:

Starts machine and moves controls to adjust grinder or crusher and clearance of spreader rollers, to produce corn-dough of specified texture and thickness as indicated by hand gauge. Fingers handful of dough to verify consistency and fineness of grind. Adjusts controls of conveyor, carrying cooked corn from automatic cookers to crusher, to regulate supply of dough to meet needs of other production workers. Cleans equipment, using steam hose and brushes.

May be designated according to type of product; for example, Flake Maker

8213-366 POPCORN-CANDY MAKER(confection.) DPT:685
popcorn coater.
GED: 2 SVP: 3 EC: I 3 5 6 PA: L 4

Tends equipment to melt ingredients and spray popcorn to make popcorn candy:

Weights, measures and dumps ingredients such as cheese, corn syrup, or caramel, butter, nuts, salt and water, according to formula, in open-fire cooker or steam-jacketed kettle. Melts and stirs ingredients in kettle. Dumps popped corn into mixing-machine bowl or other container. Pours syrup, caramel or mixed ingredients over popcorn. Starts agitator to spread coating, or starts drum and pump that sprays coating on popcorn. Pulls lever to dump popcorn candy into drying tray.

May tend moulding press to form candy novelties, such as balls or disks. May spray coatings on popcorn, using manually operated spray equipment.

8213-370 BATCH-MIXER, CHEWING GUM(confection.) DPT:685

GED: 2 SVP: 2 EC: I PA: H 4

Tends machine that mixes ingredients, such as powdered sugar, corn syrup, and flavouring with gum to manufacture chewing gum:

Places spout of vibrating hopper containing powdered sugar in top of mixing machine and starts vibrator and mixer. Places container on scale under spout of centrifuge machine or storage tank and opens valve to allow specified amount of gum base to fill container. Positions container over mixer and opens discharge valve to allow gum base to flow into mixer. Dumps gum requiring reprocessing into mixer, opens valve to dispense specified quantity of corn syrup and pours pre-weighed quantities of flavouring concentrate and glycerine into mixture. Starts machine to blend ingredients for prescribed time.

8213-374 CHEWING-GUM-MACHINE TENDER(confection.) DPT:685

GED: 2 SVP: 2 EC: I 5 6 PA: M 4

Tends machines that apply sugar coating, score and break sticks of chewing gum, performing any combination of the following duties:

Pours powdered sugar into hopper of machine that automatically coats gum to add flavour and prevent adhesion of sheets of chewing gum to rollers of scoring mechanism. Removes scored sheets of gum from trays, breaks sheets along scores to form strips and feeds strips into machine hopper for scoring into stick lengths. Sprinkles sugar by hand on poorly coated strips of gum. Inspects gum for imperfections and removes defective strips for reprocessing. Stacks scored strips in trays and takes trays to wrapping machine. Makes minor adjustments such as resetting machine guides or clearing blockages and replenishes trays of gum.

May tend machines that wrap and package sticks of gum.

8213-378 POPCORN MAKER(confection.) DPT:685
corn popper.
GED: 2 SVP: 2 EC: I 3 5 6 PA: L 4

Tends one or more ovens to pop corn:

Lights gas-fired ovens and starts drum-shaped perforated oven to rotate. Dumps measured amount of corn into rotating drum. Places container at discharge outlet to receive popcorn or starts conveyor to carry corn through screen to remove unpopped kernels. Moves lever to reverse rotation of drum and dump unpopped kernels into container beneath oven.

May tend stationary oven and push lever to release measured amount of oil into unpopped corn before heating oven. May mix syrup and popcorn to make popcorn candy.

8213-382 CHICLE-GRINDER FEEDER(confection.) DPT:686
gum batch maker.
GED: 2 SVP: 2 EC: I 5 7 PA: M 3 4

Weights and feeds prescribed quantities of chicle and other basic ingredients into grinding machine, preparatory to making chewing gum:

Weights quantities of chicle and other basic chewing gum ingredients in specified proportions to prepare batches of gum. Loads blocks of chicle and other ingredients onto conveyor of grinding machine, using electric hoist or lift truck. Starts machine and places empty containers under discharge spout to receive ground materials. Shovels material into barrels on platform scale to verify specified batch weight. Cleans work area and equipment, using brushes, scrapers and solvents.

8213-386 GUM-SUPPLY MAN(confection.) DPT:686
gum puller.
GED: 2 SVP: 2 EC: I 6 7 PA: M 3 4

Removes batch of chewing gum from mixer and feeds gum into machine that rolls, cools and scores gum sheets:

Positions cart under outlet of mixer. Sprinkles pulverized sugar by hand over interior surfaces of cart to prevent gum from sticking. Presses switch to tilt mixer and opens unloading door. Pulls quantity of gum from mixer, cuts it with knife, and drops gum into cart. Pushes cart into position over hopper of scoring machine, and pulls lever to lock wheels in position. Tilts cart or actuates automatic device to dump gum into hopper. Scrapes residual gum from sides and blades of mixer

between flavour and product changes. Cleans work area, using scouring, cleansing solutions, cloths, mops and squeegee.

8215-SLAUGHTERING AND MEAT CUTTING, CANNING, CURING AND PACKING OCCUPATIONS

This unit group includes occupations concerned with slaughtering animals and poultry; preparing, preserving and packing meats; and processing edible and inedible by-products for food or other uses. Activities include: skinning, cutting, boning, cooking, curing, smoking, dehydrating, canning and freezing meat products.

Slaughtering and Meat Cutting Occupations 8215-110 through 8215-178

8215-110 BUTCHER, ALL-ROUND(slaught. & meat pack.) DPT:381

slaughterer.

GED: 3 SVP: 6 EC: I 4 6 7 PA: H 3 4 7

Slaughters animals in small meat packing establishment, using tools, such as saws, cleaver and knives to perform any combination of the following duties:

Stuns animals prior to slaughtering, using mechanical device. Shackles hind legs of stunned animals to raise them for slaughtering, skinning or dressing. Severs jugular vein of animals to drain blood and facilitate dressing and preservation of meat. Trims and removes head meat or severs animal heads. Skins cattle and shaves hog carcasses. Slits open, eviscerates and trims out animal carcasses. Scribes, saws or splits carcasses to smaller portions to facilitate handling. Trims, sorts and washes viscera to prepare and separate edible from inedible portions for further processing. Washes and shrouds dressed cattle carcasses to improve appearance and protect meat.

May trim, clean and salt hides in packs for curing. May cut, bone and prepare standard meat cuts; such as, chucks, hams, loins, plates, rounds and shanks for marketing. May prepare meats for smoking or make sausages and other meat products.

8215-114 MEAT CUTTER(ret. trade;slaught. & meat pack.) DPT:684

butcher.

GED: 3 SVP: 5 EC: I 2 5 6 PA: M 4 7

Cuts, trims and prepares meat for marketing or cooking, performing any combination of the following duties:

Cuts and trims standard cuts of meat to shape and size for display or as ordered by customer, using hand tools and power equipment. Cuts fresh or frozen loins, ribs, rounds or other meat into individual portions, steak or chops for cooking, using hand saw. Trims excess fat and scrapes bone dust from portions. Cleans and cuts fish and poultry. Sets up and operates grinder, powered mixer and patty-forming machine to prepare meat and other ingredients to make meat patties. Weighs extruded patties for conformity to standards. Feeds folded pieces of boneless meat through roller-cutter of cubing machine to form steaks or cutlets. Spreads bread crumbs over cutlets. Packs products in lined containers or on trays.

May cut out bones from meat cuts. May wrap and weigh meat for customers and collect payment for sales. May be designated by duty performed; for example, Meat-Patty Maker Meat-Portion Cutter

8215-118 SLAUGHTERER, RITUAL(slaught. & meat pack.) DPT:684

shohet.

GED: 3 SVP: 5 EC: I 3 4 6 7 PA: L 4 7

Slaughters cattle, calves and sheep, as prescribed by Jewish law, and examines and approves kosher meat for sale:

Selects knife (chalef) according to size of animal to be slaughtered. Sharpens knife, using whetstone or steel until edge is razor sharp, and washes it under stream of water. Cuts throat from ear to ear of animal

held by mechanical restrainer or other workers, using single cross and back stroke. Reaches into opened chest cavity and feels lungs and chest walls for adhesions. Inflates lungs at inspection table to determine soundness, using compressed air tube. Examines other exposed internal organs for growths, discoloration or other indications of disease. Marks inner side of carcass with knife point or marker and indelible ink to identify kosher meat.

8215-122 SKINNER, ANIMAL(slaught. & meat pack.) DPT:684

hide puller.

GED: 2 SVP: 6 EC: I 3 4 5 6 7 PA: H 3 4 7

Skins animal carcasses performing any combination of the following duties, working as member of a team:

Slits skin on head of carcass and pulls and cuts connective tissue with knife to expose head and neck. Severs head, using knife and cleaver. Tags head and sets it aside for inspection. Slits remaining hide along mid-line from breast bone to crotch and around extremities. Removes hide by either of following methods. 1. Grasps hide and pulls and forces hand between hide and tissue covering carcass, and manipulates air-jet nozzle or knife to separate whole skins of small animals. Trims adhering meat or fat from hide. 2. Hoists carcass from floor and attaches tabs of hide to clamp of hydraulic hide-pulling machine. Monitors mechanical removal of hide and severs restraining tissue, using knife. Releases clamp and drops hide onto floor or down chute. Breaks and severs legs at knee joint and salvages other parts. Severs and exposes gullet and wind-pipe of small stock and ties gullet to prevent leakage. Slits open womb of cattle and removes and skins slunk (unborn calf). Skins hog carcasses, using draw-knife.

May be designated by kind or section of carcass skinned; for example, Backer

Brisket Skinner

Calf Skinner

Sider

8215-126 BONER, MEAT(slaught. & meat pack.) DPT:684 ribber.

GED: 2 SVP: 5 EC: I 2 4 6 PA: M 4 7

Cuts bones from standard cuts of meat to prepare them for packing and marketing:

Lifts quarters of beef or meat cuts from supply rail or truck to boning table, using meat hook. Inserts knife in meat and cuts to separate meat, fat or tissue from around bone. Pulls and twists bones loose from meat. Cuts and trims meat cuts; such as, butts, hams, flanks and shoulders to shape them or remove fat, blood clots, bruises and undesirable matter. Trims residual meat from bones, using chisel and hand or powered knives. Tosses boned meat, trimmings and bones to specified table, conveyor, bucket or truck for further processing.

May roll and tie boned-meat cuts to make roasts. May be designated by type of animal, or according to cut of meat boned; for example,

Beef Boner

Blade Boner

Butt Boner

Chuck Boner

Ham Boner

Lamb Boner

Pork Boner

8215-130 EVISCERATOR, ANIMAL(slaught. & meat pack.) DPT:684

gutter.

GED: 3 SVP: 4 EC: I 3 4 6 7 PA: M 3 4 7

Eviscerates cattle, calf, sheep and hog carcasses, working as member of a team and performing any combination of the following duties:

Slits open abdominal cavity of carcass, using knife. Reaches inside and cuts membranes holding intestines. Cuts bung from intestines, and ties intestines and bladder to prevent leakage of contents. Pulls intestines from carcass, trims off caul fat and dumps into separate containers for further processing. Separates liver and heart from stomach to present carcass and viscera for inspection. Removes beef stomach for tripe processing. Cuts through fat to expose and remove kidneys. Cuts out organs or glands; such as, sweetbreads, liver, heart and spleen and places them on conveyor or in containers. Cuts off tail and excess fat from beef carcass. Inserts spiral rod into gullet to sever gullet and windpipe from other neck tissues and ties gullet, or cuts out gullet, using knife. Cuts across bronchi to open, separate and trim lungs.

Washes lungs in cold water trough and squeezes out blood. Inserts knife under rib cage of hog carcass and cuts out spare ribs. Pulls leaf fat free at brisket end with both hands. Cuts off bruises, blemishes and ragged tissue to improve appearance and preserve carcasses.

May patch leaks in intestines, using skewers. May wash carcass and viscera with hose. May be designated according to function performed or part of animal eviscerated; for example,

Belly Opener
Bung Dropper
Gut Sorter
Kidney Remover
Lung Opener
Lung Washer
Viscera Defatter
Wash-Rail Trimmer

8215-134 CARCASS SPLITTER(slaught. & meat pack.)

DPT:684

GED: 2 SVP: 4 EC: I 2 3 4 5 6 7 PA: H 3 4 7

Splits and cuts animal carcasses into sections, using saws, cleavers and knives, to facilitate handling:

Splits carcass into halves along scribed line from butt to neck of back bone, using hand or power saw and cleaver, working from adjustable platform. Saws or cleaves carcass halves into parts, such as forequarters, hindquarters, shoulders and loins. Divides hog brisket symmetrically, using knife and rubber mallet. Weighs meat cuts and records weight on attached tags. Hangs cuts on conveyor hooks, or transports to truck and suspends on rack, or lays on pallets. Wraps cuts in heavy paper and cheese cloth.

May be designated by kind or part of animal cut, or by specific task performed; for example,

Breast Opener
Cattle Splitter
Primal-Carcass-Break-Up Man
Scriber

8215-138 ENZYME INJECTOR(slaught. & meat pack.)

DPT:684

meat tenderizer.

GED: 3 SVP: 3 EC: I 3 4 6 PA: L 4 7

Injects live cattle with papaya enzyme to tenderize dressed beef:

Drives cattle from storage pens into scale room, using electric prod or canvas slapper. Adjusts weights on beam scale to determine weight of each animal. Consults chart to learn quantity of enzyme to be injected, according to weight and grade of each animal. Drives animal from scale room into restrainer and places harness around head of animal. Turns crank to draw harness upwards, raising and exposing animal's neck. Allows sufficient enzyme to flow from storage bottle into burette. Locates animal's jugular vein, inserts needle, and lets enzyme flow from burette through needle into animal tissues. Withdraws needle, releases and drives animals back to storage pens. Records lot number, grade, weight of animals and amounts of enzyme used. Mixes cleaning solution of hyperchlorite and hot water, disassembles equipment and cleans parts, using brushes. Rinses parts with clear water and reassembles equipment.

May inject dressed meat cuts with enzyme, using machine equipped with multiple-needle device.

8215-142 STICKER, ANIMAL(slaught. & meat pack.)

DPT:684

GED: 2 SVP: 4 EC: I 4 6 7 PA: M 3 4 7

Severs jugular vein of stunned, suspended or shackled animals with sticking knife to prepare them for butchering:

Steadies neck of animal suspended from overhead rail, or shackled on table, by holding head or front leg with one hand. Thrusts knife into center of throat and draws blade upward or downward to sever jugular vein. Hangs bucket on hook placed in slit in throat to receive blood. Removes hook and bucket when bleeding has stopped. Places identification tag on carcass and on bucket, covers bucket and places on conveyor for further processing after carcass has been certified by inspector. Cleans floor in sticking area, using hot water, hose, broom and rubber scraper.

May shackle and suspend animals before sticking. May sever head and remove skin with knife after blood has drained. May be designated according to animal processed; for example,
Calf Sticker

Cattle Sticker
Hog Sticker
Sheep Sticker

8215-146 COOLER MAN(slaught. & meat pack.)

DPT:587

GED: 2 SVP: 3 EC: I 2 4 6 PA: H 4 7

Prepares, stores and transports dressed meat for further processing or shipment, performing any combination of the following duties:

Examines carcasses in cooler room for colour, freshness and proper chilling to determine condition prior to cutting. Weighs carcasses on scale. Records information, such as condition, weight and date on production sheet and tags. Prints grade and brand on meat, using metal stamp, electric or hand iron and ink, and attaches date tags. Quarters carcasses, using knife and saw, and trims excess fat. Segregates carcasses and cuts by grade, in cooler. Pushes truck filled with glands, tongues, tails, edible organs and other meats into cooler, and places meat in pans or on racks. Pushes carcasses or quarters along overhead rail to cooler or between departments. Transports meat from shipping platform into delivery truck. Places trolleys on rails and cleans and greases rails. Washes floor and containers with hose, and shovels fresh sawdust onto floor.

May shroud or remove shrouds from carcasses. May pack tongues, tails, kidneys or livers in containers for shipping. May be designated by work place or duty performed; for example,

Beef-Cooler Man
Fancy-Meat Cooler Man
Hog-Cooler Man
Warm-Beef Receiver

8215-150 HEAD TRIMMER(slaught. & meat pack.)

DPT:684

head boner.

GED: 2 SVP: 3 EC: I 4 6 PA: M 4 7

Removes meat, glands and organs from carcass heads for processing into meat, medicines or other products, performing any combination of the following duties:

Fixes head on holding hook or spike and trims skin and meat from jaw, jowls and skull with knife. Cuts fat from meat and drops into containers. Cuts out tongue and trims off fat, ragged edges, veins and bruises. Cuts and pulls hog snout from head, using knife and meat hook. Detaches jaw from skull, using jaw puller, bar or chisel. Splits skull with automatic splitter or cleaver. Removes brains, glands and other parts, placing them in separate trays. Removes horns from head, using power saw or shears.

May be known according to specific task performed; for example,

Snout Puller
Splitter, Head
Tongue Remover
Tongue Trimmer

8215-154 TRIMMER, MEAT(slaught. & meat pack.)

DPT:684

GED: 2 SVP: 3 EC: I 2 4 6 PA: L 4 7

Trims fat, skin, tendons and ragged edges from meat cuts:

Trims meat cuts, such as loins, spare ribs, butts, hams, rounds, sirloin, filets and chops, and trims meat and fat from bones, using butcher knives, draw-knife or electric-powered knife. Places trimmings and bones in separate containers. Washes, scrapes or trims foreign material and blood from meat. Trims fatback from hog bellies and cuts bellies into specified shapes.

May feed bacon bellies through rolls to flatten to prescribed thickness. May be designated according to type or section of meat trimmed; for example,

Beef Trimmer
Belly Trimmer
Butt Trimmer
Lamb Trimmer
Loin Trimmer

8215-158 VISCERA MAN(slaught. & meat pack.)

DPT:684

offal man.

GED: 2 SVP: 3 EC: I 3 4 6 7 PA: L 4

Separates animal viscera into food or other commercial products, performing any combination of following duties:

Cuts out glands and organs such as heart, sweetbreads, stomach, spleen and gall-bladder from adjoining tissues, and trims fat using knife or scissors. Pulls caul fat from paunch. Cuts and separates

membrane from gullet and wind-pipe, and inner lining from stomach. Pulls small from large intestines. Flushes and squeezes intestines and bladders to remove contents, using water hose. Grades, measures and sorts casings (intestines) according to condition and size, and cuts off damaged parts. Bleaches casings in saline solution. Salts and ties casings in bundles and packs in tierces (casks). Severs oxtails and trims loose tissue using knife and rotary brush. Brands tails and tongues with electric iron. Washes and places edible parts on spiked racks or in containers or trucks for further processing.

May be designated according to specific duty performed, or by part of viscera processed; for example,

Beef-Pluck Trimmer
Bladder Trimmer
Gland Man
Hog-Casing Puller

8215-160 STUNNER AND SHACKLER(slaught. & meat pack.) DPT:684
knocker.
GED: 2 SVP: 2 EC: I 4 6 7 PA: M 2 3 4 7

Stuns and shackles cattle, sheep, goats and hogs, using mechanical or electric shocking device:

Opens entry gate into knocking pen or chute. Moves levers to close squeezing mechanism that immobilizes animal. Stuns animal by striking it on forehead with controlled mechanical device, such as cartridge gun, pneumatic hammer, or with electrical-shocking device placed against head of animal. Dispatches animal to next work station by one of following methods: 1. Pulls lever to tilt floor of pen and slide cattle onto killing floor, or onto conveyors leading to shackling and sticking areas. 2. Shackles hind legs of stunned animals to revolving wheel of hoist that raises animal onto rail conveyor. 3. Hoists animal off floor for sticking and skinning, using chain hoist.

May assist in driving animals into knocking pen, using canvas slapper or electric prod.

8215-162 DEFEATHERER(slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 5 6 PA: L 4 7

Tends machines that scald and defeather poultry carcasses suspended from moving conveyor:

Turns valves and handwheels to set water temperature in scalding as specified and to adjust position of defeathering rollers to size of birds. Ignites gas jets of singeing machine and adjusts flame to size of birds. Starts conveyor of poultry-slaughtering line. Examines defeathered poultry periodically to detect faulty removal of feathers and adjusts scalding, rollers and singeing flame as required. Flushes blood off floor into trough, using water hose.

May direct workers engaged in removing pin-feathers and correct defective work.

8215-166 DEHAIRING-MACHINE TENDER(slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 3 4 6 7 PA: H 2 3 4

Tends equipment that removes hair from hog carcasses preparatory to dressing:

Turns hot water and steam valves to fill tank with scalding water and adds bleaching materials. Starts conveyor and releases shackled hog carcasses from conveyor into tank by tripping lever or using pry bar. Pushes soaked carcasses along length of scalding tank, using pole. Reads thermometer and periodically adjusts temperature of water in scalding tank. Hooks leg of carcass to conveyor passing through machine equipped with rotating beaters that remove hair and bristles. Opens exit door of machine and pulls carcass onto conveyor leading to dressing area.

May be designated according to specific task performed; for example, Dropper, Dehairing Machine
Feed-In Man, Dehairing Machine
Scalding

8215-170 SINGEING-MACHINE TENDER(slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 3 4 6 7 PA: L 4

Tends singeing machine that burns hair off hog carcasses suspended from conveyor:

Turns valves to adjust length of gas flames of singeing machine to synchronize singeing operation with conveyor speed and prevent

burning carcass. Shuts off gas flames when conveyor stops to prevent damage to carcass.

May remove residual hair, using knife or portable torch. May singe and trim fat and hair tufts from oxtails and be designated accordingly,
Ox-Tail Singer

8215-174 SHAVER, HOGS(slaught. & meat pack.) DPT:687
scraper, hog hair.
GED: 2 SVP: 2 EC: I 3 4 5 6 PA: M 3 4

Removes hair and dirt from hog carcasses prior to further processing or marketing:

Shaves and scrapes suspended carcasses, using knife and scraper, to remove residual dirt and hair left in skinfolds or inaccessible areas by dehairing or singeing machines.

May remove eyelids, feet and bruised areas, using knife. May be designated according to specific part of carcass shaved; for example, Belly Shaver
Shoulder Shaver

8215-178 SHROUDER(slaught. & meat pack.) DPT:687
cloth pinner.
GED: 2 SVP: 2 EC: I 4 6 7 PA: M 4

Covers warm, dressed cattle carcasses and sides with hot muslin to improve appearance and protect outer surface during chilling, storage or shipment:

Trims ragged edges of flesh from carcass, using knife. Soaks muslin in hot, weak brine solution and then drapes cloth tightly and smoothly around suspended carcass, or side. Pins muslin at six-or eight-inch intervals, using metal skewers, stretching cloth tightly around meat, starting from flank side of hind shank down to brisket point. Pushes covered meat to conveyor leading to chill cooler, storage or shipping areas, or along rail onto scale and records weight.

May wash carcasses, using water spray. May roll shrouded carcass with hand roller to smooth meat surface. May wash and sterilize muslin cloths and metal skewers for re-use.

Meat Preparing, Preserving and Packing Occupations 8215-198 through 8215-310

8215-198 BUTCHER(cater. & lodg.) DPT:381
GED: 3 SVP: 7 EC: I 2 6 PA: H 4 7

Selects and prepares meats, fowl, fish and seafood, and portions cooked meats for serving in restaurants or catering establishments:

Chops or grinds meats, using grinder. Cuts, saws and chops meats, into pieces of different sizes, using saw, cleaver and knives. Shapes and ties roasts and fowl. Slices and trims steaks, chops, fowl, fish and shellfish for individual servings or sandwiches, according to established portion-control procedure. Inspects and weighs portions to ensure conformity with size and quality standards. Stores meats, fowl and seafood in refrigerators. Requisitions supplies. Assists in menu planning, scheduling and estimating or calculating food production costs.

May supervise other meat, fowl and fish cutters. May pickle meat and make sausages. May be designated according to kind of meat prepared; for example,
Butcher, Chicken and Fish

8215-202 SMOKER, MEAT(slaught. & meat pack.) DPT:682
smoke-house operator.
GED: 3 SVP: 5 EC: I 3 4 6 PA: H 3 4 7

Controls battery of smoke chambers in which meat cuts are smoked, cooked and cured:

Pushes racks or trolleys of meat, such as bacon, hams, picnic rolls, butt rolls, bologna, salami and wieners into smoke house. Shovels sawdust into hopper of smoker and ignites sawdust burner, or places wood logs against high-speed wheel in machine to create smoke by friction. Starts electric blower to admit air that blows smoke around meat. Observes gauges, turns steam valves and adjusts ventilators and dampers to control smoking, cooking and curing process. Inspects meat for colour, feels firmness and inserts thermometer into meat to determine progress of cooking and curing. Opens cold-water valve to spray and chill meat. Removes and pushes loaded racks or trolleys to chill-room. Weighs product after smoking to determine shrinkage loss.

Records kind and weight of meat smoked. Steam-cleans smoke chambers and heating coils and removes ashes. May turn valves to spray product with synthetic liquid-smoke solution prior to curing.

8215-206 PRE-COOKED-SAUSAGE MAKER(slaught. & meat pack.) DPT:682
GED: 3 SVP: 4 EC: I 3 4 5 PA: M 4

Sets up and controls equipment that extrudes, cooks and chills sausage links or patties:

Assembles couplings and piping to join extruding-machine compression cylinders with extruding head, and fits extruder cutter, using spanner. Fills cylinders with meat emulsion, using overhead bucket or shovel. Closes cylinder lids and actuates plunger that forces emulsion from cylinder into extruder. Turns valve to start steam flow to cooker unit, and presses switches of infra-red cooker, cooler fans and powered conveyor to produce links or patties. Weighs sample links or patties on scale and adjusts controls to produce standard product. Turns lever to transfer flow of meat emulsion from empty to full cylinders. Adjusts speed of conveyor to cooker to prevent burnt products.

May clean equipment and work area.

8215-210 SEWED-CASING MAKER(slaught. & meat pack.) DPT:684
GED: 2 SVP: 5 EC: I 4 6 7 PA: L 4 7

Prepares sewed animal casings for use in enclosing large sausages and specialty meat products, performing any combination of following duties:

Soaks casings (intestines) in brine cleaning and curing solution. Turns casings inside out to facilitate cleaning. Slides lengths of casings over shaped, wooden sticks and places sticks in drying room. Removes dried casings and slits lengthwise along groove of stick, using knife. Flattens casings and stitches edges of more than one casing together lengthwise, using sewing machine to form large uniform tubular casing. Inspects and grades sewed casings for soundness, size and uniformity. Cleans tables and equipment, using hot water, soap and brush. Washes and oils drying sticks, using washer and oil-spray gun. May be designated according to specific duty performed; for example, Casing Sewer, Casing Soaker and Turner, Casing Splitter.

8215-214 POULTRY-SPECIALTY BUTCHER(slaught. & meat pack.) DPT:584
poultry boner; turkey-roll maker.
GED: 2 SVP: 4 EC: I 4 6 PA: L 3 4

Prepares poultry specialties such as turkey roasts and rolls, working as member of team and performing any combination of the following duties:

Thaws out frozen turkeys in water vat. Cuts off legs, wings, thighs and whole skin and bones out parts, using knife. Sews skin and breasts together, using needle and thread, placing loose meat in center to form roll. Shapes boneless carcass manually to form round roast and ties roast with twine to retain shape or tends automatic stuffer that forces boneless meat into plastic casing. Removes filled casing and seals with metal clip. Bones out cooked poultry, using knife and places loose meat in plastic bag and seals neck with knotted covered wire. Sprinkles dressed whole chickens with premixed, powdered spices for barbecuing. Places packaged poultry in specified quantities in containers for shipping and marks weight of contents on side of containers.

8215-218 MEAT CHOPPER(slaught. & meat pack.) DPT: 685
GED: 2 SVP: 4 EC: I 2 4 5 6 PA: H 3 4

Tends machines that chop and mix ground meat into emulsion for use in making such products as sausages and meat loaves:

Weighs out different types of meat and ingredients such as powdered milk, cereal and pre-mixed seasonings, according to product specifications, using floor or table scales. Dumps ground meat and other ingredients into chopping machine, using truck-dumping mechanism, overhead hoist, conveyor or shovel. Starts chopper equipped with knives that cut and mix meat to consistency of paste, in rotating bowl. Observes thermometer and adds ice, using bucket or shovel, to maintain specified temperature of mix. Stops machine when emulsion is mixed to specified consistency, or after specified time has elapsed.

Pulls lever to lower center core of mixing bowl and discharge emulsion into bucket or truck. Scrapes emulsion from bowl. Washes out bowl of machine between batches, using water hose.

May push truck filled with emulsion, or pump emulsion from chopper to stuffing machine. May grind meat prior to chopping. May add and mix ingredients such as pickles, olives and pimentos to emulsion.

8215-222 PICKLING-SOLUTION INJECTOR(slaught. & meat pack.) DPT:685
artery pumper; stitch pumper; vein pumper.
GED: 2 SVP: 4 EC: I 4 PA: M 3 4 7

Injects meat cuts such as hams, bacon, picnic and butt rolls with pickle (curing) solution, using one of the following methods:

1. Adjusts height of injection needles and width of conveyor guides of automatic pickle-injecting machine to dimensions of meat cuts, using wrench. Turns valves to regulate flow and pressure of curing solution in pumping system. Starts injecting machine and conveyor. Lifts meat from hand truck and places meat on conveyor moving under injection needles which force specified amount of solution into meat. Weighs meat before and after injection to verify amount of solution injected. 2. Grasps meat cut and locates artery or vein, using forceps or knife. Inserts injection needle with attached tubing into artery. Clamps needle and open arteries to prevent loss of solution. Places meat on automatic calculating scale to observe weight changes during injection. Pumps solution into meat by pressing hand or foot lever until specified amount has been injected. Removes needle and clamps and places product into truck, or on conveyor. 3. Pushes needle of syringe filled with pickle solution into meat cut and presses lever to inject solution. Removes empty syringe and places product on truck or conveyor for further processing.

8215-226 SAUSAGE DRIER AND SMOKER(slaught. & meat pack.) DPT:687
dry-sausage-room man.
GED: 2 SVP: 4 EC: I 3 4 6 PA: H 2 4 7

Dries and smokes dry-sausage products such as pepperoni, pepperettes and salami:

Stores cages containing green (uncured) sausages in dry room, using hand truck, or places sausages hanging from sticks on drying racks. Washes grease or mould from hanging sausages, using hot water hose. Transfers specified types of dry-sausage to smoke house and lights fire to start smoking process. Inspects condition of sausages in smoke house periodically, and returns smoked products to dry room. Transfers batches of sausages through various sections of dry room as curing progresses. Transports cured products to loading docks for shipment, using hand truck. May stack cages of green sausages in dry room, using electric hand lift truck.

8215-230 VACUUM WRAPPER, MEAT(slaught. & meat pack.) DPT:684
GED: 2 SVP: 3 EC: I 4 6 PA: M 4

Wraps meat cuts such as cottage rolls, hams and roasts in shrinkable plastic bags:

Fits bag over tapered end of stuffing horn and forces meat cuts through tapered end into bag, or fits bag over product placed on turn table. Places opening of filled bag over vacuum-machine spindle and depresses pedal to exhaust air, and twists neck of bag. Places neck of closed bag in sealing device that attaches metal clip and cuts off excess wrapping. Places wrapped product on conveyor passing through heated tunnel or places product in basket and submerges it in hot water tank to tightly shrink wrapping around meat. Removes meat from tank or conveyor and places on truck.

May pack product in containers. May form shipping containers, using stapling machine.

8215-234 CHUB-SAUSAGE-MACHINE TENDER(slaught. & meat pack.) DPT:685
GED: 2 SVP: 3 EC: I 4 PA: M 4

Tends machine that automatically stuffs and seals meat emulsion in plastic tubing to make chubs (stubby sausage products):

Installs roll of plastic film on machine. Threads film through rollers of machine to make tubing. Inserts load of metal clips in machine. Fills compression cylinder (stuffer) with meat emulsion, using overhead

bucket, pumps or shovel. Turns air valve and presses button to start machine which automatically stuffs tubing with emulsion and applies clips to form chubs of standard size. Observes operation of machine as it ejects chubs into water tank. Verifies weight of sausages on scales and adjusts mechanisms to ensure product meets specifications. Pushes trucks of sausages to cooking tanks.

8215-238 COOK, MEATS(slaught. & meat pack.) DPT:685
cook-kettle operator; cook-tank operator.
 GED: 2 SVP: 3 EC: I 3 4 6 PA: M 3 4

Tends tank or kettle to cook meat products, performing any combination of following duties:

Turns valves to admit cooking oil or water into tank or kettle, and steam to heat vessel. Observes thermometer and turns valves to maintain specified temperature in vessel. Loads tank with mesh bags, wire cages, metal moulds and sealed cans containing uncooked meat such as hams, meat loaves, tongues, turkeys, blood sausage or sandwich spread. Lowers cage filled with uncooked products into tank, using overhead hoist. Lifts hams, blood sausage and other large cuts of meat from truck and suspends them from sticks (racks) or holding fixtures in tank. Places cooked meat loaves in basket and lowers them into tank of heated oil to impart crusty surface to loaves. Turns valves to drain tank or kettle. Removes cooked meats and places them on racks or in trucks. Weighs ingredients such as gelatin, olives, pickles and pimientos, adds them to cooked meats and mixes in kettle using paddle or powered mixer. Pours mixture into moulds to form jellied meat loaf. Removes bones or fat from cooked meat, such as turkey or tongue, using knife. Grinds meat, using grinding machine. Cleans and oils tanks and kettles, using hot water hose and spray gun. May bake, glaze or garnish hams and other meat products. May stuff meat loaves into artificial casings, using stuffing device.

8215-242 MEAT STUFFER(slaught. & meat pack.) DPT:685
meat moulder.
 GED: 2 SVP: 3 EC: I 4 5 7 PA: M 4

Tends equipment that forces meat or meat emulsion into casings to make linked sausages, bologna and salami, or into moulds to make loaves, sandwich ham and jellied meats:

Selects casings or moulds and fits filling horn or mould on machine. Fills compression cylinder of machine with ground meat or emulsion, using shovel or dumping bucket from overhead hoist. Secures cylinder lid and turns valve to admit compressed air into cylinder. Slides end of casing over discharge nozzle and discharges meat into casing or mould by moving lever. Removes and closes filled casing with clip or by tying knot.

May set capacity of filler, or adjust control to regulate size of each unit of product. May feed lengths of filled casing into linking machine. May hand fill moulds or casings with meat. May tend machines that fill and seal tins filled with meat. May be designated according to method employed or product made; for example,
 Bulk-Sausage-Stuffing-Machine Operator
 Hand-Moulder, Meat
 Jellied-Meat Packer
 Sandwich-Ham Stuffer

8215-246 SAUSAGE MIXER(slaught. & meat pack.) DPT:685
meat mixer.
 GED: 2 SVP: 3 EC: I 4 5 PA: M 3 4

Tends machine that mixes ground meat and condiments for making sausages and meat loaves:

Shovels or dumps ground meat into bowl of mixing machine and adds specified amounts of ingredients such as seasonings, cereal and water. Starts machine and observes thermometer, occasionally adding ice to bowl to lower temperature of mixture. Turns wheel to tilt mixing bowl and empty contents into truck or bucket. Scrapes and washes meat from bowl and mixing paddles, between batches, using metal scraper. May grind or chop meat prior to mixing.

8215-250 SAUSAGE-PEELING-MACHINE TENDER (slaught. & meat pack.) DPT:685
 GED: 2 SVP: 3 EC: I 2 4 6 PA: L 4 7

Tends machine that removes artificial casing from smoked meat products such as link sausages and wieners to produce skinless variety: Turns set screws to adjust skinning mechanism to size of sausage. Dumps meat product on bed of peeling machine. Starts machine by

pressing control button and feeds strand of sausage into machine. Observes peeled product emerging from Skinner, and peels or scrapes off remaining fragments of casing, using knife. Discards damaged sausages into truck for reprocessing. Packs loose peeled sausage into containers for bulk shipment.

May tend collating machine that automatically places specified number of sausages onto conveyor-feeding-packaging machine. May tend machine that separates linked sausages preparatory to peeling. May tend machines that close, wash and shrink packages of sausages preparatory to shipment. May be designated according to type of machine tended or product skinned; for example,
 Frank-Skinning-Machine Tender
 Wiener-Peeler

8215-254 DRY-CURE MAN(slaught. & meat pack.) DPT:687
 GED: 2 SVP: 3 EC: I 4 6 PA: M 3 4 7

Spreads mixture of dry materials to cure such meat products as special hams, butts, bacon and casings before smoking:

Pushes trucks of materials such as sugar, sodium nitrate and salt to curing room. Weighs out and mixes specified materials manually or using mixing machine. Places meat in boxes, tierces (casks) and vats and spreads mixture over each layer. Sweeps excess mixture from meat, using broom. Rearranges layers after specified interval to circulate air around meat.

May place concrete weights on boards over layers of special hams to flatten to traditional shape. May be designated according to product cured; for example,
 Belly Packer
 Casing Salter
 Salt-Bellies Overhauler

8215-258 MEAT-ROLL TIER(slaught. & meat pack.) DPT:687
 GED: 2 SVP: 3 EC: I 2 4 6 PA: L 4

Rolls and ties boneless cuts of meat by hand to form various kinds and sizes of roasts:

Rolls cut of meat on table into cylindrical shape. Forces large needle, threaded with twine, through various points of roll, or forms loops of twine around roast to hold roll in place. Draws twine tight, makes knot, and cuts twine, using knife or finger-ring cutter. Trims ragged edges of roast with knife.

May stuff roll of meat into elastic netting to form roast. May be designated according to type of roast produced; for example,
 Butt-Roll Tier
 Chuck-Roll Tier
 Ham-Roll Tier

8215-262 PICKLE MAKER(slaught. & meat pack.) DPT:687
 GED: 2 SVP: 3 EC: I 4 6 PA: H 2 4 7

Prepares pickling solution used for curing meats:

Moves drums and bags of ingredients to scales. Reads appropriate formula card, and weighs and dumps specified ingredients, such as salt, sugar, and chemical pickling compounds into mixing vat, using shovel or bucket. Turns valve to admit water or brine into vat and stirs contents, using paddle, agitator or air jet. Tests density of solution, using hydrometer. Tests concentration of nitrate in solution by titration, using standard solution and watching visible changes in pickle. Starts pump or turns valve to move solution to curing vats or pickle-pumping machines. Turns steam or cold-brine valve to heat or chill solution and verifies temperature, using thermometer. Cleans mixing vats, pipe lines, holding tanks, using steam hose, cleaning solution and brooms.

May observe colour of pickled meat in vats to determine degree of cure obtained.

8215-266 PICKLER, MEAT(slaught. & meat pack.) DPT:687
 GED: 2 SVP: 3 EC: I 4 6 PA: H 3 4

Loads or packs meat cuts into pickling vats or barrels for curing: Lays green (uncured) product in vats or barrels, using meat hook. Turns valves to admit curing solution or pours solution to cover meat. Places lid on containers to keep meat submerged and protected. Sticks trier (wooden skewer) into meat and determines extent of curing by smelling. Rolls barrel or rearranges meat manually (overhauling) in curing solution to ensure maximum saturation. Opens valve or pulls bung to drain vat or barrel. Removes cured meat for further processing, or adds salt to barrels to maintain pickle strength and fastens covers on barrels of cured product for shipping. Cleans vats or

barrels with water and steam hoses. Weighs and stencils barrels and rolls barrels to shipping dock.
May dump frozen meat into water tank for defrosting prior to curing.
May sprinkle dry-cure powder over meat cuts for curing.

8215-270 PACKAGER, POULTRY(slaught. & meat pack.)

DPT:587

GED: 2 SVP: 2 EC: I 5 6 PA: M 3 4

Packages dressed whole poultry, individually or in bulk, or cuts up and packages parts, performing any combination of following duties:
Severs neck and trims hocks to dress fowl, using power shears or knife. Drops neck and small bag containing giblets (liver, heart and gizzard) into carcass and presses legs close to body to shape whole bird for wrapping. Cuts birds into standard parts, using knife or power saw. Trims off fat, loose skin and unwanted bones, and places parts in separate containers. Pushes wheeled tub filled with whole poultry to work station. Lifts and inspects birds for soundness and suitability for packaging whole, and clips grade tag into skin. Wraps whole birds in self-adhering plastic sheeting or bags. Passes wrapped birds by conveyor through heat-sealing oven or hot-water- shrink bath, or seals bag using vacuum sealer. Packs parts in trays according to weight and brand specifications, inserts identification labels and wraps trays in printed, transparent self-adhering wrap. Weighs trays and marks weight on wrapping and places trays on conveyor. Places poultry into larger containers and weighs and marks weight on containers. Writes grade and weight of birds on tally sheet, calculates totals, using adding machine and attaches tally to container.

8215-274 CASING-RUNNING-MACHINE TENDER(slaught. & meat pack.)

DPT:685

casing shirrer.

GED: 2 SVP: 2 EC: I 4 PA: L 4

Gathers lengths of cured animal casings onto short metal tubes (sleeves) to facilitate sausage making:
Removes cured casing from tierce (cask). Selects and places sleeve over water pipe and fits end of casing over end of sleeve. Places revolving casing-stripping-wheel device over end of casing on sleeve and turns valve to flow water into casing to facilitate gathering of casing on sleeve. Removes loaded sleeve and places in container for later use.

8215-278 LINKING-MACHINE TENDER(slaught. & meat pack.)

DPT:685

frank-o-matic operator; ty-linker operator.

GED: 2 SVP: 2 EC: I 4 5 PA: L 4

Tends one or more machines that automatically tie or twist stuffed casings into links to form sausages:
Loads tubes of casings into hopper and threads string into tying mechanism of linking machines. Regulates length of links by turning screws. Starts machine and feeds end of stuffed casing into machine. Ties end of one casing to another by hand, as required to form continuous length. Hangs loop of linked casing on rack or smoke sticks on trolley for transfer to smoke room.
May set up machine.

8215-282 MEAT GRINDER(slaught. & meat pack.)

DPT:685

grinder operator.

GED: 2 SVP: 2 EC: I 4 5 6 PA: H 3 4

Tends machine that grinds meat for use in manufacturing such foods as sausages, meat loaves and soups:
Pushes truck of cut meat from cooler room or storage to grinding machine. Selects and inserts grinding plate for specified particle size in machine, using special wrench. Loads meat into machine hopper, using power hoist, fork or shovel. Positions truck under discharge spout and starts machine. Removes filled truck and pushes it to chopping or mixing machine for further processing. Hoses down, scours and rinses all parts of machine and equipment, using scouring powder and brushes, upon completion of daily operations.
May cut chunks of meat into smaller pieces, using power-operated cleaver or slicer. May select, weigh and mix boneless meat in cooler room for grinding, using product formula. May add cereal or chopped suet to ground meat.

8215-286 MEAT-PRESS TENDER(slaught. & meat pack.)

DPT:685

GED: 2 SVP: 2 EC: I 4 5 PA: M 4

Tends machine that presses meat cuts to uniform shape and firmness to facilitate further processing:
Pushes trolley load of meat cuts, such as hog bellies, bacon or beef cuts from cooler room to press. Removes slabs of meat from trolley and positions meat under ram of press. Depresses pedal or pulls lever to compress meat to required shape. Raises ram and places meat in container or on conveyor leading to slicing machines.
May trim ragged edges and excess fat, using knife, and weigh meat slab on scales. May clean and oil press, using hot water hose and spray gun. May adjust pressure control of ram to accommodate various sized meat slabs. May be designated according to cut of meat pressed; for example,
Bacon-Press Tender
Belly-Press Operator

8215-290 MEAT-ROLLING-MACHINE TENDER(slaught. & meat pack.)

DPT:685

roll-tier, machine.

GED: 2 SVP: 2 EC: I 4 PA: M 4

Tends machine that binds boned hams, butts or roasts into rolls:
Threads twine through winding shaft, starts machine and binds meat, using one of the following methods. 1. Impales boneless meat-cut on spiked pivot. Pushes lever to engage metal rods around meat to shape roll and steps on treadle to wind twine in spiral around roll. Stops machine, cuts and ties twine, and slides bound roll off machine. 2. Places boneless meat-cut on bed of machine. Depresses pedal to actuate machine that wraps single loop of twine around roll and ties knot. Moves roll along machine bed and ties loops along length of roll. Trims ragged edges with knife and tosses roll onto truck or conveyor.
May bone out and trim hams or butts prior to binding.

8215-294 BUTCHER HELPER(ret. trade)

DPT:687

GED: 2 SVP: 2 EC: I 6 PA: H 4 7

Receives, stores, and grinds meat in retail establishment:
Unloads fresh, cured, and boxed meats and poultry from delivery truck manually. Transports meats to storage room on conveyor or using hand truck. Counts and weighs incoming articles and compares results against invoice. Examines and rotates meat in storage to avoid aging or spoilage. Cuts meat into small pieces suitable for grinding, and grinds for use as hamburgers, meat loaf, and sausage, using powered grinding machine. Cleans grinder, meat containers, and storage room with water hose and broom. Takes meat orders from customers.

8215-298 SAUSAGE TIER(slaught. & meat pack.)

DPT:687

casing tier; link-and-tie girl.

GED: 2 SVP: 2 EC: I 4 PA: L 4

Twists or ties ends of casings filled with sausage meat to form linked products:
Ties one end of stuffed sausage casing with twine, or crimped metal clip to enclose contents. Makes string loop for hanging. Presses casing between thumb and index finger at end of link. Twists casing at pressure point to form link of specified length. Twirls remaining length of stuffed casing to complete additional uniform links. Ties ends of stuffed casings to make longer string of links to facilitate handling. Loops linked product over smoke stick and places on trolley to be transferred for further processing. Cuts out defective parts of casing and ties sound ends together. Strips meat from damaged casings for reuse.
May wind and tie lacing at regular intervals along salamis to decorate and reinforce casings.

8215-302 SEASONING MIXER(slaught. & meat pack.)

DPT:687

spice mixer.

GED: 2 SVP: 2 EC: I PA: M 4 7

Weighs and mixes seasonings and prepares flavouring agents according to formula, for use in making sausage and luncheon meats:
Weighs various spices on scales. Mixes ingredients by hand or in mixing machine. Dumps mixtures into containers and attaches

identification tags. Cubes cooked eggs, cheese, pimentos and pickles preparatory to making luncheon meats, using automatic cubing machine or press equipped with cutters. May grind whole peppers in grinding machine. May close end of casings stuffed with meat, using clipping tool, and stamp date and code on casings and sausage containers.

8215-306 MEAT-MOULD SEALER(slaught. & meat pack.) DPT:884
ham presser; mould-press man.
GED: 2 SVP: 2 EC: I 4 5 6 PA: M 4

Fastens lids on filled metal meat moulds to prepare them for cooking, using press:
Positions filled mould under pneumatic press and closes retainer. Adds meat to top of mould and levels with knife. Positions end and top plates on mould and depresses pedal or turns knob to actuate sealing press that secures plates and attaches lid-retaining springs. Transports moulds to cook tank, using hand truck, or places moulds on conveyor rack leading to cook room.

8215-310 MEAT-MOULD STRIPPER(slaught. & meat pack.) DPT:887
long-loaf remover.
GED: 2 SVP: 2 EC: I 4 6 PA: M 4

Removes cooked meat products from metal moulds, performing any combination of the following duties:
Carries filled moulds from truck or dipping basket to work table. Separates end plates and covers from moulds. Removes contents by striking mould against table, by using press or by inserting air-activated wedge blade into mould and lifting loosened contents onto table. Weighs meats and records weights on tags. Places meats on hand truck for further processing. Transports empty moulds and parts to washing machine, using hand truck. Cleans trucks, tables and equipment, using hot water hose, and sprays anti-corrosion oil over metal equipment.
May place filled moulds in cook tank and tend tank during cooking operations. May tend mould parts washer.

Edible and Inedible By-Products Processing Occupations
8215-330 through 8215-362

8215-330 COOKER MAN, OFFAL(animal & veg. oil;slaught. & meat pack.) DPT:685
melter operator.
GED: 2 SVP: 3 EC: I 3 4 5 6 7 PA: M 2 4

Tends cookers to extract grease and tallow from inedible offal, fat, blood meal and bones:
Turns valves to admit steam to cooker. Starts pump and conveyors to load cooker. Observes gauges and adjusts valves to maintain desired vacuum or pressure throughout cook cycle. Takes sample of product to ensure cooking is completed as specified. Turns handwheel or raises lever to open discharge gate on completion of cook cycle. Reverses agitator paddles in cooker to force material into pans or conveyor leading to press that expels grease and tallow from mixture. Cleans machinery and work area, using steam hose, broom, mattock and shovel.
May record production data.

8215-334 COOK, PET-FOOD(slaught. & meat pack.) DPT:685
GED: 2 SVP: 3 EC: I 3 6 PA: L 4

Cooks and mixes meat and other ingredients in steam-jacketed kettles to make pet foods according to formulas:
Dumps or pours pre-measured amounts of water and ground meat into kettles. Starts agitator to mix ingredients. Sets automatic controls to heat and cook contents at specified temperature. Opens valves to circulate mixtures through other kettles. Dumps pre-mixed seasonings, cereals and other ingredients into mixtures in specified amounts and at designated intervals. Starts pumps to transfer cooked product from kettles through cooler and into holding tank preparatory to packaging. Flushes out equipment, using hot-water hose.
May test viscosity of mixture visually or using hydrometer. May tend cooker and extruder, and pump cereal mixture from cooker to extruder to make strands of material that are cut up and dried. May tend

coating reel that coats dried cereal with tallow, and conveyors that transfer coated dog food to packaging machines.

8215-338 LARD RENDERER(animal & veg. oil;slaught. & meat pack.) DPT:685
GED: 2 SVP: 3 EC: I 3 4 5 PA: M 2 4

Tends steam-jacketed rendering tanks that cook edible animal fat to make liquid lard:
Selects tank to be loaded with fat and bones and secures cover of loaded tank. Opens steam valve to heat contents of tank under pressure for specified time. Turns valves to transfer liquid lard into storage tank. Starts pump to transfer lard to filtering and bleaching department. Dumps or shovels residue from bottom of tank into truck or conveyor.
May tend grinding machines and centrifuges that separate solids from liquid fats.

8215-342 RENDER MAN(animal & veg. oil;slaught. & meat pack.) DPT:685
tank-house man.
GED: 2 SVP: 3 EC: I 3 4 6 7 PA: H 2 3 4

Tends equipment such as cooking tanks, presses or expellers, dryers, grinders, pumps and conveyors to prepare inedible offal, fat and bones for use in making soap, fertilizer and animal feeds, performing any combination of following duties:
Opens valves to admit steam to cooker and starts pumps and conveyors to load cooker. Observes temperature gauges, rate of flow and condition of material and makes adjustments to meet specifications. Shovels or dumps lard tankage, blood and inedible or condemned parts of carcasses into chute or conveyor leading to grinder or cooker tanks. Cuts up small whole carcasses for rendering, using cleaver. Opens valves to drain or pump oil from surface of cooked offal and opens discharge trap to drop cooked material into trough leading to expellers. Starts dryer to evaporate moisture from cooked material and transfers product by truck or conveyor to storage bins. Starts milling and screening equipment to pulverize and sift tankage, cracklings and blood meal for bagging. Hangs bag on outlet of screening hopper and moves lever to discharge specified amount of material, and ties or sews mouth of bag, using overhead sewing machine. Removes solids and fats from waste water in catch basin, using skimming device.
May tend equipment to cook, dry, mill and bag processed feathers for poultry feed. May be designated according to specific duty performed or equipment tended; for example,
Bone-Process Tender
Crackling-Press Operator
Expeller Man
Feather Cooker
Tallow Pumper
Tankage Grinder

8215-343 TALLOW-EXTRACTOR TENDER(animal & veg. oil) DPT:685
GED: 2 SVP: 3 EC: I 4 5 6 7 PA: L 2 4 7

Tends extractor tank, distilling and condensing units, and auxiliary equipment to remove grease or tallow from cooked inedible animal parts, using solvent process:
Starts screw conveyor that loads rendered materials into hopper of extractor tank, by depressing button on control panel. Turns valves to start and regulate condensing, distilling and cooling units, that separate hexane (solvent) from fat for reuse in extraction process. Depresses knobs or moves levers on control panel to start belt conveyor inside extractor tank, dryers and auxiliary equipment. Starts pumps to spray and control flow of hexane onto rendered material to remove fat from cooked meat and bones. Starts pumps to transfer grease, which has drained through perforated bed of extractor tank and through pipes, to settling tanks in tallow room, prior to refining. Observes extraction process in tank to verify normal progress and examines colour of mixture in piping system through sight glasses at various locations, to ensure separation of fat from hexane. Adjusts flow of fat and hexane mixture in pipe system and auxiliary equipment by moving levers or turning valves. Reads temperature and pressure gauges to ensure conformity to specifications and records readings for production control. Draws sample of tankage (dried, fat-free, rendered material), using shovel, and tactually examines material to ensure that it is fat-free. Starts screw conveyor to route dry

rendered material to grinding room. Performs cleaning and minor maintenance duties on machinery and equipment. May spray naphtha and steam instead of hexane onto rendered materials in extractor tank.

8215-344 TALLOW REFINER(animal & veg. oil) DPT:685
GED: 2 SVP: 3 EC: I 4 5 7 PA: H 2 4 7

Tends filter press and auxiliary equipment used to refine tallow: Turns valves to admit specified amount of tallow from storage tank into stabilizing and settling tanks. Observes gauges and turns steam valves to heat tallow in tanks. Fills mixing tank with specified quantity of boiling water and dumps pre-weighed amount of salt into tank. Starts pumps to force solution into tank to stabilize tallow, and allows water and impurities to settle to bottom of tank. Opens drain valve to remove water and impurities. Dumps specified amount of filtering or bleaching powder into tallow in settling tanks, and starts agitators to blend mixture. Inserts series of screen racks into filter press to remove impurities from tallow. Turns valves to control flow of tallow and pressurizing air into filter press. Observes colour of filtered tallow through sight-ports of pipe system and compares with standard samples to determine degree of filtration. Starts pumps and turns valves to transfer tallow to storage tanks, trucks, tank cars or shipping containers.

8215-346 TRIPE COOK(slaught. & meat pack.) DPT:685
GED: 2 SVP: 3 EC: I 4 6 7 PA: M 3 4 7

Tends equipment that cleans and cooks tripe, preparatory to further processing: Trims cattle paunch (tripe) free of fat, using knife, slits paunch and discards contents. Spreads tripe over cone-shaped, revolving table for handscrubbing and spraying. Forks or dumps tripe into scalding or rinsing vat and adjusts valves to admit steam and water. Removes and inspects tripe on table and scrubs off residual foreign matter. Places tripe in cooker, measures and adds specified cleansing or bleaching agents and adjusts water and steam valves to fill and regulate temperature of cooker. Removes tripe from cooker after specified time and drains and chills before further processing. Cleans and oils equipment, using hot water hose, brush and oil-spray gun. May cut and weigh cooked tripe and pack it in plastic bags. May pack and deliver tripe in bulk shipping containers for further processing, using hand truck.

8215-350 BLEACHER, LARD(animal & veg. oil;slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 6 PA: M 4

Tends equipment that bleaches and filters lard: Turns valves and adjusts manual controls to start pumps that draw unrefined liquid lard from storage tank into bleaching kettle. Adds bleaching agent such as fuller's earth, using shovel or by emptying container, to absorb impurities in lard. Starts agitators to mix material. Turns valve to circulate steam through bleacher coils to maintain temperature as specified, and observes pressure and temperature gauges. Draws sample of bleached product for laboratory analysis and adds more bleaching agent as required. Inserts new cloths between filter-press plates. Starts pumps to force bleached lard from kettle through filter press and into storage tanks.

8215-354 BONE CRUSHER(slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 4 5 6 7 PA: M 3 4

Tends machine that crushes animal bones for use in making products such as soap, animal feed or glue: Pushes buttons to start conveyors and bone crushing machine. Ensures that input conveyor and crushing machine function properly and output conveyor carries crushed material to cooking tanks, melters or roasters. May fork bones from handtruck into machine. May weigh and record weight of truck load of bones.

8215-358 CENTRIFUGE TENDER(slaught. & meat pack.) DPT:685

blood separator.

GED: 2 SVP: 2 EC: I 3 4 6 7 PA: M 4

Tends centrifuge that separates cattle blood into hemoglobin and plasma for further processing: Hangs pail under severed jugular vein of suspended carcass to collect blood. Tags pail to identify source of blood until carcass has been approved for use by inspector. Empties blood into centrifuge tank and starts machine that spins and separates blood into hemoglobin and plasma. Presses buttons to start pumps to transfer hemoglobin to rendering department for processing into feed and fertilizer and pump plasma to heat exchanger for chilling. Turns valve to drain chilled plasma into containers and delivers plasma to freezer or sausage department, using truck. Cleans equipment with disinfectant solution, hot water, hose and sponges.

8215-362 HOOF REMOVER(slaught. & meat pack.) DPT:685
dehoofers.

GED: 2 SVP: 2 EC: I 3 4 5 6 7 PA: M 3 4

Tends equipment that separates hooves from severed cattle feet for further processing: Opens steam and water valves to fill soaking tanks with hot water. Shovels or dumps severed cattle feet into baskets in tanks. Opens tank drain valve when soaking cycle is finished. Turns winch to lift baskets onto floor. Places single foot on bed of hoof-separator machine and depresses pedal to pinch and separate hooves from foot and drop hooves into hand truck. Tosses foot into other hand truck. Pushes trucks of hooves to dryer room, and trucks of feet to glue-rendering department for further processing.

8217-FISH CANNING, CURING AND PACKING OCCUPATIONS

This unit group includes occupations concerned with preparing, preserving and packing fish and shellfish for use as food and by-products, such as oil and meal. Includes cleaning, peeling, shucking, cutting, grinding, salting, smoking, dehydrating, freezing, cooking, canning and related activities.

8217-110 FISH-CUTTING-MACHINE SETTER(fish process.) DPT:680

filleting-machine setter; skinning-machine setter.

GED: 2 SVP: 5 EC: I 4 6 PA: M 3 4

Sets up battery of machines that fillet and skin fish: Adjusts cams of cutting knives and feed mechanisms as specified by size of fish processed and type of fillet required, using hand tools. Adjusts dial of vibrating-cutting knife to remove required thickness of skin. Patrols work area and inspects fillets for appearance and quality, and makes any necessary adjustments to machines. Repairs or replaces defective machine parts after determining part names, numbers, functions and tolerances from manuals and catalogues. Performs maintenance work, such as cleaning, disinfecting and lubricating equipment, and sharpening knives, using power grinder or whetstone.

8217-112 FISH-BY-PRODUCTS PROCESSOR(fish process.) DPT:682

GED: 2 SVP: 4 EC: I 5 7 PA: L 2 4

Operates steam cooker and pressing, drying and grinding equipment to process fish by-products, and separate fish oil from cooked fish: Turns valves to regulate steam pressure and temperature of cooker within specified range. Observes conveyor to ensure material is being fed to cooker continuously. Adjusts speed of conveyor as required, using hand wheel. Tends press to crush fish offal and extract fish oil liquor. Adjusts press to ensure maximum extraction of liquor from pressed fish and tests samples of pressed cake for conformity to moisture standards, using scale and oven. May tend drier to remove excess moisture from cooked fish offal prior to grinding offal into meal. May mix fish meal with cereal or other additives to make animal or fish feeds. May perform routine maintenance.

nance on equipment, using hand tools. May be designated according to specialized activity; for example,
Drier Tender
Fish-Food Preparer
Fish-Offal Processor
Fish Presser
Meal-Cake Former

8217-114 FISH SMOKER(fish process.) DPT:685
GED: 2 SVP: 4 EC: 1 3 4 7 PA: M 4 7

Tends smoke chamber in which fish are cured, performing any combination of the following duties:
Empties bags of special sawdust and spreads evenly on smokehouse floor, using rake, or fills hopper of smoke chamber with wood chips and sawdust. Ignites wood and allows to smoulder. Pushes wheeled racks loaded with hanging fish or trays of fish into smoke chamber. Adjusts damper to regulate amount of smoke entering chamber. Examines colour and texture of fish periodically to ensure curing meets specifications. Removes racks from chamber and stacks cured fish on trays for packaging.
May pack smoked fish and stamp identification data on package, using rubber stamp. May cut and barbecue (roast) smoked fish sections (tips) in electric oven. May remove ashes from chamber and clean racks, using brush and water hose.

8217-118 FISH-PRODUCTS MAKER(fish process.) DPT:585
GED: 2 SVP: 3 EC: 1 6 7 PA: M 4

Tends machinery that cuts, cooks and cools fish products, such as breaded fillets or fish sticks, performing any combination of the following duties:
Fills hoppers of automatic feeding and cutting mechanisms with slices of frozen fish, premixed batter and breading materials. Presses buttons to start and stop feeding and cutting mechanisms, conveyors, pumps and cooling fans. Turns dial controls to regulate temperatures of cooking and cooling units and the viscosity and level of batter-mixer and breading-feeder units. Observes operation of equipment to detect malfunctions, and stops equipment to make minor repairs, such as replacing worn or dull cutting knives or to alter speed of feed mechanism, using hand tools. Cleans hopper and spouts of feeding mechanisms, using chlorine solution and brush or sponge. Starts pump to force cooking oil through filter to permit reuse. Records production data, such as weight of fish products made, batter and breading used, and length of time required to repair machinery.
May be designated according to product made; for example,
Fish-Stick-Machine Tender

8217-122 CENTRIFUGE TENDER(fish process.) DPT:685
fish-oil separator.
GED: 2 SVP: 3 EC: 1 4 5 PA: L 4

Tends battery of centrifuge machines that separate oil from fish liquor.
Turns valves to admit steam to jacket of centrifuges to heat fish liquor. Starts pumps, opens valves and presses control buttons to feed heated fish liquor and oil to centrifuges, start centrifuges and transfer oil to receiving tanks. Observes gauges to determine when temperature is within prescribed range.
May rub oil between fingers to detect grit and may reprocess substandard oil. May open valves to pump oil through one or more settling tanks to separate residual water from oil. May steam-clean centrifuges and settling tanks.

8217-126 SHELLFISH-PROCESSING-MACHINE TENDER(fish process.) DPT:685
GED: 2 SVP: 3 EC: 1 4 6 PA: H 4 6

Tends washing, blanching, brining, steaming, peeling or shucking machines and equipment to prepare shellfish for canning, freezing or fresh packing.
Opens valves to admit water, steam or compressed air into machine vats or washing tanks. Adds specified quantities of salt or other materials. Lowers baskets of shellfish into vats by hand or hoist. Starts conveyors that transport products through machines and processing equipment, such as steam chambers, to blanch and steam open shellfish preparatory to shucking.
May be designated according to machine tended, or kind of shellfish processed; for example,

Clam-Shucking-Machine Tender
Clam Steamer
Oyster Washer
Shrimp Processor

8217-130 FISH CLEANER AND CUTTER(fish process.) DPT:684
GED: 2 SVP: 2 EC: 1 4 6 PA: M 4

Cleans and cuts fresh fish prior to processing or marketing, performing any combination of the following duties:
Positions fish on cutting table, and scrapes away scales, cuts belly open from vent to throat, and removes viscera, gills and bruised parts, using knife. Cuts off head and discards into tub. Washes slime and blood from abdomen by dropping fish into tub of water, or using hose, and removes discolored membrane from cavity, using knife, scraper or spoon. Cuts fish behind gill slits, and draws knife along backbone and ribs to free boneless portion (fillet). Cuts alongside backbone through abdominal cavity to split fish into two sides. Draws knife laterally between skin and flesh to remove skin from fillet. Trims off pieces of bone, fins and fatty portions from fillet. Examines fillet to determine number and size of possible sections, cuts sections according to specifications, and scrapes pieces into container. Carries full container to weighing station. Sharpens knife, using whetstone.
May lay fillet over illuminated glass to inspect fillets, and remove foreign matter with tweezers. May clean, wrap, label and freeze guests' catch of fish at resort or preserve catch by smoking or pickling.
May be designated according to duty assigned; for example,
Fillet Chopper

8217-134 SHELLFISH PROCESSOR, HAND(fish process.) DPT:684
GED: 2 SVP: 2 EC: 1 4 5 6 PA: L 4

Disjoints and removes meat from lobsters or other crustaceans, preparatory to canning or further processing:
Disjoints cooked lobsters or crabs manually, preparatory to removal of meat, and deposits tail, claws and legs into separate trays. Splits claws and tail and removes meat, vein and roe, using knife and special tool. Clips ends of legs, using scissors. Feeds legs through rollers to press out meat, and deposits meat in tray.
May pack meat in prescribed sequence in cans of specified weight. May tend machine that covers and seals cans of meat, and pack sealed cans in shipping cases or on trays for freezing. May tend machine that blends meat into paste, and fill cans with paste prior to sealing. May be designated according to type of shellfish processed; for example,
Crab Butcher
Lobster Processor
Shrimp Peeler

8217-136 BASKET-FILTER TENDER(fish process.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: H 3 4

Tends centrifugal-basket filters to remove solids from fish liquor:
Starts rotation of filters and flow of liquor from centrifuges into filters by pressing buttons and turning valves. Observes filters and stops each one when mesh is blocked by solids and liquor begins to flow over top of basket. Empties solids from basket by raising steel shield from bottom of basket, up centre post of basket, using steel rod. Scrapes solids from inside of basket with hand-held steel scraper, allowing solids to fall through bottom opening onto screw-type conveyor. Replaces shield at bottom of basket. Cleans filters, using steam hose.

8217-138 DRIER-AND-GRINDER TENDER(fish process.) DPT:685
fish-meal grinder.
GED: 2 SVP: 2 EC: 1 7 PA: L

Tends rotary drier to remove moisture from fish-meal cake, and grinder to grind cake into meal:
Starts conveyor to move fish-meal cake from press to drier and through drier to grinder. Monitors drier temperature and adjusts controls. Periodically tests moisture content of dried cake by taking sample, weighing, heating for prescribed time and reweighing. Adjusts temperature when tests indicate excess moisture is present.
Tends grinder to grind dried cake into meal.
May carry out running adjustments. May repair and overhaul equipment during slack period

8217-142 FISH-CAKE MAKER(fish process.) DPT:685
GED: 2 SVP: 2 EC: I 4 7 PA: M 4

Tends machines and equipment that grind, mix, form and cook fish to make fish cakes:
 Transports trays of boned, steamed fish from cooker to work table.
 Weighs specified quantity of fish, using balance scales. Places fish in machine that grinds it into paste. Places paste in mixing machine and adds specified amounts of ingredients, such as flour, water and spices.
 Feeds mixture into extrusion machine that forms and deposits fish cakes in steam cooker or deep-fat fryer. Wraps cooked product in wax paper. Cleans work table, machines and equipment, using water hose, sponge and cloths.

8217-146 SHELLFISH-SEPARATOR TENDER(fish process.) DPT:685
GED: 2 SVP: 2 EC: I 4 6 PA: M 3 4

Tends machine that removes shell particles and sand from raw shellfish meats preparatory to processing:
 Turns valves to admit water and compressed air into separator vat. Dumps shucked or peeled meats into vat. Adjusts volume of air and operating time cycle according to bulk and condition of meats. Moves cleaned meats to conveyor, using scoop or colander. Drains vat to remove shells and sand from bottom.
 May weigh cleaned shellfish meats and record production data.

8217-150 FISH-EGG PROCESSOR(fish process.) DPT:687
GED: 2 SVP: 2 EC: I 4 7 PA: H 3 4 7

Cleans, dyes, cooks and packs fish eggs for commercial purposes, working as member of crew:
 Rubs cluster of eggs over table to separate them from membrane. Dumps eggs into vat and flushes away foreign matter, using hose. Shovels eggs into pot containing dye and brine solution and starts power agitator to dye eggs uniformly. Dumps dyed eggs into sieve for draining, and shovels eggs into kettle to be cooked for specified time. Shovels cooked eggs into grading sieve, for sorting according to size. Fills jars with eggs sorted according to colour and size.
 May prepare curing solutions according to formulas. May pour brine-cured fish eggs into jars or shipping containers for sale as salmon caviar.

**8221-FRUIT AND VEGETABLE CANNING,
 PRESERVING AND PACKING OCCUPATIONS**

This unit group includes occupations concerned with preparing and preserving fruit and vegetables by canning, dehydrating, freezing, pickling, or by using sugar or other preservatives. Occupations concerned with preparing and cooking fruits and vegetables in hotels, restaurants and other non-manufacturing establishments are classified in Unit Group 6121, CHEFS AND COOKS. Occupations concerned with cooking fruits and vegetables for preserving are classified in Unit Group 8229, FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS, N.E.C.

8221-110 CANDIED-FRUIT PROCESSOR(can. & preserv., n.e.c.) DPT:685
GED: 3 SVP: 4 EC: I 4 PA: M 4

Tends equipment to prepare flavouring and preservative solutions, and make products, such as maraschino cherries or cut fruit peel, performing any combination of following duties:
 Weighs colouring, flavouring and preservative ingredients according to formulas, and dumps materials into steam-jacketed kettle. Turns valves to admit water into kettle and steam into jacket to heat solutions as specified. Stirs and blends ingredients in solution, using portable power mixer or wooden paddle. Washes cherries in barrels to remove preservative coating, drains wash water and refills barrels with specified flavouring and preservative solutions. Dumps barrels of whole fruit or cut peel into vats, using mechanical dumper, and adds brine solution and lime to bleach and firm fruit. Turns valves and regulates flow of coloured sugar solution through sprays to coat fruit and cut peel. Pumps surplus sugar solution from vats into pasteurizer,

and to storage tanks for re-use. Loads processed fruit and peel into hopper of slicing machine, using pail or shovel.
 May direct other workers engaged in sorting and packaging fruit for shipment. May be designated according to kind of fruit processed; for example,
 Processor, Fruit-Peel
 Processor, Maraschino Cherries

8221-114 MINCEMEAT MAKER(can. & preserv., n.e.c.) DPT:485
GED: 2 SVP: 3 EC: I 4 PA: M 4

Weighs, measures and mixes ingredients according to formula, to make mincemeat:
 Weighs or measures ingredients; such as, raisins, currants, ground orange peel, salt, spices and hot water, using platform scales and measuring containers. Dumps ingredients into mixing machine equipped with paddle, turns wheels and pushes buttons to start machine, or dumps and mixes ingredients in trough, using portable beater. Allows mixture to cool. Mixes premeasured quantities of ground meat or suet with cooled mixture. Observes colour of product and tests consistency, using hand paddle. Scoops or pours product from machine or trough into containers for further processing.
 May remove sample of mincemeat for laboratory analysis. May record daily production data.

8221-118 FREEZE-DRY-FOOD PROCESSOR(can. & preserv., n.e.c.) DPT:685
freeze-dry-machine tender.
GED: 2 SVP: 3 EC: I 2 6 PA: M 3 4

Tends freeze-dry equipment to preserve food, such as fruit, vegetables and mushrooms:
 Loads trays with portions of fresh or frozen foods. Places trays on conveyor or on shelves in freeze-dry chamber. Actuates switches to begin heat-dry, vacuum and freeze cycle in chamber. Sets timer controls, and monitors heating and cooling cycle of freeze-dry program specified for the food processed. Opens chamber door and places frozen-dried foods onto conveyors to packaging and shipping or storage areas.
 May package frozen foods, and apply identification labels to packages. May record production data.

8221-122 VEGETABLE PICKLER(can. & preserv., n.e.c.) DPT:687
pickleman.
GED: 2 SVP: 3 EC: I 4 PA: M 3 4 7

Pickles vegetables in preservative or flavouring solutions:
 Mixes ingredients such as salt, vinegar or sugar in barrels, vats or tanks according to formula, to make pickling or flavouring brine. Dumps vegetables into brine to soak and cure for specified time. Removes contents from containers by hand or with dip net. Washes, soaks and de-salts pickled product in special solution, prior to further processing or packing. Cleans and lubricates equipment using cleaners, brushes, cloths and oil can.
 May grind horseradish roots, and mix powder with vinegar and other ingredients, according to formula, to make condiment. May pack product into barrels in layers covered with dry preservative such as salt. May tend equipment that separates specific vegetables according to weight and size.

8221-134 VEGETABLE-DRIER TENDER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 4 6 PA: L 4

Tends drying machine that removes moisture from potatoes or other cooked vegetables to make instant or dried products:
 Actuates switch to transfer cooked vegetable mash from cooker hopper by auger-type conveyor, and turns control valves to uniformly coat heated revolving cylinder that removes moisture from mash. Observes dried mash as it passes from cylinder and between rollers, and removes any foreign material. Monitors machine operation as mash is compressed into sheets, scraped from rollers and dropped into auger-type conveyor leading to sizing screen that breaks material into flakes.
 May be designated according to product dried; for example,
 Instant-Potato Maker

8221-126 BLANCHING-MACHINE TENDER(can. & preserv., n.e.c.) DPT:685
blancher.
GED: 2 SVP: 3 EC: 1 3 4 PA: L 4 7

Tends machine that blanches fruits and vegetables preparatory to canning and preserving:

Observes gauges, sets controls, and turns valves to fill machine with water and admit steam, and to regulate temperature and blanching time. Starts machine, conveyor or pumps to feed and remove produce from machine. Feels and visually examines blanched product to determine adequacy of softening and colour change.

May fill and weigh containers of blanched products. May blanch other foods, such as nuts and rice. May manually feed paste products, such as spaghetti and noodles into blanching machine. May record daily production of blanched foods.

8221-130 LYE-PEEL TENDER(can. & preserv., n.e.c.) DPT:685
steam-peeler tender.
GED: 2 SVP: 3 EC: 1 4 6 7 PA: L 4 7

Tends equipment that removes skins of fruits and vegetables prior to cooking and preserving:

Turns valves to admit steam to heat lye solution in tank and to regulate lye and water sprays. Starts conveyor to carry produce through immersion tank and sprays. Observes and feels emerging fruit or vegetables to ensure complete removal of skins, and increases immersion time as required.

May prepare lye solution by dumping lye chips into tank, using hoist, and test strength of solution, using hydrometer. May load conveyor with fruit or vegetables by hand. May scald produce with steam to loosen or remove skin or peel.

8221-138 FOOD-COOLING-PAN TENDER(can. & preserv., n.e.c.) DPT:585
GED: 2 SVP: 2 EC: 1 4 6 PA: M 4 7

Tends equipment that cools food, such as soups or jams during processing, or prior to bottling or canning:

Turns valve to admit coolant into jacket or coil of cooling tank, or inserts portable cooling coil into container filled with hot food and adjusts flow of coolant through coil. Skims foam from top of material, using ladle or fine mesh skimmer, and stirs material with paddle to prevent coagulation and permit even cooling. Observes thickening and starts pump, or opens dump valve to transfer product to next process or to container-filling machine when desired consistency or temperature is reached. Draws food sample for laboratory analysis, and records batch data.

May truck cooled product to next process or storage area. May clean and sterilize cooling equipment by circulating sterilizing solution through piping and using brush and cloths.

8221-142 BRINE-TANK-SEPARATOR TENDER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 4 PA: L 4 7

Tends brine-filled tanks and equipment that separates tender young peas or other vegetables from mature ones preparatory to preserving:

Turns valves and actuates switches to pump water and brine solution to predetermined level in tanks, and to start conveyors to fill tanks with ungraded vegetables. Monitors automatic equipment that skims tender vegetables floating on surface of brine mixture and removes mature vegetables from tank bottoms. Tests specific gravity of brine solution, using hydrometer, and reports variances from specifications. Maintains specified level of brine in tanks. Cleans tanks and work area, using water hose and scrapers.

May tend equipment to mix brine solution and pump solution to storage tank.

8221-144 DUMPING-MACHINE TENDER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: H 4 7

Tends machine that automatically dumps containers of fruit, vegetables or other foods onto conveyor or into vats, for processing:

Directs fork-lift operator in positioning full tote boxes on feed conveyor or platform. Starts machine that automatically grips, tilts

and dumps tote boxes of fruit or produce onto conveyor for subsequent washing, cutting or peeling, and returns empty boxes. Clears blockages and controls flow of material by starting and stopping conveyor.

May lubricate and make minor adjustments to machine. May clean machine and work area, using hot water hose, brushes and hand tools.

8221-146 POTATO-PEELING-MACHINE TENDER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 4 PA: L 4 7

Tends machine that cleans, washes and peels potatoes preparatory to cooking dehydration:

Starts loaded machine by pressing button or moving lever to clean off foreign material, wash, and convey potatoes through revolving abrasive disks. Observes operation of equipment to prevent blockages and ensure removal of skin. Pushes levers to regulate flow of potatoes over abrasive rollers of continuous-type machine, to control amount of skin removed. Inspects peeled potatoes passing on conveyor and discards unsuitable product or cuts away oversized or unsuitable potato parts, using knife.

May load potatoes into hopper of machine manually or using hoist.

8221-150 BULK FILLER(can. & preserv., n.e.c.) DPT:687
tubman.
GED: 2 SVP: 2 EC: B 4 PA: H 3 4 7

Fills tubs, barrels or other containers with processed food products and ingredients for preserving:

Dumps foods, such as pickles, cucumbers or beets into wooden tub, barrel or storage tank. Measures and adds prescribed amounts of preservatives; such as, salt, sugar, brine, syrup, or vinegar. Covers container with lid and affixes identifying label. Removes food sample for laboratory analysis, using ladle and sample bottle. Cleans equipment and work area, using detergent, scrubbing brush and warm water.

May transport filled containers to storage area, using forklift truck or handtruck.

8223-MILK PROCESSING AND RELATED OCCUPATIONS

This unit group includes occupations concerned with processing raw milk and cream to make pasteurized milk and cream, butter, cheese, ice cream, frozen novelties and other dairy products. Activities include: blending, churning, coating, cooking, cooling, cutting, decorating, dehydrating, fermenting, grinding, freezing, homogenizing, moulding, pasteurizing and separating dairy products.

Milk and Butter-Making Occupations 8223-110 through 8223-138

8223-110 MILK-PROCESSING-EQUIPMENT OPERATOR(dairy) DPT:562
GED: 3 SVP: 6 EC: 1 3 4 5 6 PA: M 2 3 4

Controls continuous flow or vat-type equipment to process fresh milk and cream according to standard procedures, performing any combination of the following duties:

Connects piping between vats and processing equipment and assembles fittings and parts, using hand tools to prepare equipment for operation. Turns valves and starts pumps to force washing, sterilizing and rinsing solutions through processing pipes and equipment, and to spray inside of vats. Starts process pumps and equipment, monitors temperature and pressure gauges, and opens valves to transfer milk to centrifuge that separates cream from milk, through homogenizer that emulsifies milk, and through filter that removes sediment. Opens valves to transfer required amounts of cream or skim milk into standardizing tank to adjust butterfat content of milk to specification. Turns valves to admit steam and water into pipes or vat to pasteurize milk and to circulate refrigerant through coils to cool milk. Tests products for acidity at various stages of processing, by titration or using pH meter. Opens valves and starts pumps to transfer products to

bottling or packaging machines. Tends equipment that packages or bottles milk and other dairy products in cardboard, glass or plastic containers. Records process and production data. Directs other worker to clean equipment and work area, using steam hose, hot water and soap.

May be designated according to type of equipment operated; for example,

Homogenizer Operator
Pasteurizer Operator
Separator Operator
Standardization Man

8223-114 SPECIALTY-PRODUCTS MAKER(dairy) DPT:562
GED: 3 SVP: 6 EC: I 3 4 5 6 PA: H 3 4

Operates processing equipment to make specialty-dairy products such as whipping, table and coffee cream, chocolate drink, yogurt, butter-milk and eggnog;

Transports specified ingredients such as sugar, stabilizer, cocoa, flavouring or bacterial agents from storage to pasteurizer, using hand truck. Turns valves to admit fluid milk and cream into pasteurizer in specified quantities. Selects, measures and adds ingredients such as bacterial agents or flavouring, according to recipe for product. Adds fluid or powdered milk to correct mixture to proper butterfat content, as indicated by butterfat tests. Heats mixture to pasteurizing temperature for required time. Connects pipes between pasteurizer, mixer, homogenizer or cooler units, and actuates valve and pump controls to transfer mixtures through equipment into storage tanks or packaging machines. Sends samples for laboratory analysis. Checks weight of packed containers, using balance scale. Records process and production data. Dismantles and cleans machines, or directs other worker to clean equipment and work area after each production run, using hot-water hose, soap, cloths and squeegee.

May pour fruit juice concentrate into tank and add required amount of water to reconstitute juice and make breakfast drinks. May prepare and ripen bacterial cultures in sterile or skim-milk solutions. May be designated according to product made; for example,
Chocolate-Milk Mixer
Yogurt Maker

8223-118 BUTTER MAKER(dairy) DPT:682
GED: 3 SVP: 6 EC: I 2 4 6 PA: H 3 5 7

Controls equipment to make butter, using either batch or continuous-process churning method:

Connects sanitary piping between cream storage vat and churn, using hand tools, and actuates controls to pump sterilizing solution through equipment prior to commencement of churning process. Pumps measured amount of pasteurized cream into batch-type churn and starts churn, or sets controls to regulate cream flow and starts continuous churning equipment. Observes separation of buttermilk from butter through window, and pumps buttermilk from churn. Compares butter with colour chart and adds colouring or adjusts flow of colouring material into churn to meet standards. Tests butter for moisture, salt content and consistency, using testing apparatus, and adjusts equipment for conformity with specifications. Examines, smells and tastes butter to determine grade. Removes butter from churn and loads it into moulding-and-packaging-machine hopper, or places empty cartons in packaging unit at discharge end of continuous-process churn. Checks weight of samples of packaged butter, using scales and adjusts mould setting to conform with weight specifications. Lifts filled cartons onto truck and transports cartons to cold-storage room. Cleans and flushes piping and churning equipment, using solvents and warm water.

8223-122 DRIER OPERATOR(dairy) DPT:682
GED: 3 SVP: 4 EC: I 3 5 PA: L 4 7

Controls vacuum-drying equipment to convert fluid milk into powder of specified moisture content:

Places charts in temperature and vacuum recorders. Starts gas-fired drier, vacuum pump and circulating fan by pressing control buttons, and adjusts dampers manually. Turns drier controls and observes gauges to obtain specified temperature and vacuum. Starts pump and turns valves to spray milk into heated vacuum chamber where milk droplets are dried into powder. Tests powder with moisture meter or by placing sample on scale under heating lamp. Observes interior walls of chamber through porthole for burned scale, indicating excessive temperature. Adjusts drier temperature and volume of liquid sprayed into drier to obtain specified moisture content and prevent contamination

tion of powder by scale. Places container on weigh scale under drier outlet to fill for shipment.

May couple spray unit between pipeline and drier, using wrench. May dry specific product and be designated accordingly,
Skim-Milk-Drier Operator

8223-126 MILK AND CREAM RECEIVER(dairy) DPT:584
GED: 2 SVP: 3 EC: I 4 5 PA: M 4 7

Receives milk or cream from tank trucks or in cans at creamery or dairy, performing any combination of the following duties:

Connects plastic hose between sanitary valves of truck and tank, starts pump and turns valve to transfer milk to receiving tank. Turns valves of can washing cabinet to clean exterior of cans. Starts conveyor to transfer cans to intake room. Loosens can covers by tapping with mallet, and places covers on conveyor rack. Empties cans of milk or cream into weigh vat, and slides empty cans onto conveyor. Observes, smells and tastes liquid to detect sourness, and draws sample with dipper. Tests sample for acidity, butterfat and sediment, using testing apparatus. Records amount of milk pumped, by weighing truck before and after pumping, by observing automatic flowmeter reading, or by placing ticket in automatic meter of weigh scales.

8223-130 CANNED-MILK STERILIZER(dairy) DPT:585
GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Tends continuous-process-canning machine that cooks and sterilizes canned milk:

Turns valves to admit steam, water and hot air into heating, cooking, cooling and drying chambers of machine, and monitors gauges to adjust and maintain temperature. Observes dials and panel-control lights that indicate machine failure. Removes jammed cans when conveyor stops, to prevent overcooking milk in process. Observes sealed cans of milk moving through chambers, and discards damaged tins for reprocessing. Removes sample test cans for inspection according to test program. Opens samples and dips spoon into contents and observes texture, viscosity and colour of sterilized milk and notifies laboratory of variances from standards. Reads automatic data recorder and prepares production report. Fills tank of sterilizing unit with heated cleansing solution and flushes tank with water to clean unit between production runs.

May examine and re-pack cans of milk in shipping containers and replace soiled labels, using glue and brush.

8223-134 MILK-POWDER GRINDER(dairy) DPT:685
casein grinder.
GED: 2 SVP: 2 EC: I 5 7 PA: H 3 4

Tends equipment that grinds and sifts milk and casein powders:

Stoops to fasten specified screen in sifter, using hand tools, and pushes buttons to start hammermill, vibrating-sifter and tank agitator. Starts conveyor that transfers coarse dried milk powder or casein from sifter to hammermill, and turns crank to alter speed of hammermill to obtain specified fineness. Observes and listens to equipment to detect malfunctions. Starts pneumatic vacuum blower to convey ground powder through sifter to holding tank. Fills large bags or barrels with powder from holding tank outlet and places filled containers on skids for removal to storage.

8223-138 DAIRY HELPER(dairy) DPT:686
GED: 2 SVP: 2 EC: I 2 4 5 6 PA: H 2 3 4

Helps dairymen to prepare dairy products, performing any combination of the following duties:

Scrubs and cleans pipes, fittings and process machines with sterilizing solution, using brush, sponge and cloths. Attaches pipes and fittings to machines, using wrenches. Examines raw milk for dirt and odour, and dumps milk into receiving tank. Dumps milk, cream, butter or cottage cheese into vats or machine hoppers. Starts and stops machines and equipment as directed. Cuts butter and cottage cheese into squares, using knives. Pulls lever on hopper to fill containers with powdered milk. Weighs containers on scale and moves containers to storage or shipping areas, using hand truck, conveyor or electric-fork-lift truck. Places empty bottles, cases and cans onto conveyor to be transferred to receiving, washing or filling stations. See also definition for term title, 02-160 HELPER (any ind.).

May package or bottle milk or other dairy products in cardboard, glass or plastic containers.

Ice-Cream-Making Occupations
8223-158 through 8223-174

8223-158 ICE-CREAM MAKER(dairy) DPT:682
GED: 3 SVP: 5 EC: I 4 5 PA: L 4 7

Operates one or more continuous freezers and associated equipment to make ice-cream products:
Assembles pipes and fittings to connect machines. Places novelty dies in filler head, using wrenches. Weighs, measures and dumps ingredients such as powder, colouring, flavouring, or syrup into mixing vat, fruit feeder, or holder of rippling pump. Starts agitators, beaters, scrapers and pumps, and turns valves to blend and force mixture and air into freezer barrels, and refrigerant into coils. Observes ammeter and pressure gauge on barrel and adjusts controls to proper temperature and speed. Sets feed controls according to freezer speed to ripple ingredients into mixture leaving freezer barrel. Opens valve to transfer contents to filling machine that pumps ice cream into cartons, cups, cones, or moulds for pies, rolls or tarts. Weighs package and adjusts freezer air valve, or filler head to deposit specified quantity of product in container. Cleans equipment between product runs or at conclusion of daily production, using sterilizing solution or steam spray.

8223-162 ICE-CREAM DECORATOR(dairy) DPT:584
GED: 3 SVP: 5 EC: I 4 PA: L 4 7

Moulds and decorates ice-cream specialties:
Packs ice cream ingredients into metal moulds shaped as flowers, fruit, animals, cakes, pies, and seasonal or festive figures, using spoon, knife or spatula. Presses mould pieces together and places mould in hardening cabinet. Immerses hardened moulds in water, pries defrosted moulds open and removes confection, using knife. Whips cream, sugar and food colouring, using mechanical beater to prepare decorative creams of specified colours and consistency. Places desired extrusion tips into bottom of icing bag, and fills it with whipped cream. Presses icing bag and moves it over confection to create specified designs or artistic figures. Holds confection under stencil and stencils design onto confection with whipped cream, using spatula, or sprays colouring through stencil to form wording, using spray gun. Places paper, plastic or metal decorations, candies or nuts on confection as specified, and places finished specialty item on packaging conveyor.

8223-166 FROZEN-STICK-NOVELTY MAKER(dairy) DPT:585
GED: 3 SVP: 4 EC: I 4 6 PA: L 4

Tends machines and equipment to mould, freeze, and coat ice-cream or sherbet-type frozen-stick confections:
Connects multiple-spout-filling attachment to novelty-moulding machine, using hand tools. Fills dispensers of bagging and stick inserting machines, adjusts machine guides and clears blockages, using hand tools. Positions mould pan under filler spouts and presses pedal to fill moulds with ice cream, fruit juice or syrup mixture, and places filled pan on brine-tank (freezer) conveyor. Places slotted tray (mould-pan cover) against stick dispenser, and pushes levers to insert and lock sticks in tray slots. Inserts trays into mould pans to insert sticks in novelties and depresses pedal to start conveyor passing through freezing, removal and wrapping units. Dips trays of frozen ice-cream novelties into hot chocolate coating, and places tray on conveyor passing through chill tunnel. Observes gauges, turns valves and moves control switches to correct level of mix deposited into moulds, flow of ingredients into filler hopper and chocolate tank, or temperature of brine, water or chocolate. Tests brine, using hydrometer, and adds salt to maintain required density. Places empty mould pans on conveyor returning to filler spouts. Records quantities of ingredients used and other production data. Cleans equipment and work area, using hot-water hose, brushes, cleansers and squeegee.
May operate continuous freezer and associated equipment to freeze ice-cream mix to semi-solid consistency preparatory to making frozen-stick confections. May mix flavouring extracts, colouring, sugar and water in tanks according to formula, and tend machine that fills, seals and freezes mixture in tubelike plastic film containers. May be designated according to novelty produced or duties performed; for example,
Icicle Man
Mould Filler
Mould Remover
Stick-Machine Man

8223-170 ICE-CREAM-NOVELTY MAKER(dairy) DPT:685
GED: 2 SVP: 4 EC: I 4 6 PA: L 4 7

Tends ice-cream machine that freezes, extrudes, cuts, coats and wraps stickless ice-cream novelties:
Turns valves and sets thermostat to circulate refrigerant and maintain specified temperatures in machine. Inserts forming fixtures in nozzles of machine to extrude specified shape of ice-cream ribbons for bar, patty or roll-shaped products. Starts pump and turns steam valve to fill and heat chocolate in enrobing tank to specified temperature. Actuates controls of machines that extrudes and cuts ice-cream ribbon into measured portions onto conveyor pallets moving through hardening box, and under chocolate or other coating spray, or wafer machine to automatic wrapping unit. Observes ice-cream moving through freezer and adjusts freezer-air-intake lever to obtain specified consistency of ice-cream. Brushes conveyor pallets to remove frost, and cleans equipment, using hot-water hose and brushes.
May adjust controls to synchronize conveyor with freezer speed or to change hardening temperature. May adjust automatic wrapping mechanism. May be designated according to product made; for example,
Eskimo-Pie Maker
Ice-Cream-Sandwich Maker

8223-174 ICE-CREAM WORKER(dairy) DPT:686
GED: 2 SVP: 2 EC: I 2 4 5 6 PA: M 3 4

Helps dairy worker to make bulk ice-cream or ice-cream novelties, by performing any combination of the following duties:
Pours cans of fruit into sieve to separate juice. Places cans of chocolate coating into hot-water vat or pushes barrels of chocolate into heating unit. Adds specified amount of water to chocolate to decrease its viscosity. Measures specified kinds and amounts of ingredients, such as ice-cream mix, fruit, flavouring and colouring. Dumps ingredients as directed into mixing tank, and starts pump to maintain continuous flow of mixture into freezer. Adjusts guides or controls of automatic carton-forming, filling and wrapping machines. Shapes and feeds carton blanks, bottoms and rims into carton-forming machine. Holds bulk cartons under filler head to fill cartons with ice-cream. Packs ice-cream novelties manually. Weighs filled cartons.
May decorate ice-cream novelties, rolls, cakes or pies with whipped cream, candies, nuts or coloured topping, working as a member of a team. See also definition for term title, 02-160 HELPER (any ind.).

Cheese-Making Occupations
8223-194 through 8223-226

8223-194 PROCESS-CHEESE FORMULATOR(dairy) DPT:487
cheese blender.
GED: 4 SVP: 6 EC: I 7 PA: L 4 7

Computes quantities, grades and types of cheese required for blending and making processed-cheese products:
Selects cheeses required to make specified blend by feeling, tasting, smelling and observing various types of cheese for firmness, mellowness, acidity and colour. Calculates quantities of each type of cheese required to make blended batch according to formula, and records quantities, grades and types of cheese on charts or batch work order. Compares laboratory reports of various types of cheese with specifications, and amends chart or batch work order to achieve finished blend having specified body, texture, flavour, moisture, fat, acidity and salinity.
May test cheese during blending process to ensure conformity with specifications.

8223-198 CHEESE MAKER(dairy) DPT:462
GED: 3 SVP: 5 EC: I 4 PA: M 3 4 7

Controls equipment that cooks milk and specified ingredients to make cheddar or natural cheese, and forms and cures cheese according to specifications:
Actuates panel controls to pasteurize milk, and separate it to obtain prescribed butter fat content. Turns valves to fill vats with milk and admit steam to heating coil that heats milk to specified temperature. Dumps measured amounts of colouring agent and lactic culture into milk. Moves controls to start agitators, and mixes ingredients until specified level of acidity is reached. Removes and tests samples of milk mixture, using pipette and acidimeter. Dumps and stirs prescribed

quantity of rennet (coagulant) into mixture. Stops agitators to allow mixture to form curd. Pulls curd knives through curd or uses handscoop to separate curd and release whey. Observes thermometers, adjusts steam valve and starts agitators to stir and cook curd until desired firmness and texture are attained. Squeezes and stretches samples of cooked curd to test for proper firmness and texture. Directs other workers who add ingredients, such as seasonings, and cut, pile, mill and mould curd into specified cheese shapes, and places or turns cheeses on shelves for curing. Removes sample plugs of cured cheese, using trier (auger-like plunger), and tastes, smells, feels and observes samples for quality. Records ingredients used, processing data, and test results. Calculates variations in time cycles and quantities of ingredients for subsequent batches. May dump specified lactic culture into milk or whey in pasteurizer to make bulk lactic bacteria culture.

8223-202 COTTAGE-CHEESE MAKER(dairy) DPT:582
GED: 3 SVP: 4 EC: I 4 PA: H 3 4 7

Controls equipment to make cottage cheese from milk: Turns valves and monitors flowmeters to admit specified amounts of milk, lactic culture and rennet (coagulant) into sterilized vat. Turns steam and water valves to heat milk and ingredients at prescribed temperature for specified time to incubate culture. Starts agitator in vat or stirs ingredients, using paddle. Tests sample of whey for acidity, using pH meter. Cuts curd with knife to drain off whey. Monitors thermometer and adjusts steam and water valves to slowly raise temperature to cook curd. Breaks off and feels sample of curd to determine when it is sufficiently cooked. Opens cold-water and drain valves to wash cooked curd and remove whey. Tastes cheese to test salinity and acidity. Shovels finished cottage cheese into large trays and loads trays onto dolly. Records processing data. Washes vat and tools with sterilizing solution and rinse water. May make lactic culture. May drain uncooked whole curd from vat into porous bags to remove whey, and dump residual curd into blending machine to make baker's cheese. May stir specified amount of cream into washed curds to make creamed cottage cheese.

8223-206 CHEESE-MAKER HELPER(dairy) DPT:685
GED: 3 SVP: 4 EC: I 4 PA: H 3 4

Helps to make cheddar or natural cheese, by performing any combination of the following duties: Tends separating and pasteurizing equipment to prepare milk. Starts pump, monitors gauges and turns valves, as directed, to fill vats with specified amount of milk, and to heat and maintain milk at specified temperature. Dumps specified amounts of colouring and lactic culture into milk. Starts agitators to mix ingredients. Adds rennet (coagulant) to coagulate milk into curd, and presses, salts, cuts and drains curds to remove residual whey. Pierces, washes and turns cheese blocks or moulded circular cheeses to promote curing. Immerses cheese in liquid paraffin to apply protective coating. Loads packaged cheese onto pallets, and transports to storage area, using powered lift truck. Washes moulds, vats and agitators, and tends machines to wash and dry cloths used in cheese making. See also definition for term title, 02-160 HELPER (any ind.).

8223-210 COOKER, PROCESS CHEESE(dairy) DPT:685
GED: 3 SVP: 4 EC: I 4 6 7 PA: M 4 7

Tends vat to cook blended cheeses or cheese curd and other ingredients to make process cheese: Starts agitator and signals for cheese materials to be dropped into vat. Sets steam valve and observes thermometer to heat vat to specified temperature. Measures or weighs out prescribed ingredients such as sodium citrate, disodium phosphate and cream, using scale and measuring glass. Dumps ingredients into vat, and cooks mixture for specified time, or observes consistency of mixture to determine when cooking is complete. Pulls lever to drain cheese mixture into container, or turns valve to transfer liquid cheese into moulding or slice-making machine. Cleans vat at end of production runs. May pump cheese through blending machine to impart finer texture. May mix unheated cheese or cheese curd and other ingredients to make cold pack or creamed cheese and be designated accordingly, Cream-Cheese Maker

8223-214 SLICED-CHEESE MAKER(dairy) DPT:565
GED: 2 SVP: 4 EC: I PA: L 4 7

Tends machine that forms, cools and cuts process cheese into slices of specified size and weight: Places forming die into manifold of cheese hopper. Starts refrigerant pump and observes thermometer to ensure conveyor is cooled to specified temperature. Starts and sets speed of cheese pump which forces cheese through openings in manifold to form ribbons of cheese of specified width and thickness. Threads ribbons of cooled cheese through machine that stacks, cuts and weighs them. Observes lights on panelboard which indicate weight of cheese stacks coming off automatic cutter, weigher and counter. Alters speed of cheese pump or presses button to automatically re-set speed of convey to obtain cheese portions of specified weight. Places cheese stack on scale to test accuracy of automatic weigher. Stops machine to clear blockage. Records production data. May direct other workers engaged in packaging or checking weight of cheese output. May tend machine which automatically extrudes process cheese into moulds to form individual slices or blocks of specified size and weight and be designated accordingly, Cheese-Extruder Tender

8223-218 CHEESE CUTTER(dairy) DPT:584
GED: 2 SVP: 3 EC: I PA: M 4 7

Cuts blocks of cheese into pieces of specified shape and size: Examines cheese for defects in colour, texture and body. Trims rind, mould or sediment from cheese, using knife. Bolts specified cutting head to machine, adjusts stops on cutting table and turns wheels to position cutting wires. Places block of cheese on table, and moves lever to lower cutting head or raise table to cut cheese. Weighs cheese cut and records weight. Places pieces on conveyor leading to packaging or processing areas. Measures cheese cuts with ruler, and adjusts cutting wires to prevent wastage. May direct other workers engaged in packing, weighing and labelling cheese cuts. May send samples for laboratory analysis.

8223-222 GRATED-CHEESE MAKER(dairy) DPT:685
cheese grater.
GED: 2 SVP: 3 EC: I 5 7 PA: M 4 7

Tends grating machine and drying and cooling equipment to make grated cheese: Sets controls to start grater, drying drums or drying chamber heater, blowers and cooling cones. Dumps cheese blocks into feed box of grater, and actuates ram that pushes cheese against grating wheel. Tests moisture content of grated cheese, using moisture meter, and adjusts conveyor speed or hot-air flow into dryer to attain specified moisture content. Observes temperature gauges and reports deviations from specifications. Removes full containers of grated cheese, using hand or power truck. May tend blender to mix grated cheese with milk powder.

8223-226 CHEESE-FACTORY WORKER(dairy) DPT:686
GED: 2 SVP: 2 EC: I 2 4 7 PA: H 3 4

Prepares curd and forms cheese, as directed, performing any combination of the following duties: Divides curd into portions using knife, cutter or scoop to release whey. Inserts strainer into vat outlet and assembles piping or hose. Opens drain valve and banks curd to side of vat with hands or rake to drain off residual whey, and mat curd. Cuts matted curd into standard slabs, and piles and turns slabs over periodically as directed, to obtain specified acidity and moisture. Feeds slabs into mill to cut curd into cubes, and salts cubes. Scoops cubes into forms in press to remove whey and to shape cheese. Places cheese on various shelf levels, as directed, in temperature controlled or smoke-filled room for curing. Cuts cheese blocks into equal portions, using cutter or knife, and places pieces of cheese on truck. Weighs batch to obtain specified amounts of various kinds of cheese required for each cook. Dumps batch of cheese into machine that grinds cheese preparatory to processing. Stamps identification data on cheese. Wraps cheese in foil or other material and places it in wooden or cardboard boxes. Washes moulds, vats and other process equipment. May stretch matted curd in hot water, using paddle. May cut, weigh and mould elastic curd, as directed, using hands, to make specialty cheese.

8225-SUGAR PROCESSING AND RELATED OCCUPATIONS

This unit group includes occupations concerned with extracting, refining and processing sugar, molasses and sugar by-products from materials such as raw-cane sugar, sugar beets and corn. Includes activities such as operating diffusers, mixers, filters, evaporators, driers, presses and screening devices. Occupations concerned with processing maple sugar products are classified in Minor Group 718/719, **OTHER FARMING, HORTICULTURAL AND ANIMAL HUSBANDRY OCCUPATIONS**.

8225-110 CORN-SUGAR-REFINERY OPERATOR(sugar) DPT:382

GED: 3 SVP: 5 EC: 1 6 PA: L 4

Controls semi-automatic refinery equipment to produce sugar from corn starch:

Actuates switches and valves to pump and control flow of materials through clarifiers, converters, decolorizers, evaporators and ion exchangers. Observes dials, meters and gauges of console, to determine progress or state of process and to detect equipment malfunction. Actuates controls to regulate treating time, temperature, rate of flow and density of sugar liquors flowing through filter, converter and evaporator units, according to specification. Takes samples of solution and forwards to laboratory for determination of specific gravity and acid content, and to ensure filtering is adequate. Adds base or acid to solution as indicated by laboratory report, and checks result, using pH meter. Compiles reports and records processing and other production data.

8225-114 CARBONATION MAN(sugar) DPT:582

GED: 3 SVP: 5 EC: 1 PA: L 4 7

Controls equipment to purify and bleach sugar solutions:

Turns valves and starts pumps, from control panel, to transfer sugar-beet-juice solution to carbonation tanks, for purification and bleaching. Actuates controls to admit specified amounts of lime solutions and carbon-dioxide gas, to clarify solution by precipitating impurities to bottom of settling tank. Turns valves to regulate flow of sulphur-dioxide gas, to stabilize and prevent darkening of solution. Takes samples from carbonation tanks and filters, and tests for alkalinity, using pH meter and dilute hydrochloric acid and phenolphthalein. Records results of tests.

8225-118 DIFFUSER OPERATOR(sugar) DPT:482

GED: 3 SVP: 4 EC: 1 5 PA: L 4

Controls automatic multicell diffuser to extract sugar juice from beet slices:

Turns controls and presses switches on control panel to start diffuser and auxiliary equipment such as beet slicers, conveyors and automatic weighing scales. Observes indicators and operates controls to regulate flow of beets into diffuser, speed of agitators and temperature of liquid in cells. Determines sugar content of beets from laboratory report and adjusts controls to obtain maximum amount of sugar juice. Examines diffuser cells to ascertain that screens are clear and that liquid levels are maintained at specified height. Reads control panel meters and automatic indicators and records operating data such as tonnage of beets sliced and diffused and estimates volume of water required to diffuse beet slices.

8225-122 LIQUID-SUGAR OPERATOR(sugar) DPT:482

GED: 3 SVP: 4 EC: 1 4 PA: L 4 7

Controls equipment to process liquid sucrose and to convert it into liquid invert sugar:

Opens valves and starts pumps to move specified amounts of sucrose through processing equipment such as condensers, heat exchangers and tanks. Tests density of liquid sugar, using hydrometer, and adjusts sugar concentration by adding water. Inverts specified portion of liquid sucrose, to prevent crystallization during shipment, by pumping sucrose into inverter, using variable-output pump to control inversion time, and by adding hydrochloric acid. Adds sodium-hydroxide solution to halt inversion process. Monitors temperature, density and pH of product during and after inversion process. Connects delivery lines and opens valves to transfer liquid sucrose and liquid-invert

sugar to tank cars, tank trucks and drums, to meet orders. Measures depth of product in tank car or truck, reads conversion tables to determine amount shipped and records amounts on production slips. May prepare hydrochloric acid and sodium hydroxide solutions.

8225-126 SUGAR BOILER(sugar) DPT:582

GED: 3 SVP: 4 EC: 1 5 PA: L 4 7

Controls vacuum pans (boilers) to concentrate sugar liquor and grow sugar crystals of specified size:

Operates manual or panel-mounted controls to close vacuum seals on pans, start vacuum pump, fill pans with specified amount of sugar liquor and admit steam to heating units. Observes boiling process through peep window and adjusts steam valves to maintain specified temperature. Opens valve to admit powdered sugar to start formation of crystals. Examines sample of sugar crystals, using magnifier to determine grain size. Adjusts flow of liquor to control growth of crystals. Breaks vacuum seal and shuts off steam to stop boiling, when specified concentration and size of sugar crystals is achieved. Opens gate or valve in pan to dump contents into holding or mixing tanks. Washes and steams heating coils and pans to remove sugar deposits. Records production data such as time started, graining time and amount of liquor used.

May be designated by type of liquor boiled or by process; for example,

High-Raw-Sugar Boiler
Remelt-Sugar Boiler
Soft-Sugar Boiler
White-Sugar Boiler

8225-130 CORN-SUGAR-CRYSTALLIZER OPERATOR(sugar) DPT:682

GED: 3 SVP: 4 EC: 1 6 PA: M 4

Controls cooling, crystallizing, centrifuging and washing equipment, to cool liquid corn-sugar, to form sugar crystals, to separate sugar from residue, and wash sugar liquor from sugar crystals:

Turns valves and starts pumps to fill cooling tank (s) with liquid sugar and regulate flow of cold water through cooling coils, until specified temperature is reached. Pushes lever to open door of crystallizer and adds dextrose-crystal-seeding mixture to liquid sugar. Monitors crystallization process and removes sugar plug to admit sugar-crystal mass into centrifuge. Actuates controls to start centrifuge and separate liquid from sugar-crystal mass. Moves lever to open centrifuge gate and drop crystallized sugar to washing-tank conveyor. Presses control to start flow of water over crystals, to remove sugar liquor. Allows water to drain off and starts conveyor to move washed sugar mass to storage tank.

8225-134 CORN-SUGAR-FILTER OPERATOR(sugar) DPT:682

GED: 3 SVP: 4 EC: 1 6 PA: L 4

Controls filter presses and rotary-vacuum and pressure-leaf filters used to remove impurities from corn-sugar solutions:

Turns valves to control flow of solution through filters, following charts and formulas. Observes liquid sugar flowing through filters to detect cloudiness, consistency of liquid, and streaks caused by presence of acid. Observes gauges to detect any increase in pressure, indicating need to clean filters. Starts pumps and agitators that transfer filtrate into tank and recirculate it, or pumps filtered solution into evaporation tank, for further processing.

May open valves to admit sodium carbonate solution, to neutralize acid. May open and clean filters, using steam hose.

8225-136 KNIFE SETTER(sugar) DPT:664

GED: 3 SVP: 4 EC: 1 6 PA: M 4 5 6

Fits and secures knives on mounting block assemblies and installs blocks in beet-slicing machines:

Positions knives on block, aligns knives with cutter bar, using gauge, and secures knives in place on block, using hand tools. Places assembled block on cutter wheel and secures it in place, using hand tools. Orders machine replacement parts from company stores as required. Instructs helper in disassembly procedure and assigns duties such as obtaining parts and cleaning and servicing machines.

8225-138 LIQUOR-GALLERY TENDER(sugar) DPT:565
liquor-bridge operator; liquor runner.
 GED: 3 SVP: 4 EC: 1 4 PA: L 4 5 6 7

Tends equipment to regulate and distribute flow of sugar liquor and sweet water (sugar solution) from char filters to storage tanks: Opens char-filter-discharge valves and operates controls to start pumps to pump sugar solutions into specified storage tank. Positions weir-box (distributor) under filter-discharge pipe and weir-box outlet over gutter leading to storage tanks. Adjusts weir-box gate to regulate flow and maintain pressure on filter. Repositions weir-box to alter liquor and sweet water distribution as indicated by production schedules or as advised by laboratory personnel, or shift foreman. Tests density of sweet waters to determine sugar content, using Brix-scale hydrometer. Opens valves to regulate flow of soft- liquor by-pass, to attain specified colour and purity of brown-sugar liquor. Takes samples of liquor and sweet water for laboratory analysis. Observes signal panel to ensure correct functioning of system. Directs filter worker to introduce liquor, water or air to filter as per operating schedule or as directed by laboratory personnel. Records filter usage and settling times and prepares daily summary sheets.

8225-142 MELTER TENDER(sugar) DPT:585
 GED: 3 SVP: 4 EC: 1 3 4 PA: L 4

Tends heating and mixing equipment that melts impure crystallized sugar in molasses mixture and softens molasses adhering to sugar crystals: Starts pumps, turns valves to start flow of molasses and starts conveyors or opens chute that dumps sugar crystals into melting tanks. Regulates steam valves to maintain specified temperature and starts agitators. Reads recording devices such as meters, dials and graphs, and sets controls to maintain mixture at specified temperature and density. Tests mixture for alkalinity, using pH meter, and for sugar content, using Brix-scale hydrometer. Actuates controls to pump melt to char house for filtration. Records data such as temperature, specific gravity and alkalinity, on report form. May add milk of lime to mixture to obtain specified alkalinity. May clean pump screens with hose and water.

8225-146 CRYSTALLIZER TENDER(sugar) DPT:685
 GED: 3 SVP: 4 EC: 1 5 PA: L 4 6

Tends crystallizer tanks and agitators that mix crystallized sugar and hot sugar liquor to prevent solidification and allow sugar crystals to grow during cooling process: Opens valves, to allow sugar mixture to flow into mixing tanks. Starts agitators and turns valves to control temperature and ensure cooling at controlled rate. Stops machine when specified crystallization is obtained and drains off mixture of sugar crystals and liquor. Steams crystallizers to remove and recover hard sugar adhering to agitators, tank sides and piping. May record data such as temperature readings and disposition of batches.

8225-150 FIREMAN, CHAR-KILN(food & bev., n.e.c.; sugar) DPT:585
char revivifier; multiple-hearth-kiln tender.
 GED: 3 SVP: 3 EC: 1 3 5 7 PA: L 4

Tends kilns that reactivate char used to filter sugar liquor or corn syrups: Actuates panel controls to ignite furnaces and adjusts fuel and air supply to regulate kiln temperatures. Starts conveyors to feed contaminated char through kilns that burn off impurities, and to transfer reclaimed char to coolers. Adjusts controls to regulate char feed rates. Monitors recorders, instruments and fault alarm systems and takes corrective measures. Takes samples of reclaimed char for laboratory analysis. Records data such as temperature and amount of char processed. Replaces chart paper in recording devices. May wash spent char with acid or alkaline solution before reactivating process.

8225-152 STARCH CONVERTER(sugar) DPT:585
 GED: 3 SVP: 3 EC: 1 5 7 PA: L 4 6

Tends equipment used to change starch into glucose products: Turns valves to admit steam and water into converter. Starts pump to transfer starch slurry into converter so that starch mixture begins to cook on entering vessel. Listens to detect sound of formation of paste during cooking process. Injects steam or adds acid to vessel, as specified, to give mixture required viscosity. Collects and sends samples of mixture to laboratory for analysis. Turns valves to pump product to storage tank when test results indicate conversion is complete. Records production-control data. May perform standard iodine and alcohol titration tests.

8225-154 CENTRIFUGAL-STATION TENDER, AUTOMATIC (sugar) DPT:685
 GED: 3 SVP: 3 EC: 1 5 PA: L 4

Tends battery of automatic batch type recycling centrifuges from control panel, to separate sugar crystals from syrup: Actuates controls on panel to start centrifuges and regulate flow of mixture of sugar crystals and syrup. Observes panel lights, meters and continuous recorders, and adjusts controls to maintain specified temperatures and pressures, and cycling and recycling operations. Observes progress of mixture through loading, washing, spin-drying and dumping processes to detect faulty operation of equipment. Records operational data. Cleans and washes work area and machines.

8225-158 CLARIFYING-EQUIPMENT TENDER(sugar) DPT:685
blow-up man.
 GED: 3 SVP: 3 EC: 1 4 PA: M 4 5 7

Tends clarifiers to remove impurities from raw-sugar liquor: Actuates controls on panel to open valves that control flow of raw-sugar liquor to clarifiers or blow-up tanks, in preparation for char-filtering process. Admits steam to maintain liquor at specified temperature and admits air under pressure to agitate solutions in tanks. Adds diatomaceous earth, lime and phosphoric acid, as specified for clarification process. Observes panel meters and recording charts to ensure correct functioning of system. Tests pH of liquor and adjusts to specified level by regulating flow of lime solution or phosphoric acid, as indicated. Takes and inspects samples of liquor for clarity and performs tests, using centrifuge. May prepare lime solutions by dumping bags of lime into mixer, adding water and testing solution, using hydrometer.

8225-162 PULP-DRIER FIREMAN(sugar) DPT:685
pulp furnaceman.
 GED: 3 SVP: 3 EC: 1 5 PA: L 4

Tends drum type rotary kilns that remove moisture, from beet pulp and molasses mixture, used for animal feed: Starts oil or gas fired kilns and sets control to obtain specified temperature. Starts and sets scroll or conveyor speed, to transport pulp to kiln. Feels dried pulp to check on moisture content. Starts conveyor to move dried pulp to packing house or to station for further processing. Keeps records related to machine operation such as stoppages and down time. Monitors automatic weighing device, thermometers and humidity indicators, and makes adjustments to machines when necessary. Changes charts in automatic weigher at end of shift.

8225-166 SOFT-SUGAR MAKER(sugar) DPT:685
brown-sugar maker.
 GED: 3 SVP: 3 EC: 1 5 PA: M 4 7

Tends centrifuging equipment that separates brown-sugar crystals from syrup and screening equipment that sifts brown sugar prior to packaging: Turns dials on panel board to set spinning, washing and steam cycles on automatic centrifuges, and resets cycles as required to make brown sugar of specified colour and quality. Turns valves to regulate syrup temperature. Actuates panel controls to start screening machines, and conveyors to move sugar to storage bins or packaging stations. May direct packaging workers. May prepare production records and reports.

8225-170 CHAR-FILTER TENDER(sugar) DPT:565
 dry-char man; filter-top operator.
 GED: 2 SVP: 3 EC: I 3 PA: M 3 4

Tends char filters used to remove impurities from sugar or corn- syrup solutions:
 Opens filter, using hoist and wrenches and directs bone-char filtering material from conveyor into filter. Opens valve to admit previously filtered sugar or corn-syrup solutions, to settle char. Closes filter, connects supply lines and opens valves to start flow of solutions. Monitors filter operation and performs such tasks as bleeding air from filter system, disassembling filter to rake filter surfaces, washing filters with water, clearing obstructions with air under pressure, and removing spent char. Notifies other filter tenders, when changing filter hookups, to ensure flow of specified solutions. Keeps records such as filter operating and char replacement times.
 May adjust pH of solutions by shovelling small amounts of lime or magnesia granules into filter. May direct helper(s) to assist in some of the tasks described.

8225-174 GRANULATOR TENDER(sugar) DPT:585
 sugar drier.
 GED: 2 SVP: 3 EC: I PA: L 4

Tends granulators (rotary kilns) that dry refined sugar to specified moisture content:
 Sets temperature controls, starts blowers and adjusts draft control to regulate flow of hot air through granulators. Starts conveyors to move wet sugar from storage bins into granulator and to transfer dried sugar to screening area. Monitors process by observing temperature and airflow instruments and by feeling sugar on conveyor to judge moisture content. Makes adjustments to control drying. Records granulator temperatures and other process data.

8225-178 BEET-PULP-PRESS TENDER(sugar) DPT:685
 pulp-press man.
 GED: 2 SVP: 3 EC: I PA: L 4

Tends presses and auxiliary equipment that extracts water from sugar-beet pulp and mixes in molasses for further processing into animal fodder:
 Actuates starting mechanism to start conveyors, scrolls and presses. Opens valve to admit molasses into scroll carrying beet pulp. Adjusts presses and valves to obtain pulp and molasses mixture with specified moisture content. Takes pulp samples and forwards to laboratory for analysis.
 May tend presses that form beet pulp mixture into animal fodder pellets.

8225-182 CENTRIFUGAL TENDER(sugar) DPT:685
 GED: 2 SVP: 3 EC: I 5 PA: M 4

Tends centrifugal machines to separate mother liquor, syrup and molasses from sugar crystals:
 Opens gate to allow sugar mass to flow from crystallizer, vacuum pan or holding vat into centrifuge basket. Starts centrifuge to spin off mother liquor, wash away molasses and spin out washwater. Lifts plate covering bottom of basket, positions cutting arm over sugar, and starts machine to cut and remove crystals from inside basket. Washes centrifuge using hose.
 May be designated as to specific process, or product; for example, Intermediate-Centrifugal Tender
 Low-Raw-Sugar Cutter
 Scum Desweetener
 White-Sugar-Centrifugal Tender

8225-186 CORN-SUGAR-SYRUP COOLER AND DECOLOURIZER(sugar) DPT:685
 GED: 2 SVP: 3 EC: I 6 PA: L 4

Tends equipment to cool, decolorize and transfer corn-sugar syrup to storage tanks:
 Observes thermometer on control panel and turns valves to regulate flow of cold water through cooling coils, and to start flow of syrup over coils. Starts pump to transfer cooled syrup to decolorization tank. Actuates controls to inject specified quantities of bone char and vegetable carbon to decolorize syrup. Observes mixing and decolorizing process and after specified time, starts pump to transfer decolorized syrup to storage tanks.

8225-190 POLISHING-FILTER TENDER(sugar) DPT:685
 GED: 2 SVP: 3 EC: I 6 PA: L 4

Controls equipment to decolorize and polish (refine) liquid sugar and raw sugar liquors:
 Prepares polishing filter for use, by filling hopper with filter materials and circulating slurry through filter. Opens valves to control flow of sugar solutions to filter. Monitors filtering operation by observing dials and charts on control panel. Sends samples of filtered-sugar solutions to laboratory for testing. Diverts flow of sugar solutions from one filter to another, on direction from laboratory. Prepares filters for reuse by flushing with water to desweeten and remove impurities, or may remove impurities by using specified chemical processes.
 May operate equipment that dissolves sugar in water to provide liquid- sugar solutions for filtering. May test concentration of sugar in solutions, using Brix-scale hydrometer. May be classified according to type of filter operated.

8225-192 GLUCOSE-TRANSFER MAN(sugar) DPT:585
 GED: 2 SVP: 2 EC: I 6 PA: VH 4

Tends equipment to transfer finished glucose from processing equipment to cooling and storage tanks, and fills drums or vehicles preparatory to shipment:
 Turns valves to admit water to cooling coils and transfer glucose from production area to cooling vats and storage tanks. Starts pump to transfer glucose from storage tanks to fill tank cars or tank trucks. Rolls empty drums to filling rack, inspects interiors for cleanliness, and turns spigot to fill drums with glucose. Replaces caps and seals drums using wrench. Weighs filled drums and stencils tare, net and gross weights on drum. Obtains samples of glucose for laboratory analysis. Positions hand truck under full drums and removes to storage or shipping area. Records production data and batch-control numbers.
 May tend vat equipped with agitator to stir fluid thoroughly prior to transfer to storage tanks.

8225-194 TANKMAN(sugar) DPT:585
 GED: 2 SVP: 2 EC: I 3 4 PA: L 4

Tends equipment that distributes syrups, molasses, sludges and sweetwaters to processing stations or into storage tanks:
 Starts pumps and opens valves to move liquids to specified processing stations or storage tanks. Sets automatic controls to regulate steam pressure and air in tanks and to maintain solution at specified temperature and density. Records data concerning purity, density and routing of solutions. Drains and cleans lines and screen pots to prevent caking, or crystal formation, and to prevent contamination of solutions. Takes samples of solutions for laboratory analysis.
 May test alkalinity of solution and add milk of lime to maintain specified alkalinity.

8225-198 BEET WASHER(sugar) DPT:665
 GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends sugar-beet washers and associated conveying equipment:
 Starts conveyors and washing equipment and opens valves to allow water to flow through washing vat. Signals other worker(s) to adjust flow of beets, using telephone or signalling device. Observes operation of equipment to prevent stoppages. Opens valves to drain water from washing vats. Cleans debris from washing vat, using water hose. Directs other worker(s) in operation of conveyors and in cleaning premises and washing machines.

8225-202 FLUMER(sugar) DPT:665
 wet-hopper tender.
 GED: 2 SVP: 2 EC: O PA: L 4 6

Maintains specified supply of sugar beets to refinery, by regulating flow of water in flumes which carry beets:
 Operates control to raise gate of storage bin or railway car to admit beets to flume leading to beet washroom. Adjusts water valves to increase or decrease flow of water in flume, in response to telephone, or visual or bell signal. Flushes sugar beets from railway cars, using hose.

8225-206 CUBE-MACHINE TENDER(sugar) DPT:685
cube-drum operator.
 GED: 2 SVP: 2 EC: 1 PA: H 4

Tends equipment to form sugar cubes:
 Actuates controls to start cube-forming press, drying oven and conveyor. Starts flow of moist sugar to cube press to form cubes of specified weight and dryness. Examines and weighs samplings of cubes to determine moisture content, hardness and shape. Adjusts oven-temperature controls to ensure cubes are produced to specification. Cleans work area and equipment using broom, shovel, water hose and wipers.
 May operate mixer to blend sugar and water to consistency specified for cube press.

8225-210 ICING-SUGAR-MILL TENDER(sugar) DPT:685
powder-mill operator.
 GED: 2 SVP: 2 EC: 1 7 PA: H 4 6 7

Tends powder-mill pulverizer that grinds granular sugar and mixes in corn starch to produce icing sugar:
 Starts conveyors, exhaust fans, dust collectors and humidifying equipment, to prepare station for operation. Fills hopper with corn starch, manually or using hoist. Actuates valves to admit and regulate flow of granular sugar and corn starch into pulverizer. Observes dials, gauges and machine operation, to detect overheating, overloading and stoppages. Clears hopper and conveyor blockages. Forwards samples of icing sugar to laboratory for analysis.

8225-214 MINGLER TENDER(sugar) DPT:685
melt-house-utility man; mingling-scroll operator.
 GED: 2 SVP: 2 EC: 1 PA: L 2 4

Tends mingler machine that produces magma by reliquifying dried syrup coating adhering to raw sugar crystals:
 Opens louvers to admit raw-sugar into mingling trough fitted with rotating spiral mixer and opens valve to add sugar liquor. Observes solution in mingler during mixing and regulates flow of sugar or liquor to ensure correct level and density of magma is maintained. Washes and cleans equipment to prevent build up of sugar crystals.
 May record cumulative production weight taken from counter on weighing scale. May add specified chemicals, such as lime to the magma, to maintain required pH level.

8225-218 SCREENING-MACHINE TENDER(sugar) DPT:685
 GED: 2 SVP: 2 EC: 1 7 PA: L 2 7

Tends machines that separate sugar crystals according to grain size:
 Verifies process information on control board and selects appropriate screens to ensure correct grain size. Starts machines and observes vibrating screens to ensure that sugar is flowing. Cleans screens with brush and alters screen vibration rate to increase or decrease sugar flow. Changes screens, as dictated by production order, to provide for specified degree of sugar coarseness, by disconnecting sleeves, removing wing nuts, and hoisting cover, using hoist. Takes samples of processed sugar for laboratory analysis. Observes and listens to machine operation, and alerts mechanics when repair or adjustment is indicated.
 May direct other workers to clean or change screens. May adjust hopper gates, conveyors and feed scrolls, to control distribution of sugar to bulk storage, transportation and packaging stations.

8225-222 SUGAR-CHIPPER-MACHINE TENDER(sugar) DPT:685
 GED: 2 SVP: 2 EC: 1 6 PA: M 4

Tends chipping machine to reduce corn-sugar cakes into pieces suitable for further processing or packaging:
 Removes corn sugar cakes from conveyor and places them on table of chipping machine. Starts machine and pushes cake over rotating drum equipped with cutting knives which chip or cut surface of cake to produce sugar pieces of specified size. Observes operation and switches off machine to clear stoppages or make adjustments. Cleans equipment and work area using cleaning utensils, cleaning materials and hose.

8225-226 SUGAR GRINDER(sugar) DPT:685
powdered-sugar-pulverizer tender.
 GED: 2 SVP: 2 EC: 1 5 PA: H 4

Tends machine that grinds granulated sugar to produce powdered sugar:
 Adjusts mechanism to set spacing between grinding rollers or stones, or installs gratings in drum of grinding machine to obtain powdered sugar of specified texture. Empties bags of granulated sugar into machine hopper and starts machine. Observes grinding and discharging process to verify powdered sugar is of specified texture and discharging and bagging mechanism of machine is functioning correctly. Removes filled bags from machine and secures empty bags to machine bagging device. Lubricates machine, using grease gun and oil can.
 May weigh bags of powdered sugar.

8225-230 SUGAR PRESSER(sugar) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: M 4

Tends press that removes corn-sugar hydrol from crystallized cakes of sugar:
 Places sugar cakes in press and turns handwheel or actuates control to compress cakes and squeeze out hydrol. Releases pressure and removes slabs of sugar. Replaces filters used to remove impurities from hydrol, using hand tools. Washes and cleans equipment and working area, using mops, rags and water hose.

8225-234 LIQUOR-GALLERY-TENDER HELPER(sugar) DPT:687
 GED: 2 SVP: 2 EC: 1 4 PA: M 4

Helps to regulate flow of sugar solutions to and from char filters:
 Prepares filter-record board, showing filters to be filled with liquor. Ties clean pocket-shaped device to filter discharge pipes to prevent splashing in weir boxes. Changes weir boxes to divert flow of sweetwater (sugar solution) to specified tanks and shows change on filter-record board. Tests density of solutions to determine sugar content, using Brix-scale hydrometer. Bottles liquor and sweetwater samples for laboratory analysis. Washes weir boxes and keeps work station clean, using cleaning materials and tools. See also definition for term title, 02-160 HELPER (any ind.).

8225-238 CHAR-FILTER-TENDER HELPER(sugar) DPT:687
filter-top-operator helper.
 GED: 2 SVP: 2 EC: 1 PA: M 3 4

Helps to prepare and tend char filters used to remove impurities from sugar or corn syrup solutions:
 Attaches hoses between sugar-solution manifold and filters, using wrenches. Slides filter covers aside, or removes covers using hoist. Positions char chutes and starts conveyors to fill empty filters with bone char. Admits previously filtered solutions to settle char, by attaching hose from manifold to weir boxes (distributors) or by connecting hose from holding tanks to filter. Replaces filter cover and opens air valves to vent filter. Bags and weighs char, and transports it to storage area, using hand truck. Keeps work area and equipment clean. See also definition for term title, 02-160 HELPER (any ind.).

8226-INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS: FOOD BEVERAGE AND RELATED PROCESSING

This unit group includes occupations in inspecting, testing, grading and sampling work, as described under the term titles 02- 170 INSPECTOR (any ind.), 02-430 TESTER (any ind.), 02-150 GRADER (any ind.), and 02-330 SAMPLER (any ind.), concerned with quality- control activities in food and beverage processing. Occupations concerned with inspecting drugs are classified in Unit Group 8296, INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, PROCESSING, N.E.C.

Food Inspecting, Testing, Grading and Sampling Occupations
8226-110 through 8226-174

8226-110 FOOD TESTER(any ind.) DPT:481
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Performs standard tests on food ingredients and products to determine quantitative and qualitative physical and chemical properties to ensure compliance with control standards, using laboratory equipment:

Tests food products and food specialties and their preservatives for such properties as acidity, alkalinity, salt or fat content, non-fat solids, sediment, solubility or other chemical or nutritional factors, using centrifuge, incubator, autoclave, ovens, torsion balance, cryoscope, refractometer and sediment pump or other laboratory equipment. Tests samples to ensure compliance with standards, using pH meter, distillation equipment and scales. Refers to prepared tables, or computes, by formula, such factors as moisture, salt content, sediment or solubility. Compares test results with standards and records results. Smells samples for odours, tastes for prescribed flavour, or examines for discolouration. Observes sample smear of product, sediment disk or agar sample through microscope or magnifying glass to identify bacteria and count bacterial colonies. Mixes ingredients to make reagents, using blender. Calculates or computes percentages of ingredients in finished product, using calculating machine or slide rule. May test particular product and be designated accordingly; for example,

Laboratory Technician(confection.)

Laboratory Tester(fish process.)

Quality-Control Technician(dairy)

8226-114 TEST BAKER(bake. prod.; feed & flour mill.) DPT:681
cake tester.
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Bakes test loaves of bread or cakes to ensure conformity of flour blends with specifications, or to prove acceptability of cake mixes and bakery products:

Selects samples of flour or cake mix according to purpose of test. Weighs out and mixes ingredients according to formula, to make batches of dough or batter. Records mixing formula used and observes characteristics, such as water absorption, kneading and raising qualities of each batch of dough, to ensure that materials conform to specifications. Bakes test loaves or cakes in oven. Examines baked product for colour, smell, taste, texture and density, and compares product against weight and volume standard. Records test data on work sheet and prepares reports, or notifies supervisor when batch does not conform with specifications.

May test competitors' products, experimental mixtures and products returned by consumers.

8226-118 GRADER, MEAT(slaught. & meat pack.) DPT:687
GED: 3 SVP: 6 EC: 1 4 5 PA: M 4 7

Grades dressed animal carcasses to determine value and quality of meat:

Examines rows of suspended carcasses to determine grade based on age, sex, build, conformation, thickness of meat, quantity and distribution of fat, colour, texture and marbling of lean meat. Attaches tag identifying grade of carcass according to established standards.

May weigh carcass using manual or automatic recording scale. May record weights in register. May be designated according to carcass graded; for example,

Beef Grader

Calf Grader

Hog Grader

8226-122 QUALITY-CONTROL INSPECTOR(can. & preserv., n.e.c.; food & bev., n.e.c.) DPT:681
inspector; process-control checker.
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects and tests raw materials and finished food products, and tests and adjusts food packaging equipment during processing of products: Examines raw materials for cleanliness, signs of deterioration and moisture content. Inspects finished products; such as, corn chips, potato chips, cheese puffs, fish or prepared breakfast foods for conformance to standards. Determines colour and oil, salt, sugar and moisture content of raw materials and finished products, using devices; such as, colour charts, thermometer, hydrometer, oven, pan

balance, hydraulic press, conductivity tester and standard containers. Places standard weights on balance mechanism of packaging machine to determine accuracy, and adjusts regulating mechanism as required, using hand tools. Examines sealed packages for appearance and quality. Records inspection data and writes reports of irregularities. Verifies cleanliness of equipment and work place.

May taste product for flavour, texture and general acceptability. May inspect particular food or product and be designated accordingly; for example,

Corn-Chip Inspector(food & bev., n.e.c.)

Potato-Chip Inspector(food & bev., n.e.c.)

Potato Inspector(food & bev., n.e.c.)

8226-126 GRADER, FRUIT-AND-VEGETABLES(can. & preserv., n.e.c.) DPT:687
produce sampler.
GED: 3 SVP: 5 EC: B PA: L 2 4 7

Examines and grades fruit and vegetables on receipt at processing plant:

Removes samples of fruit or vegetables at random from truck and compares against company specifications to determine grade of load. Issues grade ticket or receipt for load, or rejects loads not meeting company specifications.

May weigh samples of produce and containers, and calculate net weight and tare of shipment. May sort samples of fruit and vegetables by grade and size, and calculate percentage of each size and grade in total load. May size and test fruit for maturity, using hand rings and pressure gun to break flesh of fruit.

8226-130 SUGAR TESTER(sugar) DPT:681
GED: 3 SVP: 4 EC: 1 7 PA: M 4 7

Tests samples of sugar to determine physical and chemical properties during refining, to ensure compliance with quality standards, by performing routine production tests:

Deposits samples of sugar into containers of pH meter and refractometer, and reads instruments' scales to determine acidity and density of samples. Titrates samples to test for presence of invert sugars. Determines starch content of icing sugar, using polariscope or by weighing and filtering sample. Separates sugar by segregating granules of different sizes, using vibrating screens and weighing each lot of granules to determine conformity to specifications. Examines dissolved sugar samples for colour and turbidity. Records results of each test.

May weigh filled containers off production line to ensure that contents conform to weight specifications.

8226-134 HONEY GRADER AND BLENDER(food & bev., n.e.c.) DPT:664
GED: 3 SVP: 4 EC: 1 PA: L 4 5 7

Grades honey according to type, colour, bouquet and moisture content, and blends various grades to obtain uniform product:

Compares samples of liquid-honey lots with standard samples for colour and bouquet, and ascertains moisture content, using refractometer. Calculates quantities of various types of honey required to produce product of uniform colour, clarity and bouquet. Directs blending of various honey lots in warming chamber. Grades honey according to government regulations and marks grade on containers.

8226-138 GRAIN INSPECTOR(feed & flour mill.) DPT:687
grain tester.
GED: 3 SVP: 4 EC: 1 6 PA: L 4 7

Separates, weighs and grades samples of grain prior to processing:

Pours grain into hopper of sample divider and removes and weighs specific amount of grain to obtain representative sample. Removes foreign matter from sample, using cleaning mill or sieve. Examines and smells sample to detect damage from excessive heat or moisture and to determine if grain is sour or musty. Computes weight of bushel of grain by weighing sample in standard measure and reading conversion chart. Separates damaged and under-developed grain from sound grain and places in separate containers. Grades weighed samples by comparing with standard samples of grain.

May test samples from incoming grain shipments, using standard procedures and reject unsatisfactory grain. May obtain representative samples of stored grain and confirm quality and grade prior to shipment.

8226-142 CHEESE GRADER(dairy) DPT:687
GED: 2 SVP: 4 EC: I PA: M 4 7

Evaluates and determines grade of cheese:
Pushes plunger into cheese to obtain sample. Smells cheese for odour and tastes for acidity and flavour. Feels cheese to determine firmness and texture. Examines cheese, visually, for colour, shape, size, finish and surface blemishes. Records weight, grade and identifying data.
May buy cheese or assist in other phases of processing or storage.

8226-146 KOSHER INSPECTOR(dairy; food & bev., n.e.c.;
slaught. & meat pack.) DPT:687
mashgiach.
GED: 3 SVP: 2 EC: B PA: L 7

Observes milking and slaughtering of cattle, and examines meats, feed and other ingredients, to ensure that collection, storage, preparation, processing, sale and use, comply with Jewish dietary laws:
Examines food, such as meats, milk, vegetables, ice cream, oils, jams, candies and baked food, used by Jewish caterers, to ensure it is kosher, and that Jewish dietary laws are complied with in preparation and serving of food. Observes milking and slaughtering of cattle, calves and sheep and examines meat to ensure it is kosher.

8226-150 TENDEROMETER TENDER(can. & preserv., n.e.c.) DPT:485
tenderometer operator.
GED: 2 SVP: 3 EC: O PA: L 4

Tests peas for tenderness to determine processing procedure and payment to grower:
Takes specified number of samples of shelled peas which are representative of truckload from conveyor, using handscoop. Shakes first sample in pan to remove unwanted material. Dumps cleaned peas onto grid of tenderometer (dynamometer device) and closes cover. Starts device and notes force required to mash peas as registered on dial. Cleans and tests each of remaining samples, and records dial readings. Computes average force required from series of tests to determine quality of truck load of peas. Records computations in log book.

8226-154 COOKIE AND CRACKER TESTER(bake. prod.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Tests cookies and crackers for conformance to standards:
Obtains random packages of cookies or crackers from conveyor line. Weighs and records weight of contents of packages, to verify specifications. Adds crumbled crackers to chemical solution and determines level of acidity or alkalinity, using pH meter or compares colour of solution with colour chart. Places weighed and crumbled contents in drier and turns on drying unit for specified time to remove moisture. Weighs dried crumbs to ascertain moisture content. Records test results and reports variations from standard.

8226-158 GRADER, FISH(fish process.) DPT:687
fish culler.
GED: 2 SVP: 3 EC: I 2 4 7 PA: M 4

Examines, classifies, and separates fish according to size, species and quality at receiving station or on conveyor line:
Observes cleaned fish passing on conveyor for bruises, unremoved fins or other defects. Removes and places culls, or fish of different species, on separate conveyors or into designated containers for further cleaning and washing or separate processing.
May weigh fish.

8226-160 GRADER, SLICED BACON(slaught. & meat pack.) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Sorts sliced bacon into various grades and slides bacon slices onto cards prior to weighing and wrapping:
Places appropriate brand cards at end of conveyor leading from slicing machine. Slides estimated amount of slices required for package off conveyor and onto card, using hand span as guide. Selects and places slices on specified card according to grade, as determined

by cut of bacon. Places cards of sliced bacon on conveyor leading to scales.
May tend bacon-slicing machine.

8226-162 CANDY INSPECTOR(confection.) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4 7

Inspects candy to ensure conformity with manufacturing and packaging specifications:
Examines candy on conveyor to ensure that it is properly formed and coated. Opens boxed candy to verify that candy is cupped, wrapped and packaged to meet company specifications. Rearranges, recups or replaces pieces not meeting quality standards, or returns rejected boxes to packaging department and annotates reason for rejection.
May brush chocolate candy to add gloss and remove markings from surface. May weigh filled containers to ensure conformity to weight marked on container.

8226-166 GRADER, DRESSED POULTRY(slaught. & meat
pack.) DPT:687
GED: 2 SVP: 2 EC: I 4 PA: L 4 7

Grades dressed poultry according to established standards:
Examines dressed poultry suspended from conveyor. Observes colour of skin. Feels poultry for presence of bruises, deformities and pin feathers. Removes fowl from conveyor shackle and sorts into specified containers according to grade. Attaches metal tags to poultry to identify grade.
May weigh filled containers and tally weight or number in each grade. May be designated by type of fowl graded; for example, Capon Grader Turkey Grader

8226-170 GRADER, GREEN MEAT(slaught. & meat pack.) DPT:687
GED: 2 SVP: 2 EC: I 2 4 6 PA: M 4 7

Inspects, weighs and sorts pork cuts, according to standards, prior to curing:
Examines and feels meat for fat limit and defects such as bruises and broken leg bones and sets aside sub-standard cuts. Trims excess fat and ragged edges off hams, using knife. Weighs and segregates acceptable cuts according to weight range and type. Tosses cuts into assorted trucks or vats according to type.
May be designated according to cut of meat graded; for example, Belly Grader Ham Grader

8226-174 INSPECTOR, CANNED FOODS(can. & preserv.,
n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4 7

Inspects open cans of food during processing for conformance to standards:
Examines open containers and sets aside rejected or off-weight cans for packers to bring to standard.
May examine contents of jars to ensure correct filling arrangement and selection of items. May inspect a particular product and be designated accordingly; for example, Inspector, Pickles Inspector, Stuffed Olives

Beverage Inspecting, Testing, Grading and Sampling Occupations 8226-194 through 8226-214

8226-194 TASTER AND BUYER, BEVERAGES(food & bev.,
n.e.c.) DPT:287
GED: 4 SVP: 7 EC: I PA: S 4 7

Tastes samples of tea or coffee to determine palatability, and makes selections for purchasing and blending:
Selects samples, brews small lots of beverages, and tastes product to determine grade, approximate market value or acceptability to consumer tastes. Writes blending formulas to guide workers engaged in preparing beverages in commercial quantities. Tastes and tests new materials on arrival from commercial production for conformity to standards. Purchases beverages on basis of samples tasted.

May be designated according to product tasted; for example,
Coffee Taster
Tea Taster

8226-198 BEER TESTER(distill., brew. & ferment.) DPT:381
brewery technician.
GED: 4 SVP: 6 EC: I PA: L 4 7

Tests samples of beer, at various stages of processing, for conformity with quality-control standards:

Tests beer for air and carbon-dioxide content, clarity, stability and specific gravity, using standard laboratory equipment. Measures mineral, protein, fat and moisture content of grain, using distillation and other laboratory equipment. Determines acidity, using pH meter. Examines samples of yeast from fermenting tanks to measure shape, number, and development of cells and to detect presence of bacteria, using microscope and other laboratory apparatus. Reads colorimeter and spectrophotometer to determine colour factors. Records test results and prepares graphs and charts.

May test beer containers for conformity to standards.

8226-202 QUALITY-CONTROL TESTER, BEER-BOTTLING LINE(distill., brew. & ferment.) DPT:484
GED: 3 SVP: 5 EC: I PA: L 4 7

Tests samples of beer and containers, taken from packaging lines in brewery bottling-house, for conformance to standards:

Selects samples of crowns, cans, lids, bottles, labels, and filled containers for testing, according to specifications. Measures dimensions of samples of containers using gauges, rules and micrometers. Conducts abrasion resistance tests on cans, lids, bottles, crowns and labels, using abrasion device. Measures hardness of crowns, lids and cans, using hardness tester. Tests wet and dry tearing strengths of labels and cartons, manually. Weighs filled cans and bottles to measure volume of beer. Performs standard tests on beer, as specified, for carbon dioxide content, clarity, foam stability and specific gravity, using test equipment such as pH meter and scales. Records test results and prepares graphs and charts.

May measure bursting strength of bottles, using hydraulic bursting device.

8226-206 WINE TESTER(distill., brew. & ferment.) DPT:484
GED: 3 SVP: 5 EC: I PA: L 4 7

Tests wine samples during processing for compliance with quality control standards:

Collects samples of wine from tanks for testing, using syphon. Immerses hydrometer, then thermometer in wine sample and compares readings with gauging manual to determine sugar and actual or potential alcohol content. Measures samples for acid content and makes sediment and contamination tests, using chemicals and gauges. Examines sample for quality of colour visually or using colorimeter. Prepares small sample batches of wine according to new formulas. Maintains records of samples tested.

May calculate amount of alcohol needed to fortify wine to desired standard. May distill sample and test distillate for alcohol content. May propagate and test yeast cultures.

8226-210 LIQUOR TESTER(distill., brew. & ferment.) DPT:684
GED: 3 SVP: 5 EC: I PA: L 4 7

Tests samples of bottled liquor for compliance to quality control standards:

Requests whisky from warehouse for tasting and testing according to work order. Tastes whisky, and records acceptability of taste and proof and testing date, brand and lot number and submits information to laboratory. Labels bottle of whisky to indicate test results and routes bottles to laboratory for analysis. Tests liquor prior to bottling to verify proof, using cooler, thermometer and hydrometer. Examines bottles to ensure correct labels and stamps have been applied. Verifies cap pressure on bottles, using torque measuring device.

May test bottled liquor for acidity, using pH meter and water. May examine old stock for evaporation and colour, comparing against on standard. May arrange to have liquor tasted by panel members.

8226-214 BEVERAGE AND BOTTLE INSPECTOR(distill., brew. & ferment.; food & bev., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I PA: S 7

Inspects bottled beverages, such as soft drinks, beer or wine for foreign matter and defective bottles:

Visually inspects contents of bottles for foreign matter, such as dirt and barrel sediment, and examines bottles for cracks, damaged caps, corks or seals or other defects as they pass on conveyor belt, in front of light and reflecting mirror. Places rejected bottles in containers for disposal.

May hold bottles up to unshielded light bulb to examine bottle and contents. May inspect empty beverage bottles passing on conveyor prior to filling.

**Miscellaneous Food and Beverage Inspecting
Testing, Grading and Sampling Occupations
8226-238 through 8226-299**

8226-238 TESTER, FEED(feed & flour mill.) DPT:381
GED: 4 SVP: 5 EC: I 6 PA: L 4

Tests feed samples to determine nutritional value and percentage of component protein, fibre, fat, calcium and salt in sample for quality control purposes:

Grinds portion of sample to be analyzed and stores unused portion for further testing. Performs standard analysis tests on feed samples for such properties as protein, fibre, fat, carotene, calcium, and salt, using various chemicals, and standard test equipment, such as scales, ovens, and spectrophotometer. Records results of tests. Prepares solutions used in testing, according to formula.

May clean and sterilize laboratory equipment to avoid contamination. May perform routine tests on fertilizers.

8226-242 BUTTERFAT TESTER(dairy) DPT:484
GED: 3 SVP: 5 EC: I PA: L 4 7

Tests samples of milk and milk products for butterfat content:

Pours measured amount or pipettes samples from separators, standardizing tanks or other containers into flask and adds specified amount of concentrated sulphuric acid. Centrifuges sample for specified time and adds to hot water to sample. Recentrifuges sample to separate butterfat from milk. Cools sample in water-bath to allow butterfat to solidify. Compares butterfat with scale on flask to determine percentage of butterfat in sample, using dividers. Calculates amount of cream or skim milk to be added to production batch to obtain correct percentage of butterfat, according to quality control standards.

May calculate price to be paid for milk by testing composite sample and determining quality accordingly.

8226-246 STARCH TESTER(food & bev., n.e.c.) DPT:481
GED: 3 SVP: 4 EC: I PA: L 4 7

Tests starch concentrates to determine conformance to specifications: Measures density of wet starch by pouring sample into cylinder and drops calibrated float in cylinder. Reads float level and records density after allowing sample to set for specified time. Weighs sample of starch before and after heating in vacuum oven and calculates moisture content from difference in weight, using slide rule. Mixes specified amounts of dried starch and acid, using spatula. Pours mixture into graduated cylinder and compares with colour on chart to determine amount of soluble proteins. Weighs dried starch on scales and pours into screening machine. Presses buttons to start agitation of screen and circulation of air to force starch through mesh. Weighs remaining starch and calculates weight and percentage of impurities removed, using slide rule. Records results of tests and maintains equipment.

8226-250 GRADER, SEED CORN(agric.; feed & flour mill.) DPT:685
GED: 3 SVP: 4 EC: I PA: H 3 4 7

Tends machines that clean and grade seed corn:

Lifts bags of corn from pallet and dumps contents into hopper of grading machine. Starts machines and opens chute gate to permit corn to flow through series of vibrating screens as fans blow dust, chaff, cobs, shucks and other foreign material from corn. Adjusts chute

slides to regulate flow of corn to reciprocating screens and revolving cylinders that separate seed-corn kernels according to width, thickness and length to ensure free-flow in planting machines. Examines graded kernels for colour and uniformity, using test screen. Replaces defective screens and cylinders.

8226-254 CASING GRADER(slaught. & meat pack.) DPT:687
GED: 2 SVP: 4 EC: I 4 PA: L 4 7

Inspects and grades variety of cattle, sheep and hog casings for soundness, uniformity and size:
Removes casings (intestines) from soaking tank or tierce (cask). Cleans length of casing on grading table, using scraper. Inflates casing, using air or water hose. Places inflated casing between spaced grading pegs or cut-out template to determine size and uniformity. Squeezes casing to detect irregularities, damaged sections, and foreign material. Cuts out defective sections and measures and cuts casings to length. Sorts casings according to size or condition and places on rack or in container filled with brine, awaiting use in sausage making, or other commercial applications. Cleans grading table, using hose and hot water.
May pack and salt casings for shipment. May reclaim cured casings for use, using soaking tank. May record kinds and quantities of graded casings.

8226-258 CAN INSPECTOR(can. & preserv., n.e.c.; distill., brew. & ferment.; food & bev., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects lid seams of closed food or beverage cans for conformity to sealing specifications:
Collects random samples of filled cans discharged by closing machine. Cuts out centre of lid, using can opener and empties contents. Measures thickness of lid seam, using micrometer. Removes crimped edge of lid, using pliers. Measures thickness of crimped edge of can wall using micrometer, and records measurements taken. Measures thickness of bottom seams prior to filling.
May inspect bottle caps by fitting loop gauge around bottle cap to determine degree of compression. May empty contents of defective cans into new cans and place on closing-machine conveyor or into buckets.

8226-262 INSPECTOR, FOOD PACKAGING(feed & flour mill.; food & bev., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects and weighs any of a variety of packaged food products; such as, gelatin, soft drink powders, cereal, dog food and flour after manufacture:
Examines packages and compares with standard or sample to ensure proper filling, sealing, labeling and stamping. Weighs packages and records weight. Tests automatic scales for accuracy, using standard weights.
May keep records of percentage of variation from standard.

8226-264 SAMPLER(dairy; distill., brew. & ferment.) DPT:587
GED: 2 SVP: 2 EC: I PA: L 4

Collects samples of foods or beverages at various stages of processing and at specified times, for laboratory testing:
Opens valve, or dips, scoops or siphons samples into bottles, bags, test tubes or laboratory containers. Closes and labels containers to identify sample. Places samples in baskets or on hand truck and delivers to laboratory.
May perform elementary tests on samples. May pour part of sample into test container for government inspection. May collect samples of particular product and be designated accordingly; for example,
Beer Sampler(distill., brew. & ferment.)
Milk Sampler(dairy)
Yeast Sampler(distill., brew. & ferment.)

8226-299 OTHER INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS: FOOD, BEVERAGE AND RELATED PROCESSING

This group includes food and beverage processing inspectors, testers, graders and samplers, not elsewhere classified; for example, those who test candy tablets for hardness, test soyabeans during processing for quality control purposes, or sort and regrade rejected food items. Typical examples of occupational titles covered by this residual group definition are:
Reclaim Sorter(food & bev., n.e.c.)
Soyabean Tester(animal & veg. oil)
Tablet Tester(confection.)

8227-BEVERAGE PROCESSING OCCUPATIONS

This unit group includes occupations concerned with processing beverage products; such as, coffee, tea, fruit juices, soft drinks, beer, wine and liquor. Activities include: crushing, extracting, blending, mixing, grinding, roasting, cooking, malting, fermenting, cooling, filtering, carbonating, pasteurizing and distilling grains and fruits. Milk processing occupations are classified in Unit Group 8223 MILK PROCESSING AND RELATED OCCUPATIONS. Cocoa processing occupations are classified in Unit Group 8229, FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS, N.E.C.

Coffee Processing Occupations 8227-110 through 8227-126

8227-110 INSTANT-COFFEE-EXTRACTOR OPERATOR(food & bev., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: L 4 7

Operates automatic instant coffee processing equipment, such as extractors and filters, from master control board, to extract soluble coffee from ground coffee beans prior to spray drying process:
Observes master control panel and gauges, and turns valves to feed roasted and ground coffee beans into extracting equipment. Turns valves and sets dials to regulate flow and temperature of water entering extractors. Adjusts valves and observes pressure gauges to control filtration and degassing of extract. Observes thermometer gauges and turns dials to control temperature of extract and flow of cooling water into plate cooler. Transfers extract into weighing tank, by turning valves. Monitors and adjusts controls on panel board to pump extract and regulate flow to spray drying equipment. Tests samples of extract to determine specific gravity, temperature, concentration and conformity to plant standards, by titration and using thermometer, hydrometer and moisture meter. Records flow rate, temperatures, pressures and other test data, for each production cycle. Circulates caustic solution and water through pipes to clean equipment. Assists in maintenance of equipment, using mechanic's tools.

8227-114 DRIER, INSTANT COFFEE(food & bev., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: M 4 7 PA: I 6

Operates automatic spray drying equipment to produce instant- coffee powder from extract by evaporation:
Prepares spray drying equipment by attaching nozzle specified for type of powder required, using wrench. Opens valves to ignite furnace and turns on air fans and water supply. Adjusts controls to obtain negative air pressure in drier and to balance air and water flow to obtain required outlet temperature. Pushes button on master control panel and observes process that blows extract from nozzle as a fine spray inside top of drier, and introduces hot air that evaporates water from extract to produce instant-coffee powder. Determines bulk density of coffee by weighing and using prepared chart. Examines sample of powder, visually on white paper, for variations in appearance such as specking and irregular colour. Adjusts powder density by injecting specified gas into extract during blowing process. Records such items as operating temperature and pressure, concentration of extract, amount of gas and type of nozzle used, and density of powder

obtained. Cleans equipment by circulating water and caustic solution throughout. Performs minor maintenance on equipment. May manually fill, weigh and seal containers of instant coffee and place containers on conveyor to storage area.

8227-118 COFFEE GRINDER(food & bev., n.e.c.) DPT:685
GED: 3 SVP: 3 EC: 1 5 PA: M 4 7

Tends automatic equipment that grinds roasted coffee beans to specified fineness:

Moves controls to allow coffee beans to flow from feed hoppers into grinding machines. Starts machines and adjusts grinding rollers by turning dials or moving levers and switches. Observes grinding equipment for proper functioning and requests repairs or mechanical maintenance when required. Weighs ground coffee on floor scales before further processing, or starts conveyors that carry ground coffee to storage bins. Records production data.

May transfer ground coffee to instant coffee extractor, using dolly, cable hoist, or by turning gravity valves. May clean equipment and work area.

8227-122 COFFEE ROASTER(food & bev., n.e.c.) DPT:685
roasterman, coffee.
GED: 2 SVP: 4 EC: 1 5 PA: M 4 7

Tends ovens and associated equipment to roast coffee beans by either of the following methods:

Reads instructions to determine grades of coffee to be blended and roasted. 1. Transfers sacks of green coffee beans to dumping chute, using hoist and hand truck. Empties sacks onto chute and discards black or dead beans. Pushes beans into scale hopper of roasting machine. Weighs batch of coffee beans and opens chute that conveys beans into oven. Observes thermometer and adjusts temperature control as required. Roasts coffee for specified time. 2. Adjusts controls on panelboard to regulate rotational speed of oven cylinder rotation, rate of flow of beans into cylinders and oven temperature for each coffee blend, according to specifications. Adjusts controls that allow predetermined varieties of coffee beans to flow into cylinders from storage silos. Observes changes in colour of beans to verify functioning of automatic oven. Opens discharge gate to dump roasted beans into cooling tray and starts air blower to cool beans. Pulls lever to dump beans into storage hopper or starts bucket conveyors that carry coffee beans to storage bins.

May tend machine that grinds coffee.

8227-126 COFFEE BLENDER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 3 4

Tends machine that mixes various grades of roasted coffee beans:

Fills containers with specified quantities and grades of coffee beans, and empties containers into dumping chute of machine, by hand. Presses button to start blending of beans. Pulls levers at end of prescribed mixing cycle, to transfer mixed coffee beans into suction-type ducts that convey them to cleaning, grinding and storage area.

May direct activities of helper.

Juice Processing Occupations 8227-146 through 8227-154

8227-146 CITRUS-JUICE EXTRACTOR(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 2 4 7

Tends machines that wash and crush citrus fruits to extract juice:

Installs juice funnel leading from extractor to container. Empties containers of specified citrus fruit into washing machine, using power hoist. Starts machines, observes fruit rolling down chute from washer to extractor, removes unsuitable fruit, and clears blockages, using stick. Inspects machines for proper functioning and examines residue to ensure maximum extraction of juice. Notifies supervisor of faulty machine operation, or of adjustments required. Stops machines when signal indicates juice tanks are filled. Cleans and lubricates machines.

8227-150 FRUIT-PRESS TENDER(can. & preserv., n.e.c.;
distill., brew. & ferment.) DPT:685
juice extractor.
GED: 2 SVP: 2 EC: 1 4 PA: M 4

Tends hydraulic press that extracts juice from fruit for use in making alcoholic or non-alcoholic beverages:

Places filter cloth on swing bed of press, or places frame equipped with filter cloth on press cart. Pulls levers or turns valves to release fruit from hopper, pipeline or conveyor onto filter cloth. Spreads fruit evenly on filter, by hand or using wooden paddle, and folds corners of cloth to cover fruit. Pushes swing bed under press or removes forming frame and pushes loaded cart into machine. Starts press by depressing button. Pulls cart or swing bed from machine, removes filter cloth and dumps fruit pulp into container. Starts pump to transfer juice for storage or further processing.

May tend power pressing equipment equipped with inflatable rubber pressing sack and screen that filters juice. May tend machine that crushes fruit to form must used to make wine.

8227-154 JUICE BLENDER(can. & preserv., n.e.c.) DPT:685
juice compounder.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends equipment that blends fruit juices to make beverages having standard characteristics:

Opens valves to permit juices to flow from extracting machines or holding tanks, to fill blending tank with required amounts of unblended juices. Adds specified quantities of concentrated fruit juices or preservative, such as, sodium benzoate. Turns on mechanical agitators in blending tank, to mix contents as directed. Opens valves and activates pumps to transfer blended juices to holding tanks, or to bottling or canning machines.

May tend concentrator that removes juice from fruits and evaporates water from juice to make fruit concentrate used to standardize juice blends. May pasteurize and filter blended juices. May blend vegetable juices. May be designated according to type of juice processed; for example,

Citrus-Fruit-Juice Blender

Beer Processing Occupations 8227-174 through 8227-202

8227-174 WORT MAKER(distill., brew. & ferment.) DPT:582
GED: 3 SVP: 4 EC: 1 3 4 PA: M 4 7

Operates equipment to grind grain and mix and cook ingredients to make mash and extract wort used for making beer, performing any combination of the following duties:

Actuates controls to start milling machine and conveyor, and opens slide gate on storage bin, to transfer grain to machine. Weighs milled grain in scale hopper. Opens gate on scale hopper to fill cooker with pre-weighed cereals and mashing tub with measured amounts of malt. Turns valves and starts pumps to admit hot water into cooker and tub, and starts power-rakes to stir mixtures in vessels. Admits steam to cook cereal and mash according to temperature and time specifications. Pumps cereal mash into mashing tub and admits steam to heat mash to specified temperature. Verifies temperature of mash, using long thermometer. Removes sample of mash, adds iodine to sample, and examines colour to determine degree of saccharization. Examines consistency of mash, using scoop, and regulates input of mash to attain correct mixture. Monitors pressure gauges, and actuates valves to regulate flow of cooked mash to lautertub (wort-filtering tub) and pump that recirculates wort through filter until desired clarity of wort has been attained. Turns valve to transfer wort to kettles for further processing upon signal from other worker. Records weight and type of grain milled, mash temperature, steam pressure, degree of saccharization and quantity of wort produced. Cools mash residue and filters with water, and transfers residue for further processing into animal feed. Washes mashing tub and cooker using cleansing solutions and high-pressure water hose.

May tend shaking machines to clean grain prior to milling. May operate specific unit of wort making equipment, and be designated accordingly; for example,

Lautertub Operator
Mash-Tub Operator

8227-178 BEER FILTERMAN(distill., brew. & ferment.)
DPT:682
GED: 3 SVP: 3 EC: I 4 6 7 PA: M 4 7

Operates primary filtering equipment to remove protein and yeast particles from beer:
Positions filter screens between frames and lowers screen assembly into filter tank, using power winch. Dumps specified amounts of diatomaceous earth into slurry tank and adds water, using metered hose. Starts agitator that mixes water and filtering agent and starts pumps to transfer mixture into filter tank to coating screens. Turns calibrated valve to release specified amount of carbon dioxide to pressurize tank and carbonate beer. Observes carbonated beer through sight glass, and adjusts valve to prevent excessive carbonation. Starts pump to transfer beer from storage tank through screens that strain protein and yeast particles from beer. Removes and examines sample of beer for clarity. Starts pump to transfer filtered beer to storage tank. Removes filter screens from tank, using power winch, and rinses screens, using hot-water hose.
May record production data, such as number of barrels and types of beer filtered.

8227-182 MASH MAN(distill., brew. & ferment.; food & bev., n.e.c.)
DPT:682
GED: 3 SVP: 3 EC: I 3 4 6 7 PA: H 4

Controls equipment to cook grain mash and boil resulting liquor (wort) with hops to flavour it preparatory to fermentation:
Mixes malt, corn (brewers grits), or barley in water, according to formula, and cooks or steeps mixture at specified temperature and for designated time. Turns valves to transfer mash to lautertub to strain and extract wort, and regulates flow of wort from lautertub to brew kettle. Adds specified amounts of hops to wort in brew kettle, and cooks brew mixture. Drains wort through hop-extractor into hot-wort tank. Connects hose lines and starts pump to transfer wort to cooler prior to fermentation. Turns valve to inject a measured quantity of yeast into wort in cooling tank. Pumps spent grain to drying tanks. Cleans equipment and flushes pipe lines, using hot water.
May weigh malt or grain, using scales. May control equipment to cook brewers grits and malt, and boil the resulting liquor with sugar and salt to produce cereal food flavouring, and be designated accordingly, Cereal-Flavour Maker(food & bev., n.e.c.)

8227-186 KETTLE-MAN(distill., brew. & ferment.) DPT:685
GED: 3 SVP: 3 EC: I 3 4 6 PA: M 4 7

Tends kettle that boils wort and hops and straining equipment that removes hops from hot wort, during beer-making process:
Opens valve and starts pump, or signals other worker to start pump, to transfer wort from filter tank into kettle. Turns valve to admit steam into jacket of kettle to boil wort. Dumps hops into boiling wort. Observes dials and gauges and adjusts controls to maintain specified pressure and temperature. Opens valves and starts pumps to transfer wort from kettle through straining equipment that removes hops, and into hot-wort-storage tank. Starts conveyor that disposes of discarded hops. Adjusts valves to control rate of straining and monitors flowmeter and pressure gauges to ensure proper functioning of equipment. Examines strained wort through port holes and sight glasses to ensure removal of hops. Cleans and rinses kettle and straining equipment, using water hose.
May record wort-production data. May test specific gravity of wort, using hydrometer.

8227-190 COOLING-MACHINE TENDER(distill., brew. & ferment.)
DPT:665
cooler operator; wort cooler.
GED: 2 SVP: 3 EC: I 2 4 PA: L 2 3 4 7

Tends processing equipment that settles, cools and transfers wort into fermenting tank, and injects yeast into wort, performing any combination of the following duties:
Opens valves that admit hot wort from hop strainer into storage tank, to permit settling of solids before transferring wort to cooling machine. Starts pumps, turns valves and sets float line to draw hot wort through cooler and into starting or fermenting tank. Turns valves to control flow of refrigerant through cooler coils. Monitors pressure gauges, flow meters, thermometers and temperature recorders, to verify or control rate of flow and temperature of wort passing through cooling machine. Observes flow meter and opens valves to admit

specified amount of air into wort. Turns spigot to drain yeast mixture from pressurized yeast tub into yeast wagon, or starts pump to transfer yeast mixture from storage tank to yeast brink (pressurized tank that pumps measured amount of yeast to starting tank). Pumps wort from cooler to starting or fermenting tank. Connects yeast wagon and wort lines, using hand tools, or opens valve on brink tank to transfer yeast mixture to wort in starting or fermenting tank. Observes flow dials and pressure gauges to ensure that specified ratio of yeast to wort is maintained. Communicates with other workers to time wort and yeast transfers. Draws sample of wort from starting tank for laboratory analysis. Cleans inside and outside surfaces of tanks and equipment, using brush, water hose, pumps and antiseptic solutions.

May tend mixing tank to prepare yeast mixture, and extruding machine to produce yeast bars. May record production and process data. May be designated according to kind of equipment tended; for example,
Hot-Wort Tankman
Yeast-Room Man

8227-198 BEER PASTEURIZER(distill., brew. & ferment.)
DPT:685
GED: 2 SVP: 2 EC: I 4 6 PA: L 4

Tends machine that pasteurizes bottled or canned beer:
Actuates valves of hot-water spray in pasteurizer, and switches on conveyor that moves filled beer containers through machine. Observes water-temperature gauge to ensure pasteurization temperature is maintained. Pushes pasteurized containers from machine table onto conveyor by hand or using metal bar, to prevent blockages. Removes broken containers from conveyor. Monitors pasteurizing machine to detect malfunctions. Cleans equipment and work place, using water hose, brushes, scrapers and cleaning solutions.
May remove machine guards, using hand tools, and lubricates moving parts.

8227-194 CARBONATION MAN(distill., brew. & ferment.)
DPT:685
carbonator.
GED: 2 SVP: 3 EC: I 4 5 PA: M 4 7

Regulates flow of carbon dioxide into beer lines and tanks, and beer through filters, to carbonate and filter beer prior to packaging:
Observes flow meters and pressure gauges, and turns valves to admit specified amounts of carbon dioxide at specified pressures, into tanks and lines containing beer. Starts pumps to transfer beer through finishing filters and adjusts flow and pressure of carbon dioxide to control turbulence, according to specifications. Turns valves to charge slurry tanks with filtering agent and pumps agent through piping and filter to attain required filtering efficiency. Observes beer through sight glasses and recirculates cloudy beer through filters until clear. Removes sample of beer to determine carbon dioxide content, using testing device. Reads quantity and pressure and interprets test results, using comparison chart. Transfers clear beverage to bottling or barreling department. Disassembles and washes filtering units, or replaces soiled filter cakes and reassembles filter units, as required, to maintain high level of sanitation, using hand tools and water hose. Cleans work area using mop and broom.
May patch fractured glass linings of steel tanks used for storing beer.

8227-202 YEAST PUSHER(distill., brew. & ferment.)
DPT:685
GED: 2 SVP: 2 EC: I 4 6 PA: M 2 3 4

Tends equipment to remove fermented beer and surplus yeast from series of brewing vessels, and cleans vessels between production runs:
Couples hose between fermentation tank and collector-pipe line, using wrench. Opens valve on line to drain off beer for further processing. Notifies yeast plant to prepare to receive yeast and opens gravity-feed-outlet valve to permit yeast to drop into storage tanks. Climbs through access opening into tank to spray and push residual yeast out of outlet, using water hose, paddle or squeegee. Scours interior of empty tanks between production runs using water hose and specified cleaning agent.
May open valves to fill fermentation tanks to begin beer-fermentation process.

Wine Processing Occupations
8227-222 through 8227-238

8227-222 CIDER MAKER(distill., brew. & ferment.) DPT:665
GED: 3 SVP: 4 EC: I 7 PA: H 2 3 4

Tends juice extracting, processing and bottling equipment to make cider from apples, performing any combination of the following duties:

Connects hoses, using hand tools, and starts pumps to move juice or cider through processing equipment. Tends slicer, crusher press or centrifuge that extracts juice from apples, and equipment such as, settling, fermentation, cooling or storage tanks, filter presses, carbonator or bottling machine. Adds specified amounts of enzymes to settling tank to clarify juice. Adjusts flow of juice to maintain temperature of pasteurizer to destroy bacteria. Adds specified amounts of pure yeast and sugar to fermentation tank, seals tank and installs carbon dioxide escape valve. Takes samples of cider from fermentation tank for analysis at specified intervals. Transfers cider to settling tank and adds settling agent. Pumps cider through filter press to storage tank. Ensures specified temperature is maintained throughout production area. Cleans equipment and work areas. Directs seasonal workers in routine production tasks.

8227-226 CELLARMAN, WINERY(distill., brew. & ferment.) DPT:685
GED: 3 SVP: 4 EC: I 4 7 PA: M 2 3 4 7

Tends fruit crushing and wine-processing equipment, performing any combination of the following duties to make wine:

Lifts bulk grapes or pomace onto conveyor leading to crusher, disintegrator or de-alcoholizer tank. Tends crusher or press that extracts juice from grapes or pomace. Connects hoses and starts pumps to transfer juice, wine or alcohol between fermenting, settling, mixing and storage tanks. Patrols inter-connecting pipe-lines during pumping operations to detect leaks. Meters out specified amounts of sugar and water into automatic mixing tank, to produce syrup. Pumps pre-measured amounts of yeast culture and syrup into wine- filled tanks, and turns valves to admit compressed air into tank for specified time, to bring about fermentation. Adds sugar or other ingredients during fermentation, according to instructions. Verifies temperature of wine during fermentation, using thermometer, and turns valves to admit steam or coolant to heat exchangers inside tank to control temperature. Pumps specified quantity of wine from settling tank to agitator tank, adds clarifying agents and pumps solution back into settling tank. Measures contents of wine and fortifying (alcohol) tanks, using weighted tape or reads content through sight- glass. Tends filter presses used to collect sediment and precipitates. Fills barrels with specified amount of wine, using pump. Weighs wine filled barrels and deducts tare, using platform scale. Marks or stencils weight and type of wine on barrels. Cleans and sterilizes winery tanks, using air hose, water, soda ash and sterilizing solutions.

May direct winery-hands or seasonal workers. May be assigned specific tasks and be designated accordingly; for example, Clarifier, Wine Fermenter, Wine

8227-230 CRUSHING-MACHINE TENDER(distill., brew. & ferment.) DPT:685
fruit-crusher operator.
GED: 2 SVP: 3 EC: I 4 5 PA: L 4

Tends machine that crushes fruit to form must (juice, pulp and skins of grapes and other non-citrus fruit), used in making wine:

Pushes button or depresses pedal to start machine and regulate flow of fruit into crushing machine. Opens outlet valves or starts pumps to transfer must into fermenting tanks. Pushes button to start refuse conveyor that removes stems from machine, and removes debris from sump and outlets, using paddle or rod. Cleans and lubricates machine, using cloths, oil can and grease gun.

May empty fruit boxes into hopper of crushing machine, by hand or using dumping device. May tend power press to extract juice from fermented pulp.

8227-234 WINE FINISHER(distill., brew. & ferment.) DPT:685

filterman, wine.

GED: 2 SVP: 3 EC: I 4 PA: M 2 4

Tends filter press and auxiliary equipment to remove tartrates from wine and produce sheen prior to bottling:

Covers filter plates with asbestos-cellulose, nylon or paper pads and turns handwheel to close press. Connects hoses and pumps between tanks and filters. Starts pumps and press, and turns valves to admit wine through filters. Starts pumps to transfer filtered wine to storage tanks or bottling room. Replaces filter pads, and cleans filter screens.

May add filtering agent such as diatomaceous earth to wine for rough (primary) filtering prior to polish (finish) filtering. May tend equipment to pasteurize wine.

8227-238 WINE PASTEURIZER(distill., brew. & ferment.) DPT:685

GED: 2 SVP: 3 EC: I 4 PA: M 2 4

Tends tanks and auxiliary equipment to pasteurize fermented wine:

Couples hoses, using hand tools, and pumps or syphons specified quantities of wine into pasteurizing equipment. Turns steam valves to admit heat. Observes thermometer, gauges and timing device to ensure that wine is heated to required temperature for specified time to effect pasteurization. Starts pumps to transfer wine from pasteurizer to storage tanks.

Liquor Processing Occupations
8227-258 through 8227-278

8227-258 GRAIN-MEAL PROCESSOR(distill., brew. & ferment.) DPT:382
GED: 3 SVP: 5 EC: I PA: S 4 6 7

Controls blending, cooking and fermenting of grain meal from master control panel, prior to distillation:

Pushes levers and buttons to start plant machinery. Reviews production schedules and adjusts panel controls to draw specified amounts of different grades of materials from storage bins onto conveyors. Observes dials and gauges and routes material through series of cookers and fermenters. Reads meters to determine load on scales and regulates loads to adjust blends. Listens for alarm signals and observes panel lights and meters for indication of overloads, malfunctions or plugged chutes. Shuts down plant, reroutes materials or adjusts feed controls as required. Notifies foreman when repairs are required. Changes charts on recorders to continuously record operational information and records other production data in log book.

8227-262 STILL OPERATOR(distill., brew. & ferment.) DPT:582

GED: 3 SVP: 5 EC: I 6 7 PA: L 4 7

Controls still that produces alcoholic liquors used for making variety of beverages such as gin, rum or whiskey:

Controls panel board to activate pumps, and controls temperature and rate of flow of distilling materials through still and auxiliary equipment, such as stripping column, rectifier, condenser and tail box. Turns dials to regulate and maintain specified temperature, pressure and rate of flow of material through processing equipment, according to formula, to obtain distilled liquor of specified proof required. Draws sample and determines proof by ascertaining temperature and specific gravity, using thermometer and hydrometer, and compares readings with standards. Sends sample for laboratory analysis. Pumps distilled liquor from tail box into cistern tank for regauging, reducing or into storage tank. Records temperature, pressure and flow meter readings as well as duration of distillation process and quantity of product distilled.

May clean internal parts of still equipment, using caustic solution. May operate still that produces high-proof alcohol from fermented wine, for use in making brandy or for fortifying high-quality wines.

8227-266 LIQUOR BLENDER(distill., brew. & ferment.)
DPT:682

alcohol reducer.

GED: 3 SVP: 5 EC: 1 PA: L 4 7

Controls equipment to regauge, filter, rectify, blend and verify proof of alcoholic liquors prior to aging or bottling:

Reduces proof of barreled or tanked whisky by pumping specified number of gallons of whisky and demineralized water into scale tank. Agitates mixture by turning valve that releases compressed air or by starting mechanical agitator. Determines proof of mixture by measuring temperature, using thermometer, and specific gravity, using alcohol-proof hydrometer, and comparing readings with tables from standard gauging manuals. Pushes button that starts filter-press pump to remove impurities from distilled liquor, and adjusts valves to control vacuum pressure in press and to regulate flow of liquor through press. Observes dials and gauges to ascertain that temperature and pressure remain constant during filtering process. Pumps different proofs of whiskies into agitating tank, adds specified amount of sugar, caramel and demineralized water, and agitates mixture to blend whiskies. Mixes flavourings and other ingredients with spirits according to formula, in mixing tank, and adjusts valves to control temperature and agitation, to produce brandies, cordials or fortified beverages.

May record number of gallons processed and proof of liquors. May tend cooling tank to lower temperature of whiskey before filtering.

8227-270 FERMENTATION OPERATOR(distill., brew. & ferment.)
DPT:682
fermenter.
GED: 3 SVP: 4 EC: 1 PA: M 4

Controls fermentation process of mash inoculated with yeast, to produce sour beer (fermented mash), for use in distillation of alcoholic liquors:

Pumps specified quantity of cooked mash and yeast into fermentation tank, simultaneously, to ensure thorough mixing of mash and yeast. Opens valves to admit water into mixture, according to formula. Turns valves to admit air to mixture or starts agitators, to accelerate chemical reaction of yeast and to ensure homogeneity of fermented mash. Observes gauges and dials to ensure that prescribed temperature is maintained. Measures temperature of mash at prescribed intervals, using thermometer. Draws sample of fermented mash for laboratory analysis. Measures and records depth of sour mash in tank, using ruler. Pumps sour mash into cistern tank, prior to distilling. Cleans tanks, using caustic solution, acid and steam.

May record production information. May measure specific proof strength of mash, using hydrometer. May control equipment to ferment molasses and yeast for use in manufacture of distilled liquors and be designated accordingly, Molasses-Fermenting Operator

8227-274 TANKMAN(distill., brew. & ferment.)
DPT:665
tank-house operator.
GED: 3 SVP: 3 EC: 1 6 PA: L 2 4

Tends pumps and hose lines to transfer alcoholic liquors from storage tanks to bottling-machine tanks:

Connects series of electric pumps with hose or pipe lines connected to storage tanks on various levels of distillery and to tanks of bottling machines. Telephones foreman to obtain filling instructions and to ascertain proper pumping sequence. Starts pumps, and turns valves, to transfer and regulate flow of specified liquors from storage tank. Determines level of liquor in tanks, looking through man holes and using flashlight. Opens valves to admit compressed air into hose lines to clear residual liquor. Collects liquor samples for laboratory analysis, or determines proof, colour and cleanliness of liquor, using glass tube, thermometer and hydrometer. Turns valves to admit distilled water through filling machine, lines and fillers, to wash equipment prior to changing kind of liquor, and collects used water, using bottles, to recover alcohol. Gauges and records proof and quantity of liquor in bottling tanks.

May tend liquor-transfer and pumping system from central-control panel in tank-house.

8227-278 COOKER TENDER(distill., brew. & ferment.)
DPT:685

GED: 2 SVP: 2 EC: 1 PA: L 4

Tends equipment that cooks grain meal, to prepare mash for distillation into alcohol, gin or whiskey:

Fills cooker with specified amount of water and opens valves to admit steam that circulates through pipes in vat and heats water to specified temperature. Turns handwheels to regulate flow of grain meal into cooker. Pushes button to start revolving blades in cooker to agitate mixture as it cooks. Observes gauges to ascertain temperature of mixture in cooker and turns valves to adjust temperature as specified on charts. Cooks mash for specified time and opens valve to pump cooked mash into drop tub. Opens valve that flushes cooker with caustic solution, to clean inside surfaces.

May record cooking time and quantity of mash prepared. May pump mash into fermenting tank after cooling.

Miscellaneous Beverage Processing Occupations
8227-298 through 8227-399

8227-298 YEAST-ROOM OPERATOR(distill., brew. & ferment.)
DPT:682
yeast man.
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Controls equipment to prepare mixture of mash and yeast for use in manufacture of distilled and malt liquors:

Weighs specified quantities of rye and malt meal, into scale hopper, depending upon amount of yeast required and pushes button on panel board to dump ingredients into yeast tub. Opens valves to fill tub with specified amount of water, and to admit steam that circulates through coil pipes in tub and cooks mixture. Starts revolving blades in tub, pushing button, to stir mixture as it cooks. Observes temperature gauges and chart recorders, and regulates steam pressure to maintain constant temperature as mash cooks. Pours yeast culture into cooked mash and blends mixture until thoroughly mixed. Observes temperature gauges and turns steam valves to maintain fermenting mash at constant temperature. Tests mash to determine temperature and specific gravity, using thermometer and hydrometer. Notifies other operator when mash is ready to be pumped to next processing tank. Removes sample of mash for laboratory analysis. Records yeast production.

8227-302 MALTSTER(distill., brew. & ferment.)
DPT:682
malt-house operator.
GED: 3 SVP: 3 EC: 1 3 4 7 PA: M 4 7

Controls equipment to germinate barley and to dry germinated grain used in preparing malt for making distilled or malt liquors, performing any combination of the following duties:

Moves lever to weigh barley conveyed into beam scale hopper or weighing tank and turns handle to drop barley into steeping tank. Turns water valve to fill steeping tank to specified level of water, and opens air valve to agitate barley and remove chaff. Turns handles after specified steeping time to dump steeped barley onto conveyors. Starts conveyors to load rotating germination drums or compartments with steeped barley. Starts fans to circulate heated moist air into drums or compartments. Observes dials and regulates temperature and humidity in drums or compartments to achieve maximum germination of barley. Starts screw-type mixing machine equipped with water sprayer to ensure uniform germination. Removes sample of steeped or germinated barley for laboratory analysis. Moves discharge chute to spread malt (germinated barley) evenly over kiln floor for drying or operates tractor-powered plow to push malt through floor traps to drying compartments. Observes temperature gauge and recording charts and adjusts hot-air dampers, and exhaust fans to maintain specified temperature in malt-drying kilns. Records malting-cycle data, such as air and water temperature and humidity content.

May start conveyor to move dried malt successively through cleaning, separating, and grading machines. May tend specific unit of malt germinating or drying equipment and be designated accordingly; for example, Barley Steeper Germination Man Kilnman, Malt House

8227-306 SOFT-DRINK MIXER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends machine that mixes concentrates, sugar and carbonated water to produce soft drinks:

Turns valves to admit specified amounts of carbonated water and concentrated syrup into tanks, observing volume meters and pressure gauges. Observes soft-drink mixture through sight glasses, and adjusts flow of ingredients to control turbulence, and amount of mixture according to specifications.

8227-310 TEA BLENDER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends equipment that cleans and blends tea:

Selects tea chests according to blend specified. Opens lids of tea chests, using power saw and crow bar, and examines tea for mould or other defects. Weighs out specified quantities of tea using mobile floor scale, and dumps tea into hopper of machine. Pushes button to start cleaning equipment that removes dusts and wastes from tea. Moves lever to start flow of tea from cleaning machine into revolving blending drum, and sets controls to obtain required mix. Takes sample for approval. Moves lever to empty blended tea from drum onto conveyor leading to packaging machines.

May operate device that cuts tea leaves as part of blending process. May take inventory of tea in storage.

**8227-399 OTHER BEVERAGE PROCESSING
OCCUPATIONS**

This group includes beverage processing workers, not elsewhere classified; for example, those who measure quantity and temperature of whiskey in bottles, or control regauging equipment to reduce proof of newly distilled liquor.

Typical examples of occupational titles covered by this residual group definition are:

Bottle Gauger(distill., brew. & ferment.)

Cistern-Room Operator(distill., brew. & ferment.)

8228-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: FOOD, BEVERAGE AND RELATED PROCESSING

This unit group includes occupations in labouring or other elemental work, as described under the term title 02-190 LABOURER/ELEMENTAL WORKER (any ind.), which are concerned with preparing food and related products for commercial or domestic use, and performing general and clean-up duties in a food processing establishment.

**Labouring and Elemental Occupations: Slaughtering and Meat
Cutting, Canning, Curing and Packing
8228-110 through 8228-158**

8228-110 CASING STRIPPER(slaught. & meat pack.) DPT:686
GED: 1 SVP: 2 EC: 1 4 7 PA: L 4

Feeds pre-soaked beef, hog or sheep casings (intestines) into machines equipped with rollers and revolving brushes that strip, clean and prepare them for enclosing sausage:

Soaks intestines in vats, barrels or troughs filled with warm water to loosen contents and deposits. Separates intestines and removes material by hand. Feeds casings on moving chain that carries them between crushing rolls and revolving brushes that squeeze and scrape away unwanted material and mucus lining, and roll casing into shape. Adjusts tension on machine rollers. Cleans and oils casing machine, using scouring pad, steam hose and oilcan.

May clean and flush animal stomachs for use as casings. May measure and tie casings into bundles, and salt and pack bundles in containers for curing before use. May unpack and soak cured casings prior to making sausage. May be designated according to function performed or machine fed; for example,

Casing-Machine Feeder

Casing Soaker

8228-114 SKINNING-MACHINE FEEDER(slaught. & meat
pack.) DPT:686
GED: 1 SVP: 2 EC: 1 5 6 PA: M 4 7

Feeds machine that skins pork pieces preparatory to further processing:

Turns knob or crank to regulate thickness of skinning cut to be uniformly made in meats; such as, fatbacks, jowls, hams, bacon and livers. Positions unskinned meat on conveyor bed that moves it under, or against skinning knife. Trims remaining skin fragments with hand knife. Places skinned meat into truck or onto conveyor, and skin and fat into separate containers for further processing.

May skin pork, using draw-knife.

8228-118 MEAT PACKAGER(ret. tr.) DPT:587
meat wrapper.
GED: 1 SVP: 2 EC: 1 6 PA: M 4

Wraps, weighs and labels meat products for sale or shipment, performing any combination of the following duties:

Removes meat or bacon slices from discharge tray of slicing machine, arranges slices neatly on package folders and places folders on conveyor-belt trays preparatory to labelling and sealing. Cuts smoked or cured meat into slices, using slicing machine, and wraps slices in plastic bags preparatory to vacuum sealing. Weighs and wraps fresh meat cuts. Pours pork jelly and chopped pork into containers to mould and make head cheese. Counts and places packages on tray-rack or into shipping cartons. Stamps identifying data on side of carton. Stacks cartons on pallets for shipment. Records number of cartons packed on production report.

8228-120 POULTRY-COOLER WORKER(slaught. & meat
pack.) DPT:587
GED: 1 SVP: 2 EC: 1 2 PA: L 4

Sorts and packs whole poultry or parts in preparation for quick freezing, or for storage in freezer, performing any combination of the following duties in cooler:

Places wrapped poultry onto conveyor leading to quick freezer or places poultry in open boxes and stacks filled boxes on pallets for movement to freezer. Routes birds with damaged wrapping for re-processing. Places wrapped poultry parts on metal racks preparatory to freezing. Removes quick-frozen poultry or parts from boxes or racks and sorts them into shipping boxes according to weight or by part. Marks weight of contents on side of box, using rubber stamp and records weight of each box on tally sheet. Seals boxes, using stapler and places boxes on pallet for storage.

8228-122 SMOKED-MEAT PREPARER(slaught. & meat
pack.) DPT:587
GED: 1 SVP: 2 EC: 1 4 6 PA: M 4

Prepares meat for smoking, performing any combination of the following duties:

Washes, scrapes and wipes salt, slime, grease, excess moisture and discolouration from meat. Weighs meat and marks grade and weight on each piece. Places meat in stockinet (muslin bags) to preserve shape during smoking. Stuffs boneless hams, butts, picnics and rolls into artificial casing, using stuffing and sealing device. Hangs filled stockinets and casings by loop on overhead trollies. Impales slabs of bacon on metal hangers suspended from conveyor rail. Records product data on tag attached to trolley. Starts conveyor or pushes trollies along rail to move meat into smoke-house.

May be designated according to task performed; for example,

Hanger, Meat

Scraper, Meat

Soaker, Meat

Stockinet Man

8228-126 EVISCERATOR, POULTRY(slaught. & meat pack.) DPT:687

GED: 1 SVP: 2 EC: 1 4 5 PA: L 4

Eviscerates slaughtered poultry suspended from moving conveyor, performing any combination of the following duties:

Slits skin of neck with knife to make opening and cuts away oil sac

from tail protuberance. Slits body between vent and tail and cuts vent free and pulls viscera out of body cavity for inspection. Pulls crop and windpipe by reaching into neck opening. Cuts out gizzard, opens and washes away contents under water tap and removes skin, using metal abradar. Severs and discards condemned parts and removes liver and heart. Removes lungs and kidneys by suction, using metal- vacuum tube. Removes bird from shackle and passes carcass through mechanical head remover. Positions bird on conveyor that severs feet from bird, or severs feet, using knife. Shackles bird by one leg to sizer conveyor for automatic weighing or grading. Packs giblets into small bag for insertion into poultry carcass.

May be designated according to function performed or part eviscerated; for example,
Giblet Packer
Gizzard Peeler
Lung and Kidney Remover
Vent Cutter

8228-130 GAMBRELER(slaught. & meat pack.) DPT:687
dropper; hooker.
GED: 1 SVP: 2 EC: I 4 5 PA: H 4

Inserts gambrels in hind ankles and hangs animal carcasses onto overhead rail prior to dressing:
Slits skin to expose tendons or gamb cords in hind ankles, using knife, and inserts gamb stick or gambrel (hooked-metal rod) between tendon and bone to spread legs. Lifts or hoists gambrelled carcass and hooks to trolley wheel suspended from rail. Cuts out flesh between toes of hog carcasses and removes toe nails, using hook.
May push carcasses to next work station. May remove gambrels and lower chilled carcasses from rail onto conveyor-cutting table.

8228-134 LABOURER, MEAT-PACKING PLANT(slaught. & meat pack.) DPT:687
GED: 1 SVP: 2 EC: I 4 5 PA: H 3 4

Performs any combination of the following duties in slaughtering and meat-packing plant:
Holds meat steady during cutting. Distributes supplies from storage to work stations, using hand truck. Pushes trolleys holding meat products and meat trucks between departments. Impales cured bacon slabs on hangers and suspends hangers on trolley for smoking. Unloads smoked meat from trolleys, cuts off stockinettes and stamps and tags product. Transports inedible materials from killing floor to rendering room, using hand truck, and dumps contents into rendering tank. Pushes carcasses through spray cabinets to wash them. Loads quarters and sides of beef into railroad cars or motor trucks. Dumps frozen meat products into water tanks for thawing before curing. Removes cooked hams from cooking tank and places them on dolly, or suspends hams on overhead rail racks for further processing. Weighs materials on dollies or hand trucks, and records weights to maintain production records. Removes empty trolley wheels from overhead rails and places them in chute or onto other rails for reuse. Washes equipment and utensils, and railroad refrigeration cars, using broom and water hose.
May be designated according to duties performed; for example,
Bacon Comber
Beef Lugger
Frozen-Meat Soaker
Hog-Carcass Conveyor
Package Handler, Freezers
Sausage Hanger
Trolley Cleaner
Trucker, Pork Cutting

8228-138 MEAT-LOAF TRIMMER(slaught. & meat pack.) DPT:687
loaf-end trimmer.
GED: 1 SVP: 2 EC: I PA: L 4

Trims crusty or ragged ends from meat loaves or cooked hams, and peels casings from bologna or salami products prior to slicing, using knife:
Lifts loaf, ham, bologna or salami products from hand truck to table and places in mitre box. Slides knife through slots in box to cut off crusty, ragged or rounded ends of meat product. Cuts ends of casing, pulls casing free, and removes any casing adhering to product, using knife. Discards end pieces of meat and casings in containers on truck. Places trimmed products on dolly.
May push dolly to meat-slicing section.

8228-142 NECK SKEWER(slaught. & meat pack.) DPT:687
neck pinner.
GED: 1 SVP: 2 EC: I 4 PA: L 4

Skewers loose neck-meat of dressed side of beef to improve appearance:
Fits skewer into metal holder shaped like door knob, and pushes and threads skewer into hanging neck-meat of suspended side of beef to pin meat together after head has been removed.
May roll shrouded carcass with hand tool to give meat smooth appearance. May complete pinning of muslin cloth around beef carcass.

8228-146 POULTRY SLAUGHTERER(slaught. & meat pack.) DPT:687
GED: 1 SVP: 2 EC: I 4 7 PA: L 4

Severs jugular vein of fowl passing on overhead conveyor:
Grasps head of bird shackled to moving overhead conveyor. Cuts throat with diagonal stroke of knife to slaughter bird and drain blood from carcass, preparatory to dressing.

8228-150 CARCASS WASHER(slaught. & meat pack.) DPT:687
GED: 1 SVP: 1 EC: I 4 6 PA: L 4

Washes blood and dirt from dressed animal carcasses, using hose, warm water, brush and scraper:
Sprays suspended animal carcasses with hose and warm water and uses brush or scraper to remove adhering blood, dirt and foreign material. Turns carcasses as required, by hand, and washes down the inner side.
May push carcasses along overhead rail to next work station. May shroud carcasses.

8228-154 POULTRY HANGER(slaught. & meat pack.) DPT:687
GED: 1 SVP: 1 EC: B 7 PA: VH 4

Shackles and suspends live or slaughtered poultry for killing or processing, working as member of a team:
Removes crates of live poultry from truck onto conveyor leading to killing area. Removes crate lid and grasps legs of bird and removes birds singly from shipping crates. Inserts feet into conveyor shackles preparatory to killing and defeathering. Transfers carcasses from slaughtering conveyor onto eviscerating conveyor.

8228-158 POULTRY PINNER(slaught. & meat pack.) DPT:687
GED: 1 SVP: 1 EC: I 4 5 PA: L 4 7

Removes pinfeathers from poultry carcasses:
Observes suspended carcasses approaching on moving conveyor to detect pinfeathers left by defeathering machine. Grasps bird and removes pinfeathers, using pinning knife or hand torch.

Labouring and Elemental Occupations: Fish Canning, Curing and Packing
8228-178 through 8228-206

8228-178 FISH-CLEANING-MACHINE FEEDER(fish process.) DPT:686
GED: 1 SVP: 2 EC: I 4 7 PA: L 4

Feeds machine that cleans fish by removing head, fins, viscera, and tail preparatory to canning:
Starts machine and conveyor system. Positions fish on feed table and aligns head with cutting knife. Places beheaded fish into machine trough, and pushes tail into teeth of cutting or cleaning machine or feeds machine that cuts and cleans fish automatically.
May pull lever to regulate speed of conveyors. May replace worn knives, using hand tools. May turn valves to control sprays of water in machine.

8228-182 FISH-PROCESSING-MACHINE FEEDER(fish process.) DPT:686
GED: 1 SVP: 2 EC: I 4 7 PA: L 4

Feeds cleaned fish into machines that bone, skin, or cut and pack fish sections into cans:

Starts machines and pulls levers to regulate speed of feed-conveyor. Places fish on feed conveyor of machine and observes operation to detect equipment malfunctions.

May adjust cutting knives on machine, using hand tools. May be designated according to type of machine fed; for example, Filling-Machine Feeder
Skinning-Machine Feeder

8228-186 FISH ICER(fish process.) DPT:687
GED: 1 SVP: 2 EC: I 4 PA: M 4

Weights dressed fish, records weights, and packs fish in ice:
Reads orders to determine quantity, size, and variety of fish to be packed. Selects fish, weighs them, and records weights on shipping voucher. Shovels layer of ice in box and fills body cavity of each fish with ice. Places fish in box and fills remainder of box with ice.

May assemble boxes and stencil addresses on them. May seal boxes, using hammer and nails.

8228-190 SHELLFISH SHUCKER(fish process.) DPT:687
shucker.
GED: 1 SVP: 2 EC: I 4 6 PA: L 4

Shucks fresh or steamed shellfish, such as oysters, clams, or scallops preparatory to canning, freezing, or packing:

Holds shellfish firmly in hand and forces shucking knife between halves of shell at hinge juncture. Twists knife to sever muscles holding shell closed and pries shell open. Cuts shellfish from shell, flips it into container, and discards shell.

May break off edges of oyster shells before shucking, using hatchet. May remove hardened part of neck (siphon) of clams, using knife. May shuck a particular kind of shellfish and be designated accordingly; for example,

Clam Shucker
Oyster Shucker
Scallop Shucker

8228-194 BRINER, FISH(fish process.) DPT:687
dipper, fish.
GED: 1 SVP: 1 EC: I 4 PA: M 3 4

Immerses fresh fish fillets in brine solution to condition them for wrapping or freezing:

Places fish in wire basket and submerges basket in salt and water solution for specified time. Removes basket from brine tank and dumps fillets on conveyor belt or sets baskets aside for further processing of fish fillets.

May prepare brine and vegetable colouring solutions prior to dipping fish. May dip fish fillets or pieces in vat containing vegetable colouring matter. May clean work area, using hose, broom and shovel.

8228-198 FISH-BIN MAN(fish process.) DPT:687
GED: 1 SVP: 1 EC: I 4 PA: M 3 4

Transfers raw fish from storage to holding bins, and onto conveyors to transport them to cleaning areas:

Opens storage bin gates, to release fish into various holding bins, according to species. Opens holding bin gates to move fish onto conveyor leading to cleaning area. Expedites flow of fish, using wooden rake, hoe, water hose or pole fitted with metal prong. Shovels chipped ice into bins, to preserve fish.

8228-202 LABOURER, SHELLFISH PROCESSING(fish process.) DPT:687
GED: 1 SVP: 1 EC: I 4 5 PA: H 3 4

Performs any combination of the following duties concerned with packing, canning, freezing, or smoking shellfish:

Transports shellfish, shellfish meats, cans or cases to work area by hand, wheeled hopper, or hand truck. Loads conveyors, hoppers, or hand trucks with product, cans or cases. Spreads shellfish on conveyor or draining table, drenches them with water, and removes foreign

matter. Weighs shellfish or shellfish meat, using scales. Records weight of product on standard form. Sorts shellfish according to size, and trims off unusable portions, using knife and scissors. Packs shellfish meat in jars, cans or boxes. Cleans conveyors, machines, and work areas, using water hose.

May feed cans and lids into lidding machine. May be designated according to task performed; for example, Shellfish Checker
Shellfish Packer

8228-206 FISH RACKER(fish process.) DPT:887
GED: 1 SVP: 1 EC: B PA: M 4

Hangs fish on racks or poles, or places them in trays. Sets racks, poles or trays in smoking room, drying room or out in sun.

Labouring and Elemental Occupations: Baking and Confectionery Making
8228-224 through 8228-238

8228-224 BAKE-PAN GREASER(bake. prod.) DPT:685
pan greaser, machine.
GED: 1 SVP: 2 EC: I PA: L 4

Tends machine that automatically coats inside surfaces of baking pans with grease:

Places container of grease alongside machine, using handcart, and inserts suction pump into container or pumps grease into reservoir of machine manually, using hand pump. Starts machine. Adjusts gauge to regulate spray of grease. Feeds pans into spray booth manually. Removes greased pans from machine conveyor and stacks them on racks. Occasionally loads pans on rack and pushes racks into steam chamber for cleaning.

May be designated according to type of pans greased; for example, Bread-Pan Greaser
Cake-Pan Greaser

8228-226 LABOURER(confection.) DPT:586
GED: 1 SVP: 2 EC: I 5 PA: M 4

Performs any combination of the following duties in candy manufacturing establishment:

Feeds one or more candy-processing or packaging machines. Offbears, counts, inspects or culls finished or unfinished confectionery pieces and ingredients. Transfers moulds, trays of candy and supplies between storage, processing and packing areas, using dolly or hydraulic lift. Fills bags with bulk items, inserts prizes in containers, and packs, labels or wraps cartons for shipment. Observes cellophane-wrapped cartons passing on conveyor to detect defective wrapping. Removes cellophane from defectively wrapped cartons and returns cartons for rewrapping. Keeps records of production data, such as machine operating time, number of cartons filled by each packing machine and weight of wastage. Attaches bows to fancy packages of candy.

8228-230 LABOURER, BAKERY(bake. prod.) DPT:686
GED: 1 SVP: 2 EC: I PA: L 4

Works at conveyor belt or bench performing any combination of the following duties:

Feeds or offbears materials from filling, icing, depositing, enrobing, slicing, packaging or other machines. Trims edges of bakery products. Guides, stacks, separates, counts, packs, wraps and weighs bakery products. Forms cartons, and places labels inside or around packages, bags or cartons. Trims edges of bakery products.

8228-234 NUT-CHOPPING-MACHINE FEEDER(confection.) DPT:686
GED: 1 SVP: 1 EC: I PA: L 4 6

Feeds machine that chops nuts:

Carries containers of cleaned nuts to chopping machine. Places empty container under discharge outlet of chopping machine. Scoops nuts into machine hopper and starts machine. Empties container of chopped nuts into trays of containers for further processing.

8228-238 NUT SORTER(confection.) DPT:687
nut cleaner.
GED: 1 SVP: 1 EC: 1 PA: S 4

Removes defective nuts and foreign matter from bulk-nut meats by hand or using electronic-sorting machine.
Observes nut meats on conveyor belt or work table. Removes broken, shrivelled, discoloured and other defective nuts and foreign matter, such as leaves and stones, by hand or using electronic-sorting machine. May dump trays of nuts on work table and deposit sorted nuts in trays or wooden containers. May be designated according to type of nut sorted; for example, Almond Sorter

Labouring and Elemental Occupations: Sugar Processing
8228-258 through 8228-270

8228-258 CHAR-KILN-FIREMAN HELPER(sugar) DPT:687
GED: 1 SVP: 2 EC: 1 7 PA: H 4

Helps to revivify char performing any combination of the following duties:
Removes carbon from kiln burners, using cleaning rod. Monitors flow of wet char through chutes and frees stoppages. Feels char leaving predrier, to check moisture content. Examines equipment and reports damage. Cleans floors in kiln area, using broom and shovel. Bags char dust from screening machine, loads bags on dolly and transports them to storage area. See also definition for term title, 02-160 HELPER (any ind.).

8228-260 CHAR PULLER(food & bev., n.e.c.; sugar) DPT:687
GED: 1 SVP: 2 EC: 1 3 PA: H 3 4

Removes contaminated char (bone charcoal) from sugar liquor and corn syrup filters for revivifying:
Opens filter-discharge gate, using hand tools. Loosens and pulls char into chute and onto kiln conveyor, using scraper. Enters filter and sweeps filters to remove remaining char. Removes filter blanket, washes in formaldehyde solution and hangs blanket to dry. Arranges and smooths dry blanket over filter grate. Replaces gate and tightens nuts evenly to prevent warping of door and leakage. Cleans char dust from work area, using broom and water hose.

8228-261 KNIFE-SETTER HELPER(sugar) DPT:687
GED: 1 SVP: 2 EC: 1 6 PA: M 4

Helps knife-setter to remove sets of knives from beet-slicing machine and performs other related duties:
Loosens nuts and setscrews on knife-block assembly and removes knife sets, using hand tools. Cleans knives, using hot water and brush. Prepositions knife blocks in slicing machine by turning handcrank to rotate slicer wheel. Obtains replacement parts from company stores. See also definition for term title, 02-160 HELPER (any ind.).

8228-262 SUGAR-BOILER HELPER(sugar) DPT:687
pan helper.
GED: 1 SVP: 2 EC: 1 5 PA: M 4

Helps to prepare and tend vacuum-pan equipment used to concentrate sugar liquor and to grow sugar crystals of specified size:
Turns valves or actuates controls to admit steam and hot water to coils and condensers and to dump pan contents at end of boiling cycle. Removes samples of sugar crystals for laboratory analysis, using proof stick (long cylindrical rod with slotted end). Turns steam valve to wash pans after dumping. Cleans pump screens with hose and water. See also definition for term title, 02-160 HELPER (any ind.).
May prepare powdered-sugar-seeding mixture used to assist crystallization process.

8228-266 FLUMER HELPER(sugar) DPT:686
wet-hopper helper.
GED: 1 SVP: 1 EC: 0 PA: L 3 4

Helps to float supply of sugar beets to wash area:
Operates controls as directed to admit sugar beets from railway cars into flume or feeds beets from hopper onto conveyor leading to flume.

Prods beets with bar to ensure continuous flow to washing equipment. Washes hopper, using hose. Removes stones, stems and trash from flume. See also definition for term title, 02-160 HELPER (any ind.).

8228-270 BEET-WASHER HELPER(sugar) DPT:687
GED: 1 SVP: 1 EC: 1 4 PA: M 3 4

Helps to wash sugar beets by performing routine tasks in beet wash room:

Removes stones, earth, beet-tops and trash from pit and vat of beet-washing-machine and moves debris from area, using wheelbarrow. Starts and stops conveyor, as instructed. Washes floors, using hose. Cleans equipment, using cleaning materials. See also definition for term title, 02-160 HELPER (any ind.).

Labouring and Elemental Occupations: Food, Beverage and Related Processing
8228-290 through 8228-326

8228-290 FOOD-PROCESS LABOURER(food & bev., n.e.c.) DPT:686
line packer; production helper.
GED: 1 SVP: 2 EC: 1 PA: H 4

Performs any combination of the following duties in food processing and packaging establishment:

Dumps prepared ingredients into hoppers of grinding and mixing machines or movable tank trucks. Transports raw materials, finished products and packaging materials about plant and warehouse, using hand or tank truck. Feeds flattened boxes into forming machine to form containers. Feeds formed containers onto conveyor for filling and places lids on filled containers. Removes filled containers from conveyor or packs food into paper bags and boxes by hand. Stacks processed food in warehouse and coolers. Removes foreign material from food on conveyor.

May inspect finished products for damage or deviations from specifications. May verify weight of filled containers emerging from packaging machines, using scales. May label shipping containers with self-adhesive tape or using hand-stamper. May perform a specific task and be designated accordingly; for example, Coffee-Blending-Machine Feeder

8228-294 MIXER HELPER(feed & flour mill.) DPT:686
GED: 1 SVP: 2 EC: 1 5 7 PA: H 3 4

Helps in mixing flour or stock and poultry feed, performing any combination of the following duties:

Directs flow of bulk grain or feed from storage bins to machines, using movable chutes or dumps pre-weighed sacks of flour, wheat, meat scraps, corn or other ingredients into hopper of mixing machine. Stirs or pokes ingredients in hopper, using paddle or metal rod to facilitate flow into mixing machine. Fills and weighs sacks of mixed products, using batch scale, and closes tops, using hand stitcher. Bundles empty bags and delivers bundles to storage area. Examines ingredients and reports sub-standard quality. See also definition for term title, 02,160 HELPER (any ind.).

May be designated according to product mixed; for example, Feed-Mixer Helper
Flour-Blender Helper

8228-298 SORTING-MACHINE FEEDER(can. & preserv., n.e.c.) DPT:686
grading-table tender.
GED: 1 SVP: 2 EC: 1 PA: H 3 4

Feeds automatic machine that sorts fruits or vegetables according to size preparatory to processing, working as member of a team:
Places empty containers beneath discharge outlets of machine. Unloads containers of fruits or vegetables from trucks onto conveyor belt leading to sorting machine, or dumps fruits or vegetables into feed chute and opens chute to feed material into machine. Starts machine and removes filled containers from discharge outlets and replaces with empty ones. Cleans and lubricates machine, using oil can or grease gun.

8228-302 WASHING-MACHINE FEEDER(can. & preserv., n.e.c.) DPT:686
dumper-washer.
 GED: 1 SVP: 2 EC: 1 4 PA: M 4

Feeds machine that washes raw fruits or vegetables preparatory to canning, freezing or packaging:
 Opens valve to fill machine with water and adds specified cleaning and wetting agents. Dumps containers of raw fruits or vegetables into flume or machine hopper or opens gate of storage bin to allow produce to fall into machine. Starts machine that washes produce. Opens discharge chute after specified interval to release washed produce onto conveyor for further processing. Drains, cleans and refills tank of machine at designated intervals.
 May lubricate machine. May be designated according to type of washer fed, or produce washed; for example,
 Apple Washer
 Carrot Washer
 Raisin Washer
 Washing-and-Waxing-Machine Tender

8228-306 EDIBLE-OIL-PROCESS LABOURER(animal & veg. oil) DPT:687
 GED: 1 SVP: 2 EC: 1 4 PA: H 4

Performs any combination of the following duties in processing and packaging of edible oil products:
 Trucks or carries supplies to work area and forms cartons for packing and shipping products. Feeds bottles, cans or cartons onto conveyor for filling, tops-up under-filled containers and removes damaged containers from conveyor. Dumps liquids from damaged containers, or places containers in tank, closes lid on tank and opens steam valve to melt and reclaim solid material. Cleans equipment and work area, using steam hose, mops, broom, squeegee and cloths.

8228-310 LABOURER, STARCH FACTORY(food & bev., n.e.c.) DPT:687
 GED: 1 SVP: 2 EC: 1 4 5 PA: VH 2 3 4

Performs any combination of the following duties to convert grain such as corn or wheat into starch:
 Transports bags of grain from storage to production area as directed, using pallet mover. Opens sacks, and dumps materials into chute or conveyor leading to grinding mill. Flushes impurities from surface of starch solution, using water hose. Opens valves to drain water from solution and mix fresh water with settled starch. Fills and weighs bags of dried starch, using scale, and transports bags to storage area.
 May add and mix chemicals to starch milk as directed. May perform a specific task and be designated accordingly; for example,
 Starch Flusher

8228-314 LABOURER, SYRUP PROCESSING(food & bev., n.e.c.) DPT:687
 GED: 1 SVP: 2 EC: 1 PA: M 4

Performs any combination of the following duties concerned with bottling or canning corn syrup:
 Transfers empty bottles or cans from receiving room to storage area, using hand truck. Collects rejected bottles and cans of corn syrup and pours contents into strainer to remove impurities and recover syrup. Places rejected bottles onto conveyor for transfer to washing machine, and carts damaged cans to scrap area, using hand truck. Cleans work area and reservoir of filling machine, using water hose and brushes.

8228-318 LABOURER, YEAST PLANT(food & bev., n.e.c.) DPT:687
 GED: 1 SVP: 2 EC: 1 PA: H 3 4

Performs any combination of the following duties in a yeast fermentation plant:
 Transfers raw and finished materials to production and storage areas, using hand truck. Draws samples of wort from tank for laboratory analysis. Cleans fermentation tanks, using brush, water and steam hoses.

8228-322 POTATO-CHIP SORTER(food & bev., n.e.c.) DPT:687
 GED: 1 SVP: 1 EC: 1 PA: L 4 7

Removes defective or discoloured potato chips from packaging-line conveyor:
 Observes fried potato chips on moving conveyor and removes chips that are burned, or broken.

8228-326 FRUIT SPLITTER(can. & preserv., n.e.c.) DPT:687
 GED: 1 SVP: 1 EC: 1 PA: L 4

Cuts fruit, such as cherries and peaches, into halves and removes pits:
 Cuts fruit into halves at suture, using sharp knife and removes pits and pit fragments. Places fruit halves on conveyor. Removes and empties containers filled with pits into waste bin.

8228-399 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: FOOD, BEVERAGE AND RELATED PROCESSING

This group includes labourers and elemental workers, not elsewhere classified; for example, those who clean food processing and related equipment, sterilize containers, feed machines that chop inedible material prior to rendering, and salvage improperly packed food products. Typical examples of occupational titles covered by this residual group definition are:
 Barrel Sterilizer(food & bev., n.e.c.)
 Bin Cleaner(feed & flour mill.)
 Filter Washer(distill., brew. & ferment.)
 Hasher, Inedible Material(slaught. & meat pack.)
 Salvage Man(can. & preserv., n.e.c.)

8229-FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with processing food and beverage products; such as, condiments, oils and fats, gelatine, yeast, unrefined chocolate, and other miscellaneous food and beverage products. Activities include: grinding, mixing, cooking, roasting, drying, cutting, freezing, preserving, packaging foods; and cleaning and washing processing equipment or containers.

Condiments Processing Occupations 8229-110 through 8229-130

8229-110 FINISHER, DRESSINGS(food & bev., n.e.c.) DPT:685
 GED: 3 SVP: 3 EC: 1 PA: L 4

Tends equipment to process mixture of essences, fats and oils to make products such as whipped topping or salad dressings:
 Turns valves and starts pump to transfer specified amounts of essences, fats and oils from blending tank to machines that remove oxygen from emulsion, pasteurize and homogenize mixture and fill storage tank. Observes gauges, and adjusts valves to control pressure and temperature in pasteurizer, homogenizer and cooling tank, according to formula. Observes gauges on storage tank to maintain specified quantity of stock. Records process temperature and pressure, and other production data on log sheet. Cleans equipment between production runs, using hot water, solvents and brushes.
 May be designated according to food product processed; for example,
 Salad-Dressing Finisher
 Whipped-Topping Finisher

8229-114 RELISH MAKER(can. & preserv., n.e.c.) DPT:685
GED: 3 SVP: 3 EC: 1 PA: H 3 4

Weighs, measures and mixes diced or ground vegetables, flavourings and spices according to formula, and tends cooking equipment to make relish or sauce:

Weighs or measures ingredients such as vinegar, spices, sugar, salt, pickles, peppers, tomatoes and onions, using scale and measuring containers. Lifts and dumps bags of ingredients into cooking kettle and turn valves to add measured quantities of liquids such as vinegar and water. Starts mixer or stirs ingredients with paddle, and turns valve to admit steam to heating jacket of kettle to cook contents for prescribed time. Observes mixing and cooking process to ensure thorough blending and cooking of ingredients. Opens discharge valve or starts pumps to transfer ingredients to filling machine or storage tank. Cleans kettles with scouring pad, cleanser and water.

May cook condiments to make relish or sauce. May be designated according to product made; for example,
Chow-Chow Maker
Steak-Sauce Maker

8229-118 SPICE MILLER(food & bev., n.e.c.) DPT:685
spice grinder.
GED: 2 SVP: 4 EC: 1 7 PA: H 4 7

Tends machines that grind spices, such as, cinnamon and chili pepper: Lifts and dumps bags of spice into storage hopper and opens gate to fill hammer or rolling-type grinding mill with spice. Moves lever to control spice feed and places containers under sifting screen or discharge spout. Examines visually or feels crushed spices to verify consistency of grind. Cleans or replaces rollers, sifters and other machine parts.

May be designated according to type of spice ground; for example,
Chili-Pepper Grinder
Cinnamon Grinder

8229-122 MIXER, DRESSINGS AND SAUCES(can. & preserv., n.e.c.; food & bev., n.e.c.) DPT:685
wet-condiments mixer.
GED: 2 SVP: 3 EC: 1 PA: H 4

Tends automatic mixing and blending machine to prepare liquid condiments; such as, mustard, salad dressing, whipped topping mixtures, mayonnaise and sauces:

Weighs out and measures ingredients; such as, eggs, spices, oils and salt according to formula. Dumps or pumps ingredients into hopper of mixing machine by hand, conveyor or bucket hoist and turns valve to admit metered amounts of liquid ingredients into mixing tank. Sets thermostats to maintain specified temperature. Starts mixing machine for prescribed time cycle. Pulls lever or starts pumps to transfer mixed condiments to storage tanks or filling machines, or uses scoop to empty mixer. Records mixing time and batch number on record sheets at end of mixing cycle.

May tend combined grinder-blending machine, or roller mill to grind dry ingredients prior to mixing. May pump whipped topping mixture into homogenizer and add flavouring prior to pasteurization. May be designated according to product mixed; for example,

Mayonnaise Mixer(food & bev., n.e.c.)
Mustard Mixer(food & bev., n.e.c.)
Roux Mixer(food & bev., n.e.c.)
Whipped-Topping Mixer(food & bev., n.e.c.)

8229-126 SPICE FUMIGATOR(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 6 PA: VH 4

Tends equipment that fumigates nuts or spices:

Stacks containers of spices or nuts, or moves loaded pallet, into fumigator tank or room, using hand truck. Starts pump to exhaust or expel air. Pours or pumps specified quantities of liquid or vapour fumigant into tank or room. Opens valves and starts vacuum pump or blower to remove fumigant after specified time. Removes nuts or spices from tank or room.

8229-130 SPICE MIXER(food & bev., n.e.c.) DPT:685
blender, dry seasonings.
GED: 2 SVP: 3 EC: 1 7 PA: H 4

Tends machine that mixes spices with other ingredients for use as dry seasonings:

Measures and weighs specified quantities of spices and other ingredients such as flour, milk powder, ground chili peppers, garlic and salt. Lifts and dumps ingredients into hopper of mixing machine or opens valve to admit specified amount of each ingredient into mixer. Checks off ingredients used on batch record sheet. Sets controls to regulate mixing time and speed, and starts machine to mix ingredients to specified consistency. Submits sample of product to laboratory for quality control analysis. Moves lever to discharge mixed product into containers. Weighs filled containers and applies identification label using brush and glue.

May sift spices before mixing, using mechanical sifter. May mix small batches, using portable mixer. May load and unload pallets or containers of ingredients and drive pallet truck. May be designated according to type of spice mixed; for example,
Mixer, Chili Powder

Oils and Fats Processing Occupations 8229-150 through 8229-166

8229-150 HYDROGENATION OPERATOR(animal & veg. oil) DPT:682
hardener.
GED: 3 SVP: 6 EC: 1 4 6 PA: M 2 3 4 7

Controls equipment that chemically converts and hardens base oils in manufacturing products, such as margarine and shortening:

Starts pump and adjusts valves to move pre-measured batches of refined oils or fats into hardening vessel. Weighs, mixes and adds specified amounts of catalysts. Opens valves to heat oil to hydrogenation temperature and establish vacuum to evaporate moisture from oil. Turns valve to start flow of hydrogen through oil to harden batch. Samples and tests hardening properties of oil in batch, using refractometer. Closes hydrogen valves at specified refraction reading and draws sample for laboratory tests. Pumps hardened oils through filter press to remove catalysts and attaches lines to transfer filtered oil to scale tank. Compares weight of filtered oil against unprocessed oil to verify efficiency of drying process. Starts pumps to add specified amounts of blending oils to blending vessel and turns valves to heat and blend oils for required time. Observes temperature, vacuum and pressure gauges and turns valves to make adjustments. Pumps finished oils through filter press and cooling tower to holding tank. Purges system and cleans equipment, using steam, hot water and scraper. Maintains batch and production records.

8229-154 MARGARINE PROCESSOR(animal & veg. oil) DPT:682
GED: 3 SVP: 6 EC: 1 3 4 6 7 PA: H 4 7

Operates equipment that mixes and churns ingredients to produce margarine:

Mixes specified amounts of powdered milk and water in steam-heated kettle, equipped with agitator. Opens steam valves to heat solution above pasteurizing temperature and transfers pasteurized milk into mixing vat. Weighs oil and measures additives, such as colouring, preservatives, stabilizers, salt and vitamins, according to formula, using scale or graduate. Dumps additives into mixing vat, manually, and starts agitator to blend and emulsify ingredients. Observes temperature gauge and adjusts steam valves to ensure vat temperature complies with specifications. Stops agitator upon completion of mixing cycle, and turns valve to transfer ingredients to cooling unit. Verifies acidity level of product by titration or using pH meter. Draws sample of product for colour analysis in laboratory. Calculates weight of colouring required to conform with specifications. Disassembles and cleans equipment, such as, product lines, pumps, tanks, kettles, and changes filters.

May dump contents of damaged margarine containers into heating and mixing vats for reprocessing. May position sterilized barrels under valves of holding tanks for filling.

8229-158 VOTATOR TENDER(animal & veg. oil) DPT:685
GED: 3 SVP: 5 EC: 1 5 6 7 PA: L 4 7

Tends votator machines that cool, solidify cream to liquid lard, shortening or margarine preparatory to packaging, or use in making foods, such as bakery or confectionery products:

Turns valve and pumps hot liquid into votator-cooling tank. Adjusts temperature and agitator controls to cream solidifying product to desired texture. Turns valve to transfer cooled product to filling and packaging units. Inspects samples of product for weight, colour, oil streaks, consistency or lumpiness, and makes adjustments as required. Cleans lines and equipment using, pressurized steam hose and nitrogen gas.

May tend combined votator-packager that assembles and fills cardboard containers. May transfer unsatisfactory product to cooling tank for reprocessing. May tend unit that fills and freezes cartons with processed liquid materials.

8229-162 OIL-CLARIFIER TENDER(animal & veg. oil; slaught. & meat pack.) DPT:685
oil-purifier tender.
GED: 2 SVP: 3 EC: 1 3 6 7 PA: M 4

Tends equipment that purifies and clarifies animal or vegetable oils for use in food preparation:

Turns steam valve to heat clarifying tank to specified temperature. Installs strainers or filters in clarifying tank. Turns valve to start flow of oleo stock (animal oil) or vegetable oil, or shovels hashed beef fat into tank. Shovels salt into clarifying tank to settle impurities and removes foreign material from surface of stack, using long-handled scoop. Observes gauges, and adjusts valves to maintain oil at specified temperature. Opens valve to pump clarified oil to storage tank for further processing. Records production data. Cleans equipment and work place, using hot-water hose.

May tend grinder to hash chilled-beef fat. May tend filter press to separate residual oil from stearine (fatty solid). May fill containers with oil or stearine for shipment.

8229-166 ROLLER-ROOM MAN(animal & veg. oil) DPT:685
ammonia-roll operator; chill-roll operator.
GED: 2 SVP: 3 EC: 1 4 6 PA: M 3 4

Tends machines equipped with quick-chill rolls to stabilize and solidify lard or shortening prior to packaging:

Opens valves to admit refrigerant into rolls, and presses buttons to start rolls and agitators. Opens valve to pour pastry oil or melted lard onto surface of chill rolls to solidify material into flakes which are scraped from rolls by blade attachment and dropped into troughs. Shovels flakes from troughs into hand truck and pushes truck to hashing machine. Shovels product into hasher to break up flakes. Scoops up and kneads hashed product and packs into metal containers for commercial use or into hopper of machine that forms and wraps domestic-sized packages. Seals and labels containers. Cleans and oils equipment, using steam hose, spray gun and vegetable oil.

Gelatine Processing Occupations 8229-186 through 8229-198

8229-186 GELATINE-EXTRACTOR TENDER(food & bev., n.e.c.) DPT:665
GED: 3 SVP: 6 EC: 1 PA: L 2 4 5

Tends equipment to extract edible gelatine liquor from treated ossein (insoluble fibrous bone protein):

Signals to other worker to pump slurry of ossein and water from lime house to extraction tanks. Turns valves to drain slurry water from extraction tanks and fills tanks with hot water. Allows ossein to soak for required period of time to extract gelatine. Drains gelatine liquor from tanks and pumps into holding tanks. Directs activities of other workers engaged in treating, extracting, filtering, evaporating and drying gelatine.

8229-190 GELATINE-EVAPORATOR-FILTER OPERATOR(food & bev., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: 1 3 4 PA: M 4

Operates evaporator and filter press to concentrate and clarify edible-gelatine liquor:

Opens valve to admit and regulate steam in evaporator. Tests sample of gelatine liquor for specific gravity, using hydrometer, and pumps liquor into evaporator. Observes gauges and adjusts controls to maintain specified temperature, pressure, and liquid level. Pumps liquor into mixing tank when liquor reaches required specific gravity. Dumps in hop of filtering materials, such as, diatomaceous earth, and starts agitator. Turns valves to open lines and pump slurry through filter press to remove impurities from gelatine liquor. Inspects filtered liquor for specified degree of clarity and circulates cloudy liquor through filter until clear. Reads gauges and adjusts controls to maintain specified pressure. Turns valves to pump filtered liquor to storage tank. Cleans filtered impurities and sediment from filter-press screens, plates and cloths, using water, steam or compressed air.

May tend equipment that cleans and reshapes cakes of wood pulp used as filtering material in press. May tend ion-exchangers that remove metallic salts from gelatine solution.

8229-194 EDIBLE-GELATINE PROCESSOR(food & bev., n.e.c.) DPT:685
GED: 3 SVP: 3 EC: 1 4 5 PA: M 4 7

Tends line of machines that process edible gelatine by extruding, drying, milling, blending and sifting:

Sets controls to pump viscous gelatine liquor through congealing coolers and machines that extrude noodle-shaped lengths of gelatine onto conveyors passing through drying compartments. Feels material to test moisture content and adjusts heater or fan controls to attain specified dryness. Reads hygrometer to detect excessive moisture in drying compartments, and starts dehumidifier when required. Starts conveyor to transfer dried gelatine for milling. Starts mills and shakers equipped with screens of specified mesh size, to grind, sift and discharge gelatine powder into drum. Transfers drums to blending machine, using lift truck or conveyor. Dumps specified types of gelatine from drums into blender hopper. Stops machine on completion of blending cycle and pulls lever to fill shipping containers to required weight. Observes line of machines to detect malfunctions, and stops line when malfunctions occur. Listens for bell that signals when drum is nearly full and replaces loaded drum.

May stamp, stencil or glue identifying information and shipping instructions on containers. May deliver containers to shipping dock, using hand or fork lift truck and load product into motor truck. May operate a particular gelatine-processing machine and be designated accordingly; for example,

Gelatine-Blending-Machine Tender
Gelatine-Drying-Machine Tender
Gelatine-Grinding-Machine Tender

8229-195 COOKER, GELATINE STOCK(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 3 4 PA: L 2 4

Tends equipment to cook chopped pork skins used to make edible gelatine:

Signals workers to fill kettle with stock. Turns valve to allow water to flow into kettle to-submerge stock. Starts heaters to cook stock for prescribed period of time at specified temperature. Tests samples of liquor for specific gravity to determine amount of gelatine that can be made from liquor, using hydrometer and consulting conversion tables. Turns valves to drain liquor from kettle to storage tank and refill kettle with water. Cooks stock several times at progressively higher temperatures until cooking process is completed. Stirs stock as required, using wooden paddle.

8229-198 GELATINE-STOCK MAKER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 4 5 6 7 PA: M 4 1

Tends equipment that washes, treats and shreds pig skins to make stock prior to extracting edible gelatine:

Removes pig skins from containers, and drops them into washing vats. Turns water valve to flush away foreign material and starts paddle wheel to agitate skins for prescribed time. Stops agitator and flow of water and drains vat. Opens valve and starts pump to transfer acid

into vat to destroy bacteria in stock. Drains acid after specified interval, and flushes skins with water to remove residual acid. Starts conveyor and skin-chopping machine and forks skins onto conveyor that feeds chopping machine and carries hashed skins to cooking kettle for extraction of gelatine.

Yeast Processing Occupations 8229-218 through 8229-238

8229-218 MOLASSES-WORT PROCESSOR(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4

Tends equipment to prepare molasses wort for use in production of brewer's yeast:

Turns valve and starts pump to transfer molasses into weigh tank. Observes scale, and pumps measured amount of molasses into weigh tank. Adds specified quantity of water and chemicals to molasses to precipitate impurities. Starts mixing unit and opens valves to admit steam into heating tank to heat molasses to specified temperature. Pumps molasses to centrifugal clarifier or through filter to settling tank to remove impurities. Observes level indicators and pumps specified amount of cane molasses to mix with beet molasses in holding tank.

8229-222 YEAST-DRIER(distill., brew. & ferment.; food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: M 4

Tends equipment that extrudes and dries compressed yeast to make baker's active dry yeast:

Dumps compressed yeast into hopper of extruding machine. Observes temperature and moisture gauges on drier and adjusts controls to attain prescribed drier temperature and humidity. Moves control to start extruder that forms yeast into noodle shape and deposits them on belt conveyor and into drier. Collects yeast samples from drier at specified times for laboratory analysis, and adjusts drier controls as result of tests. Opens outlet of drier to fill containers with yeast pellets, and pushes containers to scale for weighing. Records weight of containers on production-control log. Transfers containers of yeast to storage area, using lift truck.

8229-226 YEAST MAKER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4

Tends series of tanks to inoculate molasses wort with pure yeast culture to produce seed yeast for use in production of baker's yeast:

Admits molasses wort and specified quantities and kinds of chemicals into tank, and adds yeast culture to mixture in tank. Observes thermometer on tank and opens valves to admit water into coils of tank to maintain specified temperature. Starts air compressor to pump air into tank to aerate yeast mixture. Tests specific gravity and acidity of mixture, using hydrometer and pH meter. Adds chemicals to adjust acidity as indicated by test results. Starts pump to transfer wort and yeast mixture through successive holding or fermentation tanks and centrifuges.

May send samples of seed yeast to laboratory for analysis. May specialize in a particular phase of yeast making and be designated accordingly; for example,
Seed-Yeast Maker
Yeast Fermenter

8229-230 YEAST MIXER(food & bev., n.e.c.) DPT:685
yeast-emulsifier tender.
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that mixes compressed yeast with emulsifier preparatory to extruding and drying:

Fills mixer with specified amount of compressed yeast, using scoop. Pours specified quantity of emulsifying agents that form, stabilize and whiten yeast. Starts agitators to mix ingredients for specified time. Examines and feels mixture to determine colour and consistency, and turns valve to add amount of water to give yeast required consistency. Opens valve to transfer emulsified yeast to extruder and bar cutting machine.

8229-234 YEAST CUTTER(food & bev., n.e.c.) DPT:665
GED: 2 SVP: 2 EC: I 6 PA: L 4

Tends machine that extrudes compressed yeast into continuous bars, and cuts bars to specified length:

Signal other worker to fill extruding machine hopper with yeast. Attaches bar-forming nozzle to extruder using hand tools and starts machine. Observes yeast bar emerging from machine onto table and removes cracked or malformed bars from machine table for reprocessing. Cuts yeast bar into specified lengths using knife attachment when end of bar reaches cutter guide. Places bars on conveyor to wrapping machine.

8229-238 CENTRIFUGE TENDER, YEAST(food & bev., n.e.c.) DPT:685
yeast-separator man.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends one or more centrifuges and related equipment that separate yeast-cream (concentrated yeast suspension) from fermenter liquor or wash water:

Presses panel-board controls to start centrifuge and turns pump valves to control flow of fermenter liquor or wash water from storage tank to centrifugal separators. Takes sample of spent liquor or wash or yeast cream and examines sample to determine whether yeast has been removed. Turns valves to adjust flow of fermenter liquor or wash water into centrifuge to ensure maximum recovery of yeast cream and checks meter readings to prevent overloading of drive motors. Disassembles centrifuges, using chain hoist, and washes parts with soap and hot water.

May test sample of yeast cream for acidity using pH meter, and add specified chemicals to attain desired level of acidity. May transfer washed-concentrated yeast-cream through cooler to holding tank for subsequent use in making yeast products and be designated accordingly,
Yeast-Cream Washer

Unrefined-Chocolate Processing Occupations 8229-258 through 8229-294

8229-258 COCOA-BEAN PROCESSOR(confection.) DPT:662
GED: 3 SVP: 6 EC: I 5 6 PA: M 2 4 7

Operates variety of equipment such as cleaner, continuous roaster, cracker and fanner, dryer and grinder to produce chocolate liquor from cocoa beans by performing any combination of the following duties:

Opens jute bags containing cocoa beans and dumps beans into cleaning machine hopper to remove dirt. Turns gas valves and electric switches to start and heat rotating roaster. Sets controls to regulate temperature and speed of rotation of roaster. Starts conveyor to transfer specified type and quantity of beans to roaster. Tests samples of beans at various intervals during process cycle by tasting, crumbling between fingers to determine moisture content, or visually examining for colour. Adjusts temperature, feed rate and speed of roaster as required. Starts cracking and fanning machine to break and remove husks from roasted beans. Observes nibs (cracked roasted cocoa beans) and shells to evaluate husking process and adjusts machine controls accordingly. Opens slide gate on fanner to convey nibs for dutch processing (chocolate mixed with milk). Starts agitator to mix beans in treating tank for specified time. Opens gate to release beans onto conveyor to dryer machine. Starts gas-fired dryer, sets speed control and feels beans for dryness and transfers dried beans onto conveyor to roaster or grinding machine. Turns valve to pump chocolate liquor to storage tanks. Patrols area to ensure co-ordination of machines and equipment to attain specified rates of production. Directs activities of other workers engaged in duties, such as transporting ingredients, feeding machines and cleaning equipment and work areas.

8229-262 COCOA-BEAN ROASTER(confection.) DPT:685
GED: 3 SVP: 5 EC: I 3 6 PA: M 4

Tends one or more roasters to remove moisture and impart specified colour and flavour to cocoa beans:

Sets thermostat or fuel valve to heat roasters to specified temperature. Pulls handle to open hopper and drop beans into roaster. Starts roaster cylinder rotating to roast beans evenly. Examines sample of beans for colour, dryness, or brittleness after specified roasting cycle, and tastes

bean to judge if flavour conforms to standard. Observes temperature chart to ascertain heat pattern of roaster, and adjusts roaster flame and dampers to control circulation of hot air on basis of evaluation of samples. Pulls handle when desired degree of roasting is reached to discharge beans onto conveyor that transfers beans to cooling basin or next processing station. Records amounts of beans roasted. May load bags of cocoa beans on dolly, pull dolly to machine and empty bags into hopper.

8229-266 CHOCOLATE REFINER(confection.) DPT:682
chocolate-finisher operator; chocolate-refining roller.
GED: 3 SVP: 4 EC: I 3 5 6 PA: M 4

Operates refining machines equipped with rollers to grind chocolate paste to specified fineness:

Starts conveyor to feed chocolate into refiner hoppers. Turns handwheels on machine to adjust clearance between rollers to achieve specified fineness and opens hopper to feed chocolate between rollers. Observes thermometer or feels rollers and turns water valves to maintain specified temperature of rollers. Visually examines, feels, and tastes ground chocolate crumb or paste to ascertain if colour, texture, and taste meet standards. Collects samples of paste for laboratory analysis. Uses scoop or opens doors on machine to feed refined chocolate paste into wheeled troughs or barrels or onto conveyor to mixing tanks.

May weigh and push wheeled carts or barrels to next work station or cold storage rooms. May observe flowmeters, and turn valves to measure out cocoa butter, vegetable oil, and other ingredients according to formula to fortify chocolate in mixing tanks.

8229-270 COCOA-POWDER MAKER(confection.) DPT:682
GED: 3 SVP: 3 EC: I 3 5 6 PA: H 2 4

Operates automatic hydraulic cocoa presses to remove cocoa butter from chocolate liquor, and cocoa crushing and milling equipment to make powdered cocoa, performing any combination of the following duties:

Starts pump to transfer cocoa liquor from storage to measuring tank, and sets control to heat liquor to specified temperature. Verifies level indicator and sets automatic data recorder. Sets pressure control and stroke of cocoa-press ram, as specified, using hand tools. Starts pumps that automatically fill pots with chocolate liquor, and actuates ram that extrudes cocoa butter into holding tank and ejects cocoa cakes onto conveyor. Starts pump that forces cocoa butter through filters and into storage tanks. Starts compressor, crusher and vibrator-conveyor that carries cocoa cakes between crusher rollers and into hammer mill for grinding into powder. Starts conveyor to pass cocoa powder through cooler and into air-classification system that deposits powder in various containers, according to degree of fineness. Collects powder samples for laboratory tests. Fastens bag to holding-tank outlet, and opens discharge valve to fill bag with product. Lifts bag from filler outlet, adjusts weight of bag to specifications, and closes top of bag, using sewing machine. Records production data, such as cycle time of hydraulic press and weight of cocoa butter prior to filtering.

May operate either cocoa-butter extracting or milling equipment and be designated according to particular process; for example, Cocoa-Mill Operator
Cocoa-Press Operator

8229-274 COCOA-NIB GRINDER(confection.) DPT:685
chocolate-liquor maker.
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends one or more mills that grind cracked cocoa beans (nibs), or pre-ground cocoa-bean paste to make chocolate liquor:

Starts grinding machine and opens slide gate of hopper to admit nibs, or opens valve to allow paste to flow from paste-grinding mills. Monitors gauges that indicate amount of friction produced by grinding stones, and moves handle to adjust clearance between stones as required. Observes colour, tastes and feels liquor to ensure conformity with specifications. Draws and sends sample for laboratory analysis. Opens valves and starts pump to transfer liquor to storage tanks.

May pre-grind nibs into paste.

8229-278 COCOA-BEAN CLEANER(confection.) DPT:685
GED: 2 SVP: 2 EC: I 3 7 PA: H 4

Tends machine that removes foreign material from cocoa beans: Selects and transports bags of cocoa beans to hopper of cleaning machine, using hand truck, or starts conveyors that transfer beans from silo to machine hopper. Cuts bags open and dump beans into hopper. Positions conveyor spout to direct beans after cleaning to specified holding silo or hopper. Starts conveyors that carry beans through machine and air-cleaning system to remove foreign matter. Monitors cleaning process to detect malfunctions or material blockages. Stocks bags of residue removed from discharge spout of air-cleaning system. Examines silo to verify storage of specified type of bean.

8229-282 CHOCOLATE-CRUMB MAKER(confection.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends equipment that mixes and forms chocolate paste into crumbs (small pieces) and dries crumbs for storage, prior to further processing:

Starts kneading machine to mix chocolate with condensed milk, and adjusts handwheel or sets panel board control to attain specified consistency of mixture. Examines mixture to ensure conformity with specifications. Turns handwheels to lower conveyor chute that scoops up chocolate mixture and releases it over grinder rollers. Places drip-pans under grinder rollers to catch chocolate mixture. Stacks filled pans to allow chocolate to air dry and become crumb, or opens discharge chute to automatically release processed crumb into storage hopper.

8229-286 COCOA-BEAN-SHELLING-MACHINE TENDER
(confection.) DPT:685
GED: 2 SVP: 2 EC: I PA: H 4

Tends one or more machines that shell and crack cocoa beans and separate shells from nibs (cracked roasted beans) prior to processing into chocolate:

Loads specified quantities of various types of cocoa beans into shelling-machine hopper, using bucket. Starts machine rollers and blowers that shell and crack beans and starts conveyors that carry off shells and transfer nibs to heating drum, to sizing screens or to barrels. Moves handles to adjust blower airflow to ensure thorough separation of shells from nibs. Loads barrels of nibs onto hand truck, weighs barrels and records weight. Moves barrels to storage area. May turn hand wheels to adjust roller pressure to obtain uniform-sized nibs.

8229-290 COCOA-BUTTER FILTERER(confection.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: H 4 7

Tends filter press to separate impurities from cocoa butter: Reads pressure gauge, adjusts pressure control and actuates pump that forces unrefined cocoa-butter through filter plates or screen to separate impurities from cocoa butter. Opens valve and transfers refined cocoa butter to storage. Releases pressure on filter press and unclamps door of filter to remove screen. Flushes screen and interior of press to remove residue, using water or steam hose and scraper. Transports bags of residue to disposal area.

8229-294 CHOCOLATE-PROCESSING HELPER(confection.) DPT:686
GED: 2 SVP: 2 EC: I 3 4 5 PA: H 4

Assists other workers in processing cocoa beans, chocolate and cocoa products, performing any combination of following duties:

Transports ingredients from storage to production area, using hand truck. Weighs ingredients as directed. Loads oven to char cocoa beans, monitors thermometer and clock, and notifies foreman of variances from specified roasting temperature and time. Actuates lever to discharge roasted beans upon signal and examines beans for dryness and colour. Starts conveyors to transfer cocoa-bean shells from cracker and fanner to shell-cleaning machines, or to transfer cleaned nibs (cracked-roasted-cocoa beans) to storage. Examines shells for presence of nibs, and dumps shells into machines to recover nibs. Removes cocoa cakes from cocoa press and stacks them on pallets for removal to storage area. Positions filled mould pans of chocolate on conveyor moving through cooling tunnel. Feeds chocolate cakes or sheets into

shaker and hammer mill or crusher to break chocolate into smaller pieces. Feeds one or more processing units, such as conching machine, liquor mills, and bean roaster and cleaner. Receives and pumps shipments of milk into storage tanks. Cleans processing equipment and work areas, using hot water hose, brush and squeegees. See also definition for term title, 01-160 HELPER (any ind.).

May be designated according to processing activity assigned; for example,

Cocoa-Bean-Roaster Helper
Cocoa-Nib-Grinder Helper
Cocoa-Press-Mill Helper

Other Food, Beverage and Related Processing Occupations
8229-314 through 8229-499

8229-314 VINEGAR MAKER(can. & preserv., n.e.c.) DPT:662
vinegar technician.
GED: 3 SVP: 6 EC: I 7 PA: M 2 3 4 5 7

Controls equipment, such as fermentation tanks, acetators, generators, filters and pasteurizers used to produce vinegar from alcohol. Obtains alcohol for processing by one of the following methods. 1. Ferments apple juice to make hard cider used for making cider vinegar. 2. Cracks and soaks malted barley to obtain wort for making malt vinegar. 3. Requisitions grain alcohol from bonded warehouse or orders wine to make white and wine vinegars. Pumps specified quantities of alcohol, acetic acid, water, mineral salts and bacterial agent into acetators or into vinegar-generators and sets controls to begin production of vinegar. Adjust valves to regulate flow of air entering mixture and sets thermostat to control temperature of mixture. Tests strength of vinegar by performing titration tests on mixture at specified intervals, and pumps product to holding tanks. Sets temperature control on pasteurizing equipment and pumps vinegar from holding tanks through filters and pasteurizers into storage tanks. Dilutes vinegar to consumer specifications by pumping specified quantity of water into tank, and tests acidity of finished product, using hydrometer. Arranges for release by government officials, of alcohol from bonded storage, and for transfer of processed vinegar to receiving tanks. Records production data and amount of alcohol used in log book. Directs other worker in performing duties such as cleaning tanks and filters, and filling shipping containers with vinegar.

8229-318 RETORT-BATTERY COOK(can. & preserv., n.e.c.) DPT:667
cook, canned goods.
GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Observes battery of retorts used in pressure cooking sealed canned goods to ensure proper functioning, and examines canned food for conformity with standards:

Patrols battery of retorts and observes temperature and level of cooking water. Directs other worker to immediately remove cans from retorts on completion of cooking to prevent over cooking and to maintain continued production. Examines cans for air tightness, and accuracy and legibility of code numbers. Sends sample cans to laboratory for analysis. Tags faulty batches of canned goods to ensure removal from product distribution system. Records daily production data, and variances found in sealing, cooking and sterilizing operations.

May monitor operation of battery of sterilizers.

8229-322 COOK, KETTLE(can. & preserv., n.e.c.) DPT:682
cook, pressure.
GED: 2 SVP: 6 EC: I 6 PA: M 4

Cooks foods such as fruits, vegetables, meats, condiments, or fish products, preparatory to canning, extraction of byproducts or preserving:

Weights or measures ingredients according to recipe using scale of graduated container. Loads ingredients into kettle or pressure cooker. Observes thermometer and gauges and turns valve to admit steam to pressure cookers, or lights gas burner or turns switch of heating control, to heat and cook contents of kettles. Stirs mixture in kettle to blend and to prevent scorching of contents, using hand or power-driven paddles. Observes process to ascertain completeness of cooking. Tilts, or scoops contents of kettle into container to unload cooked product.

May test batch fluid with viscosimeter, hydrometer or refractometer to verify viscosity, specific gravity or sugar content. May start pump and open valve to transfer cooked contents to holding tank. May check kettles for cleanliness and ensure that plugs and screens are in place. May mix ingredients prior to cooking. May tend equipment that fills, caps, labels and seals containers. May be designated according to material cooked; for example,

Cook, Fish
Cook, Fruit
Cook, Jelly
Cook Juice

8229-326 DRYING-DRUM TENDER(dairy; distill., brew. & ferment.; food & bev., n.e.c.) DPT:685
GED: 3 SVP: 4 EC: I 3 6 7 PA: H 4 7

Tends machines that dry liquid foods such as milk, malt or yeast, in preparation for grinding into powdered products:

Turns valve to control flow of steam to heat drum type driers and monitors thermometers and pressure gauges to maintain temperature and pressure within specifications. Installs and adjusts scraper blades on drums, and screens on conveyor system. Starts driers and turns valve to regulate flow of food material between revolving drums. Observes thickness and colour and feels dried material to judge moisture content. Turns screws to adjust drum speed and thickness of sheet of material to ensure specified dryness is attained. Adjusts scraper blade that removes dried material from drum. Moves control to start conveyor to carry dried material to grinding mill, weighing and bagging unit or storage bin. Cleans lines and equipment, using steam or air hose.

May tend centrifuge to remove excess moisture from material before start of drying cycle. May pump or pour specified additives into material prior to drying and record amount added to mixture. May be designated according to type of food material dried, for example,

Malt-Drier Tender(distill., brew. & ferment.)
Milk Drier(dairy)
Yeast-Drier Tender(distill., brew. & ferment.; food & bev., n.e.c.)

8229-330 PEANUT-BUTTER MAKER(food & bev., n.e.c.) DPT:685
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Tends variety of machines and equipment to dehydrate, blanch, grind and mix shelled peanuts to manufacture peanut butter, performing any combination of following duties:

Loads shelled peanuts into machine hoppers. Starts equipment, such as heater, blower, conveyor, and blanching machine to prepare peanuts for grinding. Inspects samples for dryness and skin removal, visually, by touch or using moisture indicator. Open valves to fill mixing or grinding chambers with roasted nuts and specified amounts of other ingredients, such as peanut oil and salt. Observes gauges to determine if temperature in chambers is within specified limits. Turns dial control to regulate speed of pumps which force mixture through grinders. Open valves to allow mixture to flow from one grinder to another to obtain specified texture and transfer mixture into cooling unit. Records quantities of materials, such as salt, sugar and peanut oil, used in production, and requisitions required supplies.

May obtain samples and perform periodic chemical tests to determine salt content of product. May direct activities of workers engaged in filling, labelling, capping and packing containers for shipping. May replace sandpaper covered spindles in blanching machine and perform minor maintenance duties. May tend a particular type of machine and be designated accordingly; for example,
Blanching-Machine Tender, Peanuts
Drier Man, Peanuts

8229-334 CORN-SYRUP MAKER(food & bev., n.e.c.) DPT:682
GED: 2 SVP: 4 EC: I 6 PA: M 4

Controls steam-heated vats to heat and mix ingredients required to make table corn syrup:

Weights specified ingredients, such as corn syrup, flavourings and sugar, according to chart and using scales. Dumps ingredients into mixer. Starts agitators and pumps to transfer mixed ingredients to steam-heated mixing vat, filled with measured amount of thick corn syrup. Observes thermometer and turns steam valve to maintain mixture at specified temperature. Forwards sample of syrup to laboratory for colour and specific gravity testing. Adds caramel or

water as specified to adjust colour or specific gravity of batch. Starts pumps to transfer batch to storage or packaging station. Cleans equipment and work area, using cleaning materials and utensils.

8229-338 MALT ROASTER(food & bev., n.e.c.) DPT:682
ovenman.
GED: 3 SVP: 3 EC: I PA: M 4 7

Controls gas-fired rotary ovens and related equipment to roast barley malt, according to specifications:
Regulates gas valves to heat ovens to required temperature. Opens slide gate of overhead hopper to load specified amount of malt into oven, and presses switch to start rotation of oven. Sets automatic timers as specified for roasting cycle. Observes remote-reading oven gauges to ensure that specified temperature is maintained. Stops rotation of oven near end of cycle, and removes sample of roasting malt, using scoop. Manually grinds sample and compares malt with colour of quality-control specimen to ascertain progress of roasting process. Resumes roasting cycle until process is complete and turns off heat. Opens water valve at end of cycle to drench malt in rotating oven. Opens oven and transfers malt by conveyor to cooling tubs and to cleaning and drying machines.

8229-342 SYRUP MAKER(food & bev., n.e.c.) DPT:585
GED: 3 SVP: 3 EC: I 5 6 PA: H 4 7

Tends equipment to mix ingredients and make syrups and flavourings according to formulas:
Determines quantities of ingredients required to make specified quantity of syrup of designated specific gravity, using charts and formulas. Dumps sugar and flavouring ingredients and admits water into mixing vessel, and starts mixer to blend syrup. Observes thermometer and gauges, and opens valve to admit steam into jacket of mixer to invert sugar, eliminate air and sterilize syrups. Tests sugar content of syrup, using hydrometer or refractometer and dumps syrup to storage tank. Records amounts of syrups, extracts or flavourings produced and materials used.
May extract vanilla flavouring from ground vanilla beans and blend with sugar-base syrup. May be designated according to equipment used or according to product made; for example,
Extract Maker
Flavour Girl
Food-Colouring Maker
Syrup Blender
Syrup Filterer

8229-346 HONEY PROCESSOR(food & bev., n.e.c.) DPT:
685 GED: 3 SVP: 3 EC: I PA: M 4

Tends equipment that pasteurizes and filters liquid honey, and seeds it with crystals to form crystallized honey for use as food spread:
Turns valves to admit honey from blending tanks to pasteurizer and to adjust and control temperature of pasteurizer and cooler. Installs pads in filter press and secures them in position. Starts pumps and adjusts pressure to force honey through filter and transfer it to bottling machine or cooling vats. Pours container of honey crystals into vat of honey, and switches on electrical agitators to induce controlled crystallization. Opens valve to fill containers with processed honey.

8229-350 INSTANTIZER TENDER(dairy; food & bev., n.e.c.) DPT:685
agglomerator tender.
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends hydrating, mixing and drying equipment to make instant-powdered foods, such as desserts, drinks and dairy or breakfast foods, using either of following methods:

1. Turns steam supply valves and actuates controls to start fans that heat drying chamber to specified temperature, and to supply steam to hydrating jets. Starts conveyors and shaker screen. Turns feeder dial to transfer powdered ingredients from feeder hopper through steam spray, drying chamber and vibrating screen into storage hopper. Adjusts steam valves and feed rate to maintain specified powder flow and moisture content. 2. Positions sizing rolls on conveyor, using wrench, to crumble dried powder to specified size. Starts pumps, turns valves and monitors flow meter to spray water into hydrator at specified rate. Starts blower to push powdered ingredients from storage hopper through water spray agglomerator and onto conveyor loading to drying unit and sizing rolls. Adjusts valves and observes

thermometer. Feels powder for moisture content and visually examines it for charring.
May be designated according to product made; for example,
Casein Maker(dairy)
Instant-Breakfast Maker(food & bev., n.e.c.)

8229-354 POTATO-CHIP FRYER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 4 EC: I 4 PA: L 4 7

Tends machines that wash, slice, press, fry and salt potatoes to make wafer-thin potato chips:
Opens valve to pump preheated oil into cooking vats, fills hopper with salt and adjusts cooker temperature controls. Adjusts slicer controls, and turns valves of washer unit. Starts conveyor which carries potatoes through slicing and washing units into hot fat. Moves levers to adjust conveyor speed and control rate of flow of potato slices into vats. Stirs potato slices to ensure uniform cooking, using paddle or automatic reciprocating rakes. Removes cooked chips from conveyor and examines them to verify colour, thickness and saltiness. Replaces worn blades and slicing heads, using hand tools.
May cook chips by lowering filled wire basket into frying vat.

8229-358 RETORT TENDER(can. & preserv., n.e.c.; fish process.; slaught. & meat pack.) DPT:685
food pasteurizer; steam-oven operator.
GED: 2 SVP: 4 EC: I 4 6 PA: M 4

Tends steam oven or retort to cook canned or fresh foods, such as vegetables, fruit, meat and fish, or to pasteurize bottles of pickled foods:
Pushes racks of food into oven chamber, or lowers baskets or canned or bottled foods into chamber of retort, using hoist. Closes door or lid of chamber and turns latches to seal chamber. Turns valves to admit steam or hot water to cooking chamber, observes dials and thermometers and adjusts valve settings to control temperature, pressure and cooking time as specified. Turns valves to release steam and to admit cooling water into chamber at end of cycle. Opens door and moves product from chamber to conveyor for further processing, such as cooling, draining, canning and labeling.
May operate vacuum pump to remove air from sealed retort chamber. May record quantities and kinds of food processed. May clean work area and equipment, using water hose and long handled brush.

8229-362 Caramel-EQUIPMENT OPERATOR(food & bev., n.e.c.) DPT:682
GED: 2 SVP: 3 EC: I 6 PA: H 4 7

Controls equipment to process liquid sugar to produce caramel flavouring material:
Turns valves and starts pumps to fill cooking tanks with liquid sugar. Adds specified amounts of salts or caustic solution. Observes thermometers and gauges and turns valves to regulate steam pressure and temperature in cooking tanks. Admits measured quantity of water to arrest chemical action. Draws sample of solution and sends to laboratory for analysis. Verifies solution colour, using colorimeter. Reads test results. Turns valves and starts pumps to transfer material to evaporator feed tanks, filter supply tanks, blending and storage tanks or to fill shipping containers. Weighs and records weight of filled shipping drums. Cleans work area, using cleaning brush and water hose.

8229-366 COOK, VACUUM KETTLE(can. & preserv., n.e.c.) DPT:665
GED: 2 SVP: 3 EC: I 4 7 PA: M 4

Tends vacuum-cooking equipment to cook fruit and other ingredients to make jams and jellies according to formula:
Observes thermometer, sets switch or valve controls, or lights burners to prepare vacuum cooker and heat mixing kettle to specified temperature. Turns valves to transfer contents of kettle into vacuum cooker. Observes refractometer on cooker to determine sugar content. Adds ingredients, such as pectin solution, according to formula, and stirs fruit and ingredients, using paddle. Places container under discharge outlet of distillation jacket of cooker to reclaim esters. Opens valve or starts pump to transfer contents of vacuum cooker to holding or filling-machine tanks. Directs other workers in mixing pectin solution and in dumping frozen or fresh fruit and ingredients into mixing kettle.

8229-370 BRINE MIXER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: M 4

Tends equipment to make brine and pickling solutions for bleaching and preserving fruit or vegetables, by either of following methods:

1. Opens valve to admit required amount of water into steam cooker as indicated by water gauge. Measures and dumps salt or other preservatives into water. Admits steam into jacket of cooker, observing temperature gauge and regulating heat to maintain boiling for specified period of time. Tests solution for preservative content, using hydrometer or salinometer, and dilutes solutions or adds ingredients to attain prescribed specific gravity. Pumps solution into vat for aging and curing. 2. Turns tap to fill container with specified volume of water. Couples hose to outlet valve of sulphur-dioxide-gas container, using wrench, and lowers free end of hose into water. Opens valve to admit gas into water, reading gauge and chart to obtain specified concentration. Draws and sends sample of brine for laboratory analysis. Transfers brine from storage to pickling tanks.

May prepare lime solution, according to formula, to provide firming agent for cherries. May unload fresh fruit or fruit pulp from trucks for transportation to processing area.

8229-374 MIXER, DRY FOODS(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: H 4 7

Tends mixing machine that blends ingredients to make dry food products such as powdered drinks, gelatin and instant puddings:

Weights and measures out ingredients according to formula, using standard vessels, spatula and scale. Examines ingredients for foreign matter or other defects, and manually dumps them into mixer. Pushes button to start mixer that blends ingredients for specified time. Examines colour of mixture and compares with chart to ensure conformance to standard. Moves lever to dump mixture into packaging-machine hopper. Maintains records of ingredients and batches mixed.

May send sample to laboratory for quality control analysis. May cook ingredients prior to mixing. May be designated according to type of product mixed; for example,
Breakfast-Drink-Powder Mixer
Chocolate-Drink-Powder Mixer
Gelatin-Powder Mixer
Soft-Drink-Powder Mixer
Soup-Powder Mixer

8229-378 PULPER TENDER(can. & preserv., n.e.c.) DPT:685
juice extractor.
GED: 2 SVP: 3 EC: I PA: M 4

Tends equipment that crushes fruit to extract juice, or removes seeds from fruit pulp preparatory to making jams or jellies:

Examines fruit stock to ensure quality and removal of foreign material. Places containers under discharge outlets of extractor to receive juice, pulp, or seeds and pits. Dumps fruits, berries or tomatoes into hopper and starts machine. Observes juice or pulp flowing from outlets for consistency, fibre content, seeds and pits, and adjusts machine, using wrench. Removes filled containers from machine.

May clean and sterilize pulping equipment, using steam hose. May measure out pulp and add specified ingredients preparatory to boiling for jams. May tend chopper that forms tomato-pulp mass, and pump material through heated lines of pasteurizer to extractor or homogenizer machines that make tomato juice. May be designated according to product made; for example,

Apple-Juice Maker
Apple-Sauce Maker
Jam-Process Man
Tomato-Juice Extractor

8229-382 EGG BREAKER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that breaks eggs and separates yolks from egg whites: Opens containers and feeds eggs into egg-breaking machine that automatically breaks eggs and dumps contents into individual cups. Observes eggs for specified yolk colour or signs of off-standard condition before cups enter separator. Trips cup lever to drop off-standard yolk into bucket as egg white passes into separator, or stops machine and removes cup and discards defective egg.

May break eggs manually by striking eggs against metal bar prior to separation. May lift pallet containing cases of eggs to working

position by depressing pedal of hoisting device. May remove empty cases and stack them manually.

8229-386 CENTRIFUGE TENDER(food prep., n.e.c.; can. & preserv., n.e.c.) DPT:685
extractor operator; separator operator.
GED: 2 SVP: 2 EC: I PA: M 4

Tends centrifugal extractors to separate food particles held in liquid suspension or to remove excess fluids from foods during processing:

Turns valves or starts conveyor to transfer liquid or solid food materials from storage to centrifugal extracting or separating machine. Sets timer and turns switch to start centrifuge. Takes sample of separated fluid or solid residue and examines for clarity, or tests viscosity, or feels residue to determine if separation is complete.

May adjust flow of incoming liquids to ensure optimum separation on continuous-flow equipment or to avoid overloading centrifuge. May be designated according to type of product separated; for example,
Broth Separator(food prep., n.e.c.)

Tomato-Puree Extractor(can. & preserv., n.e.c.)

8229-390 CONTAINER WASHER, MACHINE(any ind.) DPT:685
GED: 2 SVP: 2 EC: I 4 PA: M 4 7

Tends machine that cleans and sterilizes food containers preparatory to filling:

Turns valves to fill washing and sterilizing tanks with water and adjusts steam pressure to regulate temperature in cleaning tank. Dumps specified amounts of chemicals, such as caustic soda into cleaning tank. Loads containers on conveyor passing through cleaning and sterilizing tanks. Examines containers for cleanliness and defects such as dents and cracks. Keeps machines and work area clean and lubricates equipment.

May wash containers manually prior to machine washing, using water, detergent and sponge. May push loads of empty containers to and from washer, using hand cart. May be designated according to type of container cleaned; for example,
Barrel Washer
Bottle Washer
Can Washer

8229-394 COOK, FRY, DEEP FAT(can. & preserv., n.e.c.) DPT:685
fry cook.
GED: 2 SVP: 2 EC: I 3 6 PA: M 4

Tends deep fat cookers to fry meats, vegetables, fish or other foods in cooking oil:

Empties containers to fill cookers with oil. Sets thermostat and timer to heat oil as specified. Empties containers of food, such as fish, meat, or vegetables into basket and immerse basket in cooker manually, or using automatic lowering device. Observes colour of food at end of frying time to ensure conformity with standards and extends frying time accordingly. Removes basket from cooker, drains and dumps contents onto tray.

May dip food into batter before frying. May skim and strain oil, and verify temperature of cooking oil, using thermometer. May fry foods for canning or freezing. May fry a particular food product and be designated accordingly; for example,
Fish-and-Chips Cook
Potato-Pancake Fryer

8229-398 CUTTER, FROZEN MEAT(fish process.; slaught. & meat pack.) DPT:685
cutter, frozen fish; sawer.
GED: 2 SVP: 2 EC: I 6 PA: H 4

Tends electric saw that cuts frozen fish or meat into slices preparatory to packaging, cooking or grinding:

Transports cartons of frozen food from freezer to work area, using hand truck or hydraulic lift. Opens cartons, using knife, and removes protective wrapping. Dumps cartons of frozen food onto cutting table. Starts saw or hydroslicer by pressing switch. Positions food manually into path of blade, using back guide to regulate thickness of cut.

8229-402 FOOD-MIXING-MACHINE TENDER(can. & preserv., n.e.c.; confection.; food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 4 6 PA: H 4

Tends machine that mixes food ingredients for subsequent processing: Weighs out and measures ingredients, using platform scale and measuring containers. Loads measured quantities of ingredients into mixer, using bucket, conveyor or bucket hoist, or by opening valves. Starts mixer and observes operation to ensure thorough blending. Pulls lever to tilt and empty mixer, or uses scoop to empty mixer into chute, hopper or container. Records mixing time and batch number on record card at end of mixing cycle. May heat ingredients to specified temperature prior to mixing, and cool mixture as required. May be designated according to type of product mixed; for example, Candy-Dough Mixer(confection.) Canned-Luncheon-Meat Mixer(can. & preserv., n.e.c.) Roux Mixer(can. & preserv., n.e.c.)

8229-406 FOOD SLICER(dairy; slaught. & meat pack.) DPT:685
GED: 2 SVP: 2 EC: I 2 6 PA: M 4

Tends one or more machines that automatically slice food products, such as cheese or meats, for packaging: Threads roll of interleaf paper into machine to separate portions. Adjusts guides on machine for size of food slab, using wrench. Positions slab on feeder bed or hopper. Turns dial control knob to set number and thickness of slices. Presses levers to clamp slab of food to bed and start feeding mechanism. Presses switch to start rotating slicer equipped with synchronized devices that cut, count, interleave and stack food slices. Places sliced stack on conveyor for packaging. Checks weight of stack of slices and resets thickness dial to obtain slices of prescribed weight. Interchanges imperfect slices or adjusts weight of stack with slices from spare piles. May transport food slabs to slicing machine. May tend press to compress and square off slabs of meat for slicing, or may grade bacon slices onto cards for further processing. May be designated according to type of food product sliced; for example, Bacon Slicer(slaught. & meat pack.) Cheese Slicer(dairy) Smoked-Meat Slicer(slaught. & meat pack.)

8229-410 PRESERVATIVE-DISPENSING-MACHINE TENDER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that automatically dispenses preservatives such as brine, oil, salt or syrup into food containers prior to lidding or capping: Fills machine reservoirs with specified preservative solution. Presses button to start machine and turns valves to allow flow of solution. Feeds or guides containers, manually, onto conveyor that carries them under dispensing nozzles. Observes filling operation and adjusts flow of solution or material to specified volume.

8229-414 TUMBLER TENDER(food & bev., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 6 PA: L 4

Tends machine to season food products such as nuts or potato chips: Dumps food product into drum of machine and starts motor that rotates drum. Scoops pre-mixed seasoning from container and sifts over food product, using measuring cup. Stops machine after specified time and tilts drum to dump seasoned product into container, onto conveyor for further processing or into hopper of bagging machine.

8229-418 VINEGAR-MAKER HELPER(can. & preserv., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 4 PA: M 4

Helps vinegar maker to tend equipment to produce vinegar by performing any combination of the following duties: Opens valves and starts pumps to move fluid ingredients from storage tanks into conversion or fermentation generators. Adds specified quantity of fluid or powdered yeast to alcohol or apple juice in processing tanks. Tests strength of vinegar using hydrometer, and records test results. Dumps specified amounts of filtering material into

vinegar-processing tanks, and opens air valve to disperse filter agent throughout contents of tanks. Removes vinegar samples at various stages of production for laboratory analysis. Cleans tanks and filter units, using water hose, brushes and squeegee or shovel. See also definition for term title, 02-160 HELPER (any ind.)

8229-422 CANNERY WORKER(can. & preserv., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Performs any combination of the following tasks in canning, freezing, preserving or packing food products: Dumps or places food products in hopper, on sorting table, or on conveyor. Sorts or grades products according to size, colour, or quality. Feeds products into processing equipment such as washing, refrigerating, peeling, coring, pitting, trimming, grinding, cooking or slicing machines. Trims, peels and slices products, using knife or paring tool. Feeds empty containers onto conveyor or forming machines. Fills containers using scoop or filling form, or packs by hand. Counts, weighs, or tallies processed items according to specifications. Inspects and weighs filled containers to ensure product conforms with quality and weight standards. Places filled containers on trays, racks or into boxes. Loads, moves or stacks containers or products on trays, conveyors or hand trucks for transportation to storage or freezing areas. May be designated according to specific task assigned; for example, Blender Dipper Filler Stirrer

8229-426 FROZEN-DINNER PREPARER(cater. & lodg.; can. & preserv., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I 2 3 4 PA: M 4

Assembles pre-cooked dinners, meat pies, desserts and other convenience or specialty foods for freezing, performing any combination of following duties: Places tray of sliced meat, fish or seafood near conveyor. Fills supply hoppers of food-dispensing machine with specified prepared foods such as cooked vegetables, gravy, dessert and sauce. Stacks supply of trays and foil covers in machine. Starts conveyor which carries trays under dispensers which automatically deposit portions of food into recesses in tray. Adds to portions that appear scanty. Places specified kind and number of meat slices or pieces of seafood into tray by hand as filled tray passes to mechanism which automatically crimps on foil cover. Places tray into package and into shipping carton. Transports filled carton into deep freezer, using dolly. Removes and weighs samples of trays to ensure conformance to weight specifications. May prepare foods for baking and freezing by placing specified foods into tray by hand and crimping foil cover around edges of tray, using hand crimping device. May be designated according to item prepared; for example, Frozen-Pie Maker(can. & preserv., n.e.c.)

8229-430 COOK HELPER(can. & preserv., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I 4 PA: H 3 4

Helps other workers to cook food products such as juices, meats, soups, fruits or preserves, in large quantities before canning or preserving, performing any combination of following duties: Weighs or measures ingredients; such as, sugar, salt, meat, lard, fruit, vegetables, rice, spices or vinegar according to formula, using platform scale, weighing hopper and measuring containers. Transfers materials to cooking area by hand or hand truck. Turns valves to admit steam to cooking-kettle jacket and dumps ingredients into kettle for melting or thawing and cooking. Stirs contents in cooking kettle and skims off foam or foreign material, using paddle, ladle or spoon. Positions sieve under kettle outlet and tips kettle to dump contents onto sieve to drain off water. Stirs contents to facilitate cooling and drainage. Dumps or places ingredients into containers on scale to obtain weight. Pushes wheeled containers of food to cooking or mixing area. Stacks or tallies containers. Reheats uncooked food in kettle. Cleans kettles, containers, utensils and work area, using water, steam, detergents, brushes and scouring pads. Pours samples of cooked food into bottles for quality control testing. May be designated according to product cooked; for example, Cook Helper, Fruit Cook Helper, Juice Cook Helper, Soup

8229-434 FOOD-PROCESSING-EQUIPMENT
CLEANER(food & bev., n.e.c.)

DPT:687

GED: 2 SVP: 2 EC: 1 4 5 6 PA: M 2 3 4

Cleans, greases and oils food processing and packaging equipment:

Cleans interior surface of kettles and other equipment that process and package foods; such as, candy, jams, jellies, peanut butter and puddings, using water hose, cleanser, sterilizing agent, solvents and rags. Opens drain valve and flushes out cleansers and food particles through drain, using hose. Greases and oils equipment, using hand-grease gun, oil containers and wrenches.

8229-438 FREEZER MAN(can. & preserv., n.e.c.; fish process.)

DPT:687

GED: 2 SVP: 2 EC: 1 2 PA: H 4

Moves racks of food packages into and out of freezing room, performing any combination of the following duties:

Transfers racks filled with food packages into and out of freezer room for freezing or chilling, using electric pallet mover or hand cart. Pushes hand cart over scale and records weight prior to freezing. Unloads trays from racks and inserts trays on shelves of freezing unit. Records identifying data such as, brand name, package sizes and time

of entry into freezing room. Feels packages at specified time to test solidity of freeze. Notifies supervisor when specified quotas are filled, and when temperature fluctuates, or outside air leaks in freezing compartments are detected. Pulls racks from freezer room, using power winch, when wheels are frozen, and transfers and unloads trays in packing and freezing areas. Loads containers on belt conveyor and adjusts speed of conveyor through quick freezer. Loads food such as fish fillets on plastic sheets and places between plates on plate-type-quick-freezer and actuates compression unit by pushing button to maintain shape of food package during freezing.

8229-499 MISCELLANEOUS FOOD, BEVERAGE AND RELATED PROCESSING OCCUPATIONS

This group includes food and beverage processors and related workers, not elsewhere classified; for example, those who tend machines that separate damaged nuts from whole nut meats, tend environmental equipment to control ripening of bananas, tend equipment to dry and bale seaweed, and act as relief operators on various food processing units. Typical examples of occupational titles covered by this residual group definition are:

Banana Ripener(whole. trade)
Chocolate-Production-Relief Operator(confection.)
Electric-Sorting-Machine Tender(confection.)
Seaweed Drier(food & bev., n.e.c.)

823-WOOD PROCESSING OCCUPATIONS, EXCEPT PAPER PULP

This minor group includes occupations concerned with removing bark from logs and sawing or splitting logs to produce rough lumber, cooperage stock, shingles and shakes; planing rough lumber into dressed stock of various sizes; manufacturing plywood and wood conglomerates; removing moisture to season or condition lumber and related materials; treating wood with preservatives and fire- retardants; and inspecting, testing, grading and scaling lumber and related materials. Occupations concerned with converting cellulose materials into paper pulp are classified in Minor Group 825, PULP AND PAPERMAKING AND RELATED OCCUPATIONS. Occupations concerned with fabricating, assembling and repairing finished products made from wood stock are classified in Minor Group 854, FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS. WOOD PROCESSING OCCUPATIONS, EXCEPT PAPER PULP are classified in the following unit groups:

- 8230 Foremen: Wood Processing Occupations,**
Except Paper Pulp
- 8231 Sawmill Sawyers and Related Occupations**
- 8233 Plywood Making and Related Occupations**
- 8235 Wood Treating Occupations**
- 8236 Inspecting, Testing and Grading**
Occupations: Wood Processing, Except
Paper Pulp
- 8238 Occupations in Labouring and Other**
Elemental Work: Wood Processing,
Except Paper Pulp
- 8239 Wood Processing Occupations, Except**
Paper Pulp, n.e.c.

8230-FOREMEN: WOOD PROCESSING OCCUPATIONS, EXCEPT PAPER PULP

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in sawing and preparing lumber and related materials; manufacturing plywood and producing wood conglomerates; inspecting, testing, grading and scaling lumber; and treating wood with preservatives and fire-retardants.

8230-110 FOREMAN, INSPECTING, TESTING AND GRADING OCCUPATIONS, WOOD PROCESSING (sawmill; veneer & plywood;

woodworking)

DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, testing and grading lumber and wood products; such as, shingles, poles and plywood, (Unit Group 8236):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Lumber Grading(sawmill; woodworking)
Foreman, Plywood Inspection(veneer & plywood)
Foreman, Treated-Pole Testing(woodworking)

8230-114 FOREMAN, LABOURERS AND OTHER ELEMENTAL WORKERS (sawmill; veneer & plywood; woodworking) DPT:138

Supervises and co-ordinates activities of labourers and other elemental workers engaged in feeding, offbearing and handling activities in the processing of lumber, shingles, plywood and wood conglomerates in a sawmill, shingle mill, plywood mill or lumber yard, (Unit Group 8238):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Lumber Yard(woodworking)
Wood-Crew Foreman(sawmill)

8230-118 FOREMAN, PLYWOOD MAKING AND RELATED OCCUPATIONS(veneer & plywood) DPT:138

Supervises and co-ordinates activities of workers engaged in operating, tending and feeding machines that peel, slice, glue, press and trim veneer, core and face sheets to produce veneer and plywood panels, (Unit Group 8233):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Gluing
Foreman, Peeler Room
Foreman, Veneer

8230-122 FOREMAN, SAWMILL SAWYERS AND RELATED OCCUPATIONS(sawmill) DPT:138

Supervises and co-ordinates activities of workers engaged in operating and tending sawing and splitting equipment in mills to produce lumber, shakes and shingles, and cooperage stock, (Unit Group 8231):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Shingle Mill

8230-126 FOREMAN, WOOD TREATING OCCUPATIONS(woodworking) DPT:138

Supervises and co-ordinates activities of workers engaged in operating and tending machines and equipment to season or condition wood; treat wood retardants; and to produce wood conglomerates, such as particle board, hardboard, and artificial fuel-logs, (Unit Group 8235):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Hardboard
Foreman, Particle Board
Foreman, Pole Yard
Foreman, Treating Plant

8230-199 OTHER FOREMEN, WOOD PROCESSING OPERATIONS

This group includes wood processing foremen, not elsewhere classified; for example those who supervise and co-ordinate activities of workers engaged in operating and tending machines to remove bark from logs and poles, and to reduce logs to excelsior, flakes, chips, log fuel or wood flour; screening wood chips; feeding saws by guiding and positioning cants, slabs or lumber on roller tables in a sawmill; and tending machines that saw pressed board or plywood sheets into panels of specified size.

Typical examples of occupational titles covered by this residual group definition are:

Foreman, Chipping and Flaking(sawmill; woodworking)
Foreman, Log Barking and Peeling(sawmill; woodworking)

8231-SAWMILL SAWYERS AND RELATED OCCUPATIONS

This unit group includes occupations concerned with operating and tending lumber-mill equipment to process logs into rough lumber, and to saw, split and plane rough lumber into stock of various sizes, such as dressed dimensional lumber, shingles and cooperage stock. Occupations concerned with milling and machining wood stock in a planing mill, shop or factory, according to specified shape and size to fabricate wooden parts or products, are classified in Minor Group 835, WOOD MACHINING OCCUPATIONS.

8231-110 HEAD-SAW OPERATOR(sawmill) DPT:382 head sawyer. GED: 3 SVP: 6 EC: I 5 PA: L 4 7

Operates head saw, log carriage and conveyor system to saw logs into rough cants or boards:

Starts conveyor that transfers log to carriage. Observes grade, condition, size and other characteristics of log to obtain optimum lumber production. Activates log turner to align log with saw, and sets saw guides and depth of cut. Starts and controls speed of carriage to force log against saw blade to cut slab. Observes exposed face of log after each cut to determine settings for next cut.

May operate semi-automatic system to saw logs into rough cants or boards, using panel buttons and hand and foot controls. May keep production records. May operate similar equipment to rip logs to smaller size for chipping or slashing in pulp mill wood room. May operate machine that saws logs into cants and simultaneously reduces cuttings into wood chips for pulp mill.

8231-114 EDGER MAN, AUTOMATIC(sawmill) DPT:382 GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates multi-blade sawing machine and conveyor system from panelboard to straighten edges of rough lumber and to saw lumber into boards of specified widths:

Starts conveyors to move lumber to feed rollers. Observes lumber as it passes, to determine cuts that will produce boards of optimum size and grade. Presses panel buttons and foot pedals to space saw blades, move outfeed guides to divert lumber to next process and adjust press rolls for thickness of lumber. Starts feed rollers to move lumber through saw.

May change saw blades.

8231-118 TRIMMER MAN(sawmill) DPT:382 GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates bank of circular saws to cut defective sections from boards and to trim boards to length:

Scans boards as they move along conveyor to saws to determine cuts that will produce highest grade. Moves levers or pushes buttons to raise or lower one or more saws to trim boards to length or to remove defects, such as rot and splits.

8231-122 GANG SAWYER, CANT(sawmill) DPT:682 GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates gangsaw to cut lumber from cants:

Spaces saws to cut specified width of lumber, using hand tools. Moves hand and foot controls to shift cants from chain conveyor table to feed rollers and to align cants with saws. Adjusts tension rollers and controls speed of saws and feed rollers to cut lumber from cants.

May replace saw blades. May record production. May align cants with saw blades, using pickaroon.

8231-126 GANG SAWYER, LOG(sawmill) DPT:682
GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Controls carriage to feed logs to gang saw that saws logs into lumber: Moves hand and foot controls to transfer logs from conveyor to log carriage. Aligns log with saw blades, by operating controls on panelboard. Advances carriage to feed log into gang saw and keeps pressure against saw while log is cut, by moving controls on panelboard.

May space saws to vary width of cuts, according to work order, using hand tools. May remove large knots, rocks and nails from log, using axe or chain-saw. May replace saw blades.

8231-130 LUMBER-SIZER OPERATOR(sawmill) DPT:682
planer operator.
GED: 3 SVP: 5 EC: B 5 PA: M 3 4 7

Operates planing machine to dress lumber to specified dimensions: Installs cutting heads on machine drive-spindles and adjusts blade exposure according to specified depth of cut, using wrenches and gauges. Adjusts feed-roll tension and positions fences that guide stock between cutter heads. Starts machine, exhaust blower, and conveyors, and slides timber against guide to align it on feed rolls. Verifies dimensions of sized stock, using gauge or rule. May sharpen cutting blades after installation, using stone.

8231-134 LOG-CUT-OFF SAWYER, AUTOMATIC(sawmill) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Controls circular saw and conveyor system from panelboard to saw logs to specified lengths: Starts conveyor that moves log to sawing position. Observes log to determine number of useable lengths to be cut and presses button on panelboard to lower saw that trims and squares log ends. Cuts log to specified lengths by registering length specification on control panel of machine that automatically measures log, starts conveyor and lowers saw to cut log when log reaches selected position. Starts discharge conveyor to transfer log to other work stations. May record production.

8231-138 LOG-CUT-OFF SAWYER(sawmill) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Tends circular or chain saw that cuts logs into prescribed lengths: Observes log to determine number of useable lengths to be cut. Starts conveyor that moves log beside footage markings and stops conveyor when specified footage reached. Presses button or moves lever to lower saw that cuts prescribed length from log. Starts discharge conveyor to transfer log to other work stations. May record production. May tend saw at edge of pond to cut logs into usable length or diameter. May set log stops that determine length of log to be cut, by pressing buttons or moving levers on panelboard. May saw timbers to prescribed length and be designated accordingly, Timber-Cut-Off Sawyer

8231-142 TRIMMING-MACHINE OPERATOR(sawmill) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Tends double-ended trimming machine to saw several pieces of lumber simultaneously into identical lengths: Stacks boards in trimming machine, butts ends against guide blocks, and moves lever to clamp boards in machine. Sets movable saw to specified or optimum distance from stationary saw for standard board length or most profitable utilization of material. Starts saws by pressing switch. Places sawed lumber on conveyor. May mark boards individually to indicate size and grade, using chalk or marker.

8231-146 SHAKE SPLITTER(sawmill) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends pneumatic machine that slices wooden bolts into blanks or shakes: Positions bolt against stops on machine table under knife blade. Depresses foot pedal to activate guillotine-type blade and repeats operation until entire bolt has been sliced. Adjusts stops for off-

standard thicknesses of shakes, using wrench. Replaces dull or worn blade as required, using wrench.

8231-150 EDGER MAN(sawmill) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Tends multiple-blade sawing machine to straighten edges of rough lumber and to cut boards into specified widths: Lays board on edger table and moves levers to space saw blades or guides so that boards of optimum width will be cut from rough board. Pushes board into feed rolls to straighten edges, and to saw board into desired width.

May start and stop conveyors to control flow of wood to edger table. May change saw blades and guides.

8231-154 SHINGLE SAWYER(sawmill) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: H 4 7

Tends machine to saw wooden blocks into shingles: Examines grain of block to determine best cutting face, and lifts and places block in machine carriage. Presses pedal to start carriage moving back and forth to feed block against rotating saw that cuts shingles. Turns block in carriage to change cutting face to obtain maximum utilization of block. Catches shingles as they fall from saw and examines them for defects, such as rot or knots. Trims off defects with table-mounted saw. Tosses shingles into specified bins or containers according to grade. May adjust carriage for thickness and angle of shingles cut. May change and sharpen saw blades.

8231-158 STAVE-BOLT SAW OPERATOR(sawmill) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends dual powersaw to saw barrel-stave bolts (split sections of logs) into specified lengths and to square their ends: Adjusts distance between saws. Lays bolt on carriage of dual power saw and starts saws. Pushes carriage between saws, trimming and squaring ends of bolts. Withdraws carriage, removes bolt and places it on conveyor.

8231-162 SCRAP CUT-OFF SAWYER(sawmill) DPT:685
bolter.
GED: 2 SVP: 3 EC: I 5 7 PA: M 4 7

Tends circular saw that cuts slabs, edgings or other scrap wood into pieces suitable for making sawmill by-products, such as laths or fuel: Starts conveyor that moves slab, edging, core or log into cutting position against end stop. Starts saw and moves blade to cut pieces according to requirements. May set dogs or wedges to hold slab, edging or log in place.

8231-166 SHAKE SAWYER(sawmill) DPT:686
GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Saws blanks (wooden blocks) into shakes, using band rip saw: Pushes and guides blank diagonally through saw that cuts it into two equal shakes. Grades shakes according to quality. Tosses shakes into conveyor chutes, according to grade. May replace saw bands, using hand tools.

8231-170 BLOCK SAWYER, BARREL ENDS(sawmill) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: H 4 7

Tends saw to cut blocks of wood into boards of specified thickness for heads and bottoms of barrels: Adjusts guide for desired thickness of board, using wrench and ruler. Places block of wood into position on saw carriage and adjusts clamp to hold it in place. Starts saw, and pushes saw carriage over saw to cut off board of specified thickness. Withdraws carriage and removes board. Repeats cuts until block is completely sawed. May be concerned with particular sawing activity and be designated accordingly; for example, Bottom-Saw Operator Heading-Saw Operator

8231-174 SPLITTERMAN(pulp & paper; sawmill) DPT:686
block splitter.

GED: 2 SVP: 2 EC: I 5 6 PA: H 4 7

Feeds steam or hydraulic-powered chisel or wedge-shaped ram that splits wooden blocks into bolts or to a size suitable for grinding or chipping:

Positions block on conveyor according to grain, using picaroon. Moves lever or presses button to drop chisel on block or to activate horizontal ram that splits blocks.

May select blocks suitable for splitting into shakes, and drag them to adjacent conveyor, using picaroon. May lift blocks containing knots or rotted areas onto waste conveyor.

8233-PLYWOOD MAKING AND RELATED OCCUPATIONS

This unit group includes occupations concerned with cutting veneer and making plywood. Activities include: operating, tending and feeding machines that peel, slice, glue, press and trim veneer, core and face sheets, and sand and repair veneer sheets and plywood panels.

8233-110 PANEL-SANDING-MACHINE OPERATOR(veneer & plywood) DPT:682

GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates one or more sanding machines to smooth plywood, chip-board or other panels:

Observes gauges and turns handwheel to adjust depth of cut. Starts drums or headrolls, drum oscillators and feed rollers. Synchronizes speed of feed rollers with drum or belt, using handwheels. Sets timers on automatic feeders, hoist, feed wheels and automatic stacker. Pushes buttons, turns handwheels and observes meters to adjust pressure of drums, belts or platens. Aligns feed rollers and drums, or belt rolls, platen and contact bars to produce even thickness of panel. Inspects and replaces worn sandpaper or sanding belts, and maintains supply of abrasive materials. Cleans machines, using air hose.

May replace worn parts, using hand tools. May keep records showing sandpaper or belt changes, machine operating hours, number of panels sanded, or equipment downtime. May be designated according to type of machine operated; for example,

Multiple-Drum-Sander Operator
Wide-Belt-Sander Operator

8233-112 VENEER-LATHE OPERATOR(veneer & plywood) DPT:682

veneer cutter.

GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates lathe to peel veneer from logs:

Adjusts height and angle of knives, elevation of pressure bar and positioning of gears in knife-feeding mechanism according to thickness of veneer to be cut, using hand tools. Activates automatic feeding device or signals worker to position log between chucks of lathe, and pushes lever or button to drive chucks into log. Pulls lever to move knife against log and starts log rotating. Verifies thickness of veneer with gauge or caliper and adjusts knives, pressure bar and gears as required. Controls turning speed of lathe to maintain even peeling according to condition of log. Stops machine and tilts blade away from log when peeling is completed or when machine becomes clogged. Releases peeled log from lathe chucks onto conveyor.

May raise and lower apron to route veneer to empty conveyor trays. May replace dull knives and worn or broken parts, using hand tools. May operate lathe equipped with back-roll impression roller and be designated accordingly,

Back-Roll-Lathe Operator

8233-114 PLYWOOD-PANEL GROOVER OPERATOR(veneer & plywood) DPT:682
panel-groover operator.

GED: 3 SVP: 4 EC: I 5 6 PA: M 4 6 7

Operates machine to cut single- or multiple-decorative grooves in plywood panels and to bevel edges of panels:

Selects, installs and secures cutters and spacers on machine-arbor at specified intervals, using hand tools. Adjusts height of table according to depth of groove. Adjusts feed guides, rollers, pressure bars and feeder drag-arm that feed plywood panels to cutter heads or guide cutting heads over stationary plywood, using hand tools. Positions automatic stacker at discharge end of machine. Starts machine and observes operation to detect malfunctions. Observes panels for conformity to specifications and to detect cracks, splits, chips and other surface defects. Feels edges of grooves for smoothness. Changes cutter heads.

May cut grooves in hardboard or particle board panels and may bevel edges of panels, and be designated accordingly; for example,
Hardboard-Panel Groover Operator(woodworking)
Particle-Board-Panel Groover Operator(woodworking)

8233-116 PLYWOOD PATCHER, HAND(veneer & plywood) DPT:684

panel patcher.

GED: 3 SVP: 4 EC: I 6 PA: M 4 7

Repairs defects, such as splits, knotholes, hairline cracks and torn grain, in plywood panels:

Inspects panels visually for defects and determines type of repair needed. Fills minor defects with colour-matched plastic filler, using caulking gun and putty knife. Cuts out major defects, using portable tools, such as router or powered hand-saw. Inserts shaped and colour-matched glued patches, using mallet and masking tape, or electrically-powered press to bond patches to panel. Removes excess wood filler and glue. Cuts colour-matched strips of wood in variety of lengths and widths to be used as patches, using bench power-driven saw.

May mark blistered panels for further processing by dyeing edges.

8233-118 VENEER-SLICING-MACHINE OPERATOR(veneer & plywood) DPT:684

GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates machine to slice veneer strips from flitches (squared log sections):

Examines flitch for defects and to determine grain pattern. Cuts defects from surface of flitch, using chisel and mallet. Positions flitch with selected grain pattern toward knife. Adjusts machine to slice veneer to specified thickness. Starts machine and verifies thickness, using gauge or caliper. Replaces dull knives, using hand tools.

8233-122 HOT-PLATE-PRESS TENDER(veneer & plywood) DPT:565

GED: 3 SVP: 4 EC: I 6 PA: M 3 4 7

Tends hot-plate press that bonds glue-coated veneer sheets together to form plywood:

Turns valves on control panel to regulate pressure and temperature of press. Raises and lowers hydraulically operated plywood loader to load press, using foot pedal. Loads press manually, assisted by helper. Presses button controls to bring plates of press together and subject veneer sheets to temperature and pressure that bond them to form plywood. Presses button controls to partially eject plywood panels from press to facilitate manual transfer of panels to unloading hoist. Raises and lowers hoist to unload plywood, using foot pedal. Works with helper to unload press manually. Cleans glue from press plates and debris from working area. Records data, such as quantity, panel dimensions and panel thickness on hot-plate-press report.

8233-126 VENEER MATCHER(veneer & plywood) DPT:684
book matcher.

GED: 3 SVP: 3 EC: I 5 PA: M 4 7

Matches precut veneer strips according to species of wood, grain, pattern, texture, and shade to form veneer face sheets:

Carries pieces of veneer from conveyor belt to work table. Arranges pieces according to similarities to form books of up to twelve matched sheets. Slides or pushes matched sheets on table for marking, or depresses foot pedal to actuate chain that conveys completed book to clipper machine for further processing. Discards defective sheets or strips into waste dolly, or carries them to clipper for further processing.

8233-130 SCARF GLUER(veneer & plywood) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Glues and fits together scarfed-plywood panels to form panels of specified length:

Spreads glue on scarfed edge of panels, using brush. Fits edges together to form joint. Sands excess glue from surface of panels after curing, using portable sander. Stacks finished panels on pallets. Brands grade and trade mark on edge of panels, using electric branding iron.

May staple corners of panel to hold them together while being pressed. May push glued panels into hot-plate press to cure joint or remove cured panels from press.

8233-134 VENEER TAPER(veneer & plywood) DPT:684
veneer patcher; veneer repairman.
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Repairs splits in veneer sheets, using one of the following methods:

1. Places veneer on work table. Estimates length of gummed tape required and tears off tape from self-moistening dispenser. Applies tape to hold edges to be joined. Strikes area covered by tape to join together edges of veneer, using mallet or air hammer. Places repaired sheet in designated tray. 2. Taps veneer patch into bruise or split in sheet of veneer, using mallet or air hammer, and covers patch with gummed tape. 3. Places split area of sheet over anvil. Taps sheet lightly in area of split and continues tapping both sides of split until split is closed. Applies gummed tape to top surface of panel to keep split closed.

8233-138 PLYWOOD PATCHER, MACHINE(veneer & plywood) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Tends machine that repairs plywood panels containing defects such as pitch pockets, knots and holes:

Inserts patching stock into machine. Inspects panel for defects or notes defects previously marked with chalk. Slides defective area of plywood sheet under head of machine, and presses pedal to lower head that routs out defect, cuts patch, injects glue into hole and presses cut patch into glued hole. Wipes excess glue from panel and stacks panel on pallet, cart or conveyor.

May set up machine by fastening router and patch cutter into machine chucks, using wrench. May grade patched panels. May tend similar machine that repairs veneer sheets and be designated accordingly, Veneer Repairer, Machine

8233-142 VENEER-CLIPPER TENDER, AUTOMATIC(veneer & plywood) DPT:585
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends automatic-power shear to clip continuous sheet of veneer to specified width, and to clip out defects:

Starts conveyor that carries veneer under knife. Sets mechanism to operate automatically, to clip sheets of veneer to specified width. Observes veneer and presses switch to actuate knife to cut out defective sections. Stops conveyor to clear blockages manually, discarding damaged veneer into waste dolly. Records quantity, species, size and thickness of veneer cut.

8233-146 CORE-LAYING-MACHINE TENDER(veneer & plywood) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends machine that automatically lays face, back and core veneer sheets in sequence and spreads glue on core sheets to form plywood panels:

Presses button to start machine and observes its operation. Turns wheels, valves and dials to adjust and synchronize conveyors, reach and vacuum of mechanical-feed arms, tension on glue-spreading rollers, and to regulate flow of glue. Pushes pedal to control conveyor that moves stacked panels to hot-plate presses.

8233-150 SCARFING-MACHINE TENDER(veneer & plywood) DPT:685
plywood-scarfer operator.
GED: 2 SVP: 3 EC: 1 5 7 PA: M 3 4 7

Tends machine that scarfs ends of plywood:

Installs cutting tools in rotary cutter head and adjusts angle of cutter according to thickness of sheet, using hand tools. Adjusts guide according to width of material. Positions and clamps sheet on machine table. Presses button or pedal that moves sheet under rotary cutter that scarfs end. Removes scarfed sheets from machine and stacks them for gluing. Blows dust from cutters and machine table, using compressed air hose.

May tend similar machine that scarfs ends of pressboard panels.

8233-154 VENEER CLIPPER(veneer & plywood) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Tends power shear that clips stacks or sheets of veneer to specified size, or cuts out defective sections:

Places veneer strips or sheets singly or in bundles on clipper table. Positions veneer under clipper blade according to measurement or against pre-set stops. Depresses pedal, moves levers or pushes buttons to release blade-locking device and to actuate blade. Slides veneer on table or turns hand wheel to reposition table under blade after each cut until veneer is clipped to size or free of defects. Stacks clipped veneer for further processing.

May clean shear, using air hose. May keep production records.

8233-158 VENEER-REEL TENDER(veneer & plywood) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: H 3 4

Tends machine to reel wet veneer as it comes from lathe:

Lifts metal shaft into brackets on reeling machine and engages locking devices on ends of shaft. Opens trap door in front of reeling machine, by depressing pedal, to allow unusable veneer to drop onto conveyor. Wraps veneer sheet around shaft to begin reel. Starts machine and turns hand wheel to synchronize reel speed with lathe. Repairs breaks and starts new runs of veneer on reel by butting or overlapping ends of veneer sheets. Lifts full reel from machine with aid of other worker.

8233-162 VENEER-SPLICER TENDER(veneer & plywood) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends machine that splices veneer strips into sheets:

Starts conveyors that carry bundles of glued and jointed veneer strips to splicing machine. Feeds strips of veneer, edge to edge, into machine that forces pieces together and cures glued edges. Examines spliced veneer sheets for conformance to specifications, and turns hand controls to regulate heat, pressure of feed rollers and speed of machine.

May reprocess spliced sheets to produce sheets of larger size.

8233-166 VENEER JOINTER(veneer & plywood) DPT:666
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Feeds machine that smooths and squares edges of veneer strips preparatory to splicing, working as member of a team:

Aligns edges of stack of veneer strips manually or by pressing button to activate mechanical shaker arms. Pushes button to clamp stack for jointing and to activate jointing head that smooths and squares edges of veneer sheets. Starts conveyors to transfer jointed strips to splicing machine.

May record production. May feed guillotine-type jointer and be designated accordingly, Guillotine Jointer

8233-170 GLUE SPREADER(veneer & plywood) DPT:686
GED: 2 SVP: 3 EC: 1 5 6 PA: M 4 7

Feeds machine that spreads glue on core sheets that form part of plywood panels:

Pushes load of pre-cut veneer core sheets over roller to feeding station. Selects sound pieces. Feeds sheets through revolving-glue- spreader rollers. Views overhead mirror to observe process of core laying on lay-up table and to estimate width of final piece required for each layer. Fills glue reservoirs manually or turns valve on tank to start flow of glue onto rollers. Stops glue-spreader machine when core sheets jam or when adding glue. Adjusts space between rollers and amount of glue flow when thickness of veneer changes.

8233-174 LATHE SPOTTER(veneer & plywood) DPT:664
lathe charger.
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Positions logs on rotary veneer lathe, using chain hoist or powered crane:

Installs chucks on lathe spindles, according to size of log. Attaches hoist or crane hooks to ends of log, and pulls chain or pushes buttons to move log to lathe and position it between spindle chucks. Signals lathe operator to insert chucks into log to hold it in place. Releases hooks from log. Pulls cores of peeled logs and split or broken wood from lathe onto conveyor, using picaroon or peavey.

May record number and size of logs peeled, and calculate volume of veneer produced, using scaling stick and conversion tables. May position logs in barking lathe prior to peeling.

8233-178 HOT-PLATE-PRESS-TENDER HELPER(veneer & plywood) DPT:886
GED: 2 SVP: 2 EC: 1 6 PA: M 3 4

Helps to load and unload hot-plate press that bonds glue-coated veneer sheets to form plywood panels:

Pushes load of veneer panels on rollers from lay-up table to loading elevator. Helps to load press. Unloads bonded panels from unloading elevator and piles them on dolly or unloads them from rack onto unloading hoist. See also definition for term title, 02-160 HELPER (any ind.).

8233-182 PLYWOOD-PANEL ASSEMBLER(veneer & plywood) DPT:667
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Assembles plywood panels from glue-covered-veneer sheets and core board, working as member of team:

Positions lay-up board on conveyor. Stacks veneer sheets and core board alternately and in specified sequence on lay-up board, turning back and face sheets to ensure that the preferred surfaces will be on outside of finished panel. Pushes stack of panels to hot press when specified number of panels have been assembled.

May be concerned with a particular activity and be designated accordingly; for example, Core-Layer Sheet Turner

8235-WOOD TREATING OCCUPATIONS

This unit group includes occupations concerned with operating and tending machines and equipment to season or condition wood; treat wood with materials, such as preservatives and fire-retardants; and produce wood conglomerates, such as particle board, hardboard, and artificial fuel logs.

8235-110 KILN OPERATOR(woodworking) DPT:362
drying-kiln operator.
GED: 4 SVP: 6 EC: 1 3 PA: L 4 5 7

Operates series of steam-heated kilns to season lumber and other wood products to specified moisture content:

Directs workers engaged in loading wood onto kiln cars and moving cars into kilns. Measures moisture content of random samples of wood throughout kilns, using moisture meter, or by sawing samples of

wood, weighing them before and after seasoning and calculating moisture content. Determines drying cycle according to work orders, species, dimension, quantity and initial moisture content of wood. Inspects loaded kiln, closes and secures door and prepares identifying tag for kiln contents. Opens water and steam supply valves, and sets control dials to activate and automatically control temperature, humidity and ventilation of kiln. Reads recording gauges and adjusts controls to regulate seasoning process. Closes valves, shuts off controls and opens kiln on completion of cycle, and verifies moisture content of wood. Directs workers to remove wood from kiln.

8235-114 GRINDING-MACHINE OPERATOR,
HARDBOARD(woodworking) DPT:382
GED: 4 SVP: 6 EC: 1 5 PA: L 4 7

Operates and controls grinding machines and steam cookers to reduce wood chips to felt (wood fibre) used in making hardboard:

Adjusts grinding machine, using rule and hand tools. Presses buttons on control panel to start machines and conveyors. Regulates steam pressure, cooking temperature and spray or flow of water, wax, resin, and other chemical additives by turning valves on control panel and storage tanks. Observes cooking, grinding and felting of chips and flow of chips into machines. Monitors meters, gauges and charts that indicate pressure, temperature, flow, acidity and moisture content of fibre to ensure that material is processed according to specifications. Adjusts process from control panel.

May test samples of fibre for colour, consistency and relative acidity, using standard testing procedures.

8235-118 FORMING-LINE OPERATOR,
HARDBOARD(woodworking) DPT:382
pressman, hardboard.
GED: 3 SVP: 6 EC: 1 5 PA: M 4 7

Operates line of machines to form mats from felt (wood fibre) and press them into hardboard panels:

Pushes buttons to activate forming and pressing machines. Observes gauges and turns valves to regulate flow of felt, water and additives to process. Adjusts steam pressure to control temperature of hot press. Turns panelboard controls to adjust pressing time and to synchronize timing of tiered-feeding-and-unloading conveyors with elevator movement of tiered-hardboard press. Observes forming of mat, and cutting and pressing of panels into hardboard. Adjusts panelboard controls to ensure product of specified dimensions and quality. Stands at side of press or rides open elevator and flips end of panel in each tier of press to loosen it from hot-pressing plate and facilitate automatic transfer to tiered-unloading conveyor. Verifies dimensions and weight of sample panels, using steel tape, micrometer, and scale. Maintains production records.

May assist maintenance workers to install and adjust stainless steel cauls and screens, drive sprockets, chains, rollers, and saws, using hand tools.

8235-122 FORMING-MACHINE OPERATOR, PARTICLE
BOARD(woodworking) DPT:382
GED: 3 SVP: 6 EC: 1 5 PA: L 4 7

Operates machines and conveyors, from control panel, to segregate treated wood flakes or particles and form them into mats for pressing into flakeboard or particle board panels:

Starts forming-machine and associated conveyors by pressing buttons on control panel. Observes gauges, charts and other indicating devices that monitor forming process and flow of particles into machine. Adjusts control dials to regulate air pressure in forming machine that segregates wood particles and deposits them on moving conveyor in predetermined order of size. Observes weigh-scale dial that indicates weight of each mat before pressing, and adjusts thickness of mat, as indicated by weight, by regulating conveyor speed. Repositions baffle plates in slots of forming-machine to control air segregating process.

8235-126 PRESS-LINE OPERATOR, PARTICLE
BOARD(woodworking) DPT:362
GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Operates line of machines from control panel, to press, cool and saw particle board or flakeboard into panels:

Starts conveyors, hydraulic press, board cooler and automatic sizing saws, by pressing buttons. Synchronizes timing of feeding-and-

unloading conveyors with elevator movement of tiered-hydraulic press, by adjusting dials and moving switches. Adjusts press temperature, pressure and pressing time according to readings obtained from indicating devices, such as charts, meters and gauges, to press mats of wood particles into panels. Observes condition of mat and pressed boards and signals other workers to adjust moisture content of mat as required.

8235-130 TIMBER-TREATING-TANK OPERATOR(woodworking) DPT:662
GED: 3 SVP: 5 EC: I 3 6 PA: L 4 7

Controls one or more cylindrical retorts to impregnate wood products, such as railway ties, piling, poles and timbers, with preserving or fireproofing chemicals:

Opens valves to fill retort with treating fluid and to admit steam into heating coils. Heats unseasoned wood with treating fluid under vacuum to boil off water from wood. Opens valves to admit compressed air to force treating fluid into wood. Observes gauges and turns valves to control temperature, pressure and level of solution in retort, according to work order. Pumps treating fluid back into storage tank at end of treating cycle. Signals helper to open retort door for removal of wood.

May operate small locomotive or winch to move tram loads of wood into and out of retort. May operate mixing machine to blend treating ingredients according to formula. May measure moisture content of wood with portable testing device prior to treating.

8235-134 VENEER-DRYER TENDER(veneer & plywood) DPT:385
GED: 2 SVP: 4 EC: I 3 PA: L 4 7

Tends one or more automatic steam-heated dryers that dry veneer sheets:

Adjusts dryer speeds, steam pressure and cooling air to control drying process, prevent shrinkage and discoloration, and to improve glue bonding. Observes steam pressure gauges, dryer speed, temperature charts and thermometers. Turns valves to regulate steam pressure and temperature, and presses switches to control cooling fans. Adjusts moisture controls to keep humidity within specified limits. Watches for dryer fires and extinguishes them by opening water-deluge system valve. Observes and clears blockages along conveyors. Maintains records of numbers and volume of loads processed, down time, pressure, temperature and dryer speed. May load dryer manually.

8235-138 DRYER TENDER, WOOD PARTICLES(woodworking) DPT:485
GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Tends rotary dryer to dry ground-wood particles used in manufacture of particle board:

Ignites furnace and starts dryer, fans and pneumatic conveyors by moving electric controls. Collects samples of ground-wood particles from conveyors, and weighs samples before and after drying, and computes moisture content of particles. Adjusts dryer temperature by turning thermostat according to air humidity and moisture content of particles. Observes meters, gauges, charts and other indicators on control panel to ensure that automatic regulators and safety devices are functioning correctly.

May tend chip-grinding refiners by adjusting motor controls and tension of chip-grinding disks and be designated accordingly; Dryer-Refiner Tender, Wood Particles

8235-142 FUEL-LOG MAKER(woodworking) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends machines that automatically compress sawdust into artificial fuel logs and extrude them onto conveyors:

Observes blowers, hoppers and screw conveyors to ensure steady flow of sawdust to machines. Observes gauges, examines compression marks on extruded logs and weighs finished logs to ensure that logs are compressed to specifications. Moves controls, such as buttons, levers, valves and thumbscrews to set and adjust flow of sawdust, pressure and rate of extrusion.

May pile or package finished logs. May replace worn or broken parts such as extrusion tips or feeding screws, using hand tools. May tend machines that compress and mould mixture of sawdust, wood chips,

and dry or liquid binders to produce hardwood fuel-briquettes and be designated accordingly, Briquette-Machine Tender

8235-146 CHIP-MIXING-MACHINE TENDER(woodworking) DPT:585

blender man.

GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends blending machine that coats wood flakes or wood particles with waxes and resins to prepare them for processing into flakeboard or particle board panels:

Measures waxes and resins according to formula, using scales or liquid measure, and pumps or pours materials into designated containers. Admits wood particles or flakes into blender by pulling lever, or by pushing button to start pneumatic conveyor. Turns hand valves or starts pump to admit coating materials into metering device of blender. Presses button to start pneumatic conveyor that carries coated particles or flakes to dryer. Records daily consumption of waxes and resins.

May tend dryer to dry wood particles to specified moisture content and be designated accordingly, Mixer-Dryer Tender, Wood Particles

8235-150 HARDBOARD-OILING-MACHINE TENDER(woodworking) DPT:585
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends machine that immerses hardboard sheets in oil to impart smooth finish:

Opens valves and starts pumps to fill reservoir with heated oil. Observes gauge and adjusts thermostat to maintain oil at specified temperature. Starts automatic feeding and stacking machines. Observes oiled boards for flaws, scratches and oil droplets. Places board beneath each stack of hardboard and inverts top sheet to protect surface against marring during storage or further processing. Keeps production records.

8235-154 TEMPERING-PLANT TENDER(woodworking) DPT:585
GED: 2 SVP: 3 EC: I 3 PA: M 4 7

Tends oven, humidifier units and auxiliary equipment to temper oiled hardboard sheets by heat and moisture:

Observes gauges and chart recorders, and maintains oven temperature and moisture conditions in humidifier unit according to specifications, by adjusting controls on instrument panel. Pushes oiled hardboard sheets into kiln rack slots, by hand, and pushes loaded kiln rack into oven. Pulls loaded rack from oven after specified time and pushes rack into humidifier. Removes rack of tempered sheets to designated area for further processing. Records gauge readings and shift production on designated forms.

May push hardboard sheets to be tempered onto roller conveyor leading from oiling machine to tilting device that dumps sheets into electric transfer cart. May drive electric transfer cart to oven, humidifier or further processing area.

8235-158 DIP-TANK TENDER(woodworking) DPT:665
GED: 2 SVP: 3 EC: O 6 7 PA: M 2 3 4 7

Tends open tank to impregnate wood products with preservatives:

Signals crane operator to lift load of material over open tank and guides load into tank by hand or with rod, working from elevated platform. Chains tank loads of poles to high rack to prevent toppling during butt treating. Observes gauges and turns valves to regulate heat and flow of preserving solution in tank. Impregnates sashes, doors and other millwork products, using hand or power hoist to load and unload tank.

8235-162 INCISING-MACHINE TENDER(woodworking) DPT:665
GED: 2 SVP: 3 EC: O 5 PA: L 4

Tends machine that perforates wood products, such as timbers, ties or poles, to facilitate penetration of preserving chemicals:

Installs knife-studded incising rollers in machine and sets roller stops according to size of wood being processed, using wrenches and pry bar. Turns air valve to regulate pressure on incising rollers, and

activates rollers and conveyor system. Signals workers to load timbers or poles onto conveyor or powered feeding tram. Moves levers, presses pedals or pushes buttons to adjust conveyor speed and opening of incising rollers according to size of wood. Observes rollers, knives, bearings and conveyor mechanisms to detect worn or broken parts. May replace defective parts.

8235-166 HUMIDIFIER TENDER(woodworking) DPT:685
GED: 2 SVP: 3 EC: I 3 PA: M 4 7

Tends humidifier unit and auxiliary equipment to impart specified moisture content to pressed-hardboard panels:
Presses pedal to position humidifier car on hydraulic hoist at discharge end of forming press for automatic loading of panels into racks of humidifier car. Pushes loaded car to humidifier unit and activates hydraulic ram that transfers car into humidifier. Observes gauges, turns valves and moves controls to regulate moisture, heat and pressure in humidifier to impart specified moisture content to board. Pushes car from humidifier to automatic unloading machine and starts machine. Inspects panels for water marks, scratches and other defects, and removes substandard panels. Records number processed and rejected. Labels each lot of hardboard passing inspection. May remove screens from forming press, examine them for wear and damage, and mark faulty ones for repair or disposal.

8235-170 LOG COOKER(veneer & plywood) DPT:685
vatman.
GED: 2 SVP: 3 EC: B PA: L 4 7

Tends steam-heated water vats to soften logs for peeling into veneer. Directs crane operator with hand signals or uses hoist to load logs into vat and place cover on vat. Turns valves to fill vat with water. Opens steam valves to heat water to specified temperature. Observes gauges and charts, and adjusts valves to maintain water and temperature levels. Removes or directs removal of logs from vat after specified time. May roll logs from pile beside vat onto conveyor to mill.

**8235-174 TIMBER-TREATING-TANK-OPERATOR
HELPER**(woodworking) DPT:685
GED: 2 SVP: 2 EC: B 3 6 PA: M 3 4

Helps to impregnate wood products with preserving or fireproofing chemicals:
Opens and closes treating-cylinder doors, using pneumatic wrench. Turns steam, compressed air or solution valves and starts pumps as directed, to assist in operation of treating retorts. Tends pumps and opens drains to transfer chemicals from railroad cars, trucks, or boats to storage tanks. See also definition for term title, 02- 160 HELPER (any ind.).
May drill test bores in treated or untreated wood, using hand drill. May move loaded trams into and out of retorts. May tend mixing machine to blend chemicals according to formula.

8236-INSPECTING, TESTING AND GRADING OCCUPATIONS: WOOD PROCESSING EXCEPT PAPER PULP

This unit group includes occupations in inspecting, testing and grading work, as described under the term titles, 02-170 INSPECTOR (any ind.); 02-430 TESTER (any ind.); 02-150 GRADER (any ind.); concerned with quality control activities in processing lumber and other wood products, except paper pulp.

8236-110 TREATED-POLE TESTER(woodworking) DPT:384
GED: 3 SVP: 4 EC: B 7 PA: L 2 4 7

Tests powerline or telephone poles to ensure that wood preservative has penetrated according to specification:
Tests moisture content of poles during seasoning period, using moisture meter. Obtains test cores from poles, using hollow auger, and fills holes with pre-cut wooden plugs, using hammer. Performs routine tests on core samples to determine degree of penetration of preservative. Calculates weight of treating solution absorbed by the wood, using standard laboratory equipment and procedures and specified

chemicals and reagents. Records results of tests and recommends further treatment when specifications are not met. Inspects poles after framing to ensure conformance to specifications.

8236-114 GRADER, LUMBER(sawmill; woodworking)

DPT:387

lumber inspector; marker, lumber.

GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Inspects and grades milled or rough-sawn lumber according to standards:

Examines lumber on table, belt or conveyor for defects, such as knots, stains, faulty edges, pitch pockets, wormholes and unsatisfactory milling. Grades and marks lumber or boards to fill orders, or for remanufacturing, trimming or upgrading.

May measure thickness of boards, using calipers and rule, to ensure specified dimensions. May remove unsatisfactory pieces from conveyor or table. May scale board footage and record results. May be designated according to type of lumber graded; for example, Flooring Grader
Green-Lumber Grader
Planer-Mill Grader

8236-118 SHINGLE INSPECTOR(sawmill) DPT:364
GED: 3 SVP: 3 EC: I PA: L 4 7

Inspects shingles at each sawing machine to ensure production of shingles of specified thickness and adjusts machine to maintain established standards:

Measures thickness of shingles, using gauge. Adjusts machine as required, to produce shingles of specified thickness, by turning knobs. Verifies size of bundles to ensure that they contain correct quantity of shingles, using measuring tape. Examines bundles of shingles and sorts them into different grades. Notifies workers when bundles fail to meet standards. Counts number of bundles packed at each table and records daily production.

8236-122 POLE INSPECTOR(woodworking) DPT:587
GED: 2 SVP: 4 EC: O PA: L 3 4

Inspects poles for defects, and classifies them according to size and specifications:

Examines poles for defects, such as splits, knots or rot, and verifies that framing specifications have been met. Measures length and diameter of poles with tape. Stamps measurements on ends of poles. Classifies poles according to size, and writes report showing size, class and number of poles ready for treating.
May mark framing instructions on poles.

8236-126 GRADER, VENEER AND PLYWOOD(veneer & plywood) DPT:587
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Grades sheets or strips of veneer or plywood panels according to company specifications:

Examines veneer or plywood for colour, texture of grain and defects, such as knots, holes, splits or unsanded areas. Marks grade on individual sheets or on top sheet of pile. Records number of sheets or loads graded. Marks defects.

May be designated according to product graded; for example, Plywood Grader
Veneer Grader

8236-130 TIE-AND-TIMBER INSPECTOR(sawmill) DPT:587
GED: 2 SVP: 3 EC: O 6 PA: M 3 4 7

Inspects timber products, such as railroad ties and mine timbers, at mill yard or shipping point, to ensure conformance to specifications:

Examines product for straightness or for defects, such as rot, splits, or knots, and verifies critical dimensions, using tape measure. Records inspection reports on work sheets.

May imprint grade or other identification on ties or timbers, using stamping hammer.

8236-199 OTHER INSPECTING, TESTING AND GRADING OCCUPATIONS, WOOD PROCESSING

This group includes wood process inspectors, testers and graders, not elsewhere classified; for example, those who measure width and length of rough or dressed lumber to determine board footage, and those who inspect shakes to ensure established standards are met. Typical examples of occupational titles covered by this residual group definition are:

Lumber Scaler(sawmill; woodworking)
Shake Inspector(sawmill)

8238-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: WOOD PROCESSING, EXCEPT PAPER PULP

This unit group includes occupations in labouring and other elemental work, as described under the term title, 02-190 **LABOURER/ELEMENTAL WORKER** (any ind.), concerned with feeding, offbearing and handling activities in the processing of lumber, shingles, plywood and wood conglomerates. Activities include: feeding saws and associated machines; treating wood with preservatives and fire-retardants; stacking, piling, moving and sorting logs, lumber and related materials; and performing other elemental duties in a sawmill, shingle mill, plywood mill or lumber yard.

8238-110 SHINGLE TRIMMER(sawmill) **DPT:686**
GED: 1 SVP: 2 EC: I 5 6 PA: L 4 7

Trims edges and cuts out defects from shingles, using table saw:
Starts saw and conveyor. Examines shingle for defects. Places shingle on saw conveyor and guides shingle through saw. Tosses unusable shingles into waste bin.
May replace worn saw blades, using hand tools.

8238-114 VENEER-STRIP-CUT-OFF SAWYER(veneer & plywood) **DPT:686**
veneer fish-tail sawyer.
GED: 1 SVP: 2 EC: I 5 PA: M 4

Feeds cut-off saw that squares ends of veneer strips:
Carries strips of veneer to work station and butts strips against raised edge of cutting table. Starts saw and pulls saw across strips of veneer or activates hydraulic cylinder or similar device that moves saw across strips, to square ends in turn. Stacks squared strips in designated area for further processing.
May operate dual sawing machine that squares off both ends of veneer strips simultaneously.

8238-118 LABOURER, PLYWOOD AND VENEER PLANT(veneer & plywood) **DPT:686**
GED: 1 SVP: 2 EC: I 5 6 7 PA: H 3 4 5 6 7

Performs any combination of the following duties in the processing of veneer sheets and plywood panels:
Feeds veneer sheets into clipping, pressing and drying machines. Assists in changing cutting knives on machines. Clears veneer blockages in machines, using hook. Pulls and sorts strips or sheets of veneer from machines, such as conveyors, lathes, patchers or splicers, and piles them in trays, bins, bundles or dollies, and on rollers or tables according to length, width, colour or grade. Pushes dolly loads of veneer to dryers, patchers and glue spreaders for processing into plywood panels. Loads and unloads strips or sheets of veneer onto or from automatic conveyor-dryer. Winds strips of veneer from lathe onto reel. Cleans machines and work areas, using hose.
May be designated according to duties performed; for example,
Plywood-Sander Feeder
Veneer-Clipper Feeder
Veneer-Dryer Feeder

8238-122 LUMBER SORTER(sawmill) **DPT:687**
chainman.
GED: 1 SVP: 2 EC: I 5 PA: H 3 4 7

Sorts and piles lumber during various stages of processing:
Pulls lumber from conveyors, tables, hand trucks, saws, grading tables or other work stages. Sorts lumber according to grade markings, size and length. Gauges length and size of boards by sight, by marks on table or by measuring. Slides and stacks lumber onto piles, hand trucks or kiln cars, or places boards in racks or on conveyors.
May perform related sawmill duties, such as feeding saws and offbearing, loading and moving lumber. May be designated according to type of wood sorted or machine from which lumber comes; for example,
Dry Chainman
Green Chainman

8238-126 LABOURER, WOOD-PRESERVING PLANT (woodworking) **DPT:687**
GED: 1 SVP: 2 EC: O 6 7 PA: VH 2 3 4

Performs any combination of the following duties to process wood products, such as timbers, ties, pilings and poles in wood-preserving plant:
Loads and unloads wood stock from railway cars, trucks and barges, by hand or using hoists or winches. Positions poles for framing. Positions wood stock for feeding into adzing, boring, cutting and incising machines and removes processed wood from machines by hand or with hoist. Piles wood on trams by hand or with hoist, inserts wooden strips to bind, space and shape load and chains or bolts down load, using wrenches. Bolts and unbolts doors of treating cylinders with hand or pneumatic wrench. Moves loads in and out of retorts, using winch.
May be designated according to duties performed; for example,
Car Stacker
Framing Labourer
Tie Handler
Tram Loader

8238-130 LOG PEELER, HAND(sawmill; veneer & plywood) **DPT:687**
GED: 1 SVP: 2 EC: O 3 6 PA: H 4

Peels bark from logs manually:
Positions log in holding rack for peeling, using cant hook, or by manipulating hand-held control box of overhead travelling hoist. Inserts spudder point or axe edge into bark and splits bark lengthwise of log. Pulls bark from log, using axe or spudder point.
May roll log to next process, using cant hook.

8238-134 SAWMILL LABOURER(sawmill; woodworking) **DPT:887**
GED: 1 SVP: 2 EC: B 5 6 PA: H 2 3 4

Performs any combination of the following elemental duties in a sawmill, shingle mill or lumber yard:
Rolls logs to log deck from truck or conveyor. Positions logs on saw carriage or on pole-peeling machine feeder, using peavey. Removes embedded objects, such as stones or nails from logs, using axe or saw. Splits blocks from logs too large for sawing, using air powered wedge. Aligns logs, wooden blocks or lumber on conveyors and clears blockages, using peavey or picaroon. Pulls sawn blocks onto floor chain-conveyor and positions them on end for splitting, using picaroon. Stacks blocks of wood, lumber or shingles in designated areas. Places sticks in machine that automatically drops them between layers of wood being stacked. Cleans work areas to remove accumulated bark or sawdust, using shovel, scraper or air hose.
May be concerned with a particular activity and be designated accordingly; for example,
Block-Piler, Shingle Mill(sawmill)
Deckman(sawmill)
Log Turner(sawmill)
Lumber Straightener(sawmill)
Pole-Peeling-Machine Loader(woodworking)
Stick Layer(sawmill)

8238-138 BARKING-MACHINE CLEANER(pulp & paper;
sawmill) DPT:887
GED: 1 SVP: 1 EC: I 4 5 6 PA: M 4

Removes bark, small logs and debris from barking-drums and conveyors:

Stops drums to permit removal of bark or logs. Pulls bark from vents by hand and deposits it in sluice leading to bark pile. Clears log jams from drums and small logs and debris from sluices, using water hose, pike pole, or picaroon.

May sort logs on turntable conveyor leading from barking machines, using picaroon. May stack logs in mill yard to contain pulp pile, or to provide passage under pile for conveyors.

**8238-199 MISCELLANEOUS OCCUPATIONS IN
LABOURING AND OTHER ELEMENTAL
WORK, WOOD PROCESSING**

This group includes wood-processing labourers and other elemental workers, not elsewhere classified; for example, those who convey lumber and other wood products to and from work areas, salvage scrap lumber and wood chips for reprocessing, and clean treating cylinders and retorts used in wood-preserving plants. Typical examples of occupational titles covered by this residual group definition are:

Lumber Handler(sawmill; woodworking)
Salvager, Lumber(sawmill; woodworking)
Scrap Piler(sawmill; woodworking)
Treating-Cylinder Cleaner(woodworking)

8239-WOOD PROCESSING OCCUPATIONS, EXCEPT PAPER PULP, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with processing wood by operating or tending machines to remove bark and clean logs and poles, and to reduce logs to chips, flakes, excelsior, hog fuel or wood flour; screening wood chips; feeding saws by guiding and positioning cants, slabs or lumber on roller tables in a sawmill; and tending machines that saw pressed board or plywood sheets into panels of specified size.

8239-110 HYDRAULIC-BARKER OPERATOR(pulp & paper;
sawmill) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Operates travelling high-pressure water jet, log-rolls and associated conveyors to remove bark and dirt from logs, from glassed-in control station:

Activates kicker arms to transfer log from chain conveyor to roller cradle for barking. Starts log rotating beneath water jet, by pressing buttons on control panel. Moves hand and foot controls simultaneously to control speed of travelling water jet, height of nozzle, width and angle of spray, and direction and rate of log rotation. Presses pedal to wash bark and refuse from window control station. Reverses rolls to eject barked log onto conveyor leading to saw deck.

8239-114 BARKING-MACHINE OPERATOR(pulp & paper;
woodworking) DPT:682
GED: 2 SVP: 4 EC: B 5 PA: M 3 4 7

Operates machine that rotates log under travelling cutting heads to remove bark, knots and dirt, or to shape logs into round or tapered form for use as poles or boat masts:

Positions log on machine, using power or chain hoist. Starts machine and moves levers or presses buttons to start log rotating, and to lower cutting heads against log. Adjusts controls to regulate speed of log rotation and pressure and horizontal movement of cutting heads along log. Raises head, stops log rotation, and removes log by means of hoist, powered carriage, or by pressing button which allows log to drop onto floor-chain conveyor.

May install and adjust cutting heads. May clear jams on conveyors, using peavey. May operate specific machine and be designated accordingly; for example,

Barking-Lathe Operator(pulp & paper)
Pole-Peeling-Machine Operator(woodworking)

8239-118 RING-BARKER OPERATOR(sawmill) DPT:682
GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Operates hydraulic or mechanical ring-type barking machine from control booth to remove bark and foreign matter from logs:

Presses buttons to start conveyors that move log to barking ring. Moves controls to adjust circumference of ring of rotating knives or water-jet nozzles to diameter of log. Activates feed rolls of barking machine and regulates speed of log feed and rotation of ring or log to remove bark. Reverses feed rolls to reprocess log through machine as required. Starts conveyors and kicker arms to move log from barker to next process.

8239-122 DRUM-BARKER TENDER(pulp & paper; sawmill)
DPT:685
GED: 2 SVP: 4 EC: I 4 5 6 PA: M 4 7

Tends one or more revolving barking drums to remove bark and foreign matter from logs:

Starts conveyors to move logs from pond into barking drums. Moves controls that start drums revolving to tumble logs and knock off bark. Turns valves to regulate water spray that washes bark and dirt from log. Clears log jams in drum, using pike pole and chain hoist.

8239-126 MILLER, WOOD FLOUR(woodworking) DPT:685
GED: 2 SVP: 4 EC: I 5 7 PA: H 4 7

Tends milling machine that pulverizes and sifts sawdust to make wood flour for use in manufacture of products, such as explosives, plastic-wood filler, and moulded plastics:

Reads work order to ascertain quantity and particle-size of flour required. Selects screen or specified mesh and places it on bed of reciprocating sifter. Starts hammer mill, conveyor, auger or blower, and sifter, and observes pulverizing and sifting operation. Collects and inspects flour sample to verify adherence to specifications. Empties sifters, conveyors or mills when overloading or jamming occurs, using hand scoop. Repairs screens by gluing patch over damaged area. Sacks wood flour. Transports sacks to storage, using handtruck or wheelbarrow.

May clean screens periodically, using brush.

8239-130 SIZING-SAW TENDER(veneer & plywood;
woodworking) DPT:685
head-saw operator.
GED: 2 SVP: 4 EC: I 5 7 PA: M 4 7

Tends multiple-blade sawing machine that trims pressed board or plywood panels to specified dimensions:

Sets guides and saws to required dimensions of panel, using rule and hand tools. Starts machine and places panel on feed bed against guide. Pushes panel until engaged by feed rollers, belt, or pawls of feed chain. Measures sample panels for conformance to specified dimensions. Adjusts saws or guides as required. Replaces dull saw blades. Prepares production reports.

May tend machine with automatic loading and feeding mechanisms. May grade trimmed panels. May be designated according to product trimmed; for example,

Sizing-Saw Tender, Hardboard(woodworking)
Sizing-Saw Tender, Particle Board(woodworking)
Sizing-Saw Tender, Plywood(veneer & plywood)

8239-134 CHIPPERMAN(pulp & paper; sawmill;
woodworking) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 3 4 7

Tends one or more machines that reduce logs, blocks, or sawmill waste into chips or flakes:

Pushes buttons to start machines and conveyors. Regulates speed of conveyors or cutters to control size of flakes. Observes conveyors, screens, and hoppers to ensure correct feeding, and clears blockages, using peavey. Removes foreign matter such as nails or stones.

May position logs or pieces of wood on conveyor, using picaroon. May replace or repair conveyor belts and install chipping or flaking knives, using hand tools. May be concerned with a specific activity and be designated accordingly; for example,
Chipping-Machine Tender(pulp & paper; sawmill)
Flake-Cutter Tender(woodworking)

8239-138 LUMBER SORTER, MACHINE(sawmill) DPT:685
drop-sorter operator.
GED: 2 SVP: 3 EC: I 5 PA: H 4 7

Tends machine that drops boards through slots on chain conveyor to sort rough lumber for grading, resawing or chipping: Starts and stops conveyors to regulate flow of wood to machine. Straightens and aligns boards parallel to slots by hand, with picaroon, or using switches to raise and lower stops. Examines lumber for defects such as rot, bark and poor sawing. Presses pedal to lower or raise gates to drop wood onto conveyors to grading, resawing, or chipping areas or to next work station. Clears blockages on conveyors.

8239-142 SAWMILL WORKER(sawmill) DPT:687
GED: 2 SVP: 3 EC: I 5 6 PA: H 2 3 4

Performs any combination of the following duties in a sawmill: Unloads logs from trucks or cars by removing truck stakes or by placing skids and rolling logs onto sawmill deck, using peavey. Examines logs for defects such as decayed wood, splits, imbedded metal or stones, and marks or cuts off defective parts, using axe or saw. Rolls log from deck onto saw carriage, using peavey. Guides and straightens slabs emerging from saw onto roller table or conveyor. Positions cants or lumber on roller tables to feed trimmer or gang saws, using cant hook or picaroon or by pressing buttons on hand-held control box that operates overhead hoist. May be concerned with a particular activity and be designated accordingly; for example, Cant Transfer Man Head-Saw Offbearer Trimmer Loader

8239-146 EXCELSIOR-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 6 PA: M 4

Tends one or more machines that shred wood into excelsior: Depresses pedal to open feed rollers, and positions wood stock manually. Starts machine that automatically feeds wood stock to

cutters. Stops machine and turns wood stock to expose all surfaces to cutters to obtain maximum amount of excelsior from wood. Depresses pedal to disengage feed rollers and cutting knives, and removes unusable portion of wood from machine, using hook.

8239-150 HOG-MACHINE TENDER(sawmill) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that pulverizes scrap wood into small particles for use as fuel: Presses buttons to start rotating hammers and cutters inside hog machine and turns valve to regulate flow of water that moistens particles to prevent fire. Starts and stops conveyors, using push buttons, to control flow of scrap and hog machine, and flow of fuel to burners or storage. Clears blockages in conveyors and throws or shovels spilled scrap onto conveyors. May transport scrap wood from production areas and load conveyors that feed hog machine. May tend metal detector to remove metallic objects from scrap.

8239-154 SCREENMAN, CHIPS(pulp & paper; sawmill; woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: M 3 4

Tends shaker screens that remove slivers, sawdust, dirt, knots and oversized chips from wood chips used for making products, such as paper-pulp and particle-board sheets: Starts conveyors to move wood chips from storage to screens and to transfer cleaned chips to designated bins. Starts screens and blower to clean chips, and adjusts feeding mechanism on screens to prevent overloading. Cleans screens and airhose and brush after each run. Observes operation of screen and clears minor blockages. Stops conveyors and screens and informs maintenance men of major blockages or breakdowns and assists in disassembling and reassembling equipment. Cleans spillages in work area, using shovel. May tend chipping machine to produce wood chips or reduce oversized chips to specified size.

825-PULP AND PAPERMAKING AND RELATED OCCUPATIONS

This minor group includes occupations concerned with converting cellulose materials into pulp, and making and finishing paper and paperboard. These occupations are classified in the following unit groups:

- 8250 Foremen, Pulp and Papermaking and Related Occupations**
- 8251 Cellulose Pulp Preparing Occupations**
- 8253 Papermaking and Finishing Occupations**
- 8256 Inspecting, Testing, Grading and Sampling Occupations, Pulp and Papermaking**
- 8258 Occupations in Labouring and Other Elemental Work, Pulp and Papermaking**
- 8259 Pulp and Papermaking and Related Occupations, n.e.c.**

8250-FOREMEN, PULP AND PAPERMAKING AND RELATED OCCUPATIONS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in converting cellulose materials into pulp, and making and finishing paper and pasteboard.

8250-110 FOREMAN, CELLULOSE-PULP-PREPARING OCCUPATIONS(pulp & paper) DPT:138

Supervises and co-ordinates activities of workers engaged in operating and tending equipment that reduces logs, rags, scrap pulp, and similar cellulose materials to pulp slurry, (Unit Group 8251)
Performs duties as described under master title, 01-250 SUPERVISOR/ FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Beater Room
Foreman, Pulp Plant
Foreman, Wet Room
Foreman, Wood Room
Grinderman, Head

8250-112 FOREMAN, INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, PULP AND PAPERMAKING(paper prod.; pulp & paper) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, testing, grading and sampling pulp, paper and paper products, (Unit Group 8256):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Paper Sorters and Counters(paper prod.)
Foreman, Pulp Testers(pulp & paper)
Foreman, Sheet-Paper Inspectors(paper prod.)

8250-114 FOREMAN, LABOURERS AND ELEMENTAL WORKERS (pulp & paper) DPT:138

Supervises and co-ordinates activities of workers engaged in feeding conveyors and hoppers, cutting wet pulp, washing screens, collecting broke, sorting rags, and performing general clean-up duties, (Unit Group 8252):
Performs duties as described under master title, 01-250 SUPERVISOR/ FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Rag-Room
Yard Foreman

8250-118 FOREMAN, PAPERMAKING AND FINISHING OCCUPATIONS(pulp & paper) DPT:138

Supervises and co-ordinates activities of workers engaged in operating and tending equipment that makes paper, paper pulp and paperboard from pulp slurry, and imparts gloss and finish to paper, (Unit Group 8253):
Performs duties as described under master title, 01-250 SUPERVISOR/ FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Coating-Room Foreman
Core-Room Foreman
Foreman, Paper Machine
Foreman, Pulp Processing
Tour Foreman

8250-199 OTHER FOREMEN, PULP AND PAPERMAKING AND RELATED OCCUPATIONS

This group includes pulp, paper and related products-making foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in making acoustical tiles, and baling paper. Typical examples of occupational titles covered by this residual group definition are:
Foreman, Acoustical-Tile Production(paper prod.)
Foreman, Paper Baling(paper prod.)

8251-CELLULOSE PULP PREPARING OCCUPATIONS

This unit group includes occupations primarily concerned with operating and tending equipment that reduces logs, rags, scrap pulp, and similar cellulose materials to pulp slurry. Activities include: grinding, shredding, mixing, screening, cleaning, cooking, and bleaching of pulp material. Occupations concerned with operating equipment to grind or screen wood chips are classified in Unit Group 8239, WOOD PROCESSING OCCUPATIONS, EXCEPT PAPER PULP, N.E.C.

8251-110 CONTINUOUS-DIGESTER OPERATOR(pulp & paper) DPT:262
cook, continuous process.
GED: 4 SVP: 7 EC: 1 PA: L 4 5 6 7

Operates continuous-process digester and associated equipment from control room to produce cooked pulp from wood chips:
Monitors master-control panel to locate malfunctioning equipment and inconsistent material or product flow. Observes temperature, pressure and flow gauges and charts, lighted flow diagrams, and coloured panel lights. Listens for warning buzzers, sirens and bells to detect trouble sources. Directs helper to suspected trouble spots, to observe machinery, report on malfunctions and make adjustments. Adjusts controls according to panel indicators and process requirements to start and stop pumps, conveyors, fans, motors and other equipment and open and close valves to regulate flow of materials such as chips, chemicals, steam, and cooked wood pulp. Tests samples of cooking liquor by titration to determine its strength and to determine length of cooking cycle. Compiles production records.
May operate associated process equipment to produce cooking chemicals, wash and screen cooked pulp, refine pulp stock or recover chemicals from exhaust gases.

8251-114 BLEACHER OPERATOR, PULP(pulp & paper) DPT:362
GED: 4 SVP: 6 EC: 1 7 PA: L 4 5 6 7

Controls absorption towers, mixing tanks, rotary drums, washers and associated equipment to bleach pulp:
Starts pumps and adjusts panel controls to regulate flow rate and consistency of pulp stock to absorption towers and bleaching and soaking tanks, according to specified bleaching sequence. Opens and closes valves to allow metered flow of chemicals such as liquid and gaseous chlorine, caustic soda and hypochlorite into pulp according to bleaching specifications. Starts agitators to mix pulp and chemicals. Starts pumps and turns valves to control flow of pulp to rotary drum washers and adjusts spray of wash water onto pulp to wash out soluble impurities and excess bleach after each bleaching stage. Signals other workers to perform routine tasks associated with bleaching operations. Observes gauges, dials and charts, examines test reports and adjusts controls to ensure specified bleaching of pulp. Starts pumps to transfer bleached pulp to storage tanks. Prepares production reports based on daily operations.
May test whiteness of pulp, using reflectance meter, or tests strength of bleaching chemicals by titration. May control other process equipment to thicken, screen, clean, or refine pulp. May operate equipment such as evaporators and mixing tanks to produce bleaching chemicals. May test chlorine gas safety equipment and alarm systems.

8251-118 DIGESTER OPERATOR(pulp & paper) DPT:362
cook, batch process.
GED: 4 SVP: 6 EC: 1 4 5 7 PA: L 4 5 6 7

Operates battery of steam digesters to cook wood chips with white liquor or acid to make pulp for use in manufacture of paper and paperboard:
Signals DIGESTER-OPERATOR HELPER to charge digesters with specified amounts of chips and chemicals. Turns valves or moves panel controls to admit steam into digesters to raise temperature and pressure within specified limits. Monitors temperature, flow, and pressure gauges and charts to ensure that chips are cooked according to specifications. Tests samples of digester liquid by titration to determine completion of cooking process. Opens valves of digester to blow cooked pulp into tank or pit. Prepares production records.
May be designated according to process; for example,
Cooker, Soda

Cooker, Sulphate
Cooker, Sulphite

8251-122 SCREEN-ROOM OPERATOR(pulp & paper) DPT:362

GED: 3 SVP: 6 EC: I 5 PA: L 4 5 7

Operates screening equipment, from central control panel, to reduce pulp stock to specified consistency for bleaching:

Turns dials and moves panel and hand controls to regulate flow of water and pulp to cleaning and screening equipment. Observes gauges, coloured panel lights, and level indicators to monitor system operation and to identify trouble sources and malfunction of equipment. Directs activities of workers in screen-room. Prepares production reports and records data such as flows, levels, and other information obtained from gauge readings and charts.

May operate screening equipment for a particular type of process and be designated accordingly; for example, Screen-Room Operator, Chemical Pulp Screen-Room Operator, Groundwood

8251-126 BEATER OPERATOR(pulp & paper) DPT:682

GED: 3 SVP: 5 EC: I 4 5 PA: L 4

Controls beater engines and related equipment to process furnish (stock) for making paper:

Starts pumps and adjusts valves to charge vats with specified amounts of slush pulp, fillers, size, alum and liquid chemicals. Starts engines and adjusts beater rolls to obtain specified degree of pulp fineness and hydration. Examines visually, furnish for specified consistency and size of fibres. Dips sample from vat for laboratory testing. Starts pumps to transfer furnish to storage chests.

May operate machine to refine pulp. May calculate volume and weight of furnish ingredients from technical control formulas.

8251-130 GRINDER MAN(pulp & paper) DPT:682

GED: 3 SVP: 5 EC: I 4 5 PA: M 2 4

Operates machines to grind logs, wood blocks, or woodchips into fibres used in making paper pulp:

Adjusts panel controls to regulate conveyor system that feeds wood to hopper of grinder machines. Moves lever to actuate hydraulic piston that presses wood against revolving grindstones. Straightens wood in machine pocket or hopper to prevent jams, using picaroon. Turns valves to regulate spray of water to cool grindstones and to control flow of pulp from discharge end of machine. Observes temperature gauge and colour of pulp for evidence of burns caused by dull or broken grindstones and notifies foreman of defects. Cleans pump buildup from around water spray pipes to prevent burning of pulp.

8251-134 PULP-DRIER OPERATOR(pulp & paper) DPT:562

pump-press operator.

GED: 3 SVP: 4 EC: I 4 5 6 7 PA: L 2 3 4

Operates machines that mix, dry, shred, and bale pulp for paper manufacturing:

Turns valves or control knobs to regulate flow of pulp slush from main supply line to pulp machine. Starts equipment, or signals machine tenders to start individual units of equipment that mix, dry, shred and bale pulp. Adjusts machine to produce pulp bales of specified moisture content by turning control knobs and opening and closing valves. Cleans pulp sludge from machine components using brush, scraper and air hose. Lubricates machine. Records production.

8251-138 BROWN-STOCK WASHER(pulp & paper) DPT:662

pulp-washer operator; washerman.

GED: 3 SVP: 4 EC: I 4 5 7 PA: L 4

Operates series of rotary drum filters from control panel to wash cooking liquor from pulp:

Starts drums rotating, activates pumps and opens and closes valves to control flow of cooked pulp to washers by pushing buttons and turning dials on control panel. Turns valves to regulate spray of wash liquor and water onto pulp stock to wash out cooking liquor and to adjust dilution of wash liquor to specified strength. Opens valves and starts pumps to transfer wash liquor to recovery storage tank. Directs helper to tend equipment such as knotters and refiners. Clears plugged washer showers with wire hook.

May tend flat or centrifugal screens to remove knots or uncooked chips. May operate machines to refine lumps of coarse fibres. May perform tests to determine degree of delignification of pulp or strength of wash liquor.

8251-142 PULP-REFINER OPERATOR(pulp & paper) DPT:682

GED: 3 SVP: 4 EC: I 5 PA: M 4

Operates battery of machines to refine pulp and shorten fibres in continuous process to prepare pulp for paper making:

Turns handwheels to adjust distance between bedplate and rotor knives to obtain specified fineness of fibres. Starts machines and pumps to regulate flow of pulp from beater chests through refining machines to paper machine chest. Examines pulp, reviews laboratory test reports, and adjusts machines to ensure that pulp meets specifications.

8251-146 BLEACHER TENDER(pulp & paper) DPT:365

bleacher helper.

GED: 3 SVP: 4 EC: I 5 7 PA: L 4 5 6

Tends absorption towers, mixing tanks, rotary drums, washers, and associated equipment to bleach pulp:

Observes and adjusts equipment to ensure efficient operation and to locate trouble sources. Turns valves and starts and stops motors and pumps as directed. Collects samples from various stages of process and performs standard titration tests to maintain quality control. Measures brightness of bleached pulp with reflectance meter. Measures acidity of pulp with pH meter. Performs standard chemical tests to measure residual chlorine in pulp.

May measure strength of bleaching solution and recausticized cooking liquor.

8251-150 CONTINUOUS-DIGESTER TENDER(pulp & paper) DPT:365

cook's helper, continuous process.

GED: 3 SVP: 4 EC: I 5 7 PA: L 4 5 6

Tends equipment, under direction of operator, to produce cooked pulp from wood chips:

Observes and adjusts equipment, under direction of operator, to ensure efficient operation and continuous process flow and to locate trouble sources. Monitors master control panel in absence of operator. Dries and weighs specified amounts of pulp to determine consistency, performs titration tests on sample solutions, measures density of wash liquor with hydrometer, and takes pH readings. Opens valves to obtain samples of cooking liquor for testing by operator. Opens valves and starts pumps to feed sulphur dioxide and caustic soda into plant from outside storage tanks. Assists mechanics in carrying out repairs on equipment and lubricates equipment using grease gun and oil can.

8251-154 SCREENMAN(pulp & paper) DPT:685

GED: 3 SVP: 4 EC: I 4 5 PA: L 2 4

Tends deckers, rotary screens, centri-cleaners, or washers that remove knots, sand, coarse fibres, unprocessed chips and water from pulp stock, and reduce stock to specified consistency for bleaching by performing any combination of the following duties:

Turns valves and activates pumps to regulate flow of pulp stock and water to cleaning and screening equipment. Opens and closes gates to adjust suction in cylinder of deck machine to deposit pulp on screen. Turns handwheel to adjust pressure of pick-up roll against cylinder to obtain specified consistency of thickened pulp stock. Pulls lever to adjust or clear blade that scrapes pulp from decker pick-up roll and into storage chests. Adjusts water sprays to wash pulp through rotating screens and rejected material into receiving chest. Collects samples of pulp stock from storage tank, using ladle, and dries and weighs sample to determine consistency.

May send samples of pulp to laboratory for testing. May tend a particular type of machinery and be designated accordingly; for example, Bull-Screenman Centri-Cleaner Man Deckerman

8251-158 DIGESTER TENDER(pulp & paper) DPT:685
cook's helper.
 GED: 3 SVP: 3 EC: I 3 4 5 6 7 PA: M 4 6

Feeds wood chips and opens valves to admit white liquor or acid into digester that cooks chips into pulp, working with another worker: Unbolts and removes digester cover, using wrench and chain or screw hoist. Lowers feed pipe into digester using hoist and pushes buttons, pulls lever or turns wheel to start flow of chips into digester. Replaces and bolts cover. Pushes control-panel buttons, or turns valve to admit specified quantities of chemicals and steam into digester. Opens valves to blow cooked pulp into pit or tank. May tend conveyors to transfer chips to hoppers. May monitor pressure gauges to ensure that chips are cooked according to specifications. May take sample of pulp at completion of cooking cycle and forward to operator for visual inspection.

8251-162 BROWN-STOCK-WASHER HELPER(pulp & paper) DPT:665
pulp-washer-operator helper.
 GED: 2 SVP: 3 EC: I 4 5 7 PA: M 4

Tends equipment that washes cooking liquor from woodpulp: Helps operate knotters, refiners, rotary washers, and other equipment to wash cooking liquor from cooked woodpulp. Starts and stops equipment, adjusts refiners, and opens and closes valves under direction. Maintains cleanliness of area by using water hose and wipers. Replaces empty barrels of defoaming agent and adjusts pump. See also definition for term title, 02-160 HELPER (any ind.).

8251-166 SCREENMAN, PAPER MACHINE(pulp & paper) DPT:665
 GED: 2 SVP: 3 EC: I 4 5 6 PA: M 2 4 5

Tends equipment to screen furnish (pulp stock and additives) prior to paper-making and assists in operation of wet end of cylinder machine: Turns valves as directed by paper-making machine operator or foreman to regulate flow of water, pulp, defoaming agent and starch onto screen plates. Scrapes residue from screens with hand rake. Adjusts guides with wrench to prevent wet felt from running off cylinder machine rollers. Guides felt back onto rollers, using iron bar. Observes pickup of pulp from cylinder screens by carrier net and formation of continuous sheets. Notifies operator of machine malfunctions and presence of defects such as breaks, slivers, dirt and slime spots.

8251-170 BEATER TENDER(pulp & paper) DPT:685
beater-operator helper.
 GED: 2 SVP: 3 EC: I 4 5 PA: H 2 4

Tends beaters and vats that prepare furnish (stock) for making paper: Weighs and dumps dry ingredient such as dyes, size, starch, alum and broke material, into vat according to formula. Weighs, mixes and cooks dyes. Observes vat and beater operation and notifies operator of malfunctioning, cleans out vat with water and hose and scrapes out adhering matter. Drives fork-lift truck to transport materials from storage. May dip samples from vat for laboratory testing.

8251-174 BLEACHER, RAG STOCK(pulp & paper) DPT:685
 GED: 2 SVP: 3 EC: I 4 7 PA: M 2 3 4

Tends equipment that completes bleaching and washing of cooked rags used for making paper: Turns valves or starts electric pump to fill vat with water and specified quantities of lime, alum, and chlorine compounds, to prepare bleaching solution. Dumps rags into solution, using electric hoist, or climbs ladder to open overhead trap to allow rags to be blown into vat. Turns valves to drain solution from vat after specified bleaching time. Fills vat with rinse water by opening tap or starting supply pump. Starts roller or pump to eject dirty water from vat. Drains vat by opening valves.

8251-178 BLOW-PIT MAN(pulp & paper) DPT:685
blow-tank tender.
 GED: 2 SVP: 3 EC: I 4 6 7 PA: M 2 4

Tends blow-pit or tank that washes pulp to remove cooking acid: Clamps shut, doors and hatches of pit or tank and covers blow-pit floor with specified amount of water by opening valves or using hose. Opens digester outlet valve to blow cooked pulp, under pressure, into pit or tank. Sprays pulp with water from high-pressure hose or turns valves to start overhead showers to wash cooking liquor from pulp. Opens valve to drain spent cooking liquor and water from pulp. Starts pump to pump pulp into receiving chests or storage tank. Retrieves pulp samples from pit or tank for testing in laboratory.

8251-180 KNIFE SETTER, CHIPPER MACHINE(pulp & paper) DPT:684
 GED: 2 SVP: 2 EC: I PA: L 4

Changes and sets knives used in chipper machines that reduce pulpwood to chips: Removes access cover from chipper machine, using wrench. Inspects blades and removes defective ones using hand tools. Removes chips collected between blades and disk wheel, using airhose. Bolts new blades in machine, using hand tools and fixed gauge to obtain accurate setting. May sharpen knife blades, using file or power grinder.

8251-182 BLEACH-BOILER TENDER(pulp & paper) DPT:685
 GED: 2 SVP: 2 EC: I 3 7 PA: M 4

Tends equipment that cleans and bleaches rags used in making paper: Positions end of conveyor over bleach-boiler opening and presses button to start conveyor that carries and dumps rags into boiler. Opens valve to add required amount of water. Pours specified amounts of cleaning and bleaching agents into boiler. Fastens boiler cover and starts agitator to rotate rags. Turns valves to admit steam into boiler to cook rags for specified length of time.

8251-186 BROKE-BEATER MAN(pulp & paper) DPT:685
pulper.
 GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that reduces broke (trim and rejected paper) or dry pulp sheets to pulp for use in making paper: Dumps broke or dry pulp sheets into machine vat and turns valves to admit water and steam to soften material to specified consistency. Starts beating machine that reduces material to pulp. Opens discharge gate or starts pump to transport pulp to storage or to other processes. May catch pulp in broke boxes and push boxes to beater engines. May push cart loads of broke from paper machines to pulper.

8253-PAPERMAKING AND FINISHING OCCUPATIONS

This unit group includes occupations primarily concerned with operating and tending equipment that makes paper, paper pulp and paperboard from pulp slurry, and imparts gloss and finish to paper. Activities include: forming sheets of wet pulp, drying, pressing, calendering, winding, cutting, glazing and impregnating paper with coating mixtures, and laminating paper with other materials.

8253-110 FOURDRINIER-MACHINE OPERATOR(pulp & paper) DPT:332
paper-machine tender.
 GED: 4 SVP: 7 EC: I 3 4 5 PA: I 2 4 5 6

Operates wet end of fourdrinier machine to make paper or sheet pulp from pulp stock: Turns valves and adjusts panel controls to start movement of white water and pulp stock into machine head box. Starts machine and turns wheel to adjust flow of stock onto wire-mesh belt on which paper or other product is formed. Observes formation of product and removal

of water. Visually inspects product samples and reviews laboratory reports. Adjusts volume and speed of stock flow, speed and pitch of wire belt, frequency and amplitude of belt shake, water removal by suction boxes and rolls, and pressure of rolls on pulp mats, according to type of pulp stock and kind, grade and weight of product specified. Gives instructions to members of crew for operating machines that dry, size, calender, wind or cut paper products. Directs or assists workers engaged in changing wire belts and felt rolls. Tends auxiliary equipment such as agitators, pumps, and filters. Compiles production records and reports.
May adjust, clean, make minor repairs and replace machine parts, using hand tools.

8253-114 CYLINDER-MACHINE OPERATOR(pulp & paper)
DPT:332

wet-machine tender.

GED: 4 SVP: 7 EC: I 3 4 5 PA: L 2 4 5 6

Operates wet end of cylinder-type machine to make paper, or sheet pulp from pulp stock:

Turns valves to start flow of water and specific types of pulp stock into designated cylinder vats. Starts machine and turns handwheels and valves or adjusts panel controls to regulate flow of stock onto wire mesh of revolving pickup cylinders, and onto wet felt mats on which continuous sheets of product are formed. Inspects products, reviews laboratory reports, and observes machine operations to determine cause of defects in paper. Regulates and co-ordinates stock flow, speed of pickup cylinders and wet felts, water removal by vacuum action of cylinders and by pressure of rolls on pulp mat, according to type of stock and specified kind, grade, weight, and moisture content of product. Directs workers engaged in replacing felts, threading sheets through drier rolls, slitting and cutting sheets to specified dimensions and winding sheets onto roll. Compiles production records and reports.

8253-118 BACK TENDER, PAPER MACHINE(pulp & paper)
DPT:662

GED: 3 SVP: 6 EC: I 3 5 6 PA: L 2 4 5 6

Operates drier, calender and winding sections of fourdrinier or cylinder-type paper-making machines to produce paper and wind it onto rolls:

Threads continuous sheet of paper through carrier, drier and calender rolls by hand. Observes charts and gauges and turns valves to adjust steam pressure, temperature of drier and calender rolls, and hot-air rolls and control running speed of sheet. Inspects sheet for defects, such as dirt, slime spots, holes and wrinkles and marks defective portions for removal at rewinding sections. Directs workers engaged in winding and rewinding, slitting and weighing, wrapping and stenciling paper rolls and sheets.

May operate size tub, or spray paper with steam, water, or dyes to obtain specified finish. May be designated according to type of machine operated.

8253-122 PAPER-COATING-MACHINE OPERATOR(paper prod.)
DPT:662

GED: 3 SVP: 5 EC: I PA: L 4

Operates one or more machines that coat paper used for graphic duplicating or reprinting of technical drawings:

Instructs other workers to fill coating troughs with specified chemical solution, mount paper roll on machine spindle or remove treated roll. Threads paper through coating rollers and drying chambers. Adjusts screws on roller shaft to regulate machine speed and paper tension, using hand tools. Adjusts temperature in drying chamber to regulate drying of paper when chamber is not equipped with thermostatic control. Visually examines coated paper emerging from machine for discoloration and streaks, and feels surface of paper to ascertain if it has adequate moisture content. Cuts paper with knife periodically from processed rolls to obtain specimen for laboratory testing.

May be designated according to type of coating applied; for example, Blueprint-Paper-Coating-Machine Operator

8253-126 WINDERMAN, PAPER MACHINE(pulp & paper)
DPT:662

GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates winder at dry end of paper-making machine to slit and wind paper from reel onto cardboard cores and make rolls for shipment:

Reads production orders and directs workers to position slitting knives, place cores on winder shaft, thread paper through feeding mechanism and wrap paper around cores to start roll. Starts winder revolving, from console, and observes slitting and winding of paper, and adjusts friction brake lever to maintain tension on paper. Observes sheet being wound to locate defects such as dirt, slime spots, holes and wrinkles and marks defective portions with chalk. Verifies perforations, and size and alignment of rolls being formed. Assists other workers to thread paper sheet through drier and calender rolls of paper machine, using air hose. Positions empty reel shaft on paper machine carriage supports, using hoist. Breaks continuous sheet of paper with air or water hose when active reel is filled and blows free end of paper around empty shaft to start new reel. Lifts full reel from paper-machine carriage with hoist, moves it to winding machine and positions it in winder carriage.

May observe paper forming on reel and adjust tension and speed of sheet.

8253-130 COATING-MACHINE OPERATOR(paper prod.; pulp & paper)
DPT:362

GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates machine to glaze or impregnate paper or paper board with size or coating mixtures such as clay, wax, adhesive, plastic or waterproofing solution:

Adjusts spreader rollers and clips or fastens brushes, rollers or scraper blade in machine, using hand tools, to spread coating to specified depth on paper. Loads paper roll on machine-feed rack and threads paper through spreader, tension, pressure and dryer rolls. Turns valves and starts pump to admit specified coating mixture into machine tank. Starts machine and observes paper to detect wrinkles, breaks, and uneven colouring. Turns handwheel or levers to adjust tension of paper and pressure of rollers. Compiles production reports indicating quantities of materials used. Directs helper to assist in positioning rolls and threading paper through machine.

May verify thickness of coating with micrometer or by weighing samples. May operate machine in which paper passes through bath of solution instead of through coating application rollers. May be designated according to coating mixture applied; for example, Clay-Coater Operator

Grounding-Machine Operator
Gumming-Machine Operator
Pre-Pasting Machine Operator
Waxing-Machine Operator

8253-134 COMBINER-MACHINE OPERATOR(paper prod.)
DPT:362

laminating-machine operator.

GED: 3 SVP: 4 EC: I 5 6 PA: M 4 5 7

Operates machine to combine two or more continuous sheets of material such as paper, paperboard, foil, and polyethylene film, to form such laminated products as building paper, fibreboard, wall-board, or material from which moisture-proof bags and wrappers are made:

Mounts rolls of material in machine, assisted by helper and using hoist. Threads material over and under guide rollers (one sheet over adhesive roller) around cooling drum and onto re-winder core. Starts pumps to transfer adhesive solution from storage tanks to machine. Starts machine, observes gauges, and adjusts controls to maintain temperature and pressure of rollers, temperature of adhesive, filling of cooling drum, functioning of doctor rod (for removal of excess adhesive) and speed of machine. Inspects laminated product by feeling sheet as it is being re-wound, for lumps, tears, scratches, and wrinkles. Makes standard tests periodically to ascertain the specific gravity and viscosity of adhesive solution. Compiles production reports.

May operate portable extruder at head of combiner-machine that melts grains of polyethylene into a liquid, extrudes it through aperture, and forms it into a clear sheet for combining with other sheets of material. May be designated according to type of material used; for example,

Polyethylene Combiner

8253-138 SUPERCALENDER OPERATOR(pulp & paper) DPT:362
GED: 3 SVP: 4 EC: I 5 PA: M 4 5 7

Operates supercalender machine to impart specified finish to surface of paper:

Positions roll of paper on machine reel stand, using hoist and with assistance of other workers. Fastens collar and alignment guides on shaft to secure roll, using hand tools. Threads paper around feed, calender, and tension rolls, and wraps end around core shaft of rewinder roll. Observes temperature gauge and turns valve to regulate flow of steam to calender rolls. Turns hand wheels to control tension of paper and pressure of rolls. Inspects paper during rewinding for such defects as dirt, slime spots, or wrinkles, and to ensure compactness of winding. Compiles daily production reports. May hold sandpaper against revolving rolls to remove lint and dirt.

8253-142 HIGH-DENSITY-FINISHING OPERATOR(pulp & paper) DPT:382
GED: 3 SVP: 4 EC: I 7 PA: M 4 7

Operates trimming and coating machines that cut to size, paint, and dry sheets of cardboard or insulation board:

Adjusts position and angle of saws, to cut sheets to specified size, using wrenches. Cleans paint brushes using scraper and brush. Adjusts clearance of paint brushes in machine to ensure uniform application without brush marks. Moves controls to start flow of paint to brushes. Turns knobs to regulate drying and cooling temperatures of coating machine to prevent coating irregularities, and scorching of paint. Observes trimming and coating operations and regulates speed of feed conveyor, transfer mechanisms, and discharge conveyor, to prevent jamming, faulty coating, and ragged edges. Removes sheets not meeting appearance or dimensional standards from discharge conveyor. Cleans paint lines and reservoir, using solvent and brushes. Compiles production records. Reports malfunctions to foreman. May set up and operate machines to trim and coat insulation tiles.

8253-146 SUPERCALENDER-OPERATOR HELPER(pulp & paper) DPT:683
GED: 2 SVP: 3 EC: I 5 PA: H 4 6

Helps operate supercalender machine that imparts specified finish to surface of paper:

Drives fork-lift truck to transport roll of paper to machine. Inserts shaft in core of paper, manually or using hoist. Mounts rolls on machine, using hoist and assistance from other workers. Helps operator to fasten collars at ends of roll to align and secure roll in place, using wrench. Removes finished roll from machine, using hoist. Drives fork-lift truck to remove finished roll from machine area. See also definition for term title, 02-160 HELPER (any ind.). May help operator to thread paper around feed and calender rolls.

8253-150 PRESS TENDER, INSULATION BOARD(paper prod.) DPT:585
GED: 2 SVP: 3 EC: I 5 PA: L 4

Tends steam-heated, hydraulic press that compresses wood pulp to form insulation board:

Turns steam valve to heat pressing-plates. Presses button to activate press and lower ram as pulp sheets are automatically transferred from forming line onto press plates. Observes temperature and pressure gauge. Raises ram after pressing while pressed board is automatically conveyed out of press and transferred to trimming and painting machine or to humidifier. Maintains daily production records. May measure thickness of pressed boards periodically, using micrometer, to maintain standard quality of product. May tend presses that compress sheets of cardboard or paper to form paperboard and be designated accordingly.

8253-154 LAYBOY TENDER(paper prod.; pulp & paper; print. & pub.) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: H 4 7

Tends cutter and layboy that cuts rolls of paper into sheets and stacks them, performing any combination of the following duties:

Inserts steel shaft through core of paper roll. Lifts roll onto machine feed rack, using hoist, and fastens collars on shaft to center and secure roll in position. Positions layboy guide stops and stacking paddles,

using rule and wrench. Observes sheets as they fall into layboy to detect such defects as spots, holes, wrinkles, cockled edges, and dirt, and discards defective sheets. Smooths sheets by hand or compresses sheets using air piston to eliminate air pockets. Places skid under layboy and transfers sheets from layboy to skid. Aligns sheets on skid by tapping edges with hands. Removes full skid, using hydraulic dolly or hand truck equipped with hydraulic lift. Fans sheets or turns up corners to facilitate inspection. Counts sheets and inserts tabs to mark off reams when layboy is not equipped with automatic counter and tabber.

8253-158 PAPER-MACHINE HAND(pulp & paper) DPT:686
GED: 2 SVP: 3 EC: I 5 6 PA: M 3 4

Performs any combination of the following duties at dry end of paper-making machine:

Adjusts paper slitting knives of winder as directed, using hand tools. Slides cardboard cores onto winder shaft, threads paper through feeding mechanism and wraps end around core to begin roll. Examines paper being wound for defects and marks defects with chalk or paper strip. Pulls broke (scrap paper) from drier and calender rolls and winding area. Assists workers in changing paper-making machine clothing such as wire belt and felts. Assists in threading paper sheet through drier and calender rolls. Cleans machinery, equipment and work area, using air and water hoses, detergents, brushes and rags.

May lubricate machines. May truck broke to beater for reprocessing.

8253-162 CARBON-PAPER CUTTER(paper prod.) DPT:585
GED: 2 SVP: 2 EC: I PA: H 4 7

Tends machine that cuts rolls of carbon paper into sheets:

Fastens roll of carbon paper into shaft supports of machine. Selects cutter drum marked with circumference that will cut sheets of specified length. Inserts axle through drum and mounts it in machine, using mallet and wrench. Turns wingnuts to adjust tension (drag) on feed roll to keep paper taut and to prevent wrinkling. Presses switch to rotate drum and observes paper as it passes in front of light or over mirror to detect such defects as pinholes, slits, or thin coating. Inserts strip of paper to flag location of defect for removal later. Feeds sheet of marker paper into winding roll after specified time. Folds cut paper to keep layers intact and unfolds and stacks it on workbench. Copies identifying data such as type and size of paper from work order to work ticket.

8253-166 DRIER TENDER, INSULATION BOARD(pulp & paper) DPT:685
GED: 2 SVP: 2 EC: I 3 PA: L 4

Tends oven drier that removes moisture from finished panels of insulation board:

Turns control knobs on thermostatically controlled heating unit to specified setting. Regulates speed of conveyors to ensure that dried sheet will conform to moisture content specification. Observes passage of panels through drier to detect jamming or scorching.

8253-170 FRICTION-PAINT-MACHINE TENDER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that applies and dries strip of friction paint to striking area of book match covers and matchbox sides:

Slides roll of cardboard onto machine spindle or loads stack of cards into machine feeding mechanism. Fills machine reservoir with friction paint. Starts machine and adjusts feedwheels, using hand tools, to regulate the spacing and thickness of paint strip. Adjusts steam valve to maintain specified temperature in conveyor-drier. Removes paper dust and dirt from revolving feedwheels, using knife.

8253-174 PAPER COATER(pulp & paper) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4

Tends machine that dyes paper to specified colour:

Pours prepared dye solution into machine receptacle. Loads roll of paper in machine, using hoist. Pulls lever to start machine that brushes colour solution on paper. Replenishes dye solution and loads machine with paper when supply has been depleted.

8253-178 PULP-PRESS TENDER(pulp & paper) DPT:685
GED: 2 SVP: 2 EC: I 3 PA: H 3 4

Tends hydraulic press that compresses laps of sheet pulp to facilitate baling or to remove moisture from pulp sheets prior to further processing:

Pushes loaded truck under hydraulic pressing plate or observes laps of sheet pulp as they move under pressing plate on conveyor belt. Makes adjustments and observes pressure gauges. Verifies that pressed pulp has cleared press or pulls loaded truck away from press to storage or baling area.

8253-180 REELER, WALLPAPER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: I PA: M 3 4

Tends machine to roll printed wallpaper into reels:

Slides cardboard core over windup shaft and locks shaft in machine, using wrench, so that core is engaged by drive rollers. Threads wallpaper through machine and attaches end of paper to cardboard core with tape. Starts machine, observes winding, and adjusts speed and tension controls until reel is complete. Rolls completed reel of wallpaper onto hand truck and transports reel to storage area.

8253-182 REWINDER, PROCESSED PAPER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that removes excess curl from gummed or treated paper and rewinds it into rolls:

Lifts and positions parent roll of paper on machine support, using electric hoist. Threads paper through horizontal rollers and guides, over diagonal rollers, and fastens end of paper to core on rewind stand. Starts machine, observes operation, and makes necessary adjustments to diagonal and tension rollers, using hand tools or by adjusting set-screws.

8253-186 REWINDER TENDER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that winds paper from one roll to another to form compact rolls of specified footage or diameter, prior to cutting into sheets or slitting into specified widths:

Slides roll core (tube) on rewind shaft. Threads end of parent roll into feeding mechanism of machine and adjusts friction brake by hand. Wraps end of roll around core or expandable rewind shaft and starts machine. Verifies alignment of rewind roll and adjusts machine, using hand tools. Stops machine, removes rewound roll from shaft, and places it on conveyor.

May space cutting disks on machine shaft, using wrench, when machine is equipped to slit paper as it is being rewound.

8253-190 VARNISHING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that coats paper decals, labels, or other printed matter with varnish:

Fills machine reservoir with varnish. Starts machine and feeds sheets of paper decals, labels, or other printed matter between rollers that coat them with varnish.

May mix varnish according to formula. May adjust control to set specified temperature of drying tunnel.

8253-194 COATING-MACHINE-OPERATOR HELPER(paper prod.) DPT:686
GED: 2 SVP: 2 EC: I 5 PA: M 4

Helps operator to glaze or impregnate paper with wax, size, or other coating mixtures:

Inserts shaft through core of paper roll. Helps operator position roll of paper on machine feed rack, using chain hoist. Clamps shaft in bearings. Slides core on rewind shaft. Helps operator thread paper through machine and tapes end of paper onto rewind core. Splices breaks in paper, using tape. Removes re-wound roll from machine, using hoist and slides shaft from core manually. Cleans wax or other coating mixtures from rollers, using scrapers and cloths. Fills machine tank with coating mixture as required. See also definition for term title, 02-160 HELPER (any ind.).

8253-198 COMBINER-MACHINE-OPERATOR HELPER(paper prod.) DPT:686
laminating-machine-operator helper.
GED: 2 SVP: 2 EC: I 5 6 PA: M 4 6 7

Helps operator to feed machine that combines two or more continuous sheets of material to form laminated paper products:

Moves rolls of material to machine, using hand truck, and inserts shafts through cores of rolls. Assists operator to place rolls on feed rack of machine, using hoists, and secures rolls in position with clamps. Assists in threading material into feed mechanism and splices end of material to that of previous roll with tape. See also definition for term title, 02-160 HELPER (any ind.).

May combine particular type of material and be designated accordingly; for example, Polyethylene-Combiner Helper

8256-INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, PULP AND PAPERMAKING

This unit group includes occupations in inspecting, testing, grading and sampling work, as described under the term titles, 02- 170 INSPECTOR (any ind.), 02-430 TESTER (any ind.), 02-150 GRADER (any ind.) and 02-330 SAMPLER (any ind.), concerned with quality control activities in pulp processing, pulpboard manufacturing, and papermaking.

8256-110 LABORATORY TESTER(pulp & paper) DPT:281
laboratory technician.
GED: 4 SVP: 6 EC: I PA: L 4 7

Performs any combination of physical and chemical tests on pulp, paper and process materials, in laboratory, for quality control of production processes:

Determines moisture content of wood chips, using drying oven, and calculates density of chips from water displacement. Dries and weighs pulp stock to determine consistency. Measures freeness quality of pulp stock, using specialized industry testing apparatus. Measures acidity and conductivity of pulp stock, using pH meter and electrical conductivity meter. Performs standard titration analyses on pulp to measure lignin content. Measures viscosity of pulp, using special tube and stop watch. Separates fibres by length with classifying screens, determines proportions by weighing, and examines fibres with microscope. Refines pulp samples in small beater, prepares handsheets (paper test samples), and performs tests for such qualities as bursting, tearing, folding and tensile strengths, using special industry testing machines. Counts dirt specks and shives (wood particles) in unit area of pulp or paper sheet. Measures brightness, colour and opacity of paper with reflectance meter, and smoothness and porosity with porosity meter. Operates special test machine to analyze quality of formation of paper. Burns weighed sample of paper in special tube, collects and weighs ashes to determine quantity of additives in paper. Follows standardized procedures to perform chemical and physical analyses of process materials such as cooking liquor, recovered liquor and lime, and on paper additives such as clay, alum and titanium dioxide. Determines solids and chemical content of mill effluent, and calculates sewer flow rates from charts and meters to measure daily losses. Measures solids and chemical losses through mill smoke discharge. Collects samples, charts and production records. Calibrates and maintains testing equipment in mill and laboratory. Prepares testing chemicals, following standard formulas. Performs other pulp and paper quality tests as assigned. Calculates and graphs test results and writes reports of findings.

8256-112 PAPER INSPECTOR(pulp & paper) DPT:267
roll inspector.
GED: 4 SVP: 6 EC: I 5 PA: L 4 5 6 7

Inspects paper rolls and analyzes test and production reports to maintain quality of paper product:

Examines paper rolls visually for defects such as tears, holes, wrinkles, slime or poor finish. Taps rolls with wooden hammer to detect uneven winding and hard or soft spots. Reviews test reports for indications of substandard production and compares with customer's order for

conformance to specifications. Examines finished rolls for conformance to size, packaging and identification specifications. Evaluates previous test results, machine production data, and variance of other order specifications to determine corrective action required. Discusses process adjustments with production supervisor. Gives directions to workers regarding rejection of substandard production, correction of faults, or salvage of rolls by rewinding, trimming to smaller size, or converting production to order having different specifications. Compiles quality control records.

May review work of paper testers for adherence to prescribed procedures. May investigate customer complaints and suggest remedial action. May inspect paper produced in sheet form.

8256-114 PAPER TESTER(pulp & paper) DPT:364
GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Tests samples of each run of paper produced, using standard testing equipment and procedures, to control quality and uniformity of products:

Weighs sample of specified size, measures thickness with micrometer and calculates density of paper sheet. Dries and reweighs sample to determine moisture content. Counts dirt specks and shives (wood particles) visually on unit area of sample. Examines paper to detect curl or surface fuzziness. Tests samples for bursting, tearing, tensile strength, folding, stiffness strengths, friction, crush resistance, and adhesive quality, following standard procedures, and using special industrial testing machines. Measures brightness, colour and opacity with reflectance meter, and smoothness and porosity with densimeter or porosity meter. Measures oil absorbency rate of paper with stop watch. Prepares composite samples for laboratory testing. Calculates and records data, such as customer specifications, test results, machine speeds and production. Reports abnormal test results to machine operators for corrective action.

May record test or production data on tally board. May perform other specialized tests on specialty papers. May be designated according to product tested; for example,
Newsprint Tester
Paperboard Tester
Sensitized-Paper Tester

8256-118 PULP TESTER(pulp & paper) DPT:364
stock tester.
GED: 3 SVP: 5 EC: 1 4 5 PA: L 4 7

Tests samples of pulp stock or sheet pulp during production, using standard equipment and procedures, to control quality and uniformity of product:

Collects samples from various production points for testing and prepares composite samples for laboratory. Measures freeness quality of pulp stock, using specialized industry testing apparatus, and calculates consistency by drying and weighing measured amount of pulp. Performs standard chemical analyses to determine lignin and liquor content of pulp. Measures acidity of pulp stock, using pH meter or titration apparatus. Prepares handsheet (paper test sample) from pulp, using cylinder, wire screen, and press, and counts dirt specks and shives (wood particles) visually in unit area of sheet. Measures weight and thickness and calculates density of pulp sheet, using scales, micrometer and slide rule. Tests sample for bursting strength. Calculates and records test results, material flow, machine speeds and other operating data, and reports abnormal test results to machine operators for corrective action.

May test strength of process materials such as cooking liquor or paper additives such as alum. May be designated according to type of pulp tested; for example,
Groundwood-Pulp Tester
Sulphite-Pulp Tester

8256-122 INSPECTOR, PULP(pulp & paper) DPT:367
GED: 3 SVP: 5 EC: 1 PA: M 4 5 7

Inspects each phase of processing in manufacture of pulpwood construction boards, panels, or tiles, by performing any combination of the following duties:

Examines products for surface defects. Verifies thickness, size, and squareness of sample products or location of drilled holes in insulation tiles, using calipers, carpenter's square, square frame, rule, or template. Examines packing materials and observes packing activities to ensure that customer and plant specifications are met, and that products are appropriately labelled for shipment. Notifies supervisor or equipment operators when products do not meet specifications, to facilitate

control adjustments. Prepares reports of defects discovered, origin of defect, shift production, and numbers of rejects, for quality control personnel. Selects samples of products for quality testing by control laboratory.

May be designated according to product tested; for example,
Inspector, Acoustical Tile
Inspector, Fibrous Wallboard
Inspector, Wallboard Siding

8256-126 INSPECTOR, SHEET PAPER(pulp & paper) DPT:367

GED: 3 SVP: 3 EC: 1 PA: L 4 7

Inspects samples of paper or paperboard sheets for conformance to quality specifications:

Verifies dimensions of sheet, using rule, and folds sheet and aligns edges to verify squareness. Places sheet on scale and compares weight with specifications for type and grade of paper or board. Fans stack of sheets and visually examines sheets for defects, such as holes, tears, dirt, streaks or shading. Feels paper surface to detect flaws in uniformity of grain or coating. Removes defective sheets, or marks stack for reprocessing and informs production staff of defects. Compiles quality control records.

8256-130 RAG CHECKER(pulp & paper) DPT:587
rag inspector.

GED: 2 SVP: 2 EC: 1 7 PA: L 4 7

Examines rags to be used for paper making to verify that they are of specified quality and free from metallic or other attachments:

Feels and examines rags on conveyor belt to ascertain that clips, buttons, and elastic have been removed. Verifies that quality, type, colour and condition of rags meet specified requirements. Discards sub-standard rags and places them in container. Weighs and records weight of rags.

8256-134 PAPER SORTER AND COUNTER(paper prod.) DPT:587

GED: 2 SVP: 2 EC: 1 PA: L 4 7

Sorts and counts paper products such as paper sheets, sandpaper, and abrasive disks:

Sorts sheets of paper, sandpaper, and abrasive disks according to specified grade, examines them for defects, and discards defective pieces. Counts and stacks acceptable sheets and disks, and inserts marker between specified quantities. Segregates sheets and disks according to customer order, and records amount and grade of separate orders.

May feed jogging machine that automatically counts and stacks bundles of product.

8258-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, PULP AND PAPERMAKING

This unit group includes occupations in labouring or other elemental work, as described in the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.) in pulp and papermaking which are concerned with activities, such as, feeding conveyors and hoppers, cutting wet pulp, washing screens, collecting broke, sorting rags, and performing general clean-up duties.

8258-110 LABOURER, RAGS(pulp & paper) DPT:487
rag sorter.

GED: 2 SVP: 2 EC: 1 7 PA: M 3 4 7

Performs any combination of the following duties to prepare rags for use in making paper:

Moves wooden boxes of rags from storage area to working area, using hand truck. Loads rags on working conveyor, by hand. Cuts buttons, clips, elastic or similar items from rags, using hand shears, power shears, or knife. Segregates coloured rags, placing them in designated containers. Places rags on conveyor leading to dusting machine (thrasher). Removes dusted rags and weighs and records weight of rags. Moves weighed rags to conveyor of cutting machine, using hand truck. Removes cover of bleach boiler, allowing rags to fall into stock

cars. Marks cars according to grade and type of rags and pushes cars to washing machines. Removes washed rags from drainer (seasoning bin) and places them in stock cars and pushes cars to beater room.

8258-114 RAG-THRASHER-AND-CUTTER-MACHINE FEEDER(pulp & paper) DPT:666
GED: 1 SVP: 2 EC: 1 5 PA: M 3 4

Feeds machines that remove dust and cut rags to size preparatory to making paper:

Places rags on feed conveyor leading to thrasher hopper. Removes rags from thrasher after cleaning and places them on conveyor leading to hopper of cutter machine. Examines cut rags from cutter for size and notifies supervisory personnel if knives need adjusting or sharpening. Loosens set-screws to remove knives for sharpening using wrench. Cleans dirt and dust from dust compartments of machines using air hose or by dumping contents of dust receivers into waste containers. May move bundles of rags from storage to machine using hand truck. May compile daily production reports.

8258-118 GRINDER FEEDER(pulp & paper) DPT:686
GED: 1 SVP: 2 EC: 1 6 PA: H 2 3 4

Aligns logs on feed conveyor and in hoppers of grinder machines to prevent jams:

Aligns logs on conveyor, using picaroon, to assure that logs fall squarely into hoppers of grinding machines and to prevent jamming. Frees log jams in hoppers, using hands, picaroon or crowbar. May put oversized logs aside for re-cutting to required length.

8258-122 BROKE HUSTLER(pulp & paper) DPT:886
beater helper; hydropulper helper.
GED: 1 SVP: 2 EC: 1 5 PA: H 3 4

Collects waste paper and pulp from paper and pulp-making machines and transports to beater machines for reprocessing:

Removes broke (waste paper and pulp) from paper and pulp-making machines and loads it onto hand truck. Pushes or hauls truck to beater and throws broke into machine for reprocessing. Washes pits beneath paper-making machines with water hose and blows dirt and dust from drier rolls, using air hose.

May operate fork-lift truck to transport heavy bales and rolls of waste paper from paper-making machines to beater machines. May dump specified amounts of fillers, such as starch and china clay, into beater vats.

8258-126 CUTTERMAN, WET-MACHINE(pulp & paper) DPT:886
GED: 1 SVP: 2 EC: 1 4 5 PA: M 3 4

Cuts sheets of specified size, from continuous rolls of pulp, and folds sheets to form laps:

Cuts pulp sheets from wet-machine cutter rolls using lap cutter (pointed wooden stick) or other device. Folds sheets to form laps. Piles laps on hand truck or conveyor for transfer to hydraulic press. May assist in threading pulp sheet through press rolls of wet machine.

8258-130 PULP-LOG RECLEANER(pulp & paper) DPT:886
rosser man.
GED: 1 SVP: 2 EC: 1 5 6 PA: M 3 4

Feeds machine that removes bark and dirt from improperly cleaned pulp logs:

Removes logs from conveyor, using picaroon. Starts machine and lifts log onto machine cradle. Moves lever to press log against rotating cutting knives that remove dirt or residual bark. Places cleaned logs onto conveyor manually. Cleans work area, using shovel and broom.

8258-134 SCREEN CLEANER(pulp & paper) DPT:887
GED: 1 SVP: 2 EC: 1 4 5 PA: M 3 4

Performs the following duties in screening ground wood or cooked pulp:

Washes clogged masses of fibres and impurities from screen plates, using water hose. Washes and scrapes sand and sludge from rifiers and flow boxes. Helps other workers to remove and replace screen plates.

8258-199 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, PULP AND PAPERMAKING

This group includes pulp and papermaking labourers or other elemental workers, not elsewhere classified, for example, those who load materials such as wood chips, pulpwood, sulphur and limerock, and clean work areas and machines. A typical example of an occupational title covered by this residual group definition is:

Yard Labourer(pulp and paper)

8259-PULP AND PAPERMAKING AND RELATED OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with making pulp and paper and related products. Includes making paper wads used in ammunition manufacture.

8259-110 WAD-COMPRESSOR OPERATOR(explosives) DPT:382

wad moulder.

GED: 3 SVP: 4 EC: 1 5 PA: L 4 7

Operates battery of automatic moulding machines and drying ovens to press and dry cardboard-fibre and wood-flour slurry to form-filler wads for shotgun shells:

Turns valves to fill compressor jackets with slurry and to heat drying ovens. Starts feed tank agitator, wad compressors, and conveyors. Observes moulded wads emerging from compressor punches to detect concave tops indicating fouled punch tip. Unbolts punch tube and cleans accumulated slurry from tip, using compressed air or water. Replaces bent or broken punches, tubes, knock-off fingers, and transfer plates, using hand tools. Weighs specified number of dried wads from each batch of slurry on grain scale and computes quantity of water needed to produce wads of specified weight. Measures thickness of wads, using dial gauge, and adjusts spacing between top and bottom punches to change wad thickness, using micrometers, feeler gauges, and precision gauge blocks. Washes accumulation of slurry from machine using hose.

8259-114 SLURRY MIXER(explosives) DPT:382
GED: 3 SVP: 3 EC: 1 4 PA: M 2 4

Operates mixing equipment to produce slurry for processing into shotgun shell wads:

Dumps bagasse and scrap paper into attrition mill that shreds material. Turns handwheel to adjust hydrobeater blades according to specified slurry consistency and adjusts timer for prescribed cycle. Weighs and measures specified quantities of milled material, wood flour, starch, and dyes according to formula, and dumps ingredients into hydrobeater in prescribed sequence. Drains unabsorbed water from measured quantity into graduated cup to determine slurry freeness and adjusts beating time and water content of next batch accordingly to maintain uniform consistency of batches. Starts pump to transfer slurry into dilution tank. Starts agitator in tank and admits metered amount of water to dilute slurry to specified consistency. Pumps slurry into holding tank.

8259-118 BALERMAN(pulp & paper) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Performs any combination of the following tasks in weighing, pressing, wrapping and tying stacks of paper pulp sheets:

Installs press machine feed guides on hydraulic press to accommodate size of sheets, using rule and wrench. Installs rolls of wire on spindle of baling machine and threads it through feed guides. Places sheet of wrapping paper on scale, sets stack of pulp sheets on wrapper, and adds or removes sheets to obtain stack of specified weight, or tends layboy cutter that cuts pulp into individual sheets and stacks them in piles of specified number of sheets. Positions stack between guides on press machine bed. Moves lever to start hydraulic press to compact bundle to specified size. Places sheet of wrapping paper on top of bundle and folds top and bottom paper over ends. Positions bundle on wire tying machine bed and depresses pedal to start machine to wind and tie wire bands around bundle. Stamps weight and other data on

bundle and shoves it onto conveyor. Moves lever to transport stack of pulp sheets along conveyor to automatic pressing and baling equipment.

machines and auxiliary equipment. Typical examples of occupational titles covered by this residual group definition are:
Pulper-Machine-Utility Man(pulp & paper)
Pulp-Stock Mixer(paper prod.)

8259-199 OTHER PULP AND PAPERMAKING AND RELATED OCCUPATIONS

This group includes pulp and papermaking and related occupations, not elsewhere classified, for example, those who prepare and mould pulp mixtures to make moulded-pulp products, or those who apply specialized knowledge to clean and flush pulp or papermaking

826/827-TEXTILE PROCESSING OCCUPATIONS

This minor group includes occupations concerned with processing textile fibres into yarn or thread, and weaving, knitting and finishing fabrics. Activities include: preparing fibres; spinning, winding and twisting yarn or thread; preparing looms and knitting machines; weaving materials; knitting fabrics or garments; and bleaching, dyeing, finishing and calendering textiles. Occupations concerned with printing designs or patterns on textiles are classified in Minor Group 951, PRINTING AND RELATED OCCUPATIONS. TEXTILE PROCESSING OCCUPATIONS are classified in the following unit groups:

- 8260** Foremen, Textile Processing Occupations
- 8261** Textile Fibre Preparing Occupations
- 8263** Textile Spinning and Twisting Occupations
- 8265** Textile Winding and Reeling Occupations
- 8267** Textile Weaving Occupations
- 8271** Knitting Occupations
- 8273** Textile Bleaching and Dyeing Occupations
- 8275** Textile Finishing and Calendering Occupations
- 8276** Inspecting, Testing, Grading and Sampling Occupations, Textile Processing
- 8278** Occupations in Labouring and Other Elemental Work, Textile Processing
- 8279** Textile Processing Occupations, n.e.c.

8260-FOREMAN, TEXTILE PROCESSING OCCUPATIONS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in processing textile fibres into yarn or thread; spinning, twisting, winding and reeling textile materials and products; weaving; knitting fabrics or garments; and bleaching, dyeing, finishing and calendering textiles.

8260-110 FOREMAN, TEXTILE BLEACHING AND DYEING OCCUPATIONS(knit goods; textile)

DPT:138

Supervises and co-ordinates activities of workers engaged in singeing, scouring, washing, bleaching, dyeing and rinsing textile products, (Unit Group 8273):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Bleaching
Foreman, Dyeing Room
Soaping-Department Foreman
Supervisor, Dye Department

8260-114 FOREMAN, TEXTILE FIBRE PREPARING OCCUPATIONS(syn. fibres; textile) DPT:138

Supervises and co-ordinates activities of workers engaged in washing, mixing, blending, picking, carding, lapping, combing, drying, sizing and slashing wool, cotton, flax, jute, hemp and other fibres for spinning, winding and weaving, (Unit Group 8261):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Roving-Department Foreman
Scouring Foreman
Sorting-and-Mixing Foreman
Wool-Sorting-and-Grading Foreman

8260-118 FOREMAN, TEXTILE FINISHING AND CALENDERING OCCUPATIONS(knit goods; textile) DPT:138

Supervises and co-ordinates activities of workers engaged in calendering, fulling, shrinking, stretching, drying and waterproofing textile goods, (Unit Group 8275):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Aging-Department Foreman

Calendering Foreman
Stretching Foreman

8260-122 FOREMAN, TEXTILE INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS(knit goods; textile) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, testing, grading and sampling textile, and concerned with quality-control activities in textiles processing, (Unit Group 8276): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in inspecting a particular product, or at a particular stage of process and be designated accordingly; for example,

Carpet-Inspector Foreman
Cloth-Grader Foreman
Hosiery-Inspector Foreman
Quality-Control Foreman
Weaving-Inspector Foreman

8260-126 FOREMAN, KNITTING OCCUPATIONS(knit goods) DPT:138

Supervises and co-ordinates activities of workers engaged in interlacing a strand of yarn or thread in a series of connected loops to make knitted fabrics or products; such as, hosiery, sweaters, lace and garments, (Unit Group 8271):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity or in producing a specific item and be designated accordingly; for example,

Hosiery Foreman
Knitting-Machine Fixer, Head
Looping Foreman
Mending Foreman
Seaming Foreman

8260-130 FOREMAN, TEXTILE SPINNING AND TWISTING OCCUPATIONS(textile) DPT:138

Supervises and co-ordinates activities of workers engaged in twisting together short strands to produce a continuous length of thread, or spinning and twisting yarn, thread, twine or cordage to impart such characteristics as strength, texture and resistance, (Unit Group 8263):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Spinning Foreman
Twisting Foreman

8260-134 FOREMAN, TEXTILE WEAVING OCCUPATIONS(textile) DPT:138

Supervises and co-ordinates activities of workers engaged in interlacing two sets of yarn or thread to produce fabric, (Unit Group 8267):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular type of product and be designated accordingly,

Endless-Belt-Weaving Foreman

8260-138 FOREMAN, TEXTILE WINDING AND REELING OCCUPATIONS(textile) DPT:138

Supervises and co-ordinates activities of workers engaged in winding and reeling yarn, thread, cloth, and narrow fabrics into beams, spools, cards and other devices, or gathering yarn into balls or skeins, (Unit Group 8265):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Preparation-Department Foreman
Quilling-Department Foreman
Throwing-Department Foreman
Warping-Department Foreman

8260-199 OTHER FOREMEN, TEXTILE PROCESSING OCCUPATIONS

This group includes textile processing foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in manufacturing needle (punched) felt. A typical example of an occupational title covered by this residual group definition is:

Felt-Goods Foremen, Needle Process(textile)

8261-TEXTILE FIBRE PREPARING OCCUPATIONS

This unit group includes occupations concerned with operating, tending and feeding a variety of machines that wash, mix, blend, pick, card, lap, comb, draw, size and slash wool, cotton, flax, jute, hemp and other fibers in preparation for further operations, such as spinning, winding and weaving.

8261-110 SLASHER OPERATOR(textile) DPT:562
GED: 3 SVP: 5 EC: 1 5 PA: M 3 4 5 6

Operates slasher machine that saturates warp with size and winds sized yarn onto loom beam:

Positions section beams onto creel with aid of helper, using hoist. Gathers ends of warp together and ties warp to corresponding leaders left in machine from previous run. Inserts lease rods between alternate strands of yarn to prevent yarn from sticking together. Lays individual warp ends between teeth of expansion comb for even distribution across loom beam. Turns valves to admit size into vat and steam into drying cylinders. Sets yardage meter, starts machine, and observes flow of warp through machine to detect breaks and tangles in yarn. Disentangles yarn and ties broken ends with fingers. Feels yarn to verify adherence of size to yarn and ensure that yarn is dry but not burned. Inserts lease string in warp yarn and secures yarn ends with tape. Doffs loom beam onto hand truck and replaces with empty beam, using hoist. Observes gauges and recording devices on control panel to ensure equipment is operating normally. Maintains production records.

8261-114 WOOL SCOURER(textile) DPT:682
scouring-machine operator.
GED: 3 SVP: 4 EC: 1 4 PA: M 4

Operates scouring train (series of tanks or bowls) to wash, rinse and dry raw wool fibres preparatory to further processing:

Turns valve to fill tanks with water and adds specified quantities of soap, soda and other scouring agents. Turns steam valves to heat solutions to operating temperature. Starts machine that feeds raw wool from hopper into series of cleaning and rinsing tanks to wash, rinse and squeeze wool. Patrols scouring train to detect choke-up at squeeze rolls and removes jammed fibres by hand. Controls flow of scouring agents by turning valves to maintain specified concentration. Starts fans that circulate hot air in dryer and adjusts thermostatic control if wool does not feel dry. Drains and cleans machine.

May feed raw wool into scouring machine hopper by hand. May tend machine that removes foreign matter from raw wool stock by feeding it through pulverizing rollers.

8261-118 COTTON-BALL-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 4 EC: 1 5 7 PA: L 4

Tends one or more machines that comb cotton fibres into sliver and form sliver into balls for surgical and cosmetic use:

Positions roll of cotton on carding machine and threads end through rollers. Starts machine that forms sliver. Threads sliver through rollers of machine that forms balls and ejects them into bag. Adjusts machine to control size and weight of cotton balls, using hand tools. Sets counter and starts ball-forming machine. Removes bag when filled with specified number of balls. Folds flaps and seals bag. May remove cotton fibres from carding machine, using stripping roller.

8261-122 PICKER TENDER(textile) DPT:685
lapper.
GED: 2 SVP: 4 EC: I 5 7 PA: VH 3 4

Tends battery of picker-machines that break up and clean cotton, form it into lap and wind lap into rolls:

Starts machine and pulls cord to open gate of hopper through which cotton tufts feed into machine conveyor. Moves lever to regulate weight and length of lap and speed of machine. Observes and regulates speed of conveyor as it feeds machine to prevent jamming. Inserts pin in take-up position and turns end of lap around pin, manually. Lifts roll from machine, weighs it, records weight, places roll on portable rack and removes pin from roll. Cleans and oils machine.

May tend, from panel board, an automatic system including a feed conveyor and a machine that automatically controls the weight, length of lap and speed, drops pin into take-up position and winds lap around pin.

8261-126 STAPLE-PROCESSING-MACHINE TENDER DPT:585
(textile)
GED: 2 SVP: 3 EC: I PA: M 4

Tends machines that stretch tow, break tow into staple lengths and crimp resulting sliver:

Ties rope of filaments to filaments in machine or threads rope through guides and tension rollers, heating plates, breaking rollers and crimping devices and into receiving can. Observes operation of machines to detect fibres wrapping around rollers and cuts away tangled fibres with hand snips. Adjusts yardage clock to stop machines when specified amount of fibre is in receiving can. Records production data and writes identification tickets for cans of sliver.

8261-130 BLENDING-MACHINE TENDER(textile) DPT:685
wool blender.
GED: 2 SVP: 3 EC: I 5 7 PA: M 3 4

Tends machine that mixes textile fibres into uniform blends:

Weighs fibres on scale of automatic feeders to regulate weight of fibres deposited on conveyor. Turns valve to regulate flow of oil lubricant onto fibre, according to type of fibres being blended. Loads machine hopper by hand with various types of fibres according to blending instructions. Starts machine and observes flow of fibres through blending machine. Stops machine when rollers become clogged and unclogs them by hand. Cleans machines, using air hose. May mix oil lubricant.

8261-134 CARDING-MACHINE TENDER(asbestos & min. wool; textile) DPT:685
carder.
GED: 2 SVP: 3 EC: I 5 7 PA: M 3 4 7

Tends carding machines that open, clean, align fibres and convert laps of fibres into slivers:

Mounts lap of fibre on bracket at feed end of machine and threads end of lap through feeder rollers or attaches end to lap in machine by pinching ends together with fingers. Patrols row of machines to detect exhausted laps or sliver breaks. Pieces up broken sliver by rolling and twisting ends with fingers. Removes full spools of fibres and places empty spool in winding position. Cuts sample from spool for quality control. Cleans machine, using air hose and brush, and oils moving parts.

8261-138 CARD STRIPPER(asbestos & min. wool; textile) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 3 4

Tends equipment that removes (strips) accumulated wool, cotton, or asbestos fibres adhering to wire teeth of carding and doffing drums, using any of the following methods:

1. Positions stripping roller in brackets of carding machine so that wire teeth of roller project between wire teeth of carding cylinder. Starts machine, allowing stripping roller to revolve rapidly and remove fibre from slowly revolving card cylinder. 2. Moves lever to position built-in stripping roll so that wire teeth contact teeth of cylinder. Opens suction line to draw away lint collected by roll. 3. Places stripper nozzles of vacuum stripper attachment at side of carding

cylinder and doffing drum. Starts machine to move stripper across cylinder, drawing dust with nozzle.

May tend vacuum tanks that collect fibre and lint stripped from carding machines. May maintain cleanliness of work area.

8261-142 DRAWING-MACHINE TENDER(textile) DPT:685
drawing-frame tender.
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends machines that draw out, straighten, level and combine wool fibres for further processing:

Positions cans of sliver at feeding end of machine. Threads sliver through guides, gathering eye, rollers, and under fallers. Starts machine and guides sliver into receiving can, or wraps end around spindle that winds it into ball. Observes operation of machines to detect breaks in sliver and pieces broken ends together by hand. Doffs can or balls of processed sliver and replaces empty supply cans or bobbins. Weighs cans or bobbins of processed sliver and marks end with chalk to indicate weight. Cleans rollers with air hose and oils machines.

May be designated according to type of machine operated; for example,

Combining-and-Drawing-Machine Tender
Gill-Box Tender

8261-146 FUR BLOWER(textile) DPT:685
fur-blowing-machine operator.
GED: 2 SVP: 3 EC: I 5 7 PA: L 4

Tends machine that cleans and disentangles fur fibres used in making felt hats:

Forks fur onto machine feeder. Presses button to start machine that forces fibres through chambers containing air blowers and toothed rollers that clean and disentangle fibres. Feels and examines fibres to determine conformance to quality standards and to detect presence of debris such as sawdust and particles of pelt requiring additional passes through machine. Weighs boxes of fur on scale to determine amount of fur processed. Cleans machine and removes debris, using brush and compressed-air hose.

8261-150 FUR MIXER(textile) DPT:685
devil tender; fur-fibre-mixing-machine operator.
GED: 2 SVP: 3 EC: I 7 PA: M 4

Tends machine that separates matted fur fibres and blends fibres for use in making felt hats:

Selects bags of fur fibres according to mixture order. Opens bags and dumps material on floor. Mixes fibres with fork and forks material from floor into hopper of machine. Starts machine that forces fibres against teeth of cylinders to separate matted fibres, and blows fibres into air-blending chamber that mixes them. Removes blended fibres from machine and deposits them in bags, boxes or trucks. Cleans machine, using brush, broom and air hose. Lubricates machine, using oil can and grease gun.

8261-154 SIZING-MACHINE TENDER(textile) DPT:685
polisher.
GED: 2 SVP: 3 EC: I PA: L 4

Tends machine that coats strands of yarn with size to stiffen and strengthen yarn:

Positions yarn bobbins or cheeses and take-up cylinders on spindles of machine. Threads yarn over fingers of tension guides, across size-covered rollers and around cylinders. Determines tension of yarn strands by feeling with hand or using tensiometer. Pulls or releases yarn between tension guides and take-up cylinders to increase or decrease tension. Pours pail of size into trough of machine or turns valve to admit size into retaining trough. Starts machine and observes operation to detect deviation from standard and yarn breakage. Adds size to trough as required. Repairs breaks by tying knot or rewinding yarn end around sizing cylinder. Removes and labels cylinders of sized yarn.

May mix size, following formula.

8261-158 SLUBBER TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 4 7

Tends slubber machines that draw out and loosely twist sliver into roving to strengthen it for subsequent drawing and twisting operations:

Transports cans of sliver to slubber machine, using hand truck. Fastens ends of sliver from full cans to preceding ends by overlapping and twisting ends with fingers, or threads sliver over guide, through rolls and flyers, and onto bobbins. Observes machines to detect empty cans and signal lights which indicate machine stoppage caused by sliver breaks. Pieces broken ends by threading sliver through rollers and flyer and twisting it to end on bobbin. Removes bobbins of roving, placing flyers on top of frame and roving in box truck. Sets empty bobbins on spindles, winds end of roving around them, and replaces flyers. Removes lint and dust from rollers, using brush or air hose, and oils machine. Marks spools of roving with coloured chalk to denote weight and texture.

8261-162 STRETCHING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4

Tends machine that stretches continuous synthetic fibre filaments to impart strength and flexibility and combine filaments into tow:

Positions cans of filaments at machine, places bobbins of filament on spindle and threads filament through rolls, pins, traveller and onto take-up bobbin or into can. Opens valve to admit steam to heat rolls. Pushes button to start machine, turns dials to control speed of feeding or spinning mechanism and observes processing to detect yarn breaks, machine malfunction or other defects. Stops and clears machine when bobbins or cans are full or when knots, breaks or tangles occur in filament. Transports stretched yarn to specified area, using handtruck. Cleans rolls and machine, using air hose.

May thread filament directly from spinning machine. May record production data.

8261-166 WASTE-MACHINE TENDER(textile) DPT:685
garnett-machine tender.
GED: 2 SVP: 3 EC: I 5 7 PA: M 3 4

Tends machine that opens or shreds and fluffs raw or used materials, such as rags, wool, kapok or hair to facilitate further processing:

Cuts open bags of waste materials. Starts machine and dumps material into feeder that conveys it into picking or shredding rollers at a rate matched to intake of machine. Wraps end of processed material around take-up rollers, or positions handtruck beneath discharge outlet of machine. Observes processing of material to detect clogged rollers and disentangles rollers, using knife or hands. Doffs laps or cans of material or pushes filled handtrucks from discharge outlet of machine. Weighs material and records weight on production records. Lubricates machine and cleans machine and work area.

May tend machine that compresses shredded material into layers for felt, batting or padding. May tend machine equipped with pneumatic conveyors that blow stock into storage bins or subsequent machine hoppers. May be designated according to process or material processed; for example,

Picking-Machine Operator
Willow Operator

8261-170 STOCK MIXER(textile) DPT:487
batcher.
GED: 2 SVP: 2 EC: I 7 PA: M 3 4

Assembles various types of textile fibres into batches preparatory to blending:

Loads fibres from bins or store rooms into cart by hand, following specifications on batch sheet. Weighs loaded carts, computes tare weight and dumps specified amount of each fibre into chutes or onto conveyors leading to blending machines.

May be designated according to fibre batched; for example,
Wool Batcher

8261-174 CHOPPING-MACHINE TENDER(syn. fibres) DPT:685

chopped-strand operator.

GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that chops strands of fibreglass sliver into staple lengths:

Pulls ends of sliver from creel and feeds sliver into feed rollers of cutter. Starts machine and observes staple lengths as they fall from cutters into vibrating screen, through screen and into container on scale to detect defects. Removes container from scale as required weight is attained, and seals container with gummed tape. Pastes label on container and places it on pallet.

May keep production records of weight of material processed.

8261-178 CRIMPING-MACHINE TENDER(textile) DPT:685
roller-bulking-machine tender.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that crimps and heat-conditions synthetic fibres to increase bulk and resiliency and to facilitate blending with natural fibres:

Turns valves to regulate heat and to control pressure of feed rollers and stuffing box, according to specifications. Starts machine and observes feeding of fibres between rollers that force fibres through stuffing box where they are compressed. Discharges crimped fibres into conditioning oven, observes fibres emerging from oven to detect substandard crimping and adjusts steam and pressure controls accordingly.

May re-thread ends of broken fibres through rollers. May measure dimensions of sample crimps with gauge. May doff and replace full receiving cans when process is not continuous.

8261-182 CRIMP SETTER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4

Tends machine that sets crimp in synthetic fibres used in high-bulk yarns:

Conveys material on handtruck and lifts cans onto loading track of machine, manually or using hoist. Adjusts controls to regulate heat and steam. Moves hand and foot controls to start machine that automatically loads, steams, vacuum-dries and unloads material. Removes cans of material from track on delivery side of machine. Feels material to determine if moisture has been removed.

May use thermometer to ensure that material is being heated to specified temperature. May record information such as heat and humidity readings, time involved and production.

8261-186 WOOL OPENER AND DUSTER(textile) DPT:685
fluffer operator.
GED: 2 SVP: 2 EC: I 5 7 PA: H 3 4

Tends machine that fluffs raw wool stock to open fibres and to remove dust and other foreign matter preparatory to scouring:

Transports bales of raw wool stock from storage to work area, using handtruck. Cuts binding cables from bales with bolt cutter and deposits armfuls of raw wool stock into machine hopper. Starts machine and observes operation to detect clogged rollers. Pulls fibres from clogged rollers and removes grease from teeth of rollers, using scraper. Cleans foreign matter from bins beneath machine, using shovel.

8261-190 YARN SOAKER(textile) DPT:685
GED: 2 SVP: 2 EC: I 4 5 PA: M 3 4

Tends vats in which skeins of synthetic or silk yarn are soaked to lubricate, bind or soften the filaments, or remove gum:

Weights ingredients for soaking solution, according to written formulas. Dumps ingredients into mixing tank, opens valves to admit water, and pushes button to start agitator. Places skeins in vat, manually. Turns valve to admit solution into vat until contents are covered. Opens valve to admit steam until specified temperature is attained and soaks skeins for prescribed time. Starts pump and turns valve, to return usable solution to storage or to permit unusable solution to drain off when soaking is completed. Places yarn on portable drying rack and conveys it to drier machine.

8261-194 BREAKER FEEDER(textile) DPT:686
first-breaker feeder.
GED: 2 SVP: 2 EC: I 5 7 PA: M 4

Hand-feeds fibre, such as hemp or sisal, into machine that breaks up matted bundles, and oils and straightens fibres preparatory to subsequent machine processing:

Places bundles of fibres from different bales on machine feed conveyor. Observes coarse sliver emerging from machine and varies rate of hand feeding to maintain production of uniform silver of specified weight. Fills feeding tanks with oil emulsion and turns valves to start flow of oil that lubricates, softens, rodent proofs, and preserves fibres.

8261-198 SLASHER-OPERATOR HELPER(textile) DPT:686
GED: 2 SVP: 2 EC: I 5 PA: H 3 4

Assists in coating warp threads with size and winding warp onto loom beams:

Transfers warp or loom beams to or from machine, using handtruck. Positions beams on creel of machine, using hoist. Assists in passing warp threads through rollers, size pot, and drying rollers, inserting lease rods and strings, and securing yarn ends with tape. Loosens and removes clamps from end of loom beam, using wrench. Lifts loom beam from slasher onto handtruck, using hoist. See also definition for term title, 02-160 HELPER (any ind.).

May mix and cook size in vats according to formula. May turn valves to control flow of size from vat to size pot on slasher machine.

8261-202 STAPLE CUTTER(textile) DPT:686
GED: 2 SVP: 2 EC: I PA: M 4

Feeds machine that cuts fibres into staple lengths for further processing:

Transports bales of material with handtruck and places them at feed end of machine. Cuts bale bands with hand snips and places loose material on belt that conveys it to cutting blades. Starts machine and observes material falling from cutter to detect fusing due to dull cutting blades. Measures cut material with ruler to verify length and notifies machine fixer when cut material does not meet specifications. Removes full cans from discharge end of machine and replaces with empty ones.

May sort loose stock by size and colour. May stock from several bales to blend fibres.

8263-TEXTILE SPINNING AND TWISTING OCCUPATIONS

This unit group includes occupations concerned primarily with tending machines that twist together short strands to produce a continuous length of thread, or that spin and twist yarn, thread, twine or cordage to impart such characteristics as strength, texture and resistance. Activities include: setting up, and feeding or off- bearing from textile spinning and twisting machines.

8263-110 ROPE-MACHINE SET-UP MAN(textile) DPT:680
GED: 3 SVP: 6 EC: I 5 6 7 PA: M 3 4

Sets up and maintains in operating order automatic machines that make hemp or synthetic fibre rope:

Installs and aligns dies and gears to produce specified types and sizes of rope, using hand tools. Turns setscrews to vary actions of machines according to type of material used and rope specified.

May make rope by operating and adjusting a rope-twisting machine.

8263-114 COVERING-MACHINE TENDER(textile) DPT:685
rubber coverer.
GED: 2 SVP: 3 EC: I 5 7 PA: L 4

Tends machine that twists one or more strands of yarn around rubber strands:

Threads narrow strip (ribbon) of rubber through feed rollers and splitting mechanism. Draws ends of rubber through guide and hollow spindles, using hook, and laps ends around take-up package. Positions

yarn supply packages on spindles, threads ends through guides and tensions, and wraps ends around rubber. Sets yardage counter to zero. Starts machine and observes covering operation to detect defective twisting caused by taut or slack yarn, and turns setscrew to adjust tension. Ties broken ends, using knotter. Replaces exhausted supply packages of yarn or rubber, and ties ends to ends in machine. Doffs machine and places empty take-up packages on holders. Adjusts speed of take-up mechanism that controls rubber tension to ensure specified stretch.

8263-118 SPINNING-MACHINE TENDER(asbestos & min. wool; textile) DPT:685
spinning-frame tender.
GED: 2 SVP: 3 EC: I 5 7 PA: M 3 4 7

Tends spinning frame to draw out and twist roving or sliver into yarn, or yarn into twine:

Patrols work area, observing spinning to detect nearly exhausted supply packages and breaks in yarn, roving, and sliver. Pieces up breaks in yarn, roving, and sliver and replaces nearly exhausted supply packages with full packages. Twists end of material from supply package to material in machine or threads material from supply package through machine guides and drawing rollers. Brushes or uses air hose to remove yarn or lint from drawing rollers, guides, and rails.

May doff machine. May be designated according to product spun or type of machine tended; for example, Asbestos Spinner(asbestos & min. wool) Roving-Frame Tender(textile)

8263-122 STRAND-FORMING-MACHINE TENDER (textile) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 4

Tends machine that forms (twists) rope-fibre yarn into strands preparatory to their being laid into rope:

Installs specified size tubes that gather and compress yarn preparatory to twisting. Places specified number of full yarn bobbins on creel. Threads yarn ends from bobbins through holes in register plates that align yarn through gathering tubes and around capstan that maintains tension on strand. Ties end to reel that revolves to twist and form strand. Stops machine to repair yarn breaks. Removes full reel, using hoist.

8263-126 TWISTER TENDER(asbestos & min. wool; textile) DPT:685
warp-twister tender.
GED: 2 SVP: 3 EC: I 5 7 PA: L 3 4 7

Tends machine to twist two or more strands of yarn together or to insert additional twist into single strand of yarn to increase strength, smoothness, and uniformity of yarn:

Creels machine with bobbins or cones of yarn, following work ticket specifications for colour and type of yarn, or notifies change crew as yarn on supply beam is depleted. Pulls ends of yarn over rollers, through tension guides, traveller or flyer, and laps yarn onto take-up spool. Sets yardage counter at zero and starts machine. Patrols machine to detect yarn breaks and replace exhausted supply packages. Ties broken ends by hand or with knotter, rethreads stopoffs, breaks and untangles yarn. Doffs take-up packages and replaces them with empty spools. Inspects yarn for defective twisting and removes defective take-up packages for reprocessing. Records production and worker identification on ticket.

May clean and lubricate machine rings and separators. May tend machines that twist synthetic fibres, silk, or asbestos and be designated accordingly; for example, Thrower(textile) Uptwister Tender(textile)

8263-130 YARN-TEXTURING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: L 4

Tends machine equipped with air-jet chambers through which continuous filament yarn is processed to change texture and increase bulk of yarn:

Creels machine and threads yarn ends through machine guides, over feed rollers, air-jet chambers, tension guides, and drop wires. Loops ends of yarn around take-up package. Turns valves to start flow of

compressed air through jets to blow loops into yarn filaments, changing physical structure of yarn. Observes processing of yarn to detect breaks in yarn and filled take-up packages. Ties broken yarn ends or starts new take-up packages to ensure continuous filament. Pulls lever to stop spindle and doffs full package. May be designated according to kind of machine tended.

8263-134 ROPE TWISTER(textile) DPT:685
rope-coiling-machine tender; rope-twisting-machine tender.
 GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends one or more machines that twist fibre or synthetic strands, or twine into rope and wind rope onto reels:
 Selects and mounts reels of ready (strands) or twine on machine according to rope size specified, using hoist. Threads strands or twine from reels through guides to twisting mechanism, and splices strands or twine to lead rope attached to reel. Starts machine and monitors operation to detect defective twisting or winding of rope. Stops machine when counter shows specified length is wound. Cuts rope with knife and binds coil with cord to prevent unwinding. Removes coil of rope from reel.

8263-138 DOFFER(asbestos & min. wool; textile) DPT:686
 GED: 2 SVP: 2 EC: 1 5 7 PA: M 3 4

Doffs bobbins of yarn from spindles of spinning or twisting frames: Stops machine and presses pedal to lower ring bar, allowing yarn to wind around base of spindle to facilitate restarting, or presses brake to stop spindle. Removes full bobbins of yarn from machine spindles, deposits yarn in hand truck, and replaces full bobbins with empty bobbins. Releases pedal to raise ring bar and starts machine, or releases pedal to start bobbin rotating. Pieces up breaks in roving ends or ties breaks in yarn ends. Packs full bobbins in cartons for shipping or pushes loaded hand trucks to spooling area. Identifies gauge of yarn in cartons or hand trucks, using various colours of chalk. Cleans waste from machine, using brush.
 May change travellers on spinning frames. May doff bobbins from slubber frames.

8263-199 OTHER TEXTILE SPINNING AND TWISTING OCCUPATIONS

This group includes textile spinners and twisters, not elsewhere classified; for example, those who tend machines that twist strands of asbestos fibres into rope. A typical example of an occupational title covered by this residual group definition is:
 Asbestos-Rope Maker(asbestos & min. wool)

8265-TEXTILE WINDING AND REELING OCCUPATIONS

This unit group includes occupations concerned with operating, tending and feeding textile-winding and reeling machines. Activities include: winding and reeling yarn, thread, rope, cloth and narrow fabrics onto beams, spools, cards or other devices; or gathering yarn into balls, bults, or skeins.

8265-110 RUG SETTER(textile) DPT:682
 GED: 3 SVP: 5 EC: 1 PA: L 4 7

Operates setting machine to wind yarn from short spools onto longer spools or loom beams in specified colour arrangement to prepare yarn for weaving rugs:
 Positions spools of yarn on creel as specified by pattern chart. Threads ends of yarn through reeds, tension devices, and guides. Adjusts tension on yarn. Clamps ends to take-up (long) spool. Starts machine and observes winding for yarn tangles and breaks. Pieces up broken ends, using weaver's knot. Stops machine when specified amount of yarn has been wound, cuts yarn with scissors, places clamp onto spool to hold yarn in place, and replaces spool with empty one.
 May be designated according to type of rug woven; for example, Axminster Setter

8265-114 DRESSER(textile) DPT:684
warp dresser.
 GED: 3 SVP: 4 EC: 1 5 PA: M 4 7

Operates machine to wind yarn from packages onto reel and from reel onto loom beams to prepare warps for weaving:
 Places yarn packages on mobile creel. Positions track-mounted mobile creel in front of stationary reel and draws yarn from packages on creel, according to specified pattern. Ties yarn ends into loop and places loop over hook on reel to secure ends for winding. Sets yardage meter to stop machine when specified yardage for section is wound on reel. Inserts lease strings in wound section to keep threads in position for weaving. Prepares next section for winding onto reel by cutting yarn, using knife, and moving creel to align next section with reel. Secures ends of wound section by placing ends under threads of section. Positions loom beam on brackets, using hoist, and secures ends from all sections onto beam. Pulls lever to reverse reel, and pushes button to start yarn winding onto beam. Replaces spent yarn packages on creel with full packages. Doffs full loom beam, using hoist, and places beam in storage for use on looms.
 May be designated according to product for which warp is prepared; for example,
 Blanket Dresser
 Felt Dresser

8265-118 WARPERS TENDER, AUTOMATIC(asbestos & min. wool.; textile) DPT:685
high-speed-warper tender.
 GED: 3 SVP: 4 EC: 1 5 7 PA: L 4 7

Tends high-speed warpers that automatically wind yarn in parallel sheets onto beams, preparatory to dyeing, weaving, or knitting:
 Examines yarn in creel to ensure that it corresponds to warp pattern sheet specifications for number of yarn ends, arrangement of yarn in creel and yarn size. Alters creel setup to correspond with warp pattern sheet. Threads machine by pulling ends from yarn packages mounted on creel through drop wires and tension-measuring and spreading devices, and fastens them to empty warp beam. Sets yardage counter to record amount of yarn wound, and starts machine. Observes operation to detect yarn breaks which cause machine to stop. Turns beam back to point of break, locates and ties broken ends, cutting excess yarn with scissors. Stops machine when specified yardage is wound on beam, and cuts threads, using scissors. Places gummed tape over ends, or loops ends together to secure them.
 May doff full beams and set in empties. May replace empty yarn packages. May wind yarn in parallel sheets onto drums or spools. May tend machine that gathers strands of yarn into rope form and winds them into ball and be designated accordingly,
 Ball-Warper Tender

8265-122 WARP BEAMER(textile) DPT:664
beamer; rebeamer; warper.
 GED: 3 SVP: 3 EC: 1 5 6 7 PA: M 4 5 6 7

Operates machine that winds yarn from several section beams simultaneously onto single loom beam preparatory to weaving:
 Positions section beams on creel, using hoist. Lays individual yarn ends from each section beam between dents of reed and teeth of expansion comb, following leases in section warps. Tapes yarn ends to loom beam or ties groups of yarn ends into knots and inserts knots into slots of loom beams. Turns knob to set yardage clock as specified. Starts machine and observes yarn to detect slubs, breaks and tangles. Removes slubs with scissors, straightens tangles, and ties broken yarn ends with fingers. Inserts lease string in warp yarn and secures yarn ends with tape. Expands beamer heads to remove warp, using crank. Doffs full loom beam onto hand truck, and replaces beam with empty beam, using hoist. Maintains operating records such as style numbers, yarn breaks, machine down time and yardage beamed.
 May operate high speed warpers that automatically wind yarn in parallel sheets onto drums.

8265-126 YARN-PLAITING-EQUIPMENT TENDER(textile) DPT:685
 GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends winding and plaiting machines to transfer yarn from cones to bobbins and to plait yarn to form skeins:
 Sets cones on creel, threads yarn through guides and feed end of winding machine and fastens end of yarn around bobbins. Starts

machine to wind yarn evenly onto slowly turning bobbins. Doffs full bobbins and places them on spindles of plaiting machine, following colour identity chart. Threads ends of yarn through guides on plaiting machine, using hook. Starts machine, feeds ends through rollers into can, and observes plaiting to detect malfunctions. Corrects irregular unwinding of bobbins by cutting off extra lengths of yarn with scissors, and tying cut ends back onto supply bobbin. Doffs full cans of plaited yarn, removes yarn from can and affixes labels to skeins. Packs skeins into box or plastic bag. Oils machines, using oil can. May condition plaited yarn in steam box.

8265-130 WARP-BEAMER HELPER(textile) DPT:675
beamer helper.
 GED: 2 SVP: 2 EC: I 5 6 7 PA: M 4

Assists 8265-122 WARP BEAMER (textile) to operate machine that winds yarn from section beams onto loom beam:
 Mounts section beams on creel of beamer, using hand truck and chain or power hoist. Helps doff and warp loom beams. Observes warp to detect breaks, and ties broken threads. Transports full and empty beams to and from storage area, using hand truck. Checks empty beams for flaws that could damage yarn, and takes faulty beams to repair area. See also definition for term title, 02-160 HELPER (any ind.).

8265-134 LOOM-WINDER TENDER(textile) DPT:685
 GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends winding units attached to looms that automatically wind yarn onto quills, transfer quills to loom shuttles, and strip bunch yarn from expended quills:
 Positions yarn packages on machine creel and threads yarn end through guides, tensions and yarn carrier. Places empty quills in feed tray of winding unit. Patrols aisles between looms to detect malfunctions, such as jammed quills, broken yarn ends, exhausted yarn packages, and unstripped quills in reject tray. Straightens or removes jammed quills, ties broken yarn ends, replaces exhausted yarn packages, strips yarn from rejected quills by hand, and places stripped quills in feed tray. Notifies machine fixer of mechanical defects.

8265-138 QUILLING-MACHINE TENDER, AUTOMATIC(textile) DPT:685
filling winder; universal-filling winder, automatic.
 GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine equipped with automatic quill loading and doffing device that winds yarn from cones or tubes onto quills for use in loom shuttle:
 Loads hopper with empty quills by hand or with electric hoist. Places supply packages on holders and ties yarn ends from packages to ends in machine. Observes winding units to detect breaks in yarn. Ties ends when breaks occur or removes quills and rethreads broken yarn ends through guides. Removes full boxes which receive wound quills ejected by machine, and separates partially filled quills.
 May deliver full quills to looms and return spent quills to quilling machine, using hand truck. May inspect quills for defects, such as broken filament and dirty or damaged yarn.

8265-142 ROVING WINDER, FIBREGLASS(syn. fibres) DPT:685
 GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine to wind strands of fibreglass sliver into a single strand of roving:
 Gathers strands of fibreglass sliver from creels to form roving, threads roving through guides, and attaches roving to take-up package or laps roving around spindle of winder to form coreless package. Starts machine and observes winding units to detect broken ends and variations in number of ends being wound into roving. Ties broken ends, and increases or decreases ends according to specifications. Observes indicator to determine when package is full. Doffs full packages from machine and packs roving into shipping containers. Weighs roving and records weight. Labels and seals containers. May wind bonded glass fibre onto tubes. May load machine with creels.

8265-146 SKEINER(textile) DPT:685
 GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that winds narrow fabrics, such as tape, into skeins:
 Draws fabric ends from box or bag and threads each end through traverse guide, and ties it to reel. Turns dial to set yardage counter that stops machine when specified yardage has been wound. Presses pedal to start machine. Laces string through and around each skein to preserve arrangement and prevent tangling. Pulls lever to contract reel, slides skeins to end of reel, removes skeins from reel, and resets yardage counter.

8265-150 SKEIN WINDER(textile) DPT:685
coner.
 GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that winds yarn from skeins onto packages, such as spools and cones:
 Hangs skeins of yarn on rack and beats out skeins to straighten yarn and facilitate winding. Inspects yarn to detect soil, colour spots, or defective twisting, and discards faulty skeins. Removes reel from machine, wraps skein of yarn around reel, and replaces reel. Cuts tie thread or card holding yarn in place, using scissors. Threads end of yarn through guides, turns it around spool or cone and starts machine. Pieces broken ends or ties new skeins with knotter. Observes winding operation, removes full yarn packages, and replaces them with empty cones or spools.
 May tend machine that winds yarn or thread from supply packages; such as, bobbins, cops, or tubes into skeins and be designated accordingly,
 Reeling-Machine Operator

8265-154 SPLICING-MACHINE TENDER(textile) DPT:685
 GED: 2 SVP: 2 EC: I 7 PA: L 4 7

Tends machine that splices ends of partially filled spools of tire cord, and winds cord from one spool to the other:
 Places spools of cord on machine spindles and pulls ends of cord through holding device under needle of sewing machine. Depresses pedal to start sewing machine that automatically sews ends of cord together, cuts thread at end of sewing cycle, and trims excess ends of cord. Removes spliced ends from holding device. Pulls lever to start spindle that winds spliced cord from one spool to another and to turn table, moving succeeding spindles into splicing position. Doffs full spools of cord as table completes circle. Threads sewing machine by mounting cones of thread on machine spindles, tying thread to thread in machine, and pulling thread through machine guides, tension spring, and needle.
 May splice ends by hand when working with fibreglass.

8265-158 SPOOLER(textile) DPT:685
spooling-machine tender.
 GED: 2 SVP: 2 EC: I PA: S 4

Tends machine that winds textile commodities; such as, bias binding, cloth, cording, piping, rickrack, or tape onto cardboard spools:
 Clamps spool onto spindle of machine. Sets yardage meter, starts machine and guides material onto revolving spool by hand. Cuts material with scissors when spool is full. Removes full spool from spindle and places in container.
 May inspect quality of product over inspecting board equipped with winding device and mirror. May wrap rolls or spools in polyethylene or paper. May weigh rolls or spools and record product data on wrapper and order card. May wind material on paperboard cards by hand or machine and be designated accordingly,
 Card-Winder, Hand

8265-162 THREAD WINDER(textile) DPT:685
 GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that winds thread onto bobbins, spools, tubes or other packages for use on sewing or stitching machines:
 Places empty package on spindle of winding unit, wraps ends of thread around take-up package and cuts off excess thread. Pushes lever to start winding unit which automatically stops when thread breaks or take-up packages become full. Pieces up broken ends, using knotter. Cuts thread with scissors and doffs full packages from winding machine. Removes and discards partially wound packages or those having winding defects from machine. Measures full package with

simple gauge, and turns screws to adjust winding tension if package is not of specified size.
May strip thread residue from bobbins to prepare them for rewinding and be designated accordingly.
Bobbin Stripper

8265-166 YARN WINDER(syn. fibres; textile) DPT:685
reeler.

GED: 2 SVP: 2 EC: I 5 7 PA: L 4 7

Tends machine that winds yarn from one package to another for use in knitting, or weaving machines:

Places supply packages, such as, cones, bobbins, spools, cakes, and pirns, on spindles or holders. Threads ends of yarn from each package through guides and tension device, and attaches them to take-up package. Observes winding units to detect breaks in yarn and ties broken ends by hand or with knoter. Stops machine or winding unit and doffs packages. Inspects yarn packages for defects, and removes loose, tangled or defective yarn by hand. Reports machine malfunctions to supervisor or repairman.

May tend machine that winds yarn through emulsion-filled trough or against paraffin disk to soften or strengthen yarn. May clean and lubricate machine. May specialize in tending a particular type of machine or equipment and be designated accordingly; for example, Balling-Machine Tender

Bobbin Winder
Redrawer(textile)

8265-170 YARN WINDER, AUTOMATIC(textile) DPT:685
spooler operator, automatic; winder, automatic.
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends automatic yarn-winding machine, equipped with knoter and winding units that move around machine, to transfer yarn from bobbins to take-up packages, such as cones, tubes, or cheeses:

Places bobbins in pockets of feeder magazine, and pulls ends of yarn over suction tube opening through which yarn is drawn into knoter. Doffs packages into hand truck when package is filled or observes automatic doffing operation. Replaces take-up packages on spindles. Taps strands of yarn around take-up package to start yarn winding. Presses pedal to stop and control speed of machine, according to flow of work. Notifies machine fixer of malfunctions.

8265-174 BATCHER(textile) DPT:686
cylinder batcher.
GED: 2 SVP: 2 EC: I 4 PA: L 4

Feeds machine that winds cloth onto perforated cylinder to prepare it for dyeing or bleaching:

Winds cloth onto reel to maximum diameter that will fit into dyeing or bleaching machine, and verifies roll diameter, using simple gauge. Removes completed roll from winding machine and places it on truck, using hoist. Pushes truck to dyeing or bleaching area, or to storage to await processing.

8265-178 LINE SPOOLER(sport. & toy) DPT:686
fishing-line spooler.
GED: 2 SVP: 2 EC: I PA: L 4

Feeds machine that winds fishing line onto spools:

Places drum of fishing line on spindle. Slides empty spools on shaft of machine. Turns setscrews to hold spools in place. Threads line through machine handle, over tension blade and onto empty spools. Presses button to start machine that winds lines onto spools automatically. Doffs full spools from machine and labels and packs them in containers.

8265-182 ROPE COILER(textile) DPT:686
rope reeler.
GED: 2 SVP: 2 EC: I 5 PA: H 4

Winds rope onto reel to form coil:

Selects reel according to size of rope, and mounts reel on spindle, using wrench. Trims loose strands from end of rope with knife, and binds end with tape or cord to prevent unraveling. Ties end of rope to reel, and starts machine by pressing button. Guides rope onto reel to ensure even winding. Stops machine and ties coil with cord to prevent

unwinding. Lowers heavy coils onto dolly or pallet, using chain hoist. Slides winding reel out of coil.

8265-186 SCRAY MAN(knit goods; textile) DPT:686
rolling-down-machine operator.
GED: 2 SVP: 2 EC: I PA: H 4

Feeds machine that unwinds cloth from rolls and discharges it into loose or folded form to facilitate further processing.

Transports roll of cloth from storage area to feed end of machine, using hand truck. Inserts metal rod through roll of cloth and lifts cloth into feeding position. Sews end of cloth roll to cloth in machine, using portable sewing machine. Positions truck under delivery roller or swing folding attachment, and starts machine, or observes operation as cloth is fed automatically into auxiliary processing equipment, such as bleaching machine. Observes cloth to detect defective seams, and resews seams to prevent ravelling.

8265-199 OTHER TEXTILE WINDING AND REELING OCCUPATIONS

This group includes textile winders and reelers, not elsewhere classified; for example, those who tend reeling machine to draw yarn or thread over gas flame and singe off lint or fuzz, remove waste from winding machine rollers, wind two or more strands of yarn parallel onto bobbin or tube preparatory to twisting, and tend automatic machines that wind, cut, label and pack embroidery thread skeins. Typical examples of occupational titles covered by this residual group definition are:

Doubling-Machine Tender(textile)
Gas-Reel Tender(textile)
Skein Winder and Packer(textile)

8267-TEXTILE WEAVING OCCUPATIONS

This unit group includes occupations concerned with interlacing two sets of yarn or thread to produce fabric. Activities include: reproducing patterns, preparing jacquard cards, drawing and tying warp, setting looms and weaving plain or figured cloth, lace, carpet or other fabrics on hand or machine looms.

Weaving Preparers 8267-110 through 8267-162

8267-110 BRAID-PATTERN SET-UP MAN(textile) DPT:280
patternman, braid.
GED: 4 SVP: 7 EC: I 5 PA: L 3 4 7

Sets up braiding machine to produce braid of specified size, style or design:

Studies guide, sample, or customer specifications to determine machine settings and size, colour, and arrangement of yarn on carrier spindles. Sets up machine for flat or tubular braid, using hand tools. Removes or replaces carrier spindles to alter crossing order of threads. Adjusts let-off motion to control closeness of threads. Replaces weights in carrier spindles or adjusts springs to control thread tension for different styles. Starts machine and examines braid to verify setup or forwards sample of braid to laboratory for testing. Records settings made for new styles or designs for future reference purposes.

8267-114 LOOM-PATTERN CHANGER(textile) DPT:380
loom changer.
GED: 4 SVP: 7 EC: I 5 7 PA: H 3 4 7

Sets up loom to weave cloth of specified pattern:

Removes warp beam, harnesses, drop wires, and reed, using hand tools. Inspects and adjusts loom components such as gears, cams, shuttle, and stop-motion devices, to determine adjustments required to change weaving pattern. Positions full warp beam, harnesses, drop wires, reed and pattern chain on loom. Levels and aligns shuttle boxes and reed. Ties group of warp ends to cloth beam. Pieces together breaks in yarn and redraws threads through harness to correct

misdraws, using reed hook. Cleans and oils loom before starting new pattern.
May start loom and examine cloth to detect defects and be designated accordingly,
Loom Starter

8267-118 HARNESS PREPARER(textile) DPT:380
harness builder.
GED: 3 SVP: 6 EC: 1 PA: M 4

Reconditions and prepares harness frames for looms:
Inspects and replaces damaged heddles, slide rods, side hooks and frame hooks. Removes or inserts heddles in harness frame, or drop wires in assembly, for change in cloth style, according to pattern. Determines number of heddles by counting or measuring with gauge. Spaces heddles in sections between heddle-rod hooks.
May clean harnesses.

8267-122 HEDDLES TIER, JACQUARD LOOM(textile) DPT:680
GED: 3 SVP: 6 EC: 1 PA: M 3 4 7

Prepares pattern control mechanism on jacquard loom, by attaching harness parts to head of loom:
Verifies harness building frame to ensure that harness will fit and hang correctly, and transports it to loom. Ties neck cords to hooks in head of loom or connects cords with wire link. Draws neck cords through metal grids to prevent tangling, ties them to harness cords and reels harness cords through coupling which has been threaded through comber board. Aligns heddle eyes, by placing leveling board on loom and retying harness cords to heddles. Brushes varnish and linseed oil on cord knots to prevent slipping.
May draw harness cords through comber board holes in specified order, gathering ends of cords in bunches and fastening heddles and lingos to other ends of cords. May place drop wires on warp threads.

8267-126 DRAWING-IN-MACHINE OPERATOR(textile) DPT:682
entering-machine operator; loom threader, machine.
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Operates machine to draw warp threads automatically from warp beam through harness assembly to prepare warp for weaving:
Bolts set-up stand containing warp beam and harness assembly to frame of drawing-in machine. Sets up machine to draw in specified pattern by attaching pattern strip to keys (slender wires) that are threaded through heddle eyes. Starts machine and observes operation of automatic threading device to ensure drawing-in according to pattern. Examines drawn warp for mistakes. Corrects misdraws and draws in selvages, using reed hook. Loops warp ends together to prevent their slipping from harness assembly and tapes ends to warp beam. Unbolts set-up stand and pushes it from frame of machine. Feeds metal strips into pattern cutting machine, and depresses button to cut holes at designated places.

8267-130 PINNING-MACHINE OPERATOR(textile) DPT:682
drop-pinning-machine operator.
GED: 3 SVP: 5 EC: 1 5 PA: M 4 7

Operates machine that positions drop-wires over warp ends according to pattern, to stop loom when thread breaks during weaving:
Positions warp in warp stand manually and combs warp ends over brush roller so ends are spread uniformly under even tension. Inserts lease rods to facilitate operation of thread separating device on unit. Bolts pinning frame into position over warp stand and sets pinning head on frame in place. Adjusts pinning head according to size and dimensions of drop-wires and pattern specifications, using hand tools. Fills magazine with drop-wires and turns hand wheel to pin first drop-wires to check unit setup. Starts machine, turns rheostat to set speed, and observes operation to detect malfunctions. Dismantles pinning head and frame and warp stand to facilitate removal of warp.

8267-134 HARNESS MAN(textile) DPT:680
GED: 3 SVP: 4 EC: 1 5 PA: H 3 4

Places new harness assembly and loom beam in loom preparatory to weaving different pattern:
Unbolts reed and drop wires, and unhooks pattern control cords from harness frames to release harness assembly in loom. Removes harness assembly and loom beam from loom by hand, or using hoist. Bolts or screws new reed and drop wires in place on loom. Positions and levels harness frames in loom and connects pattern control cords to frames. Positions loom beam on brackets by hand, or using hoist.
May assemble and place pattern chain on loom. May inspect and replace damaged heddles, slide rods, side hooks, frame hooks, and reeds, using hand tools.

8267-138 DRAWER-IN, LOOM(textile) DPT:684
drawer-in, hand; warp hanger.
GED: 3 SVP: 4 EC: 1 5 PA: L 4 7

Pulls warp yarn through loom harness and reed for weaving a specified pattern:
Selects warp ends according to colour and sequence indicated on pattern chart. Pulls yarn through drop wires, heddle eyes, and reed dents, using hook. Repairs yarn breaks on loom by tying short piece of thread to each end of broken warp yarn.
May start loom and observe operation to detect defective setup or weaving. May be designated according to type of loom or specific activity; for example,
Drawer-In, Dobby Loom
Smash Hand

8267-142 WARP-TYING-MACHINE TENDER(textile) DPT:685
tie-in man; tying-in-machine knottor.
GED: 3 SVP: 4 EC: 1 5 7 PA: L 3 4 7

Tends portable or stationary automatic warp-tying-in machine that ties warp ends from full warp beam to warp in loom in order to resume weaving without repeating drawing-in process:
Divides, combs out and straightens ends of warp from full beam and exhausted beam, and clamps ends in position in tier. Starts and observes machine operation as it picks up corresponding strands from warp beam and loom beam, ties them together and cuts off excess yarn above knot. Stops machine, corrects misalignment of warp yarn, and releases joined strands from machine. Hand-ties ends not tied by machine.
May pull warp through drop wires, harnesses, and reed so knots will not jam assembly and break when loom is started.

8267-146 PATTERN CHANGER, JACQUARD LOOMS(textile) DPT:684
jacquard-loom card changer.
GED: 2 SVP: 4 EC: 1 5 PA: M 4

Changes pattern chain on jacquard loom to alter weave design:
Cuts lacing connecting first and last cards of pattern chain on loom, using scissors. Lifts pattern chain from holder brackets onto hand truck and replaces it with new pattern chain. Positions pattern chain over card cylinder of jacquard head and ties end cards together to form endless chain. Examines pattern chains for worn cards or lacing. Cuts lacing from cards and ties in duplicate cards or new cord to replace worn parts.

8267-150 LEASE MAN(textile) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: H 3 4

Arranges yarn ends from full loom beam with corresponding warp ends in loom preparatory to tying of warp ends and resumption of weaving:
Mounts beam in brackets of loom, using hoist. Separates alternate ends of new warp and warp left in loom, according to lease arrangement, and inserts lease rod between strands so their position will be maintained. Pieces together breaks by tying thread to broken end and drawing thread through harness. Transfers loom beam to and from loom, using dolly.

8267-154 WARP TIER-IN(textile) DPT:684
twister-in.
 GED: 2 SVP: 3 EC: I 5 PA: M 3 4 7

Joins warp ends from loom beam and corresponding warp ends from loom harness by twisting ends between thumb and finger:
 Replaces lease strings in new warp with lease rods and ties rods to loom frame to support warp while twisting ends together. Turns hand wheel on loom to raise and lower harnesses to form lease in old warp, and inserts lease rods. Knots warp ends in bunches to prevent tangling and inserts knots of corresponding bunches of old and new warp through twisting hook. Selects corresponding ends from old and new warps and joins them by twisting ends between finger and thumb. Turns take-up roll at front of loom to draw warp ends through drop wires, heddles, and reed. Splices ravelled ends and draws ends through loom, using reed hook.

8267-158 LEASING-MACHINE TENDER(textile) DPT:685
 GED: 2 SVP: 3 EC: I 5 PA: L 4

Tends machine that inserts lease strings to keep warp strands separated in specified arrangement to facilitate drawing-in:
 Positions warp beam in holders, using hoist. Pulls warp ends over lease rod, combs ends to keep them even, turns rod to make warp threads taut, and adjusts weight mechanism governing tension on warp. Threads machine by placing cone of string on holder and drawing string through guides and needle. Presses button to start machine that raises and lowers warp threads and inserts string to keep threads in place and prevent tangling. Observes counter on machine to ensure specified number of warp ends are wound on beam. Removes warp ends from rod, turns warp beam to rewind ends, and secures ends with tape. Lifts warp beam from holder, using hoist.

8267-162 DRAWER-IN-LOOM HELPER(textile) DPT:687
 GED: 2 SVP: 2 EC: I PA: M 4 7

Assists in the preparation of warp for weaving, and removes and replaces loom warp beams:
 Conveys beams of warp from warper, slasher or storage to drawing-in frame, and removes completed draw-in assembly, using hand truck. Assists in positioning harness, reed and drop wires on drawing frame, and fastens ends of warp on frame with clamp bar. Places warp beam on brackets of loom, using hoist, and lays ends in position for drawing-in with reed hook. See also definition for term title, 02- 160 HELPER (any ind.)

May place drop wire on each warp thread in loom when warp thread is not drawn through eyes of drop wires. May specialize in specific type of drawing-in activity and be designated accordingly; for example,
 Beam Man
 Drop-Wire Man

Weavers

8267-182 through 8267-206

8267-182 NEEDLE-LOOM OPERATOR(textile) DPT:682
 GED: 3 SVP: 5 EC: I 5 PA: L 3 4 7

Operates loom to produce needle (punched) felt:
 Selects and bolts specified needle boards to holders, using wrenches. Turns rheostat to synchronize speed of feeder with action of needle board. Places roll of felt bat into feed holder of loom. Aligns bat on conveyor, threads end of bat through needle bed of loom and attaches it to take-up spindle. Starts machine and observes operation to detect malfunctions. Stops machine when specified length of felt is produced. Cuts finished felt from roll, using shears. Replaces worn or broken needle boards, using hand tools.
 May produce textile-backed felt.

8267-186 WEAVER, CARPET(textile) DPT:682
rug weaver.
 GED: 3 SVP: 5 EC: I 5 7 PA: L 3 4 7

Operates one or more looms equipped with pile-wire mechanism to weave carpeting:
 Inserts specified number of pile wires through shed in sequence to produce pile. Forces cop of filling into shuttle, using mallet, and inserts shuttle into loom. Places wax in holder to lubricate pile wires. Presses

button or moves lever to start loom, and observes weaving to detect exhausted filling packages, mispicks, and irregular cutting of pile. Replaces exhausted filling, inserts pile wires into missed loops, and replaces dull cutting blades. Pulls out filling to remove defects in carpeting. Pulls cord to reverse pattern card chain and card cylinder so weaving will resume at place where defect occurred, to maintain pattern continuity. May weave a specific type of carpeting and be designated accordingly; for example,
 Velvet Weaver
 Wilton Weaver

8267-190 WEAVER, CLOTH(textile) DPT:682
loom operator.
 GED: 3 SVP: 5 EC: I 5 7 PA: L 3 4 7

Operates battery of looms to weave cloth:
 Starts looms and observes cloth being woven to detect weaving defects. Removes defects in cloth by cutting and pulling out filling (cross threads). Adjusts pattern chain to resume weaving. Examines looms to determine cause of loom stoppage, such as warp, filling or harness breaks, or mechanical defects. Notifies repairman of mechanical defects. Repairs warp break by tying piece of yarn to broken end and threading yarn through drop wires, heddle eyes, and reed dents, using hook. Repairs filling breaks by pulling out broken filling and pushing shuttle through shed to insert new pick (one filling thread). May cut cloth when sufficient yardage has been woven, using scissors. May place quills or bobbins in battery or magazine of loom. May replace empty bobbins in shuttle with full ones. May tend winding units attached to looms that wind filling onto packages. May operate shuttleless looms equipped with filling-carrier needle. May operate loom to produce samples. May operate a specific type of loom or weave a particular type of product and be designated accordingly; for example,
 Dobby-Loom Weaver
 Needle-Loom Weaver
 Sample Weaver

8267-194 WEAVER, JACQUARD-LOOM(textile) DPT:682
 GED: 3 SVP: 5 EC: I 5 7 PA: L 3 4 7

Operates one or more jacquard looms to weave intricately designed cloth, or narrow fabrics such as labels and ribbon:
 Observes weaving to detect exhausted filling packages and defects in cloth resulting from worn cards in pattern chain. Replaces exhausted filling packages and notifies mechanic to change worn cards. Pulls out filling to remove defects in weaving. Mends warp break by tying piece of yarn to broken end. Pulls cord to reverse pattern chain and card cylinder so that weaving will resume at place where defect occurred to maintain pattern continuity.
 May operate loom to weave lace and be designated accordingly,
 Lace Weaver

8267-198 WEAVER, HAND(textile) DPT:684
 GED: 2 SVP: 4 EC: I PA: S 4 7

Weaves sections of loom-woven wool felt bands by hand to finish them or to join them to form continuous felt band:
 Ties selvages together to secure belt. Inspects felt bands and removes loose filling threads. Draws warp threads over and under filling threads, using hook. Cuts warp threads to specified length, using tape measure and shears, and ties or laps warp threads together to join bands. Counts number of filling and warp threads per square inch to maintain specified weave pattern. Draws new filling and warp threads through band to finish band.
 May move filling threads close together with hurdle fork, when weaving narrow belting.

8267-202 AXMINSTER-CARPET WEAVER(textile) DPT:685
 GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Tends automatic looms that weave yarn through backing material to produce axminster carpets and rugs with various coloured designs:
 Starts loom and observes weaving to detect breaks in backing yarn and weaving defects. Stops loom, knots broken ends and corrects imperfections by removing filling yarn back to point where defect began. Pushes lever to actuate chain that carries spools of yarns which are automatically woven into backing material.
 May mount spools on loom.

8267-206 BRAIDING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Tends battery of machines that braid yarn into flat or tubular narrow fabrics:

Selects yarn of correct colour and places it on machines, according to work ticket or verbal orders. Threads yarn through guides, tension rollers and braiding point. Pushes button to start machine and places yarn end into receiving can. Patrols battery of machines, observes braiding to detect breaks in yarn and ties or glues broken yarn ends. Doffs full cans or rolls of braided material from machine. Records yardage of braid on production card.
May braid packet around articles such as rope or wire.

Miscellaneous Textile Weaving Occupations
8267-226 through 8267-299

8267-226 JACQUARD-CARD CUTTER(textile) DPT:582
card cutter.
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Operates machine to punch holes in jacquard loom pattern cards following pattern diagram:
Clamps paper pattern diagram to frame on front of machine and positions blank pattern cards in guide under punches. Places automatic marker in line with first row of design marks. Depresses clutch pedal to activate punching head and depresses keys that control cutting dies, following arrangement of holes indicated on pattern diagram. Compares punched cards with pattern to detect cutting errors and pastes paper over holes punched in error. Punches holes that have been omitted from cards, using hand punch. Numbers cards in consecutive order. Duplicates set of pattern cards, using duplicating machine.

8267-230 PATTERN PUNCHER(textile) DPT:582
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Operates punching machine equipped with pantograph mechanism, to punch pattern designs in rolls of paper which control stitching operations of automatic embroidery machines:
Positions and tacks designs onto pantograph pattern board and mounts roll of paper in holder. Pulls levers to start and regulate speed of machine, and to move needles against pattern roll. Marks identifying information on punched roll, using crayon. Operates auxiliary machinery that simultaneously stitches sample design as it punches pattern in paper. Makes additional copies of design by placing punched roll in repeating machine that automatically duplicates design.

8267-234 JACQUARD-CARD LACER(textile) DPT:685
card lacer.
GED: 2 SVP: 2 EC: 1 PA: L 3 4 7

Tends machine that automatically laces jacquard pattern cards with cord to form pattern chain for use on jacquard loom:
Stacks punched pattern cards in sequence, or places cards individually on feed belt. Observes machine operation to ensure cards are spaced evenly and fed singly, according to numerical sequence, into lacing mechanism. Replenishes spools of lacing cord.
May number cards in prescribed sequence, using pencil or hand numbering device. May wire together series of cards in prescribed sequence to make pattern chain.

8267-299 OTHER TEXTILE WEAVING OCCUPATIONS

This group includes textile weavers and related workers, not elsewhere classified; for example, those who tend table-rotary warping machines; prepare narrow fabric warps; change beams, carriages and bobbins on lace-making machines; re-draw threads in loom harnesses; and insert pegs into holes of wooden pattern chains. Typical examples of occupational titles covered by this residual group definition are:

Lace-Making-Machine Preparer(textile)
Loom-Redraw Man(textile)
Peg-Boy, Dobby Looms(textile)

8271-KNITTING OCCUPATIONS

This unit group includes occupations concerned with interlacing a strand of yarn or thread in a series of connected loops to make knitted fabric and articles; such as, lace, hosiery, sweaters, and other garments. Activities include: knitting, crocheting, looping, building pattern chains and setting up, adjusting and repairing knitting and related machines.

8271-110 KNITTING-PATTERN SET-UP MAN(knit goods) DPT:380
GED: 4 SVP: 7 EC: 1 5 6 7 PA: M 3 4 6 7

Builds metal chains, consisting of multi-size pattern plates that control operation of automatic knitting machines, and arranges chains in machine to produce specified design in knitted fabric:
Obtains specifications of new knitting pattern from supervisor. Studies number, type and arrangement of stitches, number of covered strands required and sets up machine accordingly. Determines arrangement of pattern plates on chains. Connects plates to form chain, using pincers. Installs spools on machine and draws ends of strands through knitting mechanisms, using hook. Starts machine and observes operation to detect strand breaks and knitting defects. Varies threading pattern and examines sample to determine which perforations in plates are to be covered to produce specified knit. Records strand sizes and threading pattern.
May cut sample of knitted material for laboratory testing. May make minor repairs to knitting machines. May perforate blank pattern strips to correspond to needle bed spacing. May be designated according to type of machine set up,
Jacquard-Plate Maker

8271-114 KNITTING-MACHINE FIXER(knit goods) DPT:380
GED: 4 SVP: 6 EC: 1 5 6 7 PA: M 3 4 6 7

Sets up, adjusts, and repairs machines to knit hose, socks, garments and cloth according to specifications:
Sets up machine to knit specified colour, style and size of material. Inserts cams, links, buttons or needle jacks in pattern chain according to design chart. Observes operation of machine, and examines knitted material for defects, such as holes and other flaws. Adjusts machine parts, such as gears, cams and brakes. Turns setscrews and handwheel to set counter and synchronize yarn carriers, needles, dividers and sinkers. Repairs or replaces machine parts, such as switches and automatic stopping device, using hand tools. Adjusts tension on take-up mechanism to keep material taut during knitting process. Aligns and straightens needles, sinkers and dividers, using pliers. Files presser blades to required angle, using file and gauge. Cleans and lubricates machine.

8271-118 LOOPER FIXER(knit goods) DPT:380
GED: 4 SVP: 6 EC: 1 5 6 7 PA: M 3 4 6 7

Sets up, adjusts and repairs looping machines, according to specifications and knowledge of machine functions and looping process:
Examines looped hose and machine to determine adjustments or repairs needed. Replaces and aligns worn, bent or broken looper points and needles, using hand tools. Adjusts or replaces trimmer blade that trims seams at specified point. Changes pulleys and belts to increase or decrease speed of looper dial to coincide with speed of worker. Changes gears controlling automatic feeding mechanism, and adjusts width of feeding slot according to thickness of sock or hose to be looped, using hand tools. Sharpens clipper and trimmer blade, using emery wheel. Cleans and lubricates machines.

8271-122 LINKS-MACHINE KNITTER(knit goods) DPT:382
jacquard-machine operator.
GED: 3 SVP: 5 EC: 1 5 6 7 PA: M 4 6 7

Operates and adjusts battery of automatic, link-type (Jacquard) knitting machines to knit garments of specified pattern and design:
Places cards or chains that control operation of machine on machine sprockets. Places cones of yarn on machine spindle, and threads end of yarn through machine guides, tension devices and needle eyes. Adjusts stroke of yarn carrier by turning screws to set carrier stops. Pushes lever to separate needle plates of machine, and hooks stitches of knitted fabric onto needles to serve as base for knitting. Starts

machine and observes operation to detect defective knitting. Ties ends of broken yarn with weaver's knot. Separates needle plates and removes finished fabric from machine.

8271-126 HOSIERY-KNITTING-MACHINE TENDER(knit goods) DPT:585
GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Tends knitting machines that knit stockings or panty hose: Places yarn cones on spools or spindles of machine that threads yarn through guides, carrier and into needles in needle band of machine. Places welt rod in retaining notch of bar. Turns lever to lower welt bar to knitting position. Pushes yarn carrier into position, and starts machine that automatically adjusts narrowing fingers, yarn carriers and welt-bar assembly. Observes machine operation, and examines hose for knitting flaws. Clips loose threads at welt and toe of completed stocking with scissors. Ties broken threads, using knitter. Counts, bundles and labels hosiery. Replaces and aligns needles and points, using pliers. Records sizes and style number of articles completed. May clean and lubricate machine.

8271-130 CROCHETER(knit goods) DPT:682
crochet-machine operator.
GED: 3 SVP: 4 EC: I PA: L 4 7

Operates machine to crochet trimmings on knitted garments: Selects spools of yarn according to specifications, or colour of garment, and mounts spools on holder of machine. Threads needle and yarn carrier or loopers of machine. Depresses pedal to clamp edge of material under presser foot of machine. Starts machine and guides material under crocheting needle. Stops machine, turns handwheel to raise needle from garment, and cuts threads with scissors.

8271-134 LOOPER(knit goods) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: S 4 7

Operates looping machine to close opening in toe of seamless hose or socks, or join knitted garment parts: Deposits bundle of articles onto work bench. Pulls lever or depresses pedal to rotate horizontal dial containing looping points, and starts trimming and seaming mechanism. Turns dial to regulate speed of machine. Places each stitch along looping line of garment part or one side of toe over looping points, working against movement of dial. Places stitches of second garment part or side of toe over looping points holding corresponding stitches of first garment part or side of toe. Places stitches on looping points in sequence with curved collar to body of garment when looping contour collars. Removes looped articles from dial of machine. Examines looped seams for defects, and notifies machine repairman. Cuts off loose seam with scissors. Places full yarn spools on holding rack, and threads yarn into machine, using tweezers. Ties yarn from depleted spool to new one to eliminate rethreading machine. May mark defects with crayon. May be designated according to article looped; for example, Garment Looper, Hosiery Looper, Sock Looper

8271-138 SEAMLESS-HOSIERY KNITTER(knit goods) DPT:585
GED: 3 SVP: 4 EC: I 5 6 7 PA: L 4 7

Tends automatic circular machine that knits seamless hose: Places yarn cones or spools on bobbin rack or creel. Threads and ties yarn from new cone or spool to yarn on depleted one to allow continuous operation. Starts machine, observes operation and notifies mechanic of malfunctions. Removes knitted hose from machine, and cuts joining thread with scissors. Pulls hose over inspection form or over hand to examine it for defects, such as holes, runs, picks, missed stitches or faulty knitting. Classifies hose into grades, according to specifications. Counts, bundles, ties and labels hose. Weighs rejects to determine amount of waste. Records weight of hose of first, second and rejected categories. Cleans machine and work area. May measure overall length of hose, using scale and inspection form. May mark defective portion of hose with crayon. May be designated according to type of hose knitted; for example, Panty-Hose Knitter, Sock Knitter

Stocking Knitter

8271-142 SURGICAL-PAD KNITTER(knit goods) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Knits fabric from silk or synthetic fibre and elastic thread for use in surgical supports, using electrically-operated knitting machine: Marks width measurements of fabric to be knitted, and adjusts machine. Places cones of silk or synthetic fibre and elastic thread on spindles, and draws thread through guides and between needles. Presses switches or moves levers to activate machine and knit fabric. Inspects fabric during knitting to ensure conformance to specifications. May tend hand-and-foot operated machine, depressing pedal of carrier, laying elastic thread between stitches, passing thread through each end of stitch, and knotting thread with darning needle to prevent unravelling.

8271-146 WARP-KNITTING-MACHINE TENDER(knit goods) DPT:685
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Tends battery of warp-knitting-machines to knit fabrics for outer or under garments, and patrols area to inspect cloth: Attaches new warp to corresponding threads of old warp by hand-weaving new threads over and under lease rods, threading yarn through guides with hook, and tying warp ends with fingers. Cuts excess thread from knots, using scissors. Starts machine. Patrols knitting area, and inspects cloth for defects, such as holes, breaks, discolorations and stop marks. Stops machine, ties broken yarn, and replaces broken or damaged needles, using hand tools. Reports unusual defects. May doff rolls of cloth. May keep record of defects. May specialize in patrolling knitting area to inspect cloth and be designated accordingly, Patroller

8271-150 KNITTER, FULL-FASHIONED GARMENT(knit goods) DPT:685
transfer knitter.
GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Tends knitting machine that increases and decreases stitches at designated places to knit shaped garment parts onto ribbed cuffs or waist bands: Installs spools on machine, and threads yarn through guides, stop-motion devices, and yarn carriers, using hook. Positions transfer bar over needle bed of machine, pushes stitches from transfer points onto machine needles, and removes transfer bar. Pulls ribbed part up to needle eyes and attaches outer edge of rib to hooked bar of take-up roll. Starts machine that automatically increases stitches to knit garment part. Turns handle or presses pedal to activate narrowing fingers that cause needles to decrease stitches to shape portions, such as shoulders and neck. Replaces defective needles, using hand tools. Notifies mechanic of machine malfunction.

8271-154 NET-KNITTING-MACHINE OPERATOR(knit goods; textile) DPT:682
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Operates knitting machine that makes netting from twine: Adjusts twine guides and tension rollers to conform with width, length and mesh specification, using hand tools and rule. Places spools of twine on machine creel, and inserts wound bobbins in shuttle containers. Threads twine from bobbins and spools through guides and rollers. Starts machine and guides finished netting through drying oven to cylindrical containers. Stops machine to tie ends of broken twine and to replace empty spools and bobbins. Winds twine on new bobbins. Measures netting shrinkage, using rule. May inspect net and correct defects. May dye nets, according to specification, by guiding netting through dye tank, drying oven and into containers.

8271-158 KNITTING-MACHINE TENDER(knit goods) DPT:665
knitter.
GED: 2 SVP: 3 EC: I 5 7 PA M 4 5 7

Tends battery of machines that knit fabrics, garment parts or other articles from yarn, such as cotton, wool, nylon or rayon:
Installs spools on machine and ties end of yarn to strand in machine, or threads yarn through guides, tension springs, stop motion devices and carrier or needles, using hook. Starts machine and laps end of knitted goods around take-up roller. Observes knitting for defects, such as yarn breaks and exhausted packages. Notifies mechanic of unusual defects. Cuts knitted fabric with scissors, and signals helper to doff roll of cloth from machine. Records number and weight of rolls and attaches slip to roll. Cleans machines and work area.
May replace defective needles, using hand tools. May specialize in tending a particular type of machine, and be designated accordingly; for example,
Circular Knitter
Flat Knitter
Jersey Knitter

8271-162 THREADER(knit goods) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Assembles bobbins and threads yarn through needles of machines to knit lace, binding and decorative goods:
Removes paper covering from warp spools mounted on machine, or places yarn-filled bobbin in carriage. Turns spools or bobbins to align yarn ends. Cuts tape holding warp threads at intervals, using scissors. Loops bobbin threads over hooked needle, and draws thread through carriage eye, or loops yarn ends over sley points (guides), and pulls them to front of machine. Draws yarn through open hooks of needles or guides, using threader and dobber, and ties ends in bunches to facilitate handling. Sorts and separates carriages according to spring strength to ensure adequate fitting in machine.

8271-166 CHAINMAN(knit goods) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Assembles pattern chains that control pattern-forming motion of guide bars on knitting machines:
Selects pattern-chain links according to pattern diagram. Marks links according to sequence in chain, using square and scribe. Holds link against electric grinder to bevel end down to marking so link will smoothly adjust guide bars. Assembles links to form pattern chain by inserting connecting pins through holes in links.

8271-170 TOPPER(knit goods) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: S 4 7

Separates garment parts, loops and cuts stitches, and unravels rows of fabric:
Loops stitches of knitted garment parts on joints of transfer bar to facilitate transfer of garment part to needle of looping machine. Cuts several stitches and unravels rows of surplus fabric between points and edge of fabric to separate garment parts. Piles garment parts according to size and colour.
May assist other workers to doff machine.

8271-174 KNITTING-MACHINE-TENDER HELPER(knit goods) DPT:686
knitter helper.
GED: 2 SVP: 2 EC: I 5 7 PA: M 4 7

Helps other worker in tending battery of machines that knit fabrics, garment parts, or other articles from yarn; such as, cotton, wool, nylon or rayon:
Installs spools on machine, and ties yarn ends from supply cones to ends on exhausted cones. Cuts knitted cloth with shears, and doffs cloth rolls from machine, using chain hoist. Trucks cloth rolls from knitting area. Cleans machines and work area. See also definition for term title, 02-160 HELPER (any ind.).

8271-199 OTHER KNITTERS

This group includes knitters, not elsewhere classified; for example, those who smooth out wrinkles in knitted garments; stitch garment parts together, trim articles with decorative stitches; crochet collar, pockets, waist band and other trimming parts; finish button holes; and change knitting machine trough pads.

Typical examples of occupational titles covered by this residual group definition are:

Former(knit goods)
Hand Crocheter(knit goods)
Pad Changer(knit goods)

8273-TEXTILE BLEACHING AND DYEING OCCUPATIONS

This unit group includes occupations concerned with bleaching and dyeing cloth, thread, yarn or other textile products. Activities include: operating or tending equipment to singe, remove sizing, scour, wash, bleach, dye and rinse material. Dyeing occupations concerned with changing the colour of individual items of wearing apparel or textile furnishings are classified in Minor Group 616, APPAREL AND FURNISHINGS SERVICE OCCUPATIONS.

8273-110 MASTER DYER(knit goods; textile) DPT:181
head dyer.
GED: 5 SVP: 7 EC: I PA: L 4 7

Prepares dye formulas to conform with customer and plant specifications:

Compares customer samples with standard colour chart to identify colour. Selects formula sheet which corresponds with standard colour chart, or selects formula closest to desired shade and adjusts it as necessary to produce required properties and shade at lowest cost. Schedules production according to colours required, processes used, and type of goods to ensure efficient production in dyeing department. Develops new colours and dyes, following standard laboratory techniques. Requisitions dyestuffs and materials needed for each order.

8273-114 DYE-RANGE OPERATOR(textile) DPT:582
continuous-dyeing-machine operator.
GED: 3 SVP: 5 EC: I 3 4 PA: M 4 7

Operates dye-range machine consisting of pre-dyer, dye pad and hot flue to condition, dye and dry fabric in continuous process:

Mounts and removes rolls of fabric at feed and delivery ends of machine, using power hoist. Sews cloth end to lead cloth in machine. Turns handwheel to adjust cloth-guides. Adds preweighed dye solution to mixing tank on unit and mixes with water. Turns valves to admit dye to dye pad from mixing tank. Sets thermostats to control temperature of dye in padder and hot air in drying box. Starts machines, observes control panel and turns knobs to synchronize individual motor speeds. Reads yardage clock and records production, lot numbers, and running time. Turns valve to drain dye from pad and cleans padder and steambox with water hose.

8273-118 DYE-TUB TENDER(garment & fabric; knit goods) DPT:685
GED: 2 SVP: 4 EC: I 4 6 7 PA: M 3 4 7

Tends machines to impart desired colour and finish to textile products and knit goods, such as hats, sweaters and hosiery:

Turns valves to admit specified quantity of water and steam into machine. Pours dye, cleaning agents or finishing chemicals into machine, using pail. Turns thermostat and timing device to set temperature and dyeing time according to specifications. Places items in machine or compartments of machine and pushes button to start agitator, or revolving drum. Examines materials from each dye or finish lot and compares with standard to detect variations in colour or finish. Adds additional quantities of dye or finishing chemicals according to instructions, if standard is not matched. Drains solution from machine at end of dyeing or finishing cycle. Places dyed or

finished products in handtruck to await further processing and labels each lot.

May tend rinsing, extracting and drying equipment. May specialize in dyeing a particular item and be designated accordingly; for example, Hat Dyer(garment & fabric)

8273-122 BLEACHER(knit goods; textile) DPT:685
bleaching-machine operator.
GED: 2 SVP: 3 EC: I 4 PA: M 4

Tends machine that bleaches materials, such as textile fibres, yarn, cloth or knit goods, to lighten their colour:

Turns valve to fill machine tank with water to specified level. Measures and adds specified amounts of bleaching chemicals, or turns valves to admit bleaching solution to tank, and starts machine to mix solution with water. Places material on rack, in bags, or onto brackets at feed end of machine. Loads or feeds material into machine by hand or uses hoist to place loaded rack in machine. Starts machine that circulates solution through material or moves material through solution in machine. Opens valves to drain solution from tank on completion of cycle. Unloads machine, by hand or using hoist, and forwards material to next processing stage.

May tend machines that wash textile materials. May perform routine chemical tests on bleaching solution to determine its strength. May bleach a particular type of material and be designated accordingly; for example,

Cloth Bleacher(textile)

Yarn Bleacher(textile)

8273-126 CLOTH DYER(textile) DPT:685
dyeing-machine tender; dye-vat tender; fabric dyer.
GED: 2 SVP: 3 EC: I 3 4 7 PA: L 4 7

Tends machine that treats cloth with dyes to impart required colour: Turns valve to fill tank with water and adds specified quantity of dye or turns valve to release premixed dye solution into dye machine. Sets thermostat to control temperature of dye solution. Adds designated finishing chemicals to solution, using scoop. Mounts roll of cloth on machine, using power hoist and passes cloth under guide rollers in tank to take-up roll. Starts machine that passes and repasses cloth through dye bath until desired colour is obtained. Cuts sample from cloth after specified time, for colour testing. Opens valve to drain solution from machine. Doffs roll of dyed cloth from machine for further processing.

May sew ends of cloth together to form continuous length, using sewing machine. May tend machines that rinse surplus dye from cloth, or dry cloth. May tend machine that washes, dyes and rinses in automatic cycles. May tend a particular type of dyeing equipment and be designated accordingly; for example,

Dye-Beck Tender

Dye-Reel Tender

Jigger

Padding-Machine Tender

8273-130 KIER-BOILER TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I 4 7 PA: L 4

Tends kier boiler to bleach greige (untreated) cloth and remove impurities, preparatory to further processing:

Lifts roll of greige cloth with overhead crane and lowers into open kier (vat). Clamps top on kier, using hand tools. Adjusts valves to circulate alkali solution and steam through kier. Sets automatic time and temperature controls, according to instructions. Opens valves to reduce steam pressure, drain solution and flush kier with water. Removes bleached cloth from kier for transportation to drying unit or storage area.

May mix alkali solution in agitator tank, using specified amounts of ingredients, such as soda ash and resin soap.

8273-134 RAW-STOCK DYER(textile) DPT:685
batch dyer.
GED: 2 SVP: 3 EC: I 4 7 PA: H 4

Tends raw-stock-dyeing or bleaching machine to dye or bleach wool, cotton, or synthetic fibre:

Pours pre-measured quantities of dye, bleach or other chemicals into tank. Places rack in machine to support stock during processing, using power hoist. Opens bales and dumps or packs armfuls of loose fibre into machine. Closes machine lid and tightens lugs, using hand tools.

Turns valves to admit steam and water into tank and regulates temperature and steam pressure according to specified gauge readings. Starts pump to circulate solution through stock. Removes rack of fibre after processing cycle, using power hoist.

May tend dyeing kettle equipped with perforated pipe racks to hold and dye tops (combed fibres wound into ball-form) and be designated accordingly; for example,

Top Dyer

8273-138 SINGEING-AND-BOILING-MACHINE DPT:685
TENDER(textile)
GED: 2 SVP: 3 EC: I 3 4 PA: L 4

Tends machine that singes and boils greige cloth to remove substances, such as nap, lint, dirt, natural gums, dye and wax:

Sews end of cloth roll to cloth in machine, using sewing machine. Lights gas burners and regulates thermostat to maintain specified temperature of singer. Turns valves to admit caustic solution and steam to vats. Regulates controls to adjust temperature of vats according to standards established for type of cloth being processed. Starts cloth winding from roll past gas singeing flame and onto take-up beams mounted in a series of boil-off and wash-boxes. Threads cloth from terminal wash-box through squeeze rollers and swing-folding attachment. Maintains production records.

May tend auxiliary equipment to dry greige cloth. May tend machine that boils yarn in chemicals to remove foreign matter. May tend equipment that only boils or singes cloth and be designated accordingly; for example,

Boil-Off-Machine Tender

Singeing-Machine Tender

8273-142 TEXTILE WASHER(knit goods; textile) DPT:685
washing-machine tender.
GED: 2 SVP: 3 EC: I 4 PA: M 4

Tends equipment that washes textile materials, such as fibres, yarn, cloth or knit goods to remove impurities or excess dyes and chemicals:

Turns valves to fill washing tanks with water and to control steam for heating solution. Adds detergents and chemicals to tanks following specifications, using pail, ladle or scoop. Places textile material in washing machine by hand, or sews material to lead cloth in machine, using portable sewing machine. Presses button to start machine that circulates wash water through material or starts movement of material through machine for specified period of time. Turns valve to drain solution from tanks, re-fills tanks and repeats cycle, using rinse water. Drains water from machine tanks and unloads materials into hand-truck, manually, or using power reel.

May remove excess moisture from textile material, using extractors or wringers. May turn handwheel to set width guides preparatory to processing cloth in flat open form. May process cloth in rope form to prevent stretching of fabric. May be concerned with a particular type of machine or material and be designated accordingly; for example,

Cloth Washer

Open-Soaper Tender

Wool-Washing-Machine Tender

8273-146 YARN DYER(textile) DPT:685
dyeing-machine tender, yarn; kettle tender, yarn.
GED: 2 SVP: 3 EC: I 4 PA: M 4 7

Tends machines that dye or bleach skeins of yarn or yarn wound on perforated beams, rack or package stand:

Loads package stand, rack or beam of yarn into machine, using power hoist. Turns valves to fill machine container with water and adds specified quantities of dye or bleach to solution. Closes lid and secures fastening devices by hand or using wrench. Adjusts rheostat to control temperature of solution according to specifications. Presses button that starts machine and agitates yarn or solution, to circulate dye or bleach through yarn. Adds processing chemicals during dyeing or bleaching cycle as specified. Withdraws sample of yarn after prescribed time for comparison with standard colour sample. Continues or adjusts treatment as instructed. Turns valve to drain solution from container at completion of dyeing cycle and circulates rinse water through yarn. Opens container lid and removes package stand, rack or beam from machine and forwards yarn to next processing stage.

May dye particular type of yarn package and be designated accordingly; for example,

Beam Dyer

Skein Dyer

Warp Dyer

8273-150 RINSER(knit goods; textile) DPT:685
soaking-machine operator.
 GED: 2 SVP: 2 EC: 1 4 PA: M 4

Tends machines that soak, preshrink and rinse cloth before dyeing or finishing:

Loops cloth over winding reels and threads it through series of guides, so that cloth hangs on reels in folds. Laps end of cloth around take-up roll and turns valves to fill machine tank with water. Starts reel rotating to rinse cloth and to wind it into soaking tanks and onto take-up reel. Threads end of cloth between squeeze rolls to wring water from tubing. Laps end of material around overhead- feed roll for transportation to drying room.

8273-154 TWINE DYER(textile) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that dyes twine:

Creels (loads) machine with bobbins of twine. Threads ends of twine through guides, dividing racks, squeeze rollers, and dye tanks. Ties ends of twine to rope and starts machine to draw rope and attached twine through finishing rollers. Stops machine and attaches twine ends to take-up bobbins. Restarts machine and observes operation to detect malfunctions, such as tangled or broken twine. Doffs bobbins of dyed twine and places them on drying rack.
 May pour dye from barrel into dye tanks of machine.

8273-199 OTHER TEXTILE BLEACHING AND DYEING OCCUPATIONS

This group includes textile bleachers and dyers, not elsewhere classified; for example, those who tend machines that dye fibre glass yarn under pressure. A typical example of an occupational title covered by this residual group definition is:
 Glass-Fibre Dyer(syn. fibres)

8275-TEXTILE FINISHING AND CALENDERING OCCUPATIONS

This unit group includes occupations concerned with operating and tending textile-finishing machines. Activities include: calendering, fulling, shrinking, stretching, drying, waterproofing, aging, napping, mercerizing and coating. Occupations concerned with pressing garments and textiles are classified in Unit Group 6165, PRESSING OCCUPATIONS.

8275-110 FIXER, BOARDING ROOM(knit goods) DPT:682
 GED: 4 SVP: 6 EC: 1 PA: L 4

Controls equipment used to shape and dry hose:

Turns valves to admit steam to drying cabinet or boarding forms. Observes gauges during boarding process, and turns valves to increase or decrease steam pressure and temperature of drying chamber or boarding forms, according to type of hose being boarded. Adjusts or replaces malfunctioning, worn, or broken parts, such as linkages, valves, conveyors, or boarding forms, using hand tools. Cleans equipment, using air-hose.

May change toe boards or boarding forms according to size of hose being processed.

8275-114 COATING-MACHINE OPERATOR(textile) DPT:662
rubber and vinyl coater.
 GED: 3 SVP: 5 EC: 1 PA: M 4 7

Operates machine to coat fabric with chemical compounds and to dry coating:

Sews end of fabric to cloth in machine, using sewing machine, or threads end of fabric through rolls of machine. Starts pump to admit solution into trough, or pours compound on cloth directly in front of doctor blade and spreads compound evenly with paddle. Starts machine, watches for skewed cloth, and pushes buttons to control

speed of rollers that hold back or advance selvages to straighten cloth. Measures fabric coming from tenter frame to determine if it has been stretched and dried to specific width, and adjusts distance between tenter chains, accordingly. Regulates speed of machine and temperature of drying cabinet, and adjusts doctor blade according to pattern. Tests viscosity of solution with viscometer, and adds ingredients as required to bring solution to specified viscosity. Directs workers in placing rolls of materials onto feed holder of machine, doffing trucks of dry cloth at swing-folding attachment, mixing coating solution and cleaning machine parts.

May operate coating machine equipped with embossing unit and be designated accordingly; for example,
 Coating-and-Embossing-Unit Operator

8275-118 FINISHING-MACHINE OPERATOR(knit goods; textile) DPT:582
finisher.

GED: 3 SVP: 4 EC: 1 5 PA: M 4 7

Operates machines that apply finishing solutions, such as size, starch, water repellent, wrinkle resistant or other chemical finishes to fabrics and other materials:

Measures and mixes ingredients for finishing solution in storage vat or can, following formula. Turns valve to admit solution to trough of machine, or pours or dips solution from can into trough. Ties, pins or machine sews ends of material to material in machine, or threads material through rollers, onto tenting frames and drying cans or ovens. Feels finished material to determine degree of dryness, and manipulates controls to regulate speed at which material passes through machine. Observes material finish to determine conformance to standards, and turns handwheel or replaces weights to regulate pressure of rollers or drying cans. Maintains production records on type and quality of material processed. Makes minor adjustments and repairs to machine, using hand tools.

May transport fabrics to and from machine, using hand truck. May work on a particular type of equipment and be designated accordingly; for example,
 Cloth-Finishing-Range Operator
 Mangle Tender

8275-122 PILE-FABRIC FINISHER(textile) DPT:682
 GED: 3 SVP: 4 EC: 1 5 PA: L 4

Operates machine that applies finishing solution to pile, brushes solution into pile and buffs pile to impart smooth and lustrous finish:

Pushes truck of cloth into feeding position and sews end of cloth to leader cloth, using portable sewing machine. Pours solution into trough, and turns steam valve to heat pick-up roller and mix solution. Starts machine and observes cloth to detect inadequate saturation, brushing and buffing as cloth is drawn over solution pick-up roller, between series of brushing rollers and cylinder and under felt buffing roller. Controls quantity of solution transferred to cloth pile, by turning setscrews to lower or raise guide that presses cloth against solution pick-up roller. Moves lever to adjust position of brushing rollers and buffing roller, or to release rollers and disengage tangled or torn cloth. Ravels seams to separate cloth lots, and doffs cloth from machine. Transports rolls to wrapping scaffold, using air-hoist, and wraps rolls with polyethylene or paper, for storage.

8275-126 AUTOCLAVE TENDER(textile) DPT:685
 GED: 3 SVP: 3 EC: 1 PA: M 4

Tends autoclave to preshrink, preset, or age materials, such as yarn and fabrics:

Pushes racks or frames of material inside autoclave and clamps door shut. Regulates time and temperature controls according to written instructions. Presses buttons to start pump to create vacuum in autoclave chamber, and turns valves to admit steam. Observes gauges and pneumatic controller graphs to ascertain that specified pressure, temperature, and vacuum are maintained to ensure conditioning of material, according to specifications, and prevent collapse of autoclave. Closes valves and starts pump to remove moisture at end of steaming cycle. Opens door and removes processed material from autoclave.

May wrap material and paper in layers around rack or frame prior to processing.

8275-130 YARN CONDITIONER(textile) DPT:585
conditioner tender; steam-cabinet operator.
GED: 2 SVP: 3 EC: I 4 5 PA: M 4 7

Tends steam cabinet that conditions (sets twist or preshrinks) yarn with steam:

Loads trays or racks of yarn on hand truck. Weighs hand truck to determine tare weight of unconditioned yarn, and pushes yarn into machine. Regulates hand controls to set time, temperature, and humidity, according to specifications. Turns valve to admit steam into cabinet. Removes yarn from conditioner at end of steaming cycle. Reweighs yarn to determine weight increase derived from conditioning. Records data, such as processing temperature, weights, and type of yarn on work ticket. Inspects yarn for twist set and shrinkage. May separate yarn according to size and grade. May condition garments with steam and be designated accordingly; for example, Garment Conditioner
Overcoat-Conditioner

8275-134 AGER TENDER(textile) DPT:685
aging-machine operator; tower-ager tender.
GED: 2 SVP: 3 EC: I 7 PA: M 4 7

Tends machine that passes printed or dyed cloth through steam and chemical fumes to develop and fix colours:

Measures out chemicals and mixes them with water in tank. Trucks cloth to feed-end of ager, and positions empty truck under folding device at finishing end of machine. Sews end of cloth to lead cloth in machine, using portable sewing machine. Observes cloth entering machine to detect defects, such as holes and grease spots. Examines cloth emerging from machine to detect uneven or incorrect colour shade and colour runs, indicating incorrect adjustment of steam and chemical flow. Turns valves to make adjustments in cloth processing as instructed.

May tend machine that only steams cloth.

8275-138 CALENDER-MACHINE TENDER(asbestos & min. wool; textile) DPT:685
lusterer; roll-calender tender.
GED: 2 SVP: 3 EC: I PA: M 4

Tends machine that imparts lustre and finish to materials, such as cloth, felt, narrow fabrics, or plastic impregnated fabrics by pressure of cold or heated rolls:

Places roll of material on brackets of machine, using hoist, and threads end of material between rollers and onto take-up beam. Pulls lever to lower rollers and apply pressure to material. Turns rheostat to set temperature according to specifications for type of material being processed. Turns handwheel to adjust entering guides, according to width of material, and to regulate tension of material. Starts machine and observes passage of material through rollers to detect malfunctions. Feels material at discharge end of machine to determine whether desired finish has been attained. Reprocesses material that does not meet specifications.

May raise rollers to allow seams or clips to pass. May sew end of new cloth to leader cloth. May process specific type of material and be designated accordingly; for example, Asbestos-Cloth Calenderer(asbestos & min. wool)
Narrow-Fabrics Calenderer(textile)

8275-142 CAN TENDER(textile) DPT:685
dry-cans operator.
GED: 2 SVP: 3 EC: I 5 PA: L 4

Tends drying cans that dry fabric following processes, such as dyeing, washing, de-sizing, or finishing:

Turns valve to admit steam into revolving cans that dry fabric as it is drawn around and between them. Observes temperature gauges to ensure cans do not overheat and damage fabric. Turns rheostat or moves lever to regulate speed of revolving cans to adjust drying time according to fabric thickness. Turns wheel or pulls lever to regulate fabric tension according to type or style of fabric. Verifies drying and finishing process visually and by feeling fabric at discharge end of machine.

May sew ends of fabric together where the drying function is not part of a continuous process. May tend drying cans that process carpeting.

8275-146 CARBONIZER TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I 7 PA: M 4

Tends machines that reduce, char, and wash vegetable matter from woollen cloth:

Pushes truck into feed position, and sews end of cloth to lead cloth in machine, using portable sewing machine. Adjusts width guides and tension devices manually. Turns valves to admit water and acid to carbonizing and wet-out tanks. Sets thermostat to control temperature in charring unit. Presses button to start machine, and turns dials to regulate cloth speed, according to type of fabric. Observes recording devices to determine strength of acid solution, and admits water or acid to carbonizing tank to maintain uniform strength of carbonizing agent. Feeds end of dried cloth from carbonizer into crushing machine. Disentangles tear-outs, and ravel sewn ends to doff crushed cloth into truck. Feeds cloth into fulling machine to wash carbonized vegetable matter from cloth. Laps end of cloth over reel at end of cycle and starts reel to transfer cloth from machine to handtruck.

May tend machines that reduce and char vegetable matter from raw wool stock. May immerse felt in acid solution to remove vegetable matter and be designated accordingly; for example, Felt Carbonizer

8275-150 CARPET-DRYING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that dries spools of dyed carpeting:

Positions spools of wet material on machine brackets, and sews end to lead cloth in machine, using portable sewing machine. Turns switches to regulate speed of intake and exhaust blowers, and temperature of infrared or gas heat units. Starts machine and observes carpet as it emerges from discharge end and winds onto spools or metal rods, to determine if drying meets specifications. Observes gauges on control panel, and moves switches to maintain steam pressure, temperature and speed of machine.

May set width of pin tenter-frame that carries carpet through dryer and observe feed-in to ensure tenter is functioning correctly.

8275-154 CLOTH SHRINKER(knit goods; textile) DPT:685
cloth sponger; shrinking-machine operator.
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends machine that shrinks cloth:

Mounts roll of cloth on machine, using chain hoist, or positions truck at feed end of machine. Sews cloth end to end in machine or threads end of cloth through tension bars, guide and feed rollers, through water vat and over steam pan. Turns handwheels to place guides and set shrinking belt according to width of cloth. Regulates controls on panelboard to start motors and rollers and govern speed of machine. Observes flow of cloth through machine and onto take-up roll to detect processing irregularities. Turns valves and moves switch control to regulate flow of water or steam.

May doff rolls of cloth from machine or position hand truck under swing-fold device. May operate particular type of processing machine and be designated accordingly.

8275-158 DRYING-MACHINE TENDER(garment & fabric; knit goods; textile) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4

Tends machine that dries cloth without tension to give cloth a soft hand (feel), or to cure finish applied to cloth:

Positions trucks of cloth at feed end of machine, or feeds cloth directly from washer. Laps end of cloth over feed roller or ties or sews end of cloth to lead cloth in machine. Turns knob to set temperature control gauge according to instructions. Moves lever to start machine and regulate speed of cloth through drying cabinet. Straightens cloth by hand as it enters machine to remove wrinkles. Doffs rolls of dried cloth at delivery end of machine, or observes automatic swing-fold operation. Cleans machine, using vacuum or air hose.

May operate particular type of machine and be designated accordingly,

Loop-Drier Operator(knit goods; textile)

8275-162 FULLER(textile) DPT:685
fulling-mill operator.
 GED: 2 SVP: 3 EC: 1 4 5 PA: M 4 7

Tends fulling-mill to shrink and interlock fibres of woollen cloth by application of moisture, heat and pressure:
 Threads cloth through tension guides or rollers, which control shrinkage in width, between pressure rollers, and through trap which controls shrinkage in length. Sews ends of cloth together to form endless rope, using sewing machine. Turns handwheel to regulate pressure on tension guides, and sets air pressure gauge on rollers and trap, following specifications for style of cloth. Turns valves to admit water and soap solution to tub through which cloth passes. Measures distances between markings on cloth to determine when specified shrinkage has been attained. Ravels seam connecting ends of cloth, and guides cloth over reel into hand truck.
 May tend soaping machine to impregnate cloth with soap solution before shrinking.

8275-166 MERCERIZER(textile) DPT:685
cloth-mercerizer operator.
 GED: 2 SVP: 3 EC: 1 4 PA: M 4 7

Tends machine that imparts silk-like lustre to cotton cloth and increases strength of cloth fibres:
 Mounts roll of cloth on machine, and sews end to lead cloth in machine, using portable sewing machine. Opens valve to admit caustic solution into vats and turns handwheel to adjust tenter frame clips to maintain tension on cloth, and prevent shrinkage as cloth passes through spray of caustic water. Regulates thermostat to control temperature of caustic bath. Starts machine and observes flow of cloth through machine units to detect holes or tears in cloth. Observes recording devices on panelboard, and adjusts controls to synchronize motor speeds of machine units.

8275-170 NAPPER TENDER(knit goods; syn. fibres; textile) DPT:685
brushing operator; fleecing-machine operator.
 GED: 2 SVP: 3 EC: 1 7 PA: M 4 7

Tends machine that raises fibres on surface of cloth to give cloth soft, fluffy texture:
 Positions truck of folded cloth at entry end of machine. Sews cloth to lead-cloth in napper machine, with surface to be napped contacting napping cylinder. Feeds each lot of cloth through machine for specified number of nappings. Examines and feels cloth to ensure that finish conforms to standards. Ravels seams between cloth lots to allow cloth to fall into cart. Marks lot numbers on cloth with crayon. Turns handwheels to change machine speed and adjust cloth tension according to texture of cloth.
 May specialize in napping a particular type of fabric and be designated accordingly,
 Silk Brusher(textile)

8275-174 SPRAYING-MACHINE TENDER(textile) DPT:685
 GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that sprays and dries finish on felt or fabric:
 Positions roll of material in feed holder of machine, and threads end through rollers. Fills spray gun reservoir with specified dye or latex, and opens air valve to adjust spray on material. Turns knob to admit steam to drying rolls, moves lever to set speed of machine, and starts machine. Observes processing and regulates temperature of drying rolls and blowers that direct hot air over material, as required.
 May sew end of material to piece already in machine, using sewing machine.

8275-178 STEAMER TENDER(textile) DPT:685
cloth steamer.
 GED: 2 SVP: 3 EC: 1 3 4 PA: M 4

Tends pressurized, steam-heated chambers to age dyed or printed cloth:
 Winds cloth loosely around large beam, and places beam on carriage, or lifts reel of cloth onto rack, using power hoist. Pushes cloth carriages or racks into steamer, and bolts door, using wrench. Turns valves to admit steam into steam chamber. Adjusts temperature and

pressure gauges according to specifications. Pulls carriages or racks from steamer after specified time.
 May tend miniature steamer to steam samples to determine length of cycle in large steamer, and be designated accordingly,
 Patch-Steamer Tender

8275-182 TAR-MACHINE TENDER(textile) DPT:685
tarring-machine operator.
 GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machine that waterproofs twine by coating it with tar:
 Pours tar into reservoir, using container. Creels machine with bobbins of twine. Threads ends of twine through tar bath and squeezers and attaches ends to take-up bobbins. Starts machine and observes operation to detect malfunctions, such as broken and tangled twine, and to ensure that specified tension and amount of tar are applied to twine. Doffs tarred bobbins of twine and places them on rack to dry.

8275-186 YARN MERCERIZER(textile) DPT:685
mercerizer-machine operator.
 GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends machine that mercerizes yarn in skein form:
 Shakes skeins of yarn to remove tangles, and loads them on rack or roller arms of machine. Starts machine that puts yarn under tension, lowers rack into caustic solution for specified period or passes skeins through solution, and rinses them. Tests caustic solution, using hydrometer, and turns valve to admit soda or water to maintain uniform strength of solution, as specified. Removes skeins from mercerizer, and hangs them on rack for neutralizing. Turns valves to start spray of water and neutralizing solution. Determines when neutralization has taken place, using litmus paper. Weighs and mixes caustic and neutralizing solutions, according to formula.
 May tend equipment to extract moisture from yarn and dry yarn in steam chamber.

8275-190 BOARDER(knit goods) DPT:685
boarding-machine tender.
 GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that shapes and dries hose on forms before or after dyeing process:
 Pulls hose over leg-shaped forms of machine, aligns toe and heel with form, and pulls welt down to specified point on forms. Presses button or depresses pedal to start conveyor that carries filled set of forms into drying chamber, and removes finished set from chamber. Strips shaped hose from boarding forms. Changes toe boards on boarding forms, according to size of hose being processed, using key.
 May feed machine equipped with automatic hose stripping mechanism. May turn valves to increase or decrease steam pressure and temperature of drying chamber.

8275-194 BREAKER TENDER(textile) DPT:685
 GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends machine that passes dyed or printed cloth between knobbed rollers to remove stiffness and give cloth desired hand (texture):
 Slides cloth roll onto machine brackets. Threads cloth over and under alternate rollers that are covered with metal knobs or wavy ridges. Starts machine and observes operation to detect binding of cloth or machine malfunction. Moves lever to regulate speed of machine according to type of cloth being processed. Pushes lever to reverse machine to run cloth through several times until texture meets specifications. Doffs roll of processed cloth from machine by hand.

8275-198 CONTINUOUS-PRESS TENDER(textile) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that presses cloth to remove wrinkles:
 Sews end of cloth to leader cloth in machine, using portable sewing machine. Turns wheel to adjust guides according to width of cloth, and turns thumbscrew to regulate pressure of steam jacket for type of cloth and finish specified. Starts machine and observes feeding of cloth between roll and steam-heated jacket to detect and remove foreign matter. Stops machine and cuts out damaged cloth, using shears. Places empty truck under swing-spread roller that controls width of finished cloth, and moves full truck to next operation.
 May dampen cloth before pressing.

8275-202 CRABBING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I 4 5 PA: L 4

Tends equipment that permanently fixes warp and filling threads in woolen and worsted cloth to prevent uneven shrinkage during subsequent processing:

Sews end of cloth to leader, using portable sewing machine, or threads cloth between rollers and through vats of machine. Wraps end of cloth around take-up roll or guides end through swing-fold attachment and onto hand truck. Turns valves to admit water to vats and to regulate temperature controls according to specifications. Turns setscrews to adjust pressure of top roller. Starts machine, and turns knobs to regulate flow of cloth through vats of boiling water.

8275-206 DECATING-MACHINE TENDER(garment & fabric; knit goods; textile) DPT:685
decator operator; steam sponger.
GED: 2 SVP: 2 EC: I 4 5 PA: M 4

Tends machine that circulates steam through cloth, wound on perforated cylinder, to develop lustre, improve hand (feel), remove wrinkles, and shrink cloth:

Turns handwheels to set guides according to width of cloth, and pressure roll of winding unit according to tension specified. Laps end of cloth and wrapper (protective covering which removes wrinkles and holds cloth under tension) around cylinder, or secures cloth to lead cloth, using pins or staples. Starts machine to wind cloth and wrapper into single roll. Sets controls to admit steam into rotating cylinder and force steam through cloth roll, and to draw air back through cloth to cool and dry it, following instructions for style of cloth. Winds cloth and wrapper onto separate rolls or feeds cloth through swing-fold attachment that automatically folds material into hand truck.

8275-210 DRYING-MACHINE TENDER, YARN(textile) DPT:685
GED: 2 SVP: 2 EC: I 4 5 PA: M 4

Tends machine that dries packages of dyed or bleached yarn by any of following methods:

1. Removes yarn packages from stand or extractor and places them on rack or in drawers of drying oven. Sets temperature control gauges according to specifications, and pushes rack or drawers of yarn into drying oven. 2. Positions loaded yarn stand, removed from dyeing machine, over hot-air port, using power hoist. Sets controls to direct air through holes in yarn stand to dry yarn. 3. Lifts stand of yarn into drier, using power hoist. Closes lid and tightens bolts, using wrench. Sets controls to circulate hot air through yarn. Removes dried yarn from drying machine, inspects packages for dyeing defects, and packs them in cases for storage or shipment. May dry yarn following particular method and be designated accordingly; for example, Oven-Drier Operator

8275-214 EMBOSsing-CALENDER TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that imparts raised design or finish on coated fabrics by means of heat and pressure from engraved steel rollers:

Adjusts automatic device that regulates heat applied to material by rollers. Positions material to be processed on brackets at feed end of machine. Threads material between rollers and laps end onto take-up tube. Starts machine and moves controls to adjust speed, pressure of rollers, and tension of material. Observes material as it passes through machine to prevent seams, rolled selvages, or trash from damaging rollers. Changes embossing rolls when specifications call for pattern changes, using hand tools.

8275-218 EXTRACTOR-MACHINE TENDER(knit goods; textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends extractor machine that removes excess moisture or dye from washed, bleached, or dyed cloth and yarn by any of the following methods:

1. Mounts roll of cloth on brackets at back of machine, using hoist. Pins cloth to leader cloth so that cloth passes over suction tube and between rollers. Starts vacuum pump and opens drain valve. Regulates

roller speed according to thickness of cloth. Places empty truck under swing-folding attachment to receive processed cloth, or doffs rolls of processed cloth that are wound onto take-up reels. 2. Pushes loaded hand truck into position at machine. Loads centrifugal extractor, manually lifting material from hand truck. Distributes material uniformly in extractor to balance load and reduce vibration. Pushes button to close extractor lid, and starts machine. Unloads material into hand truck for transfer to subsequent operator. 3. Places cakes of rayon or other synthetic yarn on spindles of centrifugal extractor, secures lid, and starts machine to remove moisture from yarn.

May extract moisture from cloth, wound on perforated beam, by creating vacuum chamber within beam. May open valve to add water and steam to vat to rinse material preparatory to drying. May tend a particular type of extractor and be designated accordingly; for example, Centrifugal Extractor Vacuum Extractor

8275-222 FELT DRIER(textile) DPT:685
continuous-felt-drier operator.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends drying chamber that removes moisture from felt strips:

Opens steam valves to heat chamber to specified temperature, and regulates air vents in chamber to control ventilation. Sews ends of felt strips together to form continuous strip, using portable sewing machine. Attaches leading edge of felt strip to hooks of conveyor, and starts machine to draw strip through drying chamber. Feeds leading edge of felt through folding machine to fold material into hand truck. Removes key thread by hand to separate felt when hand truck is full.

8275-226 PILE-FINISHING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that separates, polishes and raises or flattens pile of fabrics:

Positions truck of cloth or mounts roll of cloth on brackets at entry end of machine, and sews cloth to lead cloth in machine, using portable sewing machine. Turns thermostat to set temperature of cylinder, according to specifications. Starts machine and moves lever to set pressure on hydraulic apron that presses cloth against cylinder to raise or flatten pile, as specified. Compares finished cloth with standard swatch, and notifies supervisor if cloth varies from standard. Observes material passing through automatic swing-fold device and into hand truck, and replaces full hand trucks with empty ones. Ravels seams to separate cloth pieces.

May tend mangle in tandem with machine to apply finish to cloth. May tend machine that sets pile of fabrics, such as corduroy and velvet, by brushing action. May raise and set direction of fibre on surface of woollen cloth. May be concerned with a specific type of equipment or fabric and be designated accordingly; for example, Gig-Machine Operator Steam Gigger Velvet-Brusher Tender

8275-230 PLEATER(knit goods; textile) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4

Tends machine that guides cloth into storage bins or processing trucks in pleat-like folds to prevent tangling during subsequent removal:

Ties end of cloth to lead rope, and threads cloth through poteyes, over rollers, through sleeve of pleating mechanism and into bin or truck. Presses button to start machine, and turns knob to adjust width of pleats and ensure that cloth piles in even layers. Depresses pedal that starts portable sewing machine to sew ends of cloth together, for continuous pleating.

May transport material with truck, for further processing.

8275-234 RAW-STOCK DRIER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4

Tends machine that dries raw wool, cotton, or synthetic fibres from which excess liquid has been extracted:

Feeds raw stock to conveyor by hand, or turns switch to control vacuum pipe through which stock is fed onto conveyor. Moves lever to regulate speed of screen or apron which carries loose fibres through drying cabinet. Sets gauge to control drying temperature. Feels wool as it is discharged from drier, to determine if drying is complete, and

adjusts conveyor speed accordingly. Cleans equipment, using compressed air and steam.
May dry materials other than raw stock, such as woollen goods.

8275-238 SHEARING-MACHINE TENDER(textile) DPT:685
brusher and shearer; cropper.
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that shears nap, loose threads and knots from cloth surface to give uniform finish and texture:
Mounts roll of cloth on brackets at feed end of machine, by hand. Pulls end of cloth over and under several feed rollers, under knife blade roller, over brush tension roller, and secures end to take-up beam or swing-fold device that folds material into hand truck. Turns crank to regulate knife blade roller to cut nap to specified depth. Starts machine and observes operation to detect shearing malfunctions. Moves lever to raise knife blade roller to permit seams to pass under blades without being cut. Sews end of cloth to be sheared to end of cloth in machine, using sewing machine.
May convey rolls of cloth to shearing machine. May doff rolls of cloth from delivery end of machine. May tend machine that shears pile from carpet surfaces.

8275-242 SPRAY-COATING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that sprays finish on material, such as carpeting and cloth, to increase thickness and bulk of material:
Adjusts air pressure control, observes gauges, and turns knob to start flow of finish from tanks through spray apparatus. Adjusts temperature control and observes gauges to regulate heat in dryer according to temperature chart. Starts machine and observes material passing through spray cabinet to ensure that finish is sprayed evenly on material. Stops machine and readjusts air pressure control, nozzles on spray apparatus, or cleans clogged nozzles if finish is not uniform. Measures material as it leaves drying compartment to detect width shrinkage and adjusts temperature controls as needed.
May place roll of material on holders at entry end of machine, and sew end of material to lead material in machine. May doff rolls of material from machine or push hand truck under swing-folding attachment.

8275-246 STRETCHING-MACHINE TENDER(knit goods) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that stretches and sets knitted cloth to uniform width:
Turns screws to adjust width of spreader, and opens valves to admit steam into steam box that sets stretched cloth. Positions hand truck, and threads cloth over feed and guide rollers, around spreader, through steam box or drying chamber and between pressure rolls. Wraps end of cloth around take-up roll or guides end through swing-folding attachment. Starts machine and observes flow of cloth to detect defects, such as dirt, dye streaks and holes. Measures width of cloth with hand rule, and doffs rolls of cloth from machine. Attaches identification tag to end of cloth bolt, using stapler.
May turn handle to lower top pressure roller that presses cloth. May cut defects from cloth with shears.

8275-248 TENSION-DRYING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4

Tends equipment that dries and rewinds fabric, preparatory to further processing:
Mounts roll of fabric, using chain hoist. Threads material around initial roll in let-off rack and through drier, and staples it to front roll shell in wind-up rack. Takes up slack on new roll and aligns material threaded through drier, manually, to ensure straight wind. Starts motor and moves lever to lower pressure roller, pass material through drier and wind it on front roll shell. Adjusts brake on take-up roll as material is winding to maintain specified tension.

8275-250 TENTER-MACHINE TENDER(knit goods; textile) DPT:685
cloth stretcher and drier.
GED: 2 SVP: 2 EC: I PA: M 4

Tends tenter frame that stretches cloth in width, removes wrinkles and dries cloth after processes, such as dyeing or finishing:
Trucks folded cloth to feed-end of machine. Sews cloth end to lead cloth in machine, manually, or using sewing machine. Turns wheel to adjust clips or pins to stretch cloth to specified width. Moves lever to control speed of cloth as it passes through drying cabinet. Measures width of cloth as it emerges from machine, using yardstick.
May read yardage clock and record production. May replace full trucks with empty ones, and ravel seams to separate truck loads of cloth. May tend tenter frame equipped with weft-straightening attachment.

8275-254 TEXTURING-MACHINE TENDER(syn. fibres; textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that crimps thermoplastic yarn to increase bulk, add elasticity, and provide yarn with a soft hand (texture):
Places supply package on spindles and threads yarn ends through guides, feed rolls, and into crimping attachments. Pulls yarn ends from heater boxes of crimping attachments, using wire hook, threads ends through guides, and attaches them to take-up packages. Ties broken yarn ends by hand or using knitter, and reports malfunction of machine to fixer. Doffs full yarn package.
May wrap yarn packages in paper and pack packages in shipping containers.

8275-258 TUMBLER TENDER(knit goods; textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends tumbler to dry and fluff, or shrink knitted fabrics after washing or dyeing:
Places material to be dried on table, and shakes items to remove wrinkles. Loads material into drum of machine. Turns rheostat to required temperature, and regulates timing dial to set length of drying cycle, according to type of material being dried. Presses button to start machine. Moves lever to reverse temperature of tumbler to cool materials and impart elasticity. Unloads machine at end of drying cycle. Separates material according to size, style, and colour.

8275-262 WEFT STRAIGHTENER(textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: S 4 7

Tends machine that straightens and aligns skewed weft of broad woven fabric, after wet-finishing:
Observes cloth as it passes under beam of light to detect skewed weft. Presses button or turns handwheel to control movement of rollers that hold back leading selvage of skewed cloth and to allow lagging selvage to catch up.
May tend finishing machine, such as cloth dryer, calender or tenter frame.

8275-266 WRINGER TENDER(leather tan. & fur dress; textile) DPT:685
squeezer operator; wringing-machine operator.
GED: 2 SVP: 2 EC: I 5 6 PA: M 4

Tends machine that removes moisture and wrinkles from felt sheets or hides:
Places material between rollers of machine, and pushes button to activate rollers that press moisture or smooth wrinkles from material. Moves lever or valve to regulate pressure on rollers according to thickness of material being pressed. Removes material from rollers, and places it on cart or feeds material to folding device.
May sew ends of pressed material together to form continuous length, using sewing machine. May untwist material to be pressed, using untwisting apparatus. May process particular section or type of leather and be designated accordingly; for example,
Belly Wringer
Blue-Leather Setter

8275-270 YARN DRIER(textile) DPT:685
dry-room man; skein-yarn drier.
 GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that dries skeins of yarn:
 Turns valves to set temperature of drying cabinet according to specifications. Starts fans to circulate heat in cabinet. Hangs skeins on rack and pushes rack into drying cabinet, or loops skeins over poles on conveyor that passes through cabinet. Removes dried skeins of yarn from racks or poles. Shakes tangled skeins of yarn before and after drying to straighten them. Loops dried skeins together and places them in boxes or on hand truck for transfer to next processing stage.

8275-274 YARN FINISHER(textile) DPT:685
 GED: 2 SVP: 2 EC: 1 5 PA: M 3 4

Tends machine that applies finishing solution to yarn, thread or twine to strengthen it and impart lustre:
 Places full spools or bobbins on spindles of creel, draws thread through finishing compound and drying unit, and laps end onto take-up package. Pours finishing compound into tank to maintain specified level. Starts machine, and adjusts valve to maintain specified temperature in drying unit. Doffs full packages from machine, and replaces them with empty spools or bobbins.
 May tend machine that stretches materials in addition to finishing them. May tend machine that impregnates belt cord with rubber compound, prior to further processing. May tend machine that washes and dries twine.

**8275-299 OTHER TEXTILE FINISHING AND
 CALENDERING OCCUPATIONS**

This group includes textile finishers and calenderers, not elsewhere classified; for example, those who produce moire effect in fabric, and improve finish and wearing quality of cord. Typical examples of occupational titles covered by this residual group definition are:
 Cord-Finishing-Machine Tender(textile)
 Moire-Process-Machine Tender(textile)

8276-INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, TEXTILE PROCESSING

This unit group includes occupations in inspecting, testing, grading and sampling work as described under the term titles, 02- 170 INSPECTOR (any ind.), 02-430 TESTER (any ind.), 02-150 GRADER (any ind.), and 02-330 SAMPLER (any ind.), concerned with quality-control activities in textile processing.

8276-110 TEXTILE TESTER(textile) DPT:384
laboratory tester; quality-control man.
 GED: 3 SVP: 6 EC: 1 PA: L 4 7

Conducts physical or chemical tests on textile materials and products at any stage in manufacturing process to verify their characteristics or composition and to determine conformance to standards, performing any combination of the following duties:

Collects and labels samples from machinery throughout manufacturing process. Feeds yarn, roving or sliver into evenness tester to detect and record variations in weight. Determines tensile and tear strength of cloth, using breaking machine. Breaks skeins of yarn with break-tester to determine strength of yarn. Weighs fibre sample on balance scale, before and after drying, or tests raw stock with meter-equipped probe to determine moisture content. Computes twists per inch in yarn samples, using standard guides. Examines samples of fabrics, using microscope, magnifying glass and pick counter to identify types of fibres and number of threads per inch. Tests yarn and cloth samples for colour fastness, shrinkage and absorbency, using special testing devices, washers, heating and drying ovens and dehumidifier. Determines colour value of yarn or cloth by exposing samples to sunlight or ultra-violet light for specified time and comparing fading to standard samples. Verifies dye formulas used to develop new colours and to match existing colours. Tests oil and soap products to determine their fitness for use in cloth or yarn finishing processes. Verifies efficiency of scouring process, using scales, solvents and ovens to determine percentage of natural grease removed. Records results of tests,

compares them with company standards and reports variations. Records waste produced by processing departments.
 May specialize in testing a particular type of fabric or material and be designated accordingly; for example,
 Cloth Tester
 Dye Tester
 Scoured-Wool Tester
 Stretch Tester
 Yarn Tester

8276-114 SWATCH CHECKER(textile) DPT:267
 GED: 3 SVP: 6 EC: 1 5 PA: L 4 5 7

Inspects loom and cloth swatches to detect cause of weaving defects:
 Examines loom to detect mistakes in set-up, such as defective drawing- in, filling and warp. Compares sample of first woven cloth with standard swatch, using pick counter and flashlight equipped with magnifying lens, to detect defects in style, yarn, weaving or colour. Requests dyer to dye swatch to ascertain dye retention of thread and detect weaving defects. Determines adjustments required to correct defectiveness and notifies repairman to set loom accordingly. Records number of swatches examined and nature of defects.
 May make adjustments to machine. May test warp tension with tensiometer. May boil swatch to remove size and permit examination of threads. May dye swatch.

8276-118 WOOL-FLEECE-SORTER-AND-GRADER(textile) DPT:387
 GED: 3 SVP: 6 EC: 1 7 PA: L 3 4 7

Sorts and grades wool fleece according to standard specifications:
 Lifts unprocessed fleece to estimate its weight. Separates locks and shafly portions of fleece, and examines fibres for length, strength, diameter, elasticity, colour, cleanliness and moisture to determine quality and approximate shrinkage. Grades and places fleece in containers or piles for weighing. Marks grade on container or load ticket, stating quality and disposal action.
 May direct warehousemen to pile fleece in appropriate grade storage. May specialize in sorting or grading wool fleece and be designated accordingly; for example,
 Wool-Fleece Grader
 Wool-Fleece Sorter

8276-122 CLOTH GRADER(textile) DPT:387
 GED: 3 SVP: 5 EC: 1 PA: M 4 7

Examines and grades cloth according to defects found:
 Examines cloth for defects marked in previous inspections, using examining frame, and determines whether corrections can be made to restore cloth to standard quality. Cuts defective sections from cloth with scissors, or routes cloth to appropriate department for reprocessing. Classifies cloth that cannot be restored to first- grade quality, according to standards for lower grades. Records disposition of cloth rehandled.
 May inform weaving department of repeated imperfections requiring loom adjustment. May examine and grade experimental fabrics and prepare reports accordingly.

8276-126 QUALITY-CONTROL TESTER(knit goods) DPT:584
 GED: 3 SVP: 4 EC: 1 PA: L 4 7

Tests hosiery to verify conformance to plant quality standards or to obtain data for use in establishing quality standards for new styles:
 Measures overall length of hose, length of toe, foot, heel, welt, and after welt, with scale. Determines stretch of welt, knee, ankle, and instep, using weighted stretch machine. Tests tensile strength of hose at knee, using stretch-flex machine. Ascertains number of stitches per inch, using stitch-counting machine. Examines samples of hose in production and defective hose returned by purchasers to find knitting, seaming, looping, or dyeing defects, using magnifying glass. Records results of findings.
 May determine cause of defect, basing judgement on knowledge of production methods, or send defective items to appropriate departments for analysis of defects.

8276-130 FABRIC INSPECTOR(textile) DPT:586
cloth examiner.
 GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Inspects finished or unfinished fabrics for weaving or finishing defects, using power-driven examining frame:

Mounts roll of fabric on brackets, using hoist, and pulls fabric over rollers and down over inspection board. Wraps fabric end around take-up beam or feeds fabric end past take-back rollers and through folding device to collection truck. Sets yardage clock at zero and pushes lever or pedal to start fabric winding onto beam or folding into truck. Scans fabric as it passes over inspection board for defects, such as grease spots, slubs, mispicks, uneven selvages, and irregularities in colour. Marks defects with thread, chalk, or adhesive sticker. Measures width of fabric with tape to detect variation from standards. Records information, such as defects, fabric style, and yardage inspected.

May repair defects, such as soils, slubs, or loose ends, using steel pick, scissors, knife, or cleaning solutions. May cut or tear strips from end of fabric for sample. May count number of picks per inch, using pick counter. May feel fabric to compare texture with sample. May examine fabric without the use of power equipment. May inspect a particular type of fabric or use a machine to assist in inspecting and be designated accordingly; for example, Grey-Goods Examiner
 Inspecting-Machine Tender

8276-134 PRE-SHRINKING PROCESS TESTER(textile) DPT:484
 GED: 3 SVP: 3 EC: I PA: L 4

Tests cloth sample to determine its potential shrinkage to establish pre-shrinking machine settings and to verify effectiveness of pre-shrinking process:

Marks cloth sample at measured intervals, using template. Loads samples into washing drum and adds detergents. Starts machine that automatically washes and rinses samples. Removes samples from washing machine at end of cycle and loads them into centrifugal extractor that extracts excess water. Presses samples, using iron. Measures distance between markings on cloth, using yardstick, and computes average shrinkage of length and width. Converts amount of shrinkage into machine settings, using conversion tables. Records measurements, cloth lot, style number, and machine settings. Cuts samples from cloth after processing and tests cloth to verify that material meets shrinkage specifications.

8276-138 ROVING-WEIGHT GAUGER(textile) DPT:487
roving sizer.
 GED: 3 SVP: 3 EC: I 5 7 PA: L 4

Weighs roving samples to detect variation in weight produced by tape condensers of wool-carding machines:

Positions jackspool of roving in winding position and threads roving ends from spool through guides and takeup roller. Sets yardage counter at specified yardage and turns crank to wind sample of roving. Weighs sample on grain scales and records weight on chart. Plots weight of each end of roving produced by single carding machine on graph paper and compares with standard graph to isolate variations in roving. Notifies machine fixer of equipment malfunctions.

May move weight on carding-machine-weight-control lever to alter weight of roving produced.

8276-142 WEAVING INSPECTOR(textile) DPT:584
inspector, loom.
 GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Inspects cloth emerging from loom to detect weaving defects and other imperfections:

Patrols work area and scans cloth on loom for defects, such as broken ends and slubs. Stops loom, ties length of yarn to broken warp yarn, and draws yarn through harness and reed, using reed hook. Picks out slubs and coarse yarn, using burling iron. Reweaves cloth, using needle. Marks grease spots and irreparable defects with crayon to indicate yardage allowance. Trims loose threads with scissors. Records defects on tag and attaches tag to finished roll.

8276-146 HOSIERY PAIRER(knit goods) DPT:587
pairer-inspector.
 GED: 2 SVP: 4 EC: I PA: L 4 7

Inspects, sorts and pairs finished hosiery articles according to grade, colour, size, and length:

Piles and spreads hosiery articles on pairing table and examines them for defects, such as pulls, snags, holes, mends, and dye streaks. Positions graded articles over length-scale to measure overall length of toe, foot, heel, and welt. Selects pair of identical stockings of same grade, and stacks them on table, or spreads panty-hose or tights on pairing table. Examines them to ensure matching pairs. Groups pairs in lots by grade. Places defective articles into box for disposal or repair. Records inspection data.

May stretch hose, using stretching machine, to measure its dimensions while extended.

8276-150 INSPECTOR, TEXTILE PRODUCTS(textile) DPT:587
 GED: 2 SVP: 4 EC: I PA: L 4 7

Examines finished articles, such as bedspreads, draperies and carpets to ensure that product meets company quality standards:

Spreads article on table, rack or floor and inspects for dimensional accuracy, defective stitching, loose threads, colour variation between thread and fabric, uneven seams, corners, pleats and hems, and colour, design or size mismatches in paired items. Marks rejects with chalk or thread and places them on hand truck, rack or table for return to repair section or to operator who made article. Records number and type of defects. When inspecting tufted articles, scans article to detect uneven or ragged tufts.

May fold or roll articles to company specifications. May work as member of team when examining large articles. May inspect particular type of article and be designated accordingly; for example, Bag Inspector
 Carpet Inspector

8276-154 WARP-TENSION TESTER(textile) DPT:687
tension tester.
 GED: 3 SVP: 3 EC: I 5 PA: L 4

Tests and adjusts tension of warp on looms to ensure proper weaving: Presses arm of tensiometer against a designated number of warp threads and reads gauge. Removes or adds weights, or turns adjustment nut with wrench to regulate tension, according to specifications. Tests accuracy of tensiometer and known weights and adjusts tensiometer, using screwdriver.

May test and adjust tension of warp on other textile machines.

8276-158 INSPECTOR, TRIMMING MATERIAL(textile) DPT:586
 GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects trimming material for defects:

Places box of flat-folded trimming material, such as lace, ribbon, or tape seamed in parallel rows, at inspection end of table, and empties box on reciprocating rollers beneath take-off rollers. Threads trimming through feeder rollers, over inspection table, and through take-off rollers that guide trimming into box. Sets yardage meter, starts rollers, and inspects trimming for holes and defective stitching, as it passes over table. Cuts out defective trimming, using shears, and pulls out defective stitching. Sews cut ends of trimming to form continuous length, and repairs unravelled seams, using portable sewing machine. Cuts trimming as indicated by yardage meter, to form bundles of specified length, and ties bundles with string. Marks ticket to indicate yardage and type of trimming in bundle, and places bundle in storage area.

8276-162 KNITTED-FABRIC INSPECTOR(knit goods) DPT:587
 GED: 2 SVP: 3 EC: I PA: S 4 7

Inspects knitted fabric for defects, and rejects fabric not meeting specifications:

Examines knitted fabric for flaws, such as defective knitting and loose threads. Measures fabric and sews thread marker into material to indicate required length. Folds and ties fabric that passes inspection,

and stacks it on hand cart. Records inspection information on routing paper and attaches paper to fabric.
May cut loose threads with scissors. May invert knitted tubing.

8276-166 STOCKING INSPECTOR(knit goods) DPT:587
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Inspects unfinished hose for defects and to ensure conformance with specifications:
Draws hose over inspection board and inspects hose for defects, such as holes, runs, torn threads, dropped stitches, and defective looping or seaming. Marks defects with chalk. Turns form to inspect both sides of hose. Clips loose threads from hose, using scissors or electric clippers equipped with suction attachment. Strips hose from board if board is not equipped with automatic turning and stripping device. Sorts hose according to type of imperfection, and places them in separate boxes. Records production data on ticket.
May bag first quality hose for dyeing.

8276-170 SAMPLE MAN(textile) DPT:687
sample maker.
GED: 2 SVP: 3 EC: 1 PA: M 4 7

Prepares samples of cloth or yarn, performing any combination of the following duties:

Collects samples or selects cloth or yarn according to sample order and examines them for defects in weave, shade, finish and dimensions. Rejects imperfect cloth or yarn. Cuts samples to specified length with scissors. Folds samples of cloth according to specifications, stamps identification data on tag, and staples tag to samples. Unwinds yarn from cheese, hangs skeins of yarn onto inspection pin, removes kinks, cuts skein ends with scissors, and ties or braids skeins. Winds sample yarn on strips, mounts strips on cardboard display card, punches holes in card and inserts eyelets into holes with eyelet punch. Distributes sample cards according to distribution list.

May tend winding unit when inspecting long cloth samples. May weave cloth samples, following specifications and using hand loom, and be designated accordingly,
Sample Weaver

8276-174 SHADE MATCHER(textile) DPT:687
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Examines rolls or folded cuts of dyed or printed cloth for variations in colour, and sorts cloth accordingly:
Places swatches, cut from rolls or folded cloth, onto examining table. Grades swatches according to shade standards. Compares swatches from opposite ends of cloth piece to detect variation of colour within the piece. Writes grade numbers on swatches and attaches them to corresponding lot. Stacks rolls or folded cuts of cloth onto hand truck ready for packing.

8276-178 SKEIN-YARN EXAMINER(textile) DPT:687
skein inspector.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Examines skeins of yarn to detect flaws, such as breaks, soil, slubs and uneven dyeing or twisting:

Shakes skein to straighten minor tangles in yarn, hangs skein over rod at eye level, and manually spreads out and pulls yarn in skein to locate imperfections. Cuts out slubs and ties yarn ends together to form continuous strand. Observes winding and tying of yarn to ensure that skein has been made according to specifications. Weighs skein from each lot, and records weight, number and type of flaws found. Knots hank of yarn around several skeins to form bundle and packs bundles into boxes for shipment, or dumps bundles into cart for further processing. Washes yarn, using cleaning solution or soap, to remove soil.

8276-182 YARN INSPECTOR(syn. fibres; textile) DPT:687
yarn examiner.
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Inspects yarn for defects preparatory to shipment, storage, or further processing:

Examines bobbins, cones, cheeses or tubes of yarn by sight and touch for defects, such as broken threads, cross threads, dirty yarn and

excessively loose or tight winding. Places defective yarn on trays, bobbin carts, or in boxes for reprocessing.

May package yarn in polyethylene, using wrapping machine. May perform routine tests on yarn to determine breaking strength and weight. May transport yarn to storage or subsequent processing stage, using hand truck.

8276-186 CLOTH SORTER(textile) DPT:587
rag-table sorter; remnant classifier.
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Sorts cloth by style, colour, length, weight or weave for further processing or packaging, performing any combination of the following duties:

Sorts cloth remnants according to quality, as specified on label. Spreads bundle of folded cloth on table, and counts number of folds. Assigns grade to cloth according to number of weave or colour defects. Writes style number, grade and yardage on label and glues label on cloth. Winds cloth onto corrugated board, using folding frame and winding unit. Separates knit tubing on conveyor, according to colour, and places tubing on trucks. Weighs cloth or waste cartons on floor scale. Stores cloth or conveys it to various processing departments, using hand truck.

8276-190 GREIGE-CLOTH EXAMINER(textile) DPT:686
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Inspects greige corduroy or velvet cloth to detect filling floats, and cuts floats with pickup knife:

Positions truck of cloth at feed end of examining frame, and pins end of cloth to cloth in machine. Pushes button and depresses pedal to start machine that passes cloth over inspection board and scans cloth for uncut floats. Stops machine, inserts point of pickup knife under floats and cuts threads. Doffs cloth from swing-folding attachment onto hand truck, and writes yardage of cloth inspected on order ticket. May mask defective parts, using coloured thread and needle.

8276-194 NARROW-FABRICS EXAMINER(textile) DPT:687
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Inspects narrow fabrics for defects:

Examines rolls of narrow woven fabrics, such as bandage and tape, to detect defective weaving, colour variations, damage or soiling. Cuts out defective sections, using hand shears. Returns defective rolls for re-examination and re-rolling. Splices cut ends with adhesive tape. Measures width of fabric with ruler to determine conformance with standards.

May place finished rolls into plastic bags, and pack them in cardboard boxes for storage or shipping.

**8276-299 OTHER INSPECTING, TESTING, GRADING
AND SAMPLING OCCUPATIONS, TEXTILE
PROCESSING**

This group includes textile processing inspectors, testers, graders and samplers, not elsewhere classified; for example, those who measure fabric pieces, feel thickness of fabric to estimate weight and sort pieces according to size and weight, and test hard-felt sheets for uniformity of thickness, using testing machine. Typical examples of occupational titles covered by this residual group definition are:

Sorter(textile)

Testing-Machine Operator(textile)

8278-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, TEXTILE PROCESSING

This unit group includes occupations in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), which are concerned with processing textile fibres into yarn or thread, and weaving, knitting and finishing fabrics.

8278-110 CLOTH FEEDER(knit goods; textile) DPT:686
GED: 1 SVP: 2 EC: 1 5 PA: M 4

Feeds machines that dye, finish, wash, treat, dry or otherwise process cloth:

Aligns trucks or rolls of cloth to be processed through machine according to priority or style, and width. Positions truck of cloth, or mounts roll of cloth on brackets at feed end of machine. Sews end of cloth to lead cloth, using portable sewing machine. Straightens cloth by hand as it enters machine.

May assist machine operator to thread cloth through machine. May offbear cloth from machine. May be concerned with a particular process and be designated accordingly; for example, Calender Helper(textile)

8278-114 CLOTH TURNER(knit goods) DPT:686
roll turner.
GED: 1 SVP: 2 EC: 1 PA: M 4

Turns tubular knitted cloth right side out and winds cloth onto rolls or into hand truck by one of the following methods:

1. Pulls end of cloth through turning pipe (slotted metal form). Opens and pulls end of cloth back over turning pipe and circular spreader. Inserts turned end under feed rollers and laps end around take-up roller. Shifts lever to activate feed and winding rollers. 2. Positions loaded hand truck at feed end of machine and empty hand truck at output end. Pulls cloth over end of turning tube. Positions feed roller against cloth and starts roller rotating to force cloth onto tube. Knots end of cloth to lead cloth in tube. Starts rollers that pull cloth inside tube to turn cloth right side out.

8278-118 DYE-HOUSE HELPER(knit goods; textile) DPT:686
GED: 1 SVP: 2 EC: 1 4 5 PA: M 4

Assists dyer to dye, bleach, or wash textile materials; such as, fibres, yarn, fabric, or garments, performing any combination of the following duties:

Carries chemicals, such as dyes, bleaches and scouring agents from mixing area to dye house. Mounts cloth rolls on brackets at feed end of machine, using hoist. Feeds end of cloth through folding attachment of machine that unwinds cloth into hand truck. Stacks yarn packages on spindles of dye stand preparatory to dyeing or bleaching. Lifts dye stands or beams into machine, using hoist. Loads fibrous materials into dye machine, manually. Closes and secures machine lid, using hand tools. Removes dyed or bleached materials from machine by hand or using hoist. Pushes empty or loaded trucks to and from other processing areas. Cleans dyeing machines, using water hose, rags and chemicals. See also definition for term title, 02-160 HELPER (any ind.).

May assist specific dye operator or perform particular task and be designated accordingly; for example,

Bleacher Helper
Doffer, Dyehouse
Dye-Reel-Operator Helper

8278-122 LABOURER, WOOLLEN MILL(textile) DPT:686
utility man, woollen mill.
GED: 1 SVP: 2 EC: 1 4 5 PA: H 4

Performs any combination of following duties in carding, spinning, weaving, dyeing and finishing departments of woollen mill:

Changes empty or full spools of roving on carding, creeling or spinning machines. Cuts and removes tacking stitch that secures top and bottom layers of folded cloth, using scissors. Threads or laps cloth between or over rolls of processing equipment, such as washers, dryers and dye vats. Transports wool, yarn or cloth between operations and departments, using hand truck or hoist. Weighs material to obtain quantities processed or delivered to machines or storage bins. Feeds raw wool into carding machine. Cleans machines and floor area, using air and vacuum hose, broom and rags.

8278-126 ROLL-MAT-MACHINE FEEDER(textile) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Feeds baked fibre glass sliver into machine that produces roll mat: Stacks tubes of sliver adjacent to feed end of machine to ensure continuous supply of sliver is available. Removes cardboard tube from package of sliver and locates inner end of strand. Unravels portion of sliver to verify location of end and cuts ravelled sliver with knife.

Positions coreless package in machine creel, and threads material end through guides and rollers into choppers of machine and starts machine. Observes operation of machine to detect strand breakage. Stops machine to tie broken ends and replenish machine creel, as required.

8278-130 TRAY DRIER(knit goods) DPT:686
GED: 1 SVP: 2 EC: 1 PA: M 4

Feeds machine that dries preboarded and dyed hose in perforated trays:

Removes folded hose from dye bag or dumps them on table and smooths or shakes out wrinkles. Places hose evenly into tray of drying machine and pushes filled tray into drying cabinet. Turns knobs to set temperature, humidity and drying cycle and presses button to start machine. Pulls tray from cabinet after hose has been dried. Removes and stacks hose in boxes, for pairing.

8278-134 UTILITY MAN, FELT GOODS(textile) DPT:686
GED: 1 SVP: 2 EC: 1 5 7 PA: M 4

Performs any combination of following duties in machine manufacturing of felt goods:

Cuts felt from feed rolls, with hand shears, and manually removes rolls of processed material from machine. Marks length of finished felt on tag attached to roll. Lifts and positions rolls of base material and bats into feed holders of machine. Transfers materials from discharge end of one machine to feed end of next, using hand truck or dolly. Picks up scraps of material from around machine and places into bins, hoppers or boxes. Lifts felt rolls from conveyors and stacks and bundles finished rolls for further processing, storage or shipping. May weigh and record weight of felt bundles to maintain production records. May assist operators in setting up machines.

8278-138 WASTE-MACHINE FEEDER(textile) DPT:686
GED: 1 SVP: 2 EC: 1 6 PA: M 3 4

Feeds machine that vacuums foreign matter from cloth and chops cloth into shredded stranded form:

Loads bale of cloth into feeding position and places end of cloth, or handfuls of loose cloth, on conveyor that conveys material to vacuum device and cutting blades. Removes material from delivery end of machine and ties material into bundles, using twine and scissors. Loads bundles in container, for removal.

May offbear and feed waste material, such as cotton strands, jute sacks and rejected felt underlay into other processing machines. May detect and remove foreign matter, such as metal and glass, from waste.

8278-142 YARN SALVAGER(textile) DPT:686
GED: 1 SVP: 2 EC: 1 5 PA: M 4 7

Salvages packages of wound yarn, examining yarn for surface defects and removing portions of defective yarn:

Examines bobbins or cheeses for defects, such as cuts, faulty winding or soiled yarn. Pulls yarn from package, manually. Places yarn on holder and draws yarn end over revolving reel or take-up roll. Presses button to start reel that unwinds yarn from bobbins or cheeses and observes yarn to determine when defective portion is removed. Cuts yarn from reel, using knife, segregates removed yarn into bags, according to type and identifies bags. Rewinds salvaged yarn on cheeses or bobbins, manually or using winding machine.

May unwind defective yarn, manually.

8278-146 YARN STRIPPER(textile) DPT:686
stripper.
GED: 1 SVP: 2 EC: 1 5 PA: L 4

Strips unused yarn from supply packages; such as, bobbins, cones, quills, cops, or spools by one of the following methods:

1. Dumps hand truck or other container of depleted supply packages into hopper of machine that strips remaining yarn from package with knives, brushes, and compressed air. Pushes or pulls packages by hand or with rake to regulate flow from hopper onto feed conveyor. 2. Dumps supply packages into tumblers that remove yarn by agitation. Places unused yarn in containers for reprocessing.

May remove remaining yarn or roving from spent supply packages by hand, with knife, or using sandpaper. May strip specific type of yarn package and use particular stripping method and be designated accordingly; for example,

Quill Stripper
Spool Cleaner, Hand

8278-150 BOBBIN PROCESSOR(syn. fibres; textile) DPT:687
bobbin sorter.
GED: 1 SVP: 2 EC: 1 PA: M 4

Examines, strips, polishes and sorts bobbins or spools before putting them back in service:
Collects bobbins which require processing from designated areas, using hand truck. Strips waste yarn from bobbins by hand or using knife. Removes obsolete markings and polishes bobbins with sandpaper, emery cloth, and steel wool. Inspects bobbins for defects and discards defective ones. Paints identification marks on bobbins as instructed and sorts them into designated containers. Returns processed bobbins to winding area in boxes or hand truck. Loads waste yarn stripped from bobbins, into hand truck, for further processing.

8278-154 CLOTH FRAMER(textile) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Winds pile fabric onto frames to prevent crushing of pile:
Places metal frame on winding bracket of worktable, manually. Turns frame by hand and catches cloth selvages on hooks of frame, spacing cloth around frame in layers. Positions and bolts pre-cut wooden slats to outside of frame, using wrench. Ties identification label to selvage, using cord and hook.
May place frame of cloth in box and move box to storage area, using hand truck.

8278-158 CREELER(textile) DPT:687
warper-creeler.
GED: 1 SVP: 2 EC: 1 5 7 PA: M 3 4 7

Creels weaving, twisting, warping, tufting, or other textile machines to change style of yarn or to replace exhausted yarn packages:
Sorts and places yarn packages on spindle of creel and threads yarn through guides or ties yarn to ends of yarn from preceeding package. Removes old yarn from machines before changing to different size or type of yarn. Repairs yarn breaks in creel by tying loose ends. Replaces yarn packages or spools in creel when faulty yarn is detected. Cleans dust and lint from creel, using brush or air hose. Transports yarn packages from storage area to creels, using hand truck.

8278-162 PICK REMOVER(textile) DPT:687
GED: 1 SVP: 2 EC: 1 PA: M 4

Removes false selvages and filling floats from looped pile fabric:
Lifts roll of cloth onto bracket at end of table and unrolls cloth onto table. Trims false selvage from edge of cloth, using scissors. Secures trimmed edge of cloth on pins set along edge of table and pulls false selvage on opposite edge of cloth to remove selvage and floats. Folds and piles trimmed cloth on hand truck for removal.
May examine cloth while unrolling it on table to detect defects, such as, mispicks, broken warp or smears. May write grade, shade and quality on ticket and tie ticket to cloth, using hook.

8278-166 RAG-SORTER-AND-CUTTER(textile) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Sorts and cuts reclaimable textile stock, according to fabric and colour:
Transports reclaimable material from bin to trimming machine and turns on rotating blade. Scans wool rags for hardware, such as buttons and snaps, and holds rags against rotating blade that cuts hardware from rags and cuts rags into specified size. Sorts rags into bins, according to colour and fabric.

8278-170 SKEINER, HAND(textile) DPT:687
yarn linker.
GED: 1 SVP: 2 EC: 1 PA: M 4

Prepares yarn for bleaching, dyeing, scouring or finishing in skein form, performing any combination of the following duties:
Transports bundles of skeins from supply truck. Loosens and separates skeins, shakes out tangles in each skein and loops skeins together with cotton band to form continuous chain. Pulls end of chain through guide over reel on which skein is wound. Unties continuous skeins after processing and ties string around skeins to form larger

bundles. Hangs bundles on peg. Twists yarn ends to form roll and stacks rolled skeins on table for further processing.
May perform duties of one part of the process and be designated accordingly; for example,
Chainer
Puller
Roller-Up

8278-174 TEXTILE-MACHINE CLEANER(textile) DPT:687
GED: 1 SVP: 2 EC: 1 4 5 PA: M 3 4

Cleans textile processing machine and equipment, performing any combination of the following duties:
Removes dust, dirt, gum, grease and lint from machines and auxilliary equipment, such as carding machines, winding frames, looms, harnesses, reeds and drop wires, using solvents, rags, compressed air, brushes and scraping tools. Removes machine guards and accessories, using hand tools. Scrubs harnesses in cleaning solution and hangs them in drying cabinet. Adds or removes drop wires in assembly, according to specifications. Oils moving parts and wearing surfaces, using oil gun. Cleans floor around machines, using broom and vacuum cleaner. Removes waste and dirt from working area, for disposal.
May clean a particular machine or processing equipment and be designated accordingly; for example,
Carding-Machine Cleaner
Harness Cleaner
Loom Cleaner
Winding-Frame Cleaner

8278-178 TRAVELLER CHANGER(textile) DPT:687
GED: 1 SVP: 2 EC: 1 3 5 7 PA: L 4 7

Changes travellers on ring-spinning frames:
Replaces worn travellers and changes travellers for different style or size of yarn being processed, using fingers or hook. Threads yarn through traveller and restarts machine. Cleans spinning frame to remove lint and roving waste, using hook and brush.
May replace worn and broken rubber drive bands.

8278-182 CLIPPER, MACHINE(knit goods) DPT:686
GED: 1 SVP: 1 EC: 1 5 PA: L 4

Feeds automatic machine that clips threads and turns and strips hose from form:
Places full box of assembled hose at feed end of machine, manually. Pulls hose over form that carries hose through machine to clip threads, turn and strip hose.
May strip hose from forms of machine that is not equipped with turning and stripping device. May detach tally coupon from completed lot for production record.

8278-186 CAN DOFFER(textile) DPT:886
GED: 1 SVP: 1 EC: 1 5 7 PA: M 3 4

Doffs and transfers sliver cans among carding, drawing and slubbing machines:
Places full sliver cans on hand truck and pushes truck from carding to drawing and slubbing machines to maintain work flow. Removes empty cans from drawing and slubbing machines and returns them to carding machines. Sweeps work area and places clean waste sliver in machine feeder for reprocessing.

8278-190 KAPOK BLOWER(textile) DPT:886
GED: 1 SVP: 1 EC: 1 5 PA: H 4

Feeds machines that automatically clean, dry, expand and aerate kapok fibres for use as pillow, cushion and quilt filler:
Removes wire and burlap from bales of kapok, using cutters and pushes material into hopper of machine. Fastens cloth bag to machine outlet pipe to recover blown material. Opens air duct or presses switch to blow material through machine and into bag. Removes bag from outlet pipe, ties and transports it to storage area.

8278-194 SHUTTLE FILLER(textile) DPT:886
 battery loader.
 GED: 1 SVP: 1 EC: I 5 PA: M 4 7

Feeds series of loom magazines with shuttles:
 Inserts quill into shuttle and threads yarn end through each shuttle eye, using hook. Loads threaded shuttles into loom magazine and pulls out yarn end into yarn holder, ready to be drawn through warp. May place shuttles on loom table, ready to be used for weaving.

8278-198 ROLLER CLEANER(textile) DPT:887
 GED: 1 SVP: 1 EC: I 5 7 PA: L 4

Cleans lint and dust from rollers of spinning or roving frames while machines are in operation:
 Removes roving wound on spinning or roving frame rollers with fingers, hook or pneumatic roll-picker, and places lint into bag, for removal. Brushes lint and dust from ring rails, tapes and pulleys. May clean under machine, using air hose. May oil machine parts.

8278-299 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, TEXTILE PROCESSING

This group includes textile processing labourers and elemental workers, not elsewhere classified; for example, those who separate bundles of hemp or sisal fibre, offbear felt-base rugs and floor coverings from lowering machine, remove short lengths of fibre glass and find end of continuous strand, place cardboard core at end of length of knitted cloth, mix cotton and wool waste, wind skeins of thread used to test effect of dyes, stack knitted garments between alternate layers of hydraulic press boards, cover winding frame coil springs with stockinets, salvage sacks and bagging used as covering for raw stock fibres; collect, sort and wind end cloths onto cardboard, and feed machine that unwinds worsted tops into mesh bags. Typical examples of occupational titles covered by this residual group definition are:
 Bagging Salvager(textile)
 End Finder, Twisting(syn. fibres)
 Spring-Tube Coverer(textile)

8279-TEXTILE PROCESSING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with operating, tending and feeding textile processing machines to produce padding, punched felt, tufted carpeting, bonded fabrics, tassels, fringes and extruded synthetic fibres; cementing flock to cloth; brushing cloth to remove foreign matter; shaving protruding fibres from twine; folding cloth; measuring cloth; compressing felt; sorting and storing yarn; and offbearing cloth from machines.

8279-110 PADDING-MACHINE OPERATOR(textile) DPT:582
 GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4 7

Operates battery of machines to produce padding from batting:
 Tightens nuts on lock plate, loom beam and web plates to align base plate and set machine stroke, using wrenches. Places rolls of batting and burlap base in feed holders, and aligns and threads ends of material through machine. Turns handwheels to adjust heat of calendar rolls to position knives that trim felt, and threads needles of stitching-machine that binds batting to base to form padding. Adjusts screws to set limit of traversing-spray gun that sprays binder onto surface of padding, and turns air valve to regulate spray of binder. Presses switch to start machine and monitors operation of machine from central-control panel. Replaces needle frame in machine after fitting new needle. Replaces spent rolls of batting or burlap base by sewing leading end of new roll to trailing end of old roll. Replaces worn or broken machine parts, using hand tools. Maintains operating log and records details of breakdowns.
 May control automatic mechanism that cuts padding to specified length, drops on layers of gauge, and cuts and laps gauze over pads. May place rolls of narrow reinforcing batting in holder, and guide batting under needles.

8279-114 FELT-MAKING-MACHINE OPERATOR(textile) DPT:682
 GED: 3 SVP: 5 EC: I 5 PA: L 2 3 4 7

Operates felt-making and cutting machines to produce punched-felt products:
 Turns screws to adjust comb and stripper rolls of garnetting machine to produce specified bat. Installs needle board into needle loom to punch together loose bat into felt. Turns handwheels to adjust tension between steam heated calender rolls and to lower circular cutting knives, to compact felt, and trim felt to specified width. Fills sizing tank, positions automatic spray gun and turns air valve to spray size onto felt. Turns knobs to regulate temperature and air flow of drying oven. Mounts cutting dies in ram and bed of automatic die-cutting machine to cut felt into specified shapes. Turns knob to synchronize speed of machines and conveyors, and aligns feed guides. Starts machine and observes operations to detect malfunctions, and examines product to determine conformity to specifications. Sharpens dull circular knives with hone.
 May repair needle boards and assist in repairing equipment.

8279-118 TUFTING-MACHINE OPERATOR(textile) DPT:582
 GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Operates machine to produce rolls of tufted carpeting:
 Mounts roll of jute backing on machine, using power hoist, threads end of jute roll through guides and sews running end to end in machine, using needle and string. Draws yarn from feed tube through guides and needle eyes with threading hook. Starts tufting machine and observes operations, to detect machine malfunction, such as yarn breakage. Ties and mends broken ends of yarn, using latex and threading hook. Records information, such as yarn, style, number of stops, weight of waste and unused yarn. Cleans and washes machine, using air hose and rag.
 May transport yarn, rolls of jute backing, and finished carpeting with fork-lift truck.

8279-122 FIBRE-EXTRUDING-MACHINE TENDER(syn. fibres) DPT:685
 GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Tends machine and associate equipment that extrudes continuous synthetic-fibre filaments, performing any combination of the following duties:
 Moves controls to start machine and heat melting pot to extrude synthetic filaments. Grasps emerging filaments, combines filament ends to form single strand and passes strand through guides and over lubricating wheels. Attaches strand to take-up bobbins, using threading device, or leads strand into cans or through machine for further processing. Patrols area and observes operation to detect and correct operating irregularities, such as broken strands, plugged jets and misaligned guides. Examines lustre of filaments to detect deviations from specifications.
 May load polymer flakes or powder into machine feed hopper. May inspect and test fibre samples, using microscope, gauges and electronic testing equipment.

8279-126 CLOTH-PROCESSING-RANGE TENDER(textile) DPT:685
 GED: 2 SVP: 4 EC: I 4 PA: M 4 7

Tends intermediate units of cloth bleaching, de-sizing, dyeing or finishing ranges, such as wash boxes, tender frames, drying cans, and curing ovens, working as member of team:
 Turns valves to admit steam, water and chemicals to washboxes and chemical troughs. Turns knobs to adjust temperature in drying and curing units and to regulate speed of motor-driven rollers. Patrols area between entry and terminal units to detect faulty operation of equipment. Reports grease spots, holes, and tears in cloth to range operator. Disentangles tear-outs, re-threads unit and sews torn cloth, using portable sewing machine to restore continuous process.
 May mix chemicals or dyes. May test strength of chemical solutions, using titrating equipment or hydrometer. May tend a particular type of range and be designated accordingly; for example,
 Cloth-Bleaching-Range Tender
 Cloth-Dyeing-Range Middleman

8279-130 YARN STOREKEEPER(textile) DPT:487
yarn sorter.
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Sorts yarn according to type, size, weight, colour, blend and quality for storage or distribution to other departments:
Receives and sorts boxes of processed yarn from spinning department. Places yarn in racks and bins. Selects yarn for weaving according to colour, quality and quantity specified. Selects yarn for dyeing, using colour sample of dyed yarn. Delivers yarn to weaving and dyeing departments, using hand truck. Sorts and weighs surplus yarn from weaving area, and returns it to storage. Maintains records of yarn received, sorted, stored and issued.

8279-132 GLASS-FIBRE-BONDING-MACHINE
TENDER(syn. fibres) DPT:585
GED: 2 SVP: 3 EC: I PA: L 4

Tends machine that bonds several strands of glass fibre yarn into single strand:

Places bobbins on creel of machine, threads yarn through guides, over and under tension bars, through strip heater, building-agent reservoir, dies and cooling tank, and laps end of cord around take-up tube of winding machine. Turns valve to admit bonding material into reservoir, starts machine and observes covering and winding process to detect defects, such as broken ends. Ties broken ends together manually. Observes temperature gauge on control panel and adjusts thermostat to maintain specified temperature. Doffs tubes of bonded yarn from creel. Weighs tubes of bonded yarn, packs tubes in shipping containers and records weight on containers.

8279-134 BONDING-MACHINE TENDER(textile) DPT:685
combining-machine tender.
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends machine that bonds together two layers of cloth or layer of cloth and another material, such as felt or foam rubber by application of glue, heat and pressure:

Mounts rolls of materials in brackets at feed end of machine. Threads materials through guides and rollers and ensures that reservoir is filled with specified glue. Regulates thermostat of drying cylinders. Presses button to start machine, and observes operations to detect malfunctions. Verifies finished fabric at delivery end by fingering fabric to ensure layers are firmly bonded.

8279-138 FELTING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends felting machine that compresses several layers of felt into one layer by application of heat and pressure:

Suspends bats of felt manually over conveyor belt. Unrolls felt strips onto conveyor and starts conveyor. Opens steam valves or water sprays to moisten felt passing through steam chamber or beneath sprays. Stops conveyor when bed of hydraulic press is covered by felt strips, and opens valves to heat press bed. Starts oscillating hydraulic ram that compresses felt. Laps end of felt bat to ends of other bats to form continuous strip. Spreads loose felt over thin spots to produce uniform product. Removes wrinkles by straightening layers of stock on press bed.

May pluck foreign matter from felt surface, using tweezers. May tend machine that attaches reinforcing burlap to felt strips.

8279-142 FLOCKING-MACHINE TENDER(textile) DPT:685
chenille tender.
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends machine that cements flock to cloth:

Positions roll of cloth on machine brackets and threads end of cloth through feed, sizing, and heated-drying rollers. Dumps flocking fabric into hopper of machine that chops fabric into flock, or dumps flock into blower that blows flock onto fabric. Pours sizing into trough through which sizing roller revolves. Starts machine and observes sizing, flocking and drying operations to ensure compliance with product specifications. Feeds flocked fabric through machine equipped with brush rollers to remove excess flocking.

8279-146 PAD-EXTRACTOR TENDER(knit goods; textile) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that extracts water or chemicals from tubular cloth, and treats cloth with softening solution:

Positions container of cloth on turntable of machines. Adjusts width of spreader to specifications by turning thumb-screws or by inserting wire loop and spacing bar of correct width. Threads cloth through tension rollers and ground spreader. Ties end of cloth to lead rope of squeeze roller or sews together with sewing machine. Pushes button, or turns handwheel to regulate pressure on squeeze rollers. Turns valve to feed softening solution into trough of machine. Starts machine and observes operation to detect misfeeding, twists in cloth and changes in size of material fed to machine. Untwists cloth by revolving turntable from which cloth is fed. Doffs cloth, places cloth on cart and pushes cart to specified area, for further processing.

May mix softening solution in feed tank, according to formula. May tend machine that dries padded fabric. May clean and lubricate machine.

8279-150 PRESSER-AND-THREADER(textile) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends hydraulic press, steam oven, blower and threading machine to prepare bobbins of yarn for further use:

Loads yarn-filled bobbins onto cage posts, fastens cover in place and positions loaded cage on hydraulic press bed. Pulls lever that lowers ram to compress thread and straighten bobbins. Tightens cover nut before releasing pressure to prevent expansion. Sets temperature and time controls on oven, and places loaded cage in steam oven to shrink thread and to temper bobbin metal. Removes cage from oven and cools with blower. Places bobbins and carriages in automatic threading machine. Loops bobbin threads over hooked needle, draws thread through carriage eye and pushes lever to start threading into carriage. Observes threading and rejects badly threaded bobbins and carriage. Sorts carriages according to spring strength to ensure required placement in machine.

May perform specific duty and be designated accordingly; for example,

Bobbin Presser
Carriage Threader

8279-154 BATTING-MACHINE TENDER(textile) DPT:585
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine that converts loose textile fibres into batting:

Moves lever to control automatic feeding of fibres by conveyor belt, or feeds armfuls of fibres into machine hopper. Starts machine and observes operations to detect malfunctions. Lifts roll of finished batting from machine and starts new roll winding into take-up beam. Weighs and records weight of standard-size sample from each roll. Controls amount of fibre fed into machine and weight of batting produced, by manipulating lever.

May cut batting into specified lengths, using scissors. May cut and wrap bundles of batting. May complete batch tickets and production records.

8279-158 CLOTH-MEASURING-MACHINE TENDER(textile) DPT:585
GED: 2 SVP: 2 EC: I PA: H 4 7

Tends machine that measures cloth before or after dyeing and finishing:

Mounts roll of cloth on machine, manually, and threads cloth through feed rollers. Laps end around take-up roller or sews end to leader cloth with portable sewing-machine. Turns knob to set yardage meter at zero. Presses button or pedal to start machine, and manually straightens cloth that becomes twisted as it enters machine. Stops machine and records yardage as indicated on meter. Compares meter reading with yardage on production ticket and records difference.

8279-162 FOLDING-MACHINE TENDER(textile) DPT:585
cloth folder, machine.
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that folds cloth into uniform lengths preparatory to inspecting, wrapping or packing:

Mounts roll of cloth onto machine brackets, and threads cloth through

feed rollers, over and under tension rollers, and through slot of folding bar. Inserts end of cloth under clamps on machine table and sets yardage meter at zero. Starts machine and observes folding to detect seams in cloth. Stops machine and ravel seams with fingers. Depresses pedal to raise clamps, releasing cut of cloth, and removes cloth from machine. Records yardage on production ticket and attaches ticket, to cloth.

May count folds to determine yardage in each cut of cloth. May examine cloth for defects, such as grease spots, slubs, and knots, and rectify defects, using cleaning fluids, hooks and scissors. May weigh cloth and record weights. May fold particular type of material and be designated accordingly,
Felt Folder

8279-166 TAPE-FOLDING-MACHINE TENDER(textile) DPT:585

bias-pressing operator.

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that folds and creases bias-binding tape:
Selects folding guides according to widths of tape, and fastens guides on machine, using screwdriver. Threads tape through folding guides and pressing rolls and onto take-up roll. Turns valve to heat rolls and sets yardage meter. Starts machine and observes folding and creasing operations to detect machine malfunctions. Removes rolls from take-up bar, and wraps them with brown paper for storage. Keeps record of shade, width and yardage of tape processed.

8279-170 TUBING FOLDER(knit goods) DPT:585
layer-up.
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that smooths and folds knitted tubing, for further processing:

Positions roll of tubing on spindle of machine. Threads end of tubing over supporting rollers of machine, through steam-chamber and through feed rolls which pull tubing over spreader. Adjusts spreader according to size of knitted tubing. Turns valve to admit steam to steam-chamber. Adjusts folding arm according to size of folds required. Starts machine and observes tubing as it travels through rollers which move back and forth on carriage and deposit tubing in folds on table. Removes folded tubing from table and places it in boxes. Weighs tubing and records weight on work order.

8279-174 CLOTH FOLDER, HAND(garment & fabric; textile) DPT:587
GED: 2 SVP: 2 EC: I PA: L 4 7

Folds cloth such as finished sheets, pillow-cases or drapery panels, preparatory to packaging:

Spreads finished cloth over table and checks cloth for defects, such as faulty stitching, dyeing, printing or finishing. Folds cloth in halves, aligns edges and matches pattern of fabric. Laps cloth at specified intervals to fold into pile. Records lot number and disposition of goods folded, on production sheet.

May work as member of team to fold large woven goods.

8279-178 PICK-PULLING-MACHINE TENDER(textile) DPT:685
waste-filling-float-remover.
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that pulls false selvages and waste filling-floats from looped pile fabric:

Lifts roll of cloth into feeding position, and pins or sews end of cloth to leader cloth. Positions false selvage between feed rollers on each side of machine. Starts machine and observes flow of cloth to detect oblique twist due to unequal tension on cloth. Depresses button to release tension on leading selvage and to allow lagging selvage to catch up. Doffs rolls of cloth and full boxes of filling waste.

8279-182 BALL-FRIDGE-MACHINE TENDER(textile) DPT:685

ball-fringe maker.

GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that automatically forms ball fringe from yarn end and secures fringe to tape:

Inserts woven tape through machine feeding mechanisms, positions yarn cones on spindles and threads yarn ends through tension guide. Presses button to start machine that automatically cuts bunch of yarn ends, ties them with wire to loops woven in tape and winds completed material on spools. Doffs full spools and places spools in cartons.

8279-186 BRUSH-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that brushes foreign matter, such as lint, strings and loose fibres from cloth:

Transports cloth to machine with hand truck and pins or sews end of cloth to lead cloth. Turns screws to adjust cloth tension and pressure of brushes. Starts machine and observes operation to detect incomplete cleaning or machine malfunction. Cleans and oils machine.

May tend brushing machine equipped with steaming or watering attachment to set cloth nap.

8279-190 CLIPPING-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that smooths twine by shaving off protruding fibre ends:

Adjusts blades of machine to remove protruding fibres, without reducing diameter of twine, using hand tools. Places ball of twine on feed spindle, threads twine through clipping machine and secures end on winding mechanism. Starts machines and observes clipping and winding operation to detect malfunctions. Doffs ball of clipped twine from winding spindle.

8279-194 FELT-PRESS-MACHINE TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends press to make felt pads of uniform thickness by one or more of the following methods:

1. Positions flat steel spacing bars of required thickness on edges of hydraulic press to limit stroke of ram. Places felt pads between spacing bars and starts ram to compress felt. Opens steam valve to heat ram to facilitate compression of felt. Removes compressed pads and places them on conveyor. 2. Places felt pads between rollers of rotary press, and depresses pedal to bring rollers together to compress pads to specified thickness.

May pack pads in boxes.

8279-198 SAMPLE STEAMER(textile) DPT:685
patch washer.
GED: 2 SVP: 2 EC: I 4 PA: L 4 7

Tends equipment that develops colour in sample swatches of printed cloth:

Places sample in miniature steam cabinet, and turns valves to spray chemicals and steam into cabinet for specified period. Removes sample swatch from cabinet, and washes swatch by hand to remove excess colour and chemicals. Rinses sample in chemical bath to fix colour. Squeezes excess water from sample, using wringer, and dries sample in oven or over heated drum. Routes sample swatch to interested personnel for comparison with standards.

8279-202 SCUTCHER TENDER(knit goods; textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine that extracts moisture and opens cloth to full width after it is processed in rope form:

Sews end of cloth to lead cloth, using portable sewing machine, or threads cloth through guides and pressure rollers, over beaters that revolve against direction of cloth to open it, and over scrimp rail that stretches and smooths cloth. Laps end of cloth around take-up beam. Starts machine and observes cloth passing over beaters to ensure cloth is opened to full width. Doffs full beams, using hoist, and transports cloth, using hand truck, for further processing.

May tend associated equipment, such as pleater, mangle or detacker.

8279-206 TASSEL-MACHINE TENDER(textile) DPT:685
tassel maker.
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends automatic machine that makes tassels for use on draperies and tapestries:

Inserts braid strip, to which tassel will be tied, into machine and fills hopper in machine with mixture of rayon and cotton. Depresses pedal to start machine, and observes operations to detect equipment malfunctions. Removes tassels from discharge end of machine and places tassels into cartons. Carries cartons to storage area.

8279-210 WINDING-MACHINE TENDER(textile) DPT:685
cloth beamer; cloth winder; reeler and tuber; rolling-machine operator.
GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends machine that winds cloth from one form to another, for further processing:

Threads cloth from supply truck, bale or roll through guides and rollers to rod, take-up roll or tube. Turns handwheel or moves flange into position to adjust width guides. Starts machine, and observes cloth to detect holes, irregular seams, printing imperfections, soiled spots and weaving defects. Pushes lever or depresses pedal to control speed of machine and tension on cloth. Cuts out flaws, using scissors. Secures end of roll with gummed tape or label. Removes full rolls or tubes by loading them onto hand truck, manually or with hoist. Records yardage-clock reading and number of cuts on order ticket. Oils and greases machine parts during operations.

May transport cloth to or from machine, using hand truck or dolly. May attach cloth to end of lead cloth, or combine several cuts of cloth, using portable sewing machine, or sewing manually. May press blocking stick against fabric to hold fabric firm during winding. May wind paper liner between layers of fabric. May tend machine equipped with water spray to dampen jute material for winding.

8279-214 CLOTH OFFBEARER(knit goods; textile) DPT:686
back tender; offbearer, textile machine; swing tender.
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Offbears cloth from machines that dye, finish, wash, treat, dry or otherwise process cloth:

Observes cloth as it winds onto rolls or passes through swing-folding attachment into trucks, and notifies supervisor or operator of processing or equipment malfunctions. Measures and feels cloth discharging from processing machines to verify that cloth meets specifications for width and dryness. Doffs cloth from machine by moving lever to lower blade that cuts cloth at seam, or by unravelling seams connecting lengths of cloth. Pushes roll of cloth onto platform, or lifts it from machine brackets, using hoist. Places cardboard tube on winding shaft and starts cloth winding on it. Replaces filled truck at swing-folding attachment. Pushes processed cloth to next processing station.

May assist operator in mixing finishes used in processing cloth. May regulate heat of drying cans and flow of water into washboxes by turning valves. May cut swatches from material in process, using scissors, and deliver them to laboratory for colour comparison. May assist operator in mounting rolls of cloth on brackets at feed end of machine, and assist in threading cloth through machine. May offbear cloth from a particular type of machine and be designated accordingly; for example,

Drying-Machine Helper
Dyeing-Machine Back-Tender(textile)

8279-299 OTHER TEXTILE PROCESSING OCCUPATIONS

This group includes textile processing workers, not elsewhere classified; for example, those who tend churns that treat rags, prepare samples of felt for use in colour matching and control, tend machines that dry staple lengths of synthetic fibre, and tend automatic crimping machines that curl synthetic fibres for doll hair. Typical examples of occupational titles covered by this residual group definition are:

Crusher-and-Binder Operator(textile)
Feltmaker and Weigher(textile)
Needle-Board Repairman(textile)
Singer(textile)

829-OTHER PROCESSING OCCUPATIONS

This minor group includes occupations, not elsewhere classified, concerned with processing tobacco, hides, pelts and a variety of other materials and products. These occupations are classified in the following unit groups:

- 8290** Foremen, Other Processing Occupations
- 8293** Tobacco Processing Occupations
- 8295** Hide and Pelt Processing Occupations
- 8296** Inspecting, Testing, Grading and Sampling
Occupations, Processing, n.e.c.
- 8298** Occupations in Labouring and Elemental
Work, Other Processing
- 8299** Other Processing Occupations, n.e.c.

8290-FOREMEN, OTHER PROCESSING OCCUPATIONS

This unit group includes occupations, not elsewhere classified, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.) concerned with supervising and coordinating activities of workers engaged in processing a variety of materials and products, such as, hides and pelts, tobacco, ice and candles.

8290-110 FOREMAN, HIDE AND PELT PROCESSING OCCUPATIONS(leather tan. & fur dress.) DPT:138

Supervises and co-ordinates activities of workers engaged in preparing hides, pelts and skins to make leather stock and finished furs, (Unit Group 8295):

Performs duties as described under master title, 01-250 SUPERVISOR/ FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Dye-House Foreman
Foreman, Beam Department
Foreman, Fur Dressing
Foreman, Hide House

Foreman, Leather Finishing

8290-114 FOREMAN, INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, MISCELLANEOUS PROCESSING(any ind.)

DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, testing, grading, sampling and other quality control work in the processing of materials, such as drugs, minerals, tobacco, hides and pelts, (Unit Group 8296):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.)

May supervise workers engaged in inspecting a particular product and be designated accordingly; for example,

Cigarette Inspector Foreman(tobacco)

Foreman, Wool Graders(leather tan. & fur dress.)

Supervisor, Pharmaceuticals and Toiletries Inspectors(pharm. & toil.)

8290-118 FOREMAN, TOBACCO PROCESSING OCCUPATIONS (tobacco)

DPT:138

Supervises and co-ordinates activities of workers engaged in preparing and treating tobacco and in making cigars, cigarettes and other tobacco products, (Unit Group 8293):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Curing Room

Foreman, Stemming Department

Foreman, Threshing Department

Foreman, Tipping Department

8290-199 FOREMAN, MISCELLANEOUS PROCESSING OCCUPATIONS

This group includes processing foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in dipping, moulding, cutting and packing candles; tending filter presses that remove sediment and impurities from liquid concentrations and compounds; and tending machines that make, crush and cube ice. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Candle Making(misc. prod. fab., n.e.c.)

Foreman, Filtration(any ind.)

Foreman, Ice House(misc. prod. fab., n.e.c.)

8293-TOBACCO PROCESSING OCCUPATIONS

This unit group includes occupations concerned with preparing and treating tobacco, and with making cigars, cigarettes and other tobacco products. Occupations concerned with kiln-drying tobacco leaves are classified in Unit Group 7183, FIELD CROP AND VEGETABLE GROWING WORKERS.

**Tobacco Preparing Occupations
8293-110 through 8293-142**

**8293-110 TOBACCO BLENDER(tobacco)
leaf blender.**

DPT:386

GED: 3 SVP: 3 EC: 1 PA: L 4 7

Selects various grades of tobacco to produce specific blend, according to formula and knowledge of tobacco characteristics:

Removes leaves or hands bundles of tobacco from bales or bins.

Examines and sorts tobacco according to texture, colour, variety, and locality grown.

Feeds specified amounts of various grades and types of tobacco onto conveyor to obtain desired blend, or places tobacco in baskets, boxes or piles for processing.

8293-114 BLENDING-LINE ATTENDANT(tobacco)

DPT:685

GED: 2 SVP: 3 EC: 1 PA: L 4

Tends conveyors and machines that blend various types of tobacco in required proportions:

Starts conveyors to move continuous flow of various types of tobacco, through revolving drum that mixes tobacco, to feeders that add specified types of tobacco, through ordering cylinder that moistens tobacco, and into final blending machine. Sets timers to control blending and feeding speeds, and sets flow scales to control amount of tobacco fed, following specifications. Opens and closes valves to regulate flow of steam, hot air or water to ordering cylinder so that tobacco will be pliable and easily processed. Observes flow of tobacco and operation of conveyors and machines to ensure correct processing.

May be designated according to type of process involved; for example,

Bulk Blender

Cascade Blender

**8293-118 CASING COOKER(tobacco)
flavour maker.**

DPT:685

GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends heated vats to mix and cook tobacco casing fluid (flavouring mixture):

Turns valve to admit steam into jacket of vat. Measures, weighs, and dumps solid and liquid ingredients into vat, following standard formula. Starts agitator to mix ingredients and prevent mix from boiling over. Starts pump, after mixture is cooked into syrup, to transfer casing fluid to storage tanks. Measures specific gravity of fluid, using hydrometer, and adds water, using hose, to obtain specified consistency.

May fill metal containers with mixture and install containers on casing machine that sprays casing fluid on tobacco to impart distinctive flavour. May tend pumps to transfer casing fluid from storage tanks to casing machines.

8293-122 CASING-MACHINE TENDER(tobacco)

DPT:685

GED: 2 SVP: 3 EC: 1 4 PA: L 4

Tends machine that treats leaf or cut tobacco with casing fluid (flavouring mixture), using one of the following methods:

1. Starts machine, feed conveyors and pump to spray fluid on tobacco fed into revolving drum by conveyor. 2. Turns hand valve to admit fluid into vat. Moves controls to adjust tension on wringer rolls and starts wringer. Forks tobacco onto conveyor that feeds leaves through fluid and to wringer rolls that remove excess fluid from leaves. Maintains proper level and temperature of casing fluid in holding tanks by starting and stopping pumps and opening and closing steam valves.

8293-126 TOBACCO-CONDITIONER TENDER(tobacco)

DPT:685

GED: 2 SVP: 3 EC: 1 PA: M 4 7

Tends vacuum conditioner (steam-pressure chamber) that moistens opened hogsheads of tobacco for further processing:

Opens chamber door and pushes hogsheads of tobacco into chamber. Closes chamber door, starts vacuum pump, and turns valve to admit steam to chamber. Observes gauges and dials on control panel to determine when temperature and air, steam, and vacuum pressure reach specified levels to force steam through tobacco. Removes hogsheads from chamber after specified time.

8293-130 DRYER TENDER(tobacco)

DPT:685

Tends dryers that remove excess moisture from cased tobacco, according to established formula:

Starts conveyor that carries tobacco through drying ovens and turns valves to admit steam to heat coils of dryers. Periodically feels tobacco to determine dryness and regulates heat to dry tobacco to specified limits.

May tend dryer that imparts distinctive flavour (toast) to tobacco. May tend revolving drum with blower that cools shredded tobacco after steaming or drying and be designated accordingly.

Cooler Tender

8293-134 STEM-FLATTENING-MACHINE TENDER(tobacco)
DPT:685

stem conditioner; stem-roller-or-crusher tender.
GED: 2 SVP: 2 EC: 1 PA: M 3 4

Tends machine that flattens tobacco stems or stems and veins of tobacco leaves:

Starts conveyor that feeds tobacco to rollers of machine and forks tobacco from boxes into hopper of conveyor. Regulates flow of steam and water by setting dial to moisten tobacco and clean and cool rollers. Forks flattened stems into boxes.

8293-138 STRIPPING-MACHINE TENDER(tobacco) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that removes stems from leaves of tobacco and arranges stemmed leaves into books (bundles):

Starts machine by pressing button, and feeds leaf between feed rollers of machine that strips stems from leaves and cuts leaves into halves. Removes stacks of stripped leaves and ties them together. Separates leaves according to right or left halves. Dumps stems from machine into cans. Cleans machine and work bench, using rags and alcohol.

8293-142 TOBACCO-CUTTING-MACHINE TENDER(tobacco)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that shreds and cuts tobacco leaves:

Dumps tobacco leaves into machine hopper or starts conveyors and feeders by pressing buttons. Starts cutting machine and observes operation to ensure that machine is shredding tobacco according to specifications. Regulates flow of tobacco on conveyor, by pulling lever or turning dial, to prevent jamming. Replaces dull or worn knives, using wrench to loosen and tighten bolts that hold knives in position.

May mix various types of tobacco in required proportions prior to shredding. May tend machine that cuts shredded tobacco into granular form or for use as cigar filler and be designated accordingly; for example, Cigar Filler, Mixer and Shredder Granulating-Machine Tender

Tobacco Products Manufacturing Occupations
8293-162 through 8293-199

8293-162 CIGAR-MAKER, HAND(tobacco)
DPT:684
GED: 2 SVP: 5 EC: 1 PA: L 4 7

Rolls cigars by hand:

Selects suitable filler, binder and wrapper leaves. Cuts or tears section of binder leaf to desired size and lays it on table. Takes filler tobacco and rolls it between palms of both hands. Lays rolled filler on binder and rolls them together to form bunch (inner part of cigar). Glues or twists end of binder to hold in position. Cuts wrapper leaf to desired size. Lays bunch on wrapper and rolls them together. Glues end of wrapper to hold in place. Presses cigars in moulds to obtain desired shape.

8293-164 CIGARETTE-MACHINE TENDER(tobacco)
DPT:685
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Tends cigarette-making machine that encases tobacco in continuous paper roll and cuts cigarettes from roll:

Places roll of cigarette paper on spindle. Threads cigarette paper between guide rolls and adjusts friction tension on holding spindles, using wrench. Sets monogram-printing device to print brand name on paper at specified position, using wrenches. Fills ink and glue reservoirs. Starts machine and observes operation to detect machine malfunction. Regulates flow of shredded tobacco to ensure that cigarettes contain specified amount of tobacco. Cleans paper scraps and waste materials from machine, using brush. Places roll of tipping material on spindle and fills hopper with filters, when making filter- or cork-tipped cigarettes. Replaces full catching trays.

May examine cigarettes discharged from machine for defects. May tend machine that forms containers used in packing cigarettes. May stack cases on pallets for storage or shipment. May be designated according to type of cigarette made; for example,

Filter-Cigarette-Machine Tender

8293-166 CIGAR MAKER, MACHINE(tobacco)
DPT:685
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Tends machine that rolls binder and wrapper leaves around filler tobacco to form cigars:

Presses button to start unit of machine that automatically cuts binder leaf and wraps leaf around filler tobacco to form bunch. Positions wrapper leaf over die of machine to obtain maximum wrapper possible from each leaf. Depresses pedal to lower knife that cuts leaf. Releases pedal to raise knife and start mechanism that removes cut leaf and wraps it around bunch. Observes filling, cutting and wrapping operations to detect machine malfunction.

May be designated according to type of machine tended; for example, Turret-Machine Tender

8293-170 PATCH WORKER(tobacco)
DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Repairs defective or damaged cigars:

Examines rejected cigars for defects, such as holes, loose seams, colour spots and loose tucks. Cuts out colour spots, using knife. Pastes pieces of wrapper leaf of matching colour on cigar to patch holes. Pastes loose seams together. Dumps unrepairable cigars into hopper of re-roll machine.

8293-174 TWISTER, HAND(tobacco)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Rolls leaves of tobacco together to form twists of chewing tobacco:

Places filler tobacco on leaves and rolls leaves over filler to form roll, using fingers and palms of hands. Folds roll in middle and rolls again to form twist. Periodically weighs twists to determine whether weight is within prescribed limits. Keeps work bench, trays and scale plate clean, using rags, scraper and brush.

8293-178 PLUG-CUTTING-MACHINE TENDER(tobacco)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that cuts cakes of tobacco into slice-plug or granular smoking tobacco:

Arranges cake of tobacco on bed of machine. Starts machine and feeds tobacco under reciprocating knife. Holds slices of tobacco together in form of plug, using stick, and slides sliced tobacco onto tray or feeds slices between rollers that reduce slices to granular form. Replaces dull knife blades, using wrench. Cleans machine and work area, using brush and steam hose.

May tend machine that cuts cakes of chewing tobacco into plugs of specified size.

8293-182 PLUG MOULDER, MACHINE(tobacco)
DPT:685
lump maker; potter.
GED: 2 SVP: 2 EC: 1 PA: H 4

Tends hydraulic presses that form plugs or twists of smoking or chewing tobacco, using one of the following methods:

1. Dumps loose tobacco into machine mould and places canvas and plastic block over tobacco. Rotates press turntable and positions mould under ram of press. Presses pedal to lower and raise hydraulic ram that compresses tobacco to shape of mould. Lifts canvas and plastic block from top of mould and removes plug of tobacco. 2. Places lumps or twists of tobacco in layers in pot (mould). Closes door of pot and tightens nuts to secure door, using wrench. Depresses treadle or turns hand valve to force ram against pot. Releases ram and removes tobacco plugs or twists. 3. Feeds lumps of tobacco into shaping cells of press that automatically compresses lumps into plugs of chewing tobacco. Turns hand valve to release ram and removes plugs from press.

May tend manually-operated press to perform second pressing on cut pieces of tobacco plugs. May examine plugs of tobacco for defects in wrapper leaf. May weigh plugs to determine conformance to standards.

**8293-199 OTHER TOBACCO PROCESSING
OCCUPATIONS**

This group includes tobacco processing workers, not elsewhere classified; for example, those who estimate weight, by grade lots, of tobacco presented by grower to marketing board for sale, or tend machine that glues plastic tips on cigars. Typical examples of occupational titles covered by this residual group definition are:

Crop Estimator(tobacco)
Tipping-Machine Tender(tobacco)

8295-HIDE AND PELT PROCESSING OCCUPATIONS

This unit group includes occupations concerned with preparing hides, pelts and skins to make leather stock and finished furs. Activities include: trimming, scraping, scouring, tanning, staining and dyeing.

8295-110 SPLITTER(leather tan. & fur dress.) DPT:380
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Sets up machine that splits hides into layers:

Turns setscrews or handwheels on machine table to adjust rollers according to desired thickness of hide. Verifies thickness of layers split from hides, using gauges. Realigns or replaces parts, such as machine belt, knife and rollers.

May read counter and record number of hides split by machine tender. May sort hides according to quality. May sharpen cutting blades.

8295-114 HIDE AND SKIN PREPARER(leather tan. & fur dress.) DPT:684
GED: 2 SVP: 4 EC: I 4 7 PA: M 4 7

Treats hides or skins in solutions to clean, cure, unhair, pickle, dye, oil or tan them, performing any combination of the following duties:

Turns valves to fill equipment with water. Weighs or measures processing agents, such as lime, sodium sulphide, salt, sulphuric acid or detergent, following standard formulas. Dumps agents and skins into vats, revolving drums or mixers. Pulls switches or levers to start rotation of drum or paddle in vat, or stirs skins in vat by hand for specified period. Starts and stops pumps to empty and refill drums or vats. Carries out similar tasks when dyeing or oiling hides. Examines and feels skins for defects, such as cuts, tears or blemishes. Bundles or stacks skins and conveys them to other workers for further processing, using hand truck.

May take sample piece of leather and boil it in water to test completeness of tanning. May verify salinity, temperature or acidity of solutions, using salinometer, thermometer or pH meter. May be designated according to equipment used or process involved; for example,

Bater
Colourer, Hides
Drum Attendant
Limer
Pickler
Tanner

8295-118 PELT DRESSER(leather tan. & fur dress.) DPT:684
GED: 2 SVP: 4 EC: I 6 7 PA: M 4 7

Cures and dresses fur pelts to improve their lustre and beauty or to restore natural appearance:

Prepares washing and curing solutions according to formulas, and places fur pelts in vats or revolving drums containing solution to clean, soften and preserve them. Removes particles of flesh and fat from pelts and skins, using hand or powered knives as determined by thickness and weight of pelt. Examines skins to detect defects, such as cuts and tears.

May record defects and sort furs according to grade. May remove long coarse hair from pelts and even length of underlying fur, using shaving knives. May oil and clip pelts.

8295-122 FLESHER, HAND(leather tan. & fur dress.) DPT:684

beamer, hides.

GED: 2 SVP: 3 EC: I 4 6 PA: M 4 7

Removes particles of flesh and fat from hides or pelts prior to curing or other processing, using either of the following methods:

1. Positions wet skin on beam. Pulls or pushes two-handled knife over surface of skin to remove flesh and hair. 2. Scrapes particles from pelt or skin with knife or works skin backwards and forwards over fixed steel blade. Piles scraped skins on hand truck.

May reduce thickness of hides by paring with machine or hand knife. May cut skin into strips.

8295-124 FUR PLUCKER(leather tan. & fur dress.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Removes guard hairs (long coarse hairs) from skins of water animals such as beaver, muskrat, nutria and seal and evens length of underlying fur:

Tacks skin, fur side up, on beam. Strokes fur from head to tail using blunt-edged beaming knife to remove loose hairs and flatten fur. Dusts fur with powder to make guard hairs more visible for plucking. Plucks fur by either one of the following methods: 1. Places skin over lead guide of plucking machine with leather side of skin downwards. Starts metal-vaned roller and rubber roller of plucking machine by depressing foot pedal. Moves skin back and forth over guide between rollers to remove long or guard hairs from fur. 2. Cuts off guard hairs and evens fur over entire skin by shaving with thin, keen-edged knife.

8295-126 FUR-FLOOR WORKER(leather tan. & fur dress.) DPT:685

GED: 2 SVP: 3 EC: I 7 PA: M 4

Cleans and dresses pelts, performing any combination of the following tasks:

Cuts pelts on belly side from neck to tail with knife to facilitate further handling. Feeds pelts into cylinder of combing machine that untangles hair, or combs pelts by hand, using metal comb or steel bristle brush. Loads, starts, stops, and unloads beating machine that removes loose hair and foreign matter from pelts. Brushes or massages grease onto skin side of pelts to restore oils removed in dyeing and tanning processes, or loads pelts and grease into revolving drum for specified time. Loads pelts and sawdust into revolving drum to tumble pelts in sawdust to dry, clean, and soften them. Stops drum after specified interval and transfers pelts to revolving cage to remove sawdust from pelts. Stretches pelts to open pores and soften skin by pulling skin back and forth over edge of metal bar or by feeding pelt onto stretching device or into pulling machine. Trims fur with scissors or powered clippers to even length of hairs. Hangs pelts over slats to dry after cleaning, dyeing, or oiling tasks have been performed. Carries or pushes pelts on cart to next work station.

May be designated according to specialized task performed or machine tended; for example,
Beating-Machine Tender
Comber
Greaser

8295-130 LEATHER STRETCHER(leather tan. & fur dress.) DPT:685

blocker; leather staker.

GED: 2 SVP: 3 EC: I 6 PA: M 4

Stretches leather, hides or pelts, using one of the following methods:

1. Positions hide between jaws of reciprocating arm of staking machine and starts machine to flex (stake) and stretch hide. Shifts position of hide to flex entire area. 2. Lays hide face down on staking table and brushes inside of hide with water. Stretches hide by hand and clamps edges to staking table to block (shape) hide. Turns on ultraviolet heater and moves heater along track of staking table to dry hide. 3. Immerses hide in water to dampen it and make hide adhere to sloping hot plate. Swings hide flat against drying plate and smooths out wrinkles, using slicker. Closes dryer, sets temperature gauge and timer as specified, and starts drying cycle. Lifts hide from dryer at end of drying cycle. Piles stretched and dried hides on pallets for removal and further processing.

8295-134 SHAVING-MACHINE TENDER(leather tan. & fur dress.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: M 4

Tends machine that scrapes flesh or hair from pelts, hides or skins, shaves hides to uniform thickness, or shears fur or wool-bearing pelts to produce pelts with hair of specified length, using either of the following methods:

1. Turns handwheel or setscrew to adjust feed roller to specified height. Places pelt or hide on roller and presses pedal to raise roller that feeds skin to clippers or revolving blades. Verifies thickness of skin, using micrometer. 2. Arranges pelt, fur side up, on cloth-covered roll, and fastens it to pins protruding through cloth. Turns setscrews to adjust clearance between rollers according to thickness of pelt and amount of fur to be sheared off. Starts machine by pressing pedal, and guides pelt through rollers, the upper of which is equipped with rotary blade that shears fur from pelt.

May sharpen cutting blades, using whetstone. May be designated according to operation performed; for example, Flushing-Machine Tender
Fur-Cutting-Machine Tender
Pelt Shearer

8295-136 FUR BLENDER(leather tan. & fur dress.) DPT:684
GED: 2 SVP: 2 EC: I PA: L 4 7

Tints and dyes natural and synthetic furs according to specifications to enhance appearance, by applying liquid dye:

Applies tints and dyes to tips of guard hair or to all surface hair, using feather, brush or spray gun, to produce lustrous finish, to accentuate colours and shades of furs, or to simulate natural furs.

May apply dye to specified patterns, such as leopard spots and tiger stripes, using template. May specialize in applying dye to orlon synthetic materials, and be designated accordingly, Orlon-Pile Blender

8295-138 MEASURING-MACHINE TENDER(leather tan. & fur dress.) DPT:585
GED: 2 SVP: 2 EC: I PA: M 4

Tends machine that measures area of finished leather:

Sets automatic counter at zero. Starts machine and feeds leather between rollers that carry it past photo-electric sensing device to automatic counter or under measuring wheels which measure area. Reads counter and chalks number of square feet onto surface of leather. Maintains records of the amount of leather processed.

May total and tie leather pieces into bundles for shipment.

8295-142 BUFFER, LEATHER(leather tan. & fur dress.) DPT:685
burnisher; leather sander.
GED: 2 SVP: 2 EC: I 5 7 PA: M 4

Tends machine that polishes or roughens hides or skins to specified finish:

Turns setscrews to regulate distance between buffing rollers, according to thickness of hide. Positions hide between rollers and starts machine that automatically buffs complete hide, or holds half of hide while rollers buff surface of other half and then repeats buffing operation on unbuffed portion of hide.

May tend machine equipped with abrasive-covered rollers that form nap on surface of leather and be designated accordingly, Sueding-Wheel Tender

8295-146 PELT STRETCHER(leather tan & fur dress.) DPT:685
boarding-machine tender; puller, machine.
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that stretches, softens, and cleans pelts:

Places pelt on slanted board or feeding roller. Depresses pedal to elevate board or roller to bring it into contact with rotating roller. Holds pelt and guides it under rotating roller as machine stretches and softens it, and removes undesired flesh from skin side.

May examine pelts for defects and sort pelts according to grade.

8295-150 WOOL PULLER(leather tan. & fur dress.) DPT:687
GED: 2 SVP: 2 EC: I PA: M 4 7

Removes wool from sheep pelts and sorts wool into bins:

Holds pelt against angled table and pulls wool from pelt by hand. Examines wool, and sorts and places it in designated containers according to colour, texture, and length. Removes remaining wool from pelt, using scraper or depilatory. Places stripped pelts on rack or truck.

May use shears to cut off brand marks and wool around head and feet.

8295-199 OTHER HIDE AND PELT PROCESSING OCCUPATIONS

This group includes hide and pelt processing workers, not elsewhere classified; for example, those who tend ovens equipped with degreasing solvent sprays that remove fats and oil from leather. A typical example of an occupational title covered by this residual group definition is:

Degreasing-Equipment Tender(leather tan. & fur dress.)

8296-INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, PROCESSING, N.E.C.

This unit group includes occupations, not elsewhere classified, in inspecting, testing, grading and sampling work as described under the term titles, 02-170 INSPECTOR (any ind.); 02-430 TESTER (any ind.); 02-150 GRADER (any ind.); and 02-330 SAMPLER (any ind.); concerned with quality control activities in the processing of materials or products; such as, drugs, minerals, tobacco, hides and pelts.

8296-110 INSPECTOR, PHARMACEUTICALS AND TOILETRIES(pharm. & toil.) DPT:267
pharmaceutical inspector.
GED: 4 SVP: 7 EC: I PA: S 5 7

Conducts testing and quality control programs during production of pharmaceuticals and toiletries, to ensure conformance to standards and regulations:

Participates in establishing procedures for testing and quality control of products, according to established techniques of sampling, controlled production, testing, and statistical analysis of test results. Reviews laboratory-test reports, charts, and similar data prepared for each batch of product under test, to ensure conformance to government standards and company or consumer specifications, as determined by accepted laboratory procedures and experience with previously tested products. Recommends full-scale production of batches meeting quality standards and destruction of rejected batches, as authorized by supervisor. Investigates customer complaints of ineffective, stale, toxic or misbranded products, by reviewing production records and test reports. Recommends procedures for rectifying valid complaints and preventing recurrence. Confers with government inspectors and quality-control staff to resolve problems affecting manufacture and sale of company products.

8296-114 BLUE-LEATHER GRADER(leather tan. & fur dress.) DPT:287
GED: 3 SVP: 7 EC: I PA: M 4 7

Inspects, evaluates, and grades chrome-tanned hides (blue leather), and determines procedures for subsequent leather processing:

Examines tanned hides to detect imperfections such as brand marks, scars and uneven thickness. Feels hides to determine weight of hide and quality of surface grain. Decides processes to which hide should be subjected and finishes which should be applied to obtain top market value for product, using knowledge gained through extensive experience in all phases of leather manufacture. Sorts hides and tags or calls out identifying information to recording clerk, according to hide characteristics and quality.

8296-118 CIGARETTE TESTER(tobacco) DPT:387
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Tests cigarettes and cellophane wrappers to ensure that products conform to company standards:
Feeds sample from cigarette-making machine into hopper of weight recorder that tallies weight of each cigarette. Computes average weight of cigarettes in sample and compares average weight with standard to determine deviations. Examines cigarettes at intervals to detect imperfections such as loose ends, stems, stemholes and defective filters and defective glue lines in cigarette paper and packages. Slits cigarette paper, places tobacco in container and places container in electric moisture meter to determine moisture content. Weighs tobacco from specified number of cigarettes and compares individual weight with standard to determine deviations. Removes cellophane wrapper from cigarette pack, and tests resistance to air by slipping wrapper over suction device of instrument that draws air through wrapper and indicates amount of airflow on gauge. Records test finding, date and machine number from which samples were taken. May place tobacco from specified number of cigarettes in agitator equipped with series of screens to separate shreds according to size, and weigh screenings to determine percentage of each size of shreds in single cigarette, using conversion table.

8296-122 LEATHER SORTER(leather tan. & fur dress.) DPT:387
hide sorter.
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Inspects and sorts raw and dressed hides:
Examines hides for defects, such as brand marks, cuts, and scars, and trims defects from hides, using knife or shears. Verifies weight of hide, using thickness gauge. Sorts hides manually into piles according to qualities, such as colour, size, grain and weight. Returns defective hides for reprocessing or disposal.
May be designated according to type of leather sorted; for example, Patent-Leather Sorter

8296-126 HOGSHEAD INSPECTOR(tobacco) DPT:487
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Inspects sample of tobacco from hogsheads to verify grade and determine condition of tobacco:
Inspects tobacco for damage, and removes, weighs and records amount of tobacco damaged. Examines, feels and smells leaves to verify grade. Computes moisture content of tobacco by weighing sample before and after drying in oven for specified time. Notifies foreman when moisture content or condition of tobacco does not meet standards.
May grade cured tobacco leaves preparatory to marketing and be designated accordingly; for example, Tobacco Grader

8296-130 CIGARETTE INSPECTOR(tobacco) DPT:587
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Inspects cigarettes for defects to ensure conformance to standards:
Collects cigarettes from each machine tray, and examines them for defective printing, filling, sealing and cutting. Examines filter-tipped cigarettes for defectively formed and attached filters. Places specified number of cigarettes in tray gauge to verify length. Verifies position of brand name printed on wrapper, using gauge. Weighs cigarettes to determine conformance to standard, and records weight and time of weighing. Measures seam of cigarette, using magnifying glass and graduated scale. Compares colour and texture of cigarette paper samples with specifications. Notifies machine tenders of deviations from standards.
May test strength of paper, using tensile-strength tester.

8296-134 HIDE-AND-PELT INSPECTOR(leather tan. & fur dress.; slaughter. & meat pack.) DPT:587
GED: 2 SVP: 4 EC: 1 4 7 PA: H 3 4 7

Inspects animal hides, pelts and slunk (unborn animal) skins for defects, and grades them according to condition, size and weight:
Spreads hides, pelts or skins on floor or table, and examines or probes them with wooden skewer or finger to detect defects, such as grub holes, cuts, brands and residual meat and fat. Weighs hides, using platform scale and estimates weight of foreign material clinging to

hides. Outlines defective areas on hide with chalk or on pattern diagram. Sorts hides by grade. Records production data, and marks grade of hides on tags according to condition, size and weight. Tags hides or bundles of skins and places hides on pallet or truck.
May trim excess fat and flesh, and cut off snout, ears and tail, using knife, or return fatty pelts to scraping machine. May inspect and grade seal or other skins.

8296-138 WOOL-AND-PELT GRADER(leather tan. & fur dress.) DPT:587
GED: 2 SVP: 4 EC: 1 7 PA: H 3 4 7

Grades sheep or lamb pelts and wool according to quality specifications:
Examines and feels wool to determine its colour, texture and length, and sorts pelts or loose wool into grades for pulling or drying. Inspects pickled slats (sheep skins) for cuts, tears, blemishes and skin quality, and stacks them in piles according to grade. Records quantity and grades of wool or pelts inspected.

8296-142 CIGAR INSPECTOR(tobacco) DPT:687
fresh-work inspector.
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Inspects cigars to determine conformance to standards:
Weighs random samples to determine that cigars are of prescribed weight and notifies machine operators when weight is not standard. Examines cigars for broken or off-colour wrappers, soft spots, defective patches and variations from standard length. Sets aside imperfect cigars, and sorts them according to brand, defect and type of repair required. Stacks examined cigars in bins or boxes and attaches identification label to container. Fills trays with perfect cigars and loads cigars in hand press prior to packaging.

8296-146 MOISTURE-CONTENT TESTER(tobacco) DPT:587
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tests moisture content of tobacco in various stages of processing by either of the following methods:
1. Places tobacco sample in electric hygrometer and turns on current. Observes hygrometer and compares reading with conversion chart to determine moisture content. Records date, time, temperature, moisture content and reading for each sample tested.
2. Weighs sample of tobacco and places it in oven. Removes and weighs sample after specified time. Compares difference in weights with conversion chart to determine percentage of moisture content.
May be designated according to method used; for example, Moisture-Meter Operator

8296-150 GRAIN SAMPLER(whole. trade) DPT:687
GED: 2 SVP: 3 EC: B PA: L 3 4

Removes and examines samples of grain from freight cars, boat holds and storage bins, for subsequent grading:
Pushes sample-taking metal tube into grain at regular intervals or, if grain is being loaded, obtains samples from loading spout. Examines samples for uniformity. Places sample in metal basket, tags and forwards it to government inspector. Sets aside individual samples of grain that differ from lot and notes estimated quantity represented. Prepares report for government inspector indicating source of grain sample and original grading on bin slip.

8296-154 TOBACCO-SAMPLE PULLER(tobacco) DPT:587
GED: 2 SVP: 2 EC: 1 PA: L 4

Collects and grinds samples of tobacco for use in moisture, blending and flavouring tests:
Takes handful of tobacco leaves from conveyor at discharge end of redrying machine, or extracts samples of unprocessed tobacco from hogshead, using electric auger. Feeds sample into electric grinder. Pours ground tobacco into container, and marks date, hogshead number, grade and time collected on container. Carries containers to laboratory for moisture, blending and flavouring tests.

**8296-199 OTHER INSPECTING, TESTING, GRADING
AND SAMPLING OCCUPATIONS,
MISCELLANEOUS PROCESSING**

This group includes processing inspectors, testers, graders and samplers, not elsewhere classified; for example, those who inspect purchased tobacco for acceptance of grade, deterioration or defects; sort tobacco leaves according to colour and condition for use as wrappers or binders, or take samples of products or raw materials for laboratory analysis. Typical examples of occupational titles covered by this residual group definition are:

Claims Inspector(tobacco)
Leaf Sorter(tobacco)
Raw Material Sampler(any ind.)
Sampleman(any ind.)

**8298-OCCUPATIONS IN LABOURING AND
ELEMENTAL WORK, OTHER PROCESSING**

This unit group includes occupations, not elsewhere classified, in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), which are concerned with processing materials and products, such as hides and pelts, tobacco and feathers.

**8298-110 LABOURER, LEATHER PROCESSING(leather tan.
& fur dress.) DPT:686
tannery worker.
GED: 2 SVP: 2 EC: I 4 5 6 7 PA: H 3 4**

Performs any combination of the following tasks in the processing of hides and pelts in various sections of tannery:
Shovels salt on uncured hides to prevent decomposition and discoloration. Cuts cord from bundles of cured hides and spreads hides on table or floor for processing. Trims ragged edges, thin areas and brand marks from hides, using knife. Dumps tannery refuse, such as skin and fat into bin and covers refuse with lime to prevent putrefaction. Applies solvent to wool of sheepskin to remove painted brands, using rag and brush. Hangs sheepskins in steam room and turns valve to admit steam that loosens wool. Moves sheepskins to depilating machine or removes loosened wool from skins by hand. Collects wool after depilation and dumps it into washing machine. Shovels washed wool into centrifugal drier to remove moisture. Feeds hides to cutting machine that divides hides into sides for further processing. Counts and ties specified number of hides into bundles. Conveys bundles of hides between workers or departments, using hand truck. Dumps hides into drums or vats containing various chemical solutions that dye, oil, tan, depilate, delime, clean or preserve hides. Dampens hides with water, using sponge, or sprays specified solution on hides, preparatory to further processing or finishing. Pastes or clips wet hides on frames to prevent wrinkling and slides frames into drying tunnel. Removes dry hides from frames and stacks them on cart. Feeds and off-bears material from machines that clean, buff and smooth finished hides by pressing, brushing or vacuuming. Cleans vats, tanks, and drums of lime, tanbark and refuse, and scrubs walls and floors of tannery, using brushes, scrapers and solvents. Sprays disinfectant in trucks or freight cars used to haul hides to tannery. Spreads solutions of seasoning, coloured pigments or acrylic emulsions on leather for waterproofing or finishing.
May specialize in performing specific tasks and be designated accordingly; for example,
Hide Trimmer
Leather Coater
Sprayer, Hand

**8298-114 LABOURER, TOBACCO PROCESSING(tobacco)
DPT:686
GED: 2 SVP: 2 EC: I PA: H 3 4 7**

Feeds and off-bears tobacco from processing machines, and performs any combination of the following tasks in making various tobacco products:
Hangs bundles of tobacco leaves of similar-colour shade on sticks moving on chain conveyor to processing machines. Loads and unloads leaf or shredded tobacco onto or from racks or conveyors, using shovel, pitchfork or electric hoist. Sprays hands of tobacco leaves with

water or casing fluid, using spray gun, or places trays of tobacco on racks in conditioning room for specified time. Dumps or forks tobacco into chutes or hoppers of threshing, shredding, mixing, casing, screening and cigar- or cigarette-forming machines. Feeds packs of defective cigarettes into machine that opens packages, removes cigarettes, and dumps them into machine that cuts paper and filter from cigarettes to reclaim tobacco. Wraps plugs of chewing tobacco in wrapper leaves preparatory to moulding. Feeds cigars into machine that automatically aligns cigars with piercing rods to pierce draft holes in ends of cigars. Opens rejected cigars to reclaim tobacco, using knife, and places binder leaves and filler tobacco in separate boxes for reprocessing. Places empty containers at discharge end of machines to catch tobacco or tobacco products, and conveys filled containers between workers or departments, using hand truck. Starts and stops conveyors. Removes stems, off-colour tobacco and foreign material, such as dirt, paper and string from tobacco as it moves along conveyor. Brushes tobacco from clogged conveyors, screens or riddles of sifting machines, using brush or broom. Feeds lumps of tobacco to hydraulic or manually operated press to shape and compress them into plugs.

May specialize in performing specific tasks and be designated accordingly; for example,
Cigarette-Machine Feeder
Filler Feeder
Plug Wrapper, Hand
Riddler Cleaner
Screening-Machine Feeder

**8298-118 FEATHER WASHER-AND-DRYER(furn.) DPT:686
GED: 1 SVP: 2 EC: I 7 PA: L 4**

Feeds feathers into machines that wash, sterilize, dry and separate feathers used in stuffing household goods such as mattresses, pillows and comforters:

Fills washing machine with feathers, washing compound and disinfectant, by hand. Opens valve to admit water and starts machine. Opens valves to drain water and admit clean water to rinse feathers. Transfers wet feathers to drying machine, manually. Starts machine that dries feathers with steam and hot air. Opens air valve to blow feathers from machine, separating down from feathers by gravity, and transferring feathers to storage bins.

May feed machines that curl (crush) feathers, mix various grades of feathers, or beat feathers to remove dust and dirt. May sort and weigh feathers before loading them in storage bins preparatory to further processing.

**8298-199 MISCELLANEOUS OCCUPATIONS IN
LABOURING AND ELEMENTAL WORK,
OTHER PROCESSING**

This group includes processing labourers and other elemental workers, not elsewhere classified; for example, those who salvage tobacco from defective cigarettes, divide hides into sides by hand, or apply depilatory solution to pelts to loosen wool or hair. Typical examples of occupational titles covered by this residual group definition are:

Cigarette Salvager(tobacco)
Hide Divider, Hand(leather tan. & fur dress.)
Painter, Depilatory(leather tan. & fur dress.)

8299-OTHER PROCESSING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, primarily concerned with operating and tending equipment to process a variety of materials and products. Activities include: forming and coating acoustical tile; cutting insulation bats to size and attaching paper backing; coating pharmaceutical tablets; moulding and decorating candles; grinding materials in ball or rod mills; cleaning processing equipment; screening material to remove foreign matter or to obtain particles of specified size; blending materials to make brushes; and making, crushing or cutting ice.

8299-110 COATER-LAMINATOR(paper prod.; textile) DPT:362
GED: 3 SVP: 6 EC: I 7 PA: M 2 4 5 7

Operates machine that coats and laminates paper, paperboard, foil, film or cloth with adhesive or other mixtures, and directs crew in feeding, drying and winding activities:

Adjusts spreader roller and aligns coating bar to spread coating to specified depth on material, using hand tools. Directs crew members to load material onto machine-feed-rolls and thread material through guide and support rollers. Turns valves to start automatic system that pumps specified coating mixture into coater pans. Moves controls on panel to start machine. Adjusts controls to maintain temperatures, speed, pressure and other factors to produce specified product. Splices breaks in material or at ends of rolls to maintain continuous operation. Cuts samples of product from line, and visually examines coating for defects and general appearance. Measures depth of coating, using scale that compares sample to standard. Observes activities of crew during material feeding, coating, laminating, drying and winding operations. Tests strip of laminated material on tension tester to measure strength of bond between laminated surfaces. Maintains log of production data and equipment performance.

May operate machine to coat single synthetic film with adhesives and other materials to produce pressure-sensitive tape.

8299-114 WALLBOARD LAMINATOR(asbestos & min. wool) DPT:362
GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Operates gluing machine, hydraulic press, cement-cutting saw and chamfering machines to produce laminated-asbestos-cement wallboard:

Reads work order to determine product specifications, machine settings and materials. Mixes adhesives according to formula and dumps mixture into gluing-machine reservoir. Adjusts gluing machine guides to size and shape of panels. Turns valves to regulate pressure in hydraulic press. Adjusts chamfering machines, saw guides and fixtures to cut and bevel panels to specified size, using hand tools. Actuates control switches and operates equipment in a series sequence to produce laminated products. Directs fork-lift operator and other workers to load and unload machines. Maintains record of production and equipment performance.

May operate automatic equipment to laminate sheets of asbestos and foam-plastic products for use as insulation panels.

8299-118 ACOUSTICAL-TILE SURFACER(asbestos & min. wool; paper prod.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Tends series of machines that perforate, groove, and imprint patterns on insulation-board panels to form acoustical tile:

Adjusts height of saws to control depth of grooves to be cut into panels, using gauge, and wrench. Dumps sacks of ground walnut shells into hopper of blasting machine that blows walnut shell fragments onto panels to imprint decorative patterns on surface. Starts machines and spaces pattern templates on feed conveyor. Feeds panels into machines that automatically groove and perforate panels, positions panels on pattern templates and blasts specified design upon panel. Observes operation and adjusts operating irregularities, such as improper grooving or perforating and misalignment of pattern templates.

8299-122 INSULATION-BATT-CUTTER OPERATOR(asbestos & min. wool) DPT:682
GED: 3 SVP: 4 EC: I PA: M 4

Operates machine that slits and cuts mineral-wool or fibreglass blankets into batts of specified dimensions and encloses batts in paper covering:

Installs and adjusts slitting saws, edge cutters, dividers, flange-sealing rollers and paper-guide rollers, using hand tools. Positions paper rolls in upper and lower machine racks, using hoist, and secures rolls in position with wrench. Threads leading edges of paper and blanket into feed rollers. Adjusts valves to control flow and temperature of liquid asphalt to provide adhesive surface. Starts machine and observes operation to detect equipment malfunctions. Stops machine to remove sub-standard material and makes necessary adjustments.

May adjust position of blanket-feed table under master roller to control thickness of batt.

8299-124 TENONER-COATER OPERATOR, ACOUSTICAL TILE (asbestos & min. wool; paper prod.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Operates machine that automatically cuts, smooths, mortises, tenons, and applies coating of sizing to acoustical tiles made of various materials:

Changes and adjusts saws and cutters according to specifications, using hand tools. Turns dials to regulate temperature of pressing irons. Adjusts pressure of irons to obtain smooth finish. Adjusts rollers that control amount of sizing to be applied to tiles. Starts machine and automatic-feed conveyor. Periodically measures finished pieces for squareness and depth of cut, using gauges. Observes each phase of processing and makes necessary adjustments.

May operate machine equipped with attachment for painting flanges and bevels of tiles.

8299-126 CANDLE DECORATOR(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: S 4 7

Decorates candles following prescribed patterns and customer's specifications:

Positions goldfoil and other decorative materials on sheets of wax and presses out ornaments, designs, labels, sprays and other figures, using heated hand dies. Attaches decorations to candles, using hand tools and Bunsen burner.

May paint surface of candle with clear lacquer and sprinkle area with coloured sparkles. May prepare sheets of wax by melting wax in pot over electric burner, pouring hot wax over paper and placing in tank of cold water to harden. May fashion wax design on candles to simulate snow by adding steric powder to hot wax, whipping the mixture, and applying to cold preformed candle by hand.

8299-130 CANDLE MAKER(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Makes candles, performing any combination of the following duties:

Cuts wicks to specified lengths, using knife or scissors. Hangs wicks from spacings in metal frames preparatory to dipping. Dips wicks manually or with aid of motorized mechanism into vat of molten wax mixture or pours mixture, using containers, on wicks to build up candles to specified circumferences. Inserts wicks through centre of moulds and attaches ends to racks. Pours molten wax mixture into moulds, using container or opens valves to admit wax into moulds. Adjusts steam and coolant valves to maintain prescribed temperature in mould. Turns hand crank of ejection mechanism, releasing candles from moulds into rack after specified time. Scrapes remaining wax from moulds, using hand tools. Cuts, trims or shapes candles by placing them in heated dies. Examines candles for defects in shape and finish, and grades them according to type, colour and size. Tends machine that fastens candlewicks to metal candle bases. Adds colour ingredients to molten wax, according to customer's specifications.

May insert wicks and bases in openings of moulded candles by hand. May tend machine equipped with heated dies that form contour of bottom end of candle. May be designated according to specific tasks performed; for example,

Candle Cutter
Candle Dipper
Pourer, Candle

8299-134 ICE-CHIP-MAKER TENDER(utilities, n.e.c.) DPT:685
GED: 2 SVP: 4 EC: B PA: L 2 4

Tends refrigeration and conveying equipment that produces and deposits ice chips into hold of fishing vessel to preserve fish:

Turns valves to admit refrigerant to freezer unit and salt water to cylindrical drum inside freezer unit. Starts motor-driven rotary scraper that scrapes ice from inner surface of drum and deposits it in storage bin. Starts mechanical spreader that spreads ice chips evenly in bin. Positions feeding and discharge chutes of conveyor to allow ice chips to flow from storage bin to ice-blowing machine. Connects length of pipe to blower and lowers pipe into hold of fishing vessel, using hand tools. Descends ladder into ship's hold to estimate amount of ice required. Starts conveying and ice-blowing equipment to force ice into hold, and stops equipment on signal from crew member. Estimates and records weight of ice delivered. Defrosts refrigeration equipment

by directing hot air to inside of freezer unit. Lubricates moving parts and performs routine maintenance on equipment, using hand tools.

8299-138 MILL TENDER(any ind.) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends one or more mills that grind materials, such as chemical compounds and ingredients for food and drugs:
Pushes lever of ball-storage bin to add specified quantity of balls to mill or adds balls to mill manually. Opens flow gate or valves and starts conveyor to load mill or dumps material into mill by hand. Secures cover plate, using wrench. Starts and runs mill for specified time depending on size of load, grindability of material and required fineness. Removes cover plate, attaches grid and starts mill to discharge contents. Regulates inflow of materials and observes outflow to ensure attainment of specified product.
May tend mill utilizing vacuum or pressure feed systems. May tend steam-jacketed mill that beats materials during processing. May keep production records. May be designated according to grinding agent used or material ground; for example,
Ball-Mill Tender
Pigment-Mill Tender

8299-142 LINSEED-OIL EXTRACTOR(animal & veg. oil) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4

Tends equipment that grinds, cooks and presses flaxseed to extract linseed oil used in manufacture of products, such as lacquer, paint or soap, and to make linseed meal:
Shovels flaxseed into hopper of grinding mill and starts mill to grind flaxseed into meal. Dumps ground meal into tempering kettle and adjusts controls to regulate and maintain specified temperature. Turns valve to dump cooked flaxseed between mats to form cakes. Places mats in bed of hydraulic press and lowers ram to press cakes and remove linseed oil that flows into drums or storage area.

8299-146 PROCESSING-EQUIPMENT CLEANER(chem., n.e.c.; petrol. & coal prod.) DPT:684
GED: 2 SVP: 3 EC: B 4 5 6 7 PA: H 2 3 4

Cleans storage tanks, filter presses, pipelines, pressure systems and other processing equipment used in chemical and petroleum industries, performing any combination of the following duties:
Opens vacuum-system valves to remove vapours from vessels and locks electrically-driven agitator in position. Steams and ventilates vessels, using steam and air hoses. Removes solidified material and other foreign matter from vessels, tanks, valve openings, filters and screens, using nonsparking-safety tools, cleaning compounds and high-pressure-water hose. Removes core or center of filter, cloth wrapper, metal screens and other strainers, using hand tools. Washes reusable canvas, using water and solvents. Cleans metal screens. Replaces worn filters and reassembles equipment after cleaning. Turns valve to drain solutions from equipment for reuse. Cleans machinery, fans and ducts, using brushes and rags.
May test storage tanks or other vessels for presence of gas, using testing meter, prior to entering vessel for cleaning purposes.

8299-150 ICE MAKER(utilities, n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 4 PA: M 4

Tends equipment that freezes water into ice, performing any combination of the following tasks:
Opens valves to fill containers with specified amounts of water, and lowers containers into freezing tanks with hoist. Inserts air bubbler into containers and starts agitator in freezing tank to ensure uniform freezing. Siphons or pumps water containing foreign matter from centres of partially-frozen ice blocks, using suction pump, and refills container with fresh water. Flushes surfaces of ice blocks with hose. Removes container from tank with hoist and immerses it in warm water to free ice from container sides. Positions containers on dumping pivot and pushes buttons to tilt pivot and dump ice onto platform.
May mix brine solution for freezing tanks by adding prescribed amounts of materials into mixing vats and starting agitator. May turn valves to regulate compressors and condensers.

8299-154 SCREEN TENDER(any ind.) DPT:685
screenman.
GED: 2 SVP: 3 EC: I 5 7 PA: M 4

Tends one or more vibrating or oscillating screens that separate powder or crushed materials according to size:
Presses buttons to start screens vibrating. Turns valves and starts conveyors or moves chute vanes to control flow of materials to screens according to type of material to be processed. Sifts samples of sized material through laboratory test screens, hand sieve or splitter to determine if screened particles meet specifications. Changes screen mesh or cloths and adjusts equipment, using hand tools. Cleans screen holes clogged with oversized particles, using bar, rubber mallet or air hose.
May scoop or shovel screened materials into bags or other containers. May examine materials to detect impurities that could contaminate product or damage screens. May prepare and stencil filled containers. May be designated according to material processed; for example, Aluminum-Powder-Screen Attendant(non-ferrous metal)
Sand Grader(construction)

8299-158 MIXER-TENDER, BRUSH MATERIAL(misc. prod. fab., n.e.c.) DPT:685
blender, brush material.
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine that blends brush-filling materials, such as horsehair, nylon, vegetable fibres, and plastic filaments:
Loosens wingnuts and adjusts conveyor guides to accommodate length of materials to be processed. Removes materials from container according to predetermined sequence and places them on machine conveyor with flag (split) ends together. Moves lever to set specified speed of machine cycle. Starts machine and observes material until blending conforms with prescribed standards. Removes and packs blended materials.

8299-162 CONVEYOR-WASHER TENDER(any ind.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends conveyor washer that cleans and rinses any of a variety of items, such as plate glass, plastic sheets, metal, cans and glassware, performing any combination of the following duties:
Places items to be washed onto movable bed of machine. Turns valves and observes gauges to set specified flow of water or steam from jets of machine. Starts conveyor that moves objects into bath tank, through spray of water or steam, under rotating brushes and through spray of rinse water. Examines washed items and removes any remaining foreign matter, using brush or sponge. Weighs or measures and pours specified quantity of cleaning agent into wash water. Moves items to be washed to and from warehouse.

8299-166 WAXER-STACKER-MACHINE TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: I 5 6 PA: M 4

Tends machine that sprays coating of lubricating wax on enamelled tinplate sheets and stacks waxed sheets on pallets:
Adjusts machine guides according to size of tinplate sheets, using hand tools. Breaks blocks of wax, using mallet and loads pieces into electrically-heated-machine reservoir. Pushes button to start machine and observes operation to detect machine malfunction. Feels surface of waxed sheet, periodically, to verify quality and adjusts waxing mechanism as required. Starts stacker and roller units, to move stacked load from discharge end of machine. Places protective paper on top of completed stack and secures load to pallet with wire straps, using hand strapper. Cleans machine, using rags, solvent and scraper.

8299-170 WINDING-MACHINE TENDER(any ind.) DPT:685
roll-up-machine tender.
GED: 2 SVP: 2 EC: I PA: H 4 7

Tends winding machine that winds various materials on cores or spindles by performing any combination of the following duties:
Positions core or spindle in winding machine, manually or using hoist. Pulls end of material through winder and secures onto core or spindle. Sets yardage counter, using hand tools. Depresses button to start machine and adjusts speed and tension controls to maintain even

winding. Examines material for imperfections during winding operation. Stops machine when specified yardage is indicated. Cuts material, using knife, and tapes end to prevent unwinding. Removes full core or spindle from machine, manually or uses hoist. Records information on work ticket.

May tend winding machine equipped with selvage knives to cut specified width from edge of material. May roll particular product or material and be designated accordingly; for example,

Abrasive-Paper Winder(non-metal. min. prod., n.e.c.)

Floor-Covering Winder(linoleum prod.)

Gummed-Paper Winder(paper prod.)

**8299-199 MISCELLANEOUS PROCESSING
OCCUPATIONS**

This group includes processing workers, not elsewhere classified; for example, those who tend machines that crush, cut or cube ice. A typical example of an occupational title covered by this residual group definition is:

Ice-Cutting-Machine Tender(utilities, n.e.c.)

MACHINING AND RELATED OCCUPATIONS

This major group includes occupations concerned with using machines and hand tools to shape or work such materials as metal, plastic, wood, clay, glass or stone by cutting, boring, milling, abrading, planning, punching, pressing, rolling, engraving, welding or similar methods. These occupations are classified in the following minor groups:

- 831 Metal Machining Occupations
- 833 Metal Shaping and Forming Occupations,
Except Machining
- 835 Wood Machining Occupations
- 837 Clay, Glass, Stone and Related Materials
Machining Occupations
- 839 Other Machining and Related Occupations

831-METAL MACHINING OCCUPATIONS

This minor group includes occupations primarily concerned with shaping metal into parts or products of specified dimensions, by such means as turning, boring, milling, abrading or planing. Activities include: measuring, laying out and setting up work, operating machine-tools, and repairing, fitting and assembling parts. The machining of plastics or similar materials is also included when methods applied to machining of metal are used. These occupations are classified in the following unit groups:

- 8310 Foremen, Metal Machining Occupations
- 8311 Tool and Die-Making Occupations
- 8313 Machinist and Machine-Tool Setting-Up
Occupations
- 8315 Machine-Tool Operating Occupations
- 8316 Inspecting and Testing Occupations, Metal
Machining
- 8319 Metal-Machining Occupations, n.e.c.

8310-FOREMEN, METAL MACHINING OCCUPATIONS

Foreman, Machine Shop, Maintenance
Foreman, Machine Shop, Production

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in shaping metal into parts or products by machining.

8310-110 FOREMAN, MACHINE-TOOL OPERATORS(mach., weld. & forg.) DPT:138

Supervises and co-ordinates activities of machine-tool operators engaged in operating metal-cutting machines; such as, lathes, millers, shapers and grinders, which have been set up for repetitive type work, applying knowledge of machine-shop mathematics and procedures, machine-tool setup and operating techniques, and production machining methods, (Unit Group 8315):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May be concerned with particular type of activity and be designated accordingly; for example,

8310-114 FOREMAN, MACHINISTS AND MACHINE- TOOL SET-UP OCCUPATIONS(mach., weld. & forg.) DPT:138 machine-shop foreman; machinist foreman.

Supervises and co-ordinates activities of workers engaged in custom or production machining of metal workpieces, applying knowledge of machine shop mathematics and procedures, machine-tool setup and operating techniques, and production machining methods, (Unit Group 8313):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May set up and operate machine-tools to expedite production or solve machining problems. May be concerned with particular type of product and be designated accordingly; for example,
Foreman, Machine Shop, Automotive
Foreman, Machine Shop, Precision Instruments
Foreman, Machine Shop, Shipyard
Foreman, Machine Shop, Tool

8310-118 FOREMAN, METAL MACHINING, INSPECTION(mach., weld. & forg.) DPT:138
chief inspector; quality-control foreman.

Supervises and co-ordinates activities of workers engaged in inspecting materials, tools, workpieces and finished products; such as, metal stock, cutting tools, gauges, machine parts, and assembled units applying knowledge of specifications, production methods, products and inspection instruments, (Unit Group 8316):
 Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
 May compute relative production and repair costs to determine salvage value of rejected products.

8310-122 FOREMAN, TOOL AND DIE(mach., weld. & forg.; metal fab., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in laying out and setting up workpieces and machines, operating machine-tools, fitting and measuring to close tolerances, heat treating and assembling parts to make or repair dies, jigs, fixtures and tools, (Unit Group 8311):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May be designated according to type of tools fabricated; for example, Forelady, Industrial Diamond Mounting(metal fab., n.e.c.)

8310-199 OTHER FOREMEN, METAL MACHINING OCCUPATIONS

This group includes metal-machining foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in machining moulds for glass and machining components for electrical equipment. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Machining and Assembling(electric. equip.)

Foreman, Mould Shop(glass)

8311-TOOL-AND-DIE MAKING OCCUPATIONS

This unit group includes occupations concerned with making and repairing custom-made, prototype or special tools, dies, jigs, fixtures and gauges that require working to close tolerances. Activities include: laying out, making mathematical computations, reading mechanical drawings, setting-up workpieces and machines, operating machine-tools, heat treating parts, hand-fitting, and finishing work to specifications. Occupations concerned with the mass production of tools are classified in Unit Group 8315, MACHINE-TOOL OPERATING OCCUPATIONS.

8311-110 TOOL AND DIE MAKER(mach., weld. & forg.) DPT:280
 GED: 4 SVP: 7 EC: 1 5 6 PA: M 4 7

Makes, repairs and tests dies, cutting tools, jigs, fixtures, gauges and special hand tools by laying out, setting up, machining, fitting and finishing metal stock and castings:

Studies drawings and specifications of tool, die, prototype or model and visualizes product. Computes dimensions and tolerances and makes sketches. Plans sequence of operations by applying knowledge of tool and die construction, metal properties, machining methods and shop mathematics. Positions, secures, measures and marks metal stock or castings to lay out for machining, using lay-out tools and procedures. Sets up and operates variety of machine tools to cut, turn, mill, plane, bore, grind or otherwise shape workpiece to prescribed dimensions and finish. Verifies conformance of machined parts to specifications by checking dimensions, clearances and alignment, using measuring instruments; such as, dial indicators, height gauge, gauge blocks, surface gauge and micrometers. Fits and assembles parts, using hand tools; such as, files, scrapers, abrasive cloth, abrasive stones, grinders, hammers and wrenches. Tests completed tools, dies, jigs, or fixtures for proper operation. Dismantles and repairs worn or defective tools, dies and fixtures. Works to close tolerances.

May design tools, templates and gauges used in tool and die making.

May heat-treat tools and dies, using electric, oil or gas-fired furnace, and oil or water-quenching baths. May specialize in making certain types of tools or dies and be designated accordingly; for example, Die-Casting-and-Plastic-Moulding-Die Maker
 Die Maker
 Die Sinker
 Tool Maker

8311-114 DIAMOND-TOOL MAKER(mach., weld. & forg.) DPT:281
industrial-diamond cutter and polisher.
 GED: 4 SVP: 7 EC: 1 PA: L 4 7

Selects, cuts, shapes, polishes and mounts industrial diamonds to produce machine-tool cutters, saws and drill bits, utilizing knowledge of tool design and characteristics of industrial diamonds:

Studies grade, quality and physical structure of rough diamonds. Sorts stones according to quality, size and faults, using magnifying glass and micrometers. Cuts stone to rough shape by positioning it in holder and holding against revolving saw or lapidary slitter impregnated with diamond dust. Grinds and polishes diamond to specified radii and angles, using lapping device. Examines stone for accuracy of angles, radii, clearances and cuts, using magnifying glass, optical comparator and microscope. Operates machine-shop tools to grind or machine recess in tool for diamond. Mounts diamond to specified angle in tool and applies brazing compound and flux. Operates electric furnace to fuse diamonds in tool holders and tool bits, in inert atmospheric conditions.

8311-118 DIE MAKER, BENCH, STAMPING(mach., weld. & forg.) DPT:281
stamping-die maker, bench.
 GED: 4 SVP: 7 EC: 1 PA: M 4 7

Makes and repairs stamping dies by laying out, fitting and assembling castings and metal parts by analyzing specifications, using knowledge of shop mathematics, die construction and ductility of sheet metal:

Studies drawings of die and product, die models, templates and prototype part, and visualizes shape, mechanical structure and operation of die. Computes dimensions, decides on machining to be done, and plans layout and assembly operations. Measures, marks and scribes metal stock for machining by machine-tool operators. Operates drill press to drill and tap holes in parts for assembly. Lifts machined parts manually or with hoist, and positions them for assembly on worktable or surface plate. Smooths flat and contoured surfaces and fits parts to each other, using tools, such as abrasive stones, files and power grinder. Verifies dimensions, alignments and clearances, using dial indicators, gauge blocks, thickness gauges and micrometers. Fastens parts together with dowels and bolts, using hand tools, such as hammers and wrenches. Fits and assembles cam-operated mechanisms for lateral movement of part of die. Works to close tolerances. Dismantles and repairs or replaces parts of dies.

May specialize in making die units and transfer mechanisms for four-slide or multi-station-die presses and be designated accordingly; for example, Die Maker, Four-Slide Machine
 Progressive-Die Maker

8311-122 DIE MAKER, WIRE-DRAWING(mach., weld. & forg.) DPT:281
 GED: 4 SVP: 7 EC: 1 6 PA: M 4 7

Makes wire-drawing dies by laying out, setting up, machining and finishing metal, carbide and diamond parts:

Studies specifications, drawings and charts and visualizes shape of die. Computes die dimensions and plans sequence of operations by applying knowledge of metal properties, machining methods and shop mathematics. Measures and marks metal stock to lay out workpiece for machining. Sets up and operates machine tools to cut, turn, mill, plane, bore, grind or otherwise shape workpiece to prescribed dimensions and finish. Polishes bores of die by lapping or using die-finishing machines, applying progressively finer grades of diamond dust compound. Inspects die for defects, such as cracks, using loupe or microscope. Pulls wire or rod through die bore manually or using wire-drawing machine to test die performance. Measures wire or rod with such instruments as micrometer, vernier gauge or wire gauge to verify conformance of die bore to specifications.

8311-126 DIE SINKER, BENCH(mach., weld. & forg.) DPT:281

forging-die maker.

GED: 4 SVP: 7 EC: I PA: M 4 7

Lays out and finishes impression cavities in die blocks to produce forging dies:

Studies drawing of part or die and plans sequence of operations, applying knowledge of die sinking. Measures and marks die block to lay out designs of cavities, using calipers, micrometers and gauges. Uses power grinder, scrapers, files, and abrasive cloth to obtain specified dimensions, contours and finish of die cavities. Inspects die cavities with templates and measuring instruments, such as calipers, micrometers and height gauges to verify conformance to specifications. Makes templates to verify dimensions of cavities. Makes and inspects sample lead or non-metal cast of part in die to verify fit of die members and basic shape of part.

8311-130 TOOL MAKER, BENCH(mach., weld. & forg.) DPT:281

GED: 4 SVP: 7 EC: I PA: M 4 7

Makes and repairs cutting tools, jigs, fixtures and gauges by laying out, fitting and assembling parts:

Studies drawings and other specifications to determine dimensions, machining involved and to plan layout and assembly procedures, using knowledge of tool design and shop mathematics. Measures, marks and scribes metal stock to lay-out for machining by other workers. Operates drill press to drill and tap holes at specific locations in parts. Smooths and scrapes parts to fit, using hand tools, such as files and scrapers. Grinds surfaces of parts, using surface grinder. Positions and secures parts on surface plates with devices, such as V-blocks, vises and angle plates. Assembles parts, using hand tools, such as wrenches, hammers and tweezers. Verifies dimensions and alignments, using measuring instruments, such as micrometers, height gauges and gauge blocks.

May operate assembled mechanism to test its functioning.

8311-134 CARBIDE-TOOL MAKER(mach., weld. & forg.) DPT:380

tool maker, carbide.

GED: 4 SVP: 7 EC: I 6 PA: L 4 7

Sets up and operates variety of machine-tools to make tools, dies, tool holders and machine parts from tungsten-carbide blanks and steel:

Sets up and operates machine-tools, such as lathes, milling machines, grinders, shapers and electrical-discharge machines, to make tools and other parts. Measures workpieces with precision-plug and block gauges, micrometer, optical comparator and other measuring instruments, to ensure conformance to specifications. Brazes carbide tips to tools, using hand torch or induction heater.

8311-138 DIE FINISHER(mach., weld. & forg.) DPT:381

die barber; die fitter.

GED: 4 SVP: 7 EC: I 5 PA: M 3 4 7

Grinds, files and polishes contoured surfaces of metalworking dies, such as forging dies and stamping dies, to specified shape and smoothness, using abrading tools and hand tools:

Selects abrasive tools according to shape and smoothness specified. Lifts and positions die on bench, manually or with hoist. Studies drawings, die models and prototype part, and compares them with die, to ascertain contours. Brushes blue pigment on ridged and grooved surface of rough-milled die and grinds down ridges with portable grinder. Brushes contrasting pigments on die and prototype part, die model, or corresponding die and presses them together, manually or with press. Interprets pattern of pigments where surfaces have made contact and grinds and files high spots until die conforms to specified shape. Polishes and smooths die surfaces, using a variety of files, stones, abrasive cloths and papers.

May be designated according to type of die finished; for example,

Forging-Die Finisher
Punch Finisher
Stamping-Die Finisher

8311-142 DIE MAKER, JEWELLERY(metal fab., n.e.c.) DPT:381

GED: 4 SVP: 6 EC: I PA: M 4 7

Makes set of dies used to form and shape metal jewellery blanks: Studies drawing or sample of product and plans sequence of operations. Draws outline of design on flat surface of steel block. Positions block in vise and cuts design, using fine chisels. Chips and cuts away excess metal to complete design of die, using machine-tools and hand tools. Verifies dimensions of workpiece, using micrometers and gauges. Hardens and tempers steel block and forces it into block of soft steel to form sunken design in other half of die, using press.

8311-146 EXTRUSION-DIE-TEMPLATE MAKER(mach., weld. & forg.) DPT:381

GED: 4 SVP: 6 EC: I 6 PA: L 4 7

Lays out sheet or plate steel workpiece and operates machine-tools to make templates of extrusion cross-sections, used in designing and manufacturing extrusion dies:

Studies template or product drawings and plans operations according to knowledge of shop mathematics and extrusion methods. Applies copper sulphate, chalk or other material used for marking surface of metal with cloth or brush. Computes dimensions, measures and scribes outline of extrusion cross-section on metal workpiece. Shapes and smooths workpiece by sawing, filing, machining and drilling, following lay-out lines and using hand and machine-tools. Verifies conformance of template to specifications, using measuring instruments, such as micrometers, calipers, height gauges and protractors. Operates bench grinder to modify standard files to particular shapes for special uses.

May make template from conductive alloy and use spark-eroding machine for shaping template.

8311-150 WIRE-DIE POLISHER(wire prod.) DPT:381

carboid-die polisher; diamond-die polisher.

GED: 3 SVP: 5 EC: I PA: L 4 7

Laps and polishes bores of carboid and diamond wire-drawing dies to specified dimensions:

Positions die in holding device of machine. Inserts steel needle in machine holder or spindle, positions needle inside bore of die and starts machine that rotates die or needle. Dabs progressively finer diamond-dust paste or solution on needle during lapping operation. Removes and cleans die, using compressed air or ultrasonic cleaner. Verifies die bore dimensions and angles by pulling specified gauge wire through die opening and measuring it with micrometer, or by taking latex rubber impressions, and measuring it with optical comparator. Inspects die for cracks or other defects, using magnifying glass or microscope. Cleans other die surfaces with files or grinders. Replaces worn needles and sharpens points on grinder.

May lap dies by inserting and pressing hand-lapping tool in bore of rotating die in bench or jewellers' lathe.

8313-MACHINIST AND MACHINE-TOOL SETTING-UP OCCUPATIONS

This unit group includes occupations concerned with setting up and operating various machine-tools to shape metal into parts or products of specified dimensions requiring work to close tolerances. Activities include: measuring, laying out and setting up workpieces; making mathematical computations and reading mechanical drawings; machining work to specifications by boring, milling, turning, sawing, precision grinding, and planing; and associated fitting, assembling and repairing of metal parts; setting up machine-tools for less skilled operators to perform repetitive work and checking samples of first-run workpieces; and machining of other materials when methods applied to metal machining are used. Occupations concerned with operating metal-cutting machines, set up for repetitive type work, are classified in Unit Group 8315, MACHINE-TOOL OPERATING OCCUPATIONS.

8313-110 MACHINIST, EXPERIMENTAL(mach., weld. & forg.) DPT:280
research machinist.
GED: 4 SVP: 8 EC: I 6 PA: M 4 7

Makes parts, tools, mechanisms and machines for experimental purposes:

Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in solving problems relative to work-holding arrangements, materials, machine settings, tools, product specifications and fabrication methods for production process. Varies factors systematically and verifies results by such methods as operating mechanisms, timing operations, measuring tool wear, inspecting products and discussing results with engineering personnel.

8313-114 PATTERNAKER, METAL(mach., weld. & forg.) DPT:280
GED: 4 SVP: 8 EC: I 6 PA: M 4 7

Analyzes specifications, and applies knowledge of pattern-making methods to lay out, machine, fit and assemble castings and other parts, to make metal-foundry patterns, core boxes and match plates, using machine-tools and hand tools:

Studies drawings and other specifications of part to be cast, computes dimensions and plans sequence of operations. Measures and marks metal workpiece for machining. Sets up and operates various machine tools, such as milling machines, lathes, drill presses and grinders to machine castings to specifications. Assembles pattern, using hand tools and dowels, bolts, screws or other fasteners. Cleans and hand finishes workpiece, using files, scrapers and powered hand grinders. Verifies conformance of pattern dimensions to specifications, using templates and measuring instruments, such as scale, calipers and micrometers. May make templates for layout and inspection purposes.

8313-118 TURBINE-BLADE FITTER(mach., weld. & forg.) DPT:280
GED: 4 SVP: 8 EC: I 5 6 PA: M 4 7

Sets up and operates machine-tools to make and fit blade structures for steam and gas turbines:

Positions turbine blades on bench preparatory to forming sections. Measures tenon location on blades with dial indicator and selects two blades with equal tenons for end blades in section. Sets up and operates milling machines and grinding machines to mill and grind blade roots to obtain specific section lengths, radial alignment and root contact. Inserts blades into grooves of spindle, cylinder or fixture and pounds metal caulking into groove to tighten blades. Operates grinders and metal saw to shape blade locking device, spindle filler pieces and wedges from metal stock. Fits locking devices to pocket of blades and smooths surfaces, using chalk, files and abrasive paper. Drills, reams and taps cylinder locks, spindle filler pieces, seals and wedges, using drill press and fastens them to blade by peening or inserting set screw. Fits shroud over blade ends and peens rivets, using hammer and capping tool or pneumatic hammer. Checks head of rivet for specified clearance, using measuring tool. Grinds shroud of each blade section to obtain specified clearance between shrouds.

8313-122 MACHINIST, BALLISTICS LABORATORY(mach., weld. & forg.) DPT:260
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates a variety of machine-tools to make ballistics laboratory equipment such as gun-holding and bench-rest devices, and cartridge-slicing fixtures, used for testing accuracy of ammunition:

Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in developing and machining ballistics-laboratory testing devices. Assembles devices by bolting, pinning, rivetting or welding. Tests accuracy of gun-holding devices and rim-fire and centre-fire cartridges by firing at target. Inspects target for bullet hole group size and mean point of impact to determine accuracy of gun-holding devices and ammunition. Provides advice on design and development of ballistics testing equipment and special test barrels, utilizing knowledge of firearms, ammunition and mechanical principles.

8313-126 MACHINIST, MODEL MAKER(mach., weld. & forg.) DPT:260
model maker; prototype machinist.
GED: 4 SVP: 7 EC: I 6 PA: M 4 7

Sets up and operates a variety of machine-tools to make or repair prototype models of precision equipment, following drawings and sketches or from oral instructions:

Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in making, repairing and assembling prototype models of precision equipment such as tool attachments, mechanical test equipment, control instruments and data processing mechanisms. Discusses dimensional and technical problems with design staff and makes drawings or sketches of proposed mechanisms.

8313-130 PINION-AND-WHEEL-CUTTING, SET-UP
MAN(scient. & ind. equip., n.e.c.) DPT:260
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates variety of machining equipment used to mass produce precision watch parts, such as wheels, pinions, clicks and screws, following drawings and sketches:

Sets up machine-tools, such as gear hobbors and lathes for production-machine operators and makes first-run workpiece. Adjusts cutting speeds, feed rates, and depth of cut. Grinds and resets precision cutters. Installs, adjusts and makes repairs to cutting tools, cams, gears, chucks, slides and similar parts of production machines. Instructs new operators in machine operation.

8313-134 GRINDER SET-UP OPERATOR, JIG(mach., weld. & forg.) DPT:280
jig grinder.
GED: 4 SVP: 7 EC: I 6 PA: L 4 7

Sets up and operates jig-grinding machine to locate and precision-grind holes and contours in metal workpieces, such as tool, die and machine parts, according to specifications, and using knowledge of tooling and jig grinding procedures:

Examines drawing, layout on workpiece, or other specifications to plan sequence of operations. Computes and sketches hole and contour dimensions and locations in relation to base reference points and lines. Positions and secures workpiece on machine table in relation to grinding spindle, verifying each step with dial indicator. Selects grinding wheel, grinding speeds and feed rates for each operation according to knowledge of metal properties and abrasives and mounts wheel on spindle. Moves controls and reads dials to set grinding speed, feed rate, spindle angle for taper grinding, diameter of planetary action, and limits of automatic reciprocating wheel-feed. Dresses wheel manually or with preset dressing device. Moves controls to feed wheel into hole and against surface of workpiece. Verifies hole locations and dimensions for conformance to specifications, using measuring instruments, such as dial indicator, gauge blocks and telescoping gauges.

8313-138 INSTRUMENT MAKER(mach., weld. & forg.) DPT:280
precision-mechanical-instrument maker.
GED: 4 SVP: 7 EC: I 6 PA: L 4 7

Sets up and operates machine-tools to make, modify and repair mechanical instruments and mechanical assemblies or parts of electrical or optical instruments, such as pressure gauges, binoculars, theodolites, actuating devices, pyrostats and servo-mechanisms:

Reads workorders and parts lists, and analyzes schematic and dimensional drawings and written specifications for job data. Lays out cutting lines and reference points on workpiece material such as silver, nickel, stainless steel, platinum, steel, ivory and plastic, using measuring and marking instruments. Cuts, shapes and fits or reworks parts and fittings, using machine-tools such as bench lathe, drill press, punch press, milling machine, grinder, and lapping and polishing machines. Heat treats metal parts by annealing and hardening. Assembles parts in jig, fixture or clamps, and welds, solders or brazes parts together. Fits and installs components such as bearings, bushings, springs, balance mechanisms and gear trains in housings, using small arbor press and hand tools. Verifies dimensions of parts, using measuring instruments such as micrometers, calipers and electronic gauges. Coats assembled instruments with protective lacquer

or enamel, using spray-gun. Lubricates moving parts to specifications during assembly.

8313-142 MACHINE-TOOL SETTER(mach., weld. & forg.)
DPT:280

set-up man, machine-tools.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up various machine-tools for use on a production basis by machine operators:
Studies drawings and other specifications and determines sequence of machining operations to be carried out, using knowledge of particular machine's operation. Measures and marks reference points on workpiece. Positions and fastens cutting tool(s) and workpiece on machine, using chucks, face plate, centers, clamps or other fixtures. Adjusts machine travel, stops and other controls to ensure machine cuts or grinds to specifications, and sets cutting speed, feed rates and depth of cut. Starts and operates machine to make sample workpiece. Checks sample with measuring instruments such as micrometers, calipers and preset gauges, and makes adjustments to machine settings. Changes worn tools and resets machine. Instructs machine operators.

May specialize in setting up one particular type of machine and be designated accordingly; for example,
Grinder Set-Up Man
Honing-Machine Set-Up Man
Lathe Set-Up Man
Milling-Machine Set-Up Man
Screw-Machine Set-Up Man, Production
Threading-Machine Set-Up Man

8313-146 MACHINE-TOOL SET-UP OPERATOR(mach., weld. & forg.)
DPT:280
machine set-up operator; setter-operator, machine-tool.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates variety of machine tools, such as lathes, millers, shapers, grinders and drill presses to machine metal into parts or products usually on custom basis:

Analyzes specifications, drawings and shape of workpiece to determine tooling and machining requirements and sequence of operations, applying knowledge of metal properties, machining methods and shop mathematics. Lifts workpiece manually or with hoist, positions and secures it to machine table, chuck, face plate, centers or holding fixture, using wrenches and aids such as shims, parallel blocks, gauges and clamps. Verifies accuracy of workpiece position with instruments, such as surface and height gauges and dial indicator. Selects and sets feed rate, cutting speed, depth of cut and type of cutting tool for each machining operation, according to knowledge of metal properties, and size and shape of workpiece. Starts machine, turns handwheels to feed tool and workpiece together and engages automatic feeding device. Turns valve handle and directs flow of coolant or cutting oil against tool and workpiece. Observes operation and regulates tool position and action. Verifies dimensions of machined workpiece to specifications, using instruments, such as micrometers, gauges and gauge blocks. Operates bench or cutter grinding machines to shape and sharpen cutting tools.

May machine non-metallic materials. May set up and operate equipment such as welding machines and flame-cutting equipment. May measure, mark and scribe dimensions and reference points on workpiece to lay out for machining. May have specialized experience with particular operation, material, product, or type of machine and be designated accordingly.

8313-150 MACHINIST, AUTOMOTIVE(mach., weld. & forg.)
DPT:280
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates variety of general and specialized machine- tools such as lathes, valve grinders, and piston grinding and turning machines to repair automotive engines and parts:
Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in machining automotive parts. Operates lathe to machine water-pump castings, pistons, valves and other automotive parts. Clamps piston in carriage of piston grinding and turning machine to grind piston to specified dimensions. Adjusts grinding wheel to make specified depth of cut. Clamps valve stem in chuck of valve grinder and grinds seating

surfaces of valves, moving levers to obtain required depth of cut. Verifies dimensions to adhere to tolerance specifications, using micrometers, height gauges and other measuring instruments.

8313-154 MACHINIST, GENERAL(mach., weld. & forg.)
DPT:280

machinist, all-round; machinist, fitter; machinist precision.

GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates various machine-tools, such as lathes, millers, shapers and grinders, and fits and assembles parts to make or repair mechanisms, tools or machines, applying knowledge of mechanics, shop mathematics, metal properties, lay-out and machining procedures:

Studies specifications and drawings or sample parts and plans sequence of operations. Computes dimensions and tolerances and prepares working sketches from general descriptions and by examining parts and their mating surfaces. Measures, marks and scribes center lines, dimensions and reference points on workpiece, using measuring and marking instruments, to lay out workpiece for machining. Positions workpiece in machine by securing it onto machine table or fixture, into chuck or collet or between centers, manually or using hoist, dial indicator, shims, parallel blocks or clamps. Selects and installs cutting tools in machines. Sets controls and gears to facilitate indexing of workpiece, cutting speed and depth of cut according to type of materials. Starts machine and observes machining progress, and frequently verifies conformance of part to specifications, using measuring instruments; such as, scales, calipers, micrometers and fixed gauges. Finishes and fits parts to mechanisms by filing, grinding, scraping and polishing. Verifies dimensions and alignment, using instruments; such as, micrometers, height gauges, surface plate and gauge blocks.

May operate assembled or repaired mechanism to test performance.

8313-158 MACHINIST, MOTION-PICTURE EQUIPMENT(mach., weld. & forg.)
DPT:280
GED: 4 SVP: 7 EC: I 6 PA: L 4 6 7

Sets up and operates machine-shop equipment to make, remodel and repair mechanical parts of photographing, projecting, editing, sound recording, printing and processing equipment used for motion picture production:

Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in machining and fitting parts for motion-picture equipment. Observes equipment operation and listens for sounds indicating defects and applies tests, using special equipment. Dismantles machines, using hand tools. Makes or repairs parts or mechanisms, using machine-tools such as bench lathe, milling machine, gear cutting machines, shaper, grinder and drill press. Verifies dimensions of parts using calipers, micrometers, height gauges, fixed gauges, optical comparator and other measuring instruments. Fits and installs parts, and adjusts and operates repaired or modified machine to verify correct functioning.

8313-162 MAINTENANCE MACHINIST(mach., weld. & forg.)
DPT:280
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 6 7

Sets up and operates machine-tools to repair or make parts for production machinery, and installs parts to correct malfunctions:

Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Observes and listens to production machines in operation to locate defects. Dismantles machine, using hand tools such as wrenches and screwdrivers and examines parts for defects or wear, using precision gauges, such as micrometers, feeler gauges and dial indicator. Assembles and starts machine to ensure correct operation.

May make fixtures and jigs. May heat treat replacement parts by hardening or tempering.

8313-166 SAMPLE MAKER, HOUSEHOLD APPLIANCES(electric. equip.; mach., weld. & forg.)
DPT:280

GED: 4 SVP: 7 EC: I 6 PA: L 4 5 7

Constructs working models of new or redesigned electrical household appliances such as fans, heaters and hairdriers, using machine-tools, sheet-metalworking machines, and hand and power tools: Performs duties similar to those of 8313-154 MACHINIST, GENERAL (mach., weld. & forg.). Specializes in making metal and plastic parts for prototype models of electrical household appliances. Devises and constructs special tools, dies, moulds, jigs and fixtures, and modifies existing tools and equipment. Designs and forms metal shells and frames following sketches and oral suggestions. Modifies existing motors, switches and other equipment to be incorporated in re-styled appliances by shaping or forming new parts or adapters. Assembles mechanical and electrical parts and installs wiring circuits, using hand and power tools and soldering iron, riveter and spot welder. Submits completed prototype for approval. May paint assembled prototype appliances, using pressure-spray cans. May measure temperature of appliance components, such as motors and frames, with temperature probes.

8313-170 JIG BORER, TAPE-CONTROL(mach., weld. & forg.)
DPT:280
tape-controlled jig-boring-machine operator.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates vertical or horizontal numerically-controlled, single-spindle, jig-boring machine to face, drill, bore, ream or tap metal castings and brackets, applying knowledge of properties of metals and machining methods: Studies drawings or tooling instructions to determine machining sequence and methods. Positions holding fixture and workpiece in machine and secures in place, using wrenches. Loads tape in reader and starts machine to automatically position indexing table, using predetermined code punched in tape. Pushes button to zero indexing table and console at established reference point. Installs and positions cutting tool at predetermined distance from workpiece and adjusts tool compensation on console for particular tool. Inspects each cut on first run workpiece and adjusts console controls to reset cutting tool to achieve desired concentricity, boring tolerances, spatial relationships and surface-finish quality. Verifies dimensions of holes, using specified gauges. May operate jig borer on manual, semi-automatic or automatic control, as required. May grind cutting tools.

8313-174 ROTARY-HEAD-MILLING-MACHINE SET-UP OPERATOR(mach., weld. & forg.)
DPT:280
milling-machine operator, rotary head.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates vertical-milling machine with spindle mounted on rotary head to mill complex shapes such as arcs and tangents on metal workpieces: Studies drawing or layout on workpiece to visualize machining requirements and to plan sequence of operations. Positions work on machine table, using devices such as parallel bars, shims, vee blocks, angle plate and planer gauges, and secures work with bolts and clamps. Selects and sets feed rate, cutting speed, depth of cut, and mounts milling cutter, applying knowledge of metal properties and shop mathematics. Verifies alignment, using devices such as dial indicator and thickness gauges. Turns handwheel to feed workpiece to cutter and engages feed. Computes dimensions of shapes to be milled and successive positions of cutter in relation to rotary head, using knowledge of trigonometry. Moves controls to position and move cutter or table in computed directions to mill specified shapes. Verifies conformance of milled workpiece to specifications, using measuring instruments such as micrometers, gauge blocks and comparator. Opens valve and directs flow of coolant against cutter and workpiece. Computes indexing ratios and sets up and operates dividing head to index workpiece for gear-tooth cutting operation. Mounts different tool attachments in place of cutter to perform other machining operations such as boring and drilling. May be designated according to particular operation, product, or type of machine used.

8313-178 LAY-OUT MAN, MACHINE SHOP(mach., weld. & forg.)
DPT:281
GED: 4 SVP: 7 EC: I PA: M 4 7

Lays out lines and reference points on metal stock or workpieces, such as bars, castings, plates or machine parts, to indicate location and dimensions of machining to be done: Studies drawings and other specifications and plans layout. Examines workpiece, establishes reference points on surfaces, and computes lay-out dimensions, using measuring instruments, such as scales, squares, straightedge and compass. Positions workpiece on surface plate or work table, using work aids, such as shims, parallel blocks and angle plates. Verifies position with instruments, such as gauge blocks, height gauges and dial indicators. Indents reference points with small center punch and hammer, and marks lay-out lines, using surface gauge, straightedge, compass, templates and scribe. Sets indicators on height gauge, protractor or lay-out machine to computed dimensions, or transfers dimensions from specified locations on model to corresponding locations on workpiece. Coats metal surfaces being used for marking, with chalk, paint, copper sulphate, lay-out blue or similar material prior to marking. Marks data, such as dimensions, instructions and part identification on workpiece. May be designated according to particular product, or workpiece.

8313-182 GEAR-CUTTING MACHINE SET-UP OPERATOR(mach., weld. & forg.)
DPT:480
gear cutter; gear shaper.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates variety of gear-cutting machines, such as gear-shapers, hobbars and generators to machine splines or gear teeth on metal blanks: Studies drawings, job orders, standard charts and other specifications. Computes dimensions, number of teeth and machine settings, according to gear type, applying knowledge of shop mathematics and gear design, visualizing machining required and planning sequence of operations. Reads tooling instructions for machine settings, equipment and cutters to be used. Positions and secures workpiece to cutting angle on arbor, in chuck or other holding device, using wrenches. Selects and secures cutters in toolhead, in spindle or on arbor. Selects and mounts gears, cams or templates, or moves levers to set feed rates and rotation speeds of cutters and workpiece in relation to each other. Selects and mounts guides to impart twisting motion to spindle for cutting helical gears. Sets cutting speeds and depth of stroke and cut for reciprocating cutters. Starts machine, turns valve handle and directs flow of coolant against cutter and workpiece. Verifies conformance of machined gear to specifications, using gear measuring wires, involute (curve) checker, master gears, optical comparator (shadow graph) and other special gear inspection equipment. May machine plastic or other non-metallic materials. May set up and operate other machine-tools.

8313-186 BORING-MILL SET-UP OPERATOR, HORIZONTAL(mach., weld. & forg.)
DPT:280
horizontal-boring-mill set-up operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates horizontal-boring machine to drill, bore and mill metal parts according to specifications and knowledge of machining procedures: Studies drawing or layout to determine dimensions, tolerances, location of base reference lines and to visualize machining required. Examines workpiece, selects workholding arrangement and plans sequence of machining operations. Positions and secures workpiece to table or angle plate, using clamps, shims, parallel blocks and bolts, and verifies alignment of workpiece with center of spindle. Selects and mounts cutting tool in spindle or boring bar. Moves controls to set feeds, speeds and depth of cut, and to position tool and workpiece in relation to each other. Starts machine and observes operation, making one or more trial passes with manual control before engaging feed. Verifies dimensions of machined workpiece, using measuring instruments such as micrometers, telescoping gauges, calipers, fixed gauges and dial indicators. May operate bench grinder to sharpen boring-mill cutting tools. May operate boring mill with automatic-positioning controls.

8313-190 BORING-MILL SET-UP OPERATOR, VERTICAL(mach., weld. & forg.) DPT:280
vertical-boring-mill set-up operator.
 GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates vertical boring machine to drill, bore, turn, ream, tap and face metal workpieces according to specifications and knowledge of tooling and jig-boring procedures:
 Studies drawings and job order to plan sequence of operations. Lays out reference lines and location of holes on workpiece, using lay-out tools, such as scribes, dividers, center punch and hammer, and applying knowledge of shop mathematics. Positions and secures workpiece on machine table, checking alignment so that workpiece is concentric with center of rotation, and surface is parallel to table. Starts machine and verifies true-setting, using dial or other indicator. Selects and sets cutting speeds, feed rates, depth of cut, and cutting tool, according to knowledge of metal properties. Sharpens, installs, and secures cutting tools in spindle. Turns handwheels to lower tool to workpiece and engages automatic feed. Turns valve handle and directs flow of coolant or cutting oil over cutting area. Verifies machined workpiece to dimensional specifications, using measuring instruments, such as fixed gauges, telescoping gauges, calipers and micrometers. May be designated according to type of boring machine operated; for example, Jig Borer

8313-194 CHUCKING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
 GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more single or multiple-spindle horizontal chucking machines (lathes) to perform series of machining operations, such as turning, boring, threading and facing on metal workpieces:
 Analyzes drawings or job order for specifications, dimensions and tolerances and tooling instructions, such as cutting speeds, feed rates, work-holding devices and cutting tools. Attaches specified chuck to headstock, using wrenches. Positions and tightens tools in holders. Moves controls, cams and stops to set rotation speed and feed rates, and to control tool and workpiece movement for various operations. Lifts workpiece manually or with hoist and positions and secures it in chuck. Turns handwheels to bring tool in position to start cut. Turns valve control to direct flow of coolant against tool and workpiece. Starts lathe and moves controls to manoeuvre tools during machining operations. Checks dimensions of machined workpiece to specifications, using micrometers, calipers and fixed gauges. Determines station and timing of each operation to assure efficient use of tools and time.
 May set automatic device to feed workpieces to machine. May compute data such as, dimensions, rotation speeds and feed rates, using knowledge of shop mathematics, shop practices and metal properties. May be designated according to product or type of machine being used.

8313-198 CHUCKING-MACHINE SET-UP OPERATOR, MULTIPLE-SPINDLE, VERTICAL(mach., weld. & forg.) DPT:280
multi-station-vertical-chucking-lathe operator.
 GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more multiple-spindle vertical-chucking machines (lathes) to perform series of machining operations, such as turning, boring, threading and facing of castings, forgings, weldments or other metal workpieces:
 Studies drawings, job order, standard charts or specifications for dimensions and tolerances, and tooling instructions for holding devices, cutting speeds, feed rates and cutting tools. Visualizes movements of machine parts, workpieces and tools for each operation in relation to others, and determines station and timing of each operation. Installs specified chucks or holding fixtures on headstocks, and places and secures workpieces in holding devices. Positions and secures cutting tools and toolholders in machine, using wrenches. Moves controls, stops and cams to set rotation speeds and feed rates, and to control timing and action of tools at each station. Starts machine, opens valve and directs flow of coolant against tools and workpieces. Stops machine and verifies conformance of first run workpieces to specifications, using fixed gauges, calipers, depth gauges, verniers or micrometers.
 May machine non-metallic materials such as plastics. May be

designated according to material or product machined or size, type or trade name of machine used; for example, Bullard Multiple-Spindle Operator Heavy-Chucking-Machine Operator

8313-202 DRILL-PRESS SET-UP OPERATOR, MULTIPLE-SPINDLE(mach., weld. & forg.) DPT:280
gang-drill-press set-up operator.
 GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates multiple-spindle drilling machine to perform, simultaneously or in sequence, machining operations; such as, drilling, reaming, countersinking, spot-facing and tapping of holes in metal workpieces:
 Studies drawings or job order for specifications, such as hole locations and dimensions, and tooling instructions, for jigs, fixtures, feed rates, cutting speeds and cutting tools. Places workpiece in fixture or on machine table, and secures it with clamps. Installs cutting tools in spindles. Positions and fastens specified drilling jig, and moves controls to position spindles and align tools with guide bushings in jig. Sets stops to control depth of holes. Moves controls to set cutting speeds and feed rates, and regulate flow of coolant. Engages power feed and observes machine operation. Periodically verifies conformance of machined work to specifications, using measuring instruments, such as calipers, micrometers and fixed gauges.
 May drill plastics or other non-metallic materials. May tilt table or spindles to machine holes at specified angles. May be designated according to product, operation, or type of machine operated.

8313-206 DRILL-PRESS SET-UP OPERATOR, TAPE-CONTROL(mach., weld. & forg.) DPT:280
numerical-control-drilling-machine operator; tape-controlled-drill-press operator.
 GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates tape-controlled, turret-type or single-spindle drill press that is programmed to automatically position indexing table, change tools and perform machining operations, such as drilling, reaming and tapping metal workpieces:
 Studies instructions and drawings or process sheets to determine set-up and operating requirements. Selects specified tools, and workpiece holders, such as blocks, risers and clamps. Loads one or several workpieces, tooling, and fixtures in location and orientation specified on process sheets, and fastens with bolts. Sets switches and dials on numerical control panels according to process sheet instructions. Threads end of control tape into read-head of console, and presses switches to set machine and tape to start point and initiate machining cycles. Turns switch to select block-stop mode when using unproven tape, and verifies conformance to tolerances by comparing numerical displays with process sheet and drawing data, and by making measurements with scales, gauges and micrometers. Adjusts tooling in machine or tool setting gauges, and trims controls before initiating finish cuts. Removes and replaces initial workpiece at end of machining cycle. Turns selector switch to full automatic position, to permit machining of remaining production run without operator intervention. Monitors automatic operation to detect errors, remove chip accumulation, adjust coolant flow, and replace worn or damaged tools. Shuts down machine in event of machine error or malfunction. Deburs and spot-checks finished parts during tape-controlled machining cycles. Operates drill press in semi-automatic mode by setting selector switch and manually dialing in data according to oral or written instruction, to machine relatively simple pieces for which a tape has not been prepared, or to make changes in a standard-part.
 May operate two or more machines simultaneously when using proven tapes. May be designated according to type of drilling machine operated.

8313-210 ELECTRICAL-DISCHARGE-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
 GED: 4 SVP: 6 EC: I 6 PA: L 4 7

Sets up and operates one or more electrical-discharge machines to shape metal workpieces to specifications:
 Studies drawing of product, and plans shaping operations, using standard charts and manuals. Computes settings from specifications, utilizing knowledge of electrical-discharge-machining processes, metal properties and shop mathematics. Positions and secures workpiece on machine table with clamps, vise or fixture. Positions and secures electrode in holder on surface plate to verify concentricity and depth,

using measuring instruments such as calipers and dial indicators. Mounts electrode and holder on machine spindle, checking alignment of electrode and workpiece with measuring instruments. Positions gauge blocks, dial indicator and spindle stop on machine so that descending electrode will stop at specified depth when indicator feeler point touches gauge blocks. Turns valve handle to adjust flow of dielectric coolant over electrode and workpiece, or to immerse them in circulating bath. Reads charts to ascertain settings such as electric current and electrode feed rate, and sets controls. Starts machine and observes beginning of operation. Moves controls to rotate electrode or workpiece. Inspects completed workpiece visually and with templates and measuring devices.

8313-214 ENGINE-LATHE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
lathe hand.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates engine lathe to perform machining operations, such as turning, boring, facing and threading on metal or nonmetallic workpieces:

Studies drawing, job order or layout on workpiece to visualize machining to be done, plan sequence of operations, and for specifications, such as dimensions, tolerances and special tooling instructions. Lifts workpiece manually or with hoist and positions and secures it on faceplate, in chuck or between centers, using clamps and wrenches. Verifies position with measuring instruments, such as calipers, height gauge and dial indicator. Selects and sets feed rate, cutting speed, depth of cut and cutting tool for each operation according to type of metal. Positions and secures cutting tool in relation to workpiece. Starts machine and turns handwheels to feed tool to workpiece and engages feed. Turns valve handle and directs flow of coolant against workpiece and tool. Verifies dimensions of workpiece to specifications, using micrometers, scale, calipers and depth and fixed gauges. Computes data, such as dimensions, tapers, speeds, and tool settings, using knowledge of metal properties and shop mathematics. Sets up and operates relieving or tracing attachments that guide cutting tools to duplicate contours from templates or models. Sets up lathe to machine tapers by offsetting tail stock, using taper attachment on carriage or by setting compound rest at specific angle. Mounts gears or moves levers, and engages threading dial to machine threads to specific pitches and shapes. Operates bench or pedestal grinder to shape and sharpen cutting tools. Cleans and lubricates lathe, using brush, air hose and oil can.

May be designated according to material machined, product, or type of lathe used; for example,
Engine-Lathe Set-Up Operator, Tool
Precision-Lathe Operator

8313-218 GRINDER SET-UP OPERATOR, PRECISION(mach., weld. & forg.) DPT:280
precision grinder, set-up operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more types of grinding machines, such as external, internal, surface or universal grinding machines to grind machine parts, dies, tools or other metal workpieces utilizing knowledge of precision grinding procedures:

Studies mechanical drawings and specifications or layout of workpiece to determine dimensions and tolerances of part to be made, tooling required, and to plan sequence of operations. Selects method of holding workpiece. Lifts workpiece manually or with hoist and positions and secures workpiece to holding device, using wrenches and clamps or magnetic chuck. Selects feed rates, grinding speeds and grinding wheel of size, shape and grade for each operation, applying knowledge of metal properties and abrasives. Mounts and secures grinding wheel on spindle, using wrench. Dresses grinding wheels to plain or complex profiles, using special fixtures and tools. Positions and secures machine centers, chuck or grinding spindle at angle to grind tapered surfaces. Adjusts stops to limit travel of workpiece or grinding wheel. Moves controls to position wheel and workpiece in relation to each other and to set feed, speed and depth of cut. Starts machine, turns handwheels to feed grinding wheel to workpiece or vice versa and engages feeding device. Turns valve handle and directs flow of coolant against wheel and workpiece. Observes operation, and adjusts position and action of wheel and workpiece. Verifies dimensions of ground workpiece to comply with specifications, using measuring instruments such as templates, micrometers, dial indicators, comparators or fixed gauges.

May measure, mark and scribe workpiece to layout for grinding. May

grind non-metallic materials such as plastics. May operate tracer attachment to duplicate contours from template or model. May specialize in grinding particular materials or product or in particular type of precision-grinding machine and be designated accordingly; for example,

Blanchard-Grinder Set-Up Operator
Grinder Set-Up Operator, External
Grinder Set-Up Operator, Internal
Grinder Set-Up Operator, Surface
Grinder Set-Up Operator, Tool
Grinder Set-Up Operator, Universal

8313-222 GRINDER SET-UP OPERATOR, THREAD(mach., weld. & forg.) DPT:280
thread grinder.
GED: 4 SVP: 6 EC: I 5 6 PA: L 4 7

Sets up and operates thread-grinding machine to grind internal or external threads on metal parts, such as micrometer spindles, worm gears and lead screws, analyzing specifications and selecting tooling according to knowledge of thread grinding procedures:

Studies drawing and plans sequence of operations. Selects machine settings, such as positioning angles, rotation speeds, feed rates and gear ratios, using knowledge of shop mathematics. Selects grinding wheel, gears and cams, using knowledge of thread types, metal properties and abrasives. Installs grinding wheels, gears and cams, using wrenches. Dresses wheel to particular angles for thread to be cut, using dressing device. Positions and secures workpiece between centers or in chuck jaws. Sets stops to limit workpiece travel and activate grinding wheel withdrawal from thread on each successive cut. Moves controls to adjust, start and control operation of machine. Observes machine operation during grinding process. Verifies conformance of ground workpieces to specifications, using measuring devices, such as thread-measuring wires, micrometers, dial indicator, thread gauge and optical comparator (shadow-graph). Changes worn grinding wheel, using wrenches.

8313-226 MILLING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more milling machines to mill or plane curved surfaces on metal workpieces according to specifications:

Studies drawing or layout on workpiece to visualize machining requirements and to plan sequence of operations. Positions workpiece in fixture or on machine table, using devices, such as templates, shims, parallel blocks and planer gauges to align workpiece, and secures it with bolts and clamps. Selects rotary milling cutter and sets feed rate, cutting speed and depth of cut by moving controls and applying knowledge of metal properties and shop mathematics. Mounts milling cutter in spindle or on arbor. Manipulates handwheels to position cutter to workpiece, or workpiece to cutter, and engages automatic feed. Verifies alignment, using devices, such as dial indicator and thickness gauges. Turns valve handle and directs flow of coolant against cutter and workpiece. Computes indexing ratios, and sets up and operates dividing head to index workpiece for milling evenly divided surfaces, such as helical shapes. Verifies dimensions of milled workpiece, using measuring instruments, such as micrometers, calipers, gauge blocks and comparator. Mounts different tools in place of cutter to perform other operations, such as drilling and boring. Sets up and operates tracer attachment to duplicate contours from models or templates. Sets up universal head to mill at angles.

May work on non-metallic materials, such as plastics. May operate particular type of milling machine and be designated accordingly,
Planer-Type Milling-Machine Set-Up Operator

8313-230 PANTOGRAPH MILLING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
GED: 4 SVP: 6 EC: I 6 PA: L 4 7

Sets up and operates pantograph milling-machine to mill contoured two-dimensional profiles and three-dimensional cavities in metal parts for products such as dies and moulds used in metal die casting and plastic moulding by duplicating contour of template or model to specified scale:

Studies drawings, workpiece and template or model. Positions and secures workpiece and model or template in relation to each other on machine, using tools such as clamps, parallel blocks and wrenches. Selects tracing stylus and cutting tool, according to type of metal in

workpiece. Mounts stylus and tool, using hand tools. Turns controls to set cutting speed and dimensional ratio of model to workpiece and starts machine. Moves stylus back and forth against template or model, causing similar action of tool against workpiece. Observes tool, feels action and resistance of tool and manually controls cutting action by applying sufficient pressure to perform cutting operation. Verifies conformance of machined workpiece to specifications, using templates and measuring instruments, such as micrometers, dial indicators and gauges.

May make templates or cutting tools. May set up and operate pantograph-machine grinding to shape work pieces.

8313-234 PLANER SET-UP OPERATOR(mach., weld. & forg.) DPT:280
GED: 4 SVP: 6 EC: I 5 6 PA: H 4 7

Sets up and operates planer that reciprocates metal workpiece against cutting tool to plane and groove workpieces such as large castings for machines and engine bases, according to specifications:

Studies drawing or layout on workpiece to visualize planing to be done and plans sequence of machining operations. Selects methods of holding workpiece so that entire surface to be planed will remain parallel to table during planing operations. Lifts workpiece manually or with hoist, and positions and secures it on planer table, using shims, blocks, planer jacks, clamps and wrenches. Checks workpiece alignment with surface gauge, rule, square and dial indicator. Selects and mounts cutting tool(s) on rail head or side head. Selects and sets cutting speed and depth of cut, according to knowledge of metal properties. Sets stops to limit length of stroke and to actuate table reversing mechanism. Moves controls to position tool in relation to workpiece. Turns valve handle and directs flow of coolant against tool and workpiece. Starts planer and turns handwheels to feed tool or engages power feed. Observes planing operations and verifies dimensions of planed workpiece to specifications, using measuring instruments such as surface gauge, calipers, scale and micrometers.

May set up and operate milling attachment to plane or groove large metal workpieces. May be designated according to product or type of planer.

8313-238 PROFILING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
profile miller; tracer operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates milling machine equipped with tracing mechanism to mill duplicates of template or model contour on metal workpieces, such as cams, metalworking dies and machinery prototype parts:

Studies drawing or layout on workpiece and pattern or model to visualize milling required, and plans sequence of operations utilizing knowledge of profiling procedures. Positions and secures workpiece and pattern parallel to each other on angle plates or machine table, using clamps, wrenches and aligning devices, such as height or surface gauges, parallel bars, shims and jackscrews. Selects cutting speeds, depth of cut, cutting tool and corresponding tracing stylus. Positions and secures cutter and stylus in respective spindles. Turns switches and dials to position cutter and stylus at reference points on workpiece and template. Engages feeding mechanism. Changes and adjusts cutters, cutting speed and feed rate according to pattern shape. Verifies dimensions of milled workpiece to specifications, using gauges, calipers and micrometers.

May mill plastics or other non-metallic materials. May be designated according to particular operation, product, material, or type of machine used; for example, Tool-Profiling-Machine Set-Up Operator

8313-242 TAPE-CONTROL-MACHINE-TOOL SET-UP OPERATOR(mach., weld. & forg.) DPT:280
multi-purpose-machine operator, tape-control; numerical-control-machine operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates various punched-tape-controlled machine-tools that automatically mill, drill, broach and ream metal parts:

Bolts fixture to machine bed, using wrench. Positions and secures metal stock, castings or other workpiece in fixture according to program directions, using rule and calipers, clamps or bolts. Assembles cutting tools in toolholders and positions tools in machine spindles, or inserts cutting tools in specified machine magazines. Places control

tape in reading magazine and hooks tape beginning point over reading mechanism. Turns index of cutting tool dials to specified set point, turns switches to operating position and starts machine. Changes cutting tools and location of clamps and repositions metal workpiece on fixture as directed by program instructions. Observes machine operation and checks accuracy of machining against drawings or other specifications by measuring with micrometers, dial indicators and other gauges. Adjusts machine feed and speed when automatic programming is faulty or if machine malfunctions. Operates bench or pedestal grinder to shape and sharpen cutting tools.

8313-246 TURRET-LATHE SET-UP OPERATOR(mach., weld. & forg.) DPT:280
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates turret lathe to perform series of machining operations, such as turning, facing, boring, and threading on metal castings, forgings, weldments or other workpieces according to specifications and knowledge of machining operations:

Studies drawing and other specifications for dimensions and tolerances, visualizes machining operation to be carried out and plans sequence of operations. Sets up work-holding fixtures. Positions and secures work to faceplate, in chuck, collet, or holding fixture, using wrenches. Selects cutting speed, tool feed rate, depth of cut and cutting tools for each operation, according to knowledge of metal properties. Positions and secures tools in toolholders at each station of turret or in cross-slide toolpost, and in relation to workpiece. Moves controls to set rotation speed of workpiece and feeding of tools. Opens valve and directs flow of coolant against cutting tool and workpiece. Turns handwheels to feed tools to and along work and to index toolholders between operations, or engages feeding and indexing mechanisms. Checks dimensions of machined workpiece against specifications, using measuring instruments, such as fixed gauges, calipers, micrometers and comparator. Sharpens cutting tools, using bench grinder. Operates tracing attachment to duplicate profile of template or model on workpiece.

May work on non-metallic material, such as plastics. May be designated according to product or type of lathe used; for example, Turret-Lathe Set-Up Operator, Tool, Vertical

8313-250 GEAR-MILLING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
milling-machine operator, gear.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more gear milling machines to machine splines or gear teeth on metal blanks:

Reads drawing, job order and tooling instructions for specifications, such as gear type, number of teeth and cutter to be used. Computes gear dimensions and machine settings, using standard charts and applying knowledge of shop mathematics, gear types and milling procedures. Clamps workpiece in fixture, or presses it on arbor and positions arbor between centers. Positions and secures cutter on spindle in relation to workpiece, using wrenches. Moves levers or mounts change gears in machine to set feed rates and rotation speeds of cutter and workpiece in relation to each other. Starts machine and controls flow of coolant on cutter and workpiece. Regulates depth of cut by adjusting height of work or cutter, using handwheel. Verifies conformance of machined gears to specifications, using micrometers and gear-measuring wires, and special gear inspection equipment such as comparators and gear-tooth verniers.

May machine plastics or other non-metallic materials. May specialize in operating particular type of machine or in cutting particular type of gear.

8313-254 GEAR-SHAVER SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more gear-shaving machines that utilize gashed cutting tool in form of gear to shape and smooth gear teeth and correct errors and distortions left by roughing operation:

Computes index and feed rates, gear dimensions and machine settings, applying knowledge of shop mathematics and gear formulas or reads mechanical drawings and job orders for production specifications. Installs gear on arbor and mounts it between centers, using hand tools. Mounts cutter on cutter head. Moves controls to set feeds, speeds and reciprocating action and angles of cutter and gear. Turns hand wheels to feed gear to cutter and engages automatic feed. Verifies

conformance of shaved gears to specifications, using micrometers and gear measuring instruments, such as measuring wires and involute checker.
May machine non-metallic gears.

8313-258 SPIRAL-BEVEL-GEAR-GENERATOR SET-UP OPERATOR(mach., weld. & forg.) DPT:480
curved-tooth-gear-generator operator; hypoid-gear-generator operator; spiral-gear-generator operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more spiral-bevel-gear generating machines to machine spiral or hypoid teeth in metal bevel-gear-blanks:

Computes data, such as gear dimensions and machine settings, applying knowledge of shop mathematics, and gear types, and reads mechanical drawings, job order, tooling instructions and standard charts for specifications. Clamps gear blank in fixture or presses it on arbor and positions assembly to correct cutting angle. Positions and secures cutter on spindle in relation to workpiece, using wrenches and turning hand wheels. Mounts gears, cams or templates in machine to control indexing of workpiece and rolling motion of cutter. Moves levers to set rotation speeds of cutter and workpiece. Starts machine, opens valve and directs flow of coolant against cutter and workpiece. Verifies conformance of machined gear to specifications, using devices such as micrometers, master gears and other special gear inspection equipment.
May machine plastics or other non-metallic materials.

8313-262 THREAD-MILLING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates thread-milling machine to mill threads on external and internal surfaces of metal workpieces:

Computes dimensions, cutting speeds or feed rates, using knowledge of metal properties, thread types and shop mathematics. Mounts and secures workpiece in fixture or chuck, using clamps and wrenches. Installs specified cutter in spindle or on arbor. Positions cutting tool and workpiece to computed angles, installs gears and cams, and sets stops to control multiple movements of workpiece and cutting tool. Moves controls to set cutting speed, feed rate and depth of cut according to computations or tooling instructions. Starts machine and engages feeding device. Turns valve handle and directs flow of coolant over cutting area. Inspects milled workpiece, using thread gauges, measuring wires and other thread-measuring instruments.
May set up and operate other machine-tools.

8313-266 TOOL GRINDER(mach., weld. & forg.) DPT:480
cutter grinder; tool dresser; toolroom grinder.
GED: 4 SVP: 6 EC: I 5 6 7 PA: M 4 7

Sets up and operates grinding machines and equipment, such as surface, universal and tool and cutter grinders to shape or sharpen precision-cutting tools, gauges and dies:
Reads drawings and prepares dimensional sketches of tools and gauges requiring grinding. Computes cutting and clearance angles of cutting tools, utilizing shop mathematics. Plans and lays out work and sets up equipment, using variety of precision-measuring devices, machine attachments and fixtures. Selects grinding wheel of required shape and grade, using knowledge of abrasives and metal properties. Positions and secures workpiece on machine table, using magnetic chuck or holding fixture or mounts workpiece on arbor and clamps between centers. Turns handwheels to position table or spindle, to obtain specified taper, level and clearances on edges of cutting tools. Adjusts controls to feed work at proper rate against grinding wheel. Measures workpieces to verify conformance to specifications, using fixed gauges, micrometers, calipers, optical comparators and surface gauges. Removes, dresses, and installs grinding wheels to change cutting action or shape.
May design, modify or make special tools according to specifications or tooling requirements. May braze or solder carbide tips to cutting tools.

8313-270 GEAR GENERATOR SET-UP OPERATOR.
STRAIGHT BEVEL(mach., weld. & forg.) DPT:480
bevel-gear-generator operator; straight-tooth-gear-generator operator.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more straight-tooth bevel-gear generating machines to machine straight teeth on metal bevel-gear blanks:
Studies drawing, or job order for product specifications, such as gear type, dimensions, number of teeth, tooling instructions and standard charts for machine settings and cutters to be used. Mounts workpiece on arbor and positions it to cutting angle. Positions and clamps one or two cutters in toolhead(s) and positions cutter cradle to specified angle, using wrenches. Mounts gears in machine to control rotation speed and indexing of workpiece, cutting speed, and rolling motion of cutter cradle. Starts machine, turns valve handle and directs flow of coolant against reciprocating cutters and workpiece. Verifies conformance of machined gear to specifications, using devices, such as micrometers, master gears, and special gear-inspection equipment. Machines gears from plastics or other non-metallic materials.
May compute gear dimensions and machine settings applying knowledge of shop mathematics and gear calculations.

8313-274 GEAR-HOBBER SET-UP OPERATOR(mach., weld. & forg.) DPT:480
hobbing-machine setter.
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more gear-hobbing machines to cut splines or spur, helical or worm gear teeth on metal gear blanks according to specifications, tooling instructions, standard charts and knowledge of gear hobbing procedures:

Clamps gear blank in fixture or presses it on arbor and mounts arbor between centers. Positions and secures specified hob on arbor in relation to workpiece, using wrenches. Moves levers or selects and mounts change gears in machine, to set feed rates and rotation speeds of hob and workpiece. Turns handwheel to feed hob and workpiece together, and engages automatic feed. Turns valve handle to control flow of coolant against hob and workpiece. Verifies conformance of hobbled gears to specifications, using devices, such as micrometers, gear measuring wires, master gears and involute (curve) checker.
May compute data, such as gear dimensions, change gear ratios and machine settings, applying knowledge of shop mathematics. May specialize in cutting particular type of material or gear or using particular type machine.

8313-278 HONING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT: 480
precision-honing-machine operator.
GED: 4 SVP: 6 EC: I 6 PA: M 4 7

Sets up and operates one or more vertical-or horizontal-honing machines to hone internal or external surfaces of metal objects, such as cylinders, bearings and connecting rods
Studies drawings and job order for product specifications, such as dimensions, tolerances, quantity, speeds, feed rates, work-holding fixtures and honing tools to be used. Plans sequence of operations. Positions and secures fixtures and workpiece on machine table, using squares, steel rules, dial indicators, micrometers, surface gauges and wrenches. Inserts and tightens specified tool in spindle. Moves controls to set tool-feed rate and spindle speed. Sets stops to control length of stroke and depth of cut. Starts machine and turns hand wheels to feed tool to workpiece and engages automatic mechanism to feed tool along workpiece surface with oscillating action. Turns valve handle and directs flow of coolant against tool and workpiece. Measures honed workpiece for conformance to specifications, using preset gauges, surface and telescoping gauges, micrometers, and comparators.

8313-282 SCREW-MACHINE SET-UP OPERATOR(mach., weld. & forge.) DPT: 480
automatic-screw-machine operator
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates one or more single-or multiple-spindle lathe-type screw machines equipped with automatic feeding and tool-indexing mechanisms to perform turning, boring, threading, and facing operations on metal bar stock:

Studies drawing or sketches to visualize machining to be done and plan sequence of operations. Selects cutting speeds, feed rates, depth of cuts and cutting tools to be used, applying knowledge of metal properties and shop mathematics. Installs collets, bushings and stock pushers in stock-feeding mechanism, using wrenches and screwdrivers. Loads feeding mechanism with bar stock, manually or with hoist. Installs and adjusts cams, gears and stops to control stock and tool movements at each station. Positions and secures tools in tool holders, checking positions with gauges and other measuring instruments. Moves controls to set cutting speeds and feed rates. Hand cranks machine through test cycle, stopping machine and adjusting tool positions and machine controls to allow for such factors as timing, clearance between moving parts, and chip removal. Starts machine, observes operation and checks dimensions of first-run workpieces to specifications, using measuring devices; such as, plug and ring gauges, calipers, micrometers, and comparator. Replaces worn tools. Operates bench grinder or cutter grinder to sharpen tools. May machine plastics or other non-metallic materials. May be designated according to type of machine used; for example, Screw-Machine Set-Up Operator, Multiple-Spindle, Jobbing Screw-Machine Set-Up Operator, Production

8313-286 SHAPER SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 6 EC: I 5 6 PA: M 4 7

Sets up and operates shaping machine that reciprocates cutting tool bit against stationary metal workpiece to plane, shape or groove machine, tool, die or other parts:

Studies drawing or layout on workpiece to plan sequence of operations and determine tooling required. Positions and secures workpiece in vise or directly on machine table, using clamps and wrenches. Verifies position with thickness gauges, surface gauge and dial indicator. Selects cutting speed, length of stroke and cutting tool to be used, according to knowledge of metal properties and shop mathematics. Shapes, sharpens, positions and secures cutting tool in toolpost. Adjusts position of shaper ram so that tool will move over length of workpiece and makes trial pass. Starts machine, adjusts depth of cut and sets automatic feed. Verifies conformance of shaped workpiece to specifications by measuring with micrometers, calipers and gauges. Opens valve and directs flow of coolant against tool and workpiece. Shapes contours by manually adjusting tool feed to follow irregular lay-out lines while watching cutting action. Computes angles and adjusts controls to tilt table or toolhead for angular or taper shaping. May machine non-metallic materials, such as plastics.

8313-290 BROACHING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates one or more broaching machines to broach internal or external curved or flat surfaces of metal workpieces, standard charts and knowledge of broaching:

Reads drawings, job order or other specifications to determine positions, dimensions and tolerances, and standard charts and tooling instructions for holding fixtures, cutting speed and cutting broaches. Lifts workpiece manually or with hoist, and positions and secures it in fixture. Installs broach on ram, using wrenches. Moves controls to set specified depth of cut and ram speed, and to start ram that pushes or pulls broach along surface of work. Checks dimensions of broached workpiece to specifications, using measuring instruments, such as fixed gauges, calipers and micrometers. May broach non-metallic materials, such as fibreboard or plastics.

8313-294 DRILL-PRESS SET-UP OPERATOR, SINGLE SPINDLE(mach., weld. & forg.) DPT:480
drill-press operator.
GED: 4 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates single-spindle drill press to drill, countersink, spot face and tap holes in metal parts or stock:

Reads drawings, job order and tooling instructions for hole locations and dimensions, feed rates, holding fixtures, cutting speeds and cutting tools. Secures driller tool in spindle. Measures, marks, scribes and center punches workpiece for machining, applying knowledge of shop mathematics and layout procedures. Lifts workpiece manually or with hoist and positions in fixture or on machine table and secures it with clamps, Vee blocks, angleplate, or vise or manually holds it in position under spindle. Aligns hole center location on workpiece

directly in line with center of cutting tool. Makes trial cut and readjusts work position and hole center to achieve exact hole location, using drawing chisel and hammer. Moves controls to set cutting speed, feed rate and depth stop and to feed tool manually, or engages automatic feed. Opens valve and directs flow of lubricant against tool and workpiece, or applies lubricant with oil can. Checks dimensions of machined workpiece to specifications, using measuring instruments, such as calipers, dividers, telescoping gauges and micrometers. May position and secure drilling jig to guide cutting tools. May tilt table or spindle to machine holes at specified angles. May be designated according to type of drill press operated; for example, Sensitive-Drill-Press Operator

8313-298 GEAR-LAPPING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
gear finisher.
GED: 4 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates gear-lapping machine to finish gear teeth to specifications:

Reads drawing or job order for specifications, such as gear dimensions, tolerances and number of gears to be lapped, and tooling instructions for lapping speeds and pressures, work-holding fixtures and spindle angles to be used. Positions and secures pairs or trains of gears on spindles, using fixture and wrenches. Moves controls to set spindle angles, lapping speeds, pressure and length of cycle. Brushes or sprays lapping compound on gears. Starts machine, examines gear contact area and moves handwheels to adjust action of gears. Inspects lapped gears for conformance to specifications applying knowledge of gear design and surface finishing. Inspects finish and mechanical action of gears with gear inspection equipment.

8313-302 GRINDER, GEAR(mach., weld. & forg.) DPT:480
gear-tooth-grinding-machine operator.
GED: 4 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates gear-grinding machine to grind surfaces of splines or gear teeth:

Studies drawing, job order and tooling instructions for specifications, such as gear type, dimensions, number of teeth, machine settings and abrasive wheel to be used. Clamps workpiece in chuck or fixture or presses it on arbor and mounts it between centers. Positions and secures grinding wheel on arbor in relation to workpiece, using wrenches. Moves levers or selects and installs gears in machine to obtain correct feed rates, angle, and rotation speeds of grinding wheel and workpiece. Turns handwheels to feed grinding wheel to workpiece or vice versa. Indexes workpiece and engages automatic feeding for each tooth cut. Turns valve handle and directs flow of coolant against wheel and workpiece. Sets up and operates wheel-dressing device to dress and true abrasive wheel. Verifies conformance of ground gear or spline to specifications, using micrometer, gear measuring wires, involute checker and master gear.

May compute data, such as gear dimensions and machine settings, applying knowledge of shop mathematics. May be designated according to particular material or gear type, or type of machine used.

8313-306 GRINDER SET-UP OPERATOR, CENTERLESS(mach., weld. & forg.) DPT:480
centerless grinder.
GED: 4 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates one or more centerless-grinding machines to grind external or internal cylindrical or tapered surfaces of metal workpieces:

Reads drawings and job order for specifications, such as dimensions and tolerances and tooling instructions for grinding speeds, feed rates, holding fixtures and grinding wheels to be used. Mounts grinding wheels on spindles, using wrenches. Dresses wheels to specifications, using dressing device. Moves control to set specified grinding speeds, feed rates and spacing between grinding-wheel faces. Positions and secures work rest at specified height, using wrenches. Lifts and positions workpiece manually or with hoist and secures it between grinding wheels and on work rest. Starts machine and observes operation. Verifies dimensions of ground workpiece for conformance to specifications, using measuring instruments, such as micrometers, calipers and preset gauges.

May operate a particular type of grinder, or grind a particular product or material and be designated accordingly.

8313-310 GEAR-SHAPER SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 5 EC: 1 5 6 PA: M 4 7

Sets up and operates one or more gear-shaping machines to machine splines or gear teeth in metal blanks:
Reads drawing for information on dimensions and tolerances. Computes data, such as gear dimensions and machine settings, applying knowledge of shop mathematics and gear shaping procedures. Clamps workpiece in fixture or presses it on arbor. Positions and secures specified cutter on spindle in relation to workpiece and sets length of stroke, using wrenches. Moves levers and mounts gears in machine to set feed rates, cutting speeds and rotation speeds of cutter and workpiece, according to tooling instructions. Mounts guides to control twisting motion of spindle for cutting helical gears. Opens valve and directs flow of coolant against cutter and workpiece. Verifies conformance of machined gears to specifications, using devices such as micrometers, go-no-go gauges, master gears, gear-measuring wires and special gear-inspection equipment. May machine plastics or other non-metallic materials.

8313-314 KEYSEATING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
slotter operator.
GED: 4 SVP: 5 EC: 1 5 6 PA: M 4 7

Sets up and operates keyseating machine to cut key seats in metal workpieces, such as wheels and gears following specifications, and standard charts:
Reads drawing or job order for dimensions and tolerances, and tooling instructions for holding fixtures, cutting speeds, depth of cut, and cutting tools to be used. Measures workpiece and scribes guidelines for cutting keyseat, using steel rule and scriber. Mounts specified tool on ram. Lifts workpiece manually or with hoist, aligns it with cutting tool and secures it in fixture or to post on machine table, using clamps and wrenches. Moves controls to set specified ram speed, length of stroke and feed rate. Turns handwheel to feed reciprocating tool to workpiece until specified depth is cut, or engages automatic feeding device. Checks dimensions of machined workpiece against specifications, using fixed gauges, calipers, scale and micrometers. Cuts tapered keyseats by adjusting tilt of table, using handwheel or adjusting screw.

8313-318 LAPPING-MACHINE SET-UP OPERATOR(mach., weld. & forg.) DPT:480
lapping-machine operator.
GED: 4 SVP: 5 EC: 1 6 PA: M 4 7

Sets up and operates lapping machines to lap surfaces of metal objects to precise tolerances and specified finish, applying knowledge of lapping tools, abrasives and lapping procedures:
Reads drawings, job orders and tooling instructions for specifications, such as tolerances, lapping speeds and pressures, work-holding fixtures, laps to be used and quantity of parts requiring lapping. Installs laps on machine spindles, using wrenches. Positions and secures workpiece or mating workpieces together in fixture, or on machine table. Moves controls to set lapping speeds, tool pressure, length of cycle and to guide action of laps against workpiece or workpieces against each other. Starts machine and brushes or sprays lapping compound on laps and workpieces. Inspects lapped workpiece for conformance to specifications, using instruments, such as comparator, monochromatic light, gauges and surface plates.

8313-322 RADIAL-DRILL-PRESS SET-UP OPERATOR(mach., weld. & forg.) DPT:480
GED: 4 SVP: 5 EC: 1 5 6 PA: M 4 7

Sets up and operates radial drill press to drill, bore, ream, countersink, counterbore, spot face or tap holes in metal workpieces, such as machine, tool or die parts:
Examines layout of workpiece or mechanical drawing and instructions for hole locations and dimensions, and plans sequence of operations. Positions and secures workpiece on machine table, using devices such as bolts, clamps, shims, blocks, vises, angle brackets and wrenches to hold workpiece. Verifies position, using surface gauge. Secures tool in spindle. Selects and sets cutting speed, feed rate and tool for each operation according to knowledge of metal properties and diameter of hole. Swings radial arm and moves controls to position tool along radial arm over hole center. Manually feeds tool into workpiece and

engages automatic feed. Observes operation and makes adjustments to tool position and depth of hole. Verifies conformance of machined workpiece to specifications, using measuring instruments; such as, telescopic and fixed gauges, calipers and micrometers. Dresses cutting tools, using pedestal or bench grinder.
May measure, mark and scribe hole locations on workpiece. May work on non-metallic materials. May be designated according to product machined; for example,
Radial-Drill-Press Set-Up Operator, Tool

8313-326 MAIN-BEARING BORER(mach., weld. & forg.) DPT:481
GED: 3 SVP: 5 EC: 1 5 6 PA: M 4 7

Operates machine to bore new or reconditioned main bearings for internal combustion engines, by one of the following methods:
Clamps engine block, bottom side up, on holding stand. Removes bearing caps and mills down mating surfaces to make bearings undersize in diameter. Places boring bar in guides at each end of engine and adjusts guides to center boring bar with bearing centers, using dial center gauges. Replaces and bolts down bearing caps, using torque wrench. Installs and sets fly cutters in boring bar, using dial micrometer. Aligns and connects electric motor with boring bar, using quick-disconnect universal coupling. Starts and observes operation of boring bar, that cuts machined surface on inside of bearing to specified measurement. Bolts engine block, bottom side up, on holding stand. Bolts line-boring machine onto bottom side of block. Inserts boring bar through main bearings and clamps bar into machine holders. Adjusts and centers boring bar according to readings on centering gauge. Installs and adjusts fly cutters in boring bar, using micrometers. Turns boring bar crank by hand to machine bearing surface. Verifies accuracy of machining, using micrometer, calipers, and by fitting specific test crankshaft into bearings and checking flow of air or oil passing under pressure through lubricating holes.
May cast babbit bearings in engine block bearing housings, using moulds, preparatory to machining.

8313-330 METAL-BAND-SAW OPERATOR(mach., weld. & forg.) DPT:682
contour-band-sawing-machine operator
GED: 3 SVP: 5 EC: 1 5 6 PA: M 4 7

Sets up and operates contour-band-sawing machine to saw straight, curved and irregular cuts in metal workpieces:
Studies job order and drawing or layout for product specifications, such as dimensions and tolerances. Selects saw blade and cutting speed according to type of material to be cut. Cuts blade and threads through workpiece hole for internal cuts and welds blade ends together to form continuous band, using resistance butt-welding attachment. Positions blade around driving wheels and adjusts blade tension, guides and table angle. Starts machine and guides workpiece along lay-out lines or sets up and engages feeding device. Turns valve handle to regulate flow of air to clean cutting area. Verifies conformance of sawed workpiece to specifications, using measuring instruments, such as steel rule, calipers, fixed gauges and micrometers. May replace saw blade with file band to file workpieces. May cut plastics or other non-metallic materials. May compute dimensions, measure and mark workpiece to lay-out for sawing. May be designated according to type of saw operated; for example,
Do-All-Saw Operator

8313-332 PRINTING-ROLLER GRINDER AND POLISHER(mach., weld. & forg.; mech., equip., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: 1 6 7 PA: M 4 7

Operates lathes to grind and polish metal printing rollers, to specified diameter and finish:
Mounts roller in grinding lathe, using hand tools and hoist. Selects grinding wheel, installs it on machine spindle, and starts machine. Turns hand wheels to bring grinding wheel in contact with roller surface, and moves lever to engage automatic feed. Stops machine at intervals, and measures roller diameter, using micrometer. Continues grinding operation until specified diameter is obtained. Removes roller to polishing lathe, and installs polishing stone on machine head. Starts machine and engages lever, so that polishing stone moves back and forth along surface of rotating roller. Stops machine at intervals to measure diameter and inspect finish of roller, and continues polishing operation until specified diameter and finish are obtained. Covers

surface of roller with oil and waxed paper, using brush and adhesive tape.

8313-334 ROUTER OPERATOR(mach., weld. & forg.) DPT:682

GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Operates routing machine to cut, slot and profile flat, formed and extruded parts of aluminum plastic, wood or similar materials: Reads drawings to determine material and dimensional information. Selects and installs specified cutting tool and adjusts depth of cut. Clamps material between templates or wood blocks, using C-clamps. Places assembly or part on machine bed against guide pin and depresses pedal to lower rotating cutter into workpiece. Turns valve handle to regulate flow of coolants on cutting area. Holds and turns workpiece against guide pin and under cutter to remove material and perform operations such as profiling, chamfering and slotting.

8315-MACHINE-TOOL OPERATING OCCUPATIONS

This unit group includes occupations concerned with operating or tending metal cutting machines normally set up for repetitive-type work. Workers in these occupations operate or tend one or more machines to perform machining operations; such as, milling, drilling, planing, turning, boring, sawing, precision grinding, honing and broaching, to produce or repair finished or semi-finished parts.

8315-110 FITTER, FIREARMS(metal fab., n.e.c.) DPT:682

GED: 3 SVP: 6 EC: I 6 PA: L 4 7

Fits together and finishes metal firearms parts preparatory to assembly, using hand and machine tools: Removes burrs and rounds sharp edges, using files and scrapers. Calculates amount of metal to be removed from parts, using micrometer, and gauges. Operates drill press, electric drill and lathe, equipped with rotary file or abrasive wheel, to smooth interior surfaces of holes. Polishes movable parts by hand to ensure smoothness and ease of action, using polishing compounds or emery cloth. Assembles gun parts, such as sliding bolts, triggers and extractors ensuring accurate fit of all parts. Stamps serial numbers on parts, using hammer and punches. May repair and refinish damaged parts returned by customers.

8315-114 AUTOMATIC-WHEEL-LINE OPERATOR(railway) DPT:682

GED: 3 SVP: 6 EC: I 5 6 PA: M 4 7

Operates and controls series of machines to machine railroad car wheels to specifications: Changes chucks, boring bars and cutting tools according to specifications on production orders, using hand tools. Positions wheel in machine, using electric hoist. Pushes buttons on console panel to start machines that perform threading, flanging, boring and other operations to finish wheels. Observes action of machines and transfer stations to detect malfunctions. Examines machined surfaces of wheels at specified stations to detect defective cutting tools and reports faulty work to supervisor. Inspects finished wheels for defects and accuracy, visually and with calipers and steel scale. Removes wheels from machine, using electric hoist.

8315-118 CONNECTING-ROD BORER(motor vehicle) DPT:682

GED: 3 SVP: 6 EC: I 5 6 PA: M 4 7

Operates machine to bore bearing surfaces of engine connecting rods to fit reconditioned crankshafts: Aligns connecting rod in holding device. Inserts and adjusts fly cutter in boring bar. Moves levers to control feed and to rotate boring bar to machine bearing surfaces. Checks dimensions of machined surfaces, using micrometer. Tests rod for defects such as bends and twists, and straightens rod, using hand-operated press. Grinds flat surfaces of connecting rods and bearing caps, using grinding machine. Drills and reams bolt and oil holes, using power drill and hand reamer.

8315-122 MACHINE-TOOL OPERATOR, PRODUCTION(mach., weld. & forg.) DPT:682

GED: 3 SVP: 6 EC: I 5 6 PA: M 4 7

Operates any of a variety of previously set-up machine-tools, such as lathes, drill presses, milling machines, grinders or special purpose machines to machine metal workpieces on a production basis: Lifts workpiece manually or with hoist and positions and secures it in fixture, or loads automatic feeding device. Starts machine and moves controls to position workpiece and cutting tools in relation to each other. Engages power feed. Opens valve and directs flow of coolant against cutter and workpiece. Observes machining cycle. Verifies conformance of machined workpieces to specifications, using instruments such as preset comparator, fixed gauges, calipers, micrometers and dial indicator. Reports deviations from specifications to set-up man or foreman. Changes worn cutting tools, using wrenches. May operate bench grinder to sharpen tools. May machine plastics or other materials.

8315-126 WOODWORKING-CUTTER SHARPENER(metal fab., n.e.c.) DPT:682

GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Operates one or more types of grinding machines to shape and sharpen woodworking-machine cutters: Fastens straight cutters to holder or table of machine or bolts cutter-head assembly to machine spindle. Turns handwheels to set travel of cutter across face of grinding wheel according to length of blade and to adjust pressure of wheel against cutter. Starts machine and observes grinding operation to ascertain when nicks and burrs are removed and cutter is sharpened. Positions template to sharpen shaped cutters in holder and clamps assembly in place on machine table. Starts machine and turns handwheels to move and guide cutter against grinding wheel and follow lines of template to shape and sharpen cutter. Hones cutting edges of ground knives and cutters, using fine whetstone and oil. May sharpen and set teeth of circular saw blades, using saw grinding or filing machines.

8315-130 AUTOMATIC-LATHE OPERATOR, CLOCK(scient. & ind. equip., n.e.c.) DPT:682

GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Operates battery of automatic lathes to drill, ream, tap, chamfer, knurl and countersink stock to produce clock and watch parts, such as balance staffs, cannon pinions, pillars, nuts, screws and winding stems: Loads machine with specified stock, such as rod or wire and starts machine. Changes and sharpens cutting tools, such as drills, taps and dies. Reads dimensions from drawings and verifies specified tolerances for parts, using gauges. Adjusts lathe to duplicate original setup.

8315-134 BRAKE-DRUM-LATHE OPERATOR(motor vehicle) DPT:682

GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4 7

Operates brake-drum lathe to refinish automotive brake-drums, and grinding machine to grind brakeshoe linings: Fastens drum in lathe, using chuck or spindle, and adjusts cutting tool to machine drum surface. Starts lathe and feeds tool into drum by hand or engages automatic feed mechanism. Repeats cut as necessary to eliminate scored and worn areas. Measures drum to verify dimensions, using calipers, drum gauge, micrometers or vernier scale. Clamps brakeshoes in grinding machine or grinder on car axle and grinds brake linings to specified arc as determined by new diameter of machined drum.

8315-138 SCREW-MACHINE OPERATOR, CUSTOM(mach., weld. & forg.) DPT:682

GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates one or more previously set-up single- or multiple-spindle-screw machines equipped with automatic indexing and feeding mechanism, to perform series of machining operations on metal bar stock on custom basis, following specifications: Reads drawing and job order for information, such as dimensions, tolerances, gauges and quantity. Verifies machine and tool setup. Loads stock into feeding mechanism. Starts machine and observes

operation. Verifies conformance of sample workpieces to specifications, using fixed gauges, micrometers and dial indicators. Replaces worn tools, such as drills and counterbores, using hand tools. Adjusts machine controls and changes tool settings to keep dimensions within specified tolerances.

May operate bench grinder or cutter-grinding machine to sharpen tools. May be designated according to type of machine operated; for example,

Screw-Machine Operator, Multiple Spindle
Screw-Machine Operator, Single Spindle

8315-142 BORING-MACHINE OPERATOR, PRODUCTION(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates previously set-up single- or multiple-spindle-boring machines to bore and drill holes in metal workpieces, such as housings, frames, and cylinders to specifications on production basis:

Lifts workpiece manually or with hoist and clamps it in holding fixture. Moves lever to feed tools into workpiece. Moves controls to adjust cutting speeds, feed rates and depth of cut. Observes machine operation and verifies conformance of bored workpiece to specifications, using measuring instruments. Assists in setting up machine and changes worn tools.

May bore or drill plastics or other non-metallic materials. May be experienced with particular material, product, or type of machine and be designated accordingly.

8315-146 COLLET MAKER(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I PA: S 4 7

Makes watch collets, using three-stage machine to cut and chamfer outside diameters, face them to specified thickness, drill hairspring hole, and saw slot in collet:

Feeds collets into machine and starts machine, controlling operation by co-ordinated hand and foot movements. Feeds cutting tools against collets by hand, exercising delicate and uniform touch. Removes collets and verifies finished dimensions, using precision gauges. Makes minor machine adjustments to keep product within specified tolerances.

8315-150 DRILL-PRESS OPERATOR, PRODUCTION(mach., weld. & forg.) DPT:682
drilling-machine operator, production.
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates previously set-up single- or multiple-spindle-drilling machines to drill, ream, countersink, spot-face or tap holes in metal workpieces on a production basis:

Clamps workpiece in drill, jig or holding fixture. Moves lever to feed tools into workpiece. Observes machine operation and verifies conformance of machined workpiece to specifications, using measuring instruments.

May operate particular type of drilling machine and be designated accordingly; for example,
Gang-Drilling-Machine Operator
Radial-Drill-Press Operator

8315-154 FILE CUTTER(metal fab., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates machine that cuts teeth in steel file blanks:

Adjusts chisel-type-cutting tool on reciprocating arm of machine to specified depth, angle and feed, to obtain correct number of teeth per inch. Changes lead beds on machine table when shape and size of files vary or because of worn bed. Positions blank on bed and starts machine that automatically feeds blanks to cutting tool. Sets up table in series of angular positions to cut teeth on back of specially shaped files. Sets up and operates turning device to produce helical cuts on round files. Changes and sharpens cutters as necessary.

8315-158 HONING-MACHINE OPERATOR, PRODUCTION
(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I PA: M 4 7

Operates one or more previously set-up honing machines to hone surfaces of metal parts, such as cylinders, bearings, and connecting rods to specifications, on production basis:

Obtains information such as dimensions and number of parts to be produced from job order. Secures workpiece in position and actuates mechanism to feed hone to workpiece. Adjusts feed rate and spindle speed. Measures finished workpiece with fixed gauges or micrometers to ensure conformance to specifications. Changes worn hones, using wrenches.

May read mechanical drawings. May assist in setting up machine. May have experience with particular material, product, or machine and be designated accordingly,
Cylinder Honer

8315-162 METAL-SAWING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
cut-off-saw operator, metal; power-saw operator, metal.
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates power sawing machines, such as hacksaw, bandsaw, circular saw, friction saw or rubber disk saw to cut metal stock to specified dimensions:

Reads job order for information as to type of metal, size of stock and dimensions to be cut. Obtains and transfers stock to saw manually or with hoist. Selects and mounts saw blade and sets cutting speed for specific type of metal. Sets stops and guides to control dimension of cut, using steel rule, wrench and square. Positions and secures stock against stops or in feeding device. Starts machine, turns valve handle and directs flow of coolant against cutting area and blade, and observes saw operation. Marks identifying data on workpiece.

May have experience with custom or production work, or with particular material, product, size of workpiece or type of machine. May place and pile cut stock, clean up work area and collect salvageable material.

8315-166 THREADING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 5 7 PA: M 4 7

Operates threading machine to thread and chamfer round stock according to specifications:

Selects, installs and adjusts threading die, die cutters, chamfering tool, feed grips, pressure tripping mechanism, cams, gears and pulleys, using screwdrivers and wrenches. Positions and secures precut stock in jaws of threading machine. Starts machine and moves handwheel or lever to feed stock into dies. Verifies dimensions of workpieces, using fixed gauges and scale.

May sharpen die cutters on grinding machine. May be designated according to type of stock threaded; for example,
Bolt-Threading-Machine Operator
Pipe-Threading-Machine Operator

8315-170 DRILLING-AND-END-MILLING-MACHINE OPERATOR (mach., weld. & forg.) DPT:682
GED: 3 SVP: 3 EC: I 5 PA: L 4 7

Operates combination horizontal-drilling and end-milling machine to drill and finish ends of rails:

Moves levers to convey rail along roll line and to position rail in drill press. Moves machine-mounted gauge along calibrated scale to determine amount of milling required and location of drill holes. Tightens set-screw to secure gauge in position. Presses button to reposition rail and clamp rail in place. Moves controls to simultaneously feed milling cutter and drills to workpiece, and engages automatic feeds. Presses button to regulate flow of coolant. Observes operation to detect machine malfunction. Verifies conformance of machined workpiece to specifications, using fixed gauge and calipers. Changes drills and milling cutters, using wrenches. Moves controls to start roll line and to route drilled rail to inspection bed.

8315-174 GRINDER OPERATOR, PRODUCTION(mach., weld. & forg.) DPT:682
production grinder.
 GED: 3 SVP: 3 EC: I 5 PA: M 4 7

Operates one or more previously set-up grinding machines to grind surfaces of metal workpieces to specifications on production basis: Places workpiece in holding fixture, between centers, on magnetic table or in direct contact with grinding wheels, and engages work feed. Moves controls to adjust depth of cut, grinding speeds and feed rates. Verifies dimensions of ground workpiece for conformance to specifications, using measuring instruments. Replaces worn grinding wheels, using wrenches or dresses wheel with dressing device. May be designated according to type of machine used; for example, Centerless-Grinder Operator, Production External-Grinder Operator, Production Internal-Grinder Operator, Production Surface-Grinder Operator, Production

8315-178 LATHE OPERATOR, PRODUCTION(mach., weld. & forg.) DPT:682
 GED: 3 SVP: 3 EC: I 5 6 PA: M 4 7

Operates one or more previously set-up production lathes, to perform one or series of repetitive operations, such as turning, boring, threading or facing of metal workpieces, according to specifications: Positions and secures workpiece in chuck or holding fixture. Starts machine, and engages automatic feed. Moves lathe controls to adjust rotation speeds, feed rates and depth of cut. Observes machining cycle and verifies conformance of machined parts to specifications, using measuring instruments. Assists in setting up lathe. May machine non-metallic materials, such as plastics. May operate particular type of machine and be designated accordingly, Turret-Lathe Operator, Production

8315-182 MILLING-MACHINE OPERATOR, PRODUCTION (mach., weld. & forg.) DPT:682
 GED: 3 SVP: 3 EC: I 6 PA: M 4 7

Operates one or more previously set-up milling machines to mill surfaces of metal workpieces to specifications on production basis: Secures workpiece on bed of machine between centers or in fixture. Engages automatic feed and observes operation of milling cutters. Verifies conformance of milled pieces to specifications, using measuring instruments, such as fixed gauges or micrometers. May mill non-metallic materials, such as plastics. May operate particular type of machine and be designated accordingly, Universal-Milling-Machine Operator

8315-186 BROACHING-MACHINE TENDER, PRODUCTION (mach., weld. & forg.) DPT:685
broacher, production.
 GED: 3 SVP: 3 EC: I 5 6 PA: M 4 7

Tends one or more previously set-up broaching machines to broach internal or external surfaces of machine parts to specifications, on a production basis: Lifts workpiece manually or with hoist and secures it in holding fixture. Starts machine, observes operation, and verifies conformance of broached workpieces to specifications, using measuring instruments, such as fixed gauges.

8315-190 SCREWMAKER, AUTOMATIC(mach., weld. & forg.) DPT:685
 GED: 3 SVP: 3 EC: I 6 PA: L 4 7

Tends machine that automatically shapes and cuts wire stock to make watch screws: Inserts wire into feed mechanism and starts machine that turns head and shank of screw to specified size, threads and cuts screw to length, and slots head. Measures thread and length of finished screw, under loupe, for conformance to specifications, using pitch and upright gauges. Adjusts machine setup by turning knobs and wheels to control depth of cut, speed and feed, to keep product within specifications.

8315-194 TAPPING-MACHINE TENDER(mach., weld. & forg.) DPT:685
 GED: 3 SVP: 3 EC: I 5 PA: L 4 7

Tends previously set-up tapping machine to perform repetitive operation of threading drilled holes in plastic or metal workpieces according to specifications, on production basis: Inserts workpiece in machine, clamps it in place, aligns hole under tap and starts machine. Removes finished workpiece from machine. Spot checks sizes of tapped holes, using thread gauges. May operate multiple-spindle-tapping machine. May gauge threaded workpieces and change worn taps to maintain specified tolerances.

8315-198 TRANSFER-MACHINE TENDER(mach., weld. & forg.) DPT:685
automatic-transfer-machine operator.
 GED: 2 SVP: 4 EC: I PA: M 4 7

Tends machine that automatically transfers, positions and secures workpieces at each station and performs series of machining operations, such as drilling, boring, tapping and milling on metal workpieces, such as castings and forgings: Lifts workpiece manually or with hoist and places it in clamping device on roller conveyor that transfers it to first work station, automatically indexing each workpiece at each station in transfer machine. Inspects machined workpieces for surface defects and spot-checks them for conformance to specifications, using measuring gauges and fixtures. Changes tools, using wrenches, when panel lights indicate that tool is worn or broken. Notifies supervisor if panel lights indicate machine failure or serious malfunction.

8315-202 BARREL RIFLER(metal fab., n.e.c.) DPT:685
 GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Cuts spiral grooves into bores of small arms weapons, using broaching machine: Installs broach in drawing head and barrel in index head of broaching machine. Starts machine and opens valve to regulate automatic feed of broach and to cut rifling to specified depth and twist. Changes graduated broaching blades for each cut to attain specified depth of rifling. Cleans bore, using cleaning rod and fabric patch, and examines bore for burrs and scratches, using magnifying glass.

8315-206 ELECTRICAL-DISCHARGE-MACHINE TENDER(mach., weld. & forg.) DPT:685
 GED: 2 SVP: 3 EC: I PA: M 4 7

Tends electrical-discharge machine to shape metal workpieces to specifications, using electrical-arc-erosion principle: Reads job order or receives verbal instructions on quantity of workpieces to be produced. Positions and secures workpiece on machine table or places it in fixture. Moves controls to align electrode and workpiece. Starts machine, turns on flow of dielectric coolant and observes operation. Inspects work visually and with measuring instruments for conformance to specifications.

8315-210 GEAR-CUTTING-MACHINE TENDER(mach., weld. & forg.) DPT:685
production-gear cutter.
 GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Tends one or more previously set-up gear-cutting machines, such as gear shapers, hobbess and generators, to machine splines, sprockets or gear teeth in metal blanks: Positions and secures workpiece on arbor or in chuck or fixture. Starts machine and flow of coolant and observes cutting operation. Indexes machine to cut successive teeth or splines. Verifies conformance of machined workpiece to specifications, using measuring instruments, such as fixed gauges, micrometers or preset dial indicators. Cleans machines and separates coolant from metal shavings, using electric separator. Cleans machined parts in solvent and deburrs parts, using hand file or power grinder. Informs set-up man if workpieces do not conform to specifications. May machine plastic and other non-metallic materials.

8315-214 LAPPING-MACHINE TENDER, PRODUCTION
(mach., weld. & forg.) DPT:685
production-lapping-machine tender.
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Tends one or more lapping machines to lap surfaces of metal objects to specifications, usually on production basis:
Starts machine and places workpieces in machine. Moves controls to adjust lapping speeds, tool pressure and length of machine cycle. Observes operation and measures lapped workpieces for conformance to specifications, using equipment, such as comparator and surface plate.
May assist in setting up machine. May be designated according to material used, product made or type of machine operated.

8315-218 LAP-TRUING-MACHINE TENDER(scient. & ind. equip., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that cuts specified curvature on metal laps used to grind and polish lenses:
Compares laps, using template, to determine if lap conforms to specifications. Clamps template on bed of machine and sets specified dioptic curve and depth of cut on vernier scale, to regulate feed of cutting tool. Clamps lap in machine chuck, starts machine and engages automatic feed or turns hand wheel to move lap across cutter. Repeats cutting process until lap is shaped to specified contour. Removes lap from turning machine at end of cycle and clamps it in chuck of scoring machine. Pulls scoring wheel across face of lap to cut grooves which retain abrasive on surface of lap during lens polishing operation. Stamps identification number on lap with hammer and marking die. Sharpens cutting tool on powder grinder.

8315-222 PLASTIC SAWYER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Operates power-driven circular or band saw to cut plastic or similar materials to specified dimensions:
Installs blade and sets guide bars and stops, using hand tools. Positions material on saw table. Starts saw and feeds material to blade. Checks dimensions of cut pieces, using gauges, template or rule. Examines pieces for defects, such as chipped edges and marred surfaces, and sorts damaged pieces according to defects.
May mark cutting lines on material.

8315-226 SCREW-MACHINE TENDER, PRODUCTION
(mach., weld. & forg.) DPT:685
automatic-screw-machine tender.
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends one or more previously set-up single- or multiple-spindle- screw machines, equipped with automatic indexing and feeding mechanisms to perform series of machining operations on bar stock, on production basis:
Loads bar stock into feeding mechanism. Starts machine, engages feeds and observes operation. Changes worn cutting tools, using wrenches. Verifies conformance of sample workpieces to specifications, using instruments, such as preset comparator, fixed gauges, calipers and micrometer. Moves controls to adjust machine operation.
May sharpen tools, using bench grinder. May machine plastics or other non-metallic materials. May be experienced in machining particular material or product, or in using particular type of machine and be designated accordingly.

8315-230 SCRIBING-MACHINE TENDER(metal fab., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that cuts graduations in metal surface of measuring tools, such as carpenters' steel squares and rules, and machinists' scales:
Reads work order and selects and installs cutter head, using wrench. Positions workpiece against locating pins on magnetic plate on machine carriage. Starts machine that cuts graduations along length of tool by automatic indexing of multiple scribing diamond points mounted in head. Removes scribed rule at end of cycle and examines

and compares it with master scale to verify legibility and accuracy of graduations. Checks measuring tool for smoothness by feeling along graduations for burrs. Selects appropriate head and repeats process to scribe opposite side of measuring tool.

8315-234 BLADE SHARPENER(metal fab., n.e.c.) DPT: 685
GED: 2 SVP: 2 EC: I 5 6 PA: M 4 7

Tends machine that grinds blades of articles, such as machine knives and hand tools:
Positions and fastens blades in holding fixture or magnetic chuck. Starts machine that automatically feeds blades to abrasive wheel or belt and sharpens blade edge. Verifies dimensions of blades and keenness of blade edges, using fixed gauges, micrometer and ruler.
May replace grinding wheels on machine, using wrenches.

8315-299 OTHER MACHINE-TOOL OPERATING OCCUPATIONS

This group includes other machine-tool operating and tending occupations, not elsewhere classified; for example, those who may operate or tend machine-tools to machine special products of metal or other materials where the methods applied to machining of metal are used. Typical examples of occupational titles covered by this residual group are:
Grinder, Neoprene-Fishing-Rod Handles(sport. & toy)
Shotgun-Bore Reamer(metal fab., n.e.c.)

8316-INSPECTING AND TESTING OCCUPATIONS, METAL MACHINING

This unit group includes occupations in inspecting and testing work as described under the term titles, 02-170 INSPECTOR (any ind.) and 02-430 TESTER (any ind.), concerned with quality control activities in metal machining.

8316-110 INSPECTOR, TOOL AND GAUGE(mach., weld. & forg.) DPT:221
gauge checker; tool and die inspector.
GED: 4 SVP: 7 EC: I PA: M 4 7

Inspects, tests and adjusts new, reworked or in-use dies and tools, such as gauges, jigs, fixtures, measuring instruments and testing equipment for conformance to specifications:
Calibrates and adjusts gauges and measuring instruments, such as dial indicators, fixed gauges, height gauges and electrical and functional gauges, using master gauges and master parts. Examines tools, gauges or measuring instruments to determine wear and required adjustments. Disassembles inaccurate or worn tools, gauges and measuring instruments, using hand tools, and inspects parts for wear, warping or other defects. Studies defective parts to determine cause of defect and recommends corrective action. Prepares report listing defects and other inspection data. Reassembles tools and gauges and adjusts to specifications. Tests units for fit of moving parts and mechanical functioning. Instructs inspection personnel in setup and operation of measuring equipment.
May record history, calibration, location and condition of all measuring equipment.

8316-114 INSPECTOR, MACHINE SHOP(mach., weld. & forg.) DPT:281
GED: 4 SVP: 7 EC: I 5 PA: M 4 7

Tests and examines machinery parts, materials and assemblies at assembly, inspection and machining stations to ensure conformance to drawings and other specifications:
Analyzes drawings and other specifications to obtain product information. Examines parts, materials and assemblies visually for surface defects, finish and completeness. Checks dimensional accuracy of machined parts, using micrometers, calipers, vernier height gauge, dial indicator, plug gauges or comparator. Tests operation of mechanical assemblies, using equipment, such as push-off testers and torque gauges. Informs foreman or quality control personnel when product fails to meet standards. Writes report indicating types of

defects and percentage of rejects. Inspects first run parts to confirm machine setups.

May lay out measuring reference lines on workpiece. May set up, adjust and test inspection equipment to ensure its accuracy. May be identified according to manufacturing process, type of product or item inspected.

8316-118 GEAR INSPECTOR(mach., weld. & forg.) DPT:381
GED: 4 SVP: 7 EC: 1 PA: M 4 7

Measures shape and dimensions and inspects finish of various types of gears, using gear-testing machines:

Positions gear on machine arbor or meshes it with master gear. Sets dial indicator on machine to zero and connects recording chart to machine. Turns handle to position measuring tip of dial indicator against gear. Measures curvature of gear tooth, distance between gear teeth and concentricity of gear by taking specified number of dial indicator readings. Compares dial indicator and recording chart readings with dimensions and tolerances specified in drawings to determine if gears are in conformance with specifications. Measures overall size of gear, using micrometer and gear-measuring wires. Records defects in gears tested and recommends action to correct machining defects.

8316-122 PROPELLER INSPECTOR(ship & boat bldg.) DPT:381
GED: 4 SVP: 6 EC: 1 PA: M 4 7

Examines ships propellers for conformance to specifications and to detect machining, chipping, grinding and polishing defects:

Reads mechanical drawings and other specifications to obtain product information. Inspects pattern from which propeller mould is made for surface defects and completeness. Sets up, adjusts and tests inspection equipment to ensure its accuracy. Verifies dimensional accuracy of propellers, using micrometers, calipers, vernier height gauges and plug gauges. Verifies setup of machine tools used to machine propellers. Measures pitch and balance of propeller blades, using pitchometer. Records data and returns defective propellers for regrinding, welding or other machining necessary for adjustment or reconditioning.

8316-126 DIFFERENTIAL-GEAR TESTER(motor vehicle) DPT:382
GED: 3 SVP: 5 EC: 1 5 PA: M 4 6 7

Operates machine to test performance and mesh of crown and pinion gears in assembled automobile or truck differentials:

Clamps differential in fixture. Adjusts gear backlash and tooth-contact pattern to specifications by turning bearing carriers. Verifies setting, using indicator gauges. Paints gears with mixture of red lead and oil to indicate high spots. Starts machine and runs gears at various speeds, observes their operation and listens to sound to detect indications of defective meshing. Stops machine and inspects gears for signs of defective meshing. Locks bearing-retaining bolts to specified torque setting, using impact wrench, when gears meet standards. Rejects gears that do not perform according to standards, and records test results.

8316-130 GEAR TESTER(mach., weld. & forg.; motor vehicle) DPT:685
GED: 3 SVP: 4 EC: 1 PA: L 4 6 7

Tends gear-testing machine to test accuracy of mesh of finished transmission gears:

Mounts gear on spindle, installs spindle in machine, and moves lever to mesh gear with master gear. Starts machine to rotate meshed gears, applies brake to load spindle, and observes operation and listens for noises that indicate defective meshing. Tests gear teeth for correct shape by spraying red-lead on teeth of gear to indicate high spots. Removes high spots from gear teeth by filing or grinding.

8316-199 OTHER INSPECTING AND TESTING OCCUPATIONS, METAL MACHINING

This group includes metal machining inspectors and testers, not elsewhere classified; for example, those who verify alignment, dimensions and finish of threads cut in pipe fittings, such as tees and elbows, using alignment table and standard test bars. A typical

example of an occupational title covered by this residual group definition is:

Thread Alignment Tester. Pipe Fittings(mach., weld. & forg.)

8319-METAL MACHINING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with machining metal, plastic or similar materials, to produce or repair parts or products.

8319-110 PLASTIC-TOOL MAKER(mach., weld. & forg.) DPT:681
GED: 4 SVP: 6 EC: 1 7 PA: M 4 7

Lays out and assembles plastic tools, such as gauges, jigs, templates, and fixtures:

Makes tool assemblies by laminating them with glass cloth and resin and shapes them by sawing, filing and sanding. Determines from drawings, location of guide and reference lines and location of holes on plastic tools. Locates and marks lines and holes on tools, using calipers, rulers, micrometers and protractors. Drills holes in tools, using drill press. Inserts bushings or pins into holes, using arbour press or hammer. Verifies dimensions and alignment of assembly, using calipers, straight edge, height gauges and sight level. Trims excess material from tool parts, using files and power grinder. Fills space between adjoining parts with plastic.

8319-114 PLASTIC-FIXTURE BUILDER(mach., weld. & forg.) DPT:681
GED: 3 SVP: 6 EC: 1 7 PA: M 4 7

Makes precision plastic checking fixture used to determine accuracy of formed metal parts:

Casts or lays-up plastic reproduction from model of part. Lays out lines on casting or built-up workpiece as references for trimming, fitting and assembling operations, using surface plate, height gauges and other measuring instruments. Cuts and trims workpiece following reference lines, using saws, files and other hand tools. Assembles fixture with glue, epoxy resin, acetone, bolts or other fasteners. Fits and fastens metal inserts into fixture at specified locations to increase strength and accuracy. Verifies dimensions of completed checking-fixture for conformance to specifications, using templates and measuring instruments.

May fabricate metal inserts used in fixture, using powered saw, drill, grinder and hand files.

8319-118 SCRAPER, HAND(mach., weld. & forg.) DPT:681
GED: 3 SVP: 6 EC: 1 PA: M 4 7

Scrapes metal workpieces with hand tools to smooth machine ways, bearing surfaces and surface plates to ensure uniform and even surfaces and free action of parts:

Positions workpiece on worktable, in vise or in fixture and secures it with clamps and wrenches. Files and grinds burrs from workpiece. Applies marking pigment to surface plate with brush, cloth or sponge. Positions workpiece and master surface plate against each other and rubs surfaces together to mark high spots. Selects hand scraper and scrapes workpiece surface to remove high spots indicated by pigment pattern. Repeats operation until pigment pattern is even over whole work surface. Checks workpiece for conformity to specifications, using instruments such as dial indicator, height gauge, master surface plate and gauge blocks.

May use power-operated hand scraper.

8319-122 BABBITTER(mach., weld. & forg.) DPT:681
GED: 3 SVP: 5 EC: 1 6 PA: M 4 7

Lines bearing surfaces of machinery with babbitt, and fits bearings to component parts:

Selects mandrel according to finished size of bearing taking into consideration allowances for machining and scraping or according to work orders. Aligns and centers mandrel in bearing and seals openings with clay or asbestos to prevent molten metal from leaking. Fits separators in split bearings, using sheet asbestos packing or similar material and tin snips, and bolts or clamps the bearing halves together. Melts metal in pot or ladle. Positions workpiece in fixture and heats

with torch. Pours molten metal from ladle or pot into workpiece assembly. Fits babbitted sections to other bearing surfaces, using machine tools, hand scrapers and micrometers, allowing specific clearance between mating parts. Drills oil holes and cuts oil grooves into babbitted bearing surfaces. Installs babbitted parts in machinery and tests for operation. May dip workpiece in acid bath, and molten tin to coat surface preparatory to babbitting.

8319-126 FILER, HAND(mach., weld. & forg.) DPT:681
precision filer, hand.
GED: 3 SVP: 5 EC: I PA: M 4 7

Files grooved, contoured, and irregular surfaces of metal objects, such as metalworking tools and dies and machine parts, to conform to templates, other parts or specifications: Studies drawing or layout on workpiece and selects files according to type of metal, size and shape of work and amount of metal to be removed. Files workpiece surface to lay-out lines. Inspects with magnifying glass and verifies conformity of finished workpiece by comparing it with template or other part, or by measuring dimensions, using instruments, such as vernier calipers, micrometers and surface gauges. Smooths and polishes workpiece with emery cloth or power buffer. Smooths surface with fingers for smoothness. Tests workpiece functionally by assembling with other parts and operating machine. May specialize according to product filed.

8319-130 LAPPER, HAND(mach., weld. & forg.) DPT:681
precision lapper.
GED: 3 SVP: 5 EC: I PA: L 4 7

Laps metal workpieces such as gauges and machine parts, to specifications within very fine tolerances, applying knowledge of abrasives, metals and lapping procedures: Measures workpiece with instrument such as comparator. Compares workpiece dimensions with specifications to ascertain amount of stock to be removed. Mounts workpiece in fixture using wrenches and keys and work aids, such as parallel bars and rods to guide motion of lap or workpiece. Files grooves in surface of lap to hold abrasive lapping compound. Applies compound to workpiece and rubs lap across workpiece with rotary or reciprocating motion, feeling friction and applying required pressure to attain specified tolerance. May be designated according to product lapped; for example, Lapper, Gauges

8319-134 SMOKING-PIPE REPAIRMAN(misc. prod. fab., n.e.c.) DPT:681
GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Repairs smoking pipes and cigar holders, according to customers' specifications, using lathe and other hand and power tools: Cuts mouthpiece blank from block of hard rubber or plastic, using hand saw. Secures mouthpiece blank in lathe chuck and guides tools against revolving blank or holds blank in hands to guide blank against revolving drills and counterbores to drill and ream air hole. Turns end of blank to fit pipe or holder. Presses blank against grinding and buffing wheel to shape mouthpiece according to customer's specifications. Cuts threads on stem or pipe shank, using tap and die or thread chasers and lathe. Heats pipe stem over flame or in hot oil to bend stem to specified angle or shape. Repairs broken or cracked pipe shanks with cement, silver bands, ferrules or screws. Buffs pipe bowl and stem to restore high gloss.

8319-138 PISTON AND VALVE MAKER(misc. prod. fab., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Operates machine tools such as lathe, drill press, saw and lapping machine to make, fit and assemble parts for pistons, valves and slide joints of brass wind instruments, performing any combination of the following duties: Cuts crooks (curved tubes) to length, using sheet metal snips or table saw. Expands crooks to size of hole in piston blank in which they are to be inserted, using ball end of mandrel or hand tool. Operates lathe to face and bevel piston ends and to smooth external surface of piston. Operates drill press to drill holes in piston valves and connecting tubes. Taps hole in piston head, threads end of piston shaft, and assembles shaft and piston. Solders crooks into piston holes and bottom plate onto piston, using hand torch and silver solder. Inserts and soft solders

connecting tubes and braces between valves. Wires valves together in position, using pliers. Solders tubes and braces to valves, using silver solder. Operates lapping machine to lap pistons and valves together. Cleans excess solder from joints and deburrs inside of valve, using files, scraping tool and abrasive paper. Matches valves and pistons, and punches corresponding numbers on them for correct assembly.

8319-142 SAW-EDGE FUSER(mach., weld. & forg.; metal fab., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Operates machine-tools and induction furnace to machine and fuse specially tipped circular-saw blades: Reads work order and other job specifications. Weighs tungsten carbide and sintering powders, such as nickel and iron, and industrial diamond chips in specified percentages, using jewellers' scale. Dumps powders into small mixing mill and mixes them for specified time. Mixes diamond chips with sintering powder as required. Compacts mixture in moulds, using arbor press, to form saw segments. Places segments in oven, at preset temperature and under inert atmospheric conditions, to sinter mixture. Operates machine-tools, such as grinder, lathe, and milling machine to finish edge of saw blank to specifications. Fuses segments to saw blank, using flux, brazing strips and furnace. Measures saw with micrometer, and dial gauge to check thickness and runout.

8319-146 SAW MAKER(mach., weld. & forg.; metal fab., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Makes blades for band-saws, circular saws and jigsaws from steel blanks and strips, according to specifications, using machine and hand tools: Selects steel-saw-blade material according to size, type and operating requirements of blade. Operates power roller to straighten and stretch (roll) blade to specific temper. Installs specified serrating dies in punch press and operates press or milling machine to cut teeth in blade. Sharpens and sets blade teeth, using power grinder and setting machine. Verifies saw blades for conformance to specifications, using micrometer and other measuring instruments. May operate surface grinder to grind circular-saw blanks to specified thickness. May heat treat saws to relieve internal stress and temper metal. May operate resistance butt-welding machine to join ends of band-saw blades.

8319-150 SAW REPAIRMAN(mach., weld. & forg.) DPT:682
saw filer.
GED: 3 SVP: 5 EC: I 5 6 PA: L 4 7

Repairs, sets and sharpens band-saw, chain-saw, handsaw, circular saw and other types of saw blades according to specifications, using hand tools, filing machine and welding equipment: Examines saw blade for defects. Cuts broken teeth from saw, using power shear. Replaces teeth on blade by beveling joints on grinder and brazing or welding new teeth to blade, using welding equipment. Brazes or welds cracks in saw blades. Straightens twists and kinks in blades, using press or hammer. Adjusts cutting widths of blades by setting teeth, using special tools. Clamps blade in saw-filing machine and adjusts machine for distance between teeth, angle of bevel and depth of cut of file or abrasive wheel to match that of saw being repaired or sharpened. Starts machine that automatically grinds or files saw teeth. May file and set individual saw teeth by hand, using file and setting tool.

8319-154 MOULD FINISHER(mach., weld. & forg.) DPT:684
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Manipulates powered-hand grinder and hand tools to shape and smooth metal mould surfaces: Lifts partially completed mould by hand or with hoist, and positions and secures it in holding fixture. Removes burrs and smooths contoured surfaces, using powered-hand grinder. Chips mould surface to sharpen impression, using hammer and hand tools. Verifies contour of impression with templates. Fits and installs nameplate in mould, using hand tools. Inserts preformed metal tabs into slots in mould, verifies height of each insert with preset dial indicator and hammers mould metal around inserts with pneumatic hammer to secure them.

Scrapes, sands and polishes moulds to shape and smooth surfaces, using hand tools.

8319-158 TRIM-MACHINE ADJUSTER(explosives) DPT:380
GED: 3 SVP: 4 EC: I 5 PA: M 3 4 7

Sets up machines that trim small-arms cartridge cases to specified length:

Installs cutters and adjusts stops and cams to regulate machine stroke and synchronize movements of feeding, cutting and ejection mechanisms according to work orders and set-up charts, using hand tools. Sharpens cutters and polishes scratched punches, using bench grinder, speed lathe and emery cloth. Gauges samples of cases to ensure conformance to established standards. Removes housings, guards, feed tubes, chutes, tool holders and other accessories to replace worn or broken parts, such as springs, bushings and push-rods, using hand tools. Straightens bent punches and machine parts, using hammer and anvil.

8319-162 CARBON SALVAGE MAN(mach., weld. & forg.) DPT:482
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates band-saw and engine lathe to salvage defective or damaged carbon or graphite stock:

Examines and measures defective stock to determine standard sizes of stock that may be obtained after cracks, burns or other defects are removed. Positions carbon or graphite stock on band-saw table manually or with hoist. Adjusts height of saw-blade guides according to thickness of stock. Starts band-saw and guides stock into saw to make smaller size stock, allowing enough material for machining to standard sizes. Positions and secures sawn workpieces in chuck of engine lathe. Installs and adjusts cutting-tool bits, adjusts depth of cut, speed and feed by turning handwheels and moving levers. Starts lathe and turns down diameter and faces ends of workpiece until defects are removed and smaller product of standard size is obtained.

8319-164 CONTACT-LENS CUTTER(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I PA: S 4 7

Operates jewellers' lathe to cut contact lens-blanks to specified diameters:

Presses double-faced adhesive tape into depressions of blocking laps (metal pegs used to hold lens-blanks), using holding jig and rounded smoothing tool, and cuts tape, using knife. Positions lens-blank and taped laps in blocking device, and presses plunger to center and fasten lens-blank to tape on laps. Mounts blocked lens-blank in chuck of jewellers' lathe. Turns crank and observes gauge to set cutting tool for specified diameter. Starts lathe and turns handle to feed cutting tool into lens-blank. Removes cut lens-blank from lathe and smooths burrs, using emery cloth. Places laps in solvent to remove tape residue before re-use.

8319-165 CONTACT-LENS-LATHE OPERATOR(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I PA: S 4 7

Operates jewellers' lathe to machine contact lenses from plastic lens blanks:

Positions and fastens plastic blank in holding chuck of lathe. Adjusts cutting tool mechanism for specified radius or inside or outside curved surface and depth of cut. Starts lathe and turns crank to advance cutting tool to workpiece. Pulls control arm to move cutting tool across face of lens. Removes lens from chuck and examines it for smoothness of machined surface. Measures lens with thickness gauge and calipers to verify compliance with specifications. Tapes finished lens to work order and places in routing container.

8319-166 SCARFING-AND-BORING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 5 6 PA: H 3 4 7

Operates portable pneumatic-scarfing machine to scarf and bore tube ends that cannot be machined in an ordinary lathe:

Reads drawings or job order for dimensions and style of scarfing required. Selects cutters and checks them for sharpness. Installs and adjusts cutters to size and shape required, using wrench and keys.

Makes trial run on test piece before starting production run. Clamps end of tube into machine holding fixture. Advances rotating cutting head to scarf and bore tubes by moving lever. Verifies conformance of scarfed and bored tubes, using fixed gauges, calipers or micrometers. Installs and removes finished workpieces from machine, using overhead hoist.

8319-170 SERRATING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates chiseling machine that serrates bevelled-cutting edges on harvesting machine knife sections:

Sets and clamps serrating tool into reciprocating arm, using hand tools and pre-set markings. Synchronizes and adjusts travel of reciprocating arms according to size of knife section to be serrated. Pushes button to start machine. Loads knife sections onto machine feeding table and clamps sections in place, co-ordinating hand movements with speed and action of machine. Observes chiseling operation of machine and checks evenness and depth of serrations, and cutting angle. Places serrated knife sections in tote box or bin for further porcessing by other workers. Operates grinder to sharpen serrating machine chisels. May set up and operate automatic serrating machines.

8319-174 BALANCER, WATCH-BALANCE WHEEL(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: S 4 7

Equilibrates mass of watch balance wheel around balance wheel staff, using poising machine and jewellers lathe:

Mounts balance wheel and staff, using tweezers, in holding fixture of poising machine. Observes rotation of wheel to determine if heavy portion exists and is drawn to bottom. Starts jewellers' lathe to drill metal from head of balance screw in heavy part of wheel, estimating amount to be removed and adjusting lathe feed to remove required amount. Repeats operation until even rotation of wheel indicates balance.

8319-178 DEBURRER(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: I PA: L 4 7

Removes burrs and excess metal from machined watchparts and stamped or hand-cast clock-wheel parts:

Manipulates deburring tools and hand scrapers to remove burrs from rims, edges and recesses of watch parts, such as pillar plates and barrel bridges. Manipulates files or small portable trimming machines to remove excess metal from clock gears and wheel parts, or cleans lead from hand cast clock wheel parts, using hand pick. Inspects parts with loupe to ensure removal of burrs.

8319-180 CARBIDE-TOOL WORKER(mach., weld. & forg.) DPT:685
GED: 2 SVP: 4 EC: I 6 PA: L 4 7

Performs one or more of the following repetitive duties in manufacturing tungsten-carbide-tipped tools:

Tends metal-sawing machines such as band saws and circular saws to cut metal bar stock to specified dimensions. Sandblasts metal parts in sandblast cabinet to clean parts in preparation for brazing to tungsten-carbide tips. Loads and unloads rotary tumbler to coat tool-tip inserts with copper powder. Places inserts in boats and loads them into coppering furnace to coat inserts. Tends furnace during heat-treat and coating process and unloads furnace after treating. Transfers inserts from boats to trays for further processing. Feeds, tends and off-bears grinding machine to grind carbide inserts. Tends milling machine to mill surfaces of tool holders to receive carbide inserts. Dip-paints tool holders by hand and places them on magnetic board to dry. Etches trade mark, grade and style on tool holder or insert, using electrolytic etching machine.

8319-184 PIPE CUTTER, MACHINE(mach., weld. & forg.) DPT:685
GED: 2 SVP: 3 EC: I PA: H 3 4

Tends pipe-cutting machine to cut various sizes of pipe to required length:

Reads job order to determine size, quantity and length of pipe required. Measures and marks specified length on initial piece of pipe

and places pipe in machine to set machine gauges and stops, using hand tools. Manipulates lever controlling cutters to cut pipes to length. Lubricates large diameter pipe during cutting operation. Completes job order by recording number of pieces cut and man-hours used. Replaces worn cutters in machine, using hand tools. May remove burrs from cut ends of pipe, using portable grinder.

8319-186 TRIM-MACHINE TENDER(explosives) DPT:685
shell-trim operator.
GED: 2 SVP: 3 EC: I 5 PA: M 4

Tends battery of machines that trim small-arms cartridge cases, and bullet jacket blanks to specified length: Fills hopper of machine with small arms cartridge cases or bullet jacket blanks. Adjusts chuck and feed punch to cut blanks to specified length, by turning stop nuts and setscrews, using hand tools. Starts machine and observes operation of feeding, cutting and ejection mechanisms to detect malfunction. Removes jammed pieces, using fingers or wire hook. Examines trimmed workpieces for defects such as dents, burrs or scratches. Verifies workpieces for conformity to specified dimensions, using fixed gauges. Sharpens cutters on bench grinder. May seat artillery-shell cases on rotating mandrel and trim them by holding circular-cutting tool against shell mouth or turning wheel of carriage cross-feed.

8319-190 BUTTON FINISHER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I PA: S 4 7

Drills holes and grinds flat surfaces of plastic buttons, using bench drill and grinding machine: Determines position and spacing of holes by examining sample button. Inserts specified drill in drill chuck. Places button against guide and presses button against rotating drill bit to form hole. Inserts button blanks in slot of grinding machine and pulls grinder against button to grind flat surfaces. May tend machine that crimps metal eyelets into buttons.

8319-194 DRILLER, PORTABLE DRILL(mach., weld. & forg.) DPT:684
GED: 2 SVP: 2 EC: B 5 6 PA: M 4 7

Drills rivet or bolt holes in materials, such as metal, wood or plastic, on production basis, following lay-out marks and using portable drill: Punches indentations along lay-out marks to guide drill bit, using center punch and hammer. Fastens specified bit in chuck of drill and drills holes in workpiece. Sharpens drill bits, using electric grinder. Replaces drill bit with reamer, tap, or countersink to enlarge, thread, or countersink holes. Realigns off-center holes in structural members, using drift pins. May bolt members together, using wrench.

8319-198 EYEGLASS-FRAME CUTTER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I 5 6 7 PA: L 4 7

Grooves and shapes eyeglass plastic-frames, using rotary-spindle cutting tool: Places and clamps frame in fixture. Starts machine and guides fixture around rotary cutter to cut groove in frame. Places frame in jig to heat bridge area and presses heated frame over other jig to shape to specified contour. Manipulates bridge area of frame against cutter to shape it to specified angle for fitting nose pads. Selects and changes cutting tool in machine, using hand tools.

8319-202 KEY CUTTER(metal fab., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Cuts notches in key blanks to duplicate notches of original key, using key-duplicating machine: Selects key blank according to size, shape, grooves or code number of original key. Positions original key and blank in vises on carriage of machine and against guides. Turns thumbscrews to secure key and blank in vises. Starts cutting disk of machine. Pushes and pulls

horizontally moving carriage of machine to slide notched edge of original key against stationary guide on machine and to move key blank against cutting disk, duplicating notches of original key in blank. Removes keys from vises, and presses new key against revolving wire wheel to remove burrs. Verifies notches of new key by positioning it against original key.

8319-206 MACHINE SHOP HELPER(mach., weld. & forg.) DPT:684
GED: 2 SVP: 3 EC: I 5 6 PA: M 3 4

Helps machine shop personnel by performing any combination of routine machine shop duties: Helps machine-tool operators lift and position heavy and awkward workpieces and machine accessories onto machines, using chain hoists. Shovels metal chips into separate containers to salvage brass and dispose of ferrous metal. Files burrs from metal parts, such as gears and valves, and washes parts in solvent to remove oil, dirt and metal chips. Lap-fits assemblies, such as ball-and-socket joints and valves, by spreading lapping compound on parts and working mating surfaces of parts together. Reclaims cutting and lubricating oils from machines by pumping oil from machine reservoir into barrel, dumping oil from barrel into centrifugal separator that removes metal chips and dirt from oil and draining clean oil from separator into containers. Moves workpieces from station to station. Sorts pieces of metal stock or finished parts and places them in specified bins or packs parts in boxes. Etches identification numbers on tools, using electric needle. Cleans work areas and empties waste receptacles. See also definition for term title, 02-160 HELPER (any ind.).

8319-210 SMOKING-PIPE-BIT FINISHER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I 6 7 PA: L 4 7

Drills, shaves and smooths mouthpieces of plastic and hard rubber smoking-pipe bits: Positions bit in holding device on drill press. Drills hard rubber or plastic bit to required size. Places bit and fitment into fixture and activates foot pedal that forces fitment into end of bit. Manipulates bit against sander or revolving blade to remove excess material. Sands pipe shank and bit to make even joint. May use holding device to hold bit during smoothing or shaving processes.

8319-214 BUTTON MAKER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 7 PA: L 4 7

Tends battery of machines that cut off non-metallic button blanks, and shape, trim, drill, and decorate faces of blanks, by working as a member of a crew, and performing any combination of the following duties: Positions plastic rod in abrasive-type circular saw and pulls lever to move saw through rod to cut off button blanks. Advances rod manually for each successive cut. Washes and dries blanks in cold water and spin drier or tumbler. Loads button blanks into machine hopper, using hand scoop. Starts automatic machine, by pressing switch, and observes blanks feeding into rotating chucks on mechanism that conveys blanks to cutting tools and drills. Removes jammed blanks from feed chute, using wire pick. Stops machine and notifies repairman in case of malfunction. Empties hopper into larger container when full and repositions hopper under discharge opening of machine. Removes and replaces worn cutters and drills, using wrenches.

8319-299 OTHER METAL MACHINING OCCUPATIONS

This group includes metal-machining occupations, not elsewhere classified, for example, those who set up or operate special types of machine-tools, machine special products or tend automatic-tape-controlled machines. Typical examples of occupational titles covered by this residual group definition are:

Cam Maker(mach., weld. & forg.)
Machining Center Operator, Vertical(mach., weld. & forg.)
Racker and Threading-Machine Feeder, Drill Pipe(mach., weld. & forg.)
Reamer, Hand(mach., weld. & forg.)
Slotter Operator(mach., weld. & forg.)

833-METAL SHAPING AND FORMING OCCUPATIONS, EXCEPT MACHINING

This minor group includes occupations concerned with shaping, forming and joining metal parts or products to specified dimensions by forging, pressing, cutting, bending, punching and shearing, and joining by welding, brazing and soldering. Activities include: measuring, laying out and setting up work and machines; and associated fitting and repairing. Boiler making, erecting and repairing occupations are included in this minor group. These occupations are classified in the following unit groups:

- 8330** Foremen, Metal Shaping and Forming
Occupations, Except Machining
- 8331** Forging Occupations
- 8333** Sheet Metal Workers
- 8334** Metalworking-Machine Operators, n.e.c.
- 8335** Welding and Flame Cutting Occupations
- 8336** Inspecting and Testing Occupations: Metal
Shaping and Forming, Except
Machining
- 8337** Boilermakers, Platers and Structural Metal
Workers
- 8339** Metal Shaping and Forming Occupations,
Except Machining, n.e.c.

**8330-FOREMEN, METAL SHAPING AND FORMING
OCCUPATIONS, EXCEPT MACHINING**

This unit group includes occupations as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in shaping and forming metal parts and products by forging, flame cutting, shearing, rolling, pressing, bending and punching; and joining and repairing metal parts by welding, brazing and soldering.

**8330-110 FOREMAN, BOILERMAKERS, PLATERS AND
STRUCTURAL METAL WORKERS(struct., plate
& ornam. metal) DPT:138**

Supervises and co-ordinates activities of workers engaged in fabricating, assembling, erecting and repairing boilers and pressure vessels; and fabricating and assembling parts in shops for storage tanks, vats, ships and other structures made from steel plates, tubes, beams, castings and similar materials, (Unit Group 8337):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity or fabricating a particular product and be designated accordingly; for example,
Foreman, Boilermaker
Foreman, Boiler-Repair
Foreman, Plate-Shop
Foreman, Structural Steel Shop

**8330-114 FOREMAN, FORGING OCCUPATIONS(mach.,
weld. & forg.) DPT:138**

Supervises and co-ordinates activities of workers engaged in shaping and forming metal parts by hammering, pressing, swaging and drop-forging metal into desired shapes, with or without benefit of heat, (Unit Group 8331):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Forge Shop
Foreman, Hot-Wound Springs
Foreman, Spikemaking

**8330-118 FOREMAN, METALWORKING-MACHINE
OPERATORS, N.E.C.(any ind.) DPT:138**

Supervises and co-ordinates activities of workers engaged in setting up and operating power machines to produce metal parts and products; such as, tinware, furniture, doors, light structural frames and appliance cabinets, usually on a production basis, from sheet-metal, tubing and wire and bar stock, (Unit Group 8334):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly,
Foreman, Forming Rolls

**8330-122 FOREMAN, SHEET-METAL WORKERS(metal
stamp., press. & coat.) DPT:138**

Supervises and co-ordinates activities of workers engaged in making and repairing sheet-metal parts or products; such as, ducts, hoods, vents, louvers, signs and restaurant equipment, (Unit Group 8333):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity or in producing a particular sheet-metal product and be designated accordingly; for example,
Foreman, Coppersmiths
Foreman, Duct Worker

**8330-126 FOREMAN, WELDING AND FLAME CUTTING
OCCUPATIONS(mach., weld. & forg.) DPT:138**

Supervises and co-ordinates activities of workers engaged in joining, surfacing, cutting or otherwise fabricating and repairing ferrous and non-ferrous metal parts and structures, using welding, brazing, soldering, lead burning and cutting equipment, (Unit Group 8335):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Lead Burning
Foreman, Welder
Headwelder, Electric-Welding Pipe Mill

8330-199 OTHER FOREMEN: METAL SHAPING AND FORMING OCCUPATIONS, EXCEPT MACHINING

This group includes foremen, not elsewhere classified, concerned with metal shaping and forming; for example those who supervise and coordinate activities of workers engaged in operating or tending metalworking machines to produce particular products; such as fences, springs and cutting implements; and those who supervise and coordinate activities of workers engaged in inspecting and testing metal shaping, forming and welding except machining. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Fence Making(wire prod.)
Foreman, Metal Shaping and Forming Inspectors(any ind.)
Foreman, Spring Making(metal fab., n.e.c.)

8331-FORGING OCCUPATIONS

This unit group includes occupations concerned with heating metal in a forge or furnace and forming it into desired shapes, using forging-hand tools, or by operating or tending powered-forging machines. Activities also include shaping metal without the benefit of heat.

8331-110 DIE SETTER(mach., weld. & forg.) DPT:380
forging-machine set-up man.
GED: 4 SVP: 7 EC: 1 5 PA: H 3 4 7

Sets up forging machines, such as forging and coining presses, drop hammers, forging rolls and upsetters, using hand tools and measuring instruments:

Selects dies following drawings, work order and data-chart specifications. Positions, aligns and bolts specified dies to ram and anvil of presses and hammers, using hoist and hand tools. Installs impression and gripping dies and synchronizing cams on upsetting machines. Sets and bolts roll dies into self-positioning slots or dogs on roll shafts of forging rolls. Aligns and bolts positioning fixtures and stops, and synchronizes conveyor speed with forging machine action and heating cycle of furnace. Starts machine and inspects sample workpiece to verify conformance of die set-up to specifications. Transports dies from die storage area to machine area, using push cart.

May assist in making and assembling jigs used to fabricate special forged workpieces. May specialize in setting up certain forging machines and be designated accordingly,
Die Setter, Drop-Hammer

8331-114 BLACKSMITH(mach., weld. & forg.) DPT:361
anvilsmith.
GED: 3 SVP: 7 EC: 1 3 5 6 7 PA: H 4 5 7

Forges and repairs variety of metal articles, such as tools, wrought iron fixtures, chains, agricultural implements and structural components:

Heats metal workpiece or stock in forge, using coke, coal, gas or electricity. Hammers, punches or cuts workpiece or metal stock into specified size and shape on anvil, using hammer, tongs, chisels, and measuring instruments. Forge-welds parts by heating, applying flux and hammering together. Devises jigs and fixtures, and forges special hand tools, such as hammers and chisels. Tempers, hardens or anneals forged articles by specified methods of heating and cooling in oil or water bath, or cooling gradually in air. Sharpens tools, using power grinder. Directs helper to hold forming tools or assist in lifting and holding workpiece during hammering.

May shape workpieces, using power hammer. May cut, assemble and weld metal parts, using arc or acetylene-welding equipment. May be designated according to specialty; for example,
Blacksmith, Farm

8331-118 POWER-HAMMER OPERATOR(mach., weld. & forg.) DPT:362
hammersmith; heavy forger.
GED: 3 SVP: 7 EC: 1 3 5 6 7 PA: M 4 5 7

Operates power hammer or press equipped with open dies to forge heated metal stock:

Selects dies following work order diagram or specifications. Aligns and bolts dies into ram and anvil of machine, using scale, square, gauges and hand tools. Observes colour of metal in furnace to determine forging temperature, and pulls metal from furnace. Starts machine, regulates action of hammer or press and directs helper to position and turn metal on anvil of machine. Verifies dimensions of forging, using scale, gauges, templates and calipers.

May forge cold metal. May direct 8331-182 LEVERMAN (mach., weld. & forg.) to control power-hammer blows or ram pressure when forging large workpieces.

8331-122 DROP-HAMMER OPERATOR(mach., weld. & forg.) DPT:362
hammer man.
GED: 3 SVP: 6 EC: 1 3 5 6 7 PA: H 3 4 7

Operates closed-die drop-hammer to forge metal parts:

Selects, aligns and bolts specified dies to ram and anvil of machine, following work order specifications and using scale, rule, square, feelers, shims and hand tools. Sets stops or trims handles to set specified striking force of ram. Heats specified quantity of workpieces in furnace until desired temperature has been reached. Positions workpiece on lower die and presses pedal, causing ram to strike metal repeatedly, forcing it to shape of die impressions. Moves workpiece through series of dies to obtain progressively finer detail. Trims flash from finished forging.

May turn knobs to regulate speed and feed of conveyor that automatically brings heated stock from furnace, places it near anvil, and carries off finished workpiece. May direct helper in manipulating materials under die to flatten, straighten, twist, form, draw, upset, split, cut or punch various shapes. May be designated according to type of hammer operated; for example,
Steam-Hammer Operator

8331-126 VEHICLE-SPRING REPAIRMAN(motor vehicle) DPT:384
GED: 3 SVP: 5 EC: 1 3 5 6 PA: M 3 4 7

Repairs leaf-type springs used in automotive vehicles, using forging and shop equipment:

Raises automobile body, using jack, and removes defective spring using handtools. Separates defective leaves from spring, using wrench, hammer and chisel. Measures broken leaves, using ruler, and obtains replacement leaves from stock or cuts out replacement leaf blanks from steel stock, using flame cutter or power shear, and bevels ends using bench grinder. Drills or punches bolt holes in blanks, using drill or punch press. Places ends of main-leaf blank in furnace to soften ends and shapes ends of blank into eyes, using eye-forming tool. Reheats leaves and arches them to required specifications, using peen hammer. Quenches spring leaves in oil to temper them according to specifications. Places graphite-impregnated lining between leaves to prevent friction. Bolts and clips leaves together and forces bushings into spring eyes, using bushing press. Replaces spring in vehicle.

8331-130 FORGE-MANIPULATOR OPERATOR(mach., weld. & forg.) DPT:663
GED: 3 SVP: 5 EC: 1 3 5 PA: L 4 5 6 7

Operates manipulator machine that moves metal stock from furnace and positions and turns it on anvil of forging press or hammer:

Moves levers and pedals to guide manipulator along floor, on overhead rails or on tracks to furnace. Grasps workpiece with jaws mounted on arm extending from manipulator cab, and conveys it to press or hammer. Moves lever controls of arm to turn and position workpiece on anvil or dies as it is being shaped, following verbal and hand signals of forger. Signals forger or hammer operator to actuate ram when forging is positioned on dies or anvil.

- 8331-134 IMPACT-HAMMER OPERATOR**(mach., weld. & forg.) DPT:682
dual-action-hammer operator.
 GED: 3 SVP: 5 EC: I 3 5 6 7 PA: H 4 7

Operates horizontal- or vertical-impact hammer that strikes metal simultaneously with two opposing rams to forge metal, suspended by fixture between rams:

Aligns and bolts specified dies on rams, using rule, square, shims, feelers and hand tools. Pulls workpiece from furnace, when colour of workpiece indicates forging temperature is reached, and positions and aligns workpiece in fixture, using hoist. Turns handles to regulate striking force, depth of ram stroke and synchronization of rams. Verifies dimensions by measuring forged pieces, using gauges or templates.

- 8331-138 FORGING-PRESS OPERATOR**(mach., weld. & forg.) DPT:682
forging-machine operator.
 GED: 3 SVP: 5 EC: I 3 5 6 7 PA: H 4 7

Operates closed-die power press to produce metal forgings:

Installs, aligns and bolts dies on ram and anvil of press, following work order specifications, and using rule, square, shims, feelers and hand tools. Turns knobs to set pressure and depth of ram stroke. Pulls workpiece from furnace when colour of workpiece indicates forging temperature, and positions workpiece on die, using tongs. Depresses treadle or pulls lever to lower ram that compresses metal to shape of die impressions.

May move workpiece through series of dies to obtain progressively finer detail.

- 8331-142 FORGING-ROLL OPERATOR**(mach., weld. & forg.) DPT:682
roll-forging.
 GED: 3 SVP: 5 EC: I 3 5 6 7 PA: M 4 7

Operates forging roll machine to taper or shape metal bar stock:

Bolts two semi-cylindrical dies on opposing roll shafts of machine, using wrenches. Positions and bolts limit stops on machine, using rule, scale, and hand tools. Pulls workpiece from furnace when colour indicates forging temperature is reached, and places it on work table, using tongs. Pushes workpiece into open segment of dies and depresses pedal to rotate dies that grasp metal in circular grooves and roll it between dies. Moves workpiece through progressively smaller grooves on dies to forge it to specified shape. Verifies dimensions, using gauge or scale.

- 8331-146 SPIKE-MACHINE OPERATOR**(mach., weld. & forg.) DPT:662
 GED: 3 SVP: 5 EC: I 3 5 6 7 PA: M 4 5 7

Operates machine that forges spikes, such as those used for boat and railway tracks, from heated steel rods:

Installs and adjusts shaping head of forging hammer, squeezing dies and stop guides according to specifications, using rule, hand tools and chain hoist. Starts spike machine and signals 8331-210 SPIKE-MACHINE FEEDER (mach., weld. & forg.) to feed heated rod into feed rollers of machine and observes forging operation. Grasps sample spike with tongs, observes shape of head and measures spike with gauge to ensure conformance to specifications. Moves lever or depresses pedal to discharge malformed spikes and waste end of rod into receptacle. Replaces and repairs worn and broken parts of machine and conveyor system.

May adjust temperature controls of furnace in which rods are heated.

- 8331-150 BULLET-SWAGING-MACHINE ADJUSTER**(mach., weld. & forg.) DPT:380
swage-tool setter, bullet.
 GED: 3 SVP: 4 EC: I 5 PA: M 3 4 7

Sets up automatic swaging machines that press lead slugs into bullet shapes:

Positions and aligns forming die and punch in machine. Changes length and rate of punch and adjusts automatic feed and ejection mechanisms, using hand tools and gauges. Starts machine to obtain sample of lead bullet to verify machine setup. Examines finished

product for visible defects, such as malformed nose or heel, nicks and scratches. Verifies profile and dimensions, using fixed gauges. Weighs samples on balance scale to ensure conformance to weight specifications. Polishes die by hand, using emery cloth. Lubricates machines, using oil can. Prepares soapy-water solution used in lubricating system, using water, oil and chemical ingredients.

- 8331-154 BOLT-MACHINE OPERATOR, AUTOMATIC**(wire prod.) DPT:682
 GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates one or more automatic machines to shear, head, trim, point and roll-thread bolts from wire stock or rods:

Installs specified dies in machine, using wrenches, rule and gauges. Places wire coil on reel, using hoist, or inserts ends of rods into machine. Threads end of wire through straightening rolls and against stop in machine. Starts machine to make sample bolt. Measures sample with gauges and adjusts dies to obtain specified dimensions.

May adjust and operate machine to reduce shanks of forged bolt blanks preparatory to thread rolling and to trim excess metal from bolt- blank heads.

- 8331-158 BUCKSHOT-SWAGE OPERATOR**(mach., weld. & forg.) DPT:682
 GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates several machines to press lead slugs into buckshot for shotgun ammunition:

Removes and replaces dies, punches and die blocks and adjusts knockout pins, feed fingers and stops, using hand tools. Fills hoppers with lead slugs from tote box, using scoop. Starts machines, and observes operation. Measures diameters of swaged shot samples, using shot gauge, and weighs them on balance scale to determine conformance to specifications. Rolls shot under dial micrometer to verify roundness. Turns bolts, setscrews and stop nuts to adjust position of punches and dies, by trial and error, to produce specified shot.

- 8331-162 HEADER-MACHINE OPERATOR**(mach., weld. & forg.) DPT:682
 GED: 3 SVP: 4 EC: I 3 5 6 7 PA: H 4 7

Operates header-machine to produce items, such as bolts and rivets by bending, offsetting, or heading metal rod or wire stock:

Installs cut-off tool and dies in machine and adjusts cams, guides, and stops, using rule, micrometer and hand tools. Pulls stock from furnace when colour of metal indicates forging temperature, using tongs. Inserts end of stock in automatic feeding mechanism and starts machine. Verifies conformance of part to specifications, using micrometer and set gauges. Positions metal stock against stop or die and depresses pedal to produce single pieces.

May forge objects from unheated metal stock. May operate machine equipped with dies to slot or slit bolt ends. May be designated according to product forged or type of forging machine operated; for example,

Bolt-Header Operator
 Cold-Header Operator

- 8331-166 NUT FORMER**(mach., weld. & forg.) DPT:682
 GED: 3 SVP: 4 EC: I 5 PA: M 4

Operates one or more automatic machines that shear, form and punch nut blanks from hot or cold metal bar or coiled stock:

Installs punching and shearing dies in machine, using wrenches, rule, hammer and gauges. Threads end of coiled stock from feeder reel through straightening rolls and against stop in machine, or aligns bar stock between dies by hand, or using tongs. Starts machine and observes feeding operation, or feeds bar stock against dies. Measures nut blanks with gauges, and adjusts dies to maintain specified dimensions.

May regulate electric induction or gas furnace to heat stock.

8331-170 UPSETTING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
upsetter.
GED: 3 SVP: 4 EC: 1 3 5 6 7 PA: H 4 7

Operates closed-die forging machine equipped with horizontal ram and gripping die to expand ends of hot metal bar stock: Aligns and bolts specified dies and cams in machine, using rule, square and wrenches. Pulls stock from furnace when colour indicates forging temperature is reached, and inserts stock in gripping die against stop gauge, using tongs or hoist. Presses pedal to close gripping die on stock and to advance ram, squeezing end of metal into gripping die cavity. Moves workpiece through series of dies to shape stock progressively to specifications. Verifies dimensions of forged piece, using set gauges. May work with cold metal.

8331-174 HEADER OPERATOR, STEEL SHOT(mach., weld. & forg.) DPT:682
GED: 3 SVP: 3 EC: 1 5 PA: M 4 7

Operates battery of machines that forge pellets for air rifles from coils of steel wire: Aligns die halves that form ball on end of wire, using hand tools. Turns setscrews and stop nuts to adjust and synchronize cut-off tool, ram stroke and feeder arm. Threads wire through straightening rollers and feeding mechanism into ram head. Starts machine by pressing switch, and observes operation to detect malfunction. Measures shot for correct size, using micrometer. Sharpens and shapes cut-off tool, using bench grinder.

8331-178 LEAF-SPRING MAKER(metal fab., n.e.c.) DPT:684
spring former.
GED: 3 SVP: 3 EC: 1 3 5 6 7 PA: M 4 7

Makes spring leaves for automotive leaf springs by performing any combination of the following duties, as member of team: Cuts spring-leaf blanks to length from bar stock and punches center-holes in all leaf blanks, using power shear and punch press. Feeds leaf blanks manually onto conveyor of automatic furnace for heating end of blank. Lifts leaf blank from furnace and positions hot end in continuously-operating press to taper ends of leaf and punch holes in ends of specified leaves. Heats ends of main-spring leaf in furnace and turns eye on ends of leaf, using forging press. Arranges spring leaves in sets and places in lower die, using tongs. Depresses pedal or pulls lever to force dies together, forming curved set of spring leaves, and quenches them automatically in oil for cooling and tempering. May install upper and lower dies in forming machine, using hand tools. May heat leaf blanks in furnace and form them by hand. May salvage and reshape defective spring leaves, using furnace and power hammer.

8331-182 LEVERMAN(mach., weld. & forg.) DPT:685
GED: 2 SVP: 4 EC: 1 3 5 6 PA: M 4 7

Tends power hammer or power press to forge metal stock: Moves levers upon signal from 8331-118 POWER-HAMMER OPERATOR (mach., weld. & forg.) to control force and frequency of hammer blows or ram pressure to shape forging. Lubricates and greases piston rod and moving parts, using oil can and grease gun. May assist other crew members loading, unloading and positioning materials, manually or using hoists. May clean scale from lower die, using air blast, and shovel refuse into receptacle.

8331-186 COILER, HOT-WOUND SPRINGS(metal fab., n.e.c.) DPT:682
GED: 2 SVP: 3 EC: 1 3 6 PA: H 4 7

Operates machine to wind heavy coil springs from hot-steel bars: Installs mandrel, lead screw and dies in machine to suit stock diameter, spring diameter, length and pitch, using hand tools. Positions leading end of hot bar under clamp, using tongs. Depresses foot pedal to clamp end of bar and start winding cycle. Grips other end of spring and guides end through dies to prevent twisting, using tongs. May direct activities of helpers when winding heavy and long bars.

8331-190 BULLET CUTTER AND FORMER(mach., weld. & forg.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 3 4 7

Tends automatic machines that cut lead wire into slugs and swages them into bullet shapes for small arms ammunition: Positions drum of lead wire on machine and threads wire over pulleys and through guides and pull-rollers to cutter. Turns setscrew and bolts, using screwdriver and wrench, to adjust stroke of cut-off knife and change length of slugs. Starts cut-off machine and observes operation for malfunction. Empties and replaces catch boxes for slugs. Loads hopper of swaging machine with cylindrical lead slugs. Presses switch to start machine and observes feeding, forming and ejecting mechanisms to detect malfunctions. Notifies adjuster when malfunctions occur. Examines finished bullet for malformation and scratches. Verifies weight, shape and dimensions of finished bullet, using balance scale and fixed gauges. Mixes oil and kerosene in prescribed proportion and fills machine wells to lubricate lead wire or slugs. Lifts and stacks tote boxes of swaged bullets onto pallet. May make minor machine adjustments, such as replacing worn dies, using hand tools. May tend tumbling machine that smooths edges and cleans slugs.

8331-194 FORGING-PRESS TENDER(mach., weld. & forg.) DPT:685

forge driver
GED: 2 SVP: 3 EC: 1 3 5 PA: M 4 7

Tends closed-die power press that produces metal forgings: Ensures that furnace is loaded and set at proper temperature. Pulls workpiece from furnace when colour indicates forging temperature is reached, and positions it on lower die, using tongs. Moves controls to lower ram that compresses metal to shape of die impressions. Moves workpiece through series of dies to progressively shape workpiece, using tongs. Operates control to cause lifters to raise finished piece from die. May prepare press for operation and do minor maintenance, such as lubrication or repacking cylinder glands. May keep daily production record.

8331-198 FORGE HELPER(mach., weld. & forg.) DPT:686
blacksmith helper.
GED: 2 SVP: 3 EC: 1 3 5 6 PA: H 3 4 7

Helps to forge metal products performing any combination of the following duties: Obtains equipment, such as stop-blocks and hammer-dies from tool room. Cuts metal to predetermined size, using saw. Loads bars, billets or blooms into furnace, using hoist. Lights furnace and turns control valves to regulate temperature in furnace. Lifts parts from furnace with tongs and places them on anvil or under power hammer. Lifts and bolts dies in place on machine, using hoist and wrenches. Strikes parts positioned over forming dies set in anvil, using sledge. Transfers workpiece to and from work stations, such as furnace, hammer and trim press, or yard, using tongs, hoist or cart. Removes scale from workpiece and dies, using broom, air hose, file, hammer and chisel. Grinds surface of finished parts, using portable or stationary power grinders. Loads racks and offbears conveyors, manually or using cart. Cleans and lubricates machines. Sorts metal scrap for reprocessing. Removes ashes from forge, using brush, shovel and bucket. See also definition for term title, 02-160 HELPER (any ind.). May be designated according to worker assisted or task performed; for example, Drop-Hammer Helper, Striker, Upsetter Helper.

8331-202 POWER-HAMMER-OPERATOR HELPER(mach., weld. & forg.) DPT:687
GED: 2 SVP: 3 EC: 1 3 5 6 PA: H 4 6 7

Helps to forge heated metal workpieces on power hammer or press equipped with open dies: Pulls workpiece from furnace with tongs and positions and turns it on hammer anvil, as directed. Removes scale from metal and anvil during forging, using compressed air or broom. See also definition for term title, 02-160 HELPER (any ind.). May assist in forging unheated metal.

8331-206 NAIL-MAKING-MACHINE TENDER(wire prod.)
DPT:685

GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends automatic machines, to cut and shape wire into nails of specified size:

Transfers coils of wire from storage area to machine by hand or using hand truck. Mounts coil of wire on rod of nail-making machine, manually or using hoist. Threads wire through straightening rollers and feeding mechanism into slots of die plates. Tightens roller bolts or guides to regulate feed of wire, using wrench. Pushes button to start machine. Visually inspects nails for flaws, such as chips or distortions. Measures sample nails, using split gauge or micrometer, and notifies set-up man of deviations from specifications. Removes filled tote pans from discharge point of machine and dumps nails in storage containers.

May record production data.

8331-210 SPIKE-MACHINE FEEDER(mach., weld. & forg.)
DPT:666

GED: 2 SVP: 2 EC: I 3 5 6 7 PA: M 4 5 7

Feeds heated steel rods into machine that forges spikes:

Signals other worker to push end of heated rod through open end of furnace. Grasps rod with tongs and shoves it onto feed rollers of machine. Observes colour of rods and notifies 8331-146 SPIKE-MACHINE OPERATOR (mach., weld. & forg.) if colour of rod is not at forging temperature. Assists machine operator in installing dies, adjusting guide stops and maintaining machine, using hand tools.

8333-SHEET-METAL WORKERS

This unit group includes occupations concerned with making and repairing sheet-metal parts or products; such as, rain gutters, ducts, hoods, flashings, signs, and components for restaurant and transport equipment, usually on a custom basis. Activities include: draughting patterns; laying out templates; and measuring, cutting, shaping, bending, soldering, brazing, riveting and crimping sheet copper, steel, aluminum, galvanized iron, tinplate or other sheet-metal stock, using metal-forming hand tools and manually-operated machines, such as benders, shears and rollers. Metalworking-machine operators working on a production basis and using power-operated metalworking machines are classified in Unit Group 8334, METALWORKING-MACHINE OPERATORS, N.E.C. Sheet-metal roofers are classified in Unit Group 8787, ROOFING, WATERPROOFING AND RELATED OCCUPATIONS.

8333-110 MODEL MAKER, HEATING APPARATUS(metal fab., n.e.c.)
DPT:261

GED: 4 SVP: 8 EC: I PA: M 3 4 7

Designs, fabricates, fits and assembles components to make models of heating-apparatus products; such as, oil or gas furnaces, radiators, fans and ventilators:

Examines drawings to determine feasibility of fabricating new products, utilizing knowledge and experience of existing facilities. Makes sketches and drawings when designing components for model by applying knowledge of heating apparatus and experience with sheet metal. Lays out, marks and cuts components, using metalworking hand and power tools. Fits and assembles parts into finished model, using hand and power tools. Presents finished model to company executives, discusses feasibility of production, proposed production schedules and cost estimates.

8333-114 COPPERSMITH(metal. stamp., press. & coat.)
DPT:281

GED: 4 SVP: 8 EC: I 5 6 PA: H 2 3 4 7

Lays out, cuts, bends, shapes and joins pipe sections, pipe fittings, tanks, vats and other parts from tubular and sheet copper, brass and other non-ferrous metals:

Lays out full-scale-floor drawings or makes templates following

drawings of pipe assemblies. Builds framework on bending slab to use as guide for bending, shaping and joining assemblies. Cuts pipe, using hand tools or shop machinery, and packs it with sand, rosin or other material to prevent flattening during bending. Heats pipe with torch to soften metal, and bends pipe, allowing for stretch at outside radius and compression at inside radius, using pipe-bending machines, or bends pipe by hand. Solders or brazes flanges on ends of pipe. Flares or bells pipe mouths, using belling and flaring tools and mallet. Bends tubing to form coils for equipment such as heaters or evaporators. Lays out patterns and templates on sheet stock, using knowledge of geometry. Bends, hammers, bumps, razes and planishes sheet stock to fabricate, such parts as expansion joints, tanks, heads, cowls and air chambers, using hand tools, gas torches, and shop machinery, such as forming press and shears. Sweats, rivets, solders or brazes seams to obtain finished part. Coats parts by dipping them in mixture of molten tin and lead to prevent erosion, galvanic and electrolytic action. Conducts hydrostatic tests to detect leaks in fabricated pipe, boilers or vats. Installs copper piping aboard ship.

8333-118 SHEET-METAL WORKER(construction; metal stamp., press. & coat.)
DPT:281

sheet-metal mechanic.

GED: 4 SVP: 7 EC: I 5 6 PA: M 2 3 4 7

Fabricates, assembles, installs and repairs sheet-metal items; such as, drainpipes, ventilator shafts, furnace casings, eaves-troughs and metal partitions:

Locates and marks dimensions and reference lines on metal stock using scribe, rule and square according to characteristics of metal, word- order specifications or patterns. Sets up, and operates machines; such as, shears, brakes, punches, and drill presses to cut, bend, punch, drill and straighten metal stock. Cuts metal shapes, using hand shears or metal saws. Shapes metal over anvils, blocks or forms, using hammer. Joins metal parts together, using welding or soldering equipment. Smooths seams, joints or burred surfaces, using hand files or portable grinders and buffers. Installs sheet-metal products; such as, ventilating shafts, air and heat ducts, metal partition frames and furnace casings in buildings, using tinsnips, pliers, hammers, screwdrivers and metal saws. Inspects assembled components or installations, using measuring instruments such as calipers, scales, tape rules and micrometers, to ensure conformance to specifications. Keeps production records showing job number and time spent on job.

May be designated according to type of metal used or according to type of activity; for example,

Model Maker, Sheet-Metal
Sheet-Metal Installer
Sheet-Metal Worker, Maintenance
Tinsmith

8333-122 MODEL MAKER, FLUORESCENT LIGHTING
(metal stamp., press. & coat.) DPT:481

GED: 4 SVP: 7 EC: I PA: L 4 7

Lays out and makes experimental models of fluorescent lighting fixtures, such as those used in buildings and tunnels:

Studies drawings, designs and engineering sketches to plan shapes for model fixtures. Computes dimensions and lays out outline of fixture on sheet metal, using rule, scribe, and drafting tools. Cuts and shapes metal, using hand and power brakes, shears, punching and notching machines, files and mallets. Assembles fixtures, using resistance spot-welding machine and hand tools. Fastens glass or plastic lens in place with clips, bolts or screws. Records dimensions, bending angles, hole locations and other specifications for use in production of fixture.

8333-126 MODEL MAKER, METAL FURNITURE(metal stamp., press. & coat.)
DPT:381

GED: 4 SVP: 6 EC: I PA: M 4 7

Cuts, forms and assembles models of metal furniture according to specifications, using hand tools and power tools:

Lays out and marks metal, according to drawings or templates, using scale, straight edge, center punch and scribe. Cuts and forms metal parts, following lay-out lines and using hand tools, and machines; such as, snips, bench shears, drill press, bender, power saw and portable grinder. Fits and assembles parts to produce desired model. Joins parts, using screw-driver, wrench or spot welder.

May use gas-welding torch or electric-arc welder to join heavy parts. May alter design of finished model according to revised specifications.

8333-130 SHEET-METAL LAYOUT-MAN

(metal stamp., press. & coat.) DPT:381
GED: 4 SVP: 6 EC: 1 PA: M 3 4 7

Lays out reference points and dimensions on sheet metal for shaping and forming sheet metal into parts or products:

Plans and develops layouts as indicated on drawings and templates, applying knowledge of trigonometry, product design, effects of heat, and allowance for curvature and thickness of metal. Details location and sequence of cutting, drilling, bending, rolling, punching and fastening operations, using instruments; such as, square, compass, protractor, dividers, steel tape and rule. Marks curves, lines, holes, dimensions and fastening symbols on workpiece, using scriber, straightedge, soapstone and center punch.

May make and assemble sheet-metal parts to evaluate accuracy of layout.

8333-134 SHEET-METAL CUT-OUT MAN(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: 1 5 PA: M 4 7

Marks and cuts sheet-metal for wind musical instruments, using templates, power and hand tools:

Determines placing of templates on sheet-metal to obtain minimum of waste. Positions template on sheet metal and marks cutting and forming lines on metal, following templates and using scriber. Cuts metal along lines, using hand shears, power shears and electric knife. Stamps identification number on workpiece according to work order, using metal stamps and hammer.

8333-138 SHEET-METAL FINISHER(metal stamp., press. & coat.) DPT:684
GED: 2 SVP: 4 EC: 1 5 PA: M 3 4 7

Repairs surface defects, such as dents, buckles and scratches on sheet-metal parts of such products as transport equipment and appliance cabinets, using dolly blocks, special hammers, burnishing tools and abrasives:

Examines and feels surface of workpiece to determine extent of defect and method of repair. Removes surface defects from workpiece, using one of the following methods: 1. Holds dolly block of correct contour against defect and hammers opposite side to smooth and straighten surface. Smooths repaired area with power sander and abrasive paper. Removes slight defects with file. 2. Burnishes workpiece by lubricating area with oil or grease, rubbing burnishing spoon over metal surface to remove scratches, and tapping out dents with hammer. Polishes surfaces by hand or with power polisher and abrasives. Polishes faces of dolly blocks and hammers to prevent marring of workpiece.

May fill in hollows and cracks with solder or body filler, and sand or file to original shape. May brush-finish or polish metal surfaces not to be painted, such as aluminum or stainless steel, using abrasive or buffing belts and disks. May be concerned with burnishing or removing dents from sheet-metal parts and be designated accordingly; for example, Burnisher and Bumper Dingman

8333-142 CUTTER, ALUMINUM SHEET(ship & boat bldg.) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: M 3 4 7

Cuts aluminum sheets to specified shape for boat hulls and deck sections, using portable saw:

Selects sheets of aluminum of proper thickness, according to work order and using micrometer. Stacks sheets of aluminum on cutting table and places pattern on top sheet. Outlines pattern on sheet, using scriber. Guides saw around outline to cut out hull or deck sections. Drills holes along edges of cut-out parts at specified locations, using portable electric drill, to facilitate attachment of parts or other sections.

8334-METALWORKING-MACHINE OPERATORS, N.E.C.

This unit group includes occupations concerned with setting up, operating and tending power machines to produce metal parts or products, such as tinware, furniture, doors, light structural frames and appliance cabinets, usually on a production basis, from sheet-metal, tubing, wire or bar stock. Activities include: pressing, bending, rolling, punching, cutting and shearing by the application of machine pressure. Occupations concerned with shaping of heavy gauge metal for structural purposes are classified in Unit Group 8337, BOILERMAKERS, PLATERS AND STRUCTURAL METAL WORKERS.

Metalworking-Machine Setting-Up Occupations, n.e.c.
8334-110 through 8334-158

8334-110 SLIDE-FORMING-MACHINE SET-UP MAN(metal stamp., press. & coat.) DPT:380
four-slide-machine set-up man.
GED: 4 SVP: 7 EC: 1 PA: M 3 4 7

Sets up multiple-operation slide-forming machines that automatically punch, cut and bend metal strips, bars, rods or wire to fabricate parts, such as flat-coil springs, terminal clips, brackets and hairpins as specified by drawings and set-up charts:

Selects cams and ram slide, and computes feed length position of cams and dies, by applying knowledge of geometry. Aligns and bolts cams to shaft, slides to machine bed, and progressive dies to stationary shoes and cam actuated slides, using micrometers, gauges, feelers, rule and hand tools. Adjusts position of cams to synchronize action of rams, cutters and feed rolls that feed stock. Turns flywheel by hand to produce sample part. Readjusts position of dies and cams to achieve specified shape and dimensions.

8334-114 METALWORKING-MACHINE SET-UP MAN(metal stamp., press. & coat.) DPT:360
die setter; job setter; machine setter.
GED: 4 SVP: 6 EC: 1 5 PA: M 4 5 7

Sets up various types of metal forming, shaping and cutting machines, such as brakes, shears, slitters, punch presses and bending and straightening machines to cut, trim, bend, roll, punch, and straighten metal sheet, plate or bar stock as specified by work order or drawings: Positions, aligns and secures dies, blades, guides, stops, jigs and fixtures, using measuring tools and hand tools. Adjusts machines for depth and pressure of stroke, applying knowledge of thickness and properties of metal, or according to standard specifications. Makes trial run and measures sample workpiece for conformance with specifications. Instructs operators in special handling techniques of machines and materials. Clears jams and corrects malfunctions of machines. Reports need for machine repairs to supervisor.

May set up automatic or multipurpose machines or those equipped with progressive dies. May specialize in setup of single type of machine and be designated accordingly; for example, Brake Set-Up Man Punch-Press Set-Up Man Roll-Forming-Machine Set-Up Man Shear Set-Up Man

8334-118 BRAKE SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
power-brake operator; press-brake operator.
GED: 4 SVP: 6 EC: 1 5 6 PA: M 3 4 7

Sets up and operates power brake to bend, straighten, notch, punch or form rolls or arcs in metal sheets, plates and structural shapes to specifications:

Reads work order and drawings for specifications. Develops layout and sequence for type of operation, applying knowledge of geometry, effects of heat, and physical properties of metal. Selects, inserts, aligns and clamps dies in machine ram and bed, using shims, rule, square, templates and wrenches. Sets specified pressure of ram and clearance

between dies according to thickness of metal, as indicated by calibrated scale and feeler gauge. Positions stops and guides, using scale and wrench. Lays out dimensions on workpiece from drawings or templates. Positions and aligns workpiece manually or signals and guides crane operator to position workpiece. Installs punches or blades in machine to perform notching, punching or shearing operations as required. Starts machine to lower ram that bends, punches, or cuts metal. Measures first-run workpieces with scale and square and adjusts brake as necessary. Adjusts stops on machine bed and repositions stock to run successive pieces, or to perform multiple operations. May devise and build temporary dies. May operate apron brake which bends metal by forcing it between movable apron and horizontal bending bar. May set up several sets of dies and stops and reposition workpiece to perform successive operations from single setup. May preheat heavy-metal workpieces, using oxygen-acetylene torch or heating furnace.

8334-122 FORMING-ROLL SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
GED: 4 SVP: 6 EC: 1 5 PA: H 4 7

Sets up and operates forming-roll to flare, straighten, knurl or form contours in previously curved surfaces of metal workpieces as specified by drawings, templates and work orders: Selects male and female forming wheels, specified on data charts to form specified contour. Positions, aligns and bolts forming wheels onto parallel spindles of machine. Positions cylindrical workpiece over inner dies or forming chuck. Moves lever to press outer roll on workpiece to rotate it between forming wheels and shape it to specified contour. Verifies contours, using rule or template. Operates machine equipped with jointed shaft or vertical table to tilt and force workpiece at angle to plane of opposing rolls to expand outer edge or form flanges to specified shape. Operates machine equipped with multiple sets of opposing rolls which expand and shrink diameter of workpiece to form contours. Preheats heavy gauge metal workpieces in furnace or with hand torch. Repeats rolling operation or changes forming wheels to shape workpiece progressively with each pass.

8334-126 STRAIGHT-LINE-PRESS SET-UP MAN(metal stamp., press. & coat.) DPT:360
GED: 3 SVP: 6 EC: 1 5 PA: M 4 5 7

Sets up machines to draw and trim brass or steel bullet-jackets and assemble jacketed bullets for small arms cartridges: Installs punches and dies, feed pipes, hoppers, guides, pins and bushings to accommodate size of bullets to be processed, using hand tools. Adjusts automatic feeding, transporting, pressing and ejecting mechanisms and microswitches by turning set screws and stop nuts. Installs cutters and adjusts stops and cams to regulate machine stroke and synchronize movements of trimming mechanisms, using mechanics' hand tools. Operates machine and examines bullet jackets for defects, such as dents, scratches or malformation and verifies conformance to specified dimensions, using gauges. Operates speed lathe and bench grinder to reshape or polish punches and dies. Removes housings, guards, feed tubes, chutes, tool holders and other parts to replace worn or broken machine parts, such as springs, pins, die bolts and washers. Gives instruction to new workers in machine operation and use of gauges.

8334-130 SHEET-METAL-WORKING-MACHINE SET-UP OPERATOR (metal stamp., press. & coat.) DPT:380
GED: 3 SVP: 6 EC: 1 5 6 PA: M 3 4 7

Sets up and operates various types of metalworking machines; such as automatic or multipurpose brakes, rolls, shears, rivetting or spot-welding machines to form, slit, rivet, spot-weld, burr, trim, bead, groove, crimp, bend, roll and shear sheet metal: Positions and fastens dies, blades, cutters and fixtures into machine, using rule, square, shims, template and hand tools. Positions and clamps guides on machine. Adjusts pressure and depth of ram stroke, rolls and speed of machine. Locates and marks bending and cutting lines and reference points on workpiece, using rule, square, compass and straightedge. Positions workpiece manually against stops and guides or aligns marks with dies or cutting blades and starts machine. Repositions workpiece and changes dies for multiple or successive operations. Inspects work, using rule, gauges and templates. May operate drill presses.

8334-134 SLIDE-FORMING-MACHINE SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
four-slide-machine operator.
GED: 3 SVP: 6 EC: 1 5 PA: M 4 7

Sets up and operates one or more slide-forming machines that automatically punch, cut, bend and form metal strips, bars, rods and wire by action of opposing rams to fabricate parts, such as flat coil springs, brackets, clips and other wire forms: Aligns and bolts appropriate cams to shaft, slides to bed and dies to slides and stationary shoes, using calipers, block gauges, micrometers and wrenches. Adjusts position of cams to synchronize action of dies, cutters and feed of machine. Places rolls or coils of stock onto reel stand and threads end through straightening and drive rolls. Turns flywheel by hand to ensure that synchronization and clearances are correct and to produce sample part. Starts machine, observes operation and tightens nuts and setscrews to maintain setup. Verifies finished parts, visually and by using gauges and micrometers. Removes trays of finished parts, when specified number have been produced.

8334-138 NAIL-MAKING-MACHINE SET-UP OPERATOR(wire prod.) DPT:380
GED: 3 SVP: 5 EC: 1 5 6 PA: M 3 4

Sets up and operates battery of machines that automatically cut and shape coiled wire to make nails of specified sizes: Installs die plates and nail-point cutting knives and positions feeding mechanism, according to work order specifications, using hand tools. Mounts coil of wire on rod, and threads wire through straightening rollers and feeding mechanism, and into slots of die plates. Tightens roller bolts to secure wire, using wrench. Turns flywheel to make sample nail. Measures nail with split gauge or micrometer, and inspects it for flaws, such as chips and distortions. Starts machine and observes operation to ensure product meets specifications. Replaces worn or broken machine parts, using hand tools. Lubricates moving parts of machines, using lubricating equipment. May make staples and be designated accordingly, Staple-Machine Set-Up Operator

8334-142 POWER-PRESS SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
GED: 3 SVP: 5 EC: 1 5 6 PA: H 4 7

Sets up and operates power press (other than forging press or steel plate bending machine) to trim, punch, notch, or otherwise shape metal stock between dies: Reads work order, drawings or sketches for job specifications. Installs and aligns dies in press according to specifications, using feelers, shims, templates, bolts, clamps and wrenches. Adjusts length of ram stroke specified for particular die and gauge of metal. Turns knobs or installs gears on automatic machines to synchronize action of feed bar or pinch rollers, with feed and takeoff conveyor and automatic action of ram. Positions and clamps feed guides. Positions workpiece against fixtures, or stops, on machine bed or die, or threads metal strip from play-out reel through pinch rollers. Starts press. Inspects finished workpieces for conformance to specifications visually or with gauges or templates. May be designated according to type of machine or purpose of machine; for example, Draw-Press Operator Forming-Press Operator Multiple-Punch-Press Operator

8334-146 BENDING-MACHINE SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
GED: 3 SVP: 5 EC: 1 5 PA: M 4

Sets up and operates bending machine to bend metal structural shapes, such as bars, rods, angles, pipes and tubes, to angle or configuration specified by work order, drawings, templates or layouts: Selects and bolts holding clamps, die block and guide clamps to machine. Positions and clamps end-stops on machine to set specified location of bend. Inserts or screws plug stops or dies into guide wheel to set specified degree of bend. Positions workpiece against end-stop. Locks holding clamp and guide clamp onto workpiece. Lubricates workpiece with oil. Starts turntable that draws workpiece through guide clamp around die block until stopped by plug stops or until dial indicator points to specified degree of bend. May slide mandrel into tubing instead of using guide clamp. May

preheat workpiece, using hand torch or heating furnace. May fill tubes or pipe with sand, resin or lead to prevent wrinkling or collapsing. May cut metal stock to length, using power shears or saws. May be designated according to type of stock bent; for example,
Pipe-Bending-Machine Operator
Rod-Bending-Machine Operator
Tube-Bending-Machine Operator

8334-150 INDUSTRIAL-NEEDLE-MACHINE SETTER-OPERATOR(misc. prod. fab., n.e.c.) DPT:380
industrial-needle maker.
GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Sets up and operates a variety of semi-automatic or automatic metalworking machines that form industrial knitting and barbed (felting) needles, performing any combination of the following duties: Selects, installs and adjusts dies, punches, bushings, stops and other mechanisms, using micrometers, magnifying glass and hand tools. Adjusts timing, lubrication, gas jet, rheostat and feeding mechanisms to specifications. Starts machines to produce sample workpieces and adjusts machines to obtain workpieces which meet specifications. Operates one or a variety of machines that process steel wire into industrial knitting needles by shearing, swaging, annealing, milling, pressing, stamping, drilling, punching, riveting and abrading. Measures samples against standards, using measuring instruments. Repairs and services machines. Records production data. May direct machine feeders on production requirements.

8334-154 MULTI-OPERATION-FORMING-MACHINE SET-UP OPERATOR(metal stamp., press. & coat.) DPT:380
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Sets up and operates automatic multiple-operation machine to perform any combination of bending, punching, roll forming, beading, cutting, welding, soldering or clinching of metal to fabricate items such as rims, mouldings, cans, tubing and housings specified by drawings or work orders:
Positions and aligns feeding and forming rolls, punching, notching or forming dies, shears or cutter blades and electrodes, using rules, vernier gauges, micrometers, square, shims and hand tools. Sets side guides and stops. Turns knobs to regulate resistance welder and synchronize speed of feed rolls and conveyor with action of roller dies, forming rolls, punch, rotary cutter or shear rams and welding unit. Places roll of sheet or strip metal or wire onto feed rack, using hoist, and threads end into feed rolls or places metal blanks or bars onto conveyor, into hopper or against guides to feed machine. Starts machine. Verifies dimensions of finished product visually or using micrometers or gauges. Removes finished parts from machine. May operate a line of machines working in tandem on assembly line. May be designated according to function of machine; for example,
Can-Forming-Machine Operator
Tube-Mill Setter-Operator

8334-158 SPRING-MAKING-MACHINE SET-UP OPERATOR (metal fab., n.e.c.; wire prod.) DPT:380
GED: 3 SVP: 5 EC: I PA: L 4

Sets up and operates machines to wind, shape and finish tension, compression and torsion coiled springs, flat springs and wire forms to specifications:
Selects and installs attachments, such as arbor, pitch tool and cutter on machine, using hand tools. Lifts roll of wire stock onto holding device, threads wire through machine guides and adjusts machine to control pitch and diameters of springs. Makes trial run and measures sample product for conformance to specifications, using gauges and micrometers. Verifies action of spring under load. Readjusts machine setup until accurate production is attained. Recommends changes in spring specifications, in machine setup and procedures to make product. Positions coiled springs on jig press and depresses pedal to lower shaping die that stamps, crimps, hooks or loops end of wound springs or wire forms. Finishes ends of springs by pressing them against abrasive wheel to remove burrs and flatten and square spring ends.
May drill and tap holes in flat springs, using single-spindle drill press. May use hand tools, vise and forming plates to crimp and true springs, and bend loops and hooks on spring ends.

Metalworking-Machine Operating Occupations, n.e.c.
8334-178 through 8334-270

8334-178 DISK-FLANGING OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 5 EC: I 5 PA: H 3 4 7

Operates machine to form flanges on metal disks and dished heads: Selects and fastens fixture onto free moving ram and powered turntable. Positions workpiece onto block or fixture on turntable, using hoist, sledge and steel tape. Clamps workpiece onto turntable, by pulling lever to lower ram on workpiece. Selects rollers and bolts them to spindles of machine with edge of workpiece between rollers. Turns handwheel to adjust rollers to thickness and curvature of metal and to exert bending pressure. Starts machine which rotates edge of workpiece through rollers. Re-adjusts curvature and bending pressure to form specified flange on workpiece. Verifies shape of flange, using template.

8334-182 DUPLICATOR-PUNCH OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates duplicator-punch, that follows tracer track on template, to punch, blank and notch metal plates, sheets and structural shapes: Positions and clamps track template onto table of machine. Inserts, aligns and locks specified punches and dies in ram and bed of machine, using hammer, shims, feelers, micrometers and setscrews. Places workpiece on carriage of machine manually or with jib or crane. Aligns workpiece to scale on machine and clamps it to carriage. Sets end and side stops to position successive pieces. Positions tracer arm one track of template and turns handwheels to move carriage along track to punching stations. Pulls lever or presses foot pedal to activate punch. Positions punch or die over lay-out marks on jobs for which no template is available. Inspects workpieces to verify location of holes, using scale, compass and plug gauges.

8334-186 SPINNER, METAL(metal stamp., press. & coat.) DPT:382
sheet-metal spinner; spinning-lathe operator.
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates spinning lathe equipped with manually or hydraulically controlled forming tools to spin (form) shaped articles from sheet or plate metal, following drawings and knowledge of physical properties of metal:
Secures specified spinning chuck to headstock spindle and follow block to tailstock, using hand tools. Clamps metal disk (workpiece) to chuck by turning handwheel to force follow block against disk. Starts machine, ensures that disk is centered and spinning without eccentricity, and coats outside of rotating disk with spinning compound. Positions, holds and moves long-handled-lever tool against disk, using steady rest or steel pin in tool rest as fulcrum point to apply required pressure to form disk into shape of spinning chuck, or operates hydraulic control to set pressure applied to disk. Varies amount and location of pressure on disk according to type of metal, shape of spinning chuck, speed of lathe and temperature and thickness of metal disk. Resets position of forming tool or changes chuck to form disk into shape. Replaces forming tool with cutting tool to trim excess metal from shaped part. Verifies dimensions of finished article with verniers, steel rule and diameter tape.
May form wood-spinning chucks by turning on lathe. May smooth surface of workpiece, using planishing tool and rotary-power sander.

8334-190 STRIP-ROLL-FORMING-MACHINE OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates machine to form longitudinal bends, rolls, beads or embossed design on continuous sheet-metal strips to produce products such as mouldings, trim and weather stripping as specified by work order and drawings:
Bolts specified roller dies and drive rolls onto spindles and adjusts rollers for thickness of metal, using feelers, rule, shims, gauges and hand tools. Adjusts side guides. Turns knobs to set footage meter and control which stops machine or activates automatic shear when specified length of strip has been run. Lifts coils of metal onto feedrack, using hoist and threads end into feed rolls. Directs flow of

coolant onto rolls. Starts machine, observes operation and turns knobs to adjust roll pressure. Verifies dimensions of finished products, using micrometers, gauges and rule.
May feed precut strips of metal into machine. May turn knobs or install gears to change speed of machine. May set up and operate punch press to cut off individual rings from spiralled strip.

8334-194 FENCE-MAKING-MACHINE OPERATOR(wire prod.) DPT:682
GED: 3 SVP: 5 EC: I 5 PA: H 4 7

Operates machine that forms wire-mesh fencing:
Positions rolls of specified gauge wire onto spools and joins wire ends, using resistance butt welder or acetylene torch. Verifies wire size, using standard wire gauge. Assists set-up man to select mesh or forming dies according to wire and loop size, and in bolting dies on weaving spindle of machine. Draws wire through die to specified height, according to work specifications. Turns setscrew to adjust automatic wire cutter, using wrench. Pushes buttons on control panel to start oil pump, machine motor and automatic shut-off device. Pulls clutch lever to start or stop machine. Adjusts roll tensions, guide and blade positions, using hand tools. Observes machine counter and removes rolls of fencing when specified lengths are made. Records number of rolls of fence fabricated. Ties, tags and places rolls on handtruck.

8334-198 STRAIGHTENING-PRESS OPERATOR(metal stamp., press. & coat.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4 7

Operates power press to straighten warped or bent metal objects, such as plates, structural shapes, forgings, weldments, tubes, shafts and bar stock to specified dimensions:
Examines workpiece to locate defects, by sighting along edge and using devices such as straightedge, rule, tape, deflection gauge, template and square. Plans sequence of operations, applying knowledge of physical properties of metal. Positions and locks specified pressure blocks or dies into ram and on bed of machine or positions shims under low spots of workpiece. Lifts and positions workpiece onto bed of machine manually or with crane. Starts ram which presses out bent or high spots of workpiece. Re-examines and repositions workpiece, changing shims for each pass until workpiece conforms with specifications. Turns levers, handwheels or dials to adjust depth and pressure of ram.
May preheat metal, using heating furnace or hand torch. May tend machine equipped with preset dies to bend metal to specified shapes. May be designated according to item straightened.

8334-202 ROLL-THREADER OPERATOR(wire prod.) DPT:682
GED: 3 SVP: 5 EC: I 5 PA: M 4

Operates one or more automatic machines that roll-threads hot or cold forged bolt blanks by application of machine pressure:
Installs specified roll-threading dies in machine, using wrenches, and rule. Fills feed mechanism with stock, by hand or using hoist and starts machine. Measures bolts with micrometer thread gauge, or rule and adjusts dies and stops to maintain specified dimensions.

8334-206 FLYING-SHEAR OPERATOR(iron & steel) DPT:382
flying shearman.
GED: 3 SVP: 4 EC: I 3 5 6 PA: H 4

Operates flying shear and other mill equipment such as guides and crop or entry gates, to cut hot steel products to specified length:
Reads production schedule to determine setup or adjustment of equipment. Installs knives in shear and guides on roll stands, using hand tools and sledge. Resets lever gauge to adjust cutting action of shear according to specified length of product. Starts shear and moves controls to raise and lower pinch rolls, adjust guides and open and close shear gates. Assists other workers in changing rolls. Removes cobbles (tangles) of metal stock from rolling line by operating shear to crop billets or rods, hooking billet with hand hook, and dragging it from processing area.
May measure length, width and gauge of product, using micrometer and tape to ensure conformance to specified dimensions.

8334-210 NIBBLER OPERATOR(metal stamp., press. & coat.) DPT:382

nibbling-machine operator.
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates machine that cuts metal plates or sheets into specified radial or irregular shapes by action of reciprocating cutters or punch and die:
Positions and clamps specified cutter or punch and die into ram and bed of machine. Turns thumbscrews to adjust depth of stroke according to thickness of metal. Turns handwheel to set specified distance between cutter or punch and center point of turntable or fixture, using scale or rule. Clamps template or guide and drive rollers over workpiece. Depresses pedal which activates machine to cut or punch along radius or straight line. Guides workpiece manually along cutting lines or template to cut irregular shapes.
May lay out guidelines on workpiece by tracing from template. May drill bolt or center hole into workpiece, using portable drill or drill press. May remove burrs with file or grinder.

8334-214 POWER-SHEAR OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates power shear to cut metal plates, sheets, billets or bars to specified dimensions and angle:
Reads work order, sketches or drawings for job specifications. Turns handwheels to adjust rake (angle) and pressure of blade. Positions and clamps stops and side guides to set length and angle of cut, using rule, built-in gauges, or template. Slides workpiece on conveyor, or lifts workpiece manually or with hoist or crane onto machine bed or roller table and positions it against side guide and end stops. Starts machine which clamps workpiece and lowers blade to cut metal. Lays out cutting lines on metal, using rule, square or template when shearing single pieces.
May set up and operate shear on production line where shear is fed by conveyor, such as automobile frame line or rolling mill. May operate portable shear to cut sheet metal. May inspect work, using tape, compass, gauge, template or micrometer to verify dimensions.

8334-218 PUNCH-AND-SHEAR-MACHINE OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 4 EC: I 5 6 PA: M 3 4 7

Operates machine to punch, shear and notch or trim metal-structural shapes and plates:
Positions specified punch and die sets and fastens them into ram and bed of machine by tightening lock screws with wrench. Sets up cutoff, trimming and notching sections of machine by positioning specified cutting blades into cutting slot, and notching dies or shear blades into ram and bed of machine, and tightens lock or clamp screws with wrench. Measures workpiece with rule or tape or traces from template to locate holes or cutting lines as specified by work order and marks them with scriber, soapstone and center-punch. Pulls lever to engage power to section used. Positions workpiece into cutting slot or under punch, die or trim blade and aligns punch or blade with layout marks. Pulls lever or depresses pedal to activate machine. Sets stops or positions guide jigs to specified location when several pieces are worked.

8334-222 PUNCH-PRESS OPERATOR(metal stamp., press. & coat.) DPT:382
punch operator.
GED: 3 SVP: 4 EC: I 5 PA: H 4 7

Operates power press equipped with punch to notch or punch metal plates, sheets, or structural shapes:
Positions, aligns and clamps specified punch and die set into ram and bed of machine, using feelers, gauges, shims, rule and template. Turns handwheel to set depth of stroke. Lifts workpiece onto machine bed or roller table, manually or by using hoist or crane. Positions lay-out marks on workpiece between punch and die. Positions and clamps guide stops to run successive pieces. Starts ram to drive punch through workpiece.
May operate machine equipped with two or more punch and die sets. May trace lay-out marks on workpiece from template or lay-out reference lines on workpiece, using rule and compass.

8334-226 ROLL OPERATOR, SHEET METAL(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 4 EC: I 5 6 PA: H 3 4 7

Operates slip-rolling machine to bend sheet metal to specified curvature:

Lifts upper roll and positions workpiece into machine manually. Sets adjustment roll to position specified by layout or worksheet to form desired shape in single pass. Turns switch to start machine. Measures arcs with template or rule. Depresses pedal to open gate and raise top roll to permit removal of cylindrical shapes. Removes shaped workpiece from rolls for further processing. Lubricates equipment periodically, using oil can and grease gun.

8334-230 ROTARY-SHEAR OPERATOR(metal. stamp., press. & coat.) DPT:382
circular-shear operator; ring-shear operator.
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates machine equipped with opposing circular cutters to shear metal plates and sheets to specified circular and curved dimensions: Checks thickness of metal, using gauge or micrometers. Adjusts distance between cutters for thickness of metal by turning thumbscrews or moving series of levers, and using feeler gauges, scale or pattern. Lifts workpiece manually or with hoist to position workpiece onto machine. Clamps workpiece to turntable and turns handle which moves sliding arm to scale on machine, or uses template to set distance between center point and cutting blades. Starts rotating action of cutters and turntable to cut metal. Aligns workpiece between cutting blades manually or with hoist and guides it along lay-out lines to cut irregular shapes. Turns handwheels which tilt machine table or installs fixture to cut specified bevel on workpiece. Checks completed workpiece for defects and correct size, using template.

May lay out lines on workpiece, using compass or trace them from template. May change cutters, using mechanics' hand tools.

8334-234 SHEAR OPERATOR, AUTOMATIC(metal stamp., press. & coat.) DPT:382
automatic-shear operator.
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates shear that automatically cuts to uniform length, metal sheets, bars, wires, rods and tubes fed into machine from continuous coil or conveyor:

Reads production schedule or workorder to determine setup and adjustments required to shear metal to specified dimensions. Positions coil into roll stands, using jib or crane. Threads metal through machine. Turns handwheels to adjust drive rolls to thickness of metal and to set guides, rake (angle) and pressure of blade. Turns screws to set length adjustment, using built-in gauge, tape or template. Turns knobs to synchronize speed of drive roll or conveyor with cutting action of shear. Adjusts straightening roll to straighten sheet-metal or wire emerging from coils. Observes operation to detect jams. Inspects finished work, using tape, compass, gauge, template or micrometer to verify dimensions.

May set up slitter to trim sheets to specified width. May install doubling fixture to feed more than one coil into shear simultaneously.

8334-238 SLITTING-MACHINE OPERATOR(metal stamp., press. & coat.) DPT:382
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates slitting machine to cut sheet-metal into strips of specified width:

Selects, cleans and installs spacers and cutters on arbors, and hones cutters with oilstone to remove nicks. Presses button to lower arbor until cutters mesh, and measures clearance with feeler gauge. Inserts spacers to adjust spacing to specified tolerance. Signals crane operator or lifts and positions metal roll on pay-out reel, using hoist or hydraulic lift. Threads sheeting through slitter and verifies dimensions of cut to specifications, using rule. Secures strips on recoiler, adjusts guides and roller tension with handcrank and starts machine. Observes slitting and rewinding operation and examines strips for turns, holes and other surface defects.

May oil and clean machine. May feed sheet metal between rotating shear rolls.

8334-242 TURRET-PUNCH-PRESS OPERATOR(metal stamp., press. & coat.) DPT:382
multi-punch operator.
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates turret-punch press to punch holes, notches, or lay out marks in metal sheets, plates or strips, following settings specified on charts: Inserts, aligns and locks punches and dies in turret, using hammer, shims, feelers and setscrews. Places workpiece on machine table manually or by using jib, crane or hoist. Aligns workpiece to scale and end gauge on machine and clamps it to machine table. Pushes button to turn turret to specified punch and die. Turns cranks to set indicator to specified dimension on longitudinal and lateral scale. Presses pedal to activate punch. Repeats operation for each machine setting specified on charts. Positions center punch from turret to touch plate and turns crank to scratch lay-out lines on workpiece. Computes own punch charts from drawings, using square, scale and applying knowledge of shop mathematics.

8334-246 HOOP MAKER, MACHINE(metal stamp., press. & coat.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: H 4 7

Operates machines to make barrel hoops from strap steel:

Installs and adjusts rollers, punches and shear plates in hoop-punch-and-coiler machines, using wrenches. Places roll of strap steel on spindle, inserts end in feed rollers and starts machine that cuts and coils strap to correct length and diameter for hoops and punches rivet holes in strap. Removes punched and coiled hoops. Aligns holes of coiled hoops on shank of rivets in rivetting machine. Slides hoop with protruding rivets under reciprocating hammer that flattens rivet shanks. Places hoop over mandrel of hoop-flaring machine and moves leg control to expand jaws that flare hoop to conform to shape of barrel.

May be designated according to machine operated; for example, Hoop-Flaring-Machine Operator
Hoop-Punch-and-Coiler Operator
Hoop-Rivetting-Machine Operator

8334-250 IMPRESSION-DIE-PRESS OPERATOR(metal stamp., press. & coat.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Operates hydraulic press that forces hard-steel hob (model) into soft-steel block to form molding die:

Positions pre-marked soft-steel block in retainer ring of press and sets specified hob on block. Places plug over hob to hold it in alignment. Turns handwheel to raise ram which holds block and hob in place. Starts pumps to build up prescribed hydraulic pressure. Pulls lever to exert pressure on ram which presses hob into soft-steel block to specified depth, forming impression die. Releases pressure, removes workpiece manually and clamps it in vise. Taps block with hammer to loosen hob and removes it from block. Inspects die for defects, such as rips or flaws, using magnifying glass. Checks accuracy of imprinted block with calipers and micrometers.

8334-254 TUBE BENDER, MUSICAL INSTRUMENTS(misc. prod. fab., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I PA: L 4

Operates machines and uses forming jigs to cut, deburr, anneal and bend brass wind instrument tubes:

Sets length gauge of saw and pushes tubes into rotating blade to cut tubes to specified lengths. Inserts burring tool into chuck of lathe and holds tube ends against rotating burring tool to remove burrs. Places tubes on sprockets of wheel that revolves between two torches to anneal tubes for ease of bending. Sets up jig to bend tubing to specified shape. Fills tubes with sand, lead or other filling to prevent wrinkling during bending. Bends tubing around forming jigs or blocks by hand. Removes filling by immersing tube in boiling water or by heating with torch. Verifies accuracy of bend, using template.

May set up and operate hydraulic press to bend tubes.

8334-258 WIRE-CRIMPING-MACHINE OPERATOR(metal
fab., n.e.c.; wire prod.) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Operates machine to crimp wire to specified shape for making products such as zig-zag springs or wire mesh:
Bolts specified crimping wheels or forming dies into machine jaws, using wrench. Loads coil of wire onto reel of machine and thread wire through feed rollers and cut wire to length. Starts machine and obtains sample of crimped wire of specified type and size. Measures sample, using gauges, and changes crimping wheels or dies, or adjusts tension of machine until crimping meets specifications.
May be designated according to product made; for example, Zig-Zag-Spring-Machine Operator

8334-262 BALE-TIE-MACHINE OPERATOR(wire prod.) DPT:682
wire-loop-machine operator.
GED: 3 SVP: 4 EC: I 5 PA: M 4

Operates wirecutting and straightening machine, equipped with forming attachment, to form wire ties for tying bales of paper, hay or other materials:
Adjusts driving and straightening rollers, forming attachment, and jaws of holding device, using hand tools. Adjusts speed of driving rollers by turning crank or adjusts gears, using hand tools, to set specified length of bale tie. Inserts wire between driving and straightening rollers and starts machine that automatically cuts, forms, and ejects specified number of bale ties in bundle onto rack for wrapping. Examines ties for conformance to specifications. Wraps bundle by hand or uses machine-wrapping device. Sharpens cutters, using bench grinder and files. Replaces worn or damaged parts such as gears and belts, using hand tools. Repairs wire breaks, using butt welding machine. Sprays bale ties with oil, using portable sprayer.
May operate several bale-tie-machines.

8334-266 BELL SPINNER(misc. prod. fab., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I 6 PA: M 4 7

Operates spinning lathe to spin (form) musical instrument bells:
Fastens bell-shaped mandrel onto lathe and positions and locks tube shaped workpiece on mandrel. Starts workpiece rotating and positions forming tool in holding device. Holds and moves forming tool along workpiece, applying pressure to form workpiece to shape of mandrel. Holds cutting tool against spinning bell to trim bell to size. Removes tarnish and scale from bell, using file, and emery cloth. Holds bead tool against bell to roll edge back, forming bead cavity. Burnishes bell with burnishing tool.
May insert wire into bead cavity and close cavity with bead tool.

8334-270 LEAD-FITTINGS FINISHER(metal fab., n.e.c.) DPT:682
lead fabricator.
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates lathe to form lead-plumbing fittings to specific shape and size:
Mounts lead pipe over mandrel in previously set-up lathe. Starts lathe and presses special hand tool, or turns handwheels to advance special tools against end of pipe, to stretch and bend pipe against rounded end of mandrel to form traps of various sizes. Reduces or expands diameter of lead-pipe openings by positioning tool against outside or inside surface of rotating pipe. Inserts iron ring inside of expanded pipe or positions it on outside of reduced pipe. Rolls edge of pipe end over ring to hold it in place. Solders brass ferrule over end of lead bend to seal junction. Heats threaded-brass ring and presses reduced opening of pipe through ring to fuse them.

8334-290 KEG-MAINTENANCE MAN(metal stamp., press. &
coat.) DPT:685
barrel de-denting-machine operator.
GED: 3 SVP: 4 EC: I 4 5 PA: M 4 7

Tends machine to remove dents from metal kegs or barrels:
Positions barrel on lower die of machine, aligning bughole under water spout of machine and fills barrel with water. Turns side dies of machine to align contour of dies with contour of barrel ends. Presses switch that closes side, top and bottom dies around barrel. Pumps water into barrel, to force walls of barrel against dies, to remove dents. Stops pump, release pressure and opens dies after specified water pressure has been attained. Examines surfaces of barrel to verify smoothness. Checks for leaks from barrel or valve, and marks leaks with pencil or chalk. Replaces damaged valves, using wrench and chisel. Drains water from repaired barrels. Scraps damaged barrels of specified vintage. Repaints identifying strip around center of kegs, using brush. Counts and records quantity and type of keg scrapped and repaired. Pushes repaired and serviceable barrels onto conveyor.

8334-294 BRAKE TENDER(metal stamp., press. & coat.) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: M 3 4 7

Tends power brake that bends, straightens, punches, or forms rolls or arcs in metal sheets, plates and bars:
Positions workpiece, manually or with hoist, against stops or aligns lay-out marks to dies. Brushes oil on dies and workpiece. Starts machine to lower ram and shape workpiece. Tightens die nuts to prevent movement of die, using wrenches. Inspects work for conformance to specifications, using rule, square or templates. Cleans scale or scrap from die with airhose or brush.
May be designated according to kind of material shaped; for example, Brake Tender, Sheet Metal

8334-298 SHEET-METAL-WORKING-MACHINE TENDER DPT:685
(metal stamp., press. & coat.)
GED: 3 SVP: 4 EC: I 5 6 PA: M 3 4 7

Tends various types of metalworking machines; such as, brakes, rolls, shears, rivetting or spot-welding machines to shear, trim, slit, bend, form, crimp, bead and join together sheet metal:
Adjusts stops or guides to specified length as indicated by scale, rule or template. Positions workpiece manually against stops or aligns lay-out marks with die or blade. Pushes button or depresses pedal to activate machine. Checks work, using rule or template. Performs other duties common to sheet-metal shops, such as assisting in moving sheet-metal and products.
May clear minor jams by pulling out buckled or wrinkled sheets.

8334-302 SLIDE-FORMING-MACHINE TENDER(metal
stamp., press. & coat.) DPT:685
four-slide-machine tender.
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Tends one or more slide-forming machines that automatically feed, punch, cut and form strip metal, bars, rods or wire stock to fabricate parts, such as flat coil springs, terminal clips and hairpins:
Threads metal strip or wire through straightening rolls and die sets, turning flywheel by hand, and starts machine. Measures sample of finished parts with fixed or precision measuring gauges, such as micrometers and verniers, and examines parts for surface defects or scratches. Shuts off machine and notifies foreman if parts do not meet specifications.
May weld ends of two coils together by resistance-butt-welding device to form continuous length of stock.

8334-306 METAL-PIPE COMPRESSOR(metal stamp., press.
& coat.) DPT:664
GED: 3 SVP: 3 EC: O PA: H 4

Operates equipment to compress galvanized corrugated circular metal pipe into oval shape, and inserts and tightens wire struts to maintain compressed shape:
Reads job order for pipe specifications. Directs mobile-crane operator in moving pipe from storage area and placing pipe on bed of compressing frame. Fastens hooks of ratchet chains to frame sides.

Compresses pipe, by manually operating ratchet handle to pull in sides of frame. Measures across small pipe diameter, using rule. Inserts wire struts through opposing holes in walls of compressed pipe and tightens wire by crimping ends, using portable machine. Trips ratchet on chains to release frame sides. Directs mobile-crane operator in removing pipe and placing section in storage.

8334-310 SCRAP-METAL-SHREDDER TENDER(iron & steel)
DPT:685

GED: 3 SVP: 3 SVP: I 5 PA: M 4 5 7

Tends scrap-metal-shredding machine that fragments metal, such as compressed automobile bodies into small pieces:

Switches on relays, motor and hydraulic equipment and observes gauges and dials to prepare equipment for operation. Presses buttons to start and control burners, conveyors, hydraulic pumps, shredders and exhaust fans. Lowers lever to dump scrap metal from hopper onto conveyors leading to shredders. Pulls lever to operate rejector that clears jams. Observes movement of material through different phases to prevent blocking. Stops machinery when alarm bell warns of malfunction. Performs minor maintenance on shredder equipment by aligning conveyors, changing fuses and repairing hydraulic leaks.

8334-314 HOOP BENDER(metal stamp., press. & coat.)
DPT:684

GED: 2 SVP: 3 EC: I PA: H 4 7

Bends and shapes metal rods into hoops for wooden vats or tanks, using bending machine:

Loosens nut of adjusting block and positions roller to obtain specified diameter of hoop. Inserts end of rod through feed rollers and over bending roller by striking end of rod with wooden maul to start rod over roll. Turns handcrank of feed roller to force rod through machine, bending rod into semi-circular or circular shape. Removes shaped hoops from machine and stacks them on floor. Threads ends of rods, using hand dies, and screws connectors on end of rod. Makes two-piece hoops for large tanks.

8334-318 WIRE-SCREEN CUTTER AND TRIMMER (wire prod.)
DPT:684

GED: 2 SVP: 3 EC: I PA: M 4 7

Cuts and trims wire screening or wire fabric to specified dimensions, using hand or powered shears and hone:

Measures material to locate specified point of cut, using rule, scale, pattern or jig. Cuts material following line between parallel wires of weave or along edge of pattern. Hones cut edges to remove burrs and even tips of wires, using hand hone. Examines edges of screen and tips of wires, using magnifying glass. Cleans or polishes finished workpiece to remove tarnish, using cleaning solution, polishing wheel or polishing cloth.

May hold workpieces in position for brazing. May solder edges of screen or wire cloth to form seam, using seaming machine.

8334-322 SCRAP-METAL-CRUSHER TENDER(iron & steel)
DPT:665

GED: 2 SVP: 3 EC: B 5 PA: M 4

Tends hydraulic crusher that compresses scrap metal, such as automobile bodies into bales:

Signals crane operator to place scrap metal on feed ramps. Pulls levers to activate rams that compress metal into bales of specified thickness. Pushes levers to raise rams and repeats operation. Observes hydraulic pressure, motor oil pressure and temperature gauges to ensure efficient operation of compressing machine. Oils, greases and performs minor repairs on compressor, using hand tools.

8334-326 BENDING-MACHINE TENDER(metal stamp., press. & coat.)
DPT:685

GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends bending machine to bend metal bars, rods, angle iron and tubes to specified angle or contour:

Positions workpiece against end stops. Locks holding clamps and guide clamp onto workpiece. Lubricates workpiece with oil. Pulls lever

or depresses pedal to activate turntable which draws workpiece through guide clamp and around die block until stopped by plug stops. May slide mandrel into tubing instead of using guide clamp. May perform other fabricating tasks, such as flaring tube ends, using tube flares, or cutting metal stock to length, using power shear or saw. May be designated according to type of stock bent; for example, Rod-Bending-Machine Tender
Tube-Bending-Machine Tender

8334-330 HYDRAULIC-CORRUGATING-MACHINE TENDER (metal fab., n.e.c.)
DPT:685

GED: 2 SVP: 3 EC: I PA: M 4 7

Tends hydraulic corrugating machine that corrugates metal tubes used in making bellows:

Moves controls of machine to expand corrugating plates or dies and position spacers between plates or dies. Places tube in opening of plates or dies. Pulls levers to close cradle, remove spacers and pump water or other fluid or air into tube forcing tube walls to conform to shape of corrugated plates or dies.

May insert rubber tube or bladder inside metal tube when making large diameter, thin-walled bellows.

8334-334 MACHINE TENDER, NUT AND BOLT(wire prod.)
DPT:685

GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends one or more automatic machines to head, trim, roll-thread, slot, or tap metal stock to produce nuts, bolts, or other fasteners:

Feeds stock to machine individually by hand, or fills machine-dispensing hoppers, or loads coiled steel on reel and threads end of coil through feed rolls. Starts machine and observes operation. Measures parts, using rule or fixed gauge, to determine conformance to specifications. Frees feed mechanism of jams, using rod. Stops machine and notifies supervisor of machine malfunctions, or when parts do not conform to specifications.

May install cutting tools on machine, using wrench and rule. May be designated according to type of machine tended; for example, Tapping-Machine Operator, Automatic

8334-338 POWER-SHEAR TENDER(metal stamp., press. & coat.)
DPT:685

GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Tends power shear to cut metal objects; such as, sheets, plates, billets and bars to specified length:

Lifts workpiece, manually or with hoist or crane, onto machine bed or roller table. Positions workpiece against side guides and end stops or aligns lay-out lines under shear blade. Starts machine that clamps workpiece and lowers blade to cut metal.

May tend shear on production line where shear is fed by conveyor, such as automobile-frame line or rolling mill. May position stops according to calibrated gauge on machine to shear items, such as scrap, billets or reinforcing rods. May be designated by type or purpose of shear; for example,

Alligator-Shear Tender
Gate-Shear Tender
Hot-Billet-Shear Tender
Scrap-Shear Tender
Square-Shear Tender

8334-342 PRESS TENDER, PIERCE AND SHAVE(scient. & ind. equip., n.e.c.)
DPT:685

GED: 2 SVP: 3 EC: I 5 PA: S 4 7

Tends automatic press that pierces and shaves metal clock and instrument parts, such as plates and bridges:

Cleans work plate of press with blast of compressed air. Selects designated components and positions these one at a time, in recess or over protruding pins of work plate. Starts press that automatically pierces and shaves component. Removes component from press and spot-checks hole dimensions and locations, using pin and location gauges.

May operate hand powered or kick presses to assemble components by staking, press-fitting or crimping.

8334-346 SPRING WINDER(metal fab., n.e.c.) DPT:685
spring coiler.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends machines that wind, shape or finish compression, tension, torsion and flat coiled springs:

Threads end of wire or strip between guide blocks or rolls and through slot in spindle of lathe-type coil-winding machine. Starts machine to rotate spindle that winds wire on mandrel to form coiled-springs. Slides loop of flat-spring-metal stock over arbor of spring winder and starts machine to wind metal around arbor to form coiled-flat springs. Cuts end of wire and removes springs from machine. Measures springs for conformance to specifications, using gauges and micrometers. Inserts compression type springs into holding device of double-disk grinder and starts machine that automatically grinds spring ends. Positions coiled-tension springs on jig press that crimps, hooks or loops ends of coiled springs. Presses and turns spring ends against abrasive wheel to remove burrs.

May feed automatic shear or punch to cut wire or strip to specified length. May specialize in winding specific types of springs and be designated accordingly; for example,

Door-Spring Winder
Furniture-Spring Maker
Hairspring Winder
Valve-Spring Winder

8334-350 TURRET-PUNCH-PRESS TENDER, TAPE CONTROL (metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: H 4 7

Tends tape-controlled turret-punch press that automatically positions indexing table, selects punch and punches holes or lay-out marks in metal sheets, plates, strips or bars:

Studies drawings, tooling specifications and charts to determine sequence of operations and to set machine controls. Selects and inserts electronic tape in read unit. Positions table or head to start point of machining cycle. Installs specific punch and die sets into machine turrets in specified sequence, using hand tools. Positions and clamps workpiece against fixtures, using air-operated foot controls. Starts machine and observes operation, particularly machine ejection of punched metal slugs which may cause machine jamming. Replaces worn or broken punches and dies by opening chucks, using wrench. May verify first-run workpiece, using rule and plug gauges.

8334-354 DRUM STRAIGHTENER(metal stamp., press. & coat.) DPT:685
barrel repairman.
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Tends pre-set machine, equipped with special rolls, to remove dents and re-form bodies and chimes (rims) of metal barrels or drums:

Slides open end of barrel over cylinder of machine. Operates foot lever to lower rolls against barrel. Starts machine that rotates barrel against rolls to re-form or straighten side, bead, or chime. Raises rolls and slides straightened barrel off cylinder.

8334-358 FORMING-ROLL TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Tends forming-roll machines to straighten or form contours in sheets, trim and bead edges of metal cylinders and rings, or crimp or seam lids on containers:

Positions workpiece on automatic-feed table by hand. Starts machine to press forming-wheels against workpiece to shape it to contour of dies. Manipulates hand or foot lever which forces dies against edge of workpiece to bend edge to form bead, or to lower crimping head onto edges of workpiece. Tends machine equipped with jointed shaft or vertical table to tilt and force workpiece at angle to expand outer edge or form flanges of specified shape. Operates machine equipped with multiple sets of opposing rolls to form contours by expanding and impressing metal simultaneously at different locations.

May pull lever to lower slitter or knife to trim edges of workpiece. May be designated according to type of machine tended: for example, Beading-Machine Operator
Roll-Flanging-Machine Operator
Seaming-Machine Operator

8334-362 MULTI-OPERATION-FORMING-MACHINE TENDER (metal stamp., press. & coat.) DPT:685
forming-mill operator.
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Tends previously set-up multiple-operation machine that performs any combination of bending, punching, roll forming, beading, cutting, welding, soldering, or clinching of metal to fabricate items; such as, rims, moulding, panels, cans, tubing and housings:

Places roll of metal sheet, strip or wire onto feed rack and threads end of strip(s) into drive rolls or through machine. Positions metal blanks manually into feed rolls, or feeds blanks into hopper or onto conveyor. Starts machine, observes operation and verifies finished product, visually or with fixed gauges.

May tighten bolts or turn knobs or handwheels to specified points on scale or dial to reset and maintain original set-up on machine. May tend one or more work stations on line of machines operating in tandem. May be designated according to function of machine; for example,

Can-Bodymaker Feeder
Tinware-Collar-Band-Machine Tender

8334-366 POWER-PRESS TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: 1 5 6 PA: M 4 7

Tends one or more power presses that cut, trim, punch, shape, notch, draw, stamp or crimp metal or other stock between preset dies:

Positions workpiece against fixtures or stops on machine bed or positions it under die. Starts machine and depresses pedal or moves lever to force die through workpiece to cut or form article of specified size and shape. Inspects parts visually or with fixed gauges.

May be designated according to product worked on or type of press tended; for example,

Draw-Press Tender
Mop-Bending-Machine Tender
Punch-Press Tender
Trimming-Machine Tender

8334-370 SCROLL-MACHINE TENDER(struct., plate & ornam. metal) DPT:685
scroll former.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that forms metal stock, such as bars, rods, squares, tubing and wire into ornamental scrolls:

Positions and locks specified die onto shaft of machine, using key and nut. Slides workpiece through drag rolls and positions it in slot on die. Starts machine that turns die to draw workpiece along its contour as horizontal or vertical rod pushes workpiece to side of die, forming scroll.

May tend power shear or cut-off saw to cut stock to specified length.

8334-374 SHADOW-MASK SHAPER(electronic equip.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends equipment that forms metal aperture masks to specified dimensions, for use in colour television picture tubes:

Adjusts hand screw to set specified clearance between series of rollers as indicated on roller gauge. Starts rollers and feeds metal blank through rollers to flatten workpiece. Positions workpiece on bed of forming press and moves controls to lower die to form mask. Removes mask from press, using tweezers to hold edge to avoid distortion and places mask on conveyor for further processing.

8334-378 SPINNING-LATHE TENDER, AUTOMATIC(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends automatic lathe that spins (forms) shaped articles from sheet or plate metal:

Places metal workpiece (disk) vertically in holding fixture by pushing lever to move tailstock, forcing disk against chuck of lathe. Slides hydraulic carriage forward to position circular forming tool against metal disk. Starts machine that presses rotating circular tool against disk to form disk into shape of spinning chuck. Trims off excess metal

from workpiece, using cutter knife. Removes shaped article and verifies dimensions, using fixed gauge.

8334-382 STRIP-ROLL-FORMING-MACHINE
TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine that forms longitudinal bends, rolls, beads or embossed designs onto continuous sheet metal strips to form items, such as moulding, weather stripping and curtain tracks: Bolts specified roller dies onto prepositioned spindles. Loads coils of metal strip onto feed rack manually. Turns knob to set footage meter and control to stop machine or activate automatic shear. Inserts end of strip(s) into machine feed rolls. Starts machine to form strip and cut it to specified length. Removes bundles of cut and finished pieces from machine. Inspects finished pieces visually or using fixed gauge. May weld ends of feed coils together to form continuous feed, using automatic-butt-resistance welder.

8334-386 TWISTING-MACHINE TENDER(struct., plate & ornam. metal) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machine that twists metal bars, squares and slats to specified shape: Clamps end of workpiece into stationary holding fixture. Slides carriage, lowers table or raises spindle to adjust to length of workpiece and clamps other end of workpiece into chuck or fixture of drive spindle. Starts machine to rotate drive spindle and stops machine after specified number of turns, or sets limit switch to stop machine. Examines finished work for conformance to specifications. May install special fixtures and chuck to twist together two or more pieces. May clamp end of workpiece in vise, slide pipe over workpiece to prevent longitudinal warping, and twist workpiece, using pipe wrench or twisting fork. May be designated according to product twisted; for example, Slat Twister

8334-390 KNURLING-MACHINE FEEDER(misc. prod. fab., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I PA: L 4 7

Feeds battery of automatic machines that roll knurled knob of snap fastener stud to facilitate gripping action of spring part: Fills machine hoppers with blank studs, using scoop. Presses button to start machines that roll studs between curved segments of dies. Extracts jammed or bent studs from hopper, feeder tube or die groove, using pick or prongs. Examines studs to verify knurling of knob and to detect cracks. Cleans dirt from die segments and feed channels, using brush. Notifies supervisor of machine malfunctioning. Empties receiving pan containing finished product into production boxes.

8335-WELDING AND FLAME CUTTING OCCUPATIONS

This unit group includes occupations concerned with joining, surfacing, cutting or otherwise fabricating and repairing ferrous and non-ferrous metal parts and structures. Activities include: setting-up and operating gas or electric welding, soldering, brazing and cutting equipment, and joining or shaping lead products or parts, using a gas torch.

Welding Occupations 8335-110 through 8335-174

8335-110 WELDER SET-UP MAN, RESISTANCE(mach., weld. & forg.) DPT:360
set-up man, resistance welding.
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 5 6 7

Sets up resistance welding and brazing machines that fuse or bond metal components, such as panels, frames, yokes, tubes and containers, according to specifications and drawings:

Lays out and marks weld points and position of components on workpiece, using rule, square, templates and scribe. Selects, positions, aligns, and bolts electrodes, jigs, holding fixtures, guides and stops onto machine, using measuring instruments and hand tools. Sets and synchronizes electric current, pressure, timing cycle, automatic feed and transfer equipment specified by welding machine chart or work record. Computes and records setting for new work, applying knowledge of metal properties, principles of welding and shop mathematics. Makes trial weld. Adjusts electrode gap and feed rollers to thickness of metal. Dresses electrodes, using file, emery cloth or dressing wheel. Gives direction to operators concerning operation of machine.

May inspect electrical circuits of machine and perform maintenance tasks such as replacing defective tubes and relays. May set up welding stations on production lines. May set up spot, multispot or butt-welding machine and be designated accordingly.

8335-114 WELDER-FITTER(mach., weld. & forg.) DPT:381
welding lay-out man.
GED: 4 SVP: 7 EC: B 5 6 7 PA: H 3 4 7

Fits and welds pre-fabricated, cast and forged metal components to assemble structural forms, such as machinery frames, tanks, pressure vessels, furnace shells and building and bridge parts: Selects tooling and plans layout, assembly and welding operations, applying knowledge of geometry, physical properties of metal, effects of heat, allowance for thickness, machining, weld shrinkage, and welding techniques. Lays out, positions, aligns and fits components together, using square, scribe, scale, straightedge, files and grinders. Bolts, clamps and tack-welds parts to secure them in position for final welding. Sets up equipment and completes final welding of components, using arc, gas-shielded arc, submerged arc or gas-welding equipment. Assembles some parts by fastening with bolts or rivets. Repairs metal products by dismantling, straightening, reshaping and reassembling parts, using cutting torch, straightening press and hand tools. May set up and operate arc or flame-cutting equipment to shape metal components to specified dimensions.

8335-118 WELDER, TOOL AND DIE(mach., weld. & forg.) DPT:381
GED: 4 SVP: 7 EC: I 5 6 7 PA: M 3 4 7

Fits, aligns and welds components of metal tools, dies, jigs and fixtures as specified by drawings and work orders, using a variety of welding equipment: Selects equipment and plans assembly and welding, applying knowledge of geometry, welding techniques, physical properties of metal, allowances for machining and weld shrinkage. Lays out components on bench, in vise, base block or fixtures, using vernier, squares, gauges, feelers and micrometers. Scrapes, files and grinds parts to fit them together, using grinder, emery cloth, hand files and scrapers. Bolts, clamps and tack-welds parts to secure them in position for welding. Sets up welding equipment such as electric arc, gas-shielded arc, submerged arc or gas, selecting method best suited for workpiece. Welds broken parts and adds weld metal to damaged or worn parts to repair tools, dies, jigs and fixtures. Heats and anneals parts after welding to remove internal stress, using hand torch or furnace.

8335-122 WELDER, PRESSURE VESSELS(mach., weld. & forg.) DPT:681
boiler welder; pressure-vessel welder.
GED: 3 SVP: 7 EC: I 5 6 7 PA: H 2 3 4 6 7

Welds metal plates, shells, tubes, drums and structures to assemble and repair boilers and pressure vessels to meet pressure test standards: Prepares metal for welding by cleaning or degreasing, using wire brush, portable grinder or chemical bath. Positions and clamps workpieces together or assembles them in jig or fixture. Tack-welds assemblies together to hold in position for welding. Selects electrode according to bead and thickness of metal to be welded and inserts it into portable holder. Connects cables from power supply to workpiece to obtain desired polarity, starts power supply, and adjusts machine controls to give specified amperage and voltage output. Strikes (forms) arc which generates heat to melt and deposit metal from electrode to workpiece and fuse edges of workpiece. Guides electrode along weld line maintaining length of arc, electrode angle and speed of movement to form specified depth of fusion and bead as judged from colour of

metal and size of molten puddle. Listens for excessive sputter which may indicate faulty manipulation, arc action or damp electrode coating which could result in poor welds. Examines weld for size of bead and penetration and conformance to established standards of precision. Repairs broken parts, fills holes and increases size of metal pores. Chips or grinds off excess weld, slag or splatter. Welds in horizontal, vertical and overhead welding positions. May use carbon electrode and manually apply filler rod to supply metal for fusing. May preheat workpiece using hand torch or heating furnace. May flame-cut metal plates or structural shapes, using flame-cutting machine or hand torch.

8335-126 WELDER, COMBINATION(mach., weld. & forg.)
DPT:664
welder, gas and arc.
GED: 3 SVP: 7 EC: B 5 6 7 PA: H 3 4 6 7

Welds metal parts together to fabricate or repair parts and equipment, using gas and arc welding equipment:
Cleans grease and corrosion from workpiece, using solvent, wire brush and portable grinder. Examines workpiece for defects. Chips or grinds away metal around cracks and joints in workpiece to enable complete fusing of weld. Heats and straightens bent pieces, using torch, hammer, tongs and anvil. Positions and clamps parts together in vise, jig or holding fixture preparatory to welding. Connects hoses to gas supply and selects torch tip or inserts electrode into portable holder and clamps cable to workpiece. Sets pressure gauges on gas supply lines or sets current and voltage levels on power supply. Opens gas valves on torch, ignites torch, and adjusts oxygen and fuel gas mixture to provide proper flame or strikes arc and guides torch or electrode along weld line at proper rate and angle. Builds up parts by welding layers onto worn or damaged areas. Removes slag splatter and excess weld, using chipping hammer, wire brush and portable grinder. Welds in flat, vertical or overhead welding positions. Cuts metal shapes, using flame-cutting torch. Gives directions to other workers helping with welding activities.
May layout, fit and align metal parts, using chalk, scribe, center punch and square.

8335-130 WELDING-MACHINE OPERATOR, GAS-SHIELDED ARC(mach., weld. & forg.) DPT:682
GED: 3 SVP: 6 EC: I 5 6 7 PA: M 4 7

Operates arc-welding machine fitted with welding gun which blows inert or non-combustible gas, such as helium, argon or carbon dioxide, over arc to prevent oxidation of metal in weld area during welding of fabricated parts of metal products:
Positions and clamps workpiece so that welding gun is over weld line. Threads specified electrode wire from reel through automatic feed rolls and welding gun. Turns welding gun to set angle of electrode. Turns knobs to select specified amperage and to synchronize feed of electrode wire with speed of welding action. Connects hose from gun to gas cylinder. Starts machine and observes welding action. Examines weld for adherence to specifications. Adjusts machine set up to vary size and penetration of bead.
May operate machine equipped with gun holding non-consumable tungsten electrode. May be designated according to process; for example,
Welding-Machine Operator, Metal-Inert Gas
Welding-Machine Operator, Tungsten-Inert Gas

8335-134 WELDING-MACHINE OPERATOR, SUBMERGED ARC(mach., weld. & forg.) DPT:682
welding-machine operator, automatic.
GED: 3 SVP: 6 EC: I 5 6 7 PA: M 4 7

Operates arc-welding machine equipped with welding gun which blows granular flux on workpiece weld area to prevent oxidation of metal during welding of fabricated metal parts:
Clamps workpiece onto machine bed. Positions weld line parallel to carriage and turns crank to align electrode on welding head(s) over weld line(s) to weld linear joints, or adjusts radial arm length to weld radial joints. Clamps cylindrical workpieces onto turning rolls under stationary head to weld circular joints. Threads specified electrode wire from reel, through feed rolls and welding head. Turns welding head to position electrode at desired angle. Fills hopper with specified flux and directs flux nozzle or gravity feed over weld line. Connects hose between compressed air source, flux tank and gun. Adjusts controls to provide specified current and to synchronize feed of

electrode wire and flux with speed of welding action. Positions vacuum hose behind weld to reclaim surplus flux. Sets limit switch to automatically stop machine at end of weld. Starts machine and observes welding action and readjusts machine setup to vary size and penetration of bead. Examines welds for adherence to specifications and frequently rewelds defective joints, using hand welding equipment. Installs track template to weld irregular shaped joints and makes trial run before welding. Records setup and operating data. Removes slag and spatter using wire brush, portable grinder and hand scraper.
May tack weld workpieces together. May preheat workpieces in furnace or with blow torch.

8335-138 WELDER, ARC(mach., weld. & forg.) DPT:684
arc welder, hand; welder, shielded-metal arc.
GED: 3 SVP: 6 EC: B 5 6 7 PA: H 3 4 6 7

Welds metal parts together to fabricate or repair parts and equipment, using arc welding equipment:
Clean, chips and grinds cracks and joints in workpieces, using solvents, wire brush, chisel or portable grinders, preparatory to welding. Positions and clamps workpieces together, assembles them in jigs and fixtures or tack welds together for final welding. Selects electrodes according to type and thickness of metal to be welded. Connects cables from power supply to workpiece observing correct polarity. Starts power supply and adjusts machine controls to give amperage and voltage output to suit electrode being used and type and thickness of metal in workpiece. Strikes electrode on workpiece and guides it along weld line at required arc length, electrode angle, speed and weaving motion to melt and deposit metal from electrode to workpiece, producing fusion of metal. Achieves specified depth of fusion by observing colour of metal and size of molten puddle. Listens for excessive sputter which may indicate faulty manipulation, arc action or damp electrode coating which could result in poor welds. Examines weld for size of bead and penetration. Welds in horizontal, vertical and overhead welding positions. Chips and grinds excessive weld, slag or splatter.
May mark off metal shapes for cutting and welding, using templates or specifications. May cut metal plates or structural shapes, using oxy-acetylene flame-cutting machine or hand cutting torch. May preheat certain types of workpieces, using oxy-acetylene torch, blow torch or forge to relieve strains and prevent cracking of metal.

8335-142 WELDER, GAS(mach., weld. & forg.) DPT:684
GED: 3 SVP: 6 EC: B 5 6 7 PA: H 3 4 7

Welds metal parts together to fabricate or repair parts or to build up worn parts, using gas welding equipment:
Prepares workpiece for welding by cleaning or degreasing, using wire brush, portable grinder or chemical bath. Lays out, positions and tack-welds workpieces or uses jigs, fixtures or clamps to hold parts in alignment for welding. Selects torch tip, filler rod and flux according to welding charts or thickness or type of metal and specified bead. Connects torch hoses to oxygen and acetylene, natural gas or hydrogen tanks. Opens tank valves and adjusts hose-line pressures, lights torch and adjusts fuel-oxygen ratio to obtain desired size and colour of flame. Holds torch at proper angle to and distance from workpiece and applies filler rod to form weld along weld line in horizontal, vertical or overhead welding positions. Examines weld for bead size and penetration. Preheats some types of workpieces in furnace or with torch to relieve and prevent internal strain caused by heat. Performs brazing and flame cutting operations. Chips and grinds off excess weld, slag or spatter.
May be designated according to type of fuel-gas used; for example,
Welder Oxy-Acetylene
Welder Oxy-Hydrogen

8335-146 TACK WELDER, ASSEMBLER(mach., weld. & forg.) DPT:684
fit-up-man, welding; tacker.
GED: 3 SVP: 5 EC: B 5 6 7 PA: M 3 4 7

Assembles and tack-welds components of metal equipment and structures, such as frames, bases and machinery parts, at points specified along edges of parts to hold them in place for final welding:
Reads specifications such as drawings and work orders or uses templates to obtain dimensions and shape of metal parts. Examines parts and removes rough spots, burrs and surplus metal with files and portable grinder. Measures and marks locations for layout on metal

castings, forgings and metal stock, using rule, square, scribe, center punch and chalk. Positions and fits parts in jig, using hoist, jacks, shims, fire brick and hand tools. Clamps parts and verifies assembled position, using straightedge, square, rule and calipers. Tack-welds components together in preparation for final welding, using gas, shielded arc or arc-welding equipment. Conveys equipment and materials to work area, and completed assemblies from work area, using crane.

8335-150 WELDER, GAS-SHIELDED ARC(mach., weld. & forg.) DPT:684
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 3 4 6 7

Welds ferrous and non-ferrous metal, using equipment which introduces shield of inert gas around electric arc to prevent oxidation of metal in weld area during welding:
Selects and installs gas orifice and threads consumable wire electrode through portable welding gun. Connects hose from non-combustible gas tank to gun. Adjusts controls to select gas pressure, electric current and rate of feed for wire electrode, according to different thicknesses and types of metal. Connects cables from welding unit to workpiece and welding gun. Strikes arc and manually guides electrode wire tip along weld line. Controls speed of forward travel, torch angle, lateral movement (weaving) and distance of electrode from workpiece.
May weld, using non-consumable tungsten electrode equipped with automatic filler wire feed or apply filler rod by hand. May be designated by process used; for example, Metal-Inert Gas, Welder Tungsten-Inert Gas, Welder Welder, Heliarc

8335-154 WELDER, SUBMERGED ARC(mach., weld. & forg.) DPT:684
GED: 3 SVP: 5 EC: B 5 6 7 PA: H 3 4 6 7

Welds metal parts together to fabricate or repair parts, using handgun or crawler-type gun which feeds bare electrode wire into welding zone through blanket of powdered flux that shields weld zone from oxidation during welding:
Cleans metal workpieces for welding, using wire brush, portable grinder or chemical bath. Positions and clamps workpieces together, assembles them in jig or fixture, or tack-welds them in preparation for final welding. Connects hoses of air compressor, drier, flux tank and welding gun. Turns knobs to select correct amperage and voltage, set speed of automatic feed of electrode and regulate amount of granulated flux sprayed onto workpiece. Presses trigger to start gun and strikes (forms) arc. Manually guides gun along weld line in horizontal plane only, synchronizing speed with feed of electrode and spray of flux, or turns knobs to synchronize drive wheel with gun action.
May use hollow-tube electrode containing flux.

8335-158 WELDER, RESISTANCE, BUTT(mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 6 PA: L 4 7

Operates resistance butt-welding machine to fuse metal articles such as automobile trim, wire ends and refrigerator racks:
Positions and bolts jigs, stops and electrodes to welding machine, using hand tools. Sets parts in jig, adjusts electrical current and moves controls to place electrodes in contact with workpiece and workpieces in contact with each other. Operates controls to start and time flow of electrical current to heat ends of workpieces. Pulls lever to press heated ends together under pressure, for specified time to fuse them.
May move lever to arc current between workpieces, maintain arc for specified time and press heated ends together to fuse metal.

8335-162 WELDER, RESISTANCE, SPOT (mach., weld. & forg.) DPT:682
GED: 3 SVP: 4 EC: I 6 PA: M 4 7

Operates resistance spot-welding machine to fuse together two or more overlapping metal parts:
Sets air and hydraulic pressure, amperage and fusion time according to specified type of metal, welding and assembly instructions. Selects, installs and adjusts electrodes. Aligns workpieces, using square and rule and secures them in jig or with clamps. Depresses pedal to close electrodes on workpiece for specific time to fuse metal at point of

contact. Cleans electrodes with file or emery cloth. Makes peel (separation) test and visually inspects finished work.
May operate machine equipped with two or more electrodes which weld at several points simultaneously and be designated accordingly, Welder, Resistance, Multiple Spot

8335-166 WELDER, PRODUCTION LINE (mach., weld. & forg.) DPT:684
welder, production line, combination.
GED: 2 SVP: 4 EC: I 5 6 7 PA: M 4 7

Welds metal parts on production basis, using previously set up gas- or arc-welding equipment:
Positions and clamps workpieces in jigs or fixtures. Opens valves to release fuel gas and oxygen and ignites mixture, or inserts specified electrode into portable holder, clamps cable onto workpiece or jig and strikes arc. Guides electrode or torch and filler rod along horizontal weld line at specified speed and angle to melt and deposit metal from filler rod or electrode into molten puddle on workpiece. Tack-welds at designated spots to secure workpieces for other welders.
May be designated according to welding process used; for example, Welder, Production Line, Arc Welder, Production Line, Gas

8335-170 RESISTANCE-WELDER TENDER(mach., weld. & forg.) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: H 4 7

Tends any previously set-up spot, butt or seam resistance welding machine to join metal components such as brackets, panels, mouldings, tubes and wire products:
Lifts and positions workpieces into jigs, fixtures, locating holes or holding clamps on machine. Moves controls to clamp workpieces in position, contact electrodes with workpiece, start electric current, and join weld points of workpieces. Holds machine control for specified time to fuse metal by pressure and heat generated by resistance of electric current at weld point. Dresses electrode tips, using grinder, emery cloth or file.
May tend machine which automatically breaks current and pressure. May position strip or wire between weld points to bond workpieces together. May be designated according to process or type of machine used; for example, Brazier, Resistance Welder, Resistance, Seam

8335-174 WELDER, RESISTANCE, HAND (mach., weld. & forg.) DPT:684
spot welder, portable.
GED: 2 SVP: 2 EC: I 5 6 PA: M 3 4 7

Welds overlapping, prepositioned components, using portable spot welding gun to fabricate sheet metal assemblies such as automobile and snowmobile bodies, panels and refrigerator shells:
Positions and clamps electrode under overlapping edges of workpieces. Presses electrode of gun against workpiece at specified weld points to complete circuit between electrodes and heat metal to fusing temperature. Removes electrode after specified period of time. Adjusts amperage depending on thickness of metal.
May position and clamp workpieces together.

Brazing and Soldering Occupations 8335-194 through 8335-246

8335-194 BRAZING-MACHINE SET-UP MAN(mach., weld. & forg.) DPT:360
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 5 6 7

Sets up a variety of brazing machines which braze (bond) or solder metal components together, following layout and other specifications:
Selects, positions, aligns and bolts holding fixtures, guides and stops onto machine, to position and hold workpieces, using measuring instruments and hand tools. Selects and bends tubing and wire to form heating coils, installs coils, and turns knobs to set electric current when setting up induction-brazing machine. Connects hoses from tanks of oxygen and fuel gas, such as acetylene or natural gas, to one or more welding torches. Selects and installs nozzles on torches. Turns knobs and installs gears and cams to set timing devices which shut off

electric current or gas pressure and synchronize conveyor or table with brazing action. Fills cooling coils with water to cool workpieces after brazing. Installs ejecting fixtures on machine to eject completed workpieces. Makes trial runs, readjusts machine, and records set-up data. Gives directions to operators concerning operation of machines. May be designated according to type of brazing machine set up; for example,

Set-Up Man, Flame-Brazing Machine
Set-Up Man, Induction-Brazing Machine
Set-Up Man, Resistance-Brazing Machine

8335-198 INDUCTION-BRAZER OPERATOR(mach., weld. & forg.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Operates induction heating equipment to braze (bond) together metal components, according to layout or other specifications:

Positions and clamps fixtures and stops into machine, using square, rule, or template. Selects heating coil which outlines joint to be brazed or connects holding fixture to electrode. Screws coil to electrode, using brass screws. Adjusts electrical current for type and thickness of metal by turning knobs and referring to data charts. Places wire, strip or preformed piece of brazing alloy over edges of components and brushes flux along seams to be joined. Assembles and positions workpieces into holding fixture. Starts electric current in coils to heat workpiece and melt alloy, using foot-controlled switch. Turns off current and allows workpiece to cool or directs stream of water or air onto workpiece. Removes workpiece, using tongs or tweezers when brazed metal has solidified as indicated by colour.

May set timing control to shut off current automatically when not using foot switches. May anneal finished workpiece to relieve internal stress. May dip workpiece into chemical or hot water bath to remove impurities and flux. May bond workpieces together with soft solder and be designated accordingly.
Solderer, Induction

8335-202 BRAZER, GAS(mach., weld. & forg.) DPT:684
torch brazer.
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 3 4 7

Brazes (bonds) together metal parts to fabricate or repair parts, using gas welding equipment:

Examines drawings, work order, layout or defective parts to determine specifications or repairs required. Cleans surface of workpiece, using wire brush, file, portable grinder, scraper or by dipping workpiece into cleaning solution. Aligns and clamps components together, using rule, square or template or sets up and places them in fixtures, jigs or vise. Selects flux, torch tip and brazing alloy rods according to type of metal or data on charts or work order. Installs torch tip and connects hoses from torch to tanks of oxygen and fuel gas such as acetylene or natural gas. Opens tank valves, regulates hose pressures by observing and adjusting gauge settings, lights torch and adjusts gas mixture to obtain desired colour and size of flame. Brushes flux onto workpiece or dips heated tip of braze rod into flux, to promote bonding. Guides and manipulates torch and rod along joint or seam to heat to brazing temperature and melt braze alloy to bond workpieces together. Builds up worn surface by melting rod over worn area to restore it to original dimensions or prepare it for machining to original dimensions. Visually examines product or salvaged part and tests for leaks or voids in seams, using water or compressed air.

May braze seams of metal sheets, strips, screening or wire cloth, using torch mounted on crawler.

8335-206 BRAZER, FURNACE(mach., weld. & forg.) DPT:682
solderer, furnace.
GED: 3 SVP: 4 EC: I 3 6 PA: M 4 7

Operates electric, gas or oil-fired furnace to braze (bond) or solder metal components, as specified by sketches, charts and work orders:

Adjusts furnace and cooling chamber temperatures and timer setting, specified for type of metal and brazing or soldering alloy by turning knobs and observing recording instruments, gauges and pyrometer. Aligns components and clamps them together, or positions them in holding fixtures under specified pressure. Brushes on flux and places wire or preformed pieces of brazing or soldering alloy over joints. Places workpieces into furnace, onto conveyor or into containers, such as baskets, trays or retorts and loads containers into furnace, manually

or with hoist. Transfers workpieces from furnace to cooling chamber, using pole, hook or by turning cranks.

May operate brazing furnace equipped to introduce reducing gas, such as hydrogen or ammonia or mixture of gases which remove oxides and prevent oxidation of metal during brazing, and be designated accordingly; for example,

Brazer, Controlled-Atmospheric-Furnace
Hydrogen-Braze-Furnace Operator

8335-210 BRAZING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
flame-brazing-machine operator.
GED: 3 SVP: 4 EC: I 3 6 7 PA: M 4 7

Operates flame-brazing machine to bond components of metal products:

Selects torch tips, braze alloy and flux according to type and thickness of metal, as specified by work orders or data charts. Screws tips in torches. Positions and clamps torches at specified distance and angle to workpiece. Aligns and clamps holding fixtures and workpieces to machine bed, or conveyor, using rule, square and hand tools. Fills hoppers with flux and positions spout to direct flow, or manually brushes flux onto seams of workpieces. Loads reel of brazing wire onto machine holder and threads end through automatic feed rolls, or positions preformed pieces of braze alloy along seams of workpiece, or manually applies alloy to seams during brazing. Connects hoses from oxygen and fuel gas tanks to torches. Opens valves to start flow of gases, lights torches and adjusts gas mixture to obtain flame of desired size and colour. Turns knobs to synchronize movement of conveyor table with feed of wire, flux and brazing action. Starts machine which moves workpiece to flame or moves torch to workpiece, to melt alloy into seams. Removes and examines finished product for defective bond.

May dip workpieces into water or acid bath to cool and clean them. May manipulate levers or crank to control movement of machine. May bond workpieces with soft solder and be designated accordingly,
Soldering-Machine Operator

8335-214 SOLDERER(mach., weld. & forg.) DPT:684
solderer, production line.
GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Solders together metal components to fabricate or repair items, such as musical instruments, electrical devices and containers, using soldering iron:

Aligns and clamps parts together, using rule, square or hand tools or positions them in fixtures, jigs or vise, following work orders, diagrams or layout. Dips parts in cleaning solution and files, grinds and brushes parts, and applies flux along seams to prepare them for soldering. Heats soldering iron in gas flame or electric-induction coil, or by plugging it into electrical outlets. Dips tip of iron into cleaning compound and rubs it onto tin alloy to clean and tin it. Guides soldering iron tip along seam to heat workpiece to bonding temperature and melt bar or wire of specified soft solder into seam to solder joint. Removes excess solder, using hand-scraper, files and emery cloth.

May dip workpieces into molten solder or place solder strip between seams and heat seam with iron to sweat them together. May grind, cut, or bend edges to fit fabricated parts together, using power grinder and hand tools. May use hand torch to heat workpiece to facilitate soldering.

8335-218 BODY SOLDERER(motor vehicle) DPT:684
solderer, torch.
GED: 2 SVP: 3 EC: I PA: L 4 7

Fills holes, indentations and seams of automobile and truck bodies with solder, performing any combination of the following duties on production line:

Prepares area to be soldered, using hand and power tools such as chisel, hammer, grinder, sander and wire brush. Brushes acid solution onto area. Heats acid with oxy-acetylene torch by manually moving flame back and forth over area, and wipes surface with rag to remove dirt and excess acid. Rubs stick of solder on heated area and melts solder, using torch. Smooths soldered area with alternate strokes of paddle and torch, leaving soldered section slightly higher than surrounding area for later filing.

8335-222 SOLDERER, JEWELLERY(jewellery & precious metal prod.) DPT:684
GED: 2 SVP: 3 EC: I 6 PA: S 4 7

Solders together parts of new or broken jewellery, using gas torch, solder and flux:
Selects type of solder and flux to be used according to composition of workpiece. Positions parts of workpiece on asbestos board. Lights torch and applies heat, flux and solder to article as needed, to make solder flow and fasten parts together. Immerses workpiece in water to cool and clean off flux.

8335-226 INDUCTION BRAZER, PRODUCTION(mach., weld. & forg.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Tends induction heating equipment to braze (bond) together metal components:
Places wire strip or preformed piece of brazing alloy between edges of parts, and brushes flux along seams of workpieces. Assembles and positions workpieces into holding fixtures. Turns on electric current in fixture or prepositioned coil to heat workpiece and melt brazing alloy. Shuts off current or observes automatic shut-off of current and directs stream of water or air onto workpiece or turns handle to fill coil with water to cool workpiece. Removes workpiece, using tongs or tweezers and checks for voids at solder line.
May dip workpiece into chemical or hot water bath to remove impurities and flux.

8335-230 JEWELLERY-SOLDERING-MACHINE TENDER
(jewellery & precious metal prod.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: S 4 7

Tends soldering machine to solder together metal parts of jewellery:
Sets controls to regulate timing and temperature of machine. Inserts metal jewellery piece in jig attached to machine or positions piece on bed of machine, and holds solder against metal part. Depresses pedal to bring electrodes in contact with jewellery parts and solder, or to allow current to flow into stationary electrodes attached to jig. Releases pedal after solder is melted.

8335-234 SIDE-SEAM TENDER(metal stamp., press. & coat.) DPT:685
seaming-machine operator.
GED: 2 SVP: 3 EC: I 3 5 6 PA: M 3

Tends seaming units of automatic-bodymaking machines to solder side-seams on tin-can bodies:
Deposits solder bars in machine reservoir. Fills and replaces flux bottles that supply flux to roller. Skims impurities from solder bath, using ladle. Cleans and adjusts machine, and clears machine of stuck can bodies. Inspects cans to verify that seaming conforms to specifications.
May mix flux, using viscosity cups and measures.

8335-238 SOLDERER, ASSEMBLER(mach., weld. & forg.) DPT:684
GED: 2 SVP: 2 EC: I PA: S 4 7

Solders small metal workpieces together by assembling components and preformed solder, and placing assembly on heated plate:
Assembles metal components and preformed solder, manually or using small arbor press. Verifies assembly, using fixed gauges. Brushes on flux or dips workpiece in flux bath before or after assembly as specified. Places assembly on gas heated steel plate to melt solder. Removes assemblies from plate, using tweezers, and visually inspects for proper solder penetration. Replaces assemblies, lacking properly soldered joint, on heated plate and places acceptable assemblies on tray.

8335-242 SOLDERER-DIPPER(mach., weld. & forg.) DPT:684
GED: 2 SVP: 2 EC: I 6 7 PA: L 4 7

Dips metal parts into molten solder to bond them together:
Dips workpieces into chemical solution or brushes flux along joints to remove impurities. Places solder bars into pot and turns knobs to

specified position to melt solder and regulate its temperature. Bonds parts together, using one of the following methods: 1. Twists, crimps, clamps or holds parts together and dips them into molten solder for specified time. Removes and holds parts together until colour indicates solder has set. 2. Dips parts separately to coat joints with solder and solders them together with hand iron, heating one part and pressing it against another or places clamped parts into furnace. 3. Clamps workpiece into fixture over solder pot and depresses lever to raise level of solder or lower workpiece into solder.
May dip units, such as radiator cores and armatures, using crane or hoist.

8335-246 TYPE-SOLDERING-MACHINE TENDER (mach., weld. & forg.) DPT:685
GED: 2 SVP: 2 EC: I PA: S 4 7

Tends machine that solders typewriter type to type bars:
Clamps type bar and segment-assembly to holding plate of machine. Selects type in designated sequence and positions it between guides or in matrix plate on machine table. Pulls down type bar with fingers and seats end of bar in back slot of type. Applies flux by dipping tweezers in acid and depositing it in back of slot. Applies solder, heat and coolant automatically by depressing foot-control pedal to solder type to type bars. Uses different fixtures for different styles of type.

Lead Burning Occupations 8335-266 through 8335-278

8335-266 LEAD BURNER(mach., weld. & forg.) DPT:384
GED: 3 SVP: 4 EC: I 6 7 PA: M 3 4 7

Burns (fuses) lead or lead alloy, to install and repair items such as leadpipe, floors, tank linings and lead shielding, using gas torch and hand tools:
Compiles layout and dimensional data from drawings, original work and oral instruction. Cuts lead sheets or pipe, using power saws, hand shears or chipping knife. Levels and scrapes edges or surfaces, using hand scraper, and positions parts for burning. Ignites torch and adjusts valves to regulate flame. Fuses sections together by moving flame of torch along overlapping joints or by heating joints with flame and adding lead from rod, applying knowledge of melting characteristics of lead. Varies techniques for flat, vertical and overhead welding positions. Cleans and smooths fused joints, using hand tools, such as scraper, files and hammer. Bonds lead to steel or copper to produce unitized lining or cover, using flux. Places hand-moulding irons on heavy seams or corners to hold them in position. Heats, forms and dresses lead pipes, elbows and parts, using hand tools and torch. Places asbestos strip under butt-seams to prevent heating of supporting surfaces. Pours molten lead into permanent or sand type moulds to cast parts. Melts scrap lead in kettle and casts it into bars for re-use.

8335-270 BATTERY-LEAD-BURNER, MACHINE(mach., weld. & forg.) DPT:685
GED: 3 SVP: 3 EC: I 6 7 PA: L 4 7

Tends lead-burning machine to fuse lead straps to grouped lead plates to form storage-battery elements:
Adjusts machine fixtures and torch according to size of grouped plates to be joined, using hand tools. Opens gas valves, ignites torch, observes pressure gauge and adjusts valves to set flame to specified size and colour. Starts machine and inspects fused elements for lead runs and defective plates and separators. Adjusts flame to correct burning malfunctions. Fuses elements missed by machine, using hand torch. Places specified number of elements in battery box, in prescribed polarity arrangement and inserts shims when necessary.
May load groups of plates in lead-burning machine and fit straps to lugs preparatory to fusing.

8335-274 BATTERY-LEAD BURNER(mach., weld. & forg.) DPT:664
GED: 2 SVP: 3 EC: I 6 7 PA: L 4 7

Fuses together lead and lead-alloy connections and builds up storage-battery parts, using oxy-acetylene torch and lead filler bar:
Opens acetylene valve, lights torch and adjusts flame by regulating oxygen and acetylene valves to obtain proper fuel mix for flame of specified temperature. Manipulates torch over joining points of parts,

adding metal as required by melting end of lead bar. Seals fusion points of parts, such as straps, posts or strips connecting battery plates. Guides torch and metal bar to add metal and build up parts, such as battery posts to specified size, using moulds. Installs and removes moulds or burning-dams used to position molten lead. May be designated according to specific task performed; for example, Battery-Connector Burner
Battery-Post Builder

8335-278 BATTERY-LEAD-BURNER HELPER(mach., weld. & forg.) DPT:687
GED: 2 SVP: 2 EC: I 6 7 PA: M 4 7

Helps in lead-burning by preparing storage battery parts for fusing (lead burning), performing any combination of the following duties: Positions specified number of positive and negative plates in burning-rack in preparation for fusing to connecting straps. Places intercell connectors on assembled batteries. Places moulds over posts preparatory to adding lead to build up posts to specified shape and height. Removes moulds from posts after burning, using tongs, and places positive and negative moulds in separate containers. Selects burning racks according to size of plates grouped. Stamps polarity symbols on posts, using hand-marking dies. Hauls plates from storage to burning area, using handtruck. Fills grooves in one-piece-battery covers with epoxy resin, using machine. Places covers on batteries. See also definition for term title, 02-160 HELPER (any ind.).

Arc and Flame Cutting Occupations 8335-298 through 8335-314

8335-298 FLAME-CUTTING-MACHINE OPERATOR(mach., weld. & forg.) DPT:682
burning-machine operator; gas-cutting-machine operator.
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 4 7

Operates flame-cutting machine to cut metal plates and structural shapes to dimensions, contour and bevel: Lifts, positions and clamps metal stock onto bed of machine. Connects hoses from torch to tanks of oxygen and fuel gas, such as acetylene, hydrogen or propane. Selects torch tip, gas and oxygen pressures and speed of cut, according to type and thickness of metal, from experience, data charts or record of previous cuts. Installs tip in torch and turns crank to slide cutting heads from overhead carriage or adjusts sliding arm from side carriage to position torch over cutting line. Adjusts height of head over workpiece to make longitudinal cuts. Regulates length of radial arm to cut out arcs or circles. Tilts torch to angle to cut bevels. Turns knobs and reads gauges to obtain selected oxygen and gas pressures and mixture, and to set speed of cutting action. Lights torch, preheats edge of metal to oxidizing temperature, starts machine and opens valve to release additional oxygen to burn path through metal along cutting line. Observes process and makes minor adjustments to improve cutting action. Manually guides torch suspended from free-moving arm, or crawler-type torch, along cutting line to cut irregular shapes. Clamps two or more plates together for simultaneous cutting. May operate machine equipped with two or more cutting heads. May lay out cutting lines, using rule, tape and square. May set up portable track or radial arms to cut large pieces in position.

8335-302 FLAME-CUTTING TRACER-MACHINE OPERATOR (mach., weld. & forg.) DPT:682
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 4 7

Operates machine which follows outline or track of template and transfers action through levers to torch which cuts metal plates and structural shapes: Prepares workpiece and equipment for flame-cutting operations 8335- 298 FLAME-CUTTING-MACHINE OPERATOR (mach., weld. & forg.). Positions, aligns and secures template onto adjacent table. Positions tracer wheel stylus or magnetized roller onto edge of template and guide wheel onto track, or beam of photoelectric cell over edge of drawing on photographic plate. Lights torch, preheats edge of metal to oxidizing temperature and opens valve to release additional oxygen to burn path through metal. Starts machine which moves tracer along track edge of template or over drawing and transfers movement to bug-type (crawler) cutting head through series

of levers. Observes process and makes minor adjustments to improve cutting action.

May manually guide stylus or tracer wheel along edge of template or sketch drawn on table. May set up portable track or radial arms to cut plates in position. May be designated according to equipment used; for example, Electric-Eye Flame-Cutting-Machine Operator
Magnetic-Flame-Cutting-Machine Operator
Pantograph-Flame Cutter
Track-Template Flame-Cutting-Machine Operator

8335-306 ARC CUTTER(mach., weld. & forg.) DPT:684
GED: 3 SVP: 4 EC: I 5 6 7 PA: H 3 4 7

Cuts, trims, or scarfs metal objects to dimensions, contour, or bevel, using arc-cutting equipment: Positions workpiece onto table or into fixture, manually or with hoist. Selects carbon or metal-coated-carbon electrode, air nozzle, electric-current rating and air pressure, according to thickness of metal, data on charts or from records of previous cuts. Inserts electrode and air nozzle into holder and connects hose from holder to compressed air supply. Connects cables from power source to electrode and workpiece or fixture to obtain desired polarity. Sets amperage by turning knob. Turns lever to adjust jet of air to blow away molten metal. Strikes arc and guides electrode along lines to cut (melt) through metal. Cuts off chips or sprues and burns out cracks and holes. May cut without use of air jet. May use non-consumable tungsten electrode and inert or fuel gas depending on type of metal being cut. May lay out specified shape on metal, using straightedge, scale and compass or trace layout from template or pattern.

8335-310 FLAME CUTTER, HAND(mach., weld. & forg.) DPT:684
burner; cutter, gas; cutter, torch.
GED: 3 SVP: 4 EC: B 5 6 7 PA: M 3 4 7

Cuts, trims, or scarfs metal objects to dimensions, contour, or bevel, using flame-cutting torch: Lays out cutting lines or traces from template, using rule, square, compass, chalk, scribe, center punch and hammer. Moves workpiece to work site and positions it manually or by using crane or hoist. Connects hoses from hand torch to oxygen and fuel-gas cylinders, and adjusts valves to regulate pressures. Selects cutting tip to cut metal of different types and thicknesses. Opens torch valves, lights torch and adjusts flow of oxygen to obtain desired mixture as indicated by colour and size of flame. Directs flame onto workpiece to heat it to oxidizing temperature as indicated by colour of metal. Squeezes lever or trigger to release additional jet of oxygen, which burns path through metal. Guides flame across workpiece following cutting line, allowing for width of cut and observing cutting to judge angle, distance of torch, and speed of movement. Removes and inspects finished workpiece. Chips or grinds burrs from edges, using power chisel or portable grinder. Cuts damaged or worn pieces from metal structures, such as bridge or building frames, ship plates or pipelines. May install special tip to cut grooves into metal joints to prepare workpieces for welding. May flame cut aluminum, using oxy-acetylene torch equipped with steel dust and compressed air equipment.

8335-314 FLAME CUTTER, SCRAP(mach., weld. & forg.) DPT:684
burner, scrap.
GED: 2 SVP: 3 EC: B 6 PA: M 3 4 7

Dismantles metal assemblies, such as automobiles, machines, building girders and ships and cuts scrap metal to size, using flame- cutting torch: Connects hoses from hand torch to oxygen and fuel gas cylinders, and adjusts valves to regulate pressures. Selects cutting tip to cut metal of different types and thicknesses. Opens torch valves, lights torch and adjusts flow of oxygen to obtain desired mixture as indicated by colour and size of flame. Directs flame on workpiece to heat it to oxidizing temperature, as indicated by colour of metal. Squeezes lever or trigger to release jet of oxygen, which burns path through metal. May climb ladders or work on scaffolds to disassemble structures. May signal and guide crane operator in the disposal of scrap metal after it has been cut.

Miscellaneous Welding and Flame Cutting Occupations
8335-334 through 8335-399

8335-334 WELDING TECHNICIAN(mach., weld. & forg.) DPT:281
GED: 4 SVP: 7 EC: I 5 6 7 PA: L 4 5 7

Develops welding and brazing machine set-up data to ensure that welded parts conform to engineering specifications, applying knowledge of machine functions, electronics, properties of metal, effects of heat and shop mathematics:
Analyzes orders and diagrams for data such as specified strength of joint, dimensions and tolerances. Selects and modifies fixtures for custom jobs. Decides welding process to be used for particular job, such as electric arc, metal-inert-gas, resistance, gas or braze welding. Repairs or modifies welding equipment, using drill press, lathe, lapping and grinding wheels. Sets up machines for trial runs. Welds, tests and inspects samples to verify machine setup. Readjusts machine to obtain specified dimensions, type and strength of weld. Records data and prepares set-up charts and diagrams. Inspects and tests new machines to detect imperfections and develop set-up techniques. Recommends repairs or changes to improve function of welding machine. See also definition for term title, 02-410 TECHNICIAN (prof. & tech., n.e.c.).

8335-338 METAL STRAIGHTENER AND HEATER(mach., weld. & forg.) DPT:684
straightener and heater, torch.
GED: 3 SVP: 4 EC: I 3 5 6 PA: H 3 4 7

Straightens metal plates, weldments and structural shapes or preheats them preparatory to welding or bending, using gas welding equipment:
Selects torch tip according to thickness, area and temperature of metal to be heated. Screws tip on torch and connects hoses from torch to oxygen and fuel-gas tanks. Opens valves on tanks, regulates hose pressure, lights torch and adjusts mixture to obtain desired size and colour of flame. Holds or guides flame along surface of workpiece to heat and expand metal to achieve specified straightness, or until colour indicates sufficient heating for welding or machine straightening or bending. Measures workpiece with straightedge or template to insure conformance to specifications. Hammers out bulges and bends.
May roll workpiece on flat surface or mount and rotate it between centers to observe irregularities. May use jack or press to straighten workpiece. May place workpiece into furnace or forge to heat metal for straightening.

8335-342 WELDER HELPER(mach., weld. & forg.) DPT:687
GED: 2 SVP: 3 EC: I 5 6 7 PA: H 3 4 5 6

Helps in welding, brazing, and flame and arc cutting processes by performing any combination of the following duties:
Helps set up welding machines and equipment by securing specified tip in torch, or inserting specified welding rods in holders, or placing reels of wire onto racks and threading wire through feed rolls. Fills machine hoppers with powdered or liquid flux. Connects hoses to gas supply tanks or cables to electrical power supply. Conveys workpieces, tools, jigs and supplies to work site, manually or with hand truck or crane. Prepares workpiece for welding by cleaning with wire brush, solvents or portable grinder. Clamps workpiece into holding fixture or places in trays or on conveyor in specified order. Brushes flux along seams of workpiece. Preheats workpiece by placing into furnace for specified time. Removes finished workpieces, using tongs or hoist. Tags or marks finished weldments with identifying information. Cleans welding equipment, picks up scrap and sweeps work area. See also definition for term title, 02-160 HELPER (any ind.).
May be designated according to type of process or machine operator helped; for example,
Flame-Cutter Helper
Welding-Machine-Operator Helper, Arc
Welding-Machine-Operator Helper, Gas

8335-346 MACHINE FEEDER(mach., weld. & forg.) DPT:686
GED: 2 SVP: 2 EC: I 6 PA: M 4

Feeds metal components and removes finished assemblies from brazing, soldering or welding machines or furnaces:
Places or clamps metal workpieces into holding fixtures, onto heating fixtures, trays or conveyor, in specified order. Removes finished assemblies after they have passed through heated induction coil,

furnace, between electrodes or over gas flame and through cooling chamber or water. Places supplies, such as wire and powdered or liquid flux into machines. Loads components into hoppers to feed machines which automatically position them into fixtures. Stacks completed workpieces on pallets or places them on conveyor.
May examine finished work and separate defective pieces. May be designated according to machine fed; for example,
Brazing-Furnace Feeder
Brazing-Machine Feeder
Soldering-Machine Feeder
Spot-Welder Feeder

8335-399 OTHER WELDING AND FLAME-CUTTING OCCUPATIONS

This group includes welders and flame-cutters, not elsewhere classified; for example, those concerned with making wire mesh sieves and guards, used for swimming pools, in motors of jet aircraft, motor boats and automobiles; and operating continuous-butt-welding machine to automatically weld pipe seams.

8336-INSPECTING AND TESTING OCCUPATIONS, METAL SHAPING AND FORMING, EXCEPT MACHINING

This unit group includes occupations in inspecting and testing work, as described under the term titles, 02-170 INSPECTOR (any ind.) and 02-430 TESTER (any ind.), concerned with quality control activities in metal shaping, forming and welding, except machining.

8336-110 WELD INSPECTOR(mach., weld. & forg.) DPT:281
weldability-test inspector.
GED: 4 SVP: 7 EC: B 5 6 7 PA: H 3 4 7

Inspects and tests welded joints of work in progress or of completed units, for visible defects, correct dimensions, joint strength, bead and weld penetration:
Measures dimensions of workpiece for conformance with layout, drawings and specifications. Examines joints visually to detect flaws, such as hair-line cracks, cold-weld spatter and undercuts, using flashlight and magnifying glass. Inspects joints for defects, using non-destructive testing methods, such as magnetic-testing machine, fluorescent penetrants, X-ray or ultrasonic equipment. Tests strength of joint, using stress-testing equipment. Inspects internal structure of welded joint, using X-ray machine to locate defects, and analyzes X-ray photographs to identify defects. Verifies welding machine setup and alignment and dimensions of product, visually and using precision measuring instruments. Marks defective workpieces and recommends scrapping or re-working. Performs welding trials and observes action for spatter and bubbles to detect impurities in metal. Records inspection data and submits technical reports.
May instruct employees in welding, to prepare them for certification tests.

8336-114 INSPECTOR, METAL FABRICATING(any ind.) DPT:381
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Inspects and tests materials, finished metal products, and work in process of fabrication into metal products, to ensure conformance with work orders, drawings and specifications:
Measures center lines and reference points to verify initial assembly, layout and machine setup, using lay-out plate, templates, squares, straightedge, feeler gauges and tape. Verifies size and other physical properties of materials, such as plates, sheets, structural shapes, castings, forgings, dies, fixtures and work produced by metalworking machines, using magnetic-flux machine, surface plate, hardness testing equipment, gauges and micrometers. Examines finished products for rough edges, cracks and appearance. Marks parts for acceptance or rejection. Recommends changes in dies, fixtures and materials used to improve product or simplify operations.

8336-118 INSPECTOR, FORGINGS(mach., weld. & forg.)
DPT:261

GED: 4 SVP: 6 EC: I 5 PA: H 3 4 5 6 7

Inspects forgings for conformance to manufacturers' standards:
Reads job order and drawings to determine forging specifications.
Verifies dimensions of forgings, using measuring devices such as calipers, gauges and rules. Examines forgings to detect surface defects, such as scale, laps and cracks. Informs supervisor of defects and their probable cause. Stops production and orders variations in forging methods, such as change in heating temperature, modification of ram stroke or realignment of dies to correct defects. Re-examines forging to determine if all specified operations, such as heat treating, cleaning and machining have been performed.
May inspect raw stock. May inspect hot or cold forgings before completion and be designated accordingly,
Inspector, Hot Forgings

8336-122 INSPECTOR, LEAF SPRINGS(mach., weld. & forg.)
DPT:381

GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Inspects and tests leaf springs for conformance to specifications:
Verifies length, taper, curvature, trimming and punching of spring leaves, using scale, gauges and template. Tests spring leaf in load-tester to determine if springs meet load requirements. Verifies intensity of shot-peening treatment by feeding fixture containing test strip into shot-peening machine and measuring curvature produced in strip, using gauge. Records test results for quality control purposes.
Observes spring assembly operations to ensure that parts are assembled according to specifications. Recommends changes in machine setup or assembly operations to improve product or simplify operations.
May adjust spring-forming machine, if inspection and testing indicate faulty production, by changing or aligning dies, using hand tools.

8336-126 INSPECTOR, METAL-PARTS(any ind.) DPT:684
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Inspects unfinished metal parts of products, such as refrigerators, dryer cabinets, baby carriages and furniture, for defects in metal surfaces or poor workmanship:
Visually examines and feels surface of metal parts to detect defects. Marks rejected piece with chalk or crayon and returns it to proper department for repairs. Checks welds and bent corners for burrs. Removes burrs with file and abrasive cloth. Records parts rejected and reason for rejection.
May visually inspect surfaces of painted articles to detect rough or discoloured areas.

8336-130 INSPECTOR, TIN CAN(metal stamp., press. & coat.)
DPT:384

GED: 2 SVP: 4 EC: I 5 6 PA: L 4 7

Inspects and tests tin cans and tin can components to ensure that standards are maintained:
Pulls samples of tinplate, can ends, can bodies or assembled cans from production line, and visually examines them for flaws such as scratches and dents, or deficiencies in sealing compound or lacquer. Cuts parts from tinplate sheets or assembled cans, using handpress, cutter or can opener. Measures structural features such as overlap of body flange and contour of seam with dial gauges, charts and magnifying projector. Measures bursting strength of cans and tests for leaks, using mechanical, air pressure or water testing devices. Examines coatings on tinplate and tin cans for thickness and evenness of application by chemical, dye or electrical tests or by precision weighing. Checks performance of critical parts of production equipment, using solder analyzer, pyrometer and thermometers. Compiles test records and compares results with standard specifications.
May sort defective cans and tinplate sheets according to specification chart for shipment, scrap or recovery. May supervise employees performing water and air testing, inspecting and sorting of tin cans.

8336-134 INSPECTOR, WIRE PRODUCTS(wire prod.)
DPT:684

GED: 2 SVP: 4 EC: I PA: M 3 4 7

Inspects wire products such as barbecue frames, oven or refrigerator racks, wire cloth and chain-link fabrics for conformance to specifications:
Places product in fixture or rolls out fabric to check dimensions and verify specified size and shape. Examines product for defects such as broken welds, chipped or unpainted surfaces, holes, or uneven weave. Twists and bends product into alignment, using hands or pliers. Cuts out defective sections of wire cloth or fabric, using scissors or wire cutters. Staples ends of cloth together, using stapling gun. Routes defective products to repair shop.
May record fabrication data after finishing process. May be designated according to type of wire product inspected.

8336-138 SPRING TESTER(mach., weld. & forg.; metal fab., n.e.c.)
DPT:684

load tester, springs.

GED: 2 SVP: 4 EC: I PA: M 4 7

Tests coiled or leaf springs for conformance with specified load, dimension and hardness requirements:
Verifies dimensions and shape of finished springs, using gauges or template and measuring instruments such as micrometers and calipers. Positions springs in holding fixture of press table. Presses button to lower ram or pulls lever to compress spring to specified load-test limits. Measures contraction of spring, using gauges. Releases press and measures uncompressed spring. Rejects springs which do not return to specified measurements. Tests hardness of spring material, using tester which makes indentations in spring surface for measurement and comparison. Observes temperature gauges of furnaces, quenching-oil baths and draw-ovens to ensure specified heat treatment of springs. Records temperature readings and test results for quality control purposes.
May insert wedges between spring coils and tap with mallet to adjust light springs to specified length and pitch. May test intensity of shot-peening treatment of leaf springs by placing test strip in fixture and measuring curvature of strip after shot peening.

8336-142 CHAIN-TESTING-MACHINE TENDER(mach., weld. & forg.)
DPT:685

GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that tests strength of chains:
Adjusts chain-holding jaws on machine, to accommodate size of chain, using hand tools. Sets scale dial to specified pounds, to regulate pulling power of machine. Positions chain in jaws and starts machine. Examines and gauges chain to detect broken or stretched links. Rolls chain on coil and ties it in bundle, using wire.
May dip bundle in anti-rust tank, using electric hoist.

8337-BOILERMAKERS, PLATERS AND STRUCTURAL-METAL WORKERS

This unit group includes occupations concerned with fabricating, assembling, erecting and repairing boilers; and fabricating structural parts and sub-assemblies for storage tanks, ships and other structures made from steel plates, tubes, beams, or similar materials. Activities include: laying out and marking metal and setting up and operating heavy-duty metalworking machines to cut, bend, roll, fit, drill, punch, ream, bolt, weld and rivet metal stock. Occupations concerned with erecting and repairing structural-metal parts and sub-assemblies are classified in their appropriate unit group in Major Group 85, PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS and Major Group 87, CONSTRUCTION TRADES OCCUPATIONS.

8337-110 BOILERMAKER(struct., plate & ornam. metal)
DPT:360
GED: 4 SVP: 7 EC: 1 5 PA: H 3 4 7

Lays out, fabricates, assembles and welds boilers, tanks, pressure vessels and parts in boiler shop:
Develops layout and plans sequence of operations, applying knowledge of trigonometry, allowances for thickness of metal, machine and welding shrinkage, and physical properties of metal. Locates and marks bending and cutting lines on workpiece, using T-squares, protractors, compasses and drawing instruments or templates. Sets up and operates metalworking machines such as brakes, rolls, shears and drill presses. Cuts metal plate and brackets, using flame-cutting torch. Hammers, chips and grinds workpiece to shape or fit parts. Preheats workpieces, using hand torch or furnace. Positions, aligns, fits and welds parts together. Installs and expands boiler tubes, using tube expander. Designs and constructs templates and fixtures. Directs helper in performing his duties.
May fabricate and assemble sheet metal products such as domestic boilers and smoke and ventilation stacks.

8337-114 STRUCTURAL-METAL FABRICATOR(struct., plate & ornam. metal)
DPT:360
GED: 4 SVP: 7 EC: 1 5 PA: H 2 3 4 5 6 7

Fabricates, assembles, and repairs structural-metal products, such as framework or shells for machinery, tanks, stacks, and metal parts such as beams, stairs and railings for buildings and bridges according to job specifications or drawings:
Develops layout and plans sequence of operations, applying knowledge of trigonometry, allowances for thickness of metal, machine and welding shrinkage and physical properties of metal. Locates and marks bending and cutting lines on workpiece. Sets up and operates various metalworking machines, such as brakes, rolls, shears, flamecutters and drill presses. Cuts, bends, and straightens metal by hammering, sawing, chipping and grinding. Preheats workpieces, using hand torch or furnace. Positions, aligns, fits and welds parts together. Designs and constructs templates and fixtures. Directs activities of hoist or crane operators, other workers and helpers during fabrication, assembly, or repair of metal structures in shop.
May fabricate and assemble sheet metal products. May set up and operate machine tools such as radial drill press, end mill or edge planer.

8337-118 BOILERMAKER, ERECTION AND REPAIR(struct., plate & ornam. metal)
DPT:361
GED: 4 SVP: 7 EC: B 5 6 7 PA: VH 2 3 4 7

Assembles, erects and repairs boilers, and associated tanks and vats on site, following drawings and using hand and power tools:
Determines location and relationship of parts from drawings and other specifications. Locates and marks position of parts, using tape, transit, square and plumb bob. Drills and taps holes with portable drill to install studs. Sets up rigging or signals crane operator to lift and position parts and assemblies. Aligns structures, sections or parts to assemble boiler frame, tanks or vats, using plumb-bobs, levels, wedges, turnbuckles, jacks, hammers and drift pins. Hammers, flame-cuts, files or grinds irregular sections or structures to fit edges together. Straightens or reshapes bent plates or structural members, using hammer, jacks and welding torch. Clamps, bolts or tack-welds parts in place for final welding or bolting. Tightens bolts with hand or power wrenches to assemble frames, mount casings of water-tube boilers or to assemble davit heads, burners or furnace casings to fire-tube boilers. Positions drums and headers into supports and bolts and welds to frame. Connects boiler tubes by expanding ends with tube expander, belling ends with power hammer or welding tube ends to heads to ensure leakproof joints. Bolts or welds casing sections, stacks, baffles and other fabricated parts such as chutes, air heaters, fan stands, feeding tubes, ladders, coal hoppers and safety hatch to frame. Installs manholes, valves, gauges, and feed water connections to complete assembly of water tube boilers. Assists in testing assembled vessels by pumping water or gas under specified pressure into vessel, and observes instruments to detect possible leaks. Repairs boilers or tanks on site by unbolting or flame-cutting defective sections or tubes, installing new tubes, fitting and welding new sections and replacing worn lugs on bolts. Lines firebox with refractory brick and compound. Gives direction to helpers during assembly, erection and repair of boilers.
May fabricate parts such as stacks, uptakes and chutes to adapt boiler to premises in which it is installed. May thread and install stay-tubes,

using pipe wrench and dies. May rivet and caulk sections of vessels or or shells, using pneumatic rivetting and caulking hammers. May specialize in boiler maintenance and be designated accordingly.
Boilermaker, Maintenance

8337-122 FITTER, STRUCTURAL METAL(struct., plate & ornam. metal)
DPT:361
fitter-assembler, structural metal.
GED: 4 SVP: 7 EC: 1 5 6 PA: H 2 3 4 5 7

Lays out, aligns, fits and assembles fabricated parts and frameworks of structural metal, in shop, as specified by drawings and lay-out specifications:
Examines drawings and materials list to obtain parts specifications. Plans sequence of operations, applying knowledge of geometry, effects of heat and allowances for weld shrinkage, machining and thickness of metal. Locates and marks centerlines and reference points on floor, plate or face block and transposes them to workpiece, using square, tape, scale, chalk line, plumb-bob, soapstone, scriber and transit. Tack-welds scrap metal to form jig for assembly. Positions parts in jig, manually or with hoist or crane, and files, chips, and grinds parts and reams holes to fit them together. Aligns heavy parts and sub-assemblies, using jacks, turnbuckles, wedges, drift pins, pry bars and hammers. Removes high spots and surplus metal, using hand files, portable grinder and cutting torch. Heats parts with oxy-acetylene torch and shapes them, using vise, anvil, or stakes mounted on table. Straightens warped or bent parts, using sledge and torch or straightening press. Positions and tightens braces, jacks, clamps or ropes to fit workpieces together for bolting, riveting or welding. Compares dimensions of parts and assemblies to specifications, using square, tape and scale. Erects ladders and scaffolding to fit together large assemblies. Gives directions to helpers.
May tack-weld parts in position in preparation for final welding. May join parts by braze welding (bonding), using oxy-acetylene torch and brazing rod. May anneal parts to remove stresses after welding by heating and allowing parts to cool slowly.

8337-126 LAY-OUT MAN, STRUCTURAL METAL(struct., plate & ornam. metal)
DPT:381
GED: 4 SVP: 7 EC: 1 5 PA: M 3 4 7

Lays out reference points and dimensions on structural shapes, plates and tubes for fabricating, welding and assembling into structural metal products, such as cranes, bridges, buildings, boilers, smoke stacks, and conveyors:
Plans and develops layout as outlined in drawings and templates, applying knowledge of trigonometry, product design, effects of heat and allowances for curvature and thickness of metal. Determines from templates and drawings location of holes, cuts and bends. Details location and sequence of cutting, drilling, bending, rolling, punching and welding operations, using instruments, such as compass, protractor, dividers and rule. Marks curves, lines, holes, dimensions and welding symbols onto workpiece, using scribes, soapstone and center punches.
May design and make templates of wood, paper or metal. May fit and align fabricated parts for welding or assembly operations.

8337-130 METAL FORMER, HAND(struct., plate & ornam. metal)
DPT:361
GED: 4 SVP: 6 EC: 1 5 PA: H 4 7

Bends or straightens hot or cold metal plates, bars, pipes and tubes, structural shapes and weldments to form angles, curves or flanges as specified by drawings, layouts and templates:
Lays out reference points on workpiece, form blocks or bending table, using tape, compass and radius bar and applying knowledge of shop mathematics, effects of heat and physical properties of metal. Sets up and bolts or clamps fixtures, dies and forming bars to form-block or bending table to outline specified contour. Heats metal, using furnace or hand torch. Lifts, positions, aligns and clamps or bolts workpiece to form-block, fixture or bending table, manually or with hoist. Bends workpiece, using bar, power bender or tugger or by hammering with sledge or mallet. Straightens out warps or bumps by heating with hand torch and using hammer. Chips and grinds edges to specified contour, using chipping hammer and portable grinder. Operates hand-powered machines such as roll brake or bender.

8337-134 HEAVY-DUTY PRESS-SET-UP OPERATOR(struct., plate & ornam. metal) DPT:380
hydraulic-press operator.
GED: 4 SVP: 6 EC: I 5 6 PA: H 3 4 7

Sets up and operates vertical or horizontal heavy-duty power press to bend or form radial shapes and straighten heavy metal bars, plates, structural members, forgings and weldments as specified by drawings, layout and templates:

Plans sequence of operations, applying knowledge of physical properties of metal. Sights along, measures and marks workpiece, using tape, rule, straightedge, template and square. Selects and positions flat, V-block radius or special purpose die sets into ram and bed of machine, using crane or hoist. Aligns and bolts dies to ram and bed of machine, using gauges, templates, feelers, shims and wrenches. Turns handwheel or levers to set depth and pressure of ram stroke. Preheats workpiece in furnace or with hand torch. Lifts and positions workpiece between dies of machine, using crane and sledge. Starts machine to move ram that bends or straightens workpiece between dies. Repositions workpiece and changes dies when making multiple or successive passes. Positions roller table to support workpiece for horizontal pressing and repositions roller tables after each pass to bend or form radial shapes. Hand forms or finishes workpiece, using sledge and anvil. Inspects finished workpiece for conformance to drawings or layout and marks identifying information on workpiece. May set up and operate heavy-duty press equipped with concave and convex die sets to form heavy plate disks into concave shapes. May operate press equipped with two or more rams to bend angles or flanges, or bend to radius by successive passes. May draw full-scale pattern of workpiece on lay-out table or floor, using tape, square and dividers according to drawings, and verify dimensions of workpiece against pattern.

8337-138 METAL-FORMING MACHINE-SET-UP OPERATOR (struct., plate & ornam. metal) DPT:380
GED: 4 SVP: 6 EC: I 5 PA: H 4 7

Sets up and operates metalworking machines, such as brakes, rolls, shears, saws, and heavy-duty presses to cut, bend, straighten and form metal plates, sheets and structural shapes as specified in drawings, layout and templates:

Selects, positions and clamps dies, blades, cutters and fixtures into machine, using rule, square, shims, template, built-in gauges and hand tools. Positions and clamps stops, guides and turntables. Turns handwheels to set pressure and depth of ram stroke, adjustment of rolls, and speed of machine. Locates and marks bending or cutting lines and reference points onto workpiece, using rule, straightedge or by tracing from templates. Positions workpiece manually or with hoist against stops and guides or aligns lay-out marks with dies or cutting blades. Pushes button to start machine. Repositions workpiece and changes adjustments or dies for multiple or successive passes. Measures completed work, using rule, gauges and templates to conform to specifications. Preheats heavy metal workpieces, using hand torch or furnace.

May operate other machines, such as bar straighteners, drill presses, flame cutters, spot welders and metallizing equipment.

8337-142 ORNAMENTAL-METAL WORKER(struct., plate & ornam. metal) DPT:380
GED: 4 SVP: 6 EC: I 5 PA: H 4 7

Makes architectural metal parts of ornamental and functional design; such as, grills, railings, gates and fences containing scrolls, decorative twists and interlaced metal:

Develops lay-out and plans sequence of operations, applying knowledge of shop mathematics, allowances for metal thickness, machine and welding shrinkage and physical properties of metal. Designs and constructs templates and fixtures. Locates and marks bending and cutting lines onto workpiece. Sets up and operates metalworking machines, such as brakes, rolls, shears, flamecutters, drill presses, and scroll and twisting machines. Manually bends metal around jigs or scroll irons, or twists metal, using twisting fork. Feeds metal stock between opposing cog wheels that rotate to form ripples, crimping or ribbon mesh from stock. Interlaces rippled or twisted metal stock to form ornamental grillwork. Cuts, shapes and fits workpieces by hammering, chipping and grinding. Preheats heavy workpieces, using hand torch, forge or furnace. Positions, aligns, fits and welds together parts. Fabricates miscellaneous products such as

fire escapes, access ladders, flag poles, gratings, guard railing, gates and brackets.
May install finished products.

8337-146 SLIP-ROLL OPERATOR, HEAVY DUTY(metal stamp., press. & coat.) DPT:382
bending-roll operator.
GED: 4 SVP: 5 EC: I 5 6 PA: H 3 4 7

Operates slip-rolling machine to bend metal plates, sheets or bars into arcs, cylinders, cones or curved structural shapes according to drawings, and templates:

Lifts upper roll by pulling lever, and positions workpiece into machine manually or with crane. Lowers roll and turns nuts or handwheel to lock roll into machine, and to adjust pinch-roll to thickness of metal. Turns handwheel to adjust roll to set degree of curvature of initial pass. Starts machine and sets feed speed of workpiece. Controls back and forth direction of workpiece by moving lever. Adjusts roll after each pass to progressively form workpiece into specified shape. Realigns workpiece between rolls, using hammer. Measures arcs with template and rule. Sets adjustment roll at angle to form conical shapes. Adjusts roll to straighten warped or bent bars or plates. May preheat metal, using hand torch or furnace. May operate vertical-roll machine and be designated accordingly, Vertical-Roll Operator

8337-150 STEEL-PLATE SHAPER(ship & boat bldg.) DPT:664
tampo heater.
GED: 3 SVP: 6 EC: B 5 6 7 PA: H 2 3 4 7

Shapes hull and deck plates of ship to specified contour, using oxy-acetylene torch:

Signals crane operator to lower rolled plate onto support blocks. Prepares heating torch by connecting fuel lines and adjusting fuel supply controls to obtain desired mixture. Applies heat to selected areas of plate for specified time in accordance with heat-treating process and knowledge of metallurgy, using weight placed on plate to facilitate shaping, and template to provide guidelines for specified contour. Inspects plate after cooling and repeats heating process until desired contour is obtained.

May apply heat to plates to remove distortions caused by welding.

8337-154 ANGLE-SHEAR OPERATOR(struct., plate & ornam. metal) DPT:382
GED: 3 SVP: 5 EC: I 5 PA: H 4 7

Operates shearing machine equipped with sets of cutting dies or blades to shear structural shapes, such as angles, channels and Z-bars to specified angle, length or bevel: Selects, aligns and fastens cutting blades or dies in machine, using rule, gauge, shims, feelers and wrench. Turns handwheels to adjust angle and pressure of blade. Positions and clamps stops and side guides to set length and angle of cut, using rule, built-in gauges or template. Lifts workpiece manually or with hoist or crane to machine bed or roller table and positions it against side guide and end stops. Starts machine that clamps workpiece and activates cams that force blades to shear metal. Lays out cutting lines on metal, using rule, square, or template when shearing custom pieces.

May set up shear with single set of blades to cut bars or rounds. May inspect work, using tape, compass, gauge or template to verify dimensions.

8337-158 BOILERMAKER HELPER (struct., plate & ornam. metal) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: H 2 3 4

Helps workers to fabricate and assemble boilers and steel-plate vessels, such as tanks and vats in boiler shop, performing any combination of the following duties:

Tends machines, such as drill press, punch press and boring mill to drill, punch and ream metal stock for boiler parts. Tends power shears to cut plate to size and shape. Grinds welded joints, and other irregular areas to smooth boiler surfaces, using portable and pedestal grinders. Fills steel-boiler tubes with sand prior to bending. Wraps blanket of insulation around shell to insulate boiler and tacks blanket

to shell surface, using stud-welding gun. Helps move and position materials, manually or with overhead bridge-crane or dolly. Removes casing, grates and grate rigging from boiler prior to repair of boiler and reassembles them after repair, using hand tools. See also definition for term title, 02-160 HELPER (any ind.).

8337-162 METAL-FORMING-MACHINE TENDER(struct., plate & ornam. metal) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: H 3 4 7

Tends metal-forming machines, such as saws, shears, brakes, straightening press and punch, to cut, shape and bend metal plates, sheets and structural shapes:

Sets stops or guides to specified length, using scale, rule or template. Positions workpiece, manually or with hoist, against stops and guides or aligns lay-out marks with dies or cutting blades. Starts machine by pushing button or depressing treadle. Measures completed work, using rule or template. Finishes workpieces by removing burrs, sharp edges, rust or scale, using file, portable grinder, or wire brush. Performs other duties in shop, such as oiling machines, dies or workpieces, assisting machine operators to set up machines, and stacking, marking, packing and transporting finished pieces on handtruck.

May tend other machines, such as drill press, spot welder, or riveting machine.

8337-166 METAL-FORMER HELPER, HAND(struct., plate & ornam. metal) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: H 3 4 7

Helps metal workers to bend and straighten hot or cold metal plates, bars, pipes, tubes, structural shapes and weldments, performing any combination of the following duties:

Transports tools, fixtures, materials and workpieces manually or by hand truck. Places metal in furnace or heats it with hand torch. Helps bolt or clamp fixtures, dies and shims onto forming block, using hand wrench. Assists in lifting workpiece manually or with hoist, and in clamping workpiece onto forming block, fixture or bending table. Helps bend workpiece to specified shape, using pry bar, hammer, sledge or mallet. Measures work, using template, rule or straightedge. Marks or tags identifying information onto finished work. Chips or grinds rough or sharp edges from workpiece, using portable grinder or pneumatic chisel. Stacks finished work on trolley or handtruck. See also definition for term title, 02-160 HELPER (any ind.).

8337-170 BOILERMAKER HELPER, ERECTION AND REPAIR(struct., plate & ornam. metal) DPT:687
GED: 2 SVP: 2 EC: I 5 6 7 PA: H 2 3 4

Assists workers to assemble, erect and repair boilers, tanks or vats on site:

Carries or hauls tools, equipment, materials and parts to work area. Attaches slings, ropes or cables to objects, such as plates, tubes, and drums for moving by crane. Lifts, holds, and moves parts and materials to assist other workers in fitting, straightening or fastening them into position. Bolts or unfastens assemblies, using hand tools, such as wrenches, screwdrivers or prying bars. Cleans and scrapes boilers and vessels preparatory to painting or shipping, using scraping tool and steel abrasive or pneumatic-scaling tool. Carries or hauls dirt and discarded parts from work area. See also definition for term title, 02-160 HELPER (any ind.).

May mix insulating material used for insulating boiler heads or fire pots, using shovel and hoe. May remove burrs and smooth welded seams, using file and portable grinder.

8339-METAL SHAPING AND FORMING OCCUPATIONS, EXCEPT MACHINING, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with shaping, forming and joining a wide variety of metal parts and products; such as, ornamental and art metal workings, lighting fixtures, wire screening and fencing, wire springs, frames and baskets; slide fasteners, safety pins, and reinforcing cages, using any combination of forging, pressing, winding, rolling, punching, shearing, welding, brazing and soldering techniques.

8339-110 ART-METAL WORKER(metal fab., n.e.c.) DPT:260
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Sets up and operates variety of metalworking machines and equipment to fabricate light fixtures, lamps, church statuary, plaques and other metal artwork, following sketches, artistic and architectural drawings, models, written descriptions and photographs:

Interprets data to select materials, lay out reference points and develop sequence of operations. Sets up and operates machines, such as shears, saws, brakes, bending machines, drills and presses to cut stock to size or bend it to shape. Heats pieces in forge to working temperature, as indicated by colour. Bends, twists and hammers hot or cold workpieces to achieve desired shape and ornamental imprints, using jigs, scroll iron, twisting fork, vise and special peening hammers. Operates machine tools to turn, drill and mill metal workpieces to specified dimensions. Engraves castings to finish metal statuary and plaques, using hand scrapers and tools. Welds, brazes, solders, rivets or bolts components together to assemble workpiece. Grinds, buffs and polishes surfaces to desired finish. Fabricates or forges special jigs, tools and peening hammers. Gives direction to helpers in the fabrication of ornamental-metal products.

May install finished product. May specialize in fabricating religious art work.

8339-112 SAMPLE MAKER, LEAF SPRINGS(metal fab., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: I PA: M 4 7

Develops, assembles and tests prototype automotive leaf springs prior to production run:

Studies drawings, narrative instructions, hand books and other sources of information to determine material, construction dimensions and operating characteristics of spring required. Calculates length and arch of leaves and compiles bill of material, to include components, such as clips, bushing inserts and liners. Writes and issues work orders for production of sample set of leaves and other components. Verifies hardness of leaves, using hardness-testing machine. Assembles spring, using bench press and hand tools. Tests assembled spring, using load-testing machine, to impose maximum safe load and to verify load characteristics of spring at specific deflections. Makes necessary changes to prototype spring and authorizes commencement of production run of approved spring.

8339-114 LIGHTING-FIXTURE MAKER(mach., weld. & forg.) DPT:380
GED: 4 SVP: 7 EC: I 5 6 PA: L 4 7

Sets up and operates machine tools and metalworking machines to machine, form and join metal parts of floor lamps, wall lamps and hanging fixtures, according to specifications:

Sets up and operates spinning lathes to spin brass, bronze, aluminum or steel sheet-metal stock into desired shape. Sets up and operates engine lathe to turn metal parts. Cuts and shapes sheet-metal, using metalworking machines, such as shears, bending machine and punching machine. Compares dimensions and shape of finished parts with drawings, using rule, micrometer, square and protractor. Solders, brazes and welds parts together, using spot welding and brazing equipment. Smooths surfaces and removes burrs and weld spatter, using belt sander.

May heat and bend metal to shape fixture parts. May attach glass parts, sockets and wires to metal parts to form fixture, using hand tools. May be designated according to type of fixture fabricated; for example, Chandelier Maker, Floor-Lamp Maker

8339-118 GRID-MACHINE JOB SETTER(wire prod.) DPT:380
GED: 4 SVP: 6 EC: I PA: L 4 7

Sets up and adjusts machines that form wire grids for electron tubes: Verifies size of specified wire and machine accessories, using microscope and gauges or micrometer. Inserts wire into feed mechanism of machine. Installs specified shaping and cutting tools and control devices, such as ratchets and cams in machine, using hand tools. Adjusts feed mechanism, shaping and cutting tools, cams, ratchets and rollers to synchronize winding, shaping and cutting operations of machine, using hand tools and magnifying devices.

Refinishes tool surfaces and cutting blades, using power grinder. Examines first-run grids for accuracy, using microscope.

8339-122 LINK-WIRE-MACHINE SET-UP OPERATOR(metal fab., n.e.c.) DPT:380
GED: 4 SVP: 6 EC: I 5 PA: M 4 7

Sets up and operates link-wire machine to form linked wire fabric for flat bedsprings: Studies work orders to determine spring dimensions and type of wire required. Utilizes knowledge of machine operation and bending characteristics of wire to select tool and die elements. Manually positions and fastens tools, dies and cams into required arrangement in machine to cut and bend wire by action of sliding rams in co-ordinated sequence. Places coils of wire on reels. Feeds wires through drive wheels and between dies of slides, using hand tools. Starts machine to form and link wire lengthwise and crosswise to produce fabric of specified dimensions. Inspects product, using template or rule. Adjusts machine setup to control dimensions of wire fabric. May pass operation of machine to tender after set-up phase.

8339-126 LOOM SETTER, WIRE WEAVING(wire prod.) DPT:360
wire-loom set-up man.
GED: 3 SVP: 6 EC: I 5 PA: M 3 4 5 6 7

Sets up power looms to weave wire into screening and cloth: Studies work orders, diagrams and charts to set up machine to produce specified mesh and weave patterns. Selects, positions and installs machine parts, such as reeds, heddles, shuttles, cams and gears, using hand tools. Turns speed control knobs to synchronize action of machine to produce size and pattern of weave specified. Sets electric eye control which automatically stops machine when specified run is completed or when shuttle of warp wire runs out or breaks. Directs operator or helper to thread wire from back beam through heddles and reeds to cloth roll, and to install bobbins in shuttle. Starts machine to produce sample product. Inspects sample visually and with gauges, and readjusts machine to correct malfunctions. Assists in replacing or repairing broken parts of machine.

8339-130 METAL-CAN MACHINE SET-UP MAN(metal stamp., press. & coat.) DPT:380
production mechanic, tin cans.
GED: 3 SVP: 6 PA: M 4 7 EC: I 5 6

Sets up, adjusts and repairs variety of automatic multiple-operation machines that punch, form, bead, solder and seal tin can bodies: Lights gas burners under soldering vats and adjusts thermostats to regulate temperature of molten solder in machines. Sets up machines to accommodate different sizes of can bodies and ends by changing components and adjusting settings, using spacing gauges and mechanic's hand tools. Changes dies and punches, aligns magazines, sets timings and adjusts guides. Sets up and adjusts automatic end lining machines that spray rubber base sealing compound onto edges of tin can ends. Starts machines and observes operation to detect malfunctioning. Checks quality of soldered seams in finished can bodies. Measures critical dimensions, using micrometers and calipers. Replaces worn or defective machine parts, using mechanics hand tools. Assists machinist to dismantle and reassemble presses for overhaul. May operate one or more automatic tin can fabricating machines. May set up, adjust and clean welding head of key-welding machine.

8339-134 AIRCRAFT PIPE AND TUBE FITTER(air & space-craft) DPT:481
GED: 3 SVP: 6 EC: I 6 PA: M 2 3 4 7

Cuts, bends and fits oil, fuel, air and hydraulic tubing and piping for use in aircraft: Establishes location of cut-outs, holes and trim lines of parts and relationship of parts to each other, using measuring devices such as rules, scales and dividers. Cuts, fits, aligns, trims and bends tubing in jigs or fixtures, using hand tools and power bending equipment. Modifies holding fixtures or jigs to conform to configuration of tubing samples by placing and fastening guides, stops, cradles, clamps and rotation holders, using hand tools. May bend assemblies after welding, using equipment, such as gas-flame torch, arbor press and hand tools.

8339-138 ORGAN-PIPE MAKER, METAL(misc. prod. fab., n.e.c.) DPT:681
GED: 3 SVP: 6 EC: I 5 PA: M 4 7

Forms metal pipes for pipe organs, using hand tools: Hand-rolls metal sheets into tubular shape, using mandrel and hand tools. Scrapes edges of tube with hand tool to shape angle for soldering. Solders seam. Cuts mouth of pipe, using knife. Forms mouth of pipe to desired shape, by beating it with wooden mallet around metal or wooden mandrel. Hand-rolls or uses forming rolls to shape annealed sheet zinc into large pipes.

8339-142 ORGAN-BLOWER MAKER(misc. prod. fab., n.e.c.) DPT:481
GED: 3 SVP: 6 EC: I 5 6 PA: M 4 7

Makes metal turbine blower assemblies used in pipe organs: Selects gauge and type of sheet metal from storage rack, according to work order. Locates and marks curved vane dimensions and reference lines on metal, using scriber and rule. Cuts sheet metal along reference lines to form vanes, using hand shears. Bends vanes to specified angle, using power brake. Drills screw holes at base of vanes, using electric drill. Aligns bases of vanes with central spindle, and screws them together. Welds outer rim on vanes, using portable-electric-welding machine. Places wheel on balancing shaft, and attaches weights to balance wheel. Installs turbine wheel in lower metal casing. Connects electric motor to turbine shaft and bolts it to casing, using wrenches. Bolts upper section of casing to lower section to form complete blower. Paints blower, using spray gun.

8339-146 METALWORKING-MACHINE SET-UP OPERATOR (metal stamp., press. & coat.) DPT:360
metal-fabricating-machine operator.
GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4 5 6 7

Sets up and operates metalworking machines; such as, shears, cutoff saws, brakes, punch presses, forming rolls and drill presses, to make metal products, such as light structural components, sporting goods and metal furniture: Lays out and marks reference lines and points on metal workpieces, using templates, rule, square, compasses and scale. Sets up and operates various metalworking machines to cut and shape metal components or products. Fits and assembles components, using fixtures, hand tools and portable power tools, such as grinders, drills and riveters. Operates machines, such as arbor press, rivetting press, brazing machine or resistance-welding machine to complete assembly. Tests products for accurate fit. Gives direction to 8339-270 METAL-FABRICATING-SHOP HELPERS (metal stamp., press. & coat.) assisting in fabricating, fitting and joining metal components. May take measurements of windows, doors or awning sizes when fabricating such products on a custom basis. May be designated according to product fabricated or type of material worked on; for example, Awning Maker Screened- Door and Window Builder Tent-Frame Maker Tubular-Products Fabricator

8339-150 RUBBER-FOOTWEAR-PARTS DIE MAKER(mach., weld. & forg.) DPT:481
GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Makes metal dies for rubber-footwear parts, using metalworking machines, hand tools and welding equipment: Studies templates and confers with patternmaker to solve technical problems. Cuts, bends and welds metal to make dies to shape of templates, using bench cutter, bending machine and welding equipment. Examines dies for defects and conformance to templates. Punches identifying data on dies, using punch and hammer. Records die information and stores templates for future reference.

8339-152 PULPSTONE-CAGE BUILDER(metal fab., n.e.c.)
DPT:482

GED: 3 SVP: 5 EC: I 5 6 PA: VH 4 7

Sets up and operates metalworking and welding machines to fabricate pulpstone-reinforcing cages:
Reads work order and calculates and assembles sheet steel, steel rods and rubber sheet stock required. Adjusts and operates cut-off saw to cut rods to required length. Sets up and operates roll-forming machine that bends rods into rings. Sets up and operates butt-welding machine to weld rings into hoops. Sets up and operates power shear to cut stringer blanks to calculated dimensions from sheet steel. Sets up and operates punch press to shape ring-support lugs in stringers. Assembles hoops and stringers to form cages. Cuts segment joints from rubber sheet. Selects template and traces number of joints required on rubber. Cuts out rubber joints with scissors, and bundles and tags them with work order number. Delivers cages and joints to pulpstone fabricating area, using push truck.

8339-154 SAFETY-PIN-MACHINE SET-UP OPERATOR(misc. prod. fab., n.e.c.)
DPT:680
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Sets up and operates battery of automatic or semi-automatic machines to twist coils in pointed lengths of wire and form and attach caps and guards to wires to make safety pins:
Installs cutting and forming dies in machine according to size of pin specified, using hand tools. Loads feed-rolls with reels of metal strip used to make caps and guards. Scoops pointed wires into gravity-feed hopper and starts machine. Observes operation to detect jamming of mechanisms and extracts jammed pin parts, using pick, screwdriver and pliers. Measures samples of completed pins for conformance with specifications such as length, diameter of wire, size of springcoil and width of pin, using micrometers and fixed gauges. Examines pins for malformation of caps or guards, and opens and closes sample pins to test operation. Adjusts guides, tension bars, cams, feeder arms and stops, and synchronizes moving parts of machine to correct malfunctions. Replaces worn cutting or forming dies, using hand tools.

8339-158 WIRE WEAVER, CLOTH AND SCREEN(wire prod.)
DPT:662
GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Operates power loom to weave wire mesh cloth for products such as filters, insect screening, sieves and strainers:
Reads specifications to determine quantity, type and size of wire. Positions spools of wire on spindles of creel. Verifies specified size of wire, using micrometer or wire gauge. Fastens wire ends to back beam of loom. Starts motor to wind and transfer wire from creel to beam. Threads warp wires individually through heddles and between teeth of comb and fastens ends to roller. Adjusts spring of loom to required tension, using wrench. Inserts bobbin in shuttle, fastens short wire end to roller and pushes switch to start loom. Observes loom operation to detect faulty weaving or wire breaks. Reweaves and ties broken wires, using pick and magnifying glass. Counts mesh of woven cloth to ensure that specifications are met, using pick and counting glass. Removes roll of finished cloth from loom, using electric hoist. Directs helper who aids him in the weaving of wire mesh cloth or screening. May wind bobbins while loom is in operation.

8339-162 STRANDING-MACHINE OPERATOR(wire prod.)
DPT:662
cable-machine operator.
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Operates stranding machine to fabricate wire rope or cable:
Positions spools of wire of specified type and gauge, into cradles, manually or using electric hoist, and secures them in place. Positions take-up spool onto shaft and adjusts travel of distributor to width of spool. Threads wires through holes on inside of edge of machine and through twisting head and coils it around capstan, following drawings or sample of stranded wire as a guide. Nails or hooks stranded wire onto take-up spool. Changes or adjusts gears for specified direction of twist and speed of capstan and cradle, using wrenches. Pours lubricant into grease pot and opens valve to lubricate strands. Starts machine and regulates speed of take-up spool shaft. Observes machine to detect malfunctioning. Cuts wire when specified footage has been wound, and wraps cable end with wire by hand or using mechanical

wrapping tool. Operates resistance welder to butt weld ends of new or broken wires. Measures diameter and lay of stranded wire or cable using micrometers and rule. Directs helper who aids him in the fabrication of wire rope or cable.
May tend automatic wrapping or taping attachments on machine. May be designated according to machine operated; for example, Bunching-Machine Operator

8339-166 BRAZER AND HAMMERER(misc. prod. fab., n.e.c.)
DPT:681
GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Shapes sheet metal into brass-wind-instrument bells and bell-necks:
Traces pattern of bell onto sheet metal, using template and scriber. Cuts out bell and bell-neck blanks, using hand shears. Hammers bell blank over bell shaped mandrel, and butts seam. Brazes bell, using oxy-acetylene torch. Smooths seam, using file and power hammer. Removes scratches from bell, using fine abrasive cloth. Bends bell-neck blank down middle by hand. Bends neck blank on mandrel, using forming device. Rolls bent blank around mandrel and shapes neck, removes dents and forms seam, using wooden mallet. Brazes bell-neck seam, using oxy-acetylene torch. Smooths brazed seam with file.
May operate spinning lathe to spin bell-head and form bead at edge of bell-head.

8339-170 WIRE WEAVER, BENCH LOOM(wire prod.)
DPT:682
GED: 3 SVP: 5 EC: I 5 6 PA: M 4 7

Forms heavy wire screens used for partitions, draining racks, aggregate screens and window guards, using bench loom:
Reads specifications to determine quantity, type and wire size. Verifies size of wire, using micrometer or wire gauge. Measures, crimps and cuts wire to specified lengths, using steel scale, wire cutters and crimping machine. Inserts ends of warp wires in heddles. Operates loom to raise and lower alternate warp wires. Slides shoot wire between warp wires and pulls it into position by hand. Measures position of shoot wire with scale to ensure specified spacing. Operates loom to reverse warp wires, fasten inserted shoot wire and prepare for next shoot wire. Removes finished screen from loom and stacks it for pickup.

8339-174 CABLE SWAGER AND STRETCHER(wire prod.)
DPT:684
cable stretcher and tester.
GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Makes and tests cable assemblies, such as aircraft or boat control or check cables:
Lays out cable on measuring table and clamps cable end to holding block. Places cable between electrodes of electric-cutting device and pulls lever causing electrodes to cut and fuse cable ends. Installs dies in staking and swaging machines, using screwdriver and wrenches. Slips fitting over cable end, sets it in die of staking machine and positions fitting at specified distance from cable end, using gauge. Presses pedal to crimp fitting onto cable to position it for swaging. Inserts crimped fitting between dies of swaging machine, starts machine and turns cable by hand as fitting is swaged between dies. Positions ball stop at specified distance from cable end and swages it onto cable with swaging machine. Verifies diameter of swaged ball stop, using gauge. Solders ends of cable. Inserts cable fittings in holding attachments of proof-loading machine to pre-stretch and prove security of fittings. Immerses cables in anti-corrosion solution and attaches identification tags. Packs cable assemblies into bags for storage.

8339-178 LAY-OUT MARKER(metal stamp., press. & coat.; struct., plate & ornam. metal)
DPT:684
GED: 3 SVP: 5 EC: I 6 PA: M 3 4 7

Traces patterns from templates and marks specifications for fabricating operations onto metal sheets, plates and structural shapes:
Measures stock, using rule, and locates centerline for positioning template. Clamps, bolts or holds template on workpiece. Marks reference lines with scriber, and marks hole locations with center punch or by spot drilling. Stacks or moves workpieces to assigned locations, using hand truck or crane.
May lay out straight lines and hole locations as detailed on drawings.

8339-182 WIRE-ROPE-SLING AND CABLE SPLICER(wire prod.) DPT:684
cable splicer; sling-maker.
 GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Makes wire-rope slings from wire rope and installs fittings on ends of sling legs or straight cables:
 Cuts wire rope or cable to length with wire cutter or abrasive cutting wheel. Marks rope or cable at specific points with chalk to indicate location of loops. Wraps rope or cable around bench hobs and secures it with tie wires to form loops in end of sling legs or straight cables. Splices rope or cable by interweaving end strands of wire into body strands to form sling or end loops, using tapered spike and splicing vise. Wraps and solders wire around whole loop or inserts metal thimble on inside of loop and hammers thimble flanges to secure loop. Finishes loop eyes by hooking loop onto wire-winding machine and ties end of wire strand onto body. Depresses pedal to start sling revolving, and guides strand along length of splice to provide protective covering. Installs dies in swaging machine, using screwdriver and wrenches and depresses pedal to swage fittings onto straight cables or sling legs. Verifies size of wire, cable or rope, and finished splice, using micrometer, vernier or fixed gauges.
 May braze loose ends of wires, using oxy-acetylene torch. May repair damaged slings or cables.

8339-186 EMBOSSEING-MACHINE OPERATOR(metal stamp., press. & coat.) DPT:682
 GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates machine to emboss designs on sheet metal:
 Installs embossing roll of specified design and size in machine. Adjusts roll clearance and tension, width of feed table and guides, according to dimensions of sheet metal, using hoist, gauges and hand tools. Starts machine and feeds sheets into roll or places coil of metal on spindle and threads coil end through machine onto rewinder. Measures depth of embossed design of first run workpiece, using depth micrometer or dial indicator and re-adjusts machine embossing roll to meet specifications. Removes embossed roll of material from winder, using hoist or jib crane and installs empty winder reel.

8339-190 ART-METAL-WORKER HELPER(metal fab., n.e.c.) DPT:684
 GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Helps workers to fabricate ornamental metal products such as light fixtures, church statuary, lamps, plaques and other metal artwork by performing any combination of the following duties:
 Cuts metal stock to specified size, using shears and saws. Helps bend or twist metal stock, using hand tools, bending jigs, scroll irons and power brakes. Welds, brazes, forge welds or bolts components together, at designated locations, as directed. Builds fire in heating forge. Heats and hammers metal to specified shapes, using special peening hammers. Grinds and polishes surfaces of workpieces to desired finish. See also definition for term title, 02-160 HELPER (any ind.).

8339-194 FIXTURE MAKER, PLATING EQUIPMENT(metal fab., n.e.c.) DPT:684
 GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Fabricates and repairs fixtures, rods, baskets and hooks used for suspending articles in plating, cleansing and painting vats:
 Cuts metal stock to size, using handsaws, powersaws, shearing and forming machines, and following working sketches or drawings. Bends metal, using vise, hammer or press. Drills and threads holes, using drill and hand-taps. Bolts, screws or rivets parts together, using wrenches, screwdrivers or riveting equipment. Brazes, solders and welds parts together.
 May clean contact areas with wire brush. May dip workpiece in rubber or plastic solution, and hang in oven to cure.

8339-198 REINFORCING-CAGE MAKER(wire prod.) DPT:684
 GED: 3 SVP: 4 EC: I 6 PA: H 3 4 7

Cuts, forms and welds wire mesh and steel rods to fabricate cages used in reinforcing concrete pipe or other concrete forms:
 Obtains roll of wire mesh of specified gauge and unrolls and stretches

out mesh for cutting. Measures desired length of wire mesh, using steel rule. Cuts strands, using hand or pneumatic cutter. Feeds wire mesh into rollers of bending machine and turns adjusting wheel to shape frame or cage sections. Places formed mesh and rods on floor or in special forming stand preparatory to welding. Tack-welds sections together, using arc-welder or fastens ends of sections together, to form tube, using special bending tools and equipment. Cuts reinforcing steel rods using cutting torch. Bends lugs along edge of wire mesh in alternate directions to facilitate positioning in mould, using special hand tool.

8339-202 STRAIGHTENER, HAND(mach., weld. & forg.) DPT:684
 GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Straightens metal workpieces to specifications, using hand tools and knowledge of properties of metal:
 Places workpiece on surface plate, or mounts and rotates it between centers to detect irregularities visually or with dial indicator. Positions workpiece on flat surface, anvil or special fixture and hammers it at point of irregularity to straighten it. Forces mandrel through cylindrical workpieces, such as pipes and tubing to remove dents and kinks. Measures straightened workpiece for conformance to specifications, using straightedge, dial indicator, feeler gauges or contour projector.

8339-206 REINFORCING-CAGE-WINDING-MACHINE OPERATOR(wire prod.) DPT:682
 GED: 3 SVP: 3 EC: I 5 6 PA: H 4

Operates cage-winding machine to produce cylindrical wire cages used as reinforcing in concrete pipe:
 Operates control panel to move welding electrodes and longitudinal wire guides to form drum for shaping and sizing of cage. Loads spools of wire of specified size on spindles, and threads wires from spindles through tensioning rollers and feeder arm of machine. Starts machine to wind and space wire to form cage. Starts welding device to weld longitudinal rods and winding wire at points of intersection. Inspects cage to ensure that welds and dimensions are as specified. Cuts cage to specified length, using hand shears or cutting torch. Operates butt-welder to join new rolls of feed wire as spools are depleted, and smooths butt welds, using portable grinder.

8339-210 TUBE BENDER, HAND(metal stamp., press. & coat.) DPT:684
 GED: 3 SVP: 3 EC: I PA: M 4 7

Bends metal and plastic tubing around forming blocks or between rollers of bending device to produce components for products such as refrigeration systems, electrical heating units or hydraulic systems:
 Adjusts rollers or forming dies and stops of bending device, according to required location of bends. Marks tubing at location of bend or places end of tubing against stop of bending device. Heats plastic tubing in hot oil or water to facilitate bending. Bends tubing by hand or pulls lever to force rollers against workpiece to bend it to required shape.
 May flare tubing by forcing end against rotating cone. May draw outline of tubing bends on cardboard or cut wood-forming blocks on band saw, following templates.

8339-214 BARBED-WIRE-MACHINE TENDER(wire prod.) DPT:685
 GED: 3 SVP: 3 EC: I 5 6 PA: M 4

Tends machine that automatically twists barbs between strands of wire to form barbed-wire fencing:
 Mounts reels of smooth wire on feed rack of machine, using hoist. Threads end of feed wires through machine. Butt welds ends of feed wires to ends of wires in machine. Adjusts feed and tension rollers and barb spacing, using hand tools. Sets automatic counter for specified length of wire in roll, and starts machine. Stops machine, cuts wire with cutter, and removes roll of barbed wire from machine. Attaches identification tag to roll and places it on pallet or handcart.

8339-218 SLIDE-FASTENER-LINK-MACHINE TENDER
(misc. prod. fab., n.e.c.) DPT:685
wire coiner,
GED: 3 SVP: 3 EC: I 5 6 PA: M 3 4 7

Tends battery of automatic machines that make metal slide fastener scoop impressions in wire and trim and form fastener links, using special rolling dies, shavers and shears:

Changes rolling dies according to gauge of wire to produce specified links. Mounts roll of wire on spindle, threads wire end through machine rolling, trimming and cutting units, and starts machine. Examines processed wire with microscope and micrometer to verify that impressions are aligned and of correct pitch. Notifies supervisor of machine malfunction.

8339-222 FITTER, METAL FABRICATING(metal fab., n.e.c.) DPT:664
GED: 2 SVP: 3 EC: I 6 PA: M 4 7

Fits together preformed components of fabricated-metal products to prepare them for welding or assembly:

Positions parts in fixture to examine alignment visually or verifies alignment, using square, rule and template. Files and grinds parts to remove burrs and surplus material, or alter shape. Straightens or bends parts by hammering or using straightening press. Secures parts to fixture or fastens parts together, using clamps or bolts. Keeps production records. Directs helpers in fitting together preformed components during fabrication of metal-formed products.

8339-226 AUTOMOBILE-BUMPER STRAIGHTENER(motor vehicle) DPT:684
bumper straightener.
GED: 2 SVP: 3 EC: I 5 6 PA: H 4 7

Straightens and repairs automobile bumpers:

Selects specified make and model of damaged bumpers from storage. Positions bumper in hydraulic press and starts press to restore original shape to bumper, using templates to verify contours. Removes smaller dents, using sledge hammer. Positions bumper in bench vise and grinds out hammer marks, scratches and rust areas, using portable grinder.

May cut and weld together sections from several similar shaped bumpers to form single salvageable unit, using flame cutting and oxy-acetylene or electric-arc welding equipment.

8339-230 FITTER HELPER(mach., weld. & forg.; struct., plate & ornam. metal) DPT:684
GED: 2 SVP: 3 EC: I 5 6 PA: H 2 3 4

Assists fitters to position, align and fit together plates, structural shapes and weldments, preparatory to assembly into fabricated structural products, performing any combination of the following duties:

Holds, positions and reads tape or measuring rods to assist in taking lay-out measurements. Places and moves blocking, braces and jigs to hold parts. Hammers wedges and drift pins, and turns turnbuckles to bring assemblies together. Pulls pry bars to align parts. Grinds or chips away rough edges, surplus weld or scale, using portable grinder or pneumatic hammer. Positions and clamps or bolts together butt straps or parts, using hand or power wrench. Assists other workers by hooking and slinging heavy workpieces, bucking rivets, drilling and reaming holes and cleaning up work area. See also definition for term title, 02-160 HELPER (any ind.).

May mark finished work with item or order number, using paint brush. May drill holes and fit nameplates to structural steel products. May be designated according to specific type of worker helped; for example,

Fitter Helper, Structural Metal(struct., plate & ornam. metal)

Plate Worker, Helper(struct., plate & ornam. metal)

Welder-Fitter, Helper(mach., weld. & forg.)

8339-234 WIRE BENDER, HAND(wire prod.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Bends wire to form wire frames for upholstered items, such as mattress and box-spring assemblies, chairs and automotive seats, by using wire-bending jig:

Positions bending pegs on jig table according to specifications and tightens them with wrench. Inserts one or more wires in holding

device and depresses pedal to drive bending arms around pegs to bend wire to required angle, or bends wire around pegs, using lever. Connects ends of wires, using electric resistance-butt-welding machine.

8339-238 WIRE-FRAME LAMP-SHADE MAKER(wire prod.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Constructs wire lamp-shade frames, working from drawings, sketches and models:

Makes jigs to hold framing wires in position during assembly and welding. Inserts forming blocks and wire stops into machine, and adjusts stops and rollers, using hand tools. Loads wire into automatic-wire-cutting machine and starts machine. Feeds lengths of wire, cut to size, into wire-forming machine. Positions top and bottom frame rings over jig, and spot welds frame members to rings.

May operate punch press to punch holes in frame parts to permit riveting instead of welding.

8339-242 CHAMFERING-MACHINE TENDER(explosives) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Tends battery of machines that flare mouths of shell cases to facilitate insertion of bullets:

Starts each machine and starts flow of compressed air to cool chamfering tools. Observes shell cases sliding down feed and discharge tubes, straightening any cases that are out of position. Observes flaring and rolling tools in operation to ensure proper functioning, and replaces and resets them as necessary, using hand tools. Examines samples from each machine for burrs, ragged edges, or scratches and determines if dimensions are within prescribed tolerances, using gauges, micrometers and calipers.

8339-246 COIL-REWIND-MACHINE TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 3 EC: I 6 PA: M 3 4 7

Tends machine that rewinds sheet metal coils into compact rolls for shipment or further processing:

Measures sheet width and thickness, using tape and micrometer. Adjusts machine arbor in accordance with width of coil. Places full coil on stand, using hoist. Inserts end of coil in rewind arbor and starts rewind machine. Observes operation to detect telescoping or excessive tightness of coil. Cuts off damaged portions or joints between rolls, using shears. Removes and stores rewound coils, using crane or hoist. May stitch new roll to end of previous roll, using wire stitching machine.

8339-250 COIL-SPRING-ASSEMBLY-MACHINE TENDER(metal fab., n.e.c.) DPT:685
automatic-coil-machine operator.
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Tends machine that joins coil and helical springs to form spring assemblies for inner spring mattresses, and furniture:

Sets end stop on machine according to number of coils required in each row. Places coil springs in rows of channels on machine table. Loads spools of spring wire on machine. Inserts ends of spring wires in feeders that form wire into helical springs, and rotate and move springs toward coils. Depresses pedal to start feeder that guides and laces helical springs into top and bottom edges of coil springs. Pushes lever to activate bar that cuts helical springs and moves coils forward. Inserts more coils in channels to form additional rows and repeats cycle until specified number of rows of coil springs are completed. Pulls release lever to eject completed spring assembly from machine. Adjusts machine and relieves snagging or jamming, using hand tools.

8339-254 LINK-WIRE-MACHINE TENDER(furn.; wire prod.) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Tends previously set up automatic machines that cut, bend and join wire links to form wire-mesh mattress supports for cots, folding beds and other furniture:

Mounts spools of wire on machine arbors and threads ends into feed

rollers. Starts machine that forms lengthwise and crosswise spring links. Stops machine after desired length of wire mesh has been fabricated. Inspects wire-mesh fabric and replaces missing or defective links, using wire snippers and pliers. Adjusts cams and setscrews of machine to correct malfunctions.

8339-258 POCKET-SPRING-MACHINE TENDER(metal fab., n.e.c.) DPT: 685
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that automatically spins wire coil springs and sews them into cloth pockets to form units for mattress-innersprings: Mounts spools of wire, fabric and cotton thread on machine spindles. Inserts wire and fabric ends into machine guides and rollers and threads machine needles. Starts machine and folds chain of pocketed coils as it emerges on conveyor. Removes springs at regular intervals and tests them for uniformity of pressure under plunger of stationary dial gauge. Turns regulating wheel to adjust wire cutter for specified coil length. Turns setscrew on sewing machine to regulate thread tension. May feed pockets onto anvil to facilitate spring insertion by machine.

8339-262 SPIRAL WEAVER(wire prod.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends machines that coil and interlace wire strands into products, such as wire screen, chain link fence and conveyor belts: Threads wire through box of lubricant, between pulling dies and around coiling die. Depresses lever that starts machine to coil wire. Adjusts machine to cut and loop next wire through last coil of previous strand to begin interlacement of strands. Starts machine that automatically continues interlacing coils of second strand through coils of first strand. Weaves mesh of specified length and crimps or loops ends of wire to finish off top and bottom of mesh. Dismantles and cleans coiling die, using wrench and rags. May produce chain-link fencing with galvanized or other type of coated wire and be designated accordingly, Chain-Link-Fence-Machine Operator

8339-266 CHAIN-MAKER FEEDER(wire prod.) DPT:686
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Feeds one or more machines that automatically cut wire, and form and weld chain: Loads coil of wire on turntable of machine, using hoist. Straightens and files end of wire, and threads it into machine. Starts machine that cuts, forms and welds chain. Connects formed chain with previously formed chain to produce continuous length of chain. Replaces defective links. May lubricate machines and clean chain.

8339-270 METAL-FABRICATING-SHOP HELPER (metal stamp., press. & coat.) DPT:687
metalworking-machine helper.
GED: 2 SVP: 3 EC: 1 5 6 PA: H 3 4 7

Helps workers engaged in operating metal-fabricating machines which fabricate metal products, performing any combination of the following duties:

Lifts, moves, clamps and bolts dies, fixtures and workpieces on machines, using hoists and hand tools. Fills reservoirs and oil cups with lubricants. Brushes or blows dirt from dies and machines, using air hose. Removes burrs, sharp edges, scale or rust from workpiece by filing, grinding, brushing and scraping, using hand tools and portable grinder. Hammers out bent or warped areas in metal. Paints metal stock or workpieces, using paint brush. Sorts, marks or tags finished work. Transports material, using handtruck or hoist, or signals crane operator. Attaches ropes or lifting devices to heavy workpieces to prepare them for moving by hoist. See also definition for term title, 02-160 HELPER (any ind.).

May place workpieces in heating furnace or preheat them, using hand torch. May be designated according to machine operator helped; for example, Bending-Machine-Operator Helper
Brake-Operator Helper
Forming-Roll-Operator Helper
Punch-Press-Operator Helper
Shear-Operator Helper

8339-274 WIRE-BASKET MAKER(wire prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Forms and assembles wire mesh containers, using bending machine and wire spirals: Cuts mesh to specific sizes, using pattern or markings on table, and shears. Shapes wire mesh containers, such as degreasing baskets, animal cages, waste baskets, and other containers by bending wire mesh into specified shapes and sizes, using hand operated bending machine, pliers and crimping tool. Assembles cut mesh panels, using wire spirals to form container joints.

8339-278 BULLET-SHAPING-MACHINE TENDER(explosives; metal fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 3 4 7

Tends machines that groove, knurl, die-size and lubricate bullets for small arms ammunition: Scoops bullets from supply box and deposits them on machine apron. Starts machine and manually inserts bullets into holes of moving feed dial. Observes operation to detect jamming and clears jammed bullets, using fingers or wire pick. Measures bullet samples to verify location and depth of grooves, and length and diameter of bullets, according to specifications, using fixed gauges. Examines bullets to ensure that grooves are filled with lubricant. Adjusts machine by turning stop nuts and set screws, to produce acceptable bullets.

8339-282 EMBOSSING-MACHINE TENDER(explosives) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends battery of automatic machines that roll grooves or knurls on brass shot-gun-shell heads: Places empty trays under delivery chutes. Moves levers to start machines and flow of brass heads from hoppers. Clears heads jammed in feed and groove mechanisms, using screwdriver and wire picks. Examines heads for defective trimming, splits, dents and scratches. Verifies locations of grooves or knurls on embossed heads at specified intervals, using fixed gauges. Notifies machine repairman of malfunctions.

8339-286 KNITTER, WIRE-MESH(wire prod.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Tends several machines that automatically knit strands of wire to form metal mesh for use in products, such as scouring pads: Installs spool of metal or plastic wire on frame of machine and inserts flyer spindle into hole of spool. Threads wire through guide on flyer, through pulley of rotating frame, around and under hooks of knitting needles and fastens end to feed roller. Starts and observes machines to detect faulty knitting or wire breaks. Measures width of mesh with ruler to ensure specified dimensions are maintained. Stops machine to re-thread and tie broken wires, replace spools of wire and remove rolls of mesh. Notifies supervisor of machine repairs or adjustments required. Stacks rolls of mesh for pickup. Sprays wire with oil, soap suds or other lubricant to reduce friction, depending on type of wire being used.

8339-290 METAL-SPONGE MAKER(wire prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that forms metal sponges from wire: Places spool of wire on spindle and threads end of wire around tension rollers and around winding spindle. Installs and threads additional spools of wire according to type of sponge to be made. Presses button to start machine that twists, curls and winds wire around spindle to form sponge. Cuts wire when sponge has been formed. Removes sponge from spindle and pulls and pats it to specified shape. Packs sponge in cartons.

8339-294 INDUSTRIAL-KNITTING-NEEDLE-MACHINE FEEDER(misc. prod. fab., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Feeds various previously set-up machines that fabricate industrial-knitting needles: Carries pans of needle blanks or semi-processed needles to machine.

Strings up or aligns needles before feeding them into machines. Feeds machines by setting handfuls of needles in feeding slides. Sorts out defective needles for reprocessing or scrapping. Observes functioning of machines. Stops machines to remove jammed needles. Notifies machine setter or supervisor when machine malfunctions. Empties catch pan, and places tally card with processed needles. Applies compound to felt buffers or steel brushes of machines that remove burrs from edges and polish metal needles.

**8339-298 STRANDING-MACHINE-OPERATOR
HELPER(wire prod.) DPT:687
cable-machine-operator helper.
GED: 2 SVP: 2 EC: I 5 6 PA: M 4 7**

Helps machine operators to fabricate wire rope or cable: Selects spools of wire according to job card. Helps position spools of wire on spindle of winding reel manually or with hoist. Turns handwheel or pulls lock pin to release shaft preparatory to installing take-up spool onto shaft. Assists in threading wire through stranding head. Places spools of finished cable on handtruck for removal to storage. See also definition for term title, 02-160 HELPER (any ind.). May remove unused wire from spools, using spool stripper.

**8339-302 WIRE-WEAVER HELPER(wire prod.) DPT:687
wire-loom helper.
GED: 2 SVP: 2 EC: I 5 PA: H 3 4 7**

Assists wire weavers in weaving wire-mesh cloth or screening: Transports beams, magazines, wire stock and machine parts to looms, using handtruck or forklift. Attaches wire from spools to warp beam. Threads warp wire through heddles and reeds of machine, and ties sections of warp wire together. Removes beams of finished screen or cloth from looms with forklift and transports them to stockroom or finishing department. Removes spools and bobbins from automatic spooling machines and racks them onto magazines. See also definition for term title, 02-160 HELPER (any ind.).

**8339-399 OTHER METAL SHAPING AND FORMING
OCCUPATIONS, EXCEPT MACHINING**

This group includes metal shaping and forming occupations not elsewhere classified; for example, those who specialize in forming metal parts or products; such as, garment hangers, buckles, trunk valances, wound gaskets, swaged mechanical pencil and pen parts, hand woven wire screen, electrical connectors, bell-end pipes and fan blades. Typical examples of occupational titles covered by this residual group definition are:

Buckle-Assembling-Machine Tender(misc. prod. fab., n.e.c.)
Crimping-Machine Feeder(wire prod.)
Fan-Blade Aligner(metal fab., n.e.c.)
Gasket Winder(metal fab., n.e.c.)
Pipe-Belling-Machine Tender(metal stamp., press. & coat.)
Swager, Pen and Pencil(misc. prod. fab., n.e.c.)
Valance Maker, Trunk(misc. prod. fab., n.e.c.)

835-WOOD MACHINING OCCUPATIONS

This minor group includes occupations concerned with shaping wood into parts or products by machining to specified dimensions by such means as sawing, cutting, boring, sanding, milling and planing. Activities include: measuring, laying out and setting up work and machines, and machining cork, wood by-products and other materials when the methods applied to machining wood are used. These occupations are classified in the following unit groups:

- 8350 Foremen, Wood Machining Occupations**
- 8351 Wood Patternmaking Occupations**
- 8353 Wood Sawing and Related Occupations,
Except Sawmill**
- 8355 Planing, Turning, Shaping and Related Wood
Machining Occupations**
- 8356 Inspecting Occupations, Wood Machining**
- 8357 Wood Sanding Occupations**
- 8359 Wood Machining Occupations, n.e.c.**

**8350-FOREMEN, WOOD MACHINING
OCCUPATIONS**

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in shaping wood into parts or products by machining.

**8350-110 FOREMAN, INSPECTING OCCUPATIONS,
WOOD MACHINING (furn.; woodworking)**

DPT:138

Supervises and co-ordinates activities of workers engaged in quality control of machined-wooden parts or products, (Unit Group 8356):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

**8350-114 FOREMAN, PLANING, TURNING, SHAPING
AND RELATED WOOD-MACHINING
OCCUPATIONS(furn.; woodworking)**

DPT:138

Supervises and co-ordinates activities of workers engaged in setting-up, operating, tending and feeding woodworking machines that plane, turn, shape, mill, rout, mortice and drill wooden workpieces to desired shape and size, in the manufacture of wooden parts or products, (Unit Group 8355):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly,
Foreman, Planing

**8350-118 FOREMAN, WOOD PATTERNMAKING
OCCUPATIONS (furn.; woodworking)**

DPT:138

Supervises and co-ordinates activities of workers engaged in making wooden patterns for items, such as moulding patterns, shoe lasts and hat blocks, (Unit Group 8351):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

**8350-122 FOREMAN, WOOD SANDING
OCCUPATIONS(furn.; woodworking)**

DPT:138

Supervises and co-ordinates activities of workers engaged in smoothing, cleaning and roughing wooden surfaces, using sandpaper or similar abrasives, (Unit Group 8357):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

**8350-126 FOREMAN, WOOD SAWING AND RELATED
OCCUPATIONS, EXCEPT SAWMILL (furn.;
woodworking)**

DPT:138

Supervises and co-ordinates activities of workers engaged in setting up, operating and tending power-operated-circular, band or reciprocating-type saws that cut wood, paperboard and other non-metallic materials into various lengths, widths, thicknesses or shapes, (Unit Group 8353):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

**8350-199 OTHER FOREMEN, WOOD MACHINING
OCCUPATIONS**

This group includes wood-machining foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in framing timbers for utility poles and structures, and machining small-wooden items, such as gun stocks and shuttles. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Framing Mill(woodworking)
Foreman, Gun Stocks(woodworking)
Foreman, Shuttles(woodworking)

8351-WOOD PATTERNMAKING OCCUPATIONS

This unit group includes occupations concerned with making wooden patterns used to form sand moulds, full size or scale models of production line items, models for copy lathes, and custom made hat blocks. Activities include: following drawings, templates or samples to achieve specific shape and dimensions, laying out, sawing, planing, turning, shaving, drilling, gluing, nailing, sanding and painting, using a variety of hand tools and woodworking machines.

8351-110 PATTERNMAKER, WOOD(woodworking)

DPT:281

GED: 4 SVP: 8 EC: I 5 6 7 PA: M 4 7

Plans, lays out and constructs wooden patterns used in forming sand moulds for castings, analyzing drawings and using hand and power tools:

Lays out pattern on wood stock and divides pattern into sections to facilitate removal of pattern from mould, utilizing knowledge of moulding and casting techniques, and using marking and measuring devices, such as scribe, shrink-rule and square. Cuts and shapes parts, using woodworking machines, such as bandsaw, lathe, planer and router. Fits and fastens parts together to form pattern or section, using fastening devices; such as, glue, nails, dowels and screws. Trims, smooths and shapes surfaces, using carpenters' hand tools. Assembles sections and verifies conformance of pattern dimensions to specifications, using templates, straightedges, calipers and protractors. Glues fillets along interior angles of pattern. Repairs or rebuilds worn or broken patterns. Finishes patterns by applying shellac, lacquer, paint, or other material.

May use black paint to show coring required in mould.

8351-114 MODEL MAKER, WOOD(woodworking)

DPT:281

sample maker.

GED: 4 SVP: 7 EC: I 5 6 7 PA: M 4 7

Constructs full-size or scale wooden models of production-line items; such as, machinery, household appliances, transportation equipment, furniture and toys:

Selects wooden stock and marks layout of parts, using precision equipment; such as, scribe, square, protractor, surface plates, height gauges, and scales, following drawings, draft, or sample. Operates band-saw, lathe, planer, router, and other woodworking machines to cut and shape lumber following outline of part. Fastens wooden parts together with dowels, glue, nails, bolts, screws, and other fasteners. Planes, shaves, files, scrapes, and sands model to attain specified shape. Verifies dimensions and contours of model during hand-forming process, using templates and measuring devices. Fabricates work aids, such as scrapers or templates for own use.

May wax and polish finished model. May construct plastic or metal models, or assemble metal parts, made to specifications by machine shop, using hand and power tools, bolts, screws, and measuring instruments.

8351-118 MODEL MAKER, LAST(woodworking) DPT:381
GED: 4 SVP: 6 EC: I 7 PA: L 4 7

Shapes wooden blocks into shoe lasts for use as models in copy lathe: Lays out and cuts templates to specified shape and size, using scribe, measuring instruments, shears, or razor cutter, to verify dimensions and contour of finished last models. Selects last model of backpart (heel-ball of last) having same size and shape as specified on order. Mounts last model of backpart and wooden block in copy lathe that automatically turns down end of block to match backpart of last model. Removes model and partially turned block from lathe and verifies duplication by measuring block at prescribed points. Clamps partially turned block in vise. Shapes toe area to specified size and contour, using drawknives, spokeshaves, files, sandpaper, glass, and templates. Sandpapers model to specified finish. Hammers tacks and files tack heads along edges to protect model when used in copy lathe. May shape last models from wooden blocks, using hand tools only, when identical-last model of backpart is not available.

8351-122 HAT-BLOCK MAKER(woodworking) DPT:381
GED: 3 SVP: 6 EC: I 7 PA: L 4 7

Shapes and finishes wooden-crown and brim hat blocks to specified style and size: Selects plaster-crown-model master of hat block to be manufactured. Shellacs plaster model and applies adhesive tape to outer surface to protect model during processing. Inserts and secures model and wooden block in duplicating machine. Sets up, starts, and tends machine that follows contour of model to produce rough-wooden duplicate from wooden block. Removes rough-crown block from machine, clamps it in vise, and shaves it to specified contour with spokeshave. Sets wooden-crown block in gauge to determine height of crown. Judges shape and marks high spots to be removed. Measures block with steel tape to ascertain head size. Secures block on turning machine, starts machine, and sands rotating block by hand. Selects brim template and traces pattern of brim on wood stock. Cuts, saws, drills, and shaves work piece, following outline to produce rough-brim block, using woodworking tools. Smooths and finishes rough-brim block to specified shape and dimensions, using spokeshave, files, and sander.

8351-126 TRIMMER, LAST(plastic prod.; woodworking) DPT:684
toe-and-heel finisher.
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Shapes and smooths wooden or plastic-shoe lasts to specified contour and size, using hand and power tools: Files toe area of last to specified contour according to instructions and outline drawn on bottom of last. Sandpapers toe area by hand or machine to attain required size and finish. Verifies finished size with templates. Removes excess material from heel to establish correct length of last, using sanding machine. Verifies length, using gauge. Replaces worn sandpaper belts on sanding machine. May tend band-saw to separate lathe center from last turning at specified point.

8353-WOOD SAWING AND RELATED OCCUPATIONS EXCEPT SAWMILL

This unit group includes occupations concerned with operating and tending power operated circular, band or reciprocating type saws that cut wood, paperboard and other non-metallic materials into various lengths, widths, thicknesses or shapes. Occupations concerned with operating saws in a mill to produce lumber are classified in Unit Group 8231, SAWMILL SAWYERS AND RELATED OCCUPATIONS. Occupations concerned with producing veneer and plywood sheets are classified in Unit Group 8233, PLYWOOD MAKING AND RELATED OCCUPATIONS.

8353-110 BAND-SCROLL-SAW OPERATOR(misc. prod. fab., n.e.c.; woodworking) DPT:682
scroll-saw operator.
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates band-saw to cut curved or irregular designs in wooden stock, fibre glass, parchment or paperboard: Positions template and marks cutting outline on stock. Stacks specified number of sheets of material and clamps them together. Starts saw and holds, guides, and turns wood stock or stack of sheets against blade following cutting outline. Adjusts height of blade guides according to thickness of stock. Turns handwheel to loosen tension of band between bandwheels and replaces saw band. May install jigs and attachments, using clamps and wrenches. May clean and maintain machine, using pneumatic hose, brush, cloth, oil can and grease gun.

8353-114 JIGSAW OPERATOR(woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates machine equipped with narrow, vertical-reciprocating saw blade to make irregular-external and internal cuts on wood stock: Starts machine and places stock on machine table. Holds and guides stock against saw following outline marked on wood to make cuts or uses special jig to guide work piece against saw. Detaches saw blade from machine, using hand tools, inserts it through previously-bored hole in stock, and reattaches blade to machine to make internal cuts. Replaces dull-saw blades. May lay out pattern on wood stock, using template and marker. May drill starting hole when making internal cut, using portable-electric drill.

8353-118 RESAW OPERATOR(woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates saw that cuts timbers and planks into boards of lesser thickness according to work orders: Observes lumber on conveyor or table as it approaches saw to determine cut to be made. Turns handwheels, pushes buttons, depresses pedal, or manipulates levers to adjust distance between saw and feed rolls, and to move saw guide to regulate thickness of cut. Moves levers to control speed of saw and feed rolls. Pushes end of lumber into feed rolls. May start and stop conveyor to control movement of lumber to resaw location. May perform minor maintenance duties, such as changing saw blades and lubricating saw, using hand tools and oil can. May be designated as to type of saw operated or item produced and be classified accordingly; for example, Horizontal-Resaw Operator Vertical-Resaw Operator Wood-Blank Sawyer

8353-122 VARIETY-SAW OPERATOR(woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates adjustable-circular saw to rip, cross-cut, bevel, groove or mitre wood or other non-metallic material: Selects saw blade according to type of cut and secures it on saw arbor. Turns handwheel or crank to adjust saw or table to specified angle or depth of cut. Adjusts and secures guides to length, width or angle required. Feeds material against saw blade and sets finished work aside. Verifies measurements of cut stock with rule or square.

8353-126 STOCK CUTTER, WOOD(woodworking) DPT:682
GED: 3 SVP: 3 EC: I 5 6 7 PA: M 4 7

Operates saws to cut lumber and plywood according to customer's order or plant-production specifications: Selects kind and grade of wood specified on work order or is supplied lumber selected by another worker. Measures and marks lumber, or sets and adjusts guide fence, to produce size stipulated in specifications, using rule and square. Cuts lumber to specified length and plywood to required length and width, using circular-saw. Replaces worn or defective saw blades, using hand tools. May feed lumber through planing machine to smooth edges prior to gluing, and glue pieces together to form panels, using glue and bar clamps.

8353-130 CUT-OFF-SAW OPERATOR(any ind.) DPT:682
cross-cut-saw operator.
GED: 2 SVP: 3 EC: I 5 6 7 PA: M 4 7

Operates circular saw with single or multiple blades to cut wood stock to desired length or remove defects:

Adjusts and locks end and back stops or guides on saw table, or bolts saws to shaft and turns handwheel to space saws, according to requirements. Starts saw. Cuts material by one of the following methods: 1. Places stock on feed conveyor. 2. Places stock on movable table and pushes table past saw. 3. Places stock against guides and pushes stock into saw. 4. Positions stock on table and operates hand lever or pedal to move saw through stock.

May grade stock according to standards. May be designated according to type of machine operated or purpose of operation; for example, Corner Trimmer(woodworking)
Defect Trimmer(woodworking)
Double-Cut-Off-Saw Operator(woodworking)
Salvage Sawyer
Swinging-Cut-Off-Saw Operator(woodworking)
Treadle-Cut-Off-Saw Operator(woodworking)
Utility-Trimsaw Operator

8353-134 RADIAL-ARM-SAW OPERATOR(woodworking) DPT:682
GED: 2 SVP: 3 EC: I 5 6 7 PA: M 4 7

Operates radial-arm saw to cut boards and other stock to specifications:

Selects and fits saw blade according to type of cut to be made or material to be cut. Adjusts and secures radial-arm and saw arbour to required angles, and saw height for depth of cut. Places stock on saw table against stop and aligns work piece with saw blade. Starts saw and pulls it across stock to make cut. Rip-saws material to width by holding it against rip fence and pushing stock into saw.

May replace saw blade with attachments to shape, rout, groove, mortise, or drill work piece.

8353-138 RIPSAW OPERATOR(woodworking) DPT:682
GED: 2 SVP: 3 EC: I 5 6 7 PA: M 4 7

Operates machines with one or more band or circular-saw blades to cut boards or wood stock along grain:

Adjusts and locks rip fence or saw guides according to width and depth of cut or adjusts distance between saws by positioning collars on saw shaft and tightening them with set screws. Moves levers to adjust height and speed of feed rolls according to thickness of board and starts saw(s). Positions stock on saw table against guide or rip fence and pushes stock into saw, or aligns it on feed rolls, using shadow-line or rip fence as guide.

May change saw blades or adjust tension of band-saw, using wrench. y May cut stock in order to match wood grain. May grade stock in accordance with standards. May be designated according to type of machine used or work performed; for example,

Band-Ripsaw Operator
Circular-Ripsaw Operator
Gang-Ripsaw Operator
Ripsaw-Grader Operator
Ripsaw Matcher

8353-142 HEADINGS SAWYER, COOPERAGE (woodworking) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 4 7

Tends band saw equipped with revolving table to cut out headings for barrels, hogsheads or kegs:

Clamps heading mat, boards or sheet of veneer in position on circular table. Adjusts blade guides of band saw according to thickness of heading material, by loosening nut, and raising or lowering blade guides. Starts saw and turns table, or starts motor that turns table, to revolve material against saw and cut circular headings. Removes headings from table to designated area for further processing.

8353-146 BAND-SAW-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 6 7 PA: L 4 7

Tends band-saw that cuts wood or paper products to specified shape: Adjusts guide fence or positions turntable at specified distance from saw blade, using wrench and ruler, or calibrations on saw table. Stacks specified number of sheets of stock on saw table. Clamps sheets together or secures bundle in position on turntable. Starts machine and guides bundle against saw, following cutting line, or revolves turntable by hand to press bundle against saw blade, to cut material to specified shape. Places cut pieces on skid or in tote box. May mark cutting line on top sheet of bundle, using pattern and pencil. May keep production records.

8353-150 HOLE-SAW TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends saw that cuts holes of specified diameter in square blanks in the manufacturing of woodenware:

Selects and fits correct-size-hole saw. Positions and secures L- shaped guide on saw bed. Places wood blank against guide and starts saw. Depresses pedal to force saw into wood blank. Releases pedal to raise saw. Removes and piles cut parts according to shape and size.

8353-154 MITRE-SAW TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 6 7 PA: L 4 7

Tends mitre-saw to cut moulding stock for picture frames to specified length and angle, using mitre-saw:

Turns screws to adjust feed guides to width of moulding and to adjust end stop that measures moulding for cutting. Inserts moulding between guides and depresses pedal to lower saw that cuts one end of stock at required angle. Places moulding against end stop and under saw to cut other end of moulding to specified length and angle.

May tend mitre-saw to ensure tight fit by matching two mitred ends of moulding, placing matched assembly in V-shaped fixture of machine, and passing joint through saw. May be designated according to type of saw tended; for example, Double-Mitre-Saw Tender
Single-Mitre-Saw Tender

8353-158 SAWING-MACHINE TENDER(asbestos & min. wool) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: M 4

Tends machine that automatically cuts and trims asbestos tubes, used to insulate pipe:

Adjusts saw blades for specified depth and length of cut, using wrench. Places tube on feed bed or conveyor that carries it through series of circular saws that cut tube wall longitudinally and trims tube ends to specified length. Observes feed of tubes through saws and inspects cut edges. Rejects defective tubes. May pack cut and trimmed tubes into case.

8353-162 STAVE SAWYER(sawmill) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: H 4

Tends stave saw that cuts barrel, keg, tub, and bucket staves from log sections or stave bolts (lengths of split logs):

Lays bolt or log section on carriage and holds it against fixed guide. Starts machine and feeds rough stock into stave saw (rotating open-end cylinder, toothed on open end) by manually moving carriage. Withdraws carriage and sets stave aside.

8355-PLANING, TURNING, SHAPING AND RELATED WOOD MACHINING OCCUPATIONS

This unit group includes occupations primarily concerned with setting up, operating and tending one or more woodworking machines that plane, turn, shape, mill, rout, mortise or drill wooden workpieces to make wooden parts or products in a factory or shop. Occupations concerned with operating and tending large planers and milling machines in a lumber mill, to prepare lumber for stock, are classified in Unit

Group 8231, SAWMILL SAWYERS AND RELATED OCCUPATIONS. Occupations concerned with assembling wooden parts machined by workers in this unit group are classified in Minor Group 854, FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS.

8355-110 WOODWORKING-MACHINE SET-UP

OPERATOR(furn.; woodworking) DPT:280
GED: 4 SVP: 7 EC: I 5 6 7 PA: M 3 4 7

Sets up and operates a variety of woodworking machines; such as, saws, planers, routers, sanders and tenoners to cut, plane, shape and sand stock to specifications:

Studies drawings, work order or sample part to determine specifications. Selects and installs appropriate knives, saws, drill bits or cutter heads on drum, spindle or in chuck of machine, and balances cutter heads, using hand tools. Attaches or installs guides, fixtures or jigs to table or bed of machine with clamps or bolts, and turns handwheels and moves levers to adjust stops, guides and angle and height of table. Adjusts feed rollers or tailstock position as required. Selects direction and speed of rotation of workpiece to produce smoothest finish. Starts machine to produce items and feeds stock into machine or observes automatic-feed mechanism. Verifies conformance of work to specifications and adjusts machine as necessary.

May perform maintenance and repairs on machines. May specialize in setting-up machines for use by other workers and be designated accordingly,
Woodworking-Machine Set-Up Man

8355-114 SMOKING-PIPE MAKER(misc. prod. fab., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 6 7 PA: L 4 7

Fabricates, assembles, and finishes briar smoking-pipes, using a variety of woodworking machines:

Selects block of briar according to size and shape of pipe specified. Mounts block in lathe fixture. Selects and inserts cutters in lathe chuck. Starts machine and moves block into cutters, manually, to bore and partially turn and face pipe bowl. Clamps block in brazing machine and guides block against pre-selected cutters to shape lower part of bowl. Places shank in holder of drill press, and drills, faces and countersinks shankhole, using multi-purpose cutter. Selects appropriate bit and drills hole through shank into bowl chamber. Removes stummel (combined bowl and shank) from drill press. Cuts stock for pipe stem from slab of vulcanized rubber, using hacksaw. Drills, counterbores, shapes and finishes stem, using hand and power tools. Fits stem to stummel, or selects finished stem from supplied stock and counterbores it to fit stummel. Inserts metal bushing in stem, using hand or arbor press. Assembles pipe by mounting stem into shank manually. Smooths assembled pipe utilizing successively finer abrasive paper. Evaluates hardness of briar to determine quality by estimating resistance of briar to sanding. Selects and installs burrs in rotary-chuck and manipulates pipe against rotating tool to produce burred or carved effect. Dips pipe in hot stain solution to bring out grain and to colour briar. Immerses stem in hot oil to make stem pliable. Bends stem manually to desired shape, and sets stem by cooling under cold water. Coats inside of bowl with specified mixture to sweeten bowl, using brush. Inspects pipe for flaws, cracks and other defects. Polishes assembled pipe, using buffing wheel and polishing compounds. Grades pipe according to quality and grain of briar, and stamps trade mark on pipe, using press. Repairs broken pipes, using hand and power tools.

8355-118 BILLIARD-CUE MAKER(sport. & toy) DPT:382

GED: 3 SVP: 6 EC: I 5 6 7 PA: L 4 7

Shapes billiard cues from woodstock and fits ferrules and tips to cues, using a variety of woodworking machines, special clamps and glue:

Selects and grades exotic or other hardwoods according to quality of billiard cues to be manufactured. Operates saws, lathes, boring machine and rabbeting fixture to produce cue butts, shafts and inlays according to specifications. Assembles shafts, butts and inlays, using brush, adhesives and clamps. Operates belt sander to shape and smooth cues to size, taper and finish, and verifies diameter and taper, using calipers and scale. Feeds shaft end into pre-set tenoning chuck to reduce diameter and glues fibre ferrule to shaft end. Secures cue tip on end of shaft, using brush, adhesive and special clamp. Sands tip to

blend with cue point, using sanding machine. Dips cue in lacquer to apply finish coating and places cue in drying rack.

May fabricate two-piece cues by cutting finished cue in half, drilling and tenoning shaft and butt portions and gluing threaded-nylon fittings in position. May manufacture custom cues according to customers' specifications and repair broken or damaged cues and be classified accordingly,

Custom-Cue Maker and Repairman

8355-122 SPINDLE CARVER(furn.)
carver, machine.

DPT:681

GED: 3 SVP: 6 EC: I 5 6 7 PA: L 4 7

Carves decorative designs on wooden-furniture parts by manipulating stock freehand against spindle-mounted cutter:

Studies drawing or pattern to select cutters suitable to reproduce design on type of wood stock supplied. Mounts cutter on machine spindle, using hand tools. Holds and guides stock freehand against rotating cutter to duplicate master pattern. Selects and installs series of cutters to duplicate intricate designs. Cleans and oils machine.

May sharpen cutters on bench grinder. May perform minor machine maintenance, using hand tools.

8355-126 BRIAR-BOWL TURNER(misc. prod. fab., n.e.c.)

DPT:682

frazier; stummel turner.

GED: 3 SVP: 5 EC: I 6 7 PA: L 4 7

Operates special-purpose lathes to turn and shape briar blocks into smoking-pipe bowls:

Selects and installs cutters and balancing weights in rotary-cutter heads according to shape of stummel (bowl and shank) specified. Clamps block in holding device and pulls lever to feed block against cutters to shape shank. Removes block, secures it in second lathe, and pulls lever to feed block against cutters to shape sides, face and top, and bore bowl interior. Clamps shank of block in third lathe and pulls lever to feed front and bottom areas of bowl to rotating cutters. Turns handwheels to manipulate bowl against cutters to complete bowl forming. Inspects workpiece for defects after each cutting operation. Grinds and hones cutters.

8355-130 WOOD-TURNING-LATHE OPERATOR(furn.;
woodworking)

DPT:682

lathe operator; wood-lathe turner

GED: 3 SVP: 5 EC: I 5 6 7 PA: L 4 7

Operates wood-turning lathe to turn and shape wood stock by holding chisel against rotating stock:

Studies drawing or reads work order or specifications to determine set-up data. Positions wood stock between spur center in headstock spindle and tail center in tailstock and turns handwheel to force centers into stock. Adjusts turning speed according to size of work by changing belt position or by turning speed-control handwheel. Positions and clamps tool rest. Starts machine, places gouge chisel on tool rest and in contact with stock and moves gouge to reduce square stock to rough cylinder. Lays out cutting lines according to drawing, using scale and pencil. Resets speed control at speed appropriate to diameter of workpiece. Selects chisel according to type of cut specified and manipulates chisel against rotating workpiece to cut shapes. Verifies dimensions, using calipers and scale.

May smooth surface of work by holding sandpaper against rotating workpiece. May apply wax or other finishes to workpiece.

8355-134 ADZING-AND-BORING-MACHINE OPERATOR

(woodworking)

DPT:662

tie-machine operator.

GED: 3 SVP: 4 EC: I 5 PA: M 3 4 5 6 7

Operates machines to trim, bore, incise and stamp railroad ties and utility-pole crossarms, preparatory to treating with wood preservative:

Adjusts guides and stops, and installs adzing cutters, boring bits, incising rollers and identification and dating punches, according to work order, using hand tools. Starts machines and conveyor system, and observes operation. Directs machine feeders and off-bearers and inspects finished workpieces. Replaces worn or broken drills, cutters and knives.

May manually feed ties or crossarms into machines.

8355-138 BORING-MACHINE OPERATOR(furn.;
woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 6 PA: M 4 7

Operates single- or multiple-spindle-boring machine to bore holes in wooden parts:

Studies drawings, sample part, work order or specifications to determine size, type and setting of boring tools, stops, jigs, and guides required. Selects and installs boring tools and accessories in machine, using rule and wrenches. Adjusts spindle locations and stops to regulate spacing and depth of bore, using rule, template and wrenches, or turns handwheels to move table and guides to position stock under bits and regulate depth of bore. Positions workpiece against guides and depresses pedal to engage boring bit with workpiece. Verifies location, size and depth of hole, using template or rule or by fitting parts together.

May ream or countersink holes as required. May be designated according to type of machine operated or operation performed; for example,

Boring-Machine Operator, Horizontal
Bunghole Borer(woodworking)
End-Bore Operator
Multiple-Boring-Machine Operator.

**8355-142 CHUCKING-AND-BORING-MACHINE
OPERATOR** (furn.) DPT:682
trim-and-bore operator.
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Operates machine to saw, bore, and round ends of chair posts, rails and backs:

Turns handwheel to adjust space between chucks and saws. Selects and installs cutter heads according to size of stock and angle of cut, and spaces boring bits according to specified location of holes, using wrenches and gauges. Starts machine and guides workpiece into machine that automatically clamps and processes it. Places processed workpiece on conveyor or in designated area. Keeps production records.

8355-146 CHUCKING-MACHINE OPERATOR(furn.;
woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Operates machine to taper ends of implement handles or to cut round tenons on furniture parts, such as legs and rungs:

Selects, aligns and secures blades in cutter head in accordance with specifications. Adjusts stops according to length of cut specified, and adjusts feed-yoke or jig according to diameter of stock. Positions and clamps stock in feed-yoke or jig. Starts machine and turns handwheel or depresses pedal to feed stock into cutter head or cutter head into stock. Verifies accuracy of settings, using caliper or scale and adjusts settings as required.

May operate machine equipped with automatic feed. May operate machine equipped with saw that trims end of stock, or machine that simultaneously cuts tenons on both ends of stock and be designated accordingly; for example,
Chuckling-and-Sawing-Machine Operator
Double-End-Chucking-Machine Operator

8355-150 DADO OPERATOR(furn.; woodworking) DPT:682
dado-saw operator.
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates single- or multiple-blade machine to cut grooves, slots, notches, recesses, rabbets, lap joints and tenons in wooden parts:

Examines drawings, work orders or sample part. Selects and mounts circular saws and chip breakers, or circular saw and wobble washers to cut slots of specified width. Adjusts height of blade or table, by turning handwheels, to control depth of cut. Sets up machine for multiple-slot cutting, using spacers, hand tools and scale. Adjusts position of guide fence to control location of slots. Starts machine and pushes wooden parts into cutters. Inspects depth, width and location of slots, using scale, and adjusts machine as required.

May pull overhead-swing saw through stock to cut groove. May be designated according to part produced or type of operation; for example,

Cleat Notcher
Groover
Overhead-Dado Operator
Wobble-Saw Operator

8355-154 DOVETAIL-MACHINE OPERATOR(furn.;
woodworking) DPT:682
lock-corner-machine operator.
GED: 3 SVP: 4 EC: I 5 7 PA: M 4 7

Operates routing machine to cut matching-dovetail or rectangular notches for interlocking joints in edges or ends of wooden stock:

Studies drawings, specifications or sample to determine set-up data, such as size, depth and location of cuts to be made. Selects and installs router bits, jigs and guides, using chuck key and hand tools. Spaces spindles on shaft at specified intervals, using wrenches, and turns handwheels or sets stops to regulate depth of cut. Clamps workpiece to jig, inserts pin in guide-hole of machine table, and places jig over guide pin. Starts machine, depresses pedal to raise table and feed workpiece into rotating bits, and moves workpiece under bits or slots in jig. Verifies spacing of notches, using rule, or assembles notched edges together to verify spacing and depth of cut.

8355-158 LOUVER-ROUTER OPERATOR(woodworking)
DPT:682
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Operates automatic machine to space and cut mortises in stiles for insertion of slats to form louvered doors and shutters:

Studies sample or reads work order to determine set-up data, type of wood and quantity required. Selects, installs, and adjusts cutter heads on spindles according to length, depth, and angle of mortises to be cut. Installs machine-ratchet gear in spacing track according to specified distance between mortises and design of door or shutter, and locks ratchet gear in place. Positions and clamps two stiles on spacing tracks to produce matched pair. Starts machine to force cutting head into stile and to automatically advance head.

8355-162 PLANER OPERATOR(furn.; woodworking)
DPT:682
GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Operates planer to dress lumber and reduce it to specified size:

Reads work order and turns handwheel to adjust gap between cutter head and table to produce thickness required. Positions pressure bar and chip breaker, using hand tools. Adjusts feed rolls and guide fence. Starts machine, exhaust blower and conveyors, and slides stock against guide to align it on feed rolls. Inspects planed surface and verifies thickness of dressed stock, using scale or gap gauge, and adjusts planer as required. Changes cutter knives, using hand tools.

May sharpen cutter knives in machine, using handstone. May operate planer equipped with two cutter heads to dress both sides of stock simultaneously. May operate equipment with two double-planers to dress four sides of lumber and produce specified width and thickness in one operation. May be designated according to type of planer operated, or operation carried out; for example,
Double-Planer Operator
Finish-Planer Operator
Rough-Planer Operator
Single-Planer Operator

8355-166 SHAPER OPERATOR(furn.; woodworking)
DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: L 4 7

Operates machine to cut grooves, rabbets, flutes or pattern shapes on surface or edges of wooden stock:

Studies master pattern, drawings, or shop orders to determine set-up specifications. Selects, mounts and adjusts cutters, guides, spindle and collars to make specified cuts. Starts machine and feeds straight stock past rotating-cutter head while holding stock in firm contact with guide or fence. Produces cuts on stock for shaped items by clamping rough-shaped stock to appropriate pattern. Manipulates stock through periphery of pattern while holding pattern in contact with spindle collar, to simultaneously shape edge contour and reproduce pattern.

May sharpen and mount knives in cutter heads. May be designated according to shaper operated, part produced, or type of operation performed; for example,
Detail Shaper
Double-Spindle-Shaper Operator
Panel-Raiser Operator

8355-170 SHAPER OPERATOR, AUTOMATIC(furn.;
woodworking) DPT:682
profile-shaper operator
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Operates automatic-woodworking machine that follows contour of model or template to shape wooden parts:
Selects and secures model or template to machine table. Selects cutter knives according to shape of cut specified. Locks and balances knives in cutter head and installs cutting unit in machine, using hand tools. Positions and clamps workpiece in each loading station and starts machine. Monitors operation as slowly-revolving table brings template into contact with following roller. Engages workpiece with high-speed cutter, or positions workpiece under clamps and depresses pedal to actuate mechanism that automatically closes clamps, moves carriage containing workpiece against rotating cutters, returns carriage to starting position, and releases clamps. Inspects workpieces, using scale or template to verify dimensions, and adjusts machine as required. Loads and unloads work stations.

8355-174 SPLITTING-MACHINE OPERATOR,
CORK(woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 PA: H 4 7

Operates machine to split slabs or blocks of cork or composition corkboard into sheets of specified thickness:
Sets dial gauge and turns handwheels to adjust feed-roller gap, table height and band knife to cut sheet of prescribed thickness. Pulls block from roller conveyor to machine table. Feeds block into rollers which force it against knife to cut sheet. Measures sheet with dial-indicator gauge and makes machine adjustments to meet thickness specifications. Cuts first sheets from each of several blocks. Readjusts table height and roller gap after each successive pass on batch of blocks to split blocks to sheets of specified thickness. Sharpens knife by adjusting position of integral-grinding wheel. Places cork blocks in steam-heated oven to condition them prior to cutting. Performs cleaning and maintenance on splitting-machine.

8355-178 TENONER OPERATOR(furn.; woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: L 4 7

Operates woodworking machine to tenon ends of stock:
Examines drawings, master pattern or work order to determine size, type and setting of cutter heads, guides and jigs required. Selects, mounts and positions end-trim-circular saw, using hand tools and scale. Selects and installs cutter heads and spacers on vertical spindle. Adjusts position of heads by turning handwheel. Adjusts guides and jigs on machine table. Starts machine, positions stock and pushes table through machine or places stock on feed conveyor. Verifies dimensions of stock, using scale or template, and adjusts machine as required. May operate machine to trim and cut tenons on both ends of stock and be designated accordingly,
Double-End-Tenoner Operator.

8355-182 TRIMMING-AND-BORING-MACHINE OPERATOR(furn.) DPT:682
double-cut-off-and-bore operator; end-trim-and-bore-machine operator.
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates machine to trim or mitre ends of wooden-furniture parts and bore holes for dowels:
Reads drawings and work orders or studies master pattern to determine set-up specifications. Selects and installs drill bits in chucks to produce holes of specified diameter and depth, using wrench or key. Sets angle and spacing of cut-off saws according to specifications. Sets up work-positioning devices, such as fixtures and stops on machine table, and adjusts pneumatic clamps, using hand tools. Starts machine and positions stock under clamps that hold stock during automatic trimming and boring cycle. Removes workpiece from machine and verifies dimensions, using tape measure, scale and carpenter's square. Adjusts drills or saws to ensure conformance to specifications.

8355-186 MORTISING-MACHINE OPERATOR(furn.;
woodworking) DPT:682
GED: 3 SVP: 4 EC: I 5 7 PA: L 4 7

Operates machine to cut mortise slots in wooden parts:
Selects mortising chisel or mortise-chain-saw assembly according to size of mortise specified. Adjusts height of machine table or spindle stops for depth of slot specified. Lays out cuts to be made on stock, using rule and pencil. Clamps stock to machine table. Starts machine and pulls lever or depresses pedal to force cutting head into wood. Turns handwheels to release stock from clamps or to reposition table and stock for further cutting.
May be designated according to type of mortising machine operated; for example,
Chain-Mortiser Operator
Chisel-Mortiser Operator

8355-190 WOODEN-BOWL-LATHE OPERATOR(woodworking) DPT:662
GED: 2 SVP: 4 EC: I 5 7 PA: H 4 5 6 7

Operates special-purpose lathe to cut and shape several bowls of decreasing size from same piece of wood stock, assisted by co-worker:
Measures bowl blank to determine number and size of bowls to be cut, using rule and chart. Signals co-worker to secure bowl blank to face plate on headstock. Selects and installs curved knives on sliding arm, according to size of bowl being machined, using wrench. Starts lathe, pushes lever to force curved knife into wood to shape inside of first bowl. Cuts outside of first bowl with larger curved knife which forms inside of next larger bowl until smaller bowl is detached from inside of larger bowl and falls into container held by co-worker. Signals co-worker to polish surface of each bowl. Sharpens knives, using grindstone and files.
May operate additional special-purpose lathe to cut and shape small-wooden bowls from blanks salvaged from other bowl-making operations.

8355-194 ROUTER OPERATOR(furn.; woodworking) DPT:682
GED: 3 SVP: 3 EC: I 5 6 7 PA: L 4 7

Operates single- or multiple-spindle-routing machine to cut slots, grooves, designs or recesses in wood workpiece:
Studies drawing, sample part, or specifications to determine size, depth and location of cuts to be made. Selects and installs specified bits, jigs and guides on machine according to type of routing to be done. Clamps or tacks workpiece to jig. Turns handwheel to adjust table height or adjusts spindle to regulate depth of cut. Starts machine and depresses pedal to raise table and engage wood with rotating bit. Slides workpiece under rotating bits, following guides, lines or slots in jig to produce specified cut.

8355-198 SWING-TYPE-LATHE OPERATOR(furn.;
woodworking) DPT:682
GED: 3 SVP: 3 EC: I 5 7 PA: M 4 7

Operates swing-type lathe equipped with rotary cutters to turn wooden articles, such as implement handles or table legs:
Studies drawings, specifications or sample part to determine machine settings. Mounts appropriate cutters on machine spindle, using template, scale and hand tools. Adjusts spindle and workpiece turning speeds according to size or type of wood. Positions workpiece between spur and tailstock centers and moves lever to secure workpiece. Starts lathe and moves lever to swing rotating stock against high-speed cutters until shaping is completed. Stops lathe and verifies dimensions of product, using template or calipers and scale.
May operate lathe incorporating automatic feed and be designated accordingly,
Swing-Type-Lathe Operator, Automatic

8355-202 WOOD-CARVING-MACHINE OPERATOR(furn.;
woodworking) DPT:682
GED: 3 SVP: 3 EC: I 5 7 PA: L 4 7

Operates multiple-spindle-carving machine to duplicate master pattern simultaneously on pieces of wooden stock:
Selects and sets-up appropriate master pattern, tool bits and tracing point, using hand tools. Positions and clamps wood blanks between

chucks on machine bed. Holds master spindle and moves tracing point over and around pattern contours to produce carvings on blanks. Verifies accuracy of carving against specifications, using calipers, rule or templates. Sharpens bits, using bench grinder.

May operate machine equipped with mechanism that rotates blanks and pattern to reproduce carving on sides of blanks. May install fine-finish bits and tracing point after rough cuts are made to complete carving.

8355-206 SHUTTLE MAKER(woodworking) DPT:682
shuttle planer; shuttle spotter.
GED: 3 SVP: 3 EC: I 5 6 7 PA: L 4 7

Operates machines to cut, shape and finish shuttles used in looms:

Cuts wood or plastic material into shuttle blanks of specified dimensions, using circular saw. Smooths flat surfaces of block, using jointer and sanding machine. Inserts block in machine carriage that forces end of block against cutting head that automatically shapes shuttle ends to specified contour. Brushes adhesive compound on pre-cut-fibre strips and aligns strips on sides of wooden shuttles. Operates manual press to bond strips to shuttles. Clamps shuttles in rack and hangs rack in drying room. Removes rack from drying room. Bends and glues fibre strips to tapered contour of shuttle ends, using adhesive compound, hammer and wedges. Returns shuttles to drying room.

8355-210 SMOKING-PIPE BURLER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: I 5 6 7 PA: S 4 7

Cuts burling or carved effects on smoking-pipe bowls, using rotary burrs:

Selects and mounts burr in machine to give burling depth specified. Starts machine and manipulates pipe bowl against burr to cut burling on bowl surface. Mounts successive series of burrs to produce carved effect.

8355-214 PANEL-JOINTER-MACHINE TENDER DPT:685
(woodworking)
plywood-tenoner operator.
GED: 3 SVP: 3 EC: I 5 6 7 PA: H 3 4 7

Tends machine that cuts tongue-and-groove or lap joints in edges of plywood or veneer panels:

Installs or mounts multiple-cutter heads and adjusts cutter guards, using hand tools. Starts machine and makes test cut to verify set-up. Arranges stock so that widest pieces are processed first. Inspects, sorts, and piles finished panels by species of wood, size, and quality. Prepares production report.

8355-218 WOODEN-BOWL-LATHE-BOTTOM MAN DPT:665
(woodworking)
GED: 2 SVP: 3 EC: I 5 6 PA: H 4 5 6 7

Tends special-purpose lathe to cut and shape bottoms of wooden bowls of decreasing size from same piece of wood, working as member of team:

Secures pre-drilled square-wooden block to face plate or shaft of head stock. Positions hinged-cutting and shaving fixture on center of rotating-bowl blank. Pulls lever and applies pressure so that curved blade shaves and shapes bottom of smallest bowl and each succeeding larger bowl after previous bowl is cut and separated from bowl blank. Holds basket over rotating workpiece to catch bowl as it is cut from bowl blank by lathe operator. Deposits finished bowls in container for further processing. Removes remaining piece of bowl blank from head-stock shaft for further processing by other workers. Transports bowl blanks from storage room to machine area.

8355-222 BOWL-BLANK-BORING-AND-FINISHING-MACHINE OPERATOR (woodworking) DPT:682
GED: 2 SVP: 3 EC: I 5 PA: H 4 7

Operates machine to bore small hole in center of wooden-bowl blank to facilitate securing blank in special purpose lathe and to remove lathe centers on completion of shaping:

Selects and installs holding fixture, according to size of bowl blank, on machine table and positions bowl blank in fixture. Installs drill bit in

machine chuck. Starts boring machine and depresses pedal to raise table and bore hole in center of blank. Removes drilled blank from holding fixture and routes blank to lathe operator. Installs cutter head in chuck of boring machine and positions shaped bowl in holding device. Starts machine and depresses pedal to raise table and engage cutting head with bowl blank to remove lathe centers from interior and exterior of bowl. Piles bowls in container for further processing.

8355-226 CROZE-MACHINE OPERATOR(woodworking) DPT:682
GED: 2 SVP: 3 EC: I 6 7 PA: H 4 7

Operates machine equipped with trim-saw-and-dado-cutter assembly to cut croze (groove) in wooden staves, into which tank bottom is fitted:

Starts machine. Places stave on machine table, aligns mark on stave with cut-off-saw blade and depresses pedal to actuate pneumatic clamp that secures stave in position. Pulls lever to move pneumatic saw- and-dado-cutter assembly across stave to cut croze. Releases clamp and slides stave to next work station.

8355-230 TOOTH-PICK-LATHE OPERATOR(woodworking) DPT:682
GED: 2 SVP: 3 EC: I 5 PA: H 3 4 7

Operates lathe-type machine to peel log section into thin sheet and cut sheet into strips for further processing into tooth-picks:

Lifts log section onto machine bed assisted by co-worker. Pulls lever to raise machine bed to center and secure log section between headstock and tailstock. Adjusts lathe knives to cut strips of specified thickness and width. Starts machine and engages clutch to start log rotating. Pushes lever and applies pressure so that lathe knives peel sheet from log section and cut sheet into strips of standard width. Examines strips for defects, such as holes, knots and improper thickness.

8355-234 COPY-LATHE TENDER(misc. prod. fab., n.e.c.; woodworking) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: L 4 7

Tends one or more copy lathes that turn and shape wooden or plastic blanks into duplicates of master model:

Clamps model of article to be duplicated next to scanning arm of copy lathe and mounts wood or plastic blank between lathe centers. Starts machine to activate cutters, which are guided by follower (roller) that follows contour of model, to shape workpiece.

May adjust machine, using hand tools, to regulate size of duplicated article. May rough shape wood stock preparatory to mounting on lathe, using bandsaw. May be designated according to the articles produced; for example,

Gunstock Shaper
Last-Lathe Tender
Last Turner

8355-238 DOWEL-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: L 3 4 7

Tends machine that cuts dowel-rod from squared stock:

Adjusts knives, guides and feed rolls according to size and finish of dowel-rod to be cut. Starts machine and inserts stock between feed rolls that force it through cutting head. Verifies machine settings and size of stock, using calipers and micrometer.

May tend machine that cuts spirals or longitudinal grooves while rounding stock. May keep production records. May tend machine that rounds, chamfers, and cuts dowel rod to length and be designated accordingly,
Pin Maker.

8355-242 EMBOSSING-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that imprints ornamental designs on picture-frame mouldings:

Installs embossing wheel in machine, using hand tools. Turns handwheel to lower embossing wheel over bed of machine according to thickness of moulding, and sets feed guides. Ignites and positions

gas jets to heat embossing wheel, regulating heat to prevent burning of moulding. Starts machine, places moulding in guides and pushes it under embossing wheel. Examines embossing on moulding and adjusts wheel to correct depth of indentation.

8355-246 LAMINATED-BOWL-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 4 6 7

Tends special-purpose machine that simultaneously cuts five, concentric, slant-edged, ring-shaped sections, used to fabricate laminated bowls, from one piece of flat-circular-wooden stock: Mounts bowl stock on machine shaft so that shaft pin is inserted in pre-bored hole in center of stock. Secures bowl blank on shaft for cutting operation, using hydraulic-plate-holding device. Starts machine and turns handwheel to force arm-mounted-cutting knives into rotating stock to cut concentric, ring-shaped sections with slanted edges. Controls pressure on cutting knives to prevent machine stalling or damage to knives. Stops machine, releases hydraulic- holding-plate, and removes rings from shaft. Stacks rings in proper sequence on table preparatory to gluing and further processing by other workers. Replaces broken knives, using key to slacken or tighten locking screw. Cleans machine, using vacuum cleaner.

8355-250 RIP-AND-GROOVE-MACHINE TENDER(furn.) DPT:685
GED: 2 SVP: 3 EC: I 7 PA: L 4 7

Tends machine that rips and cuts grooves on straight, curved or irregularly-shaped-furniture stock in one operation: Turns panel controls to adjust stops and saws for cutting grooves of specified width and depth. Feeds stock under rollers. Measures first cuts, using rule to verify processed part against work order.

8355-254 WOODENWARE CARVER, HAND(woodworking) DPT:684
GED: 2 SVP: 2 EC: I PA: M 3 4 7

Carves simple decorative design on woodenware, such as bowls and plates, using pneumatic-hand-carving tool: Selects jig according to item to be carved and bolts it to rotary spindle. Positions and secures inverted workpiece over jig, using spring-clamping device. Installs carving knife in pneumatic tool. Starts pneumatic tool and carves standard freehand design on woodenware, pressing pedal to rotate workpiece as carving progresses. Examines completed article for defects. Packs woodenware for shipment in cardboard cartons and seals containers.

8355-258 GUN-STOCK CHECKERER(woodworking) DPT:685
checkerer, small-arms.
GED: 2 SVP: 2 EC: I 7 PA: L 4 7

Tends machine that checkers (cross grooves) gunstock or handle of small-arms for decorative and gripping purposes: Positions wooden stock or forepiece in holding device on machine. Pushes buttons to cause electrically-heated, automatically-cycled dies to press checkered design in each side of workpiece. Removes workpiece from machine on completion of cycle and inspects checkering. Adjusts heat and dwell-time controls as necessary. Sands workpiece with fine sandpaper to remove irregularities.

8355-262 GUN-STOCK FITTER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 6 7 PA: L 4 7

Tends preset-woodworking machines to rout, drill or mill recesses in gun-stocks for parts to fit breech, barrel or trigger mechanisms of firearms: Clamps gun-stock in fixture on machine table. Starts machine and turns handwheels or pulls lever to feed workpiece into rotating tool to rout or drill recesses for trigger and breech mechanism. Turns handwheel on milling machine to cut barrel recess in fixture-mounted gun-stock. Removes gun-stock from fixture and slides it along guide on shaper to cut finger recesses. Fits metal-gun parts into their respective recesses and marks identifying number on parts and gun-stock to facilitate assembly.

8355-266 HEADING-MACHINE TENDER(woodworking) DPT:685
bottom-machine tender.
GED: 2 SVP: 2 EC: I 5 7 PA: L 4 7

Tends machine that shapes barrel, tub and bucket bottoms and headings from wooden blanks, using either of the following methods: 1. Centers and clamps heading or bottom blank between faceplates of machine, using handwheel. Moves lever to automatically feed blank into combination saw and cutter head that cuts blank to specified diameter and bevels edges. Releases clamps and removes workpiece. 2. Adjusts limit of horizontal-swing saw to shape blanks to specified size. Centers and clamps blank in machine chuck. Starts machine and moves lever that simultaneously swings rotating saw against blank and starts chuck and blank revolving. Holds saw against revolving blank to trim and shape periphery. Opens jaws of chuck and removes workpiece.

8355-270 SADDLE-MACHINE TENDER(furn.) DPT:685
chair-seat-planer tender.
GED: 2 SVP: 2 EC: I 5 7 PA: L 4 7

Tends machine that chips out saddle forms in seats of wooden chairs: Installs cams and cutter heads according to seat contour specified on work order, using screwdriver. Turns handwheels to set cutter heads for depth of cut. Starts machine and places chair seat on feed belt that pulls it into cutter heads. Removes chair seat at discharge end of machine and examines it for defects.

8355-274 WOODEN-PRODUCTS-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: M 4 7

Tends one or more pre-set woodworking machines that cut, shape, smooth, bore, chop, or slice wood stock to produce items; such as, rolling pins, clothes hangers, pencils, bowls, toothpicks and basket handles, performing any combination of the following duties: Makes basic adjustments to machine table, guide fence, feed rolls, stops, jigs, or fixtures to present stock to saws, knives or cutter heads in prescribed manner, using hand tools. Pulls lever, depresses pedal, or pushes button to start machine and feeds stock into feed rolls, against guide fence and stops, or loads hopper. Stops machine to remove jams. Off-bears workpiece at discharge end of machine and inspects finished product for defects. Replaces dull or damaged blades, bits or knives. Keeps production records. May be designated according to machine tended or item produced; for example, Bowl-Lathe Tender Pencil-Grooving-Machine Tender Pencil-Rounding-Machine Tender Rolling-Pin Maker Slat Slicer Toothpick-Chopping-Machine Tender

8355-276 WOODEN-PRODUCTS-MACHINE FEEDER(woodworking) DPT:686
GED: 2 SVP: 2 EC: I 5 7 PA: L 4 7

Feeds wooden stock into preset special-purpose-woodworking machines that automatically cut, shape or finish articles; such as, threaded mop-handles, coat hangers, toothpicks, meat skewers, or clothes- pins: Loads hoppers or conveyors, or manually feeds machines to transfer stock to cutter heads, saws, or slicing knives. Stops machine and clears jams. Inspects finished products for defects. May count and pack products. May feed series of machines. May be designated according to article produced, operation performed or type of machine; for example, Automatic-Chucking-and-Threading-Machine Feeder Clothes-Pin-Machine Feeder Coat-Hanger-Shaper-Machine Feeder Handle-Threading-Machine Feeder, Automatic Skewer-Machine Feeder

8355-280 PREFITTING-MACHINE FEEDER(woodworking)
DPT:686

GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Feeds wooden doors into automatic machine that drills holes and cuts recesses for locks and hinges:
Presses buttons to start conveyor, drills and air-powered routers. Slides door from stack and positions it against guides on conveyor. Observes progress of door through machine to ensure that door is properly positioned on conveyor and that drills and routers are cutting cleanly. Verifies depths and locations of recesses and holes, by laying hinge or gauge in recess or by measurement. Stacks doors in designated area for further processing.
May replace dull drills or routers. May adjust position of drills and routers in machine to process doors of different sizes, using hand tools.

8355-298 WOODWORKING-MACHINE FEEDER(furn.; woodworking)
DPT:686
GED: 2 SVP: 2 EC: I 5 7 PA: M 4 7

Feeds wooden stock into rollers of machines that cut, plane, shape or smooth stock:
Feeds stock into machine or places stock on feed conveyor. Stops machine to remove jams or to make minor adjustments. Removes stock from discharge end of machine. Assists operator in setting-up machine.
May transport stock to or from machines, using handtruck or dolly. May be designated according to type of machine; for example, Groover Feeder
Moulder Feeder
Stave-Planer Feeder

8355-299 OTHER PLANING, TURNING, SHAPING AND RELATED WOOD-MACHINING OCCUPATIONS

This group includes planing, turning, shaping and related wood-machining workers, not elsewhere classified; for example those who drill air holes in shanks of smoking pipes. A typical example of an occupational title covered by this residual group definition is:
Smoking-Pipe-Air-Hole Driller(misc. prod. fab., n.e.c.)

8356-INSPECTING OCCUPATIONS, WOOD MACHINING

This unit group includes occupations in inspecting work, as described under the term title, 02-170 INSPECTOR (any ind.), concerned with quality control activities in wood machining.

8356-110 INSPECTOR, WOOD MACHINING(furn.; woodworking)
DPT:684
GED: 3 SVP: 4 EC: I PA: L 4 7

Inspects machined-wooden parts or products for conformity to specifications:
Examines items for defects, such as cracks, knots, scratches and dents. Measures items to verify specified dimensions, using gauges, templates, calipers and rules. Examines rejects to determine those that can be salvaged, and routes usable material to machine operators. Records number and type of defects, and reports recurring defects for corrective action.
May keep production records. May be designated according to part or article inspected or machining operation involved; for example, Pattern Inspector(woodworking)
Sanding Inspector
Shuttle Inspector(woodworking)

8356-199 OTHER INSPECTING OCCUPATIONS, WOOD MACHINING

This group includes wood-machining inspectors, not elsewhere classified; for example, those who measure and inspect wooden parts or products for conformance to specifications. Typical examples of occupational titles covered by this residual group definition are:
Door-Mortising-and-Boring Inspector(woodworking)
Gun-Stock Inspector(metal fab., n.e.c.)

Wooden-Bowl Inspector(woodworking)

8357-WOOD SANDING OCCUPATIONS

This unit group includes occupations concerned with operating, tending and feeding sanding machines to smooth and clean wood parts or products. Occupations concerned with sanding veneer and plywood panels in a plywood plant are classified in Unit Group 8233, PLYWOOD MAKING AND RELATED OCCUPATIONS.

8357-110 CONTOUR-SANDER OPERATOR(woodworking)
DPT:684
GED: 3 SVP: 4 EC: I 5 7 PA: M 4 7

Operates belt-sanding machine to sand mouldings or other contoured wood surfaces:
Adjusts tension of sanding belt, using handwheel. Starts machine, and regulates speed of belt. Places stock to be sanded on bed of machine and selects sanding form according to shape of contour required. Forces belt manually against surface of stock, using sanding form to mould belt to contour of workpiece. Moves form along belt to smooth entire surface of material. Examines and feels surface for acceptable finish. Replaces worn sanding belts.
May complete work order cards or production reports. May operate belt-sanding machine on which sanding form is clamped to pressure bar and stock conveyed under belt, or operate machine which has power-oscillated pressure bar or shoe.

8357-114 TURNING-SANDER TENDER(furn.; woodworking)
DPT:685
GED: 3 SVP: 3 EC: I 5 7 PA: L 4 7

Tends sanding machine that sands turned items, such as spindles, chair rungs and bed posts, by rotating them against strips of sandpaper:
Turns handwheel to space chucks of machine according to length of stock. Cuts strips of sandpaper according to shape of article and clamps strips in position on machine. Starts machine and places stock on feed rest where it is picked up by rotating spindles, or positions stock between chucks, manually. Observes and feels sanded stock to verify smoothness.
May keep production records.

8357-118 SANDER, MACHINE(furn.; misc. prod. fab., n.e.c.; woodworking)
DPT:684
GED: 2 SVP: 3 EC: I 5 6 7 PA: L 4 7

Sands surface of wooden items or parts by moving them against power-driven abrasive belts, disks, drums or spindles, using either of the following methods:
1. Shapes and smooths item by holding and turning it against abrasive. 2. Adjusts table height or angle, places item on table or in jig, and pushes item against moving abrasive form. Observes and feels surface of stock for smoothness. Replaces worn sanding material. May fit sanding belt, drum, disk or spindle according to shape of article to be sanded. May fill cracked surfaces of item with putty or other compound. May be designated according to type of machine operated or item produced; for example, Drum Sander
Last Sander(misc. prod. fab., n.e.c.)
Smoking-Pipe Sander(misc. prod. fab., n.e.c.)

8357-122 LATHE SANDER(furn.; misc. prod. fab., n.e.c.; woodworking)
DPT:684
GED: 2 SVP: 2 EC: I 5 6 PA: M 4 7

Removes tool marks and smooths round wooden parts by hand-sanding parts rotated on lathe:
Positions part between headstock and tailstock of lathe, and closes tailstock against part to hold it in place. Starts machine and presses sandpaper of specified grade over rotating part. Examines or feels part to ascertain whether surface is smooth. Removes part from lathe. May apply wax or other finish while part is rotating on lathe.

- 8357-126 SANDER, PORTABLE MACHINE**(furn.; woodworking) **DPT:684**
clean-up man.
 GED: 2 SVP: 2 EC: 1 5 7 PA: M 3 4 7

Sands surface of wood articles to facilitate finishing, using portable sander:

Attaches sheet or disk of abrasive material to machine platen and secures it with thumbscrews or clamps. Starts machine and guides it over surface by hand. Examines and feels surface for smoothness. Removes excess glue from joints, using knife, scraper, or wood chisel. Fills cracks, splits and knotholes with wood putty or plastic wood. Sands wood surface by hand, when shape of workpiece precludes use of sanding machine.

- 8357-130 CYLINDER-SANDER FEEDER**(furn.; woodworking) **DPT:686**
 GED: 2 SVP: 2 EC: 1 5 7 PA: L 4 7

Feeds sanding machine, that sands cylindrical-wooden stock: Starts machine and inserts article between abrasive belt and feed roller through collar or guide, or places article on conveyor that carries it between feed roller and sanding belts. Observes and feels stock emerging from machine to verify smoothness.

May adjust tension of abrasive belt by turning set screw. May replace worn sanding belts. May mount collar or guide, according to size of stock, using hand tools. May record number of pieces sanded.

- 8357-134 SANDING-MACHINE FEEDER**(woodworking) **DPT:686**
 GED: 2 SVP: 2 EC: 1 5 PA: M 3 4 7

Feeds flat-wood workpieces into sanding machine to obtain smooth surface:

Turns handwheel or moves lever to adjust clearance between sanding belt or drum and feed bed to obtain desired thickness of workpiece. Starts machine, and lifts and feeds stock onto endless belt or feed rollers. Checks workpiece periodically to verify thickness, using thickness gauge or calipers. Inspects product for smoothness, using fingers, as it emerges from machine.

May replace worn or torn sandpaper or sanding belts, using hand tools.

8359-WOOD MACHINING OCCUPATIONS, N.E.C.

This unit group includes wood machining occupations, not elsewhere classified, concerned with activities, such as framing timbers and poles, sawing and shaping wooden paddles, shaping and finishing wooden or plastic shuttles, laying out cutting lines on wood stock, mitring and cutting moulding stock, cutting and waxing cork bottle-cap liners and cutting and pointing wooden dowels.

- 8359-110 FRAME-TABLE OPERATOR**(woodworking) **DPT:662**
framer.
 GED: 3 SVP: 5 EC: 0 5 PA: M 3 4 7

Operates machines to cut, drill, incise, and assemble timbers for utility poles, and for structures, such as buildings, bridges, and piers, performing any combination of the following duties:

Lays out timber for cutting operations, according to drawings or work order, using square, rule and pencil, and assisted by co-worker. Installs dado cutters or adzing knives. Adjusts cutters for depth and angle of cut by raising, lowering, or tilting it with aid of electric motor. Directs co-worker to spot lumber on carriage under cutting tool. Starts machine and advances cutter into wood by turning wheel or pressing

pedal. Bores and countersinks holes in timber, using drill press or portable drill. Changes or sharpens cutters or drill bits, using hand tools. Sets up and operates incising machine to slit surface of timber to aid the penetration of preservative fluids. Operates circular saw to cut timber to specified length. Marks identifying data on finished pieces, using die-filled hammer or crayon. Repairs and lubricates machines. May specialize in framing particular items and be designated accordingly,

Timber Framer

- 8359-114 OAR MAKER**(woodworking) **DPT:681**
paddle maker.
 GED: 3 SVP: 3 EC: 1 5 6 7 PA: M 4 7

Sets up and operates variety of woodworking machines to saw, taper, shape and finish wooden oars or paddles according to specifications: Selects template and lays out patterns on rough stock, using pencil, to obtain most effective use of material and to avoid defects. Cuts out workpiece by guiding wood stock against band-saw or jigsaw and following pattern outline. Shapes blade of oar, using table saw. Shapes shaft and handle of oar with wood-turning lathe. Sets up and operates planing machine to taper paddle blade to specifications. Selects and installs cutting heads in multiple-spindle-shaping machine. Starts machine and holds and pushes paddle stock against cutting heads to obtain desired shape. Smooths surface of oar or paddle by holding and turning against abrasive surfaces of sanding machine. May glue pieces of different wood species together to form stock for making fancy paddles.

- 8359-118 SHUTTLE-SHAPER-AND-TIP INSERTER** (woodworking) **DPT:682**
 GED: 3 SVP: 3 EC: 1 5 6 PA: L 4

Operates variety of machines to shape and assemble wooden or plastic shuttles:

Feeds shuttle blanks into cutting, profiling, filing, grooving, and corrugating machines to shape shuttles, including bobbin chamber, using levers and guide fence. Saws and squares ends of shuttles, using circular saw and rotating-cutting machine. Bores holes in shuttle to permit insertion of ferrule and metal tips, using boring machine. Inserts ferrule in shuttle, using ferrule-inserting machine. Dips corrugated shaft of metal tip in glue, sets shaft in hole, and forces tip into hole, using electro-magnetic, arbor, or other type of press.

- 8359-122 SHUTTLE FINISHER**(woodworking) **DPT:684**
 GED: 3 SVP: 3 EC: 1 PA: L 4 7

Smooths and finishes shuttle grooves, inserts tension devices, and lacquers wooden shuttles:

Bores holes in shuttles for tension devices, using boring machine. Inserts tension devices through holes and secures them with glue. Removes rough spots from shuttle grooves, using knife, chisel and file, and polishes surface of shuttle with sandpaper and emery-cloth. Removes dust from shuttles, using air hose, and places shuttles in dipping rack. Lowers rack into lacquer tank to coat shuttles with lacquer, and raises rack to allow shuttles to dry. Removes flaws in lacquer finish, using buffing wheel, sandpaper and steel wool. Sharpens knives and chisels, using hand oilstone.

- 8359-126 LAY-OUT MAN**(woodworking) **DPT:684**
pattern marker.
 GED: 2 SVP: 3 EC: 1 PA: L 4 7

Marks cutting guidelines on wood stock for woodworking-machine operators:

Selects pattern according to part being processed and aligns pattern on stock. Marks or traces outline of irregularly-shaped parts on wood stock or partly-finished-wooden products, using pencil or other marking device.

May nail pieces of thin stock together for identical parts to be cut

simultaneously. May be designated according to machine supplied or product; for example, Band-Saw Marker
Last Marker

8359-130 MOULDING CUTTER(woodworking) DPT:684
GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Cuts and mitres moulding stock for picture frames and doors, performing any combination of the following duties:
Turns screws to adjust feed guides and end stop to cut moulding to specified angle and length. Turns handwheel to raise or lower mitre bars that protect edges of moulding from splintering during cutting operation. Slides stock under knife and depresses pedal or pulls hand lever to lower cutting knife that cuts and mitres moulding. Traces outline for decorative or irregular-shaped moulding, using template and pencil, and cuts moulding following outline, using band- saw. Makes several cuts with mitre knife or pushes moulding through band-saw or pre-adjusted mitre saw when stock is too thick for one cut of knife.

8359-134 POLE FRAMER(construction) DPT:684
line and frame poleman.
GED: 2 SVP: 3 EC: O 6 PA: VH 2 3 4 7

Shapes pole ends, bores bolt holes, and cuts crossarm and step notches in wooden poles for telephone, telegraph and electric-power transmission lines:

Cuts pole to specified length, using chain saw. Sights down pole to determine straightest side so that poles will line up evenly when erected. Rotates curved pole until curved side is down, using peavey. Measures and marks cutting points on pole, using steel tape and chalk. Cuts tip of pole to point, using chain saw. Cuts notches for crossarms, using hand saw, chisel and hammer. Drills holes in pole for support bolts and step sockets, using air powered or electric drill. Brands pole, using gas heated iron, to burn identifying information into poles.

8359-138 BOTTLE-CAP-LINER CUTTER(woodworking) DPT:685

disk cutter.

GED: 2 SVP: 2 EC: I PA: M 4

Tends machines that slice cork rods into bottle-cap liners and spray liners with wax:

Feeds cork rods into automatic machine that slices rods into disks of specified thickness for use as cap liners. Inspects disks for defects, such as chips or rough edges. Pours powdered wax into hot- water-heated drum to melt wax. Tends machine that sprays liners with hot-liquid wax.

May sharpen or change knives, using hand tools.

8359-142 DOWEL POINTER(furn.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that cuts and points wooden dowels:

Selects guide sockets according to diameter of stock and secures them in automatic-feed head with thumbscrews. Adjusts saws that cut dowel to length. Starts machine, and inserts dowel rods in guide sockets to be cut and pointed.

May sort and stack finished dowels in rack.

8359-199 OTHER WOOD MACHINING OCCUPATIONS

This group includes wood machining workers, not elsewhere classified; for example, those who operate punch presses to cut notches in wood stock, and select wood stock from stockpile according to production specifications. Typical examples of occupational titles covered by this residual group definition are:

Notching-Machine Operator(woodworking)

Stock Picker(woodworking)

837-CLAY, GLASS, STONE AND RELATED MATERIALS MACHINING OCCUPATIONS

This minor group includes occupations concerned with shaping clay, glass and stone into parts or products through machining to specified dimensions by such means as cutting, boring, abrading, milling and planing. Activities include: measuring, laying out, and setting up work pieces and machines. Includes machining of related materials, when methods applied to machining of clay, glass and stone are employed. Occupations in this minor group are classified in the following unit groups:

- 8370** Foremen: Clay, Glass, Stone and Related Materials Machining Occupations
- 8371** Cutting and Shaping Occupations: Clay, Glass, Stone and Related Materials
- 8373** Abrading and Polishing Occupations: Clay, Glass, Stone and Related Materials
- 8376** Inspecting Occupations: Clay, Glass, Stone and Related Materials Machining
- 8379** Clay, Glass, Stone and Related Materials Machining Occupations, n.e.c.

8370-FOREMEN: CLAY, GLASS, STONE AND RELATED MATERIALS MACHINING OCCUPATIONS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in machining clay, glass, stone and related materials into parts or products.

8370-110 FOREMAN, ABRADING AND POLISHING OCCUPATIONS: CLAY, GLASS, STONE AND RELATED MATERIALS(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in operating and tending machines that grind and polish stone, cement, abrasives and clay materials; grind and polish flat glass and glassware; and grind, polish and coat optical elements, such as lenses, reflectors, filters and prisms, (Unit Group 8373):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Contact Lenses (scient. & ind. equip., n.e.c.)
Foreman, Glass Grinders and Polishers(glass)
Foreman, Lens Grinders and Polishers (scient. & ind. equip., n.e.c.)
Foreman, Stone Polishers(cement, stone & clay)
Foreman, Ware Dressers(cement, stone & clay)

**8370-114 FOREMAN, CUTTING AND SHAPING
OCCUPATIONS: CLAY, GLASS, STONE AND
RELATED MATERIALS(any ind.) DPT:138**

Supervises and co-ordinates activities of workers engaged in operating and tending machines that cut, drill, plane, bore and shape clay, glass, stone and related materials to specified dimensions, (Unit Group 8371):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Stone Carvers(cement, stone & clay)
Foreman, Stone Cutters(cement, stone & clay)

Glass-Cutting Foreman(glass)

**8370-199 OTHER FOREMEN, CLAY, GLASS, STONE AND
RELATED MATERIALS MACHINING
OCCUPATIONS**

This group includes foremen clay, glass, stone and related materials machining occupations, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in blocking lenses for grinding, making mirrors and cutting and grinding slate. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Lens Blockers(scient. & ind. equip., n.e.c.)

Foreman, Mirror Makers(glass)

Foreman, Slate Cutters and Grinders(cement, stone & clay)

**8371-CUTTING AND SHAPING OCCUPATIONS:
CLAY, GLASS, STONE AND RELATED MATERIAL**

This unit group includes occupations primarily concerned with operating and tending machines that cut, drill, plane, bore and shape clay, glass, stone and related materials to specified dimensions. Includes activities such as, cutting, shaping and drilling which are done manually, using hand tools, drills and chisels.

**Stone, Cement, Abrasives and Clay Cutting and Shaping
Occupations**

8371-110 through 8371-170

**8371-110 STONE CARVER(cement, stone & clay) DPT:281
GED: 4 SVP: 7 EC: I 5 PA: M 4 7**

Carves designs and figures in stone, employing sense of artistry and knowledge of stone-carving techniques:

Studies objects or graphic material to visualize finished product and plan method and sequence of carving. Lays out figures or designs on stone surface by marking over tracing paper or by transferring dimensions from sketches or drawings, using rule, straightedge, square, compass, calipers, chalk and scriber. Selects chisels and pneumatic tools required, according to intricacy of design or figure. Roughs out design freehand or by chipping along marks on stone surface, using mallet and chisels or pneumatic tool. Shapes or trims roughed-out design with appropriate tool to complete carving. Compares carving with drawing or model during carving process. Verifies dimensions of carving, using calipers, rule, straightedge and square. Feels carving to verify smoothness of finish.

May smooth and polish surface of carving or monument, using rubbing stone or portable electric grinder.

**8371-114 MACHINE OPERATOR, CEMENT PIPE
(cement, stone & clay) DPT:682
GED: 3 SVP: 6 EC: I 5 7 PA: H 4 7**

Operates a variety of lathes, drills, and boring mills to shape cured and uncured asbestos-cement pipe and fittings:

Reads work order to ascertain product specifications. Lifts items onto machine manually or using hoist. Positions item in machine, using expanding arbors, air chucks, centers and fixtures. Machines item to specifications, using manual, automatic or hydraulic tool feed. Adjusts machine speed or tool feed to minimize chatter. Adjusts tool position to correct dimensional errors. Removes tool marks on rotating item manually, using abrasive paper. Inspects item to verify conformance to specifications, using fixed gauges, calipers and scale, and rejects defective items.

May be designated according to type of machine operated; for example,

Boring-Mill Operator
Fitting-Lathe Operator
Monolithic-Lathe Operator
Radial-Drill Operator
Taper-Lathe Operator

**8371-118 STONECUTTER, HAND(cement, stone & clay)
DPT:381**

GED: 3 SVP: 5 EC: I 5 7 PA: VH 4 7

Cuts, shapes and finishes rough stone to specifications, using hand or pneumatic tools:

Positions stone for marking and cutting, using hoist or rollers and pry. Traces around patterns or transcribes dimensions from drawings to stone, using rule, straightedge, square and chalk or scribe. Selects cutting tool according to finish specified or step in finishing process. Chips away fragments of stone along cutting mark to produce required finish, dimension or shape, using hammer and chisel or pneumatic chisel. Verifies progress of work and adherence to specifications, using pattern or straightedge, level, plumb and square.

May drill holes in stone using portable drill or drilling machine. May be designated according to type of stone or product cut; for example,

Granite Cutter
Marble Cutter
Slate Cutter
Stonecutter, Building
Stonecutter, Monument

**8371-122 GRINDING-STONE SHARPENER(cement, stone &
clay) DPT:662
GED: 3 SVP: 5 EC: I 5 PA: L 4 7**

Operates stone-dressing lathe to sharpen and dress grindstones that grind logs into pulp:

Observes grinders, examines pulp for length and thickness of fibre or reads laboratory reports on pulp consistency to determine need for sharpening grindstone. Selects and installs sharpening burr in stone-dressing lathe, using wrench. Moves controls or signals other worker to move controls to feed burr against revolving stone to dress and sharpen stone.

**8371-126 STONE SAWYER(cement, stone & clay; non-metal.
min. prod., n.e.c.) DPT:662
GED: 3 SVP: 5 EC: I 5 7 PA: H 2 4 7**

Operates single- or multiple-blade saw to cut stone, cement or similar material to specified dimensions:

Signals crane operator to lift and position stone on machine or timber bed or positions and levels stone, using hoist, crowbar, wedges, blocks, rule and spirit level. Marks dimensions on stone according to specifications, using rule, straightedge, square, crayon, chalk- line and scribe. Selects and fits saw blades and spacers. Aligns saw with cutting marks. Turns valves to circulate water and abrasive against saw blades. Starts machine, observes meter and adjusts controls to regulate pressure of saw on stock, machine speed and depth of cut. Verifies dimensions of cut stock, using rule. Washes stone with water hose. Replaces worn blades, using hand tools.

May be designated according to type of saw operated or item produced; for example,

Carbon Cutter(non-metal. min. prod., n.e.c.)
Circular Sawyer, Stone(cement, stone & clay)
Gang Sawyer(cement, stone & clay)
Ripsawyer, Stone(cement, stone & clay)

8371-130 GREENWARE TURNER(cement, stone & clay; non-metal. min. prod., n.e.c.) DPT:682
clay turner.
GED: 3 SVP: 5 EC: I 4 7 PA: H 4 7

Operates vertical or horizontal lathe to cut and shape green (unfired) clayware or similar material to manufacture items, such as insulators and abrasive wheels:

Reads work order or studies drawing to ascertain specifications. Selects hand tools or selects and mounts machine tools, according to specifications. Positions and centers greenware on vertical lathe or mounts ware between spur chuck and tail stock on horizontal lathe. Starts machine and guides tool against revolving ware to produce specified shape or size. Turns workpiece over to shape both sides of wheel. Verifies accuracy of shape and dimensions, using scale, calipers and templates.

May smooth surface, using sandpaper or wet sponge. May be designated according to products machines; for example, Abrasive-Wheel Shaper(non-metal. min. prod., n.e.c.) Insulator Shaper(cement, stone & clay)

8371-134 GRINDING-WHEEL DRESSER(non-metal. min. prod., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I 5 7 PA: H 4 7

Operates machine to dress grinding wheels to specified dimensions, shape and surface finish:

Positions and secures grinding wheel in machine chuck or on spindle, using hand tools. Mounts dressing tool in machine holder. Moves levers, turns handwheel or manually positions drive belt on step pulley to adjust speed of machine. Starts machine and turns handwheels to force cutting tool against grinding wheel to obtain specified shape or finish. Verifies dimensions and smoothness of wheel, using rule, calipers, micrometer and templates.

May hold cutting tool on tool rest and press against grinding wheel to shape or surface wheel to specifications.

8371-138 STONE PLANER(cement, stone & clay) DPT:682
GED: 3 SVP: 5 EC: I 5 6 7 PA: H 4 7

Operates machine to shape, smooth and square surface of stone blocks and slabs:

Positions stone on machine bed, using hoist. Secures stone with clamps. Measures and marks stone, using pattern, tape measure and marking pencil. Installs and adjusts cutting tool in machine chuck with wrench. Starts machine, pulls levers and turns handwheels to regulate cutting speed and depth of cut. Smooths edges, or cuts specified design in portion of stone that cannot be cut by machine, using hammer, chisels, file and pneumatic-cutting tool.

May shape and sharpen cutting tools according to specifications, using grindstone. May replace worn or broken parts and lubricate machine, using hand tools and oil can.

8371-142 WIRE-SAW OPERATOR(cement, stone & clay) DPT:682
GED: 3 SVP: 5 EC: I 4 5 PA: M 3 4 7

Operates one or more wire saws to cut blocks of stone to specified dimensions:

Places supporting timbers on machine bed preparatory to positioning stone. Operates forklift to lift and position stone on supporting timbers. Levels stone on timber bed, using crowbar, wedges, blocks, rule and spirit level. Marks dimensions on stone according to specifications, using rule, square, straightedge and chalk line. Presses button to lower and align wire with mark on stone. Positions abrasive supply hose and starts saw and pump that circulates abrasive and water under moving wire. Observes machine operation to detect uneven sawing. Adjusts pulleys that increase tension on wire to restore even sawing. Dumps abrasive into hopper to maintain supply. Verifies width or thickness of cut stone, using rule. Replaces worn wire by threading new wire through pulleys and splicing ends together, using hand tools and electric welder.
May operate saw with more than one wire.

8371-146 GREENWARE DRILLER(cement, stone & clay) DPT:682
clayware driller.
GED: 3 SVP: 4 EC: I 7 PA: VH 4 7

Operates vertical-or horizontal-spindle-boring machine to drill holes in green (unfired) clay products:

Reads work orders and studies drawings to ascertain specifications. Selects boring tools and accessories and installs them in machine, and adjusts spindle stop to regulate depth of bore, using rule and wrench. Places stock on machine table or in vee forms and starts machine. Moves lever to force item against rotating bit. Verifies size, location and depth of hole, using rule and template.

8371-150 STONE DRILLER(cement, stone & clay) DPT:682
GED: 3 SVP: 3 EC: I 5 PA: H 4

Operates machine to drill holes in blocks or slabs of stone according to specifications:

Positions and secures stone on machine bed, using hoist, wedges and wooden blocks. Measures and marks stone for drilling, using rule and marker. Selects and installs bit in drill and starts machine. Pulls levers and turns wheels to regulate speed of machine, flow of water and depth of hole cut.

May drill holes in stone, using pneumatic-hand drill.

8371-154 MILLSTONE CUTTER(non-metal. min. prod., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I 5 7 PA: H 4

Sharpens millstones in grain-grinding mill, using pneumatic chisel: Removes bolts holding stone in mill, using wrench. Places stone on workbench, using hoist. Brushes face of stone with broom. Recuts floors (grooves) in stone following original indentations, using pneumatic chisel. Brushes chips from stone. Replaces stone in mill, using hoist and wrench.

8371-158 CONCRETE-SAW TENDER(cement, stone & clay) DPT:665
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends automatic machine that saws concrete slabs to specified length: Signals crane operator to position machine over slab. Connects electric-power cord and cooling water hose to respective supplies. Turns valve to start water flow to machine. Depresses buttons to position saw blade on cutting mark, adjust cutting depth and start automatic-cutting operation. Observes sawing operation to ensure that saw is following cutting line and that material is cut to prescribed depth. Signals crane operator to move machine to next slab on completion of cut. Cleans, lubricates and makes minor repairs to machine, using hand tools and lubricating equipment.

8371-162 STONE SPLITTER, HAND(cement, stone & clay) DPT:684
rock splitter; slate splitter.
GED: 2 SVP: 2 EC: B 6 PA: H 4 7

Splits rough or large stones into smaller sizes, using hand tools: Examines stone to determine rift, grain or cleavage lines. Positions chisel on selected line. Strikes chisel with mallet or hammer to split stone. Loads cut stone on pallet or moves stone from work area.
May chip rough edges from stone, using hand tools.

8371-166 CARBON-PLANER TENDER(non-metal. min. prod., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: M 4 7

Tends planing machine that smooths flat surfaces of graphite-slab stock to specified thickness and width for use as anodes in electrical equipment:

Starts machine and pushes stock along roller conveyor to cutting heads that plane top, bottom and sides of slab. Observes planing operation to detect machine malfunction. Gauges planed stock and adjusts machine cutters to maintain desired thickness, using dial- micrometer gauge and hand tools.

8371-170 STONE-SPLITTER TENDER(cement, stone & clay) DPT:685

GED: 2 SVP: 2 EC: 1 PA: H 4

Tends hydraulic machine that splits stone slabs for further processing: Moves lever to raise conveyor turntable containing stone slab. Rotates slab manually to measure rough block and mark stone where split is to be made, using chalk, rule and string. Positions stone under blade manually, using rollers and crowbar. Manipulates lever to lower blade against stone, and raise wedges mounted on pressure head. Observes gauge and moves lever to increase pressure of cutter head that splits stone into specified dimensions. Moves lever to raise blade and lower pressure head. Pushes stone over rollers to next work station. May tend pedal-controlled machine that splits concrete blocks to produce imitation ashlar.

Glass Cutting and Shaping Occupations

8371-190 through 8371-210

8371-190 GLASS-CUT-OFF-MACHINE OPERATOR(glass) DPT:682

GED: 3 SVP: 4 EC: 1 PA: L 4 7

Operates automatic machine to cap (score and break off) flat glass to specified dimensions: Positions trip switches on machine to control stroke of cutting bridge. Sets electronic control or manually adjusts cutting head on bridge to score glass to specified dimensions. Turns screw to set scoring depth. Sets snap-bar mechanism that breaks glass along scored line. Starts and adjusts vacuum lifter that lays glass on machine conveyor. Starts machine and synchronizes conveyor speed with machine functions. Examines glass for irregular or rough breaks and adjusts machine to correct cap-off defects. Verifies dimensions of glass with rule or graduated bar. Replaces dull cutters, using hand tools. May operate machine that automatically stacks cut sheets of glass on designated tables.

8371-194 GLASS-LATHE OPERATOR(electronic equip.) DPT:682

GED: 2 SVP: 3 EC: 1 6 PA: M 4 7

Operates glass lathe to cut and seal sections of television-picture tubes: Stamps identification mark on neck of bulb. Places neck in tailstock of lathe. Mounts and aligns bulb in lathe chuck. Measures and marks required length on neck. Starts lathe. Lights and regulates flames of gas-torch heater according to requirements. Heats glass to working temperature observing colour of glass. Cuts neck to length, using oxygen burner. Stops lathe. Aligns and butts neck against bulb. Starts lathe and fuses neck to bulb, using torch. Places tube in annealing oven or anneals tube, using torch.

8371-198 GLASS CUTTER, HAND(glass) DPT:664

GED: 2 SVP: 3 EC: 1 PA: M 4 7

Cuts glass sheets by hand to obtain sections of prescribed dimensions or shape or to remove blemishes: Lays sheet of glass on padded table or in jig. Places pattern on or under glass, or measures and marks glass for cutting. Examines and marks defective glass to obtain best cut. Scores glass surface around pattern or along straight-edge, using cutting tool. Breaks off required sheet or excess glass with notched tool or glass pliers, or directs other workers to break glass. May smooth rough edges, using belt sander or smoothing wheel.

8371-202 GLASS-CUTTER OPERATOR(glass) DPT:684

GED: 2 SVP: 3 EC: 1 PA: L 4 7

Cuts sheet glass into oval or circular shapes, using cutting table equipped with manually-guided-cutting tool suspended above surface of glass: Places glass on cutting-machine table. Adjusts cutter to produce specified shape. Guides cutting tool over glass to score and cut surface. May strip (break off) excess glass. May remove rough edges of glass, using belt sander.

8371-206 GLASS-DRILL TENDER(glass) DPT:685

GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that drills holes in flat glass: Positions glass in preset jig or on table beneath drill. Starts drill and pulls lever to force rotating bit through glass. Raises bit and removes glass. May tend machine that automatically cycles (starts, lowers, raises and stops) drill when button is pressed. May clean glass, using cloth or by placing glass in machine washer.

8371-210 GLASS-CUTTER HELPER(glass) DPT:687

GED: 2 SVP: 2 EC: 1 PA: H 4

Helps glass cutter to cut and handle glass, performing any combination of the following duties: Carries glass to and from work table. Places cutting tools on table. Breaks excess glass from stock along lines cut by glass cutter, using notched tool or pliers. Removes excess glass from work area. Packs glass in cartons. See also definition for term title, 02-160 HELPER (any ind.).

**8373-ABRADING AND POLISHING OCCUPATIONS:
CLAY, GLASS, STONE AND RELATED MATERIALS**

This unit group includes occupations concerned with operating and tending a variety of machines that grind and polish stone, cement, abrasives and clay materials; grind and polish flat glass and glassware; and grind, polish and coat optical elements, such as lenses, reflectors, filters and prisms. Dispensing opticians are classified in Unit Group 3154, DISPENSING OPTICIANS. Occupations concerned with cutting and shaping plastic contact lenses by machining are classified in Unit Group 8319, METAL MACHINING OCCUPATIONS, N.E.C.

**Stone, Cement, Abrasives and Clay Abrading and Polishing
Occupations**

8373-110 through 8373-142

8373-110 SURFACE-PLATE FINISHER(cement, stone & clay) DPT:381

GED: 4 SVP: 7 EC: 1 PA: M 3 4 7

Laps (smooths) granite-block surface to specified tolerance for use as surface plate: Positions stone on base, using hoist. Aligns and levels stone with arm of lapping machine, using wedges and screw adjustments on base. Moves straightedge over stone surface to detect uneven areas. Sets stone surface with water and applies abrasive. Selects lapping block according to uniformity of stone surface or step in finishing process. Lifts block onto stone, using hoist, and secures block to arm of lapping machine with wrench. Starts machine and presses buttons to guide spinning block over stone surface. Laps surface manually to obtain fine tolerance. Examines surface with collimator to ensure conformance to specifications. Prepares graph of collimator readings to indicate tolerance deviation at any point. Operates diamond drill to bore adapter holes in plate to facilitate attachment of measuring instruments. Cements tapped-metal inserts in holes. May specialize in hand lapping rough-lapped stones. May lap metal-precision surfaces, such as straightedges, or angle, bench and lapping plates.

8373-114 STONE POLISHER, MACHINE(cement, stone & clay) DPT:682

GED: 3 SVP: 6 EC: 1 4 5 PA: H 3 4 7

Operates machine to grind and polish surface of stone to smooth and lustrous finish: Places, aligns and levels stone or slab on machine bed. Selects grinding or polishing wheel or type of abrasive, according to type of stone, finish specified or step in finishing process. Attaches wheel to machine spindle, using latch or hand tools. Turns valves to circulate, or manually spreads abrasives and water on surface of stone. Starts

machine and guides rotating wheel over surface of stone. Observes level gauge or puddles of water on stone to detect uneven areas. Observes ammeter to determine grinding pressure and move levers to adjust wheel pressure or speed. Washes stone, using hose or wet sponge and changes wheel as grinding or polishing progresses to specifications.

May be designated according to type of stone surfaced; for example, Granite Polisher, Machine
Marble Polisher, Machine

8373-118 STONE POLISHER, HAND(cement, stone & clay) DPT:684
GED: 3 SVP: 6 EC: I 5 7 PA: H 3 4 7

Grinds and polishes surface of stone to smooth and lustrous finish, using portable grinding and polishing machine:
Positions and secures stone on work table, using hoist and clamps. Selects abrasive wheel according to type of stone, finish specified or step in finishing process. Attaches wheel to portable machine, using wrench. Wets stone surface, using hose. Starts machine and guides rotating wheel over stone in circular motion to smooth surface. Washes grit from stone, using hose or wet sponge. Feels stone surface to detect uneven areas, rough spots, cracks and scratches. Removes grinding wheel and attaches buffing wheel to machine. Charges wheel with polishing compound. Starts machine and guides wheel over stone to polish surface. Hand rubs stone surfaces that cannot be finished by machine, using abrasive blocks or buffing cloth. Mixes colouring compound and wax to match colour of stone and fills surface cracks or imperfections, using putty knife.

May be designated according to type of stone polished; for example, Granite Polisher, Hand
Marble Polisher, Hand

8373-122 CONTOUR GRINDER, MACHINE(cement, stone & clay) DPT:682
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 4 7

Operates machine to grind building or monumental stone to specified shape or design:
Positions and secures stone on machine bed, using hoist, hand tools, wedges and clamps. Measures and marks shape or design on stone, using template or drawing, tape measure and marking pencil. Selects, installs and adjusts grinding wheel in machine, using hand tools. Turns valve to start flow of water onto grinding wheel. Starts machine, moves levers and turns handwheels to regulate speed of cutting wheel, depth of cut, and to move wheel onto stone or machine bed and stone under cutting wheel. Repositions stone on machine bed as necessary to obtain specified pattern or design. Compares cut made on stone with template or design to assure adherence to specifications. Shapes, sharpens or dresses grinding wheels to specifications. Lubricates and makes minor repairs to machine.
May cut specified designs in portions of stone that cannot be cut by machine, using hammer and chisel or pneumatic chisel.

8373-126 SANDBLASTER, STONE(cement, stone & clay) DPT:684
GED: 3 SVP: 4 EC: I 6 7 PA: H 4 7

Operates sandblasting equipment to cut inscriptions or decorative designs in monumental stone:
Dumps abrasive into mixing chamber of sandblasting equipment and turns valve to admit compressed air into mixing chamber. Selects and attaches sandblasting nozzle to supply hose. Turns valve to adjust jet of abrasive from nozzle. Cuts inscription or design in stone, using sandblasting nozzle and following stencil outline. Measures or estimates depth of cut, using rule or by utilizing knowledge of sandblasting operations. Removes or adds parts of stencil as required to create differences in depth of cuts.
May cut stencils to be used in sandblasting operation. May sandblast stone without aid of stencil to produce rough, pitted finish.

8373-130 STONE-GRINDER TENDER(cement, stone & clay) DPT:685
bed rubber.
GED: 3 SVP: 4 EC: I 4 5 6 7 PA: H 4

Tends machine that grinds rough-sawn-stone blocks or slabs to specified finish or thickness:

Positions and clamps stone in machine with designated surface resting on circular-metal plate, using hoist and side-vise clamps. Shovels abrasive, such as grit, sand and steel shot, into machine hopper. Starts machine, turns valve, moves handle and sets dial to control flow of water and abrasive between stone surface and rotating-metal plate. Verifies thickness of stone with gauge. Removes finished stone from rubbing bed and cleans abrasive from surface of stone, using scraper, brush, sponge and water hose.

8373-134 STONE BEVELER(cement, stone & clay) DPT:684
GED: 2 SVP: 4 EC: I 5 7 PA: VH 4 7

Bevels and smooths edges of stone, using hand tools:
Positions slab on work bench, using hoist and clamps. Marks width of specified bevel on slab edges, using rule, straightedge, square and scriber. Removes excess material along edge to produce bevel angle, using rasp. Smooths beveled edges, using fine file and sandpaper. Feels beveled edge to determine smoothness.
May use hammer and chisel or pneumatic chisel to remove excess material when cutting large bevels. May place finished slab on truck, using hoist.

8373-138 WARE DRESSER(cement, stone & clay) DPT:684
GED: 3 SVP: 3 EC: I PA: M 4 7

Dresses glazed and decorated ware and sorts ware into standard or unacceptable grades:
Chips pin marks or cement from ware, using dressing iron, chisel or blade, exerting sufficient pressure to remove defect without damaging surrounding glaze. Grinds down dressed spots and other defects, such as glaze droplets, tar, paint, kiln dirt and colour spots, using sanding belt or steel wool and turpentine. Separates items into various grades according to number and type of defects, and discards unusable products.
May test randomly-selected items in tensile-testing machine.

8373-142 ABRASIVE-WHEEL GRINDER(cement, stone & clay) DPT:685
diamond-wheel finisher.
GED: 3 SVP: 3 EC: I PA: H 4 7

Tends machine that grinds abrasive wheels to specified dimensions:
Studies drawing or reads work order to ascertain specifications. Sets machine head to control feed angle of abrasive wheel to grinding wheel. Positions and secures abrasive wheel in chuck or on arbor manually, or using hoist. Starts machine and feeds abrasive wheel into grinding wheel manually, or starts machine that automatically feeds abrasive wheel into grinding wheel. Inspects abrasive wheel for conformance to specifications, using fixed gauge, calipers, scale, template and micrometer.

Flat Glass and Glassware Abrading and Polishing Occupations 8373-162 through 8373-190

8373-162 GROOVE GRINDER(glass) DPT:682
GED: 3 SVP: 3 EC: I PA: M 4 7

Operates machine to grind mitred or rectangular grooves in flat-glass articles:
Selects and installs grinding wheels according to specifications. Adjusts and secures guide rails and stops. Turns handwheel to adjust depth of cut or pressure of grinding wheel on workpiece. Positions glass under grinding wheel and against guide or stop. Turns valve to start flow of coolant against grinding wheel. Pushes lever or depresses pedal to force grinding wheel against surface of glass, or pushes lever to move machine table and glass under grinding wheel. Observes grinding process and feels cut to determine that groove is cut to specified depth. May dress grinding wheels.

8373-166 EDGE FINISHER, HAND(glass) DPT:684
GED: 3 SVP: 3 EC: I PA: M 4 7

Bevels or smooths edges of mirrors or other flat-glass items, using grinding wheels or abrasive belts:
Selects and installs grinding wheel or abrasive belt in accordance with required finish. Turns valve to start flow of coolant or abrasive onto wheel or belt or starts exhaust on dry-belt machine. Starts machine.

Holds and turns item against abrasive wheel or belt to obtain desired bevel or finish. Examines or feels edge of glass to determine correct bevel or degree of smoothness. Rinses item to remove abrasive residue.

May dress grinding wheels or replace worn-abrasive belts. May be designated according to type of equipment used or work performed; for example, Beveler, Glass Diamond-Wheel Edger, Edger, Glass Glass Sander, Belt.

8373-170 GLASS POLISHER(glass) DPT:684
GED: 3 SVP: 3 EC: 1 5 PA: H 4 7

Polishes edges or surface of flat glass or mirrors, using either of the following methods:

Examines edges and surface of glass for scratches, chips, cracks or roughness. 1. Pours polishing compound into machine hopper or applies compound to felt or cork wheel. Starts machine. Holds and turns glass edge or scratched, engraved or beveled surface against revolving wheel to obtain desired finish. 2. Starts hand-held machine fitted with sand-and-pumice-grinding wheel. Moves grinding wheel over edge or surface of glass to remove flaws. Imparts final polish to glass, using hand buffer fitted with compound-impregnated-felt-buffing wheel.

8373-174 GLASSWARE GRINDER(glass) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Removes rough and uneven surfaces from formed glassware, using grinding machine equipped with metal disk, grinding wheel or abrasive belt.

Turns valves to regulate flow of abrasive compound and water onto grinder or applies abrasive compound to buffing wheel. Starts machine. Presses and turns edges and surfaces of article against moving disk, buffing wheel or belt to remove rough or irregular area. Rinses article in water to remove glass dust.

8373-178 GLASS-BEVELER TENDER(glass) DPT:685
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that bevels edges of flat glass or mirrors. Presses button to select grinding wheel. Adjusts grinding wheel to specified angle or width of bevel. Presses buttons and turns handwheels to start flow of coolant and polishing compound onto grinding wheel. Starts machine and places glass on machine conveyor or in feed channel. Observes ammeter and turns handwheels to adjust grinding-wheel load. Verifies width, depth and angle of bevel, using gauge. Feels edges for smoothness and rejects defective glass.

8373-182 GLASS-EDGER TENDER(glass) DPT:685
GED: 2 SVP: 3 EC: 1 PA: M 4 7

Tends machine that grinds and polishes edges of flat glass. Turns handwheel to set speed of feed conveyor to type of glass to be ground. Starts conveyor and grinding and polishing wheels. Positions glass on conveyor, and pushes stock into drive rollers or moves lever to lower pressure-drive roller that forces glass against grinding and polishing wheels. Turns glass to finish other edges and removes glass from machine. Examines quality of glass edge to determine need for wheel dressing or adjustment, and reads ammeter to determine grinding load. Adjusts grinding wheel, using wrench. Feeds glass into washing machine that removes polishing compound. May dress grinding wheels.

8373-186 GLASS-POLISHER TENDER(glass) DPT:685
blocker.
GED: 2 SVP: 3 EC: 1 PA: VH 4

Tends machine that polishes and cleans surface of flat glass. Positions glass on machine conveyor, assisted by other worker. Turns valves and pulls lever to start flow of polishing compound onto glass surface. Pushes buttons to raise or lower polishing heads and cleaning brushes individually or collectively, according to size and number of glass pieces, or moves lever to lower polishing heads onto glass surface and lifts lever to move machine table and bring entire surface of glass under polishing heads. Turns controls to start washing and drying units.

May clean and lubricate machine, using water and air hoses, oil can and grease gun. May record production. May mix polishing compound according to formula and pour compound into storage tank.

8373-190 GLASS-GRINDING-MACHINE FEEDER(glass) DPT:686

GED: 2 SVP: 2 EC: 1 4 5 PA: H 4

Feeds and offbears flat glass and mirrors to and from machines that bevel and grind edges:

Feeds glass or mirrors onto conveyor of machine. Offbears glass at discharge end of machine. Turns glass over and feeds glass onto conveyor to finish other edges. Wipes compound from edges of glass, using waste and examines edges for quality finish. Places finished glass or mirrors on skid.

May polish edges of glass, using belt sander. May be designated according to type of machine fed; for example, Beveling-Machine Feeder Edging-Machine Feeder

Optical Element Abrading, Polishing and Coating Occupations 8373-206 through 8373-254

8373-206 LENS-GRINDER-POLISHER SET-UP MAN(scient. & ind. equip., n.e.c.) DPT:380
GED: 3 SVP: 7 EC: 1 PA: L 4 7

Sets up machine to grind and polish lens blanks:

Selects and secures grinding or polishing tools to machine spindles, using hand tools. Adjusts screws to set radius of grinding or polishing-arm stroke according to size of lens or holding block. Sets time cycle or micro-switch that stops machine on completion of grinding or polishing cycle. Tilts and secures machine head at angle according to specified curve and thickness of lens.

May set up and adjust other machines used in process; such as, edger, fusing furnace, chiller, caustic-solution sprayer or blocking machine. May dress grinding wheels.

8373-210 OPTICIAN(scient. & ind. equip., n.e.c.) DPT:380
GED: 3 SVP: 7 EC: 1 PA: L 4 7

Sets up and operates machines to grind eyeglass lenses to prescription specifications and assembles lenses in frames:

Reads lens and frame specifications from prescription or determines specifications of broken lens, using power-determining and optical-centering instruments. Selects lens blank from stock. Sets up and operates machines; such as, generator, polisher, edger and hardener to make lens to specifications. Inspects lens for pits and scratches. Mounts lens in metal, plastic or rimless frames.

8373-214 LENS GRINDER, HAND(scient. & ind. equip., n.e.c.) DPT:681
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Operates machine to grind curves on surfaces of optical lenses:

Selects lens blank specified on production order. Places lens in holder, block or collet and positions on lap against grinding tool. Starts machine, oscillates control arm and applies pressure manually to grind lens to specifications. Measures lens during grinding process, using gauge or hand spherometer, to ensure conformance to specifications. Removes and washes or wipes lens. Examines surface of completed lens to detect scratches or chips.

May specialize in grinding bifocal lenses, cataract lenses or multifocal buttons and depressions and be designated accordingly; for example, Bifocal-Lens Grinder Multifocal-Button Grinder

8373-218 LENS GRINDER AND POLISHER(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Operates automatic machines to grind and polish standard-strength-lens blanks to individual prescription specifications:

Locates and marks focal axis on lens blank, using protractor. Aligns markings on lens with those on mounting block that correspond to prescription specification. Mounts lens on block and positions block in chuck of machine. Sets dial control, pushes buttons and turns cranks to

set up machine that automatically grinds lens to prescribed curves. Measures lens with calipers and gauge to verify specified thickness and power. Mounts lap and group lens in machine that automatically polishes lens to specifications.

8373-222 OPTICAL-ELEMENT COATER(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 5 EC: I PA: L 4 7

Controls equipment to coat optical elements with metal or chemical film to change reflection qualities, using either of the following methods:

1. Installs heated filament of metal to be sublimated and condensed in electrical-metal-evaporating unit, using hand tools. Cleans and dries elements, using chemical solution and air blower. Positions elements in holding fixture of evaporation unit. Places vacuum bell over holding fixture, using hoist. Adjusts instrument-panel settings to create vacuum and sublimate material that condenses on surface of element. Observes colour change reflected from element as thickness of coating increases to determine when elements are coated to specifications. Stops vacuum pump and allows unit to cool. Removes element and tests adherence of coating by holding element against rotating rubber wheel or by applying and removing strips of cellophane tape. 2. Mixes chemicals according to formula and pours solution into funnel. Places element under funnel and starts machine to distribute specified amount of solution of element. Electroplates copper backing on silvering by immersing glass in electrolyte and passing electric current through solution. Dries elements in electric oven. Marks specified dimension outlines on elements, using milling machine. Removes excess silvering and copper, using hand scraper and solvents. May inspect coated elements visually under strong light source. May be designated according to item coated; for example, Lens Silverer
Optical-Mirror Coater

8373-226 PRECISION-LENS CENTERER-EDGER(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 5 EC: I PA: L 4 7

Locates optical center of precision-instrument lenses and tends machine that grinds lens edge concentric with the optical axis: Coats lens with warm pitch or cement. Affixes lens to periphery of metal tube of centering machine. Rotates tube to observe motion of reflected image on lens or looks through optical system to observe motion of ray of light passing through center of lens. Moves and positions lens until image or ray of light remains stationary as tube is rotated. Hardens pitch with cold water to secure lens in position. Places lens and tube in holder of automatic-grinding machine and grinds lens edge.

8373-230 LENS-POLISHING-MACHINE OPERATOR(scient. & ind. equip., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: I PA: L 4 7

Operates one or more machines to polish surface of optical elements or lenses:
Reads work order to determine polishing specifications and selects and mounts required polishing tool. Mounts optical element on holding fixture. Moves controls to bring tool into contact with element, adjusts oscillation stroke of machine, sets automatic timer and starts machine. Observes polishing action to detect improper polishing or malfunction of machine. Inspects elements for defects and conformance to specifications, using loupe, test plate and power- determining and lens-centering instruments.
May polish lenses manually by oscillating lens against revolving lap or moving lapping tool over surface of lens. May apply pitch and mount cloth pad on metal lap. May prepare polishing compound and apply to lapping tool. May disassemble and clean polishing machine.

8373-234 LENS EDGER, HAND(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4 7

Bevels, grooves or grinds flat edges of optical elements or lenses: Measures element to determine optical axis, bevel angle or conformance to specifications. Adjusts flow of coolant onto grinding wheel and starts machine. Holds and turns element against grinding wheel, or mounts element in clamp and turns handle that feeds edge of lens to check conformance to specifications, using gauge.

May tend machine that cuts lens to shape of selected template. May be designated according to type of work performed; for example, Lens Beveler, Hand
Lens Groover, Hand

8373-238 CONTACT-LENS-CURVE GRINDER(scient. & ind. equip., n.e.c.) DPT:685
GED: 3 SVP: 3 EC: I PA: S 4 7

Tends machine that grinds or polishes curved surfaces of plastic-contact lenses to specifications:

Selects diamond-dust-impregnated-metal lap for grinding or adhesive-tape-covered lap for polishing or curve blending. Mounts lap and blocked lens in machine. Applies liquid abrasive, sets timer and starts machine. Measures thickness of lens edge after grinding, using shadowgraph. Examines lens for scratches and blending of curve juncture, using loupe. Routes ground lenses for final finishing. Replaces adhesive tape of polishing lap.

8373-242 CONTACT-LENS-EDGE BUFFER(scient. & ind. equip., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: S 4 7

Tends machine that buffs edges of plastic-contact lenses to uniform thickness:

Inserts and locks blocked lens in machine spinner, using wrench. Positions spinner in spring-clip holder and adjusts pressure-control knob. Sets automatic timer and starts machine. Removes lens on completion of buffing cycle and measures lens edge, using shadowgraph. Repeats buffing operation until lens edge is of specified thickness. Removes lens and measures diameter, using gauge. Trims buffing pad, using scissors, and dresses pad, using buffing compound.

8373-246 LENS-EDGER TENDER(scient. & ind. equip., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: S 4 7

Tends one or more machines that grind beveled or flat edges on eyeglass lenses:

Clamps lens and specified template in machine. Turns dials and knobs to set specified depth of feed and position of bevel and to start flow of coolant. Starts machine that automatically grinds lens to applied settings. Measures dimensions of completed lens to verify conformance with specifications, using vernier caliper. Dresses grinding wheel as required.

8373-250 LENS-GRINDING-MACHINE TENDER(scient. & ind. equip., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends one or more machines that grind lenses to specified contour:
Reads production order or identifying symbols on edge of lens blank to determine grinding specifications. Fits grinding tools and adjusts machine settings in accordance with specifications. Positions lens blank in chuck, collet or block and fits holder in machine. Positions lens blank against grinding wheel or lap. Sets automatic timer and starts machine. Removes lens on completion of grinding cycle. Verifies curvature and thickness of ground lens, using template or gauge.
May be designated according to type of lens ground or operation performed; for example,
Convex-Curve Grinder
Countersink Grinder
Cylindrical-Lens Grinder
Multifocal-Lens Generator
Spherical-Lens Generator

8373-254 POLISHING-PAD MOUNTER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I PA: L 4

Mounts felt pads on metal laps used for polishing lens surfaces:
Removes old pad from lap, using knife, hammer, wire wheel and spinning device. Heats metal lap, using gas burner, torch or electric plate. Rubs or pours pitch on heated-lap surface. Positions felt pad on lap. Places matched holder over felt pad and clamps assembly in bench press until pitch sets.

8376-INSPECTING OCCUPATIONS: CLAY, GLASS, STONE AND RELATED MATERIALS MACHINING

This unit group includes occupations in inspecting work, as described under the term title, 02-170 INSPECTOR (any ind.), concerned with quality control activities in clay, glass, stone and related materials machining.

8376-110 CONTACT-LENS INSPECTOR(scient. & ind. equip., n.e.c.) DPT:381
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Inspects plastic-contact lenses for conformance to prescription, using precision-measuring instruments:

Cleans finished contact lens with tissue and cleaning fluids. Inspects lens, using magnifying glass over blue light, to detect flaws, such as pits or scratches. Measures power of lens, using power-determining instrument. Slides lens down tapered slot of diameter gauge and reads scale to measure lens diameter. Writes specifications of lenses that conform to prescription on shipping envelope and inserts lenses.

8376-114 OPHTHALMIC-LENS INSPECTOR(scient. & ind. equip., n.e.c.) DPT:381
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Inspects single or multifocal-ophthalmic lenses or lens parts for defects at various stages of processing, performing any combination of the following duties:

Examines lenses or lens parts for processing defects, such as lap scratches, grey areas, pits and chips by holding lens against dark background under light or by examining item under magnification. Inspects blanks with polariscope to detect annealing defects, such as bubbles, striae, fire cracks, or check seals. Verifies curvature of lens with specifications, using lens gauge or template. Measures dioptric power of lens, using lensometer. Measures position and dimensions of multifocal segment with millimeter-scale rule. Writes rework symbols on rejected lenses. Sorts lenses according to size, power and quality.

May be designated according to type of lens inspected or phase or process; for example

Lens-Grinding Inspector
Lens-Polishing Inspector
Multifocal-Lens Inspector

8376-118 OPTICAL-ELEMENT INSPECTOR(scient. & ind. equip., n.e.c.) DPT:381
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Inspects precision-optical elements (non-ophthalmic) at various stages of manufacture to determine conformance with specifications:

Cleans surfaces of elements with solvents to facilitate inspection. Inspects elements for chips, scratches and pits, under magnification. Examines elements for defects, such as stresses and bubbles, using polariscope. Measures focal length and dispersion of lenses and lens systems, using such instruments as focimeter, collimator and goniometer. Examines coated lenses for depth and hardness of coating. Marks defective elements for reworking or salvaging, using crayon or pencil.

8376-122 INSPECTOR, GLASS(glass) DPT:687
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Inspects sheets of glass or mirrors to detect imperfections, such as scratches, chips and cracks:

Places item on padded table under light. Rotates and inspects item on both sides and marks defects with crayon or wax pencil. Keeps record of rejections, types of defects and footage loss.

May glue labels onto mirrors and pack mirrors into containers. May specialize in determining salvageability of defective-glass items and be designated accordingly,

Inspector, Glass, Salvage

8376-199 OTHER INSPECTING OCCUPATIONS: CLAY, GLASS AND STONE MACHINING

This group includes clay, glass and stone machining inspectors, not elsewhere classified; for example, those who inspect mounted-eye-glasses, and those who inspect monumental stones for quality of finish and engraving. Typical examples of occupational titles covered by this residual group definition are:

Inspector, Mounted Eyeglasses (scient. & ind. equip., n.e.c.)
Monument Inspector(cement, stone & clay)

8379-CLAY, GLASS, STONE AND RELATED MATERIALS MACHINING OCCUPATIONS, N.E.C.

This unit group includes clay, glass and stone machining occupations, not elsewhere classified, concerned with activities; such as, grinding and cutting slates used for construction purposes or billiard tables; laying out and marking, cutting and carving lines on stone; machining asbestos stock to form brake linings; aligning dimension stone on machine bed preparatory to machining; cutting, finishing and assembling mirror glass; setting up and operating a variety of machines to cut, grind and polish optical elements, such as prisms and mirrors; locating and marking reference points on optical elements; trimming edges of watch crystals; and mounting lens blanks on blocking mould.

Stone, Cement and Clay Machining Occupations, n.e.c.
8379-110 through 8379-126

8379-110 SLATE-BED MAKER(sport. & toy) DPT:682
GED: 3 SVP: 6 EC: 1 7 PA: VH 4 7

Operates machine to grind slates used for billiard tables to specified thickness and finish, and cuts irregular shapes, matching marks and numbers in slates to facilitate reassembly, using hand and power tools: Assembles numbered slates, face down, on machine bed by butting slates together with locating pins that mate in appropriate sleeved holes. Positions and aligns slates under surfacing head, using crowbar. Lays out and marks dimensions on slate bottom according to pattern or drawing, using scale, straightedge, square and scribe. Chips off excess slate in rough-cutting operation, using pneumatic chisel. Turns wheel to lower surfacing head onto slate. Starts machine and guides rotating wheel over slate surface to grind slate to an even finish. Verifies progress of surfacing, using straightedge. Disassembles bed and turns slates over. Reassembles bed and surfaces top face of bed. Cuts and finishes curved or irregular shapes, such as ball pocket recesses, using pneumatic tools and file. Operates pneumatic chisel to cut matching marks, and sequence and set numbers in slate bottoms. Disassembles bed, places pieces in crate and marks crate with set number.

8379-112 STENCIL CUTTER, STONEWORK(cement, stone & clay) DPT:684
GED: 3 SVP: 4 EC: 1 6 PA: M 4 7

Lays out and cuts inscription and design stencils preparatory to sandblasting stone surfaces:

Removes protective sheet from adhesive surface of stencil material, and applies material to surface of stone. Pushes stone along conveyor, and moves levers to position stone on bed of stencil press. Aligns wooden frame on stencil material, and places stencil cutters in frame to produce specified inscription and design. Moves levers to position and depress hydraulic head of press, to cut through stencil material for each unit of pattern in turn. Peels off portions of stencil material to expose stone for sandblasting.

8379-114 STONE-LAY-OUT MARKER(cement, stone & clay) DPT:381

tracer.

GED: 3 SVP: 5 EC: 1 PA: M 4 7

Lays out and marks designs or lettering on stone preparatory to cutting and carving by other workers:

Positions stone on bench, stool or floor, using crane or assisted by other workers. Marks lettering or design on surface of stone, using drafting instruments, or sketches design or lettering on stone freehand. Traces standard designs on stone, using stylus and following lines on tracing paper.

8379-118 BRAKE-LINING FINISHER, ASBESTOS(asbestos & min. wool) DPT:684
GED: 3 SVP: 3 EC: I 5 6 7 PA: L 4 7

Machines asbestos stock to produce brake linings:

Cuts brake-lining stock into strips, using band or circular saw. Trims edges of stock, using side-trimming machine. Pushes strip against revolving blade, following line or guide, to cut strip to specified shape or size. Presses strip against grinding wheel to reduce strip to specified thickness. Measures thickness of strip, using micrometer. Places strip and template under drill and moves lever to drill holes through strip. Countersinks drilled holes, using power reamer. Presses drilled strip against buffing wheel to polish surface of material. Inspects completed item for defects.

8379-122 BED SETTER(cement, stone & clay) DPT:664
GED: 2 SVP: 3 EC: I PA: M 3 4 7

Aligns dimension stone on timber bed preparatory to grinding, polishing, sawing or chipping:

Builds bed of timbers on flatcar or bed of machine. Signals crane operator to lower stone, and guides it onto timber bed. Aligns stone with arm of polishing or surfacing machine or saw. Levels stone, using wedges, straightedge, spirit level and crowbar. Directs crane operator to position grinding or polishing wheel on stone. Measures and marks block for cutting, using straightedge, rule and crayon. Spreads abrasive material over surface of stone. Shovels abrasive material from mill into storage hopper after grinding and polishing processes.

8379-126 SLATE-CUTTING-AND-GRINDING-MACHINE TENDER (cement, stone & clay) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Tends machines that cut and grind slate products, such as flooring, mantels and coping to specified dimensions:

Secures saw blade on machine arbour, using wrench. Turns handwheels that adjust saw and grinding head to cut and grind slate to specifications. Places slate strip on conveyor. Tightens conveyor guides against strip, using wrench. Turns valve to spray water on saw and grinding head. Starts machine to cut one edge of strip. Repeats process to cut all four edges of slate. Places strip on conveyor that feeds strip under grinding head to grind slab to specified thickness and polish surface.

Glass Machining Occupations, n.e.c.

8379-146 through 8379-199

8379-146 FLAT-OPTICAL-ELEMENT MAKER(scient. & ind. equip., n.e.c.) DPT:280
prism maker.
GED: 4 SVP: 7 EC: I PA: H 4 7

Sets up and operates machines, such as diamond saws and drills, surface grinders and milling and polishing machines to produce uncurved-precision-optical elements:

Cuts required thickness of optical material, using diamond saw. Bores specified holes in element, using diamond drill. Cuts batch lot of optical flats to approximate contours, using milling machine. Grinds edges of element according to specifications, using surface grinder. Warms element on electric-heating plate and applies pitch with brush or spatula, to provide dark background while polishing. Cements elements to brass jig and screws mounted elements in series to holder of polishing machine. Coats lapping tool with polishing compound. Adjusts control arms for specified weight and oscillating motion of element on lap block, and starts polishing machine. Periodically assembles element and master-optical flat under monochromatic (single wavelength) lamp to determine accuracy of polishing.

8379-150 LENS-LAY-OUT MAN(scient. & ind. equip., n.e.c.) DPT:381

GED: 3 SVP: 6 EC: I PA: S 4 7

Locates and marks reference points on lens blanks or ground lenses to guide workers in lens processing:

Reads lens prescription specifications. Examines lens to ensure that colour and shade are as specified and to detect surface defects, such as scratches or pits. Measures lens power and locates optical center, using optical instrument, or measures dioptric curve with gauge and locates optical center, using protractor. Marks optical center and axis line on lens. Measures thickness of lens blank, using calipers. Compares obtained readings with prescription specifications and determines cutting and grinding requirements, using charts. Marks edge-cutting lines, curve numbers, multifocal- optical center and R (right) or L (left) on lens. Writes instructions on work slip and routes lens for processing.

8379-154 LENS CUTTER-GRINDER(scient. & ind. equip., n.e.c.) DPT:382
precision-lens generator.
GED: 3 SVP: 5 EC: I PA: M 4 7

Operates machines to cut and grind lens-glass stock for optical flats, prisms, mirrors and special-shaped lenses:

Reads drawings to ascertain specifications of optical elements. Positions stock on bed of saw, using clamps or blocks. Starts machine and saws glass to specified size and shape. Inserts and secures grinding tool in head of generator, using hand tools. Clamps element in machine chuck, and sets speed and feed of wheel and chuck according to specifications. Starts machine and sets control that automatically stops machine on completion of grinding or stops machine periodically and measures blank to verify conformance to specifications, using gauge, hand spherometer, micrometer or straightedge. Chamfers edges of elements at various grinding stages to reduce chipping and breakage. Examines surface of lens to detect scratches or chips.

8379-158 MIRROR MAKER(glass) DPT:684
GED: 3 SVP: 5 EC: I PA: M 4 7

Cuts, finishes and assembles mirror glass to make a variety of mirrors, performing any combination of the following duties:

Marks size or pattern on mirror glass. Cuts glass to size or shape, using hand-glass cutter. Bevels and polishes edges of glass, using grinding and polishing machines. Tends single-spindle-drilling machine that drills holes in mirrors to accommodate bolts or cords. Mixes paint and silvering solutions and operates silvering range or sprays silver solution on glass. Lays out design or monogram on glass and sandblasts surface within guidelines, using sandblasting equipment. Locates and marks points for fitting mirror hangers on masonite backing, using rule and pencil. Drills holes in backing, using portable-electric drill. Bolts hangers to backing. Fits mirror to backing with hangers or bolts mirror directly to backing. Bolts wings to frame to form multiple mirror.

8379-162 WATCH-CRYSTAL-EDGE GRINDER(scient. & ind. equip., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends lathe that trims edge of watch crystal to correct size and angle: Positions crystal in automatic-centering and holding device of lathe. Presses switch to start lathe and revolve crystal, and turns handle or presses foot pedal to bring powered-abrasive wheel in contact with edge of crystal until stop is reached. Measures diameter and angle of ground edge of crystals at specified intervals, using fixed gauges.

8379-166 LENS BLOCKER(scient. & ind. equip., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Mounts lens blanks on blocking mould preparatory to grinding and polishing operations, using one of the following methods:

1. Places lenses in mould cavities, inserts blocking chuck in mould and pours hot pitch into mould.
2. Places lenses in mould, pours in hot pitch and inserts blocking chuck.
3. Places lenses in mould and fits block in centre of mould that automatically rotates and inserts pitch.
4. Covers block with pitch or pitch-based paint and presses lens blanks into pitch. Warms lenses and blocking mould on heating surface of

blocking machine or in gas flame to prevent cracking and improve adhesion of pitch preparatory to mounting. Allows pitch to cool and harden, scrapes off excess pitch with knife and routes blocked lenses to grinding and polishing area.

May dust bowl-shaped mould with powder and brush lenses with plastic to facilitate blocking. May place block in shaper to ensure cemented lenses conform to curvature of block. May be designated according to type of lenses blocked; for example,

Meniscus Blocker
Spherical-Lens Blocker
Toric Blocker

8379-170 LENS-EDGER FEEDER(scient. & ind. equip., n.e.c.)
DPT:686

GED: 2 SVP: 2 EC: I PA: L 4 7

Feeds and offbears optical elements or lenses from one or more machines that grinds their edges:

Inserts element in clamp or between pads of automatic grinder.

Removes element on completion of grinding process. Visually checks edges for defects. Verifies size or diameter, using gauge or ruler.

8379-199 OTHER CLAY, GLASS, STONE AND RELATED MATERIALS MACHINING OCCUPATIONS

This group includes clay, glass, stone and related materials machining workers, not elsewhere classified; for example, those who re-clean metal blocks used for processing lenses blanks or those who clean optical elements, such as lenses, lens parts and prisms for eyeglasses and precision instruments. Typical examples of occupational titles covered by this residual group definition are:

Block Cleaner(scient. & ind. equip., n.e.c.)
Optical-Element Cleaner(scient. & ind. equip., n.e.c.)

839-OTHER MACHINING AND RELATED OCCUPATIONS

This minor group includes occupations, not elsewhere classified, concerned with using machines or hand tools to shape or work various materials, parts or products to specifications by such means as engraving and etching; filing, grinding, buffing, cleaning and polishing; and patternmaking and mould-making. These occupations are classified in the following unit groups:

8390 Foreman, Other Machining and Related Occupations, n.e.c.

8391 Engravers, Etchers and Related Occupations

8393 Filing, Grinding, Buffing, Cleaning and Polishing Occupations, n.e.c.

8395 Patternmakers and Mouldmakers, n.e.c.

8396 Inspecting and Testing Occupations, Machining, n.e.c.

8399 Other Machining and Related Occupations, n.e.c.

8390-FOREMEN, OTHER MACHINING AND RELATED OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.) concerned with supervising and co-ordinating activities of workers engaged in using machines or hand tools to shape or work various materials, parts or products to specifications by such means as engraving, etching, filing, grinding, buffing and polishing; and patternmaking and mouldmaking.

8390-110 FOREMAN, ENGRAVERS, ETCHERS AND RELATED OCCUPATIONS(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in engraving, etching, imprinting or indenting designs or lettering on glass, metals, plastics and a variety of other materials on a production basis, using hand tools, machines and etching solutions, (Unit Group 8391):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Aircraft Parts Etching(air & space-craft)

Foreman, Glass Engraving(glass)

Foreman, Jewellery Design Cutting(jewellery & precious metal prod.)

8390-114 FOREMAN, FILING, GRINDING, BUFFING, CLEANING AND POLISHING OCCUPATIONS, n.e.c.(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in occupations, not elsewhere classified, concerned with filing, grinding, buffing, cleaning and polishing materials, parts or products, (Unit Group 8393):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Filing and Polishing

Foreman, Metal Buffing

8390-118 FOREMAN, PATTERNMAKERS AND MOULDMAKERS, n.e.c.(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in occupations, not elsewhere classified, concerned with making patterns, moulds, models and templates out of materials; such as, metal, wood, clay, plastic or plaster, for use in the fabrication of a wide variety of products, (Unit Group 8395):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Loftsmen(air & space-craft; ship & boat bldg.)

Foreman, Model and Pattern(jewellery & precious metal prod.)

Foreman, Mould Loft(air & space-craft; ship & boat bldg.)

Foreman, Statuary and Art Goods(cement, stone & clay)

8391-ENGRAVERS, ETCHERS, AND RELATED OCCUPATIONS

This unit group includes occupations concerned with engraving and etching designs or lettering on glass, metals, plastics and a variety of other materials and imprinting or indenting designs or letterings on metal on a custom or production basis, using hand tools, machines and etching solutions. Photoengravers and printing-plate engravers are classified in Unit Group 9515, PHOTOENGRAVERS AND RELATED OCCUPATIONS. Fine arts engravers and etchers are classified in Unit Group 3311, PAINTERS, SCULPTORS AND RELATED ARTISTS.

Engraving Occupations 8391-110 through 8391-138

8391-110 ENGRAVER, HAND(misc. prod. fab., n.e.c.)

DPT:481

GED: 4 SVP: 7 EC: 1 PA: L 4 7

Lays out and cuts lettering and designs on surfaces of metal dies or plates used to imprint designs on paper, metal, plastic, or porcelain products:

Computes dimensions of lettering and design, according to sketches and drawings, and marks or scribes lay-out lines on workpiece, using drawing instruments, such as straightedge, compass, and scribe. Positions workpiece in vise and cuts designs in surface of workpiece, or trims precut designs, using gravers, punches, files, hammer and shaped chisels. Sharpens and shapes cutting edge of gravers on cutter grinder.

May sketch original design for customer. May enlarge or reduce reproduction of pattern according to size of article to be made. May lay out and cut lettering and designs on surfaces of metal moulds.

8391-114 ROLLER REPAIRMAN, TEXTILE(mach., weld. & forg.)

DPT:361

GED: 3 SVP: 7 EC: 1 PA: H 4 7

Repairs defects on surface of cloth-printing rollers, by performing any combination of the following duties:

Lifts roller into brackets on table with assistance of other worker and using portable hoist. Examines roller to detect defects; such as, pin holes, scratches, missed or extra engravings, and uneven design. Dusts engraved design with chalk and examines roller to determine whether engraving will produce desired effects on cloth. Plugs pinholes, extra engravings, and over-engraved areas with copper wire, hammering it into place, using ball peen hammer and punch. Smooths rough spots with file and removes scratches from roller surface, using burnishing tool. Traces outline of missing engraving on waxed paper and transfers outline to roller, using scribe. Engraves additional lines or designs on roller surface, freehand or by following outline, to fill in gaps in design or missing engravings, using gravers and magnifying glass. Rejects rollers failing to meet specifications.

May repair rollers while roller remains on printing machine.

8391-118 ENGRAVER, DECORATIVE(jewellery & precious

metal prod.; misc. prod. fab., n.e.c.) DPT:381

GED: 3 SVP: 7 EC: 1 PA: L 4 7

Engraves lettering and ornamental designs on silverware, trophies, aluminum eyeglass frames, and jewellery, working free-hand or from sketches, diagrams, photographs, or samples:

Lays out lettering or design to be engraved on workpiece by coating workpiece with chalk-like powder or solution. Sketches design in coating, locating reference points and marking outline of design, using scribes or gravers. Mounts workpiece in holding device and cuts design, using engraving tools.

May imprint design on surface of workpiece, using inked rubber stamp, and mark outline, using scribes. May sketch original designs. May work free-hand or according to laid out design. May advise customers regarding engraving procedures and costs to assist them to make selection.

8391-122 DESIGN CUTTER, JEWELLERY(jewellery &

precious metal prod.)

DPT:381

GED: 3 SVP: 6 EC: 1 5 PA: L 4 7

Cuts decorative designs, lines or facets in metal jewellery settings and ornaments, by machine:

Marks design or lines on workpiece, using scribe, following sample sketch, photograph or standard pattern. Selects and installs appropriate cutting tool for effect desired, using knowledge and experience of process. Clamps workpiece in holding device of machine. Starts machine and cuts designs, lines or facets by moving cutting tool along guide lines. Observes progress of work, using magnifying glass. Replaces dull cutting tools. Cleans work area thoroughly to recover precious metals.

8391-126 GLASS ENGRAVER(glass)

DPT:381

GED: 3 SVP: 6 EC: 1 5 6 7 PA: L 4 7

Engraves ornamental designs on glass and glassware:

Traces or sketches design on glass or glassware, using stencil, china-marking pencil, chalk or brush pen. Mounts abrasive cutting wheel of specified type and size on lathe. Pours water into pans beneath abrasive cutting wheel to cool wheel and reduce dust when grinding. Starts lathe and holds workpiece against outer edge of wheel, twisting and turning glass so that glass is ground according to marked design.

May dress and shape cutting wheel by holding dressing stone against rotating wheel. May polish engravings, using felt and cork wheels. May originate and suggest designs to customer or management.

8391-130 ENGRAVER, PANTOGRAPH(jewellery & precious

metal prod.; metal fab., n.e.c.)

DPT:382

GED: 3 SVP: 6 EC: 1 PA: L 4 7

Operates a pantograph engraving machine to engrave designs, symbols, lettering or serial numbers on flat or curved surfaces of products, such as jewellery, cigarette lighters, fountain pens, or name plates. Position end clamps workpiece in holding fixture under cutting tool, using rule, calipers, square, and clamps. Centers and secures pattern under tracing stylus. Sets serial numbers by moving slides on which individual numbers are inscribed or locks type characters in tracing vise. Adjusts machine to reproduce at specified scale. Inserts and locks cutting tool into spindle of machine, using wrench. Starts electric motor that rotates cutting tool. Lowers tracing stylus to beginning point on pattern, and guides stylus to trace pattern and duplicate design, symbols, lettering or numbers on workpiece. Observes action of cutting tool and adjusts movement of stylus or depth of cut by turning graduated wheel or calibrated spindle. Cleans chips from workpiece, using brush or air hose. Examines engraving to ensure conformity to specification, using loupe.

May read drawings to obtain job specification. May sharpen cutting tools, using bench grinder.

8391-132 GLASS MARK-UP MAN(glass)

DPT:684

GED: 3 SVP: 5 EC: 1 PA: L 4 7

Marks designs on flat, curved or spherical glassware, by either of the following methods, to prepare surfaces for engraving or etching:

1. Sketches design on cardboard, according to drawing, using drafting instruments. Cuts out design, using razor blade or scalpel. Positions glass, such as mirror prior to silvering, over cut-out, and traces design on glass, using marking pen or pencil. 2. Studies design drawing, and measures dimensions of glassware, to determine location and number of design repeats required to meet specifications. Lays out reference lines and points, such as upper and lower limits of pattern, and center points of design repeats, on glass surface, using brush, paint, and measuring instruments.

8391-134 GLASS DECORATOR(glass)

DPT:685

GED: 2 SVP: 4 EC: 1 5 6 PA: M 4 7

Tends machine that cuts designs on surface of glass products, such as shower and bath tub enclosures, bowls, and vases, using sand or abrasive powder and protective stencils:

Fits rubber stencil mask to sand blast machine, using thumb screws and clamp, or fits brass or rubber stencil over workpiece. Starts machine that blows abrasive, such as sand or aluminum oxide against uncovered areas of workpiece to cut design into surface according to stencil pattern. Removes protective stencil from workpiece and examines workpiece to ensure conformance to specifications.

May polish glassware, using rotating buffing wheel.

8391-138 LENS-BLANK MARKER(scient. & ind. equip., n.e.c.)
DPT:684

GED: 2 SVP: 3 EC: 1 PA: L 4 7

Marks lens blanks for processing:
Marks focal length, type, trademarks, or other identifying information on lens blanks, using rubber stamp or diamond-pointed tool, or dots surface of blanks to locate optical axis, using pedal-operated centering machine, to guide workers engaged in grinding blanks to specifications.

Etching Occupations
8391-158 through 8391-170

8391-158 ETCHER, AIRCRAFT PARTS(air & space-craft)
DPT:381

chem-mill processor.
GED: 4 SVP: 6 EC: 1 6 7 PA: M 4 7

Etches portions of parts used in aircraft construction to remove metal to specifications:
Cleans surface of workpiece, using cloth and solvent, to ensure uniform adhesion of masking material or liquid coating. Covers workpiece with templates, masking or adhesive tape, or chemically resistant coatings to prevent etching of specified areas of workpiece. Marks areas to be etched, using template and scribe. Removes masking material from areas to be etched and presses down edges of masking on workpiece. Immerses workpiece in etching solution for specified period of time. Removes workpiece from etching tank and rinses it in neutralizing solution and water. Measures depth of etch, to ensure conformance to specifications, using micrometer and depth gauge.
May repeat process in successive stages to produce varying depths of etch, as specified.

8391-162 ETCHER(misc. prod. fab., n.e.c.)
DPT:387

GED: 3 SVP: 5 EC: 1 6 7 PA: L 4 7

Etches, designs, lettering and figures on metal plates by performing any combination of the following duties:
Mixes etching solution according to formula, and pours mixture into etching tank. Places plate on rack in etching tank, sets tank timing controls, and starts machine that sprays plate with etching solution. Removes plate periodically and measures depth to which metal has been etched, using gauge. Examines plate to ensure conformance to specifications. Washes plate to remove etching powder and protective ink. Brushes etching powder on surface of plate to prevent undercutting of reproduction. Prepares plates for etching by placing silk screen of specified design or lettering over workpiece and brushing acid resistant solution or ink through screen.

8391-166 OPTICAL-GLASS ETCHER(scient. & ind. equip., n.e.c.)
DPT:684

GED: 3 SVP: 4 EC: 1 6 7 PA: L 4 7

Etches numerals and graduation lines on optical glass surfaces, using either of the following methods:
1. Mounts glass workpiece in holder. Dips glass in molten wax to obtain uniform protective coating and mounts holder in pantograph. Positions tracing stylus of pantograph on template and guides stylus to reproduce pattern of lines and numerals in wax coating of workpiece. Exposes glass to hydrofluoric acid fumes to etch pattern. Cleans glass with water and solvents. Fills etched characters with opaque paste to improve readability. Examines etched glass for conformity to specifications, using microscope. 2. Pours photosensitive solution onto glass blank mounted on horizontal rotary fixture and pushes controls that rotate blank to whirl-coat it. Positions and clamps photo-printing pattern over sensitized glass blank in vacuum printing frame. Turns on arc light to print pattern on blank. Immerses exposed blank in water to remove non-exposed portion of coating and develop pattern. Exposes blank to hydrofluoric acid fumes that etch glass for specified time in areas not covered by coating. Rinses etched glass in water to remove hydrofluoric acid and immerses in solvent bath to remove coating. Examines etched glass for conformity to specifications, using microscope.

8391-170 ETCHER, ELECTROLYTIC(metal fab., n.e.c.)
DPT:885

GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends equipment that electrolytically etches markings, such as insignia, trademarks, or part numbers on metal articles:
Switches on control unit that causes electric current to flow through electrolytic solution. Positions workpiece on stencil and against contact strip to complete electric circuit. Places workpiece on felt pad saturated with electrolytic solution that etches stencil markings on metal. Switches off control unit and removes workpiece from pad after specified time, and sprays it with water or neutralizing solution to remove acid. Places workpiece on rack to dry.

Imprinting and Indenting Occupations
8391-190 through 8391-206

8391-190 CHASER(jewellery & precious metal prod.) DPT:381

GED: 4 SVP: 6 EC: 1 PA: L 4 7

Reproduces decorative designs on articles made of precious or other metals following photographs, drawings or samples:
Outlines design on surface of article, using hand tools. Positions article on forming block and raises design area, by tapping with hammer. Strikes small tools with hammer to indent design.
May pour molten pitch into article to serve as foundation for further processing. May sketch designs for custom articles.

8391-194 IMPRINTER AND CASTER, SEALS(misc. prod. fab., n.e.c.)
DPT:381

seal maker.
GED: 3 SVP: 4 EC: 1 6 PA: L 4 7

Imprints characters and designs in surface of die, according to customer's copy or specification, and casts corresponding male die for use in seals, such as corporate or notary seals:
Marks vertical-center line on blank or prestamped dies, using compass. Selects style and size of characters and visually spaces characters from center line to obtain symmetry. Imprints characters in surface of die, using hand stamps and mallet. Examines die and restamps closed or distorted characters. Cleans die, using wire brush. Installs finished female die in device used to impress die in molten alloy to form male die. Melts metal alloy in gas-fired crucible and ladles it onto aluminum foil sheet placed on device holding female die. Drops die into metal alloy and allows it to cool. Removes dies and files notch in both to ensure alignment in seal press and trims away excess metal, using knife. Oils faces of dies to prevent sticking. Applies adhesive fabric to base and ram of press and aligns and mounts dies. Imprints seal on purchase order to verify copy.

8391-198 MOULD STAMPER(mach., weld. & forg.) DPT:484

GED: 3 SVP: 4 EC: 1 PA: M 4 7

Lays out and stamps lettering and designs on tire moulds:
Positions and clamps mould on worktable manually or using hoist. Studies drawings to determine location and spacing of single letters, words or designs. Computes spacing of letters. Applies blue pigment to mould and measures and marks reference lines, using protractor, scales and scribes, to indicate location of specified stampings. Positions stamps according to lay-out lines and holds and hammers stamps to imprint letters and designs in mould. Measures impressions to verify uniform depth, using template.
May remove burrs and smooth interval surfaces of mould, using scrapers, files and abrasive wheels.

8391-202 NAME-PLATE STAMPER(mach., weld. & forg.)
DPT:685

GED: 3 SVP: 3 EC: 1 PA: L 4 7

Tends machine that stamps identifying data on name plates for manufactured products, using either of the following methods:
1. Aligns type in die block, using set screws. Positions die block on press bed, and feeds blank name plates into power or manually operated press to imprint data on blank. 2. Turns wheel of stamping machine to specified character and pulls lever to stamp character on name-plate blank. Repeats operation for each character until specified information is stamped on plate.

May place name plate in curved forming block and close block manually to shape plate to specified curvature.

8391-206 IMPRESSING-MACHINE TENDER(mach., weld. & forg.) DPT:685
GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Tends machine that impresses serial or part numbers, sizes, trademarks, or insignia into metal objects, such as small arms parts: Locks specified dies in holder on die bed, using wrench. Positions workpiece in holding fixture and turns handwheel or starts hydraulic ram to impress dies into surface of part. Stamps parts unsuited to press operations, using hand dies and hammer. Examines impressions for accuracy and clarity and replaces worn dies. May change dies after each impression when numbering in sequence.

8393-FILING, GRINDING, BUFFING, CLEANING AND POLISHING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with filing, grinding, buffing, cleaning and polishing materials, parts or products.

Filing Occupations, n.e.c. 8393-110 through 8393-114

8393-110 MOULD DRESSER(non-ferrous metal) DPT:684
GED: 2 SVP: 4 EC: I PA: M 4 7

Smooths interior surfaces of moulds used to cast aluminum ingots: Inspects interior surfaces of moulds to locate defects which would affect ingot finish, and release of ingots from moulds. Positions moulds for work, using hoist, and smooths interior surfaces, using files, abrasive cloths and papers.

8393-114 FILER, HAND(metal fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Files metal parts to specified shape, or to form cutting edges: Clamps part in vise or holding fixture. Selects file of suitable size, shape and cut, and files part to specifications. May compare hardened template with part and file part to match template.

Grinding Occupations, n.e.c. 8393-134 through 8393-178

8393-134 GRINDER AND SHARPENER(any ind.) DPT:381
GED: 3 SVP: 5 EC: I 6 7 PA: L 4 7

Sharpens fine cutting tools, such as hair clippers, and special-purpose shears and scissors performing any combination of the following duties:

Holds cutting edge of blade against rotating abrasive wheel, or clamps blade in holder or carriage of machine to maintain correct position, and grinds blade, applying knowledge of cutting-edge angles and clearances. Inspects blade, and uses abrasive wheels of finer grade, when necessary. Finishes fine edges, using whetstone.

May grind and sharpen general-purpose tools and implements; such as, garden shears, household scissors and saws, chisels, knives, and lawnmowers.

8393-138 MILL-ROLL GRINDER(rubber) DPT:682
GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates powered grinding wheel to resurface worn or damaged mill rolls used to compress reclaim rubber into slabs:

Examines sample rubber slab from mill to determine extent of grinding required. Bolts electric grinder to fixture beside mill, and selects and installs grinding wheel, using hand tools. Adjusts fixture to align grinding wheel with roll, and starts grinding wheel and roll rotating. Engages feed screw so that grinding wheel travels

horizontally along roll. Continues grinding process until roll meets specified standards.

May spread abrasive compound on closed rolls of mill after grinding, start rolls to polish surface and wipe abrasive from polished rolls.

8393-142 BIT-SHARPENER TENDER(mach., weld. & forg.) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Tends bit-sharpening machine to sharpen detachable mining-drill bits: Inserts bits in clamp and fastens them in place with wrench. Rotates and moves clamp to bring cutting edges of bits into contact with grinding wheels. Lubricates sharpening machine and changes worn grinding wheels, using hand tools.

May issue sharpened bits to drillers in exchange for dull bits, and record such issues.

8393-146 BENCH GRINDER, HAND(any ind.) DPT:684
GED: 2 SVP: 3 EC: I 5 6 7 PA: M 4 7

Manipulates metal objects, such as machine parts, castings or sheet metal subassemblies, against abrasive wheel of bench grinder, to remove irregularities or surplus metal:

Clamps part in workholder or holds part in hands, and feeds it against grinding wheel to remove projections, burrs, or scratches. Examines surfaces visually, and measures dimensions, using fixed gauges, to ensure conformance to standards. Selects and installs grinding wheel of size and grade suitable to shape of workpiece and finish specified. Trues surface of grinding wheels, using dressing tool, and replaces worn wheels, using wrench.

May deburr parts, using hand tools.

8393-150 GRINDER-CHIPPER(any ind.) DPT:684
GED: 2 SVP: 3 EC: B 5 6 7 PA: M 2 3 4 7

Grinds, chips and wire-brushes imperfections, such as casting projections, welding slag and highspots, from metal parts or structures to improve finish or to prepare them for further processing:

Positions workpiece on stand, bench or floor, manually, or by means of hoist. Installs selected grinding wheel, chisel or wire brush in portable power tool, and guides tool over surface to be dressed. Inspects work visually, and repositions workpiece as necessary to present new surfaces for treatment. Dresses grinding wheels and sharpens chisels.

May work to specified guidelines, using straightedge or template, to remove excess stock. May work on large fabricated structures from scaffold or platform, or from position on structure itself.

8393-154 GRINDER-TRIMMER(any ind.) DPT:684
GED: 2 SVP: 3 EC: I 5 6 7 PA: M 4 7

Grinds and smooths surfaces of products; such as, castings, automobile bodies, hardware or household appliance components, to prepare them for further processing:

Installs suitable grade of abrasive disk, belt or wheel on portable grinder, according to specifications and knowledge of process. Examines surface to be ground and starts grinder. Moves grinder over surface to remove major imperfections. Installs finer disk, belt or wheel, and smooths ground areas to produce specified finish.

8393-158 TOOL GRINDER(any ind.) DPT:684
GED: 2 SVP: 3 EC: I 6 7 PA: M 4 7

Sharpens tools, such as chisels, drills, knives and cleavers:

Starts bench or pedestal grinder, and holds tool to be sharpened against machine rest so that cutting edge of tool bears against grinding wheel at correct angle. Dips tool in water repeatedly to prevent overheating of cutting edge. Inspects cutting edge and continues grinding process until required sharpness is attained.

May finish cutting edges by using a finer abrasive wheel or whetstone. May tend semi-automatic machine by clamping tool to be sharpened in holder of machine carriage, and turning handles to feed carriage across grinding wheel, so that cutting edge of tool is ground at correct angle.

8393-162 GRINDER, MACHINE KNIFE(any ind.) DPT:685
GED: 2 SVP: 3 EC: 1 6 7 PA: M 4 7

Tends grinders that sharpen slicing knives or scraper blades used in industrial machines, such as beet-slicing machine:

Aligns and secures knife or blade in grinding machine fixture, using wrench. Moves lever or turns handwheel to set machine feed. Starts machine that automatically grinds knife or blade to specified sharpness or edge contour.

May disassemble scraper blade from supporting plates, using wrench, and trim scraper edge, using shear, prior to automatic grinding. May finish edge of knife or blade by hand, using whetstone.

8393-166 SWING GRINDER(iron & steel; non-ferrous metal) DPT:684
snag grinder.
GED: 2 SVP: 2 EC: 1 5 6 7 PA: H 3 4

Removes projections from surfaces of metal castings by grinding:

Places casting in work position manually, or by means of hoist or crane. Grasps handles of counterbalanced frame, and pulls grinding wheel down onto surface of casting and starts wheel to remove projections, such as gates, fins and parting lines. Repositions casting as required to expose surfaces to be ground.

May change belts between motor and grinding wheel pulleys, to regulate grinding speed.

8393-170 GRINDER, COIL SPRINGS(metal fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 6 7 PA: M 4 7

Tends machine to grind one or both ends of coil springs, used in such applications as automotive suspensions, by either of the following methods:

1. Bolts spring-holding fixture to machine table, using wrenches. Clamps spring in fixture and starts machine. Turns handwheel to feed end of spring against face of grinding wheel, as machine table moves from side to side. Removes spring and inspects ground end visually, or uses fixed gauge, to determine that flat area conforms to specifications.
2. Loads coil springs into slots of fixture. Starts machine, so that ends of springs are pressed against face of grinding wheel, as wheel and fixture revolve. Inspects ejected springs visually, or uses fixed gauge to measure flat area.

8393-174 PELLET GRINDER(mach., weld. & forg.) DPT:685
shot grinder.
GED: 2 SVP: 2 EC: 1 5 6 PA: M 3 4 7

Tends machine that grinds and polishes steel pellets to specified diameter for use as shot in air guns or shot gun shells:

Obtains pellets from tote boxes stacked on handtruck. Scoops pellets into feed hopper and starts machine that rolls and grinds pellets into shot. Turns valve handle to control flow of coolant and adds abrasive powder to hasten abrasive action. Measures processed shot at machine discharge chute to verify size, using gauges. Turns handwheels to adjust pressure plates that regulate size of shot. Loads finished pellets on handtruck and tags tote boxes with date, type and weight of pellets.

8393-178 PLATEN GRINDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 7 PA: M 4 7

Tends machine that grinds surface of rubber platens used in typewriters, adding machines, and similar business machines, to specified diameter and finish:

Mounts platen between centers of headstock and tailstock of machine, and positions stops to limit travel of reciprocating carriage, according to length of platen, using hand tools. Turns control to set depth of cut of grinding wheel, according to specified diameter of platen, and starts rubber grinding operation. Examines finish of platen surface, and measures diameter, using micrometer.

May tend double-bladed-cutting machine to trim ends of platen. May recondition used platens, by heating in oven, cutting and stripping rubber sleeve, and installing new sleeve on metal cylinder, using arbor press, before grinding.

Buffing Occupations, n.e.c.
8393-202 through 8393-214

8393-202 BUFFING-LINE SET-UP MAN(any ind.) DPT:360
GED: 3 SVP: 6 EC: 1 5 6 7 PA: M 4 7

Sets up progressive line of buffing machines used to polish metal parts to specified finish:

Selects holding fixtures and bolts parts to feed mechanisms, using wrenches. Selects buffing wheels and spacers, and installs them on spindles. Applies knowledge of buffing operations to determine type of wheel, angle of contact and pressure against workpiece. Directs machine tenders, and examines first piece through buffing line, and subsequent pieces at intervals, for conformance to specifications. Adjusts set-up to achieve specified finish. Changes surface speed of buffing wheels by varying ratio of drive-pulleys or by changing size of buffing wheels. Performs experimental buffing to determine best method of treating new products.

May set timers to control feed mechanisms of buffing machines according to size and material of workpiece, and to control application of lubricants and abrasives.

8393-206 BUFFING-MACHINE SET-UP OPERATOR(any ind.) DPT:680
GED: 3 SVP: 5 EC: 1 5 6 7 PA: M 4 7

Sets up and operates semi-automatic machines to buff metal parts for products, such as pens and pencils, domestic appliances or automobiles:

Selects holding fixtures, buffing wheels and spacers, and installs them on machine, using wrenches. Clamps or fits workpieces to holding fixtures and starts feed mechanisms, or inserts long workpiece between feed rollers. Measures and sets angles, clearances and travel of feed mechanisms, to obtain effective contact between workpieces and buffing wheels. Starts buffing wheels and applies buffing compound by hand, or opens valve to release liquid compound spray. Examines workpieces to ensure that specified finish is obtained.

8393-210 BUFFER, HAND(any ind.) DPT:684
GED: 3 SVP: 4 EC: 1 5 6 7 PA: M 4 7

Buff's metal parts to finish them for use in products; such as, automobiles, aircraft, household appliances and hardware:

Starts powered buffing wheel and applies stick of buffing compound to surface. Holds parts and manipulates them in contact with wheel, applying knowledge of buffing processes. Changes buffing wheels according to type of finish required, and replaces worn wheels, using hand tools.

May shape buffing wheels to fit contours of parts to be buffed, using trimming tool or lathe.

8393-214 BUFFING-MACHINE TENDER(any ind.) DPT:665
GED: 2 SVP: 2 EC: 1 5 6 7 PA: M 4 7

Tends previously set-up buffing line machine used to buff metal parts to specified finish:

Starts machine and holds bar of abrasive compound against buffing wheels to coat them. Places or clamps parts in holding fixtures as machine indexes. Removes buffed parts and examines them for acceptable finish. Informs set-up man of buffing defects.

Cleaning Occupations, n.e.c.
8393-234 through 8393-266

8393-234 GLASS-MOULD CLEANER(glass) DPT:684
GED: 2 SVP: 3 EC: 1 5 6 7 PA: M 3 4 7

Cleans and polishes bottle-forming moulds and mould parts by hand polishing and using vapour-blast cleaning machine:

Rubs mould surface with oil or kerosene and abrasive stone, to remove scale, rust, scratches and dirt and obtain a high lustre, maintaining cavity design by removing a minimum of cavity surface metal. Starts pumps on vapour-blast machine to circulate water and cleaning compound through hose. Places parts on table and pushes table into machine cabinet. Starts flow of compressed air through hose, using knee controls. Holds and turns parts while directing pressurized stream of cleaning compound onto parts to remove dirt,

carbon and scale. Dips parts in oil solution to prevent rusting. Stores cleaned moulds in storage bins and transfers moulds and mould parts from storage to production area, using handtruck.
May mix cleaning compound for vapour-blasting machine.

8393-238 METAL CLEANER, IMMERSION(any ind.)
DPT:685

grease remover; pickler.

GED: 2 SVP: 3 EC: I 6 7 PA: H 4 7

Tends equipment that chemically cleans grease, scale, dirt and other foreign matter from metal objects to prepare them for other processes, such as machinery repairing, welding, electroplating, galvanizing or painting:

Removes shavings, dirt and rust spots from objects, using airhose, file or sandpaper. Places objects on racks or in containers. Immerses objects in chemical and rinsing solutions and removes them, using hoist. Moves controls to start electric hoist and to regulate temperature of solution. Maintains strengths of cleaning solutions by adding specified amount of chemicals. Drains, cleans and refills tanks with chemicals, as specified.

May be designated according to task performed or according to type of cleaning equipment used; for example,

Degreaser

Ultrasonic Cleaner

Vibrating-Vat Tender

8393-240 CLEANER, METAL BLUING(metal fab., n.e.c.; sport. & toys)
DPT:687
GED: 2 SVP: 3 EC: I 4 7 PA: M 4 7

Cleans and prepares metal parts, such as sub-assemblies of automatic pistols, revolvers and toy gun barrels for bluing:

Blows out dirt particles remaining after sand blasting, using air hose, and wipes parts with cloth. Places parts in rack or wire basket and immerses them in degreasing tank. Mixes alcohol and whitening powder and rubs resultant paste onto gun or toy parts to facilitate bluing. Wires or hooks parts, and attaches them to immersing rack or rod. Blows excess solution from blued parts with air hose. Inspects parts for nicks, scratches, clearness of trademark and cleanliness.

May immerse parts in tank for specified time for cold bluing. May disassemble and reassemble components of automatic pistols and revolvers, using wrenches and screwdrivers. May position gun barrel in embossing machine to press trademark die into underside of barrel. May be designated according to item cleaned; for example,

Firearms Cleaner(metal fab., n.e.c.)

Toy-Gun Cleaner(sport. & toys)

8393-242 CARTRIDGE-PARTS CLEANER(explosives)
DPT:685
GED: 2 SVP: 2 EC: I 5 6 PA: M 3 4

Tends equipment that tumbles metal cartridge parts in acid and detergent solution to remove oil, scale and dirt, and dries them:

Loads parts into hopper of machine, manually or using hoist. Moves controls to start conveyor system, open gate on hopper and rotate open-end tumbling barrel. Turns steam and water valves and reads gauges to regulate temperature and level of liquid in tanks or barrel and heat in drying drum. Adds cleaning chemicals, according to chart, to maintain solution at specified concentration. Examines parts at ejection chute of drier to determine if they are completely cleaned and dried. Stacks tote boxes of finished parts on pallet, manually or using hoist.

May tumble parts in metal drawing (lubricating) solution before drying. May operate electric tier-lift truck or hoist, to position containers of parts on platform above feed hopper.

8393-246 SANDBLASTING-MACHINE TENDER(any ind.)
DPT:685
rotoblast operator; shotblast-machine tender.
GED: 2 SVP: 2 EC: I 5 6 7 PA: M 4 7

Tends equipment that cleans dirt, sand, scale, paint, tar, grease and rust from metal objects with blast of abrasive, such as steel shot and sand or steel grit, by one or more of the following methods:

1. Dumps or shovels objects into tumbler, manually or using hoist. Starts tumbler that exposes surfaces of objects to blast of abrasive and tumbling action. 2. Stacks objects on racks or on swinging table. Places

racks in chamber, or pushes swinging table into chamber, and starts blast of abrasive for specified period. 3. Places objects on moving conveyor that carries objects under abrasive blast. Examines workpiece for completeness of cleaning or conformance of finish to specifications.

May pour abrasive material into feed hopper to replenish supply. May chip and grind objects to obtain smooth surfaces, using air grinder, electric sander, pneumatic hammer, chisel and steel brush.

8393-250 ULTRASONIC-CLEANING-MACHINE TENDER
(any ind.)
DPT:685
GED: 2 SVP: 2 EC: I 4 PA: L 4 7

Tends equipment that cleans, rinses and dries jewellery or electronic parts before and after plating or soldering operations:

Dumps or places parts in basket and immerses basket in ultrasonic tank containing prepared cleaning solution. Sets timer according to type and size of parts to be cleaned. Starts cleaning cycle to produce ultrasonic waves causing microagitation around parts. Transfers basket from cleaning to rinsing tank. Places basket in oven and sets timer for specified drying period. Places units in trays or boxes for delivery to processing areas.

May paste identifying label on boxes. May record number of baskets and type of units cleaned. May be designated according to article cleaned; for example,

Electronic-Cleaning-Machine Tender(electronic equip.)

Jewellery Cleaner(jewellery & precious metal prod.)

8393-254 WASHING-MACHINE TENDER, INDUSTRIAL
(any ind.)
DPT:685
GED: 2 SVP: 2 EC: I 4 5 PA: M 4

Tends machines that wash and dry manufactured articles or components to clean them or to prepare them for further processing:

Dumps specified quantity of detergent into machine, using hand scoop, and turns valve to admit water, or turns valve to admit prepared cleaning solution. Loads objects or racks of objects in washing machine. Sets controls to regulate length of washing cycle and water temperature. Starts machine. Removes objects on completion of cycle, and stacks them on racks, or places them in drying machine and starts machine. Places articles or components in clean containers after drying.

May tend machine that rinses articles.

8393-258 DRIFTER(iron & steel)
DPT:686
GED: 2 SVP: 2 EC: I 5 7 PA: M 4

Removes scale from inner surfaces of pipe, using drifting machine:

Installs specified drift mandrel in machine, using hand tools, and inserts pipe into head of machine. Moves controls to tighten pneumatic grip that holds pipe in position, and to move mandrel in and out of pipe loosening scale.

8393-266 SANDBLASTER(any ind.)
DPT:687
GED: 2 SVP: 2 EC: I 5 6 7 PA: M 4 7

Directs blast of abrasive-laden compressed air or water from nozzle against metal to remove adhering scale, sand, paint, grease, tar, rust and dirt and impart on even finish:

Moves controls to adjust pressure and concentration of abrasive to obtain specified finish. Dons gloves and helmet or hood to prevent breathing sand-laden air and injury to eyes and hand. Turns air valve on helmet to allow air to circulate in helmet. Inserts hands through holes in side of cabinet, or places and holds part inside cabinet under sandblast nozzle. Steps on pedal to start sandblast stream. Turns part in hands or on floor to expose specified surfaces to sandblast. Examines workpiece for completeness of cleaning or conformance of finish to specifications.

May mask area not being sandblasted. May mix liquefied abrasive according to instructions received. May deburr parts, using belt sander. May setup portable equipment at work location. May be designated according to type of equipment used; for example,
Cabinet-Abrasive-Blast Man
Casting Finisher
Shotblaster

Polishing Occupations, n.e.c.

8393-286 through 8393-306

8393-286 POLISHER, KNIFE BLADES(jewellery & precious metal prod.) DPT:682
GED: 3 SVP: 3 EC: 1 5 6 7 PA: M 4

Operates battery of semi-automatic machines to polish knife blades: Selects polishing rollers according to degree of polishing required. Mounts rollers on machine spindles, and adjusts spindle speeds and work holder stroke, using hand tools. Loads knives into workholder and starts machine. Removes knife from workholder at end of timed cycle, and presses switch to feed and polish next knife. Repeats above sequence for each machine in battery. May brush abrasive compound onto polishing rollers when compound is not applied automatically.

8393-290 POLISHING-MACHINE OPERATOR(any ind.) DPT:682
GED: 3 SVP: 3 EC: 1 5 6 PA: M 4 7

Operates belt-sanding machine to polish flat surfaces of metal or other material, such as chain-saw bars, plate steel and rubber or vinyl slabs: Installs abrasive belt of specified grit, using hand tools. Places workpiece on conveyor and turns knob to bring workpiece into contact with polishing belt. Turns valve handle to regulate flow of coolant onto polishing belt and starts machine. Examines first run workpiece to determine conformance of finish to specifications and adjusts height of conveyor or sanding belt as required to achieve specified finish. Replaces worn polishing belts, fills coolant tank and cleans collection reservoir, using hand tools to maintain machine in operating condition.

8393-294 NIB FINISHER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Manipulates tips of fountain pen nibs against polishing wheel to attain specified smoothness and finish: Applies compound to fine polishing wheel, and manually manipulates nib of pen against wheel until it appears smooth. Wipes nib with cloth, and draws thin paper through slit of nib, to remove polishing compound. Examines tip of nib, using magnifying glass, and verifies smoothness by simulating writing action on paper. May tend semi-automatic machine that smooths fountain pen nibs in production quantities.

8393-298 POLISHER AND BUFFER, SHEET METAL(metal stamp., press. & coat.) DPT:684
GED: 2 SVP: 3 EC: 1 5 6 7 PA: M 4 7

Polishes and buffs sheet metal parts and products, such as freezers, storage tanks, display cases, metal furniture and transport vehicles: Secures sheet or part to work table, and guides hand-held power polisher over surface to remove scratches and other defects. Removes dents, using hammer and blocks. Applies oil and abrasive compound to powered buffing brush, and repeats process to achieve specified finish. Polishes recessed areas by hand, using fine emery cloth. May polish large sheets or panels by placing them on sanding machine table, and bringing continuous abrasive belt into contact with surface of workpiece.

8393-302 POLISHER, SLIDE FASTENERS(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends one or more automatic machines that deburr and polish metal links on slide-fastener tapes: Positions container of single tape behind machine, and threads end through guides, feed rollers, tension bars, and under wire brushes to pick-up drum. Starts machine, and observes passage of tape through rotating brushes and onto drum. Examines brushed links to verify smoothness. Adjusts pressure of wire brushes and feed rollers, by turning wing nuts. Attaches ends of preceding and following tapes, using stapler, to maintain continuous operation. Notifies supervisor of any machine malfunction.

8393-306 TUMBLING-BARREL TENDER(metal fab., n.e.c.) DPT:685
barrel attendant.
GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends tumbling barrel to lap, polish and clean metal balls or rollers used in the manufacture of ball or roller bearings: Reads job order to obtain specifications, such as size, number and tolerance of balls or rollers to be cleaned, lapped or polished. Loads barrel, manually or using shovel. Fills barrel with water and adds specified amount of lapping compound. Bolts top on barrel and starts tumbler. Measures balls or rollers for tolerance, using indicator gauge. Tumbles lapped balls or rollers in soapy water and in cob meal to clean and dry them. Empties tumbling barrel into hoppers for further processing. Cleans barrel to remove metal dust, using water, soap and hose.

Other Filing, Grinding, Buffing, Cleaning and Polishing Occupations, n.e.c. 8393-326 through 8393-399

8393-326 TUMBLING-MACHINE TENDER(any ind.) DPT:685
GED: 2 SVP: 2 EC: 1 4 5 PA: M 4 7

Tends one or more tumbling machines to clean, deburr, smooth and polish articles, such as jewellery, buttons or metal stampings: Loads barrel of machine with workpieces and types and quantities of abrasives and fluids as specified. Clamps cover on barrel, and starts machine to tumble parts for specified period. Examines sample parts and continues tumbling process, if necessary. Unloads parts by hand, or tips contents of barrel into container, or onto shaker- screen. May dip basket of parts in cleaning solvent to degrease prior to tumbling. May dip tumbled parts in oil to prevent corrosion. May dry parts in hot air centrifuge or oven.

8393-399 MISCELLANEOUS OCCUPATIONS IN FILING, GRINDING, BUFFING, CLEANING AND POLISHING.

This group includes filers, grinders, buffers, cleaners and polishers, not elsewhere classified; for example, those who smooth, clean or polish a variety of materials, parts or products, using machines, or hand or powered tools. Typical examples of occupational titles covered by this residual-group definition are:
Deburrer(mech. equip., n.e.c.)
Insulator Cleaner(electric. equip.)
Polisher, Automatic Machine(metal fab., n.e.c.)
Polisher, Spectacle Frames(scient. & ind. equip., n.e.c.)

8395-PATTERNMAKERS AND MOULDMAKERS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with making patterns, moulds, models, templates and samples out of metal, wood, clay, plastic, plaster, or other materials for use in the fabrication of a wide variety of products; such as, jewellery; structural parts, furniture, brick, tile, pottery, concrete products, plaques, figurines, statuary, and plastic products. Occupations concerned with making wood patterns involving the methods applied to machining wood are classified in Unit Group 8351, WOOD PATTERN-MAKING OCCUPATIONS. Occupations concerned with making patterns for textile, fur and leather products are classified in Unit Group 8551, PATTERNMAKING, MARK-ING AND CUTTING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS.

8395-110 FURNITURE REPRODUCER(furn.) DPT:281
GED: 5 SVP: 7 EC: I PA: L 4 7

Prepares working drawings and templates of antique or custom furniture to facilitate reproduction:

Draws sketches of furniture item freehand or with drawing instruments. Measures item with rule and calipers and notes dimensions on drawing. Makes detailed drawings of joints, carvings, and milled sections for shop use. Traces or draws outlines on plywood or cardboard and cuts out part along outline to make template. Marks templates, indicating name of part, type of construction, and kind of wood and finish.

May make drawings from pictures when models are not available.

8395-114 SAMPLE MAKER, JEWELLERY(jewellery & precious metal prod.) DPT:461
GED: 5 SVP: 7 EC: I PA: L 4 7

Produces wax samples and prepares specifications of articles of jewellery to original designs, and computes production costs:

Moulds and carves wax to produce sample jewellery, using modelling tools. Compiles design specifications, such as type of alloy, metal content, and weight. Computes cost of material and labour to determine production costs. Consults with customers to provide information on design and cost, and to suggest modifications.

8395-118 MODEL MAKER(any ind.) DPT:281
GED: 4 SVP: 7 EC: I PA: M 4 7

Constructs scale or full-size models used in the design and manufacture of products; such as, boats, aircraft, automobile accessories and household appliances:

Builds rough framework from materials, such as foamed plastic blocks, wood laths and wire mesh, using hand tools to cut, shape and assemble sections. Applies clay or other material to surface of frame, to build up model to approximate scale dimensions and form. Shapes surfaces, following drawings, sketches, or verbal instructions, using hand tools, such as scrapers, carvers and spatulas. Scrapes material from high areas and builds up hollows to obtain desired shape. Cuts plastic templates for use as guides to shape symmetrical sections.

May construct relief maps, or architectural models and layouts, using similar materials and methods.

8395-122 MODEL MAKER,POTTERY(cement, stone & clay) DPT:281
GED: 4 SVP: 7 EC: I PA: L 4 7

Carves, shapes and shaves clay, plaster and plastic materials, using any of the following methods, to produce pottery and porcelain-ware models, for making casting moulds:

1. Carves plaster, clay or plastic material, using hand carving tools, contour gauges and calipers. 2. Moulds clay, as it revolves on potter's wheel, with hands and fingers, and smooths surface, using wet sponge and scrapers. 3. Positions rough model in lathe, and guides cutting tool against surface, to shave it to required contours and dimensions.

May prepare working drawings to design specifications, applying knowledge of drafting. May verify dimensions of finished model, using calipers and gauges.

8395-126 PATTERNAKER, METAL(iron & steel; non-ferrous metal) DPT:281
GED: 4 SVP: 7 EC: I 5 6 PA: M 4 7

Fits, assembles, and finishes castings and parts, to make metal foundry patterns, applying knowledge of patternmaking methods and metal-casting processes:

Studies drawing of part to be cast, computes dimensions, and plans sequence of operations. Dresses castings or metal parts to required shape, dimensions and smoothness, using hand and machine tools. Assembles patterns, using bolts, screws, and other fasteners. Verifies dimensions, clearances, and alignments, using measuring instruments, and makes corrections as necessary.

May make templates for use in inspecting finished surfaces.

8395-130 LOFTSMAN(air & space-craft) DPT:381
GED: 4 SVP: 7 EC: I PA: L 3 4 7

Lays out, on plywood or sheet metal, full-scale outlines and reference points of aircraft structures and parts:

Makes preliminary reduced scale layouts of exterior surface contours, from engineering data and sketches, using drafting instruments, and applying knowledge of drafting and aircraft design. Lays out full-scale drawings of aircraft structures, such as fuselages and wings on plywood or sheet metal, working from preliminary loftings and engineering designs. Prepares tables of full-scale lofted structures for shop use.

8395-134 MODEL MAKER, JEWELLERY(jewellery & precious metal prod.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 4 7

Fabricates metal models of items of jewellery conforming to samples, drawings, or design instructions, for use in making casting moulds:

Lays out design on metal stock, and cuts, bends, and shapes parts, using gas torch and metal working hand tools. Measures parts for conformance to specifications. Hammers, scrapes or smooths surfaces, to produce specified finish. Solders pieces together to assemble completed model.

8395-138 PATTERNAKER, METAL FURNITURE(furn.) DPT:381
GED: 4 SVP: 7 EC: I PA: M 4 7

Sketches and constructs patterns for use in manufacture of metal-furniture parts:

Draws outline of part on paper or traces it from drawing. Transfers outline onto pattern material, such as metal, plastic or wood, by tracing over lines. Cuts out and trims pattern, using hand and power tools. Assembles pattern sections, using hand tools and welding equipment. Marks identification number or symbol on completed pattern.

8395-142 PATTERNAKER, PANTOGRAPH MACHINE(mach., weld. & forg.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 4 7

Lays out and cuts plastic patterns for use in pantograph engraving:

Establishes reference points on plastic sheet, and computes lay-out dimensions, following drawing or sketch. Marks points and lines on plastic material, using drawing tools, such as straightedge, compass and scribe. Cuts out pattern, using hand and machine-tools.

May design and develop engraving pattern layouts.

8395-146 PATTERN MAN, ENVELOPES(paper prod.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 4 7

Draws patterns, compiles data, and prescribes manufacturing specifications for envelopes from customer orders:

Sketches layout and dimensions of envelope on card, using drafting instruments. Selects type of paper and computes number and size of sheets required to fill order. Determines machines, dies, and tools to be used. Compiles set-up data for operations, such as cutting, folding, printing and attaching fastening devices. Determines sequence of manufacturing operations, and prepares process card.

8395-150 TEMPLATE MAKER(any ind.) DPT:381
GED: 4 SVP: 7 EC: I PA: M 3 4 7

Plans and makes templates of paper, plastic, wood and sheet metal, used for laying out reference points and dimensions on metal stock, in the manufacture of fabricated metal products:

Develops lay-out from drawings or work orders, applying knowledge of product design, welding, and allowances for curvature and thickness of metal. Lays out design on template material, using drafting instruments and marking devices. Operates power and hand tools to fabricate templates. Marks identification symbols and work instructions on completed template. Repairs and reworks templates.

May specialize in particular type of product, and be designated accordingly; for example,

Template Maker, Shipbuilding(ship & boat bldg.)

Template Maker, Structural Steel(struct., plate & ornam. metal)

8395-154 PATTERNMAKER, HAT(garment & fabric) DPT:381
GED: 3 SVP: 7 EC: 1 PA: L 4 7

Casts plaster mould from sample hat to form pattern for subsequent castings of aluminum die, used in hat production:
Applies lacquer to sample hat to stiffen it. Fills hat with sawdust and caps with wood or plastic insert to maintain rigidity and hat size. Inverts hat and places lengths of thread on surface to facilitate subsequent sectioning of mould. Mixes powder with water to form plaster. Applies plaster to hat to form shell, using large- palette knife and spoon. Removes threads from hat to sectionalize shell. Separates hardened shell from hat and inspects for defects. Joins sections of shell together, using clips. Inverts shell and inserts core in center of shell. Packs plaster between shell and core and allows plaster to harden to form pattern used in casting aluminum die. Whittles, cuts, and scrapes plaster from pattern with hand knife, to achieve specified form and dimensions, measuring and comparing pattern with sample hat, using rule and tape.

8395-158 PATTERNMAKER, PLASTER(air & space-craft) DPT:381
plaster-pattern caster.
GED: 4 SVP: 6 EC: 1 PA: M 4 7

Fabricates plaster patterns and casts, by any of the following methods, for use in the manufacture of aircraft tools and parts:
1. Studies drawing, sketch or product model, or follows verbal instructions, and constructs frame of approximate size and shape from wood and metal sections, using hand tools. Tacks or ties wire mesh to frame, to provide base for plaster. Mixes and spreads plaster over surfaces, building up contours to required shape. Scrapes high spots and fills hollows, until shape, dimensions and smoothness meet required standards. Verifies dimensions, using measuring instruments. Brushes shellac or similar compound over pattern, to seal and strengthen surface. 2. Brushes release agent over surface of pattern, and spreads and smooths plaster over section from which cast is required. Removes cast when set, and trims surfaces and edges to specifications, using scrapers. 3. Assembles metal or wooden frame around pattern or part, and brushes on releasing agent. Pours plaster into enclosure, using fibre, wire or rods as reinforcements, and allows plaster to set. Removes cast from enclosure, and part from cast. Trims edges and surfaces of cast, using hand tools.
May lay up plastic laminated materials on plaster pattern, to form plastic mould, or to prove pattern for plastic product.

8395-162 PATTERN GATER(iron & steel; non-ferrous metal) DPT:381
GED: 4 SVP: 5 EC: 1 7 PA: M 4 7

Fits and fastens metal patterns, gates and risers, to metal matchplates used to make foundry sand moulds:
Cuts strips from metal stock, using hacksaw, to make gates and risers as specified on drawing. Screws patterns, gates and risers to matchplate, to connect each pattern to riser and to main gate, according to specifications. Fills and trims joints, using solder and file, to form smooth continuous surfaces.

8395-166 SHOE-LAST PATTERNMAKER(shoes) DPT:682
last-pattern grader.
GED: 3 SVP: 5 EC: 1 PA: M 4 7

Cuts out steel master patterns for use in manufacturing shoe lasts, and operates grading machine to cut paper last patterns for all sizes of specified shoe style:
Positions design pattern on steel sheet, scribes line around pattern, and cuts along line with shears or metal cutter to form steel-master pattern. Bolts master pattern to table of grading or sizing machine, and adjusts reduction scale of machine to cut paper patterns of specified size. Inserts cutting tool and stylus into ends of pantograph arm of machine, and starts machine. Turns wheel to advance pattern paper from roll into position under cutter, and positions stylus at starting point against edge of steel pattern. Guides stylus around pattern, observing action of cutter. Compares paper pattern with master to verify reproduction of shape. Repeats machine operations, and readjusts reduction scale of machine, to produce specified number and size of patterns of particular shoe style.

8395-170 LAY-UP MAN, PLASTICS(plastic prod.) DPT:684
caster, plastics.
GED: 3 SVP: 5 EC: 1 7 PA: M 4 7

Lays up or casts plastic reproductions of models, patterns and prototype parts:
Examines original to determine sections to be laid up or cast, and assembled to obtain reproduction. Constructs enclosure around selected section, and brushes or sprays section with parting agent. Brushes plastic facing coat over parting agent and mixes plastic resin to proceed by either of the following methods: 1. Brushes thin uniform coat of resin over facing coat, applies sheet of fibreglass cloth cut to approximate size of section and smooths cloth by brushing. Repeats lay-up procedure until specified thickness is attained. 2. Pours plastic resin into enclosure until cast is of specified thickness. Removes lay-up or cast when set, and smooths rough edges, using files, grinders and sanders. Forms base and bracing structure to support cast, using hand tools and adhesive.
May assemble lay-ups or casts to produce complete reproduction.

8395-174 FUEL-TANK-FORM BUILDER(air & space-craft; rubber) DPT:684
GED: 3 SVP: 4 EC: 1 4 7 PA: M 3 4 7

Builds forms for use in the manufacture of rubberized fuel tanks, performing any combination of the duties described in the following methods:
1. Brushes inside of mould halves with parting agent. Mixes specified amounts of plaster and water, using portable power mixer, and splashes coating over interior of mould halves. Cuts burlap strips and soaks them in plaster mix, adding retarding agent to delay set. Applies strips to inside of mould halves in specified pattern, until required thickness is built up. Applies stiff plaster mix around fitting openings in form, to reinforce them. Assembles mould halves by tightening thumb screws. Puts hand through openings in mould, and applies plaster-soaked burlap strips around seams to join halves of form. Separates mould halves and removes completed form when set. Trims outside surface and fitting openings of form using plaster, spatula and sandpaper. 2. Brushes inside of mould sections with parting agent. Feeds cardboard into pulverizing machine. Cuts burlap strips to specified sizes, following patterns. Measures and mixes pulverized cardboard, glue and water in specified proportions, using scales and portable mixer. Pours mixture into container of powered sprayer, and sprays inside of mould sections. Places burlap strips, soaked in mixture, in mould sections, and resprays, until required thickness is built up. Places mould sections in oven until form sections are dry, and separates forms from moulds. Assembles form sections, using string and tape. Puts hand through openings in form and joins seams with mixture-soaked burlap strips. Trims outside surface, and fitting openings of form, using plaster, spatula and sandpaper. 3. Lays out cutting, scoring and joining lines on cardboard sheets, using templates and patterns. Cuts form sections from sheets, using handsaw, and scores and grooves fold and join lines, using hand tools. Stamps out openings for fittings, using dies and mallet. Assembles cardboard form by bending, folding, fitting and gluing sections together, using wooden supports. Inserts cardboard ribs in form, and secures and reinforces them with adhesive tapes. Glues on cardboard cover to complete form, and removes wooden supports. Moulds plaster components and glues them to surface of form. Trims surface and joints, and bevels edges, using plaster, adhesive tape, spatula and knife.

8395-178 WAX-PATTERN ASSEMBLER AND REPAIRER(iron & steel; non-ferrous metal) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Assembles and repairs wax patterns used in lost-wax casting process:
Melts edges of wax components, using heated knife or electrically-heated iron, and manually positions and joins components. Repairs defects, such as broken edges, holes and cracks, and smooths surfaces, using wax and heated knife or iron.

8395-182 WAX-PATTERN MOULDER(iron & steel; non-ferrous metal) DPT:685
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends semi-automatic machine that produces wax patterns used in lost-wax casting:
Sprays interior surface of rubber mould with parting agent, using spray gun. Places mould in fixture in bed of machine, and starts machine to inject melted wax into mould. Loosens pattern from mould, using air hose, and opens mould by hand to remove pattern. Inspects pattern and removes excess wax, using knife. Smooths small defects, using gas torch and hand tool. Inserts sprues in patterns to prepare them for casting process.

8395-186 WAX-PATTERN COATER(iron & steel; non-ferrous metal) DPT:687
GED: 2 SVP: 2 EC: I PA: M 4 7

Coats wax foundry patterns with compound to form shell moulds used in lost-wax casting process:
Dips pattern in suspension of silica flour and water, and sifts materials, such as sand or aluminum oxide onto pattern to form coat. Examines pattern for evenness of coating, and smooths surface as necessary, using knife.

Mouldmaking Occupations 8395-200 through 8395-224

8395-200 MODEL-AND-MOULD MAKER, CONCRETE PRODUCTS(cement, stone & clay) DPT:281
GED: 4 SVP: 7 EC: I 7 PA: M 4 7

Constructs models and moulds for use in casting concrete-garden ornaments, furniture and statuary:
Shapes models, following drawings or duplicates originals, by moulding clay or other compounds with hands and hand tools. Sprays parting agent on surface of model. Covers model with layers of plaster or resinated glass cloth, to form shell. Cuts hardened shell with saw, or separates sections where divider strips have been inserted during moulding. Reassembles sections of shell to form mould for concrete castings.

May fabricate lugs and projections on mould sections, so that sections may be clamped together. May mould fibre glass sections on aluminum bases to give rigidity to larger mould. May paint models, using spray gun and brushes.

8395-204 MOULD MAKER(woodworking) DPT:481
GED: 3 SVP: 6 EC: I PA: H 3 4 7

Constructs and repairs wooden forms used to mould brick and tile or concrete mixtures in the manufacture of concrete products:

Constructs new moulds by laying out and marking measurements on boards from engineering drawings, or specifications, and cutting boards to size with handsaw or powersaw. Fits mould sections, using hand tools, power tools or with jointer, and joins sections, using materials, such as wood screws, bolts, clamps and glue. Repairs moulds by removing damaged or worn parts, fashioning new ones and screwing them in place.

May lay out and construct wooden plugs used in making fibre glass moulds that are inserted into casting moulds to create voids. May perform general maintenance carpentry about the plant.

8395-208 TIRE-MOULD REPAIRMAN(rubber) DPT:681
tire-mould dresser.
GED: 3 SVP: 6 EC: I PA: H 4 7

Repairs and refinishes metal tire moulds and changes lettering plates and bead rings:

Repairs nicks, dents and holes in moulds, using ball peen hammer, hand drill, chisels, metal plugs and oxy-acetylene torch. Refinishes repaired area or entire mould with hand-buffing machine and steel wool. Changes bead rings and name plates to correspond with size and ply of tires scheduled to be cured, using wrenches. Cleans equipment, using rags, solvent and steel wool.

May add or remove metal from plates, rings and moulds, using welding equipment and files. May fill in mould lettering with liquid

metal or plugs, buff to smooth finish, and restamp. May maintain inventory of plates, bead rings and moulds.

8395-212 MANNEQUIN-MOULD MAKER(plastic prod.) DPT:684
lay-up man.

GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Builds moulds used to cast articles, such as display mannequins, using either of the following methods:

1. Places hand-made model on bench. Packs clay or plaster around model to level of its horizontal center line. Applies parting agent to exposed surface of model to facilitate later removal of cured mould. Brushes plastic facing coat onto exposed surface of model. Covers initial coating with thin, uniform resin coating. Cuts sheet of fibreglass cloth to approximate surface dimensions of model. Presses cloth sheet onto coated surface and smooths cloth to remove wrinkles and air-bubbles. Applies additional resin coating and fibreglass sheet, repeating laminating procedure until desired thickness of mould is attained. Removes clay or plaster from pattern. Turns pattern over and repeats process to fabricate matching half of mould. 2. Applies parting agent to mould. Constructs enclosure around pattern. Mixes and pours plastic resin into enclosure to surround model to desired depth. Allows resin to set hard. Removes enclosure and cuts hardened cast from model. Files, grinds and cuts cast to specified dimensions, using hand tools.

May use plaster of paris as initial coating agent. May attach drilled metal strips to moulds to facilitate bolting together of mould halves.

8395-216 POTTERY-MOULD MAKER(cement, stone & clay) DPT:684
GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Casts plaster moulds used in manufacturing pottery ware:

Places model in clay so that upper half of model remains exposed. Brushes exposed half with parting agent and places wooden form around model to serve as enclosure. Mixes plaster and pours it over model to form one half of mould. Allows plaster to set, removes wooden enclosure, and turns mould over. Removes clay, leaving model in plaster, and smooths plaster surface at parting line, using knife and scraper. Brushes parting agent on model and plaster surface, and replaces wooden enclosure around sides. Pours plaster over model to form second half of mould.

8395-220 MOULDING SCREEN FORMER(mech. equip., n.e.c.) DPT:684
wire screen former.

GED: 3 SVP: 5 EC: I PA: M 4 7

Manufactures and installs moulding screens for machines which produce pulp stock products, such as egg trays:

Cuts wire mesh into sections of required size, using shears. Selects and sets up forming dies in hydraulic press, using hand tools. Presses wire mesh partially into die by hand. Lowers and raises hydraulic press in progressive stages to gradually form screen mould. Smooths mesh with shaping tools after each stage to remove wrinkles. Cuts seal from rubber sheeting, using scissors and positions seal at mould perimeter in press. Operates press to set rubber seal in wire mesh. Changes screens and suction moulds in pulp-stock-forming machines for product changeover.

May anneal wire mesh by reeling wire cloth through gas furnace and cold water tank, before forming operations.

8395-224 WAX-PATTERN MOULDMAKER(iron & steel; non-ferrous metal) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Forms rubber moulds for use in machine that produces wax patterns for lost-wax casting:

Places metal model in frame and packs raw rubber around model. Clamps frame in vulcanizing machine. Removes frame from machine after specified time. Splits mould into two pieces and removes model, using knife or scalpel. Inspects mould for defects.

Miscellaneous Occupations 8395-244 through 8395-276

8395-244 JIG AND FORM MAKER(any ind.) DPT:381
GED: 4 SVP: 7 EC: I 6 PA: M 4 7

Builds jigs, fixtures and forms of wood, metal, or plastic materials, for use in assembling or shaping parts of products, such as electrical equipment, motor vehicles, or aircraft:

Examines drawing, part or assembly for which jig, fixture or form is to be built. Lays out design, using shop measuring instruments. Cuts and shapes wood, metal or plastic materials, to specified dimensions, using hand, power and machine tools. Assembles parts to complete jig, fixture or form, and verifies dimensions. Repairs worn or damaged fixtures.

May build holding fixtures for assembly of variety of products by moulding plastic material, using product as pattern.

8395-248 MODEL-AND-MOULD MAKER, PLASTER(cement, stone & clay; misc. prod. fab., n.e.c.) DPT:681
GED: 4 SVP: 7 EC: I 7 PA: M 4 7

Makes plaster models and moulds used to cast concrete or plaster products; such as, cornices, mouldings, decorative panels and columns: Lays out profile of product on sheet-metal, following drawings. Cuts out and trims template of profile, using shears and files, and nails template to wood guide for use on modelling frame. Mixes water and plaster to required consistency in tub, using paddle. Brushes parting agent on modelling frame, to prevent adhesion of plaster. Builds up plaster in or on frame, and incorporates reinforcing fibres, allowing setting time between successive layers. Pushes and pulls template across plaster surface to remove excess, and form model or mould to required contours and dimensions. Cuts hardened model or mould into sections, using handsaw, and lays out sections to form required pattern. Cements sections together, using resinous compound, and fills and smooths joints and surface defects with plaster, using moulding tools.

8395-252 BUTTON DESIGNER AND SAMPLE MAKER(misc. prod. fab.; n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I PA: L 4 7

Designs and fabricates plastic button samples:

Determines size, shape, and colour of buttons from customer's order. Prepares coloured designs of buttons, using drawing instruments, colouring and brushes. Selects plastic button blanks according to design specifications. Turns, cuts, drills, sands and buffs plastic blanks into shape of designed button samples, using a variety of machine-tools. Measures buttons to ensure correct specifications, using calipers. Attaches sample of coloured cloth to buttons and forwards them to dyeing room. Examines and approves dyed sample buttons and attaches them to customer's order.

8395-256 PLASTER DIE MAKER(cement, stone & clay) DPT:684
press-die, maker.
GED: 3 SVP: 5 EC: I PA: H 4

Casts plaster dies for hydraulic ram press that forms pottery ware:

Places wire mesh over die face of master model and presses or taps mesh with wooden mallet to contour of model. Wires non-metallic conduit to wire mesh. Removes wire mesh assembly and sponges soap solution on model surface to separate die halves after casting. Lowers and taps steel die rings over outside rim of each half of model, using wooden mallet. Places wire mesh assembly over model face and wires assembly to die rings manually. Mixes powdered plaster with water, according to specifications, using hand paddle. Pours mixture into each half of model to top of die ring. Separates die from model and attaches airhose to die to remove water from dies. Removes remaining moisture from die, using sponges and places finished dies in storage rack.

May make master model for use in making dies. May place dies in ram press. May salvage steel rings and wire mesh assembly.

8395-299 OTHER PATTERNMAKERS AND MOULDMAKERS

This group includes patternmakers and mouldmakers, not elsewhere classified; for example, those who fabricate patterns, moulds, models and templates from materials; such as, metal, wood, clay, plastic or plaster, for use in the manufacture of a wide variety of products.

Typical examples of occupational titles covered by this residual group definition are:

Mould Maker(jewellery & precious metal prod.; misc. prod. fab., n.e.c.)

Patternmaker, Plastics(plastic prod.)

8396-INSPECTING AND TESTING OCCUPATIONS, MACHINING, N.E.C.

This unit group includes occupations, not elsewhere classified, in inspecting and testing work as described under the term titles, 02-170 INSPECTOR (any ind.), and 02-430 TESTER (any ind.), concerned with quality-control activities in the machining, engraving, etching, filing, grinding, buffing, cleaning and polishing of various materials and products and in patternmaking and mouldmaking.

8396-110 BALANCING-MACHINE OPERATOR(electric. equip.; mech. equip., n.e.c.) DPT:482
balancer, dynamic.
GED: 4 SVP: 6 EC: I PA: M 4 7

Operates dynamic-balance machine to locate points of imbalance on parts, such as impeller wheels, armatures, rotors and flywheels and corrects imbalance, using machine and hand tools:

Positions workpiece on machine spindle or bearings manually or with crane. Connects power source that rotates workpiece by sliding drive belt over shaft of workpiece or moving drive wheel against workpiece. Starts machine to rotate workpiece at specified speed. Moves controls of machine to locate points of imbalance indicated by light beam from stroboscope on identification marks of workpiece, position of wave crest of trace pattern on oscilloscope screen, or readings on wattmeter and protractor dial. Computes amount of weight to be added or removed from workpiece, or changes size and location of test weight until zero reading is indicated on ammeter. Removes excess material from heavy areas, using drill press, grinder, chisel and hammer or files. Adds weight to light areas by installing metal clips, wedges or rivets or welding or soldering metal on part, using hand and power tools and welding equipment.

8396-114 SAFETY-RAZOR BLADE INSPECTOR(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 6 EC: I PA: S 4

Inspects safety-razor blades in all stages of manufacture:

Inspects incoming material visually to ensure conformity to invoice description. Inspects small parts visually and with measuring instruments, such as micrometers, to ensure that dimensions are within specified tolerances. Inspects strips of blades by measuring physical, mechanical and dimensional properties. Performs destruction tests on random samples of blades to ascertain flexibility and hardness. Inspects blades in blocks of specified number by placing blades on holder under mercury vapor lamp and turning to various angles to reveal defective blades by pattern reflection. Sorts defective blades to determine pattern of defects that could be corrected by machine adjustments.

8396-118 STATIC BALANCER(electric. equip.; mech. equip., n.e.c.) DPT:484
GED: 3 SVP: 3 EC: I PA: H 4 7

Balances parts, such as transportation wheels, grinding wheels, armatures, blower fans and rotors, and corrects imbalance by removing or adding weight at point of imbalance:

Mounts parts without spindles or shafts on mandrels. Positions part on two parallel, level, knife edges or rotates part on two pairs of overlapping, narrow faced rollers. Rolls part and observes point of rest. Removes excess material from heavy areas, using drill press, grinder, chisel and hammer or hand files. Adds weights to light areas by installing metal rivets, clips or wedges, or adding material similar to that of part, using hand and power tools and soldering and welding equipment.

May be designated according to part balanced; for example,

Abrasive-Wheel Balancer(mech. equip., n.e.c.)

Armature Balancer(electric. equip.)

Blower-Fan Balancer(mech. equip., n.e.c.)
Rotor Balancer(mech. equip., n.e.c.)

**8396-199 OTHER INSPECTING AND TESTING
OCCUPATIONS, MACHINING**

This group includes machining inspectors and testers, not elsewhere classified; for example, those who inspect engraved or etched materials or inspect or test samples, templates, patterns and moulds made from metal, wood, clay, plastic, plaster or similar materials. Typical examples of occupational titles covered by this residual group definition are:
Inspector, Concrete Moulds(cement, stone & clay)
Inspector, Etched Glass(glass)
Inspector, Etched-Metal Parts(scient. & ind. equip., n.e.c.)

**8399-OTHER MACHINING AND RELATED
OCCUPATIONS, N.E.C.**

This unit group includes occupations, not elsewhere classified, concerned with using machines or hand tools to shape, work or join various materials, parts and products according to specifications.

**8399-110 AIRCRAFT MECHANIC, EXPERIMENTAL(air &
space-craft) DPT:261**
GED: 5 SVP: 8 EC: 1 6 PA: M 2 3 4 7

Fabricates and assembles experimental structural and mechanical parts and installs them in aircraft, or mock up of aircraft, according to specifications:
Lays out reference points and lines on metal, wood or plastic, using drafting instruments, according to drawings and verbal instructions. Sets up and operates wood and metalworking machines and machine-tools, such as band saw, table saw, lathe, drill press, shear and brake, to make parts and verifies their dimensions, using measuring instruments. Drills, countersinks and reams holes in parts and assemblies for bolts and rivets, using portable power tools. Fits and installs parts and assemblies, using hand tools. Strings cables through guides and pulleys and adjusts cable tensions. Fabricates jigs and fixtures for use in locating and installing parts. Confers with engineers to resolve problems of fabrication and installation.

**8399-114 MODEL AND MOCK-UP MAKER(air & space-
craft) DPT:261**
GED: 5 SVP: 8 EC: 1 6 PA: M 2 3 4 7

Constructs scale models and full-scale mock-ups of aircraft from wood, plastic and other materials:
Lays out work to determine lines and contours of model or mock-up according to drawings, rough sketches, lofting data or verbal instructions. Transfers lay-out detail onto wood or plastic materials. Operates shop equipment; such as, band saw, planer, jointer, lathe and drill press to shape and form parts, such as ribs, tailplane and control surface. Constructs fabrication and assembly jigs and fixtures. Grinds, files and sands parts to finish them. Aligns parts and assemblies, using transit and sight level. Fits and joins assemblies, such as wings, fuselage and tail sections, using hand and power tools. Confers with engineers to resolve construction problems.

**8399-116 DIE MAKER, PAPERBOARD(mech., equip., n.e.c.)
DPT:381**
steel-rule-die maker.
GED: 4 SVP: 7 EC: 1 PA: M 4 7

Constructs dies from sharpened steel-rule stock, and plywood or hardboard, for use in machines that cut or score paperboard:
Lays out die design on plywood or hardboard sheet, following drawing specifications, and using drafting instruments. Saws blocks from sheet, using table, band or jig saws. Sands and polishes blocks to specified dimensions and smoothness, using belt sander. Measures and cuts sharpened steel-rule stock to specified length, using power hacksaw or shears, and bends pieces to form cutting knives and scoring rules. Places die holder on assembly table, positions wooden blocks in die holder, and inserts knives and scoring rules between

blocks according to drawing. Turns bolts on die holder using wrench, to fasten blocks and knives in place. Adjusts setup of die during trial run to compensate for deviation from specifications.
May secure blocks and knives in die holder, using wedges.

8399-118 FLOAT MAKER(non ferrous metal) DPT:484
GED: 3 SVP: 6 EC: 1 7 PA: L 4 7

Fabricates and assembles floats used to control flow of molten aluminum from pouring machines:
Lays out float pattern on sheet metal, according to sketches and drawings and cuts marked sheet to form pattern, using hand shears. Bakes asbestos material in oven according to specifications. Removes baked material from oven, applies precut-metal pattern and marks material for sawing by tracing around pattern. Starts band saw and cuts float parts from baked material. Fabricates other parts according to assembly requirements. Verifies specified dimensions, using micrometer. Assembles float according to specifications, using hand tools, such as wrenches and pliers. Records production according to type, size and form of float produced.

**8399-120 PORTABLE-DIAMOND-DRILL-AND-SAW
OPERATOR (cement, stone & clay; const.) DPT:662**
GED: 3 SVP: 6 EC: B 5 6 7 PA: VH 3 4 5 6 7

Operates portable diamond saw and drills to cut and bore masonry and steel to specifications:
Reads work order and talks to client to determine location and nature of assignment. Determines and selects equipment required, such as electric saw, electric, gasoline or air-powered drill, portable generator, water pump and air compressor. Loads equipment on truck at plant and unloads at job site, assisted by other worker. Measures and marks, on masonry or steel, position of hole to be drilled or cut to be made, using steel-tape measure and marking pencil. Selects and fits specified diamond bit into drill or saw blade onto saw, using wrench. Sets up and operates drill or saw following markings on masonry or steel. Records assignments completed and hours worked in log book and on time sheets. Erects scaffolding at site to provide position for boring or sawing, using hand tools. Performs minor repairs and servicing on equipment and delivery truck.

**8399-122 BUTTON-MACHINE SET-UP MAN(misc. prod.
fab., n.e.c.) DPT:680**
GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Sets up machines that shape, drill and cut designs on plastic or wooden buttons:
Selects and installs specified button-holding chucks, abrasive wheels, cutting tools, and drill bits in machine, using hand tools and gauges. Adjusts cams to synchronize feeding mechanism with tool action, and sets cutting tools in holders to control depth of design on button. Selects approximate settings and test-operates machine. Examines and gauges sample button to determine need for further adjustment. Replaces worn or broken machine parts, using hand tools. Operates bench grinder and lathe to sharpen drill bits and cutting tools, and reshape worn button-chucks.
May polish buttons, using tumbling machines or buffing wheels. May instruct new employees in machine tending procedures.

**8399-126 SAFETY-RAZOR-BLADE MAKER(metal fab., n.e.c.)
DPT:680**
GED: 3 SVP: 5 EC: 1 6 PA: L 4 7

Sets up and operates machines that produce safety-razor blades from steel strip:
Mounts coil of strip on machine-feed reel, using hoist. Threads strip through successive grinding, honing and stropping sections of machine. Starts and stops machine to examine result produced by each section, using microscope. Adjusts and sets machine grinders, hones and stropps, to ensure conformance to standards. Adjusts device that prints trade mark. Observes dial thermometers and adjusts controls of heat-treating furnace to maintain specified temperature. Replaces worn grinders, hones and stropps as required.
May operate machine that divides processed strip into individual blades, and finishes edges, and be designated accordingly,
Safety-Razor-Blade Honer.

MAJOR GROUP 83

8399-130-8399-199

**8399-130 PORTABLE-DIAMOND-DRILL-AND-SAW
OPERATOR HELPER**(cement, stone & clay; const.)
DPT:687

GED: 2 SVP: 2 EC: B 4 5 6 7 PA: VH 3 4 5

Helps operator to bore or saw holes in masonry and steel:
Loads, unloads and carries equipment from truck to work site. Mixes and pours gasoline and oil into equipment fuel tanks. Fills water pump from tap and connects pump to drill. Pumps water manually during drilling operation. Connects portable generator to electric drill or saw. Turns generator crank manually to provide power for electric drill or saw. Holds drill or saw steady to obtain initial penetration. Cleans equipment and work area. Performs minor repairs to equipment or truck. See also definition for term title, 02-160 HELPER (any ind.).

May drive delivery truck to work site. May help operator to erect scaffolding.

**8399-199 MISCELLANEOUS MACHINING AND RELATED
OCCUPATIONS**

This group includes miscellaneous machining occupations, not elsewhere classified; for example those who use machines or hand tools to shape, work or join various materials, parts and products to specifications. A typical example of an occupational title covered by this residual group definition is:
Shallot Maker(mach., weld. & forg.)

PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS

This major group includes occupations concerned with using manufactured components and assemblies to produce or repair products; such as, automobiles, airplanes, and marine craft, industrial and agricultural machinery, commercial and business machines, domestic appliances, precision instruments, electrical and electronic equipment, rubber and plastic products, garments, footwear, furniture, housewares, and jewellery, by assembling them in a factory, shop, or yard. Activities include: final working, fitting and finishing of parts and assemblies to complete fabrication, installation and repair of finished products or equipment. Occupations primarily concerned with inspecting, testing, grading, and sampling activities related to the fabrication, assembly, installation and repair of products are classified in special unit groups for inspecting, testing, grading, and sampling within the applicable minor groups. Occupations concerned with assembling and repairing marine craft are classified in Unit Group 8592, MARINE CRAFT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS. PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS are classified in the following minor groups:

- 851/852 Fabricating and Assembling Occupations,
Metal Products, n.e.c.
- 853 Fabricating, Assembling, Installing and
Repairing Occupations: Electrical,
Electronic and Related Equipment
- 854 Fabricating, Assembling and Repairing
Occupations, Wood Products
- 855/856 Fabricating, Assembling and Repairing
Occupations: Textile, Fur and Leather
Products
- 857 Fabricating, Assembling and Repairing
Occupations, Rubber, Plastic and Related
Products
- 858 Mechanics and Repairmen, n.e.c.
- 859 Other Product Fabricating, Assembling
and Repairing Occupations

851/852-FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS, N.E.C.

This minor group includes occupations, not elsewhere classified, concerned with fabricating and assembling a wide variety of products, primarily made of metal, and mechanical equipment designed for domestic, commercial, industrial, construction, agricultural or other uses. Activities include: fabricating and assembling motor vehicles; aircraft; railway rolling stock; engines and related equipment; industrial, farm and construction machinery; business and commercial machines; precision instruments; armament equipment; and other related products. MARINE CRAFT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS are classified in Unit Group 8592. FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS, N.E.C. are classified in the following unit groups:

- 8510** Foremen, Fabricating and Assembling
Occupations, Metal Products, n.e.c.

- 8511** Engine and Related Equipment Fabricating and Assembling Occupations, n.e.c.
- 8513** Motor Vehicle Fabricating and Assembling Occupations, n.e.c.
- 8515** Aircraft Fabricating and Assembling Occupations, n.e.c.
- 8523** Industrial, Farm, Construction and Other Mechanized Equipment and Machinery Fabricating and Assembling Occupations, n.e.c.
- 8525** Business and Commercial Machines Fabricating and Assembling Occupations, n.e.c.
- 8526** Inspecting and Testing Occupations, Fabricating and Assembling Metal Products, n.e.c.
- 8527** Precision Instruments and Related Equipment Fabricating and Assembling Occupations, n.e.c.
- 8528** Occupations in Labouring and Other Elemental Work, Fabricating and Assembling Metal Products, n.e.c.
- 8529** Other Fabricating and Assembling Occupations, Metal Products, n.e.c.

8510-FOREMEN, FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating and assembling a wide variety of metal products and mechanical equipment designed for use in domestic, commercial, industrial, construction, agricultural or other activities.

8510-110 FOREMAN, AIRCRAFT ASSEMBLY(air & space-craft) DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling aircraft, air or space-craft subassemblies; such as, power plants, landing gear, tail assemblies and wings and related equipment in a shop or on a production line, normally using manufactured parts and components, (Unit Group 8515): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in fabricating and assembling a particular part or type of aircraft and be designated accordingly; for example,

Aircraft-Hydraulic-Equipment Installation Foreman
Aircraft-Rigging Foreman
Airframe Assembly Foreman
Helicopter Assembly Foreman
Power-Plant Installation Foreman
Space-Craft Subassemblies Foreman

8510-114 FOREMAN, BUSINESS AND COMMERCIAL MACHINES ASSEMBLY(mech. equip., n.e.c.)

DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling a variety of business and commercial machines; such as, typewriters, calculating, bookkeeping, adding, copying and similar business machines, punched card and vending machines, normally using manufactured parts and assemblies, (Unit Group 8525):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in fabricating and assembling a particular type of machine and be designated accordingly; for example,

Adding-Machine Assembly Foreman
Addressing-Machine Assembly Foreman
Bookkeeping-Machine Assembly Foreman
Calculating-Machine Assembly Foreman
Cash-Register Assembly Foreman
Copying-Machine Assembly Foreman
Postage-Meter Assembly Foreman
Punched-Card-Machine Assembly Foreman
Typewriter Assembly Foreman
Vending-Machine Assembly Foreman

8510-118 FOREMAN, ENGINE ASSEMBLY(mech. equip., n.e.c.) DPT:138

Supervises and co-ordinates the activities of workers engaged in fabricating and assembly of engines, power transmissions and mechanical accessories for installation in transport vehicles, construction, agricultural or other mechanical equipment, (Unit Group 8511):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in rebuilding engines and allied equipment to specification, using new or reworked parts. May supervise workers engaged in fabricating and assembling a particular type of engine or equipment and be designated accordingly; for example,

Aircraft-Engine Assembly Foreman
Diesel-Engine Assembly Foreman
Engine-Accessories Assembly Foreman
Engine-Rebuilding Shop Foreman
Outboard-Motor Assembly Foreman
Power-Transmission Assembly Foreman
Small-Engine Assembly Foreman
Transmission-Rebuilding Shop Foreman

8510-122 FOREMAN, INDUSTRIAL, FARM AND CONSTRUCTION MACHINERY ASSEMBLY(mech. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling industrial machinery; such as, printing presses, textile manufacturing equipment, turbines and steam generators, farm equipment and agricultural machinery, heavy construction equipment, railway rolling stock, snow vehicles and lawn mowers, and material handling equipment. (Unit Group 8523):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in fabricating and assembling a particular type of machinery or equipment and be designated accordingly; for example,

Agricultural-and-Farm-Equipment Foreman
Construction-Machinery Assembly Foreman
Hoisting-and-Lifting-Equipment Assembly Foreman
Locomotive-Erecting Shop Foreman
Metal-and-Woodworking-Machinery Manufacturing Foreman
Printing-Equipment Assembly Foreman
Railway-Rolling-Stock Manufacturing Foreman
Snowmobile Assembly Foreman
Textile-Machinery Assembly Foreman
Turbine Assembly Foreman

8510-126 FOREMAN, METAL PRODUCTS INSPECTION AND TESTING(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting and testing activities in the fabrication and assembly of metal products; such as, aircraft, motor vehicles, engines and accessories, agricultural equipment, and scientific testing and control equipment. (Unit Group 8526):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in inspecting and testing various types of metal products and be designated accordingly; for example,

Aircraft-Assembly Inspection Foreman(air & space-craft)
Clock-and-Watch Inspection Foreman(scient. & ind. equip., n.e.c.)
Engine Testing Foreman(mech. equip., n.e.c.)
Farm-Machinery Inspection Foreman(mech. equip., n.e.c.)
Motor-Vehicle Inspection and Testing Foreman(motor vehicle)

8510-130 FOREMAN, MOTOR VEHICLE ASSEMBLY(motor vehicle) DPT:138

Supervises and co-ordinates the activities of workers engaged in fabricating and assembling motor vehicles, trailers, subassemblies and parts, other than engine accessories, on a factory production line utilizing manufactured parts and assemblies. (Unit Group 8513):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in fabricating and assembling a particular type of vehicle and be designated accordingly; for example,

Automobile Assembly Foreman
House-Trailer Assembly Foreman
Mobile-Home Assembly Foreman
Truck Assembly Foreman
Truck-Trailer Assembly Foreman

8510-134 FOREMAN, PRECISION INSTRUMENTS AND RELATED EQUIPMENT ASSEMBLY(scient. & ind. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling precision instruments and related equipment; such as, scientific and optical instruments, measuring, indicating and controlling instruments and equipment, surgical, medical and dental instruments and apparatus, photographic equipment, timepieces, and similar items. (Unit Group 8527):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in fabricating and assembling a particular type of instrument or equipment and be designated accordingly; for example,

Clock-and-Watch Assembly Foreman
Controlling-and-Recording-Instruments Assembly Foreman
Optical-Instruments Assembly Foreman
Photographic-Equipment Assembly Foreman
Scales-and-Weighing-Equipment Assembly Foreman
Solenoid-Valves Assembly Foreman
Thermostats Assembly Foreman

8510-199 OTHER FOREMEN, FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS

This group includes foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in fabricating and assembling metal products; such as, metal furniture, bicycles, roller bearings and firearms. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Assembly Department(struct., plate & ornam. metal)
Foreman, Baby-Carriage Assembly(mech. equip., n.e.c.)
Foreman, Ball-and-Roller-Bearings Assembly(mech. equip., n.e.c.)
Foreman, Bicycle Assembly(mech. equip., n.e.c.)
Foreman, Firearms Assembly(metal fab., n.e.c.)
Foreman, Metal-Furniture Assembly(metal fab., n.e.c.)

8511-ENGINE AND RELATED EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling engines, transmission systems and mechanical engine accessories; such as, water pumps, radiators, and carburettors for use in transport conveyance and construction, agricultural or other mechanized equipment. Activities include: fitting, pressing, bolting and aligning to install parts, components or accessories; and adjusting fabricated or assembled equipment, using common or special hand and power tools and equipment. Includes occupations concerned with rebuilding engines to specifications, using new or reworked parts. Occupations concerned with repairing installed engines are classified in Minor Group 858, MECHANICS AND REPAIRMEN, N.E.C. Occupations concerned with installing and repairing marine engines are classified in Unit Group 8592, MARINE CRAFT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS. Occupations concerned with fabricating and assembling electrical engine accessories are classified in Unit Group 8531, ELECTRICAL EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS.

8511-110 TURBINE FITTER(mech. equip., n.e.c.) DPT:281 turbine assembler.

GED: 4 SVP: 8 EC: 1 5 PA: H 2 3 4 7

Builds steam or gas turbines and subassemblies by fitting and assembling machined parts and castings:

Assembles blades, disks, spacers, shafts and casing to build compressor and turbine spindles, and stator assemblies, using drawings, fixed and dial gauges, and hand tools. Erects and aligns bedplate structure, using level, transit and straightedge. Lays out and drills mounting

holes. Grinds and files welds on turbine casing to obtain specified clearances and finishes. Fits and aligns bearings, spindles, casings, exhaust ducting, oil cylinders and pumps, to specifications, using hand tools and hoist. Cuts, threads, and installs, oil, fuel or steam lines. Bolts, dowels and lock-wires nuts to assemble parts. Dismantles and rebuilds worn or damaged turbines and subassemblies. May balance spindles, using vibroscope or balancing machine.

8511-114 INTERNAL-COMBUSTION-ENGINE ASSEMBLER(mech. equip., n.e.c.) DPT:481
engine fitter.
 GED: 3 SVP: 5 EC: 1 PA: M 4 7

Fits and assembles internal-combustion engines and subassemblies to specifications, at bench or on assembly floor:

Fits keys and assembles gears, pulleys, flywheels, bearings and bushings, using arbor press or hand tools. Positions crankshaft and camshaft in bearings, and tightens bearing caps, using hand tools or impact wrenches. Fits piston assemblies into cylinders, and bolts them to crankshaft. Fits and installs gaskets, and subassemblies; such as, cylinder heads, camshaft assembly, fuel, oil and water pumps, distributor and carburetor, to specifications, using torque wrench, hand tools and gauges. Fits and installs tubing for fuel, lubrication and cooling systems. Aligns engine parts, sets clearances and timing, to specifications, using dial indicator, timing light and feeler gauges. Examines parts and completed assemblies for defects and disassembles, or replaces parts as required.

May specialize in particular area of engine assembly, or subassembly, or type of internal-combustion engine, and be designated accordingly; for example,

Air-Cooled-Engine Assembler
 Cylinder-Head Assembler
 Diesel-Engine Assembler
 Gasoline-Engine Assembler
 Outboard-Motor Assembler

8511-118 AUTOMOTIVE-PRODUCTION FITTER(motor vehicle) DPT:682
 GED: 3 SVP: 4 EC: 1 PA: M 4 7

Machines and fits internal-combustion engine components, on production line:

Operates boring, reaming and honing machines to finish cylinders and valve-guide holes to specified size. Verifies finished size with dial and fixed gauges. Seats bushings on shafts or in bearing housing, and valve guides in engine block, using press. Operates grinding machine to grind and seat valves in engine block or cylinder head.

May build cylinder-head or piston assemblies, using semi-automatic assembly machines. May specialize in seating valves and be designated accordingly,
 Valve Seater

8511-122 CLUTCH REBUILDER(motor vehicle) DPT:684
 GED: 3 SVP: 3 EC: 1 5 PA: H 4 7

Rebuilds motor vehicle clutches by performing one or more repetitive bench assembly operations:

Disassembles clutch, using hand tools. Removes grease and rust from parts, using degreasing machine and shot blasting equipment. Inspects and regrinds clutch pressure plates, using micrometer and surface grinder. Tends riveting press to replace clutch plate facings. Reassembles clutch, using jig, and replaces worn or damaged clutch parts as required. Adjusts operational limits of clutch assemblies to specifications, using hand tools and dial indicator. Inspects and adjusts balance of clutch assembly, using dynamic balancing machine.

May be designated according to operation performed; for example,
 Clutch Balancer
 Clutch-Plate Grinder
 Clutch Preassembler

8511-126 GEARED-AUTOMOTIVE-COMPONENTS ASSEMBLER(motor vehicle) DPT:684
 GED: 2 SVP: 3 EC: 1 5 PA: M 4 7

Assembles geared automotive components, such as transmissions and differentials at bench or on assembly line by performing any combination of the following duties:

Fits gears, pinions, bearings and spacers on shafts, manually or using hydraulic assembly press. Positions shafts and gear clusters in

gearcase, using hand tools and assembly press. Measures and adjusts gear alignment and backlash, using micrometers, gauges and hand tools. Bolts sections of gearcase together, using hand and power tools. May specialize in assembling a particular geared automotive component and be designated accordingly; for example,
 Differential Assembler
 Steering-Box Assembler
 Transmission Assembler

8511-130 AUTOMOTIVE-ENGINE-ACCESSORIES ASSEMBLER(motor vehicle) DPT:684
 GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles automotive engine accessories; such as, fuel pumps, water pumps, carburetors, and clutches, working at bench or on assembly line by performing one or more of the following repetitive duties:

Positions parts in specified relationship to each other, using hands, tweezers or fixtures. Bolts, screws, solders, welds, press-fits, crimps, rivets or otherwise fastens parts together, by hand or using hand tools, power tools, spot welder, assembly press or riveting machine. Verifies operation and alignment of parts, using test equipment, gauges and micrometers. Adjusts parts as required, using hand tools.

May specialize in assembling a particular automotive component and be designated accordingly; for example,

Carburetor Assembler
 Clutch Assembler
 Fuel-Pump Assembler
 Water-Pump Assembler

8511-134 ENGINE ASSEMBLER, PRODUCTION LINE(mech. equip., n.e.c.) DPT:684
 GED: 2 SVP: 2 EC: 1 PA: M 3 4 7

Assembles internal-combustion engine components by performing repetitive, short-cycled duties on an assembly line:

Positions one part; such as, piston or cylinder-head assembly, fly-wheel, crankshaft or oil-pan as engine block moves past on belt conveyor. Starts bolts in threaded holes. Tightens preplaced belts, using multiple-head impact wrenches. Positions and glues gaskets. Installs or removes conveyor hooks in engine blocks. Seals parts with masking tape and positions engines in storage racks.

May oil and grease engines.

8513-MOTOR VEHICLE FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling entire motor vehicles, trailers, subassemblies, and parts other than engine accessories; such as, brakes, bumpers, shock absorbers, and windshield wipers, on a factory production line utilizing manufactured parts and assemblies. Activities include: fitting, bolting and riveting to install parts, engines or other components; and adjusting fabricated or assembled components using common or special hand and power tools or equipment. Occupations concerned with fabricating or assembling engine accessories are classified in Unit Group 8511, ENGINE AND RELATED EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C. Motor vehicle repairing occupations are classified in Unit Group 8581, MOTOR VEHICLE MECHANICS AND REPAIRMEN.

8513-110 AUTOMOTIVE BUILDER(motor vehicle) DPT:381
 GED: 4 SVP: 7 EC: 1 5 6 PA: H 2 3 4 7

Builds passenger buses or trucks, by performing any combination of the following duties:

Studies blueprints, drawings and work orders to determine assembly procedure. Moves or directs movement of heavy parts and units into position, using hoist or crane. Drills holes in parts, following layout marks and using portable power drill. Fits, bolts, screws, rivets or welds together parts; such as, frame, panels, bulkheads, braces, ductwork and doors, to build vehicle. Installs engine, transmission, fuel tank and other units, using hoist, hand tools and gauges. Installs

hydraulic pumps, valves and prebent piping, using hand tools. Press-fits bearings, installs brakes, and mounts wheels and tires, using arbor press, hand tools and power tools. Installs electrical wiring, lights, signals, fans and other accessories, using hand tools. Cuts and installs linoleum or carpeting, using patterns, knife and adhesives. Installs and adjusts glass windows, and cements rubber stripping in place. Bolts prefabricated seating into position.
May specialize in assembly of buses and be designated accordingly,
Coach Assembler

8513-114 TRUCK-TRAILER BUILDER(motor vehicle) DPT:381
GED: 4 SVP: 6 EC: I 5 PA: H 2 3 4 7

Builds truck bodies and trailers according to specifications, by performing any combination of the following duties, using hand tools and power tools:
Lays out dimensions on sheet metal, aluminum, wood, fiberglass or angle iron, using measuring instruments, such as square, rule, punch and templates. Marks and cuts openings in sheeting and installs support framing around openings. Fits and assembles doors, handles, hinges and catches. Welds, glues, bolts or rivets together body parts and cross-braces, using hand tools, welding apparatus and riveting gun. Installs insulating material between framing and outer plates of doors and walls. Measures and cuts wood stock and installs wood floors and fixtures.
May install electrical wiring for dome, tail and brake lights, and other equipment according to specified procedures. May spray or brush primer, paint or protective coating on wood and metal surfaces. May specialize in building truck bodies and be designated accordingly,
Truck-Body Builder

8513-118 TRAILER FINISHER, EXTERIOR(motor vehicle) DPT:684
GED: 3 SVP: 5 EC: I 5 PA: M 3 4 7

Installs metal panels, mouldings, exterior parts and accessories on frames and bodies for mobile homes, motor homes, travel trailers, camping trailers and similar trailers:
Lays out window, door and vent areas on sheet metal panels, using pencil and ruler. Cuts openings, using electric router and tin snips. Trims panels to shape of vehicle, using router or snips. Positions and fastens panels on body frame, using rule, power drill, stapler and screwdriver. Sets prefabricated window units, screens and louvers in openings, and fastens them in place with screws or rivets. Measures, cuts and installs corner moulding strips, using hand tools. Fastens metal thresholds and doorcasings on body frame, hangs doors, and attaches weather stripping, doorsteps, striker plates and mouldings. Applies sealer compound around window, doors and vent areas, using caulking gun.
May install accessories; such as, visors, lights, brackets and railings.

8513-122 TRAILER FINISHER, INTERIOR(motor vehicle) DPT:684
GED: 3 SVP: 4 EC: I 5 PA: M 3 4 7

Assembles and installs internal fixtures; such as, doors, cabinets, shelves, panels, flooring and trim, in mobile homes, motor homes, travel trailers, camping trailers and similar trailers, by performing any combination of the following duties:
Uncrates materials and inspects them for surface defects, such as dents, scratches and breakage. Lays carpeting, floor covering and padding, using hammer, tacks, scissors and glue. Lays tile blocks, using sander, trowel, linoleum knife and tile roller. Installs precut panels of wood, aluminum or stainless steel for walls and ceilings by drilling holes and screwing or cementing them to framing, according to drawings. Inserts insulating material between inside and outside panelling and between flooring. Assembles and installs cabinets, closets, interior doors and shelves by gluing and fitting joints or precut parts, and fastening them with nails in locations shown on drawings. Positions and screws metal and wood moulding around sink tops, cabinets, carpeting and wall panels. Installs hardware; such as, door lock assemblies, hinges, rods, racks and holders, using templates, hand tools and power tools. Attaches metal and rubber stripping for doors and windows. Installs plumbing fixtures and connects water supply and drainage, using wrenches. Positions and secures appliances, such as refrigerators and stoves, with bolts and screws, using hand tools. Connects fuel lines to cooking and heating units. Connects wiring to electrical appliances, using screwdriver and pliers.

8513-126 TRAILER-FRAME ASSEMBLER(motor vehicle) DPT:684
GED: 3 SVP: 3 EC: I 5 PA: H 3 4 7

Assembles and erects floor, wall, and roof frames to construct shells for mobile homes, motor homes, travel trailers, camping trailers, and similar trailers:
Positions precut frame members in jigs, and nails, rivets or staples members together to assemble wall, floor, and roof sections. Nails wheel wells and insulation board to floor frame, and installs chassis brackets for wheel assembly, using impact wrench. Sprays undercoating compound on floor frame with spray gun. Erects side, end and roof sections, using hoist, and fastens sections to floor frame, using rivet gun, screwdriver, and hammer. Glues and nails plywood sheets to floor frame, and attaches wood panelling to side walls, using brush, glue, rivet gun, and hammer. Measures and cuts heat register openings in panels, using rule and powersaw. Sands floor, spreads on mastic, and lays tile blocks to finish floor, using sander, trowel, linoleum knife, and tile roller.
May install carpeting, using scissors, hammer, and tacks.

8513-130 ASSEMBLER, CONVERTIBLE TOP(motor vehicle) DPT:684
trimmer, soft top.
GED: 2 SVP: 2 EC: I PA: M 3 4

Installs fabric on metal frames for use as automobile convertible tops: Places preassembled metal frame on fixture that holds it in raised position. Stretches and fits fabric sections; such as, padding, weather stripping, back curtain, and top on frame, by hand. Aligns corners and edges of fabric with location marks on frame. Fastens fabric in position, using staples, screws, or glue. Staples cover- up trim over seams to conceal them, using staple gun.

8513-134 AUTOMOTIVE ASSEMBLER(motor vehicle) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: M 4

Assembles automobiles, trucks or buses, working at one station of progressive assembly line, performing any combination of the following repetitive tasks, using hand tools, power tools, spot welders and production fixtures:
Bolts, screws, welds, clips or otherwise fastens parts together to form subassemblies; such as, doors, seats, dashboards, steering columns and axle units. Positions and fastens together parts and subassemblies; such as, frames, engines, transmissions, axle units, bodies, exhaust systems and hardware to assemble vehicles. Performs simple fitting and adjustment, using hand tools. Seals joints and seams, using caulking gun. Sprays undercoating onto chassis and vehicle underbody. Installs prepared soft trim; such as, door panelling, headliners, carpeting and rubber mats. Bolts or snaps seating into position. Verifies and adjusts front-end alignment, using testing machine, hand tools and power tools. Pours in oil, brake fluid and coolant.
May be designated according to component assembled or installed; for example,
Axle Assembler
Body Assembler
Chassis Assembler
Headliner Installer

8513-138 FITTER AND ADJUSTER(motor vehicle) DPT:684
line-up man.
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Fits and adjusts doors, hoods and trunk lids on automobile, bus or truck bodies so they will swing freely and close tightly:
Opens and shuts doors, hood or trunk lid to test alignment. Observes and feels movement of doors, hood or trunk lid to determine amount of adjustment needed. Adjusts alignments, using prying tools, screwdrivers or rubber hammers.

8513-142 LEAF-SPRING ASSEMBLER(motor vehicle) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: M 4

Assembles leaf-springs for vehicles, by performing any combination of the following duties:
Inserts pin through prepunched center holes in leaves to align them

lengthwise. Compresses leaves in vise. Removes pin and inserts and tightens bolt, using impact wrench. Installs clips on assembled leaf-springs by bolting U-shaped clip on springs, or positioning clip and spring in holding device. Hammers clip around spring; or positions clip in holding die, aligns spring over clip, and starts press that automatically clenches clip around spring. May spread grease over surface of leaf-springs by hand or with greasing apparatus.

8513-146 WHEEL-ASSEMBLY INSTALLER, TRAILER(motor vehicle) DPT:687
GED: 2 SVP: 2 EC: 1 PA: H 3 4

Fastens wheel assembly to trailer frame, and mounts wheels and tires on axles in manufacture of mobile homes and travel trailers: Positions chassis brackets of floor frame over wheel assembly, using chain hoist. Bolts wheel assembly to chassis frame, using hand or power wrench. Mounts wheels and tires on axles and secures nuts. Bolts front wheel jack to trailer frame. Attaches electromagnetic controls to brake housing and threads wires through holes in frame. Lubricates wheel and axle assembly, using grease gun. May spray frame and chassis with undercoating material, using spray gun.

8513-199 OTHER MOTOR VEHICLE FABRICATING AND ASSEMBLING OCCUPATIONS

This group includes motor vehicle fabricators and assemblers, not elsewhere classified; for example, those who assemble all-terrain vehicles, dune buggies, go-carts and golf-cars, and assemble parts other than engine accessories, such as shock absorbers. A typical example of an occupational title covered by this residual group definition is:

Go-Cart Assembler(motor vehicle)

8515-AIRCRAFT FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with assembling aircraft and aircraft subassemblies such as power plants, undercarriages, tails and wings, normally utilizing manufactured parts and components. Activities include: fitting, bolting, riveting and adjusting fabricated or assembled equipment, using common or special hand and power tools, and jigs and fixtures. Aircraft repairing occupations are classified in Unit Group 8582, AIRCRAFT MECHANICS AND REPAIRMEN. Aircraft engine assembling occupations are classified in Unit Group 8511, ENGINE AND RELATED EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.. Occupations concerned with assembling and installing aircraft instruments are classified in Unit Group 8527, PRECISION INSTRUMENTS AND RELATED EQUIPMENT, FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.. Occupations concerned with fabricating, assembling, installing and repairing electrical and electronic aircraft equipment are classified in Minor Group 853, FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS, ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT.

8515-110 TAPE-CONTROLLED-RIVETING-MACHINE OPERATOR (air & space-craft) DPT:380
GED: 4 SVP: 6 EC: 1 5 PA: L 4 7

Sets up and operates tape-controlled riveting machine that automatically drills, countersinks, dimples and rivets aircraft parts and structures, such as wing panels and fuselage sections: Reads drawings, production orders and material specifications to organize material and determine set-up and operating procedure. Positions parts to be assembled in jig on machine table, using hoist. Installs tools, such as drill bit, countersink and rivet shaver in machine spindles, using hand tools. Locates part on carriage table at correct starting point, by operating machine controls. Installs perforated-film

control tape over reading mechanism in control cabinet to automatically regulate indexing of spindles, rivet spacing, raising and lowering of spindles, and longitudinal and transverse movement of carriage. Selects correct rivet fingers according to specifications and fills hopper with proper rivets. Starts machine and makes test run. Measures riveted assembly for conformance to specifications using micrometers and other measuring devices. Adjusts machine as required to obtain accurate results. Presses button to transfer machine to full tape control. Monitors machine performance to detect equipment malfunction and replaces cutting tools when necessary.

8515-114 AIRCRAFT RIGGER(air & space-craft) DPT:381
aircraft mechanic, rigging and controls.
GED: 4 SVP: 6 EC: 1 PA: M 3 4 7

Installs, adjusts and secures flying and power plant mechanical controls, such as cables, torque-tubes and rods, in aircraft: Drills, countersinks and reams holes in structural members using jigs, fixtures and power tools, in accordance with drawings and rigging diagrams. Screws and bolts pulleys, guides, brackets, bearing supports and related fittings in position, using hand and power tools. Threads cables through guides and around pulleys, and attaches cable ends to control levers, structural members and mechanical assemblies, using bolts, clamps and turnbuckles. Installs control rods and torque-tubes, and attaches ends to levers and control-arms, using bolts, yokes and yoke-pins. Turns tie-rod ends and turnbuckles to adjust length of rods and cables, and to adjust and co-ordinate degree and direction of travel of flying control surfaces, using measuring instruments such as inclinometers and scales. Verifies specified tension of cables using tensiometer. Secures and locks all control-mechanism attachments with wire, cotter pins or other prescribed fasteners.

8515-118 AIRFRAME ASSEMBLER(air & space-craft) DPT:381
airframe final assemblyman; airframe fitter.
GED: 4 SVP: 6 EC: 1 5 PA: M 2 3 4 7

Assembles airframe by fitting together subassemblies such as fuselage, wing and tail sections and landing gear: Locates and aligns assembly reference points and holes, using jigs and templates, or calculates relative positions from pre-marked or known station lines and index points using tape, scales and square. Cuts, files, drills and reams metal, plastic and rubber of assembled units to prepare them for fitting and fastening, using hand and power tools. Bolts and screws brackets, pulleys and flaptracks in position, using wrenches and screwdrivers. Aligns and fits fuselage sections and wing and tail assemblies, using hoists or cranes to position them. Bolts, clamps and rivets assemblies together, using hand and power tools. May verify fit, clearance and alignment of assembled components, using measuring instruments such as gauges and micrometers.

8515-122 ASSEMBLER-INSTALLER, AIRCRAFT POWER PLANT(air & space-craft) DPT:381
GED: 4 SVP: 6 EC: 1 PA: M 2 4

Fits auxiliary components to engine to make power plant, and installs power plant in aircraft: Removes engine container and bolts mounts to engine, using torque wrench and locking devices. Mounts engine in stand, using hoist, and makes visual inspection for transportation damage. Cleans protective coatings from surfaces, using solvent. Bolts and clamps auxiliary components such as generators, starters, pumps, fire detectors and thermocouples, and connects piping and flexible hoses, using hand tools. Tightens nuts and bolts to specified torque, and locks them with specified fasteners. Clamps electrical harness in position and connects cables to terminals of electrical components, using wrenches and fasteners. Hoists power plant into position for installation in aircraft, and bolts and locks engine mounts. Clamps or screws connections of wiring system, fuel and oil lines, pressure and other gauges, and engine control rods and cables, to corresponding fittings on aircraft. Adjusts engine controls by turning fittings to lengthen or shorten rods or cables, using wrenches. May specialize in assembly or installation of power plant, or specific type of power plant, and be designated accordingly; for example, Engine and Propeller Mechanic, Power Plant Assembler, Power Plant Mechanic.

8515-126 INSTALLER, HYDRAULIC(air & space-craft) DPT:381
aircraft mechanic, plumbing and hydraulics.
GED: 4 SVP: 6 EC: 1 PA: M 3 4 7

Lays out, assembles, installs, and tests hydraulic and pneumatic systems in aircraft:
Lays out location of units and assemblies such as pumps, valves, reservoirs, actuating mechanisms, and tubing and piping systems, following detailed drawings and specified procedures, and using scale, tape and chalk. Drills mounting holes in frames, and screws or bolts units and assemblies to structures, using hand and power tools, and parts such as brackets, clips and braces. Installs and connects tubing and piping, using fittings and wrenches, and locks bolts and unions with wire, cotter pins or other approved devices. Turns setscrews and locknuts to set relief valves, and to adjust travel of actuating cylinders. Performs functional tests of systems, using test stand equipment, and observes that operating pressures are as specified. Rectifies leaks and malfunctions, and refills and bleeds systems as required.

8515-130 AIRCRAFT FITTER-ASSEMBLER, BENCH(air & space-craft) DPT:681
bench fitter mechanic.
GED: 4 SVP: 5 EC: 1 PA: L 4 7

Fits and assembles parts to make aircraft components such as struts, torque-tubes, control linkages, actuators, and wheel assemblies:
Selects, inspects and measures parts to ensure conformance to drawings and production orders. Drills, reams and taps holes, and files, fits, aligns, and bolts parts together, using jigs and fixtures to facilitate assembly, and to set and verify measurements. Tightens and locks bolts and nuts to specification, using torque-wrench, and wire or other specified fasteners. Assembles pivot pins, rollers, pulleys, and fittings such as grease nipples, and applies lubricant by hand or power gun. Installs bushings, bearings and seals, using mechanical or hydraulic press. Verifies operation of assembled units as specified, using test equipment and measuring instruments, and reworks or replaces components to correct malfunction.
May specialize in fitting and assembling hydraulic and pneumatic components and be designated accordingly; for example, Hydraulic Component Assembler

8515-134 METAL-BONDING EQUIPMENT OPERATOR(air & space-craft) DPT:682
GED: 4 SVP: 5 EC: 1 PA: M 4 7

Operates heated-platen presses and autoclaves to bond flat, curved or contoured metal parts for aircraft:
Reads drawings and shop orders to determine bonding specifications, and examines parts for cleanliness and fit of mating surfaces. Prepares parts for assembly and bonding by brushing liquid adhesive on bonding surfaces, or by stripping protective coating from precut sheet adhesive for placement between bonding surfaces. Bonds parts using either of the following methods. 1. Assembles flat parts on conveyor table of heated-platen press, using aluminum shims to ensure even distribution of pressure. Installs thermocouples in press at critical points, using wrench, and connects thermocouple leads to temperature gauges. Turns controls to set press temperature, pressure and curing time. Turns conveyor control to position workpieces between platens and starts machine to bring platens into contact with workpieces. 2. Assembles curved or contoured parts on conveyor table of autoclave and places thermocouples at critical points on table. Places plastic sheet over assemblies and seals edges of sheet to table with bead of sealant, to form vacuum cover. Pushes conveyor table into autoclave and connects vacuum lines and thermocouple leads. Closes autoclave door and turns controls to set temperature, air pressure and curing cycle. Turns control to apply vacuum beneath table cover, and starts autoclave. Observes indicators during curing cycle and adjusts controls as necessary.

8515-138 AIRFRAME SUBASSEMBLER(air & space-craft) DPT:684
assembler, aircraft structures and surfaces.
GED: 4 SVP: 5 EC: 1 5 PA: M 2 3 4 7

Fits and assembles metal skin and structural members to form airframe subassemblies and sections:
Aligns parts or subassemblies on bench, jig or airframe, using

templates and fixtures, or following drawings and station lines. Files, saws and deburrs parts, and drills, reams and countersinks holes, using hand and power tools. Inserts temporary fasteners into rivet holes to hold sections in position for riveting. Rivets and bolts parts, sections or subassemblies together, using portable dimpling and riveting guns, and hand tools, or dimpling and riveting machines. Assembles and installs fixtures and fittings such as braces, mountings, heating and ventilating ductwork, clips, brackets and air and liquid tanks, using wrenches and riveting gun. Cuts safety glass to required shape for windows and windshields. Fits and cements weather-stripping, and secures frames and flanges to windshields, doors and windows. Installs completed units in aircraft, using drills, riveting gun and hand tools.

8515-142 AIRCRAFT SEALER(air & space-craft) DPT:684
pressure sealer-and-tester.
GED: 3 SVP: 4 EC: 1 7 PA: L 2 3 4 7

Seals and tests aircraft tanks and pressurized compartments:
Cleans surfaces, using solvents, brushes and cloths. Applies sealants to internal seams and surfaces, using pressure guns, sprays and brushes. Dries sealants, using heat lamps and hot-air blowers. Closes openings of tanks or compartments to be leak-tested, and connects hoses of pneumatic test equipment, using fittings and wrenches. Turns valves to admit compressed air to tank or compartment, and observes gauges to determine leakage. Brushes soapy solution on suspected leak areas, and marks location of leaks detected. Repairs or reworks defective sealing and retests.
May work inside pressurized tank or compartment to detect and reseal leaks, in co-ordination with other workers on the outside, maintaining communication by telephone. May trim, fit and install composition linings in structural cavities to provide bases for fuel-tank installations, using templates, bandsaw and adhesives.

8523-INDUSTRIAL, FARM, CONSTRUCTION AND OTHER MECHANIZED EQUIPMENT AND MACHINERY FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling machinery and equipment; such as, printing machinery; textile manufacturing equipment; turbines and steam generators; material handling equipment; farm equipment and machinery; such as, combines, ploughs, disks, milking machines and separators; construction machinery and equipment, such as graders, bulldozers and cranes; railway rolling stock; and motorized machinery and equipment, such as snow vehicles, hovercraft and power lawn mowers. Activities include: aligning, fitting, fastening, bolting, riveting and welding to install parts, engines and other components and assemblies; and finishing and adjusting fabricated or assembled equipment, using common or special hand and power tools and equipment. Industrial, farm, construction and other mechanized equipment repairing occupations are classified in Unit Group 8584, INDUSTRIAL, FARM AND CONSTRUCTION MACHINERY MECHANICS AND REPAIRMEN.

8523-110 PROTOTYPE BUILDER(mech. equip., n.e.c.; motor vehicle) DPT:261
GED: 4 SVP: 8 EC: 1 5 6 PA: M 3 4 5 6 7

Assembles and tests experimental models of mechanized equipment, such as farm machinery, recreational vehicles, and construction machinery, according to engineering specifications:
Examines drawings and materials list to obtain parts specifications, and plans sequence of operations. Requisitions standard and special parts from production departments. Examines special parts for flaws and verifies conformance to specifications, using measuring devices. Lays out, positions, aligns and assembles frame of prototype model, using hand tools and welding equipment. Installs other components onto frame; such as, engine, clutch, brakes and driving track, using electric hoist, hand and power tools. Fits and adjusts fibreglass or sheet metal parts to frame. Installs seats and other padding material at

specified locations. Tests engine of prototype model by operating at varying speeds and making necessary adjustments to conform to specifications. Drives vehicle on test track to determine defects in performance. Writes report to engineering staff stating functional characteristics of vehicle, and suggests changes to improve performance and quality.

8523-114 LOCOMOTIVE BUILDER(rail. rolling stock) DPT:281
GED: 4 SVP: 7 EC: 1 5 6 PA: H 2 3 4 7

Builds diesel locomotives, by performing any combination of the following duties:

Reads blueprints and specifications to plan assembly procedure. Lays out and marks lines, reference points and patterns on structural parts, using tape, transit, square, templates, center punch and scribe. Moves heavy parts or units into position, using hoist or crane. Drills and reams holes in parts, using radial drill or drill press. Shrink-fits parts such as wheels to axles and gears to shafts, using furnace, acetylene torch and hydraulic press. Aligns parts, using transit, spirit level, jacks, shims, pry bar and sledge. Fits, bolts, screws, rivets or tack-welds parts together; such as, plates, frames, bulkheads and trucks to build locomotive body. Installs windows, insulation, seats and other trim articles. Installs diesel engine, electric generator, pumps, brakes and controls.

May install oil, air, fuel and water lines in locomotive. May rebuild damaged locomotives.

8523-118 MACHINE BUILDER(mech. equip., n.e.c.) DPT:281
fitter-assembler; machine assembler; machine fitter.
GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Fits and assembles parts and subassemblies to build machinery and equipment; such as, metal-forming machines, food-wrapping machines, material-handling equipment, earth-moving equipment and compressors, by performing any combination of the following duties:

Examines blueprints and specifications, and plans building sequence. Moves bedplate, frame or heavy parts into position, using hoist. Levels plates or frames, using transit, level, shims and jacks. Lays out mounting holes and reference lines, using transit, square, rule, tape, center punch and scribe. Drills, taps and reams holes, using drill press or portable drill. Files, grinds, laps or scrapes parts to remove high spots and to ensure proper fit. Bolts, screws, rivets, dowels, tack-welds, shrink-fits or press-fits parts together to assemble machine or equipment, using hand tools, power tools, welding equipment, acetylene torch and arbor press. Cuts, threads and installs hydraulic, pneumatic, oil or water lines. Verifies alignment and clearances of parts, using gauges, micrometer, calipers and other measuring instruments. Greases and oils machine or equipment. Operates unit to test performance and makes adjustments as required.

May set up and operate metal-working machines to shape parts. May install electrical or electronic equipment, wiring or controls. May dismantle unit and erect at customer site. May rebuild or repair unit. May build a particular type of machine or equipment and be designated accordingly; for example,

Compressor Assembler
Crane Assembler
Grader Assembler
Vibrating-Equipment Mechanic

8523-122 PIPE FITTER, TURBINES(mech. equip., n.e.c.) DPT:381
GED: 4 SVP: 7 EC: 1 PA: H 2 3 4 7

Fabricates, assembles, and installs high and low pressure piping, for steam, air, hydraulic, cooling, lubrication or fuel-flow systems, on steam or gas turbines, compressors, pumps and generators:

Reads drawings and schematic diagrams, and plans work procedures. Selects specified type and size of piping from stock. Cuts pipe to required length, using hacksaw or pipe-cutter. Heats heavy piping to facilitate bending, using acetylene torch. Bends pipe as specified, using pipe-bender or hydraulic pipe-bending machine. Threads piping as required, using vise, stock and dies. Brazes fittings in position. Installs valves, gaskets and pipes, using wrenches, or welds or brazes pipes together to form assembly, working from erection pit or platforms. Cleans piping system, using compressed air line. Corrects defects revealed by functional tests. Disassembles piping, and tags or colour-codes items to identify for reassembly at installation site. May lay out pattern of complicated bends, using drafting equipment.

May fabricate piping for spare stock. May remove and replace unserviceable piping.

8523-126 ATOMIC-FUEL-BUNDLE ASSEMBLER(metal fab., n.e.c.) DPT:381
fuel-rod assembler.
GED: 3 SVP: 6 EC: 1 6 PA: M 4 7

Assembles atomic fuel bundles for use in nuclear reactors, by performing any combination of the following duties:

Measures inside diameter and wall thickness of special-alloy tubes, using gauge. Loads tubes onto racks and immerses tubes into degreasing and rinsing tanks, using hoist. Loads uranium dioxide pellets into tubes manually, using safety equipment. Fits and welds end plugs and spacers to loaded tubes, using welding machine. Assembles tubes together in jig to form bundle, and welds plates to ends of bundles to secure tubes. Dips bundles in solution tank to coat them with sealing compound, using hoist. Tests bundles to detect contamination leaks, using leak bubble tests, geiger counter and related equipment. Weighs bundles, records data and packs bundles into polystyrene containers for shipping.

8523-130 PIPE FITTER, RAILWAY CAR AND LOCOMOTIVE (rail. rolling stock) DPT:381
GED: 3 SVP: 6 EC: 1 PA: H 2 3 4 7

Fabricates, installs and tests air, fuel, water and other piping systems in railway cars and locomotives:

Selects type and size of pipe and related materials according to drawings and specifications. Measures, cuts, threads and bends pipe, using rule, scribe, pipe cutter, pipe-threading machine and pipe-bending machine. Positions pipes and components; such as, valves, couplings, pressure cylinders, pneumatic and hydraulic controls, in locomotive or railway cars. Connects parts of system following drawings, using brackets, clamps, hand tools, power tools and welding equipment. Connects piping system with shop test lines, and turns valves to start air, oil or water through system. Observes gauges and joint connections to detect pressure variances and leaks. Adjusts system to specifications.

May replace worn, corroded or broken piping on railway rolling stock.

8523-134 GEARCASE ASSEMBLER(mech. equip., n.e.c.) DPT:381
gear-train fitter.
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Assembles gearcases and power drives for farm and garden machinery:

Fits bearings and bushings, using arbor press or hand tools. Assembles and positions gears, shafts and pins as specified, with keys, set screws and bolts, using hand tools and fixed gauges. Inspects assembly for run-out, using dial indicator. Corrects run-out, and adjusts backlash and pressure points in mating gears, using shims. Installs housing cover plates and grease cups. Lubricates gearcase and mounts case in power-driven inspection fixture to test and adjust assembly.

May install and adjust springs, pulleys and belt drives, sprockets and chain drives, in farm machinery.

8523-138 FARM-MACHINERY ASSEMBLER(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: M 3 4 7

Assembles farm tractors, combines, disks and ploughs at station on assembly line:

Positions and aligns engines, transmissions and wheels, with main frame, using hoist. Installs radiators, gear and chain drives, fuel lines and tanks, using power drills, wrenches, hammer and screwdriver. Files surface edges and reams holes to achieve prescribed fit. Sets required clearances between parts, using fixed gauges. Tightens nuts and bolts, using torque wrench.

May install customer-specified components and accessories as detailed on work order or simple shop drawing. May be designated according to type of unit assembled; for example,

Plough Assembler
Tractor Assembler

8523-142 FARM-MACHINERY DISMANTLER(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: M 2 3 4 7

Dismantles farm machinery, such as combines, tractors and harvesters, to reduce bulk for export crating:

Dismantles protruding parts, such as wheels, mufflers, fenders, seats and combine reels, as specified in shop order, using hand tools, hoist and jacks. Coats unpainted machinery parts, using oil spray gun. Packs nuts, bolts, washers and small components in bag. Records name and number of components on tag, and ties tag and bag to machine frame. Drains fuel from fuel tank. Records name and number of parts dismantled, on packing slip.

8523-146 GARDEN-MACHINERY ASSEMBLER(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Assembles power lawn mowers, snow blowers and rotary tillers, by performing any combination of the following duties:

Drills mating holes, rivets parts and inserts bushings, to prepare parts for subassembly. Fits and secures parts, using hand and power tools, to form subassemblies; such as, reel units, drive assemblies and rotary cutting units on power lawn mowers, impellers and chutes or snow blowers and tire assemblies on rotary tillers. Installs gear on belt drives, controls or engines to form completed units.

May be designated according to type of unit assembled; for example, Power-Lawn-Mower Assembler
Rotary-Tiller Assembler
Snow-Blower Assembler

8523-150 RAILWAY-CAR TRIMMER(rail. rolling stock) DPT:684
trimmer, coach.
GED: 2 SVP: 3 EC: I PA: M 3 4

Installs articles; such as, seats, windows, grab handles, emergency cords and curtains in railway cars or subway cars:

Sprays window guides with lubricating compound to ensure correct operation of windows. Positions and fastens windows in casings. Positions, bolts, screws or otherwise fastens seats, handles, hand rails, curtains and emergency cords into place, using hand tools and power tools.

8523-154 RAILWAY-CAR-TRUCK ASSEMBLER(rail. rolling stock) DPT:684
GED: 2 SVP: 3 EC: I 5 6 PA: H 3 4 7

Assembles frames, beams, brakes and springs to form railway car truck and wheel units:

Positions bolster on erection block and lowers side frames and brake beams into bolster slots, grooves, and recesses, using hoist. Assembles brake parts; such as, bottom rods, traverse plates, fulcrum and levers, and secures unit to brake beams and shoes, with bolts and cotter pins, using hand tools and portable power tools. Sets springs on studs in spring housing and places adapters in grooves on axle wheel bearings. Lifts complete truck unit over truck wheel assemblies, using hoist, and lowers unit into position. Pushes truck and wheel assembly along track for next operation.

8523-158 SEWING-MACHINE ASSEMBLER(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Assembles domestic and industrial sewing machines or subassemblies, by performing any combination of the following duties:

Screws and bolts parts together to assemble units or subassemblies; such as, machine head, knee control or light fixture. Mounts or fastens parts or units; such as, head, motor, drive belt and treadle control to table or stand. Verifies alignment and clearance of parts, using fixed gauges. Lubricates parts, using oil can.

8523-162 SNOWMOBILE ASSEMBLER(motor vehicle) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: M 4

Assembles snowmobiles by performing any combination of the following duties:

Fits, bolts or screws parts together to form subassemblies, such as frame, dolly-wheel unit and ski assembly, using gauges, arbour press, hand tools and power tools. Tests operation of subassemblies and makes necessary adjustments. Positions and bolts parts and subassemblies; such as, motor, rubber track, handlebars, seat and body shell to frame. Installs and connects electrical wiring to lights, battery and ignition system.

May drill, tap and ream holes in parts, using drill press. May assemble snowmobile engines.

8523-166 RAILWAY-CAR LINER(rail. rolling stock) DPT:684
GED: 2 SVP: 2 EC: I PA: M 2 3 4

Installs wall, ceiling and floor linings in railway freight cars:

Fits precut panels of aluminum, stainless steel or wood to car frame. Drills holes and screws panels into place, using power tools.

May insert and cement slabs of foam insulation between outer walls and inside panels.

8523-199 OTHER INDUSTRIAL, FARM, CONSTRUCTION AND MECHANIZED EQUIPMENT AND MACHINERY FABRICATING AND ASSEMBLING OCCUPATIONS

This group includes workers, not elsewhere classified; for example, those who fabricate and assemble industrial, farm, construction, and mechanized equipment, such as hovercraft, and reed assemblies for textile looms. A typical example of an occupational title covered by this residual group definition is:

Reed Maker(mech. equip., n.e.c.)

8525-BUSINESS AND COMMERCIAL MACHINES FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling typewriters, calculating, bookkeeping, adding, duplicating, and other business machines from manufactured parts and assemblies. Activities include: fitting, bolting, screwing and fastening to install parts and assemblies, and adjusting parts and assemblies, using a variety of common or special hand and power tools and equipment. Business and commercial machines repairing occupations are classified in Unit Group 8585, BUSINESS AND COMMERCIAL MACHINE MECHANICS AND REPAIRMEN. Electronic data-processing equipment assembling occupations are classified in Unit Group 8534, ELECTRONIC EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS.

8525-110 ADJUSTER, KEYBOARD MACHINES (mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I PA: M 4 7

Adjusts interrelated parts of typewriters, and adding, accounting and similar keyboard business machines, to synchronize their operation:

Reads inspection report to determine defects, or operates machine to test functioning and synchronization of parts. Bends or taps parts, or turns screws, to eliminate binding, looseness and misalignment, and to synchronize trips and releases, using special-purpose hand tools. Replaces defective parts. Verifies spacing and tension of parts, using instruments such as feeler gauges, dial indicators and tension scales. Replaces electrical or electronic components as required.

May repair machines removed from assembly line. May be designated according to type of machine adjusted; for example,

Adjuster, Adding Machine
Adjuster, Calculating Machine
Adjuster, Cash Register
Adjuster, Typewriter

8525-114 PERIPHERAL-EQUIPMENT ASSEMBLER (mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I PA: M 4 7

Assembles and adjusts punched card, magnetic tape, magnetic ink character recognition (MICR) and similar machines:
Reads drawings or diagrams to determine position of components in machine, and assembly procedure. Mounts components, such as vacuum pumps, switches and keyboard assemblies, on machine frame or in machine cabinet, using hand and power tools. Starts machine and observes operation. Adjusts timing, clearances, linkages and parts to ensure proper operation of machine, using fixed gauges, test lights, meters and hand tools.

May assemble components prior to mounting in machines, using hand and power tools. May install wiring and cables in machines, using hand tools. May be designated according to type of machine assembled; for example, Punched-Card-Machine Assembler

8525-118 TYPEWRITER ALIGNER(mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I PA: M 4 7

Adjusts type and type-bars of assembled typewriters, to obtain even spacing, equalized impression and alignment of characters:

Verifies serial number, carriage model, keyboard and type style against specifications. Inserts sheet of paper into typewriter. Manually types alternate upper and lower case characters of each key, or plugs typewriter into automatic robot typing machine that runs typewriter through programmed typing sequence, to produce sample of type. Examines typing for defects. Bends or straightens type or type-bar, to space and align characters or equalize impressions, using special-purpose hand tools and first aligned character as guide. Turns regulator or impression screw on electric typewriters to adjust type-bar stroke and equalize impression. Aligns type-bar- and-segment assembly in relation to platen, using hand tools. Removes or replaces defective type, using soldering torch.

8525-122 DUPLICATING-MACHINE ASSEMBLER (mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 5 EC: I PA: M 4 7

Assembles parts and subassemblies to make spirit duplicators and thermal copiers:

Examines drawings and wiring diagrams to determine assembly procedure. Drills, reams and taps holes in parts, using drill press or portable drill. Fits, screws, bolts or rivets together parts and subassemblies; such as, frame, drum, feed rollers and controls, using hand and power tools. Installs and connects motor and wiring in electrically-operated machines. Starts machine and observes operation. Adjusts clearances and synchronization of parts to ensure proper operation, using hand tools and space and feeler gauges.

May rebuild offset machines. May test and prepare imported office machines, such as folding and mailing machines, for customer use.

8525-126 KEYBOARD-MACHINE ASSEMBLER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Assembles parts to make typewriters, and adding, accounting and similar keyboard business machines:

Fits, screws and bolts together parts; such as, frame, platen, covers, key-levers and key-tops, using hand and power tools, to make machine or subassembly. Tests machine to detect loose or binding parts, and to verify operation of interrelated parts. Twists, bends and taps parts into alignment, using pliers, mallets, screwdrivers and special hand tools. Verifies tension and clearance of parts, using tension scales, and space and feeler gauges. Lubricates moving parts, using oil and brush. May ream, tap and file parts, using variety of tools. May be designated according to type of machine assembled; for example,

Assembler, Adding Machine
Assembler, Cash Register
Assembler, Electric Typewriter
Assembler, Standard Typewriter

8525-130 VENDING-MACHINE ASSEMBLER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Assembles vending machines that dispense items such as food, drinks and sundries, by performing any combination of the following duties:
Assembles parts to make subassemblies, such as latch mechanisms, bottle racks and cooling fans, using hand tools. Cuts, bends, installs and connects copper or plastic tubing in machine, using pipe cutter, hand shears, brazing equipment and hand tools. Mounts units; such as, refrigeration compressor, hot-water tank, heating element and coin mechanisms in machine frame or cabinet, according to specifications. Charges refrigeration systems with gas. Installs and connects wiring harnesses. Fits doors and covers, using hand tools.
May rebuild used machines.

8525-134 PERIPHERAL-EQUIPMENT SUBASSEMBLER (mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles variety of subassemblies; such as, brush slides, switches, clutches and gear mechanisms, for punched card, magnetic tape, magnetic ink character recognition (MICR) and similar machines:

Reads drawings or diagrams to determine relationship of parts, and assembly procedure. Positions parts; such as, cams, shafts, frames, keys and brushes in assembly fixtures. Fastens parts together with bolts, screws or rivets, using power tools, hand tools, hand press or riveting equipment. Adjusts linkage and clearance of assembled parts, using fixed gauges and hand tools.

8525-138 TYPE-BAR-AND-SEGMENT ASSEMBLER (mech. equip., n.e.c.) DPT:684
type-bar assembler.
GED: 2 SVP: 3 EC: I PA: L 4

Assembles typewriter type-bar-and-segment units, and bends ends of type-bars to specified angles preparatory to type soldering:

Clamps segment in holding fixture and inserts type-bars into segment slots. Pushes curved wire (fulcrum) through channel in segment and through holes in type-bars to hold them in place. Places assembled type-bar-and-segment unit on holding plate of braking device. Positions type-bar in centering slot of device, and moves levers to grasp and bend end of type-bar to specified angle. Repeats operation for each type-bar.

May deburr segment slots or type-bars to permit free movement of bars, using hand file or emery wheel. May screw parts, such as ribbon guide and V-blocks, to segment, using hand tools.

8525-142 TYPEWRITER-PARTS SALVAGE MAN(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Disassembles, sorts and repairs defective typewriter parts and subassemblies to reclaim serviceable parts:

Transports containers of rejected parts from assembly lines to work area, using hand truck. Reads rejection tags or written instructions to determine disposition of parts. Dismantles subassemblies, using hand tools. Examines parts and sorts them into lots for reuse, repair, or salvage. Repairs or salvages parts by bending, grinding or drilling, using variety of hand and power tools.

8525-199 OTHER BUSINESS AND COMMERCIAL MACHINES FABRICATING AND ASSEMBLING OCCUPATIONS

This group includes business and commercial machine fabricators and assemblers, not elsewhere classified; for example, those who assemble postage meters, collators, binding equipment, dictating equipment, paper punches and tape dispensers. Typical examples of occupational titles covered by this residual group definition are:

Dictating-Machine Assembler(mech. equip., n.e.c.)
Tape-Dispenser Assembler(mech. equip., n.e.c.)

8526-INSPECTING AND TESTING OCCUPATIONS, FABRICATING AND ASSEMBLING METAL PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, in inspecting and testing work, as described under the term titles, 02-170 INSPECTOR (any ind.) and 02-430 TESTER (any ind.). Activities are primarily associated with quality control in the fabrication and assembly of a wide variety of metal products; such as, motor vehicles, snowmobiles, small arms and metal shell cases, engines and their accessories, agricultural equipment, scientific testing and control equipment, business machines, timepieces, bicycles, photographic equipment, vending machines, metal furniture, sewing machines and ornamental metalwork. Occupations concerned with inspecting and testing assembled explosives and ammunition are classified in Unit Group 8596, INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS: PRODUCT FABRICATING, ASSEMBLING AND REPAIRING, N.E.C.

Motor Vehicle Inspectors and Testers 8526-110 through 8526-134

8526-110 FINAL INSPECTOR, TRUCK TRAILER(motor vehicle) DPT:381
GED: 4 SVP: 6 EC: 1 PA: L 2 3 4 7

Examines assembled truck trailers, such as fuel tankers, cement trailers and moving vans, for conformance with manufacturing specifications and company standards:
Reads work order and studies drawings and specifications to determine standards against which vehicle is to be inspected. Measures parts and compares dimensions with specifications, using steel tape, fixed gauges and micrometers. Inspects electrical wiring and accessories for proper installation by operating switches. Examines interior and exterior of vehicle for installation and function of parts and assemblies; such as, doors, bumpers, mudflaps, axles, wheels, undercarriage, brake system and ceiling and wall construction. Examines installation and functioning of king-pin plate that couples trailer to tractor. Examines welded and painted surfaces for flaws. Operates auxiliary equipment; such as, hydraulic pumps, valves and hoses for tankers, refrigeration units and fire extinguisher systems. Verifies that trailer is equipped with all items on check list. Prepares report and arranges for defects to be repaired.
May test tank by filling it with water and observing it for leaks, or by placing it in dark room, lighting up tank interior and observing it for light emission from cracks. May road test vehicles.

8526-114 TEST DRIVER(motor vehicle) DPT:383
roll tester.
GED: 3 SVP: 6 EC: 1 5 PA: L 4 6 7

Operates completed vehicle under its own power on stationary testing device to discover performance defects:
Drives vehicles, such as car, truck or snowmobile, onto rollers of testing unit. Starts engine and operates vehicle at various speeds. Observes test gauges, such as tachometer and temperature gauge to detect malfunctions. Listens for unusual noises indicating defects in engine or transmission. Moves switches and controls to test operation of accessories; such as, power windows, lights, horn and brakes. Marks off, on check list, each item inspected, indicating location and nature of malfunctions.

8526-118 AUTOMOBILE INSPECTOR AND TESTER(motor vehicle; ret. trade) DPT:383
GED: 3 SVP: 5 EC: 1 PA: L 4 6 7

Inspects, tests and finishes new cars in factory or dealer's workshop:
Examines car for scratches, dents, poor paintwork and missing trim or screws. Operates lights, horn and power accessories to detect malfunctions. Drives car to test steering, brakes, transmission and engine and listens for irregular sounds. Touches up paintwork and replaces missing or defective components, using spraying equipment and hand tools. Records defects and corrective action on work sheet.
May install accessories; such as, lights, mirrors and defrosters, using hand and power tools. May spray car underbody with rust- proofing

compound. May inspect and test cars at factory, car dealership or rental agency and be designated accordingly; for example,
Car Examiner
New-Car Preparer
Road-Test Mechanic

8526-122 ENGINE TESTER(motor vehicle) DPT:384
GED: 3 SVP: 5 EC: 1 5 6 PA: L 4 7

Tests new automobile engines prior to mounting in chassis:
Mounts engine on test stand, using hoist. Connects fuel, exhaust, coolant and electrical lines, using hand tools. Starts engine and examines block and accessories for oil and water leaks. Adjusts ignition timing to specifications, using timing light. Describes defective parts or operation on check sheet. Routes faulty engines to reworking area.
May adjust carburetor or tappet settings to improve engine performance.

8526-126 SNOWMOBILE INSPECTOR(motor vehicle) DPT:384
GED: 3 SVP: 5 EC: 1 5 7 PA: M 4 6 7

Inspects new snowmobiles for conformance to specifications:
Starts engine and operates snowmobile on roller testing device. Observes readings of instruments and listens for abnormal sounds from engine and transmission to detect malfunctions. Turns screws and nuts to adjust brake, carburetor, clutch or engine timing to attain specified performance or action, using hand tools. Records serial numbers and inspection results on check-sheet.
May inspect small amphibious or all-terrain vehicles or test drive experimental, or prototype vehicles on test track and be designated accordingly; for example,
Inspector, All-Terrain Vehicles
Snowmobile-Test Rider

8526-130 FINAL INSPECTOR, AUTOMOBILE(motor vehicle) DPT:587
automobile checker.
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects completed automobile for installation and operation of options and equipment according to specifications:
Examines car for installation and function of specified accessories; such as, radio, heater, air-conditioning unit and defroster. Tests operation of windows, doors, lights and controls on dash panel. Examines seats, headlining, and door paneling for spots or tears in upholstery. Inspects car exterior for chips, scratches and marks on painted surfaces. Records defects on check list.
May prepare vehicle for export by removing wheel disks, antenna and windshield wipers and locking them inside car. May examine chassis for loose or defective parts and for missing bolts and screws. May inspect completed snowmobiles and be designated accordingly,
Final Inspector, Snowmobile

8526-134 WATER-LEAK EXAMINER(motor vehicle) DPT:687
GED: 2 SVP: 2 EC: 1 4 PA: S 7

Examines automobile bodies for water leaks:
Sits in automobile as it is conveyed under coloured waterspray containing fluorescent material, in darkened room. Inspects interior for water leaks, using fluorescent lamp. Marks location of leaks on diagram. Seals leaks by adjustment of parts or with sealing compound, using hand tools.

Small-Arms Inspectors and Testers 8526-154 through 8526-174

8526-154 FIREARMS INSPECTOR(sport. & toy) DPT:384
rifle inspector; shotgun inspector.
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Inspects and tests finish and mechanical action of assembled firearms:
Examines weapon visually to detect defects; such as, scratches, file-marks and misalignment of components. Tests tightness and fit of screws, nuts and pins, using hand tools. Loads firearm with dummy cartridges. Cocks weapon, presses trigger and ejects cartridge to detect

malfunctions. Initials log sheet or tag, recording information, such as serial number of weapon and nature of defects found.

8526-158 SMALL-ARMS TESTER(sport. & toy) DPT:384
gun tester.

GED: 2 SVP: 5 EC: 1 5 6 PA: L 4 7

Test fires weapons; such as, cartridge rifles and air or gas powered pistols and rifles:

Positions target at specified distance. Loads weapon with suitable ammunition or cylinder of compressed carbon dioxide gas. Aims and fires a series of shots at target, using gun rest. Examines shot pattern on target to determine sighting error. Adjust sights to obtain specified accuracy, using hand tools. Repeats test firing and adjustments until shot pattern is brought within required limits. Determines firing deficiencies of rejected firearms. Records observations on tags, and routes weapons for reworking.

May test fire rifles to prove integrity of components, using specially overcharged proof cartridges, holding devices and remote control firing equipment. May examine marking on cartridges to detect deficiencies in firing pins or extractor mechanisms. May verify muzzle velocity of weapon, using photo-electric chronographic equipment.

8526-162 AMMUNITION-SALVAGE INSPECTOR(explosives) DPT:684

GED: 2 SVP: 3 EC: 1 6 PA: S 4 7

Inspects ammunition from assembly line, to reclaim salvageable parts; such as, fuses, cases, powder and shot:

Inspects and measures cartridges, shotgun shells, fuses and blasting caps to determine salvageability, using gauges and measuring instruments. Examines items for cracks and corrosion and separates them according to defects and salvage value. Feeds cartridges into machine to remove bullets and routes cases and primers to destruction furnace.

May dismantle cartridges and shotgun shells, using hand press. May dump powder and shot onto screen to remove impurities prior to reclamation.

8526-166 BULLET AND CARTRIDGE-INSPECTOR (explosives) DPT:687

GED: 2 SVP: 3 EC: 1 5 PA: S 4 7

Examines slugs, bullet jackets and cartridge cases for defects to ensure conformance to specifications:

Aligns slugs on grooved inspection plate by scooping them onto plate and shaking plate manually to remove excess slugs. Examines slugs, bullet jackets and cartridge cases for defects; such as, burrs, dents, holes, distortion and improper size, on inspection plate or as they pass by on conveyor. Picks out defective slugs, bullet jackets or cartridge cases by hand and drops them into scrapbox.

May inspect different types of wads and separate them according to defects. May record data on time card, such as quantities of slugs or cases accepted and rejected.

8526-170 CARTRIDGE EXAMINER(explosives) DPT:686

GED: 2 SVP: 2 EC: 1 5 6 PA: S 4 7

Feeds cartridges into machine that gauges and weighs them, and rejects those not meeting specifications:

Scoops quantity of cartridges from bin and arranges them with heads in one direction. Rolls cartridges from hand to hand and examines them visually for defects; such as, dents, scratches, burrs, holes, rust spots and missing or inverted primers. Places acceptable cartridges on inclined chute for gravity feeding into gauging and weighing machine. Presses button to start machine and observes operation to detect jamming. Removes misaligned cartridges from gravity chute, using wire hook. Moves lever to eject jammed cartridges from machine. Notifies machine adjuster of machine malfunctions.

8526-174 SHOTGUN-PROOF TESTER(sport. & toy) DPT:587

GED: 2 SVP: 2 EC: 1 5 6 PA: L 4 7

Fires shotguns to prove integrity of components and to test loading, firing and ejection mechanisms:

Mounts gun in fixture and loads gun with proof (specially overcharged) shells. Attaches lanyard to trigger and stands behind barrier. Pulls lanyard to fire gun to test safety of gun construction and

resistance against bursting. Loads and free fires gun several times, using regular shells, to verify action of various mechanisms. Examines gun and spent shells for indications of mechanical defects; such as, cracks or gouge marks. Records test results on tags attached to guns. May stamp proofmark on barrel, using hammer and die-stamps. May clean bore of guns, using cloth-tipped rod.

Engines and Accessories Inspectors and Testers

8526-194 through 8526-218

8526-194 DYNAMOMETER TESTER, ENGINES(mech. equip., n.e.c.; motor vehicle) DPT:281
diesel-engine tester.

GED: 4 SVP: 7 EC: 1 5 PA: M 4 7

Tests operation of new or reconditioned diesel or gasoline engines and accessories, using dynamometer:

Lifts engine onto test-bed, using hoist, and couples engine drive-shaft to dynamometer. Attaches fuel, coolant and electrical connections, using hand tools. Starts engine under test to drive dynamometer. Reads gauges to determine that conditions; such as, engine revolutions, developed horsepower and manifold vacuum at specified speeds meet operating standards. Records temperatures and pressures of oil, water, bearings and fuel pump. Fits gauge to various spark plug or injector orifices to verify compression pressures. Replaces or adjusts accessories; such as, spark plugs, fuel pumps and injectors. Adjusts settings of governors, ignition timing, carburetors and tappets, using timing light, gauges, micrometer and hand tools. Compiles data sheet detailing findings, and makes recommendations for corrective action as required.

May turn switches causing dynamometer to drive engine and determine power required to turn engine. May listen for noises, such as rattles and piston slap, to detect irregularities. May make various engine adjustments to obtain maximum economy or power output, and be designated accordingly,

Tune-Up Man

8526-198 PROTOTYPE TESTER, OUTBOARD MOTORS(mech. equip., n.e.c.) DPT:281
experimental mechanic.

GED: 4 SVP: 7 EC: B 5 PA: H 4 6 7

Tests and adjusts experimental outboard motors to attain specified operational efficiency:

Mounts motor on boat or on edge of testing tank. Operates motor at various speeds in waterway or tank. Observes gauges and records engine revolutions and temperature, power output and generator voltage. Measures and records boat speed, thrust forces and engine balance, using manometer, tachometer and vibration analyzer. Analyzes test data to determine modifications required. Dismantles motor, using hand and special tools, to remove component parts for modifications. Reworks and modifies motor and drive parts, such as pistons, valves and propeller, using hand and machine tools. Assembles motor and conducts further tests to obtain desired performance.

May test and adjust prototypes of light stationary internal-combustion engines and be designated accordingly,

Test Mechanic, Small Engines

8526-202 ENGINE-QUALITY-CONTROL INSPECTOR(mech. equip., n.e.c.; motor vehicle) DPT:281
quality-audit inspector.

GED: 4 SVP: 6 EC: 1 PA: L 4 7

Inspects internal combustion engines and components for conformance to specifications and quality standards:

Reviews performance test report on sample engines. Compares test data describing factors; such as, horsepower, fuel consumption, manifold vacuum and cylinder compression, with specifications. Analyzes data to determine reason for failure to attain required performance. Measures dimensions of dismantled parts; such as, pistons and rings, valves, bearings and shafts, using gauges, micrometers and special tools. Compares measurements with specifications to detect substandard components. Advises supervisor of inspection results.

May dismantle and reassemble engines. May inspect incoming or

purchased parts. May specialize in quality-audit inspection of automotive or marine-craft engines and be designated accordingly; for example, Quality-Control Inspector, Automotive Engines(motor vehicle) Quality-Control Inspector, Marine Engines(mech. equip., n.e.c.)

8526-206 OUTBOARD-MOTOR INSPECTOR AND TESTER(mech. equip., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Inspects, tests and adjusts outboard motors from production line: Examines completed motors for dents, scratches, poor paintwork and missing parts. Fits special test propeller to motor, using wrench. Mounts motor frame in water-filled tank and attaches test leads. Starts motor and observes operation for malfunctions, such as, misfiring and excessive smoking or vibration. Reads gauges on test apparatus to verify conditions, such as engine revolutions, coolant temperature and fuel consumption. Adjusts carburetor and ignition timing, using special tools. Aligns gearshift lever, using hand tools and ensures correct gear selection. Records test results.

8526-210 ENGINE-ACCESSORIES INSPECTOR(air & space-craft; mech. equip., n.e.c.; motor vehicle) DPT:684
GED: 3 SVP: 5 EC: I PA: L 4 7

Inspects internal-combustion engine accessories for conformance to specifications: Examines accessories; such as, magnetos, alternators, starter motors, carburetors, pumps and valves for faulty assembly, surface defects and missing parts. Measures dimensions of components; such as, shaft diameters, jet sizes and air gaps, using micrometers and gauges. Connects air or liquid lines to pumps and valves to ensure correct operation and locate leaks. Mounts electrical units in testing device. Turns switch to operate unit and verify output and performance under simulated operating conditions. Stamps or tags inspected parts.

8526-214 TRANSMISSION TESTER(mech. equip., n.e.c.; motor vehicle) DPT:584
GED: 3 SVP: 4 EC: I PA: L 4 6 7

Tests, automatic or manual, motor-vehicle transmissions under simulated operating conditions: Mounts transmission onto test bed, using hoist. Flushes debris from gearcase, using flushing oil, and fills gearcase to level with specified lubricant. Attaches driving mechanism to transmission input shaft, using wrench. Starts motor to operate transmission at various speeds. Shifts gears to verify correct engagement of gear combinations. Detects malfunctions by listening to sounds emitted by transmission and by placing hand on gearcase to feel excessive vibration. Records test results. May test non-automotive transmission, such as conveyor-line gearboxes.

8526-218 CLUTCH INSPECTOR(mech. equip., n.e.c.; motor vehicle) DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Inspects friction clutch assemblies for defects: Examines clutch plates to detect missing rivets, distortion and oil or dirt on friction material. Mounts clutch plate, pressure plate or complete clutch assembly in testing jig. Starts machine to rotate clutch. Measures eccentricity of rotation, using dial gauge. Pulls lever to withdraw pressure plate from driven plate to verify action of clutch. Rejects defective components. May rotate clutches in machine to detect out-of-balance vibration. May verify flatness of contact faces, using straight-edge and gauges.

8526-236 MACHINE TRY-OUT MAN(metal fab., n.e.c.) DPT:280
GED: 4 SVP: 8 EC: I 5 6 PA: M 4 7

Tests and verifies performance of various types of prototype and new production machine tools and metalworking machines; such as, lathes, milling machines, planers, forging presses and punch presses, by setting up and operating machines: Installs dies or cutting tools in machine, following detailed drawings and using hand tools and measuring instruments. Sets controls to regulate speed of feed, depth of cut or length of ram stroke according to type of machine being tested. Operates machines in various setups to obtain sample workpieces. Verifies conformance of sample work-piece to specifications, using measuring instruments, such as calipers, micrometers and gauges. Adjusts machines so they conform to operating specifications. Notifies supervisor of malfunctions or problems with machine.

8526-238 TURBINE INSPECTOR AND TESTER(mech. equip., n.e.c.) DPT:381
GED: 4 SVP: 8 EC: I 5 PA: L 2 3 4 7

Inspects and tests operation, alignment, control settings and clearance of moving parts of steam and gas turbines under static or simulated load conditions to detect defects of materials or workmanship: Examines parts, materials and assemblies for defects and completeness. Reads blueprints and verifies dimensional accuracy, using micrometers, verniers, height gauges, calipers and gauge blocks. Examines turbine, generator and exciter bedplate to detect faulty alignment and centering, using dial indicators and optical instruments. Measures turbine blade clearance and alignment, using precision gauges. Operates turbine under no-load and simulated-load conditions and tests balance of rotating parts, using vibroscope. Records governor setting, oil pressures and overspeed trip-settings during test. May inspect parts or sub-assemblies during their assembly. May set up, gauge and calibrate test equipment.

8526-242 AIRCRAFT INSPECTOR, ASSEMBLIES AND INSTALLATIONS(air & space-craft) DPT:381
GED: 4 SVP: 7 EC: I PA: L 2 3 4 7

Inspects aircraft assemblies, such as wings, control surfaces, fuselage sections and landing gear, assembly of components and subassemblies into major structures, and complete aircraft, to ensure adherence to and compliance with standards and specifications designated on drawings and in manuals: Verifies alignment of parts, and location and finishing of bolt, rivet and other attaching holes, using inspection equipment, such as templates, gauges, jigs and calipers. Checks dimensions, fit and clearances, and correct assembly and operation of components such as landing gear and actuators, using precision measuring instruments and test equipment. Examines engines and accessories, piping and electrical wiring to ensure proper installation. Examines aircraft structures to verify completeness and fastening of equipment, and to determine surface defects, such as scratches and cracks or other evidence of internal damage. Checks fitting and sealing of windows, doors and bulkheads, and fit, colour and quality of seats and upholstery and other internal trim for adherence to standards. Records observations and inspection results on inspection reports and affixes inspection stamp on components and assemblies accepted. May inspect a particular type of aircraft or assembly and be designated accordingly; for example, Helicopter Inspector

8526-246 INSTRUMENT INSPECTOR AND TESTER(scient. & ind. equip., n.e.c.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 4 7

Inspects and tests instruments, navigational aids and sensing devices; such as, gyroscopes, auto-pilots, guidance systems, altimeters, valves, gauges and temperature sensing probes, by performing any combination of the following duties: Examines units for inclusion of specified parts and materials, proper assembly and general appearance, using magnifying glass. Measures components, housings and finished devices, using micrometers, calipers and gauges. Mounts instrument in electro-mechanical testing unit. Operates instrument under simulated conditions and reads dials, observes stroboscopic light and compares readings with specifications to verify accuracy and constancy of operation. Attaches test leads to

temperature probes and places probes in liquid or oven held at fixed temperatures. Applies electric current to probe, measures and computes electrical resistance of probe at specified temperatures, using galvanometer, oscilloscope and formulas. Connects lines to pressure sensors and places units in vacuum chamber. Starts vacuum pump to reduce pressure upon sensor. Applies varying electrical force to determine voltage required to break down sensor insulation at specific pressures, using power supply, oscilloscope and multimeter. Tests free movement of gyroscope parts by turning gears and gimbals. Writes inspection and procedure reports.

May clean and lubricate instruments and adjust contacts, using gauges and hand tools. May determine cause of malfunctions and route instruments to repair shop. May test master standard instruments and arrange for their certification. May specialize in inspection of aircraft instrumentation or work in standards laboratory and be designated accordingly; for example,

Aircraft-Instrument Inspector(air & space-craft)
Instrument Technician, Standards Laboratory

8526-250 MAJOR-ASSEMBLY INSPECTOR(mech. equip., n.e.c.) DPT:381
GED: 4 SVP: 6 EC: 1 PA: M 4 7

Inspects parts and component subassemblies of agricultural equipment, such as tractors and combines, for compliance with drawing specifications, using precision measuring instruments:

Inspects parts, such as housings, shafts, and gears, before assembly, for location and diameter of threaded holes, shaft diameter, and gear-tooth angle and spacing, using templates, and precision measuring instruments, such as micrometers, vernier calipers and dial indicators. Measures completed assemblies for fit and clearance of parts. Examines parts for casting flaws and surface defects, such as scratches and paint streaks. Records number of items rejected and reasons for rejection.

May compare faulty parts with drawings to determine type of defect. May order reworking of faulty parts.

8526-254 WATCH INSPECTOR(scient. & ind. equip., n.e.c.) DPT:381
watch-assembly inspector.
GED: 4 SVP: 6 EC: 1 PA: S 4 7

Examines watch assemblies, components and completed watch movements for mechanical and visual defects, using watch maker's tools and work aids, performing any combination of the following duties:

Inspects banking of pallet and lock, and drop and slide of escapement. Determines visually that hairspring is level and examines positioning of parts to determine that they are in beat, and that overcoil is in correct relationship to spring. Tests vertical play of wheels, (end-shake), using tweezers, to determine that it is within acceptable limits. Examines spring to determine that it is centered between regulator pins, and centers regulator lever. Examines movement and case for scratches, blemishes and finish. Determines accuracy of movement by running it for specified period in different positions. Dismantles faulty movements to point of error, records observations, and returns movements to appropriate department for reworking. Inspects oiling of pallet stones and jewelled bearings. Observes minute parts with aid of loupe. Inspects and adjusts watches after specified subassemblies have been added, such as barrel, train, and balance. Verifies parts dimensions, such as thickness, inside and outside diameters and length, for conformance to specifications, using precision gauges. Projects image of parts on screen and compares dimensions of blown-up shadow with its scale drawing to verify sizes, locations, and contours. Moves stem in and out to determine that it clicks into winding and setting positions, and turns stem in each position to test for ease of winding and setting. Winds mainspring to observe wheel characteristics, such as flatness of path and freedom of movement. Maintains statistical graphs and charts to provide visual comparison for quality control. Records number and type of defects found.

May perform leak test on waterproof watches. May inspect a particular part of watch during assembly or at certain time of assembly and be designated accordingly; for example,

Final Inspector
Hairspring Inspector
Hands Inspector
Mechanism Inspector

8526-258 HYDRAULIC TESTER(air & space-craft) DPT:384
GED: 4 SVP: 6 EC: 1 PA: L 3 4 7

Inspects and tests aircraft hydraulic, pneumatic and vacuum piping systems to detect damaged tubing, loose fittings and leaks:

Connects lines to equipment, such as pumps, gauges and flowmeters, using wrenches. Turns switches and valves to exhaust lines, or to charge them with gas or liquid. Observes dials and gauges on testing apparatus and inspects tubing to detect leaks and to verify specified pressures or rates of flow. Locks doors and hatches in pressurized fuselage and reads gauges to ensure effectiveness of sealing devices. Records observations and writes inspection and test report.

8526-262 TYPEWRITER INSPECTOR, PARTS AND ASSEMBLIES(mech. equip., n.e.c.) DPT:361
GED: 3 SVP: 6 EC: 1 PA: M 4 5 7

Inspects mechanical and electric typewriters, sub-assemblies and parts for conformance to specifications:

Inspects parts for defects, such as burrs, scratches or rust. Measures parts or assemblies for conformance to specifications, using drawings, micrometer, gauges and dial indicators. Examines angles and curves of parts, using profile gauges and protractor. Tests tightness of screws and nuts with screwdrivers and wrenches. Moves components of assemblies to detect binding, looseness or misalignment. Compiles records, charts and graphs of defects and notifies supervisor when rejects exceed specified limits.

May perform functional tests on typewriters following printed procedures.

8526-266 AGRICULTURAL-EQUIPMENT INSPECTOR(mech. equip., n.e.c.) DPT:364
GED: 3 SVP: 6 EC: B PA: L 4 5 6 7

Inspects agricultural equipment; such as, tractors, combines, rotary tillers, snow throwers, and balers for missing, defective, or improperly installed parts and for operational malfunctions:

Observes operation of equipment being driven around test area to detect defects; such as, loose fitting, improper assembly, malfunctioning parts or faulty controls as indicated by noise, leaks or irregularities in braking, steering or transmission mechanisms. Directs repairman to repair defective equipment, explains defects and suggests method of repair. Examines equipment for paint defects, rust-proofing, incorrect decal application, missing tools and faulty lights. Records cause, type of defect and repair work necessary. Adjusts governor on engine, using wrench, screwdriver and tachometer to regulate engine speed.

May specialize in inspecting various equipment; such as, snow throwers, rotary tillers, power lawn mowers and combines and be designated accordingly.

8526-270 BUSINESS-MACHINES TESTER(misc. prod. fab., n.e.c.) DPT:384
GED: 3 SVP: 6 EC: 1 PA: L 4 6 7

Examines and operates business machines, such as calculators, accounting machines and cheque encoders to verify correct operation and conformance to manufacturer's standards:

Plugs cord of machine into electrical outlet. Presses keys on keyboard and moves levers in prescribed sequence to test alignment of printing, repeat latch, ribbon and paper feed, correction release, noise, and clearance of type bars, according to checklist. Operates machines in test sequence and reads arithmetic results, recorded by machines, to verify accuracy.

May specialize in testing calculators, accounting machines, cheque encoders or other business machines, and be designated accordingly.

8526-274 TENSILE-STRENGTH TESTER(gov. serv.; wire prod.) DPT:384
cable tester; rope tester.
GED: 3 SVP: 6 EC: 1 PA: M 4 7

Conducts destructive tests on wire ropes to ensure conformance with government and industry standards:

Reads specifications of wire-rope sample to determine test procedures. Fastens cast metal sockets attached to end of rope to jaws of testing machine, using hoist and split clamps. Presses switches and moves levers to apply strain to rope for testing tensile strength and breaking point. Records gauge reading at breaking point of rope.

May cast metal attaching sockets to ends of rope sample. May apply strain to rope, representing specified loads, and measure rope diameter, using calipers. May examine ropes broken in regular usage for cause of failure.

8526-278 GASOLINE-PUMP TESTER(mech. equip., n.e.c.) DPT:381
gasoline-pump calibrator.
GED: 3 SVP: 5 EC: 1 PA: H 3 4 6 7

Operates equipment to test and calibrate rate of flow of gasoline pumps to meet precise government specifications:
Transports gasoline pumps to test bench, using hoist. Verifies insulation and continuity of pump chassis and motor circuits, using electrical test equipment. Adjusts motor belt for specified tension by altering position of pulley, using wrench. Attaches pipelines from test equipment to pump, using hand tools. Starts pumps and turns valves to adjust revolutions per minute, pressure, and flow of gasoline, according to specifications. Reads gauges and listens to operation of pumps to detect malfunctioning units. Records gauge readings and rejects defective units.
May examine chassis for workmanship and proper assembly.

8526-282 PURCHASED-METAL-PARTS INSPECTOR(any ind.) DPT:364
outside-production inspector; resident inspector.
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects and tests a wide variety of purchased parts at sub-contractors' premises, for use in automobiles, aircraft, appliances, clocks and watches and other metal products, to ensure conformance to specifications:
Tests hardness of metal parts, using hardness tester. Measures dimensions, alignment, angles and radii of machined, stamped or die-cast components, using templates, gauges and fixtures. Examines welded or plated parts to verify specified standard of finish. Writes inspection reports, and advises sub-contractor and employer regarding contract requirements.
May release completed orders for shipping or specify reasons for rejection. May inspect purchased parts in own plant and be designated accordingly.

8526-286 PHOTOGRAPHIC-EQUIPMENT INSPECTOR(scient. & ind. equip., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects still or movie cameras, flash units, enlargers, projectors and other photographic equipment for defects:
Examines equipment for defects; such as, missing parts, missing or incorrect serial numbers, incorrect fit of parts, flaws in finish and faulty action. Trips shutters to verify timing, using timing device. Measures focal distance of lenses, using depth micrometer. Tests electrical components, using electrical instruments. Inserts strip film or slides in projectors and tests operation by projecting picture on screen. Records rejects and reasons for rejection.
May make minor repairs or adjustments, using hand tools. May do minor touch up, using brushes and lacquer or paint. May inspect a particular item and be designated accordingly; for example, Camera Inspector
Projector Inspector

8526-290 SALVAGE INSPECTOR, INSTRUMENTS(scient. & ind. equip., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects defective or obsolete instruments; such as, thermostats, cut-outs, altimeters and gyroscopes to determine their disposition:
Reads tag accompanying instrument to determine reason for rejection. Examines unit or parts to discover extent of damage or defect. Dismantles assembly into component parts and measures parts, using hand tools and gauges, to ascertain deviations from standards. Reads specification manual and parts book to assess alternatives of reuse, repair or scrapping of components. Writes appropriate information on tags to accompany parts. Sorts parts according to disposition and routes them to designated department. Inspects items returned under warranty to detect evidence of misuse. Writes reports detailing number and types of defects found and sends sample parts to quality control area.

8526-294 VENDING-MACHINE TESTER(misc. prod. fab., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Tests automatic vending machines for performance, and adjusts operating components:
Tests operating cycle of machine, using electrical timer. Tests wiring, using electrical test equipment to verify circuit continuity and insulation. Tests operation of coin-operating-and-return mechanism, using test coins. Adjusts or repairs faulty operating components, using hand tools. Rejects units requiring extensive repairs or refinishing.
May examine paint finish for blemishes, chips or other flaws. May inspect refrigerating units for gas leaks, using gas-detecting device.

8526-298 MATRIX INSPECTOR, PHONOGRAPH RECORDS(misc. prod. fab., n.e.c.) DPT:384
GED: 3 SVP: 4 EC: 1 PA: S 4 6 7

Inspects metal matrices used as dies in mass production of phonograph records for surface defects, using optical and sound reproducing equipment:
Places matrix on turntable and switches on audio amplifier and turntable. Measures width of grooves of matrix, using calibrated microscope or precision tester that measures lateral movement of stylus. Listens for audio defects in matrix, such as pops and ticks, and general audio quality, using stereo headset. Observes meter that records surface noise indication above specified acceptable level. Locates defects and marks location on matrix, using washable crayon. Records reasons for rejection and returns matrix for reworking. Tests reworked matrices to ensure defects have been corrected.

8526-302 TYPEWRITER TESTER(mech. equip., n.e.c.) DPT:384
functional tester, typewriters.
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Tests manual or electric typewriters to evaluate their performance and detect malfunctions:
Types characters in prescribed sequence on sample sheet, either manually or using autotype machine, to evaluate functioning of parts. Examines sample sheet to detect misaligned type or improper spacing. Operates tabulators, carriage, platen and other parts to detect faulty action, such as binding or roughness. Indicates defects on inspection worksheet and returns machine for repair or adjustment.

8526-306 BICYCLE INSPECTOR(sport. & toy) DPT:387
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Inspects bicycle and tricycle parts and assemblies, on production line, for conformance to specifications:
Examines part or assembly for defects; such as, dents, scratches, missing decals or incomplete fabrication. Inspects paintwork for conformance to colour and finish standards. Operates moving parts to detect binding or misalignment. Removes rejected items from line for repair or adjustment. Compiles records of rejects and reasons for rejection.
May touch up paint defects, using hand brush.

8526-310 METAL-FURNITURE INSPECTOR(furn.) DPT:587
GED: 3 SVP: 4 EC: 1 PA: M 3 4 7

Inspects metal furniture for defects in construction or finish:
Verifies colour of furniture against work ticket specifications. Feels and inspects article for defective workmanship or damage; such as, unwelded joints, wrinkled or torn upholstery, paint flaws or scratches. Marks defective areas with chalk or crayon and segregates articles requiring repair. Records number of rejected pieces and reasons for rejection.
May hone rough spots, using hand stone or abrasive paper.

8526-314 SEWING-MACHINE TESTER(mech. equip., n.e.c.) DPT:584
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Tests sewing machines and attachments:
Threads needle and bobbin of sewing machine and turns knob to adjust thread tensioner. Presses pedal to start machine. Feeds cloth under needle and sews stitches in cloth to test feeding and stitching

mechanisms. Moves controls to vary stitch pattern and type of stitch. Fits and operates machine attachments, such as hemming and button-holing devices to verify performance. Records test results and returns defective machines for rework.
May mount sewing machine heads on cabinets prior to testing.

8526-318 PRESSURE-SWITCH TESTER(mech. equip., n.e.c.; scient. & ind. equip., n.e.c.) **DPT:684**
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Tests and adjusts pressure-operated switches or aneroid barometers: Couples air-line and electrical leads to pressure switch, using hand tools. Turns valve to raise or lower air pressure upon switch diaphragm to specified level. Observes gauge and switch contacts to verify opening or closing of contacts at specified pressures. Turns screw or bends arm of pressure switch, using hand tools, to ensure contacts open and close at required pressures. Loads racks of aneroid barometers into chamber. Closes glass door and turns screws to seal vacuum chamber. Starts vacuum pump to decrease pressure in chamber to specified level. Compares barometer readings with value shown on master gauge and notes instruments whose readings differ from standard. Routes acceptable barometers to packaging area. Resets calibrating screw on temporarily rejected instruments and loads them into chamber for re-testing.

8526-322 TIME TESTER, WATCHES(scient. & ind. equip., n.e.c.) **DPT:585**
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends electronic timer that verifies accuracy of clock and watch movements:

Positions movement in holding fixture of machine that automatically compares test beat with standard, and records discrepancies in beat. Records timing error and number of faulty movements. Returns inaccurate movements for correction, reworking and special testing.

8526-326 BALL-BEARINGS TESTER(mech. equip., n.e.c.) **DPT:685**
GED: 2 SVP: 2 EC: 1 PA: S 4 6 7

Tends sound-testing equipment to detect defects in ball and roller-bearing assemblies and determines causes of defects:

Turns dials on equipment to specified setting. Slides bearing onto adapter arm and presses button to start machine that rotates inner ring of bearing. Listens through headphones to detect sounds that indicate mechanical defect in bearing and to determine probable cause of defect or listens for bell and observes photoswitch light that indicates if rollers are missing inside bearings. Places defective bearings in box for scrap or salvage. Packs usable bearings into paper tubes and places them in cartons.

8526-330 HARDWARE, TOOL AND CUTLERY INSPECTOR(metal fab., n.e.c.) **DPT:687**
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects articles; such as, can openers, hacksaw blades, hand tools and kitchen cutlery to detect manufacturing defects:

Examines articles for surface defects; such as, scratches, nicks, defective plating or incorrect marking. Verifies dimensions of parts, using gauges, micrometers and other hand or dial type measuring instruments. Operates moving or adjustable parts of article to verify freedom of action. Examines cutting edges of tools, hacksaw blades and cutlery to ensure that manufacturing specifications are met. May be designated according to article inspected; for example, Cutlery Inspector
Hacksaw Inspector

8526-334 STRUCTURAL AND ORNAMENTAL-METALWORK INSPECTOR(struct., plate & ornam. metal) **DPT:687**
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Inspects structural and ornamental metalwork; such as, window screens, sashes, doors and shower enclosures for appearance and conformance to specifications:

Inspects article for burrs, improper assembly, dents or torn screening. Tests alignment by sliding panels up and down. Verifies dimensions,

using gauges, steel tape or square. Returns defective items for repair or performs minor repairs; such as, rolling or hammering out small dents, filing burrs or tightening screws.

May package article and hardware kit in cardboard container for shipping or storage.

8526-399 OTHER INSPECTING AND TESTING OCCUPATIONS, FABRICATING AND ASSEMBLING METAL PRODUCTS

This group includes metal product fabricating and assembling inspectors and testers, not elsewhere classified; for example, those who record performance of aircraft engines and accessories; sort metal-cartridge cases, using sorting machine; test food packaging equipment; test and prove gas meters; inspect roller-bearings; and test vibratory feeders, screens and oscillating conveyor equipment. Typical examples of occupational titles covered by this residual group definition are:

Aircraft-Engine-and-Accessories Inspector, Field(air & space-craft)
Cartridge-Case Sorter(explosives)
Food-Packaging-Equipment Inspector(mech. equip., n.e.c.)
Gas-Meter Inspector(elec. power)
Roller-Bearing Inspector(mech. equip., n.e.c.)
Vibratory-Equipment Tester(mech. equip., n.e.c.)

8527-PRECISION INSTRUMENTS AND RELATED EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling precision instruments and related equipment; such as, scientific and optical instruments; measuring, indicating and controlling instruments and equipment; surgical, medical and dental instruments and apparatus; photographic equipment; time-pieces; and similar items. Activities include: fitting and assembling previously manufactured parts, installing precision components and assemblies, and adjusting and calibrating precision equipment, using a variety of common or special hand tools, and special test equipment. Occupations concerned with fabricating and assembling instruments for measuring, recording and controlling electrical characteristics are classified in Minor Group 853, FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS: ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT.

8527-110 SCALE CALIBRATOR(scient. & ind. equip., n.e.c.) **DPT:261**
GED: 4 SVP: 7 EC: 1 PA: M 4 7

Calibrates electronic and mechanical weighing scales by performing any combination of the following duties:

Mounts assembled scale indicating dial on calibrating fixture. Clips balance weights to dial assembly so that zero mark on dial matches calibrating mark on fixture. Sets dial or indicating needle of mechanical scales to zero reading by turning screw. Calibrates scales by placing standard weights on scale platform and reading to capacity of scale. Corrects false readings of scale by adjusting fulcrum position or lever length, using hand tools, or by adding lead shot to shot box. Seals shot box by hammering lead shot into orifice of box when scale calibration is completed. Examines electronic scales for missing or poorly aligned parts or unconnected wires and rectifies faults, using hand tools. Aligns light source, mirrors and prism of photo-electric cell and verifies that reading projected onto ground-glass screen is accurately focussed. Trips operating lever and inspects printed tag for alignment and legibility. Verifies scale functions through specified range, using check list. Connects leads of electronic test unit to specified test points on scale and places standard weights on scale platform. Reads dials of test unit and adjusts resistance units of scale, using screwdriver, to obtain specified meter readings. Turns controls of test equipment to simulate supply voltage variations and interprets oscilloscope pattern to determine if scale accuracy is maintained throughout tested range. Performs disassembly and test procedures as required by government scale inspector who certifies scales for commercial use. Repairs worn

and faulty scales. Instructs workers engaged in scale subassembly. Prepares scales for shipment by disconnecting and securing delicate parts of operating train, using pads, tie-wires and hand tools. May assemble electronic and mechanical scales as required.

8527-114 INSTRUMENT-PANEL ASSEMBLER-INSTALLER
(air & space-craft) DPT:381
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Assembles and installs aircraft instrument panels:
Drills, reams, taps and countersinks holes, following drawings and diagrams, using jigs, fixtures and powered hand tools, to prepare panel for assembly and mounting. Rivets additional parts, such as stiffeners and mounting brackets to panel, using rivet gun. Installs instruments, switches, indicator, lights and identifying decals on panel in specified sequence, using rivets, screws, adhesives and hand and power tools. Installs electrical wiring harnesses, using clips or clamps, and attaches wiring leads to instruments, lights and switches by soldering or by connecting plugs and sockets. Attaches rigid and flexible tubing to panel frame, using clamps and connectors. Tests vacuum and pressure lines for leaks, and performs specified functional tests on instruments, using test equipment. Installs assembled panel in aircraft and makes final connections of instruments and components.

8527-118 SCALE ASSEMBLER(scient. & ind. equip., n.e.c.)
DPT:681
scale mechanic.
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Assembles scales of various types, ready for calibration, from components and subassemblies:
Verifies by check-list that kit of parts is complete for scale to be assembled. Assembles parts and subassemblies; such as, base, levers, stirrups, pins, charts, indicators and pendulums into scale housing, using hand and power tools, fixtures, and gauges. Places lead pellets in shot-box to weight required for particular type of scale, to achieve approximate calibration subject to subsequent verification by supervisor. Drills holes, twists levers, hones pivots, and files parts, to ensure accurate clearances and alignment. Installs subassemblies; such as, computing unit, photo-electric cell, prism system, printer and read-out, on base of electronic type scales, and connects wiring harness, using diagrams, hand tools and soldering iron. Repairs worn and faulty scales by replacing parts and adjusting mechanism.

8527-122 HAIRSPRING TRUER(scient. & ind. equip., n.e.c.)
DPT:381
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Adjusts hairsprings to proper form:
Examines spring with watchmaker's loupe to determine if center coils appear as perfect circles. Bends inner coil of spring away from or toward collet, using truing tool, to locate center of collet in center of spring, and to correct errors resulting from faulty collecting of coil. Estimates space between collet and first inner coil to determine if it is within acceptable limits.
May form overcoils and be designated accordingly,
Hairspring Overcoiler

8527-126 LASER-TUBE ASSEMBLER(scient. & ind. equip., n.e.c.)
DPT:681
GED: 3 SVP: 5 EC: 1 6 PA: L 4 7

Assembles tubes for laser units:
Measures tubular stems at ends of laser tube, using calipers, and cuts stems to specified length with diamond saw. Brushes grinding tool with abrasive solution and grinds bevel at tube stems to accommodate reflector plugs. Cements coated reflector plugs with slow-drying cement to facilitate subsequent alignment of reflectors. Presses plugs into place on stems. Seals evacuating stem of laser tube to glass tube of vacuum exhausting device, using gas flame. Starts pump to evacuate air from tube. Stops evacuating pump when specified degree of vacuum is attained and opens valve to fill laser tube with neon-helium gas. Seals exhausting and gas entry orifices, using gas flame. Passes sealed laser tube to technician for optical alignment of reflector plugs. Fits electrodes over laser tube following alignment and presses switches to cause tube to emit laser beam. Places light meter in laser beam to measure beam intensity and manipulates reflector plugs to achieve maximum output.

May grind and polish glass reflector lens blanks. May align reflectors, using optical sighting equipment. May heat laser tube in furnace to purge water and foreign matter.

8527-130 TEMPERATURE-CAPILLARY CHARGER(scient. & ind. equip., n.e.c.)
DPT:582
GED: 3 SVP: 5 EC: 1 4 6 7 PA: L 4 7

Fills temperature capillary systems with liquid or gas:
Fits bulbous end of capillary tube into vacuum orifice of exhausting and charging panel and turns screw to seal joint. Starts pump to exhaust air from capillary for specified period. Pulls lever to insert tapered plug into hole in bulbous end and to seal capillary. Removes capillary unit from exhausting orifice to appropriate charging orifice of panel. Turns valves to admit filling medium to charging chamber, pulls lever to remove plug from bulbous end, allowing capillary system to fill. Pulls lever to seal opening in bulbous end of capillary, and starts pump to return excess filling medium to holding tank. Removes capillary system and mounts it in fixture which registers movement of bellows, bourdon tube, or diaphragm at other end of capillary. Submerges bulb alternately in water tanks maintained at specified temperature differentials, and reads dial of fixture to verify accuracy of capillary system. Compiles sheet specifying kind of liquid, vapour or gas contained in system, and records test readings obtained.
May attach bellows, bourdon tube or diaphragm end of system to back plate of control or indicating unit, using screws, bolts and hand tools.

8527-134 AUTOMATED-VALVE ASSEMBLER(scient. & ind. equip., n.e.c.)
DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Assembles flow-control valves and valve-actuating equipment, performing any combination of the following duties:
Fits, bolts and screws parts; such as, stems, springs, cages, plugs, packing-nut washers, covers and top plates to valve housings, using hand tools and assembly fixtures. Brushes gasket-bonding material on mating surfaces as specified. Assembles shafts, bearings, motors, switches, arms and cams to make step-control assembly. Fits step-control to valve and bends switch contacts to adjust on and off sequence. Switches motor on and off to set cam at low point and limit-screw at high point. Positions test fixture over step-control, starts motor, and observes indicator lights to verify cut-out and cut-in of each switch position in sequence. Brushes locking compound on adjustment screws. Connects wires to terminals, using soldering iron. Mounts parts; such as, brackets, step-control assemblies, terminal blocks, wiring and plug connectors to valve housings, using bolts, screws, hand tools and soldering iron. Clamps valve in test fixture and attaches electrical supply leads and liquid pressure lines to valve. Turns liquid supply valve to regulate pressure to specified figure and observes closed automated-valve assembly for leaks. Drills holes with portable drill in specified positions on valve housings and mounts identification and instruction plates with screws.

8527-138 CLOCK AND WATCH ASSEMBLER(scient. & ind. equip., n.e.c.)
DPT:684
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Assembles spring-driven movements for watches and clocks, by performing any combination of the following duties:
Installs balance wheel assembly, lever, escape and train wheels, mainspring barrel, winding and setting mechanism, bridges and plates, using watchmaker's hand tools and loupe. Verifies endshake and other clearances by moving parts with tweezers. Determines that balance spring is concentric, in parallel plane and between regulator pins. Moves regulator arm to central position, and adjusts balance spring by bending slightly with tweezers. Lubricates movement, using oiling needle. Observes action of movement, and makes adjustments such as truing balance or bending banking pins, or replaces defective parts. Secures dial, using screws, or by crimping pre-formed lugs in slots. Installs hands in correct relative positions, using staking press or special hand tool, and adjusts clearances between hands and face by slight bending with tweezers. Adjusts setting of alarm hand, when assembling alarm clocks, to co-ordinate with alarm release mechanism and hour hand.
May assemble a particular part or subassembly of watch or clock and be designated accordingly; for example,
Balance-Wheel Assembler
Mainspring-Barrel Assembler

8527-142 HEAT-SENSOR ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4 7

Assembles immersion heat-sensing devices:

Cuts lead wires to specified length, using cutters. Connects lead wires to ends of precut sensing-element wire, using silver solder and gas torch. Pulls precut insulating sleeve over sensing-element wire, and slides precut metal tubing over sleeve. Crimps ends of metal tubing, using hand tool. Bends sensing element by hand, using former, and inserts element into perforated metal tube. Places assembly in water bath maintained at specified temperature, and attaches leads to ohmmeter to determine that element resistance is as specified. Coats perforated tube with ceramic compound, using brush, and places element in oven to bake ceramic. Inserts ceramic-coated assembly in stainless steel or platinum tube, and seals open end, around lead wires, with silicon compound.

8527-146 PUT-IN-BEAT ADJUSTER(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: S 4 7

Adjusts positioning of hairspring collet on watch balance assembly:

Positions balance wheel and spring assembly in fixture of special tool, using tweezers. Engages locking device with crescent of roller to prevent balance wheel, staff and roller from turning. Engages special tool with slot in hairspring collet. Turns collet on balance staff so that stud on outer coil of hairspring is aligned with indicator on fixture, ensuring impulse-roller and hairspring stud are in correct relative positions, and watch escapement will be in-beat when assembled.

8527-150 THERMOSTAT-AND-PRESSURE-SWITCH CALIBRATOR(scient. & ind. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4 7

Calibrates heat or pressure-actuated devices, such as thermostats, gauges and switches, by any of the following methods:

Positions device to be calibrated in holding fixture, according to whether calibration is to be performed by immersion of capillary in controlled-temperature bath, application of air pressure, or mechanical measurement: 1. Turns valves and dials to regulate temperature of liquid in baths to specified level, using master thermometer. Immerses capillary of device to be calibrated in baths of different temperatures, alternately or in specified sequence. Turns adjusting screws or bends operating parts until indicating dial reads correctly, or until contact points open and close at specified temperatures. 2. Connects compressed-air supply line to bellows or bourdon tube of device to be calibrated or to pressure gauge under test. Turns valve to admit specified air pressure. Measures movement of actuating devices, using dial gauge, or compares gauge reading with master gauge and turns adjusting screw, or bends parts, until indicating pointer of device reads specified temperature or pressure, or until contact points open or close at specified temperatures. 3. Observes action of contact points, working under temperature-controlled conditions, by moving control dial, and adjusts parts; such as, differential arms, levers, springs and blades by bending parts or turning adjusting screws, using hand tools, until contact points open or close at specified settings of control dial. Verifies gap between contact points at specified dial settings, using feeler gauges.

8527-154 DIE-CASTING ASSEMBLER, CLOCK PARTS(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: I 5 6 PA: L 4 7

Operates die-casting assembly machine that casts pinions and attaches them to clock wheels:

Places clock wheel in recess in die, using tweezers. Depresses foot pedal to feed attaching wires to intermediate stop position in die. Depresses second foot pedal to raise and seal die against moulding pot, and drive attaching wires into wheel. Presses plunger with hand to inject molten metal into die and cast pinion around wires. Pulls lever to cut wires and eject completed wheel and pinion. Cleans injection nozzle as required, using leather wiper. Inspects finished assemblies for casting flash or pits. Replenishes melting pot with metal ingots.

8527-158 PHOTOGRAPHIC-EQUIPMENT ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: I PA: L 4 7

Assembles components and sub-assemblies of photographic equipment; such as, still cameras, movie cameras and projectors:

Screws, rivets, and otherwise fastens and installs parts, following assembly diagrams and verbal instructions, using hand and power tools, on progressive assembly line. Operates sub-assemblies and assemblies to test for proper functioning, using test fixtures and equipment, as specified.

8527-162 SOLENOID-VALVE ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: I PA: S 4 7

Assembles a variety of solenoid valves used to control flow of liquids or gases:

Slides or presses parts; such as, seals, washers, rings, collars and springs onto valve stem or plunger, using fingers and appropriate assembly fixtures. Inserts plastic-encapsulated solenoid coil into valve body and clamps body in fixture. Inserts assembled valve stem or plunger through coil into valve body, and seats seals and brass bushing in body around valve stem or plunger, to seal opening, using special hand tool and hammer. Stamps inlet and outlet markings on valve body, using dies and hammer, and attaches self-adhesive identification label.

8527-166 CLOCK-AND-TIMER-MOVEMENT ASSEMBLER, AUTOMATED LINE(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles spring-operated movements for clocks and timers on automated assembly line, by performing any combination of the following duties:

Places parts, such as plates, train wheels, springs, escapements, regulators, and shut-off levers in specific positions in conveyor pallet, or in partially assembled mechanism, during conveyor stop cycle, using tweezers to place parts, and air-powered tool to tighten pillar nuts. Positions balance wheel bridge and stakes bridge, using foot operated press. Lubricates movement, using oiling needle, and moves parts with special tool or tweezers to verify proper endshake and other clearances. Places completed movement in box ready for final assembly.

8527-170 CLOCK AND WATCH FINISHER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Installs movements in cases and performs final assembly of clocks and watches by any combination of the following duties:

Fits watch cases face up in press fixture, and places watch crystal face up on case. Operates press to snap crystal into holding groove of case, by pressing pedal. Removes foreign particles from clock and watch cases, using air jet. Fits assembled movement in case in correct position to receive winding stem and inserts stem through hole in case, or manipulates stem into case slot, according to design. Fits mainspring, alarm and hand-adjusting keys and knobs to squared or threaded shafts. Tightens stem retaining screw, using screwdriver and watchmaker's loupe, and ensures that stem operates both spring and hand-setting mechanism as required. Tightens screws which secure movement to case. Screws or snaps back plate onto case, using wrench or press. Inspects crystals, case and back for surface imperfections. Attaches wristbands to watches by fitting spring-loaded pins through band loops to case lugs, by threading band through gaps in case lugs and crimping metal ring around band overlap, or by crimping links between band and case lug pins.

May mount timepieces in display boxes and pack boxes into shipping cartons.

8527-174 COMPRESSED-AIR-AND-GAS-REGULATOR ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles and tests compressed air and gas flow regulators used with underwater, industrial, or medical respiratory equipment:

Inspects regulator body and removes burrs resulting from drilling operations, using hand pick and file. Clamps body in holding fixture.

Picks up diaphragm and positions plastic seats and rings in specified slots. Inserts diaphragm assembly and other components, such as springs, retainers and seals, into body, and screws regulator stem and handle into place. Inserts and tightens holding screws in regulator body, using screwdriver. Screws gauge or protective plugs into auxiliary ports of unit and tightens them with wrench. Connects assembled regulators to test equipment and master gauge, and turns test valve to admit air pressure. Brushes soapy solution over surfaces of regulators to detect leaks. Turns regulator handle and compares gauges to verify correct regulator operation.

8527-178 DIAL INSTALLER, CLOCK AND WATCH(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: S 4 7

Installs dials and hands on clocks and watches:
Places movement in holding fixture, and installs hour wheel and spacing washers over cannon pinion, using hand tools. Installs dial on movement by inserting dial feet to holes in plate. Inserts feeler gauge between dial and faceplate of movement to ensure correct clearance, and tightens screws to secure dial. Installs hands, using staking tool, and sets hands in correct relationship to each other.

8527-180 DIAL MARKER (scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: S 4 7

Draws scale markings by hand on instrument dials:
Measures and marks specified number of increments between calibrations on dial, using dividers. Draws scale according to markings, using special pens, and ink to contrast with dial. Stamps outline of numbers on scale, using rubber stamp, and fills in outlines with ink. Marks danger points on scale in red.

8527-182 ELECTRIC-CLOCK ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles electric clocks, by performing any combination of the following duties:
Assembles dial or faceplate, frame and gear train from plates, pillars, prestaked gears and shafts, using assembly fixtures, bolts, screws and hand tools. Fastens electric motor to frame, using screws and screwdriver. Inspects components visually during assembly for defects and to ensure appropriate clearances for free movement. Lubricates gears and pivots, using small brush or oiling needle. Installs power cord to motor leads, using insulated twist connectors. Installs hour, minute and second hands by pressing them onto respective arbors or shafts, using special hand tools. Installs light-bulb sockets, light bulbs, decorative components and alarm mechanisms according to type of clock being assembled. Plugs clock into power supply, verifies operation of clock and adjusts tone and volume of alarm by turning eccentrically-mounted bell. Ensures that alarm operates at correct indicated time. Stops alarm and determines that clock operates quietly.

8527-186 HAIRSPRING CALIBRATOR(scient. & ind. equip., n.e.c.) DPT:684
hairspring vibrator.
GED: 2 SVP: 3 EC: I PA: S 4 7

Calibrates and cuts hairsprings of watch balance-wheel assemblies to required vibrating length, by either of the following methods:
1. Fastens free end of hairspring in holding fixture of electronic calibrating machine, using tweezers. Raises bed of machine until it supports lower pivot of assembly, causing vertical swings of assembly to become horizontal swings, as indicated on cathode-ray screen. Continues to raise bed, automatically winding excess length of hairspring into holding fixture, until vibrating point (point at which length of spring is such as to cause attached balance wheel to oscillate at specified rate) is located, as determined by screen readings. Moves lever to cut excess spring from assembly. 2. Positions balance-wheel assembly in holding fixture of automatic, electronic calibrating machine, using tweezers. Turns balance wheel and threads free end of hairspring through drawing rollers. Moves lever to start machine that automatically draws spring through rollers, locates vibrating point, and stops when point is located. Moves lever to cut excess spring from assembly.

8527-188 STAKER, SMALL PARTS(scient. & ind. equip., n.e.c.) DPT:684
jewel staker.
GED: 2 SVP: 3 EC: I PA: L 4 7

Operates staking press to assemble small parts; such as, cams, gears, shafts, dials and indicating needles, or to install jewelled bearings in bridges and plates, for use in instruments, measuring and controlling devices, and timepieces:
Places machined parts to be assembled, in specific relationship to each other, in fixtures and holders installed in staking press, using tweezers, loupe, or magnifying lens fixture. Pulls hand lever of press down to preset stop, to insert and force-fit one part into the other, or to spread edge or shoulder of one part in riveting action.

8527-190 LEVEL-VIAL SETTER(misc. prod. fab., n.e.c.) DPT:684
level setter.
GED: 2 SVP: 2 EC: I PA: L 4

Mounts glass vials in bodies, frames or cases to make spirit levels:
Inserts vial manually in opening of body, frame or case, and secures vial in approximate position with wedges or clamp. Mixes small quantity of plaster and water to desired consistency. Clamps frame, body or case in pre-levelled bench fixture and applies plaster around enclosed vial, using trowel or spoon. Removes vial wedges or clamp and adjusts vial to center bubble. Smooths and removes excess plaster.

8527-192 PRECISION-PRESS OPERATOR(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I PA: S 4 7

Operates small air-powered press to fabricate minute parts used in the manufacture of pocket watches and small clocks:
Places parts; such as, balance wheels, hour hands, hairsprings and collets, and mainsprings, in holding fixture in bed of press, using tweezers. Depresses foot pedal to actuate ram containing fine tool, that performs single or combined operation; such as, piercing, sizing, trimming, forming or press-fitting, in single stroke.
May use loupe to make sample visual inspection of parts at intervals.

8527-194 REGULATOR, TIMEPIECE(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I PA: L 4

Determines timekeeping accuracy of spring-driven watches, clocks and timers, and adjusts regulators to obtain specified performance:
Winds timepiece by hand or winding device, and sets time to agree with master timer. Places timepiece on rack for specified period. Compares time indicated at end of period with master timer, and selects units within specified limits of deviation. Rewinds units not within limits, and adjusts regulators, using pointed tool. Replaces adjusted units on rack for further specified period and comparison.

8527-198 THERMOSTAT-CAPILLARY SEALER(scient. & ind. equip., n.e.c.) DPT:684
bellows crimper.
GED: 2 SVP: 2 EC: I 4 PA: L 4

Crimps and solders end of liquid-filled capillary tubes used for thermostatic controls:
Lifts exposed open end of capillary tube from non-powered rotating fixture submerged in temperature-controlled water tank. Raises end of tube into crimping fixture up to end stop. Depresses foot pedal to crimp end of tube. Releases pedal, lowers tube, and solders crimped end, using gas torch. Allows tube to drop back into fixture for removal by another worker.
May load and unload capillary tubes from submerged fixture.

8527-299 OTHER PRECISION INSTRUMENTS AND RELATED EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS

This group includes precision instrument and related equipment fabricating and assembling workers, not elsewhere classified; for example, those who assemble film processing units, assemble and mount lenses for optical apparatus, make surveyors' tapes, assemble

and calibrate speedometers, calibrate glass vessels, and adjust timing of clocks and watches. Typical examples of occupational titles covered by this residual group definition are:

Clock Magnetizer(scient. & ind. equip., n.e.c.)
Escape-Spring Adjuster(scient. & ind. equip., n.e.c.)
Film-Processing-Unit Assembler(scient. & ind. equip., n.e.c.)
Glass Calibrator(scient. & ind. equip., n.e.c.)
Optical-Instrument Assembler(scient. & ind. equip., n.e.c.)
Speedometer Assembler and Calibrator(scient. & ind. equip., n.e.c.)
Surveyors' Tape Maker(scient. & ind. equip., n.e.c.)
Timing Adjuster(scient. & ind. equip., n.e.c.)

8528-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, FABRICATING AND ASSEMBLING METAL PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), concerned with fabricating and assembling a variety of metal products.

8528-110 TINWARE WORKER(metal stamp., press. & coat.)
DPT:687
GED: 1 SVP: 2 EC: 1 5 6 PA: M 3 4

Performs any combination of the following duties involved in the manufacture of tin cans:
Unpacks bundles of tinplate sheets by removing binding wires, using wire cutters. Examines tinplate sheets visually to detect surface defects. Removes dents from sheets, using wooden mallet. Sorts tinplate sheets according to size and thickness. Stacks defective sheets by hand and places them in reject pile on pallet. Removes lithographed tinplate sheets from drying oven and stacks on pallets. Packs lids or cans in cartons or bags, manually or by automatic machine. Lines inside of railroad cars or transport trucks with paper, to prevent damage to cans, by stapling paper to walls and floor. Stacks cans in railroad cars or transport trucks with can fork. Fastens braces of wood or metal to sides of freight car to keep bulk-packed cans in place. Collects and discards spoiled tin sheets and cans by pitchforking them from scrap containers into scrap truck. Pushes scrap trucks to chutes and dumps scrap into open freight cars or trucks for disposal. Maintains supply of packaging material by transporting it from storage area, using handtruck. Moves tinplate, cans and other materials between work stations, using handtrucks, electric trucks or chain hoists. Cleans assigned work area.
May keep record of material used and packed. May be designated according to specific duties performed; for example,
Line-Setter, Hustler
Packer, Lids
Plate Sorter
Tinplate Bundler-Hustler

8528-114 WEDGER, MACHINE(misc. prod. fab., n.e.c.)
DPT:887
GED: 1 SVP: 2 EC: 1 5 PA: L 4

Mounts tools, such as axes, hatchets and hammers on wooden handles:
Inserts slotted end of handle into eye of tool. Places head of assembled workpiece under power hammer and depresses foot pedal to drive tool head onto handle. Inserts wooden or metal wedge into handle slot and depresses foot pedal to force wedge into place.

8528-199 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, FABRICATING AND ASSEMBLING METAL PRODUCTS

This group includes metal products labourers and other elemental workers, not elsewhere classified; for example, those who attach handles to metal pails. A typical example of an occupational title covered by this residual group definition is:
Pail-Handle Inserter(metal stamp., press. & coat.)

8529-OTHER FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating and assembling metal products.

Wire Products Fabricating and Assembling Occupations, n.e.c.
8529-110 through 8529-126

8529-110 CYLINDER-ROLL FABRICATOR(wire prod.)
DPT:684
dandy-roll fabricator; seamer.
GED: 3 SVP: 7 EC: 1 PA: M 3 4 7

Fabricates cylinder rolls used in paper processing by cutting, honing, fitting and brazing fine wire cloth to specifications:
Places specified type of wire cloth on cutting table. Lays out cutting lines, using straightedge, rulers or pattern, and cuts wire cloth between parallel wire of weave or along edge of pattern, using shears. Examines sheared edge, using magnifying glass or binocular microscope. Hones edges to prepare cloth for seaming. Fits wire cloth around cylindrical screen frame, smooths contours by hand and aligns edges for brazing. Attaches leather straps to hold cloth in position for brazing. Operates torch to braze or solder seam, using specified filler material and flux. Files and hones seam to blend contour and prevent seam from showing during paper processing operations.

8529-114 MESH-WELDING-MACHINE OPERATOR(wire prod.)
DPT:682
loom operator, electric.
GED: 3 SVP: 4 EC: 1 5 6 PA: M 2 3 4

Operates mesh-welding machine to produce wire-mesh screening used in the manufacture of products such as, concrete re-enforcing material, industrial tote boxes, or wire-wall enclosure:
Studies work order and gathers hanks (coils) of wire required to produce mesh screening. Sets up and operates straightening machine that cuts shoot wires (straight screen wires) to specified length, using hand tools and rule. Manually loads shoot wires into mesh welding machine feed hopper and warp wires (lengthwise thread wires) onto machine feed rolls. Sets up mesh-welding machine by installing specified guides, adjusting welding electrodes, and positioning securing magnets, using hand tools and measuring devices. Operates machine manually for trial period and examines output for quality standards, using specifications, rulers and micrometers. Repositions machine control switch from manual to automatic and operates machine to produce specified amount of rigid wire-mesh screening.

8529-118 STEEL-WOOL-MACHINE OPERATOR(wire prod.)
DPT:682
GED: 3 SVP: 4 EC: 1 PA: M 4

Operates machine that shaves steel wire to form steel wool:
Mounts spool of flat steel wire on machine, using electric hoist. Installs specified cutting tools in machine toolholder, using hand tools. Turns controls to adjust depth of cut according to specifications. Operates control switches to start machine and threads flat wire stock through automatic feeding mechanism. Turns valves to control cooling agent to each cutting tool. Observes strands of cut wire moving to catch basin to form rolls of steel wool. Repairs breaks in strands by splicing ends together, manually. Welds new spool of flat-steel wire to end of used spool, using butt-welding machine.
May thread steel strands through guides to steel wool ball-making machine for subsequent processing into soap pads.

8529-122 WIRE-CONVEYOR-BELT BUILDER(wire prod.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: H 4

Builds wire conveyor belts by assembling spiral wire coils and metal rods to side plates prior to brazing by other workers:
Removes spiral wire coils and metal rods with one end crimped from hoppers of wire-forming and rod-crimping machines. Aligns ends of coils with previously positioned coils on worktable and trims to length, using pliers. Joins coils by inserting straight end of rod through coils

and crimping rod ends, using crimping tool. Connects crimped rods to side plates to prepare wire conveyor belt assembly for final brazing operations. Builds up specified length of belt and bends back protruding ends of coils or rods, using pliers. Measures completed assembly with ruler and gauges for conformance to specifications. Moves conveyor belt assemblies to designated work areas, using electric hoist.

8529-126 WIRE-MESH-GATE ASSEMBLER(wire prod.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: M 4

Fabricates metal products, such as barriers, frames, or gates, by assembling pipe stock, special fittings and wire mesh fencing:
Cuts pipe stock to specified size, using pipe cutter. Inserts pipe ends into corner fittings and verifies framework dimensions against template. Drills holes through pipe and fittings, using power drill. Bolts pipes, fittings and required braces together, using power wrenches. Cuts wire mesh to size, using wirecutters. Inserts metal straps into terminal links of wire and fits clamps around metal straps and framework. Stretches wire and bends clamps around framework, using ratchet tool. Smooths welded pipe joints, using hammer, chisel and files, and paints joints to retard rusting.
May install hinges, ornamental castings, or signs on gates or barriers, using power drill and hand tools.

Ammunition Fabricating and Assembling Occupations, n.e.c.
8529-146 through 8529-158

8529-146 SALVAGE-MACHINE OPERATOR(explosives) DPT:682
GED: 3 SVP: 4 EC: 1 5 6 PA: L 4

Operates machines that disassemble rejected cartridges to salvage metal parts:
Replaces or adjusts punches, fingers, dies, feedplate, and shell holders, using hand tools. Turns setscrews and stopnuts, using wrenches and screwdrivers to adjust ratchets, springs, gates, and pulldown mechanisms to accommodate calibre of cartridge being processed. Starts machine, by activating switch, and feeds cartridges into slot in dial feed plate by hand. Shakes empty cases in hand tumbler to remove powder. Weighs scrap and components on scale and records weight on production sheet.
May insert cartridges in jaws of bench device and pull lever to extract bullet. May sort and tag components salvaged for further processing.

8529-150 BURNING-GROUND ATTENDANT(explosives) DPT:684
GED: 2 SVP: 3 EC: 0 6 PA: H 4

Reclaims usable metal parts, and destroys waste ammunition powders, defective ammunition components or waste commercial explosives by either of the following methods:
1. Disassembles defective ammunition components, such as boosters, fuses, and shells, to reclaim usable parts, using hand and power tools. Transports waste explosive powders and defective ammunition components to burning area, by truck. Closes barrier and raises red flag to warn other employees of danger. Places powder on specified sites according to safety regulations, buries loaded shells in sand pit to retain fragments and places detonators, fuses and primers into pan filled with fuel oil. Positions electric detonators near waste material and connects wires to remote control firing device. Ensures area is completely free of personnel and detonates charge by remote control. Loads scrap metal into truck for salvage and cleans area, using rake and shovel. Records quantity and nature of powder and ammunition destroyed. 2. Transports waste commercial powders to burning area, by truck. Closes barrier and raises red flag to warn other employees of danger. Spreads powder and paper on ground according to safety regulations. Ignites powder and monitors burning operation to ensure powder is completely destroyed.

8529-154 METALLIC-CUP-MACHINE TENDER(explosives) DPT:685
cup-forming and trimming-machines tender.
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends machines that produce metallic cups for bomb and shell detonators by either of the following methods:
1. Places reel of strip metal on spindle of automatic press. Threads end of strip into machine feeding mechanism. Presses button to start press that forms metallic cups to specified size. Observes machine operation and advises superior in case of machine malfunction. Loads metallic cups into metal baskets. Immerses cups into degreasing compound and air dries them prior to subsequent loading operations or storage. 2. Inserts unfinished metallic cups into feeding mechanism of automatic lathe. Presses button to start machine that trims cups to specified size. Verifies dimensions of cups, using gauges and micrometer and discards defective cups. Loads acceptable cups into hopper of finishing mill and adds abrasives and soap. Pushes button to start machine that polishes and washes machined cups. Turns valve to rinse cups with water. Places rinsed cups in drying oven prior to subsequent loading operations or storage.

8529-158 SHAKER-PLATE TENDER(explosives) DPT:685
shell-sieve tender.
GED: 2 SVP: 2 EC: 1 5 6 PA: L 4 7

Tends shaker machine that positions small arms cartridges or components in specially holed plates and shakes out loose foreign matter:
Places shaker screen on shaker bed and scoops bullets or cases onto screen. Starts machine that shakes screen to remove foreign matter and tumbles primed cartridge cases or components into holed plates, or shakes screen by hand. Stops machine and shakes plate manually to invert deflected parts, or brushes bullets or cases into holes of plate, using gloved hand. Examines cartridges and components for defects, such as dents, burrs, scratches, and reversed or missing parts, using magnifying glass. Removes defective parts, using tweezers or pick. Positions transfer plate on top of charge plate and inverts charge plate to position bullets noses up. Places filled plates on conveyor that immerses bullet noses in lubricant to coat bullets, preventing lead deposits within weapon bore when fired.
May record quantity of rejections according to type of defect.

**Miscellaneous Metal Products Fabricating
and Assembling Occupations, n.e.c.**
8529-178 through 8529-299

8529-178 DIAMOND-SAW MAKER(metal fab., n.e.c.) DPT:381
GED: 4 SVP: 7 EC: 1 5 PA: M 4 7

Manufactures or rebuilds large reciprocating or circular diamond saws used in cutting stone, concrete or similar materials:
Reads work order to determine operating instructions. Prepares steel blade for insert setting by operating rotary wire brush to remove rust. Lifts blade onto steel table manually or by operating electric hoist. Removes worn diamond inserts from repairable saw blade, using welding torch, hammer and drift. Straightens circular saw blade, using hammer, straightedge and knowledge of process. Places diamond bearing inserts in saw blade. Positions flux and brazing strips and sets diamond insert into position, using self-centering jig or by tapping with hammer. Files or grinds end of insert and brazing strip, using knowledge of process, to produce a circular saw blade which will run true at specified operating speed. Operates welding torch to braze segments into position.

8529-182 GUN ASSEMBLER(metal fab., n.e.c.) DPT:381
small-arms-final assembler.
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Assembles small arms; such as, revolvers, rifles, shotguns and air or gas-powered guns:
Verifies dimensions, fit and appearance of parts and subassemblies, using fixed gauges. Files, scrapes and reams parts as required, using hand tools. Screws and bolts together parts; such as, barrel, stock, receiver and sight, to assemble weapon, using hand and power tools. Tests action of weapon to detect malfunctions. Disassembles defective weapons and makes necessary adjustments.
May mount and align telescopic sights. May test action of weapon,

using dummy ammunition. May touch-up paintwork on weapons, using brush or spray gun.

8529-186 CASKET ASSEMBLER, METAL(metal fab., n.e.c.)
DPT:682

GED: 3 SVP: 6 EC: I 5 PA: H 3 4 7

Assembles and shapes metal sheets to form metal caskets: Operates power presses to cut and shape sheetmetal for casket assembly according to specifications. Places sheetmetal sections into jigs to form casket and lid. Solders joints, using soldering iron, and smooths rough joint surfaces, using grinder or file. Saws wooden slats to specified dimensions to form wooden frame for casket interior, using handsaw and jointer. Bolts slats to flanges on casket and lid, using hand tools. Fits lid to casket. Bends casket flange by hand to ensure tight fit. Sprinkles powder on mating surfaces, to provide visual proof of tight lid fit. Drills and bolts hinges to lid, using power drill. Welds hinges to casket, using electric spot-welding machine.

8529-190 METAL-SHEATHED-INSULATION MAKER(asbestos & min. wool)
DPT:682
GED: 3 SVP: 4 EC: I 5 6 PA: M 4

Operates a variety of machines to produce metal-sheathed insulation for exterior industrial piping:
Reads work order and requisitions materials; such as, sheet aluminum, steel or stainless steel, pipe insulation, and adhesive. Operates shear to cut sheets to specified size. Operates roll-forming machine to form sheathing of appropriate diameter. Operates punch press to produce metal locking straps. Operates mixing unit to mix adhesives to specifications. Brushes adhesive on interior of sheathing, positions insulation halves as specified and closes utilizing flanges. Packs piping insulation and appropriate number of locking straps into cartons. May work as part of a two-man team and operate machines to produce corrugated or flat metal coverings used to protect insulation on exterior industrial equipment.

8529-194 FURNITURE ASSEMBLER, METAL(furn.)
DPT:684
GED: 3 SVP: 4 EC: I PA: M 4

Assembles metal furniture by performing any combination of the following tasks:
Reads specifications, work orders, or sketches for assembly instructions. Drills holes in parts or items; such as, back-rests, covers, seats, metal cabinets, bookcases and filing cabinets. Fits parts together and fastens them temporarily with clamps. Assembles components; such as, desk tops, seats, arms or head rests. Bolts or screws parts together, using hand tools such as pliers, wrenches, ratchet and pneumatic screw-drivers. Refits components which fail to assemble, using file, hacksaw or drill. Rivets parts together, using hand or pneumatic hammer. Inserts parts; such as, casters, drawers, shelves, slides, slide locks, and scuff plates into holes or slots. Bends fastening devices and fits interlocking parts together with hammer or rubber mallet. Applies cement to cushions and covers, using brush or spray gun, and joins parts by hand. Inserts drawers into slides, and adjusts slides to fit drawer surfaces. Examines completed work and marks defects in finish for attention of other workers.
May assemble parts on an assembly line, or assemble particular type of furniture, and be designated accordingly; for example,
Hydraulic-Chair Assembler
Locker Assembler
Metal-Cabinet Assembler
Metal-Table Assembler
Office-Chair Assembler
Production Worker

8529-198 METAL-PRODUCTS ASSEMBLER(struct., plate & ornam. metal)
DPT:684
GED: 3 SVP: 4 EC: I PA: M 4

Assembles standard or custom metal components and products; such as, structural assemblies, awnings, metal sashes, shower doors, aluminum doors and aluminum windows by performing any combination of the following tasks:
Reads specifications or work orders for assembly instructions. Operates sandblasting equipment to frost or cut decorative designs in glass panels. Assembles and aligns predrilled frame components in jigs or fixtures and fits edges, using grinder or file. Bolts, screws or rivets

frame together, using hand tools or hand riveter, and installs hardware such as, locks, hinges, or catches. Cuts channels, mouldings or panels to length, using punch cutter or cutoff saw, and installs according to specifications. Assembles metal or vinyl framing for glass windows or shower panels by positioning frame, using hammer. Installs glass windows or shower panels in component channel assemblies. Cuts screen to size, using knife. Positions screen over opening, rolls edge into groove and rolls plastic or metal spline into groove to secure screen, using disk roller. Attaches tag or sticker to workpiece and examines completed assembly, marking defects for attention by other workers.

May assemble plywood sliding doors. May be designated according to type of product assembled; for example,
Aluminum-Door-and-Window Assembler
Awning Assembler
Shower-Door-and-Panel Assembler
Window-and-Screen Assembler

8529-202 ARBOR-PRESS TENDER(any ind.)
DPT:685
GED: 3 SVP: 4 EC: I PA: M 4

Tends power-arbor press to press-fit parts; such as, bearings, gears, armatures and wheels, to housing, shafts or axles:
Reads work order and installs specified holding fixture, die or arbor in press, using hand tools. Positions parts in holding fixture on press bed under ram, manually or using hoist. Moves controls to lower ram that presses part onto shaft or into housing. Verifies alignment of parts, using rule and gauges.
May disassemble parts, using arbor press. May repair defective parts after disassembly, using hand, power or machine tools. May be designated according to part assembled; for example,
Wheel-Press Operator(rail. rolling stock)

8529-206 BEARING ASSEMBLER(metal fab., n.e.c.)
DPT:684
GED: 3 SVP: 3 EC: I PA: L 4 7

Assembles miniature, standard and large ball or roller bearings by performing any combination of the following duties:
Measures and selects matched inner and outer rings, and places them on pedestal jig. Picks up miniature bearings, using vacuum needle, or actuates lever that releases appropriate size and number of ball or roller bearings from feed hopper. Inserts balls or rollers between inner and outer rings, using non-magnetic needle. Inserts retaining guard or cage into bearing unit assembly manually. Places assembled bearings on conveyor that carries them through cleaning and oil baths. Inspects bearings for obvious physical defects by running them over a surface plate and revolving by hand. Places acceptable bearings on sound testing machine and records aural and visual readings. Loads acceptable bearings in baskets for final degreasing and drying. Stencils manufacturers information on outer ring, using electric etching process. Places stencilled bearings on machine that fills bearing race with controlled amount of grease. Wraps bearings individually or in groups, using special paper.
May perform repair or salvage operations on rejected bearings that do not meet test specifications.

8529-210 SPOKE-WHEEL ASSEMBLER(motor vehicle)
DPT:684
GED: 2 SVP: 4 EC: I PA: M 4

Laces and aligns spoke-wheels, such as motorcycle and bicycle wheels, according to specification, by either of the following methods:
1. Places spoked hub on bed of machine and positions rim over hub. Presses button to start machine that fits and tightens spoke nipples, and aligns and centers rim. 2. Hooks wire spokes onto perforated hubs and screws nipples of spokes onto rim to lace wheel, using special wrench. Measures diameter of wheel, using fixed gauge. Mounts tires on wheels and clamps wheel in fixture. Positions dial indicator against tire and rim, turns wheel, and observes needle deflection on indicator. Turns nipples with wrench to adjust tension of spokes at indicated points to align wheel.

8529-214 GUN SUBASSEMBLER(metal fab., n.e.c.)
DPT:684
small-arms subassembler.
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles triggers, bolts, ejectors, magazines and other subassemblies for small arms; such as, revolvers, rifles, shotguns and air or gas-powered guns:

Drills, reams and countersinks parts, using power tools. Screws, bolts or rivets parts together to form subassembly, using hand and power tools. Files, scrapes or peens parts to improve fit and appearance. Verifies accuracy of assembly, using gauges. May assemble gun stock, barrel, trigger, and other components to form complete weapon, using hand and power tools.

8529-218 AIR-CONDITIONING-COIL ASSEMBLER (mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: L 4 PA: M 4

Assembles prepunched aluminum fin plates and copper tubing to form cooling coils for air-conditioning units: Clamps fin plates into position on bench. Inserts copper tubing through holes in fin plates. Positions hydraulic expansion chucks on each end of tubing and operates control to apply hydraulic pressure to expand tubes into fins. Expands tube ends, using pneumatic hammer or hand-flaring tool. Immerses coil in water tank, using hoist, connects air hose to one end and plugs other end, to test for air leaks. Repairs leaky coils, using hand tools and brazing equipment.

8529-222 PRODUCT ASSEMBLER, METAL(any ind.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4

Assembles metal products; such as, vacuum cleaners, valves, hydraulic cylinders or domestic appliances, partially or completely, working at bench or on shop floor: Positions component parts according to knowledge of unit being assembled or in accordance with drawings and specifications. Aligns holes and assembles parts with bolts, screws, speed clips, or other fasteners, using hand tools and portable power tools. Files and scrapes parts to produce close fit. May operate drill presses, punch presses or riveting machines to assist in assembly operation.

8529-226 VENETIAN-BLIND ASSEMBLER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4

Assembles venetian blinds: Reads work order to determine components required to assemble venetian blind. Tends power press to form and cut metal rails and slats to required dimensions. Installs metal turning and raising assemblies in place on top rail, using hand tools, and attaches tapes and cords. Places required number of slats through tape loops and threads cord through holes in slats. Fastens end of tape to bottom rail, using stapler, and trims excess tape from assembled blind. Examines completed assembly and installs blind on hangers to test functional performance. Wraps and packs blinds for shipment.

8529-228 CARBIDE-PRESS TENDER(metal fab., n.e.c.) DPT:685
compressor, tungsten-carbide blanks.
GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Compresses granulated tungsten-carbide powder into carbide blanks of specified size and shape, by either of the following methods: 1. Installs dies in machine and adjusts spring tension and ram pressure of mechanical press, according to specifications, using hand tools. Scoops or dumps powder into hopper, and presses button to start machine that compresses powder into blanks. Examines and feels compressed blanks to detect surface chips, pits and other imperfections. Measures and weighs samples, using micrometer and scale, or routes samples to laboratory for analysis and inspection. Readjusts machine tension and pressure as required to produce carbide blanks according to specifications. Places blanks on trays preparatory to sintering. Removes and cleans dies and compression chambers, using hand tools, air hose and cloth. 2. Weighs out specified amount of powder, using scoop and scale. Dumps powder from scale pan into cavity of collapsible mould, and levels powder with hand tool. Places plunger block over powder in mould, places mould in hydraulic press, and presses button to close side rams, locking mould in place. Presses dual buttons to lower ram, compressing powder in mould into desired shape. Releases buttons, removes mould from press and disassembles mould. Removes carbide blank from mould, examines it for defects and places on tray preparatory to sintering. Sends samples to

laboratory for analysis and inspection. Cleans mould sections, using scraper and cloth, and reassembles mould.

8529-230 COUPLING-MACHINE TENDER(iron & steel) DPT:685
GED: 2 SVP: 2 EC: I 5 6 7 PA: M 4

Tends machine that screws metal couplings onto lengths of pipe: Reads work order and sets machine torque dial to specifications. Lifts couplings onto machine feed ramp. Pushes button to start automatic machine that tightens couplings onto pipe to specified torque. Presses release button that lifts pipe onto transfer table and into drifter machine that cleans inside of pipe. Observes automatic action of indexing machine that paints coloured identification bands on pipes. Performs servicing and maintenance operations on machines, such as refilling grease and paint reservoirs from cans, and replacing or adjusting pipe holding mechanisms, using wrenches. Manually controls machine operations in event of breakdown of automatic control system.

8529-234 KNITTING-NEEDLE-MACHINE FEEDER(misc. prod. fab., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I 5 6 PA: L 4 7

Feeds variety of machines that bend, chamfer, clip, press, rivet or straighten industrial knitting needles prior to final processing: Prepares needles for processing by aligning ends in feed trap or on machine beds, or by placing in special holding fixtures and securing lids, using wrench. Feeds needles into machines that incorporate feeding devices such as conveyors, jaws or slots according to standard procedures. Observes functioning of machines and removes jammed needles, using metal tool. Empties filled catch pans or removes needles from special holding fixtures, using wrench. Reports malfunctioning of machines for corrective action. Records daily production data on work card. May feed vibrating board with processed needles to align ends in preparation for packaging. May inspect and adjust latches on knitting needles, using metal tool, and be designated accordingly, Knitting-Needle-Latch Adjuster

8529-238 ASSEMBLER, FILTERS(misc. prod. fab., n.e.c.; motor vehicle) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4

Assembles filters used in air, fuel or oil systems on aircraft, automotive or industrial engines by performing any combination of the following duties: Places roll of paper on holder and threads paper through convolution machine. Presses control button to start machine that folds and cures filter paper. Observes machine operation for jamming or overcuring. Assembles filter components composed of metal, rubber, plastic or paper materials and places them into applicable outer casing or shroud. Installs plastic-coated metal, plastic or cardboard disks on ends of filter units. Places units in machine that automatically fastens sealers on ends. May operate screening machine used to print information on filter surface. May be designated according to type of filter assembled; for example, Air-Filter Assembler Fuel-Filter Assembler Oil-Filter Assembler

8529-242 BABY-CARRIAGE ASSEMBLER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4

Assembles prefabricated metal and plastic parts to make baby carriages and strollers: Assembles and fits prefabricated metal and plastic parts together with nuts and bolts, screws or rivets, using a variety of hand and power tools. Glues side padding to assembled frame, using brush. Installs specified hardware, hood, cushions and wheels to complete carriage or stroller assembly. May place package of wheels in assembled unit for installation by customer.

8529-246 STRETCHER, BEDSPRING(furn.) DPT:687
 GED: 2 SVP: 2 EC: 1 PA: M 4

Stretches wire mesh over metal frames to assemble springs for cots, folding beds or other furniture:
 Clamps frame into jig and places metal springs in specified positions on frame bars. Spreads wire mesh over frame and hooks springs to loops in mesh, using hand tool. Stretches wire mesh over frame by attaching and clinching metal clips, using hammer and pliers.
 May attach edge-wire frames to coil spring assemblies of mattresses or box springs, using wire clips and pliers, and be designated accordingly,
 Wire-Border Installer

**8529-299 MISCELLANEOUS FABRICATING AND
 ASSEMBLING OCCUPATIONS, METAL
 PRODUCTS**

This group includes metal products fabricating and assembling workers, not elsewhere classified; for example, those who tend machines that rivet ear lugs onto sides of pails, garbage cans or paint tins. A typical example of an occupational title covered by this residual group definition is:
 Ear-Lug Riveter(misc. prod. fab., n.e.c.)

853-FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS: ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT

This minor group includes occupations concerned with fabricating, assembling, installing and repairing such electrical and electronic equipment as motors, generators and batteries, domestic appliances, communications equipment, data-processing equipment, and radio and television receivers; and such electrical and electronic components and parts as coils, transformers, light bulbs, cathode-ray and electron tubes, capacitors, resistors and printed circuitry. Occupations concerned with repairing office equipment, such as bookkeeping machines and typewriters, are classified in Unit Group 8585, BUSINESS AND COMMERCIAL MACHINE MECHANICS AND REPAIRMEN. Occupations concerned with installing and repairing precision instruments, such as scientific, engineering, optical and medical instruments and apparatus, are classified in Unit Group 8588, PRECISION INSTRUMENT MECHANICS AND REPAIRMEN. Occupations concerned with fabricating and assembling other equipment primarily of a mechanical nature, but which may be electrically or electronically activated, are classified in their appropriate unit groups within Major Group 85, PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS. FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS: ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT are classified in the following unit groups:

- 8530** Foremen: Fabricating, Assembling,
 Installing and Repairing Occupations,
 Electrical, Electronic and Related
 Equipment
- 8531** Electrical Equipment Fabricating and
 Assembling Occupations
- 8533** Electrical and Related Equipment Installing
 and Repairing Occupations, n.e.c.
- 8534** Electronic Equipment Fabricating and
 Assembling Occupations
- 8535** Electronic and Related Equipment
 Installing and Repairing Occupations,
 n.e.c.
- 8536** Inspecting and Testing Occupations:
 Fabricating, Assembling, Installing and
 Repairing, Electrical, Electronic and
 Related Equipment
- 8537** Radio and Television Service Repairmen
- 8538** Occupations in Labouring and Other
 " Elemental Work: Fabricating,
 Assembling, Installing and Repairing,
 Electrical, Electronic and Related
 Equipment

**8539 Fabricating, Assembling, Installing and
Repairing Occupations: Electrical,
Electronic and Related Equipment, n.e.c.**

**8530-FOREMEN: FABRICATING, ASSEMBLING,
INSTALLING AND REPAIRING OCCUPATIONS,
ELECTRICAL, ELECTRONIC AND RELATED
EQUIPMENT**

This unit group includes occupations as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating, assembling, installing, repairing, testing and inspecting electrical, electronic and related equipment.

**8530-110 FOREMAN, ELECTRICAL AND ELECTRONIC
INSPECTION(electric. equip.; electronic equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, testing, grading and sampling work concerned with quality control activities in assembly, fabrication, installation and repair of electrical, electronic and related equipment (Unit Group 8536): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Chief Inspector, Television Production(electronic equip.) Foreman, Communications-Equipment Testing(electronic equip.) Foreman, Electric-Motor Testing(electric. equip.)

**8530-118 FOREMAN, ELECTRICAL EQUIPMENT
FABRICATING AND ASSEMBLING
OCCUPATIONS(electric. equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling a wide variety of electrical equipment, such as motors and generators, household-electrical appliances, industrial-electrical-control equipment and wet or dry cells, storage batteries and battery packs (Unit Group 8531): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Appliance Assembly Foreman, Dry-Cell Assembly Foreman, Motor-and-Generator Assembly

**8530-122 FOREMAN, ELECTRICAL EQUIPMENT
INSTALLATION AND REPAIR(electric. equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in installing and repairing various kinds of electrical machinery and equipment, such as domestic appliances and electrical components of transport vehicles, aircraft and ships (Unit Group 8533): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Electric-Motor-Repair Foreman Foreman, Appliance-Repair Shop Foreman, Transformer-Repair Shop

**8530-126 FOREMAN, ELECTRONIC EQUIPMENT
FABRICATING AND ASSEMBLING
OCCUPATIONS(electronic equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating and assembling a wide variety of electronic equipment, such as domestic radio and television receivers, high fidelity audio equipment, commercial and aircraft communications and radar equipment, and components such as electron tubes, capacitors and printed circuit boards (Unit Group 8534):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Crystal-Processing Foreman Foreman, Communications-Equipment Assembly Printed-Circuit-Board Foreman Semiconductor-Assembly Foreman

**8530-130 FOREMAN, ELECTRONIC EQUIPMENT
INSTALLATION AND REPAIR(air trans.;
electronic equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in installing and repairing a wide variety of commercial electronic and related equipment, such as communications receivers and transmitters, radar equipment and computing equipment (Unit Group 8535): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Flight-Simulator Repair, Chief(air trans.) Foreman, Aircraft-Radar Repair(electronic equip.) Foreman, Audio-Visual Equipment(electronic equip.)

**8530-134 FOREMAN, RADIO AND TELEVISION
REPAIR(electronic equip.)**

DPT:138

Supervises and co-ordinates activities of workers engaged in repairing radio and television receivers and other domestic electronic equipment, such as tape recorders and high-fidelity audio equipment (Unit Group 8537): Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Radio Repair Foreman, Television Repair

**8530-199 OTHER FOREMEN, ELECTRICAL AND
ELECTRONIC OCCUPATIONS**

This group includes electrical and electronic foreman, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in tending coil-winding machines that wind coils for use in small electrical and electronic components. A typical example of an occupational title covered by this residual group definition is:
Foreman, Coil Winding(electric. equip.; electronic equip.)

**8531-ELECTRICAL EQUIPMENT FABRICATING AND
ASSEMBLING OCCUPATIONS**

This unit group includes occupations concerned with fabricating and assembling commercial air-conditioning and refrigeration equipment, and other electrical products and appliances; wet and dry batteries; fixtures, bulbs, electric signs and other lighting equipment; motors, generators and related equipment; and miscellaneous products, such as automated process-control equipment, heavy-duty capacitors and power-distribution transformers. Activities include: assembly-line work, such as locating, mounting and securing component parts of appliances and motors, using hand and power tools; positioning and securing cable assemblies and attaching cables and other electrical leads to relays, switches and other components; and tending or operating production machines to wind coils for motors and generators, fill batteries with

electrolyte, and exhaust and seal electric light bulbs. ELECTRONIC EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS are classified in Unit Group 8534.

Commercial and Industrial Air-Conditioning and Refrigeration Equipment, Fabricating and Assembling Occupations 8531-110 through 8531-122

8531-110 FITTER-ASSEMBLER, ENVIRONMENTAL CHAMBER(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: 1 PA: M 3 4 7

Fits and assembles refrigeration system in refrigeration unit for use as environmental chamber:

Consults drawings to determine location, size, capacity and type of components required, such as compressor, condenser, expansion tank, valves and tubing. Fits and assembles components of refrigeration system in refrigeration unit, using hand and power tools. Installs expansion and control valves, using welding torch and wrenches. Adjusts valves according to specifications. Attaches thermocouples at various points of gas-charged refrigeration system. Test-operates equipment to evaluate functioning and cooling capacity. Fabricates and assembles structural members used to support additional test apparatus as required.

8531-114 ASSEMBLER, COMMERCIAL REFRIGERATOR(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 5 EC: 1 PA: M 3 4 7

Assembles commercial refrigerators, display case and walk-in type coolers, performing any combination of following duties:

Assembles cooling-blower assembly, by installing air impeller in housing, affixing directional air-flow grills, and by installing control switches, wiring and cushioning pads. Mounts components, such as blower assembly, electric motor, compressor, rubber grommets and insulation, using hand tools and power tools. Installs glass windows in display cases, by cutting and fitting gasket material around window pane and securing glass to cabinet with metal frame, using hand tools and power tools. Fits hardware, such as hinges, latches and shelving, using hand tools, power tools and riveting machine. Paints case with rust preventative.

May test electrical wiring for continuity or leakage to ground, using electrical-test equipment.

8531-118 GAS CHARGER, REFRIGERATION EQUIPMENT(mech. equip., n.e.c.) DPT:485
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Tends charging device to fill refrigeration unit compressors with gas refrigerant:

Tests compressor-coil assembly for leaks by admitting nitrogen or dry air under pressure, and immerses assembly in water-filled tank. Repairs leaks, using welding equipment. Purges traces of nitrogen from system, using compressed dry air. Connects assembly to vacuum pump for specified time. Sets controls on charging console to control volume and type of gas for type of unit to be charged, following specifications. Attaches filler hose to unit and actuates control to fill compressor assembly with refrigerant. Determines gas pressure in system, using pressure-measuring device. Shuts off flow of gas when specified pressure is attained and disconnects supply line. Fills oil reservoir on compressor.

8531-122 ASSEMBLER, COOLING UNIT(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Assembles cooling units and related items used in air-conditioning and refrigeration equipment, performing any combination of following duties:

Mounts blowers, fans, compressors, motors and refrigerant tubing, using hand tools, electric drill and riveter and following production drawings. Installs wiring to electrical parts, such as motor relays, switches and thermostat, using electrical connectors, terminals and crimping tool. Cuts, bends and brazes tubing to outlets and inlets of cooling unit components, using brazing equipment and hand tools. Charges unit with refrigerant, using charging equipment. Performs running test to check for noise and vibration and corrects when

necessary. Tests unit for refrigerant leaks, using gas-leak tester. Bolts down compressors to prevent damage in shipment. Pastes labels, tags and instructions on unit.

May assemble units for air-conditioning equipment and be designated accordingly,

Air-Conditioning-Unit Assembler

Electrical Appliance Fabricating and Assembling Occupations 8531-142 through 8531-148

8531-142 ASSEMBLER, ELECTRICAL APPLIANCES(electric. equip.) DPT:684
GED: 3 SVP: 4 EC: 1 5 PA: M 3 4 7

Assembles household-electrical appliances and equipment, such as stoves, washing machines, and automatic furnaces, performing any combination of the following duties:

Secures components, such as motors, pumps, control panels, blowers and heating units, in specified location, using hand and power tools. Makes electrical connections to control panels, motors, heating units or blowers as specified, according to colour, size or length of wire, by connecting mating plugs and sockets, securing prepared leads to screw terminals, placing insulated sleeving over exposed wire and interconnecting leads by soldering or by use of solderless connectors. Fastens parts such as trim, support brackets and panels by positioning and aligning parts and inserting and tightening screws, using hand and power tools. Packs or positions insulating material between panels.

May test wiring for short circuits or leakage to ground, using electrical-test equipment. May be designated according to appliance assembled; for example,

Clothes-Drier Assembler
Electric-Range Assembler
Furnace Assembler
Washing-Machine Assembler

8531-144 ELECTRICAL-APPLIANCE SET-UP MAN(electric. equip.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: H 3 4 7

Prepares major-electrical appliances, such as stoves, washing machines and refrigerators for operation:

Uncrates appliances, using pry bar, wire cutters and nail puller. Removes separately packaged items, such as control panels and hoses, and checks them against packing list. Positions and secures parts and attaches interconnecting wiring, following manufacturers instructions. Places items, such as shelves, ice trays and wire baskets, in appliance. Plugs in appliance or connects wires to power source, using hand tools. Actuates switches and controls and observes appliance to ensure operation as specified by manufacturer's instructions. Washes and polishes appliances and examines exterior surfaces for scratches and dents.

May prepare particular appliance and be designated accordingly; for example,

Dishwasher Set-Up Man
Electric-Range Set-Up Man

8531-148 ASSEMBLER, PORTABLE-ELECTRICAL APPLIANCE(electric. equip.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles portable-electrical appliances, such as food mixers, coffee makers and steam irons, performing any combination of following duties:

Inserts and tightens screws, bolts or rivets through predrilled holes, using hand and power tools, while article is held and positioned in jig, to secure field windings, fan blades, pulleys, thermostats, switches and timers to appliance housing. Installs gears, drive mechanisms, blades or cutters in motor driven appliances. Attaches lug ends of wires to terminals with screws or solders wire ends to terminals, using soldering equipment, to connect motor or line cord. Winds coiled or straight heating-element wire around mica or porcelain base, or strings wire through porcelain insulators to assemble heating units for toasters, hot plates and electric irons. Folds and seals adhesive-insulating fabric over thermostats in heating pads and electric blankets.

May be designated according to appliance assembled; for example,

Electric-Fan Assembler
Food-Mixer Assembler

Steam-Iron Assembler

Wet and Dry-Cell Battery Fabricating and Assembling Occupations 8531-168 through 8531-224

8531-168 PLATE FORMER, LEAD-ACID STORAGE BATTERY(electric. equip.) DPT:382
GED: 3 SVP: 5 EC: I 4 6 7 PA: L 4 7

Controls rectifiers or direct-current generating and auxiliary equipment to electrically condition lead-acid storage battery plates: Interconnects plates by burning (melting) lead strips to assemble elements, using gas torch. Positions elements in forming-tank slots to prevent buckling, and connects them to voltage supply terminals to electrically condition (form) plates. Admits electrolyte (diluted sulphuric acid) to forming tanks, using hose. Checks output voltage and adjusts rheostat to set forming current at specified level. Monitors forming process to detect deviations, such as increase in current or in electrolyte temperature, and makes corrective adjustments. Switches off voltage supply after specified time and disconnects elements. Removes formed elements from electrolyte. May mix acid and water to specification for use in forming tanks. May perform tests on formed plates such as on-load voltage test or discharge test.

8531-172 BATTERY-PLATE STACKER, MACHINE(electric. equip.) DPT:382
GED: 3 SVP: 4 EC: I 6 7 PA: L 4 7

Operates machine which sequentially places positive plates, separators and negative plates of lead-acid storage batteries into groups to form plate complement for one cell: Loads positive and negative plates into machine magazine. Positions separators in magazine with ribbed side towards positive plate, to facilitate passage of sediment in operational battery. Moves lever to set electrical counter for number of plates specified for one battery cell. Turns screws to adjust opening in feeding mechanism according to plate size, using hand tools. Starts machine to stack positive and negative plates and separators alternately, to form group. Clears machine stoppages and adjusts machine to correct malfunctions, using hand tools. Places grouped plates on conveyor to transport them to another station for further processing. Removes lead-oxide dust from machine, using vacuum cleaner.

8531-176 PASTING-MACHINE OPERATOR(electric. equip.) DPT:382
lead-acid battery plate maker.
GED: 3 SVP: 4 EC: I 6 7 PA: M 4 7

Operates pasting machine and dryer to apply specified amount of lead-oxide paste to grids to make positive plates for lead-acid storage batteries: Stacks grids or multiple-grid panels on bench or in automatic feeding device. Adjusts machine guides to grid size, using hand tools. Installs correct pasting plate and roller, according to thickness specified for plate, using hand tools. Hoists carts of paste into position near machine and shovels or hoes paste into hopper. Starts machine that automatically feeds grids between shoes of scraper to produce plate. Sets dryer temperature as specified. Examines plates to ensure adequate processing. Cleans machine and equipment. May apply paste by hand for special batteries or for short runs and be designated accordingly, Paster Hand, Battery Plates

8531-180 ASSEMBLER, STORAGE BATTERY(electric. equip.) DPT:484
GED: 3 SVP: 4 EC: I 6 PA: L 4 7

Assembles lead-acid storage batteries, performing any combination of following duties: Positions group of plates for cell in jig and inserts insulating separators between positive and negative plates. Inserts shaped insulating material around cell or inserts wooden shims to obtain tight fit. Places state-of-charge indicator in each cell and attaches glass mat to rear surface, using adhesive. Applies liquid level lines to case, using marking device. Installs cell covers and inserts bushings over post

openings to provide lead-proof seal. Fits and fuses intercell connectors on posts, using torch. Fits filler plugs over acid-filling openings. Pours molten compound over cells to fill cracks and seal battery, using thermostatically-controlled kettle and sealing or automatic extrusion device. Stamps information, such as polarity symbols and dates, on posts and connectors, using marking dies and mallet. Tests sealed units for air leaks, by submerging in water and using air-pressure device. Tests cells electrically by determining internal resistance, using ohmmeter, or applies specified voltage and reads current flow with testing device.

May tend automated-process equipment to perform functions, such as positioning interconnecting lead straps, lead burning and sealing. May perform similar duties related to assembly of nickel-iron and nickel-cadmium storage batteries.

May perform a particular function and be designated accordingly; for example, Element Setter Separator Inserter

8531-184 ASSEMBLER, INDUSTRIAL-STORAGE-BATTERY-PLATES(electric. equip.) DPT:684
GED: 2 SVP: 4 EC: I 6 7 PA: M 4 7

Prepares and assembles component parts to make positive plates for heavy-duty industrial lead-acid storage batteries, performing any combination of following duties:

Fills hopper of tube-filling and capping machine with lead-oxide powder. Positions nylon cylindrical tubes and plastic bottom sections, in machine-feed mechanisms. Actuates control to release measured amounts of lead oxide into cylindrical tube and pack oxide into tube. Positions lead spines (comb-shaped lead castings) in trimming and forming machines that trim off excess metal, straighten and flatten spines, and cut them to specified length. Examines spines and removes excess metal, using scraper and hacksaw blade. Aligns lead-oxide filled nylon tubes in jig on workbench and pushes lead spines into tubes, by hand.

May perform a specific duty and be designated accordingly; for example, Spine Fitter Storage-Battery-Tube Filler Trimmer and Slammer

8531-188 FLAT-DRY-CELL-MACHINE TENDER(electric. equip.) DPT:685
wafer-machine tender.
GED: 3 SVP: 3 EC: I PA: L 4 5 7

Tends machines to fabricate wafer-type (flat) dry cells: Loads feeding mechanisms with materials, such as pliofilm, paper, zinc and carbon plates and silver wax. Starts machine which cuts piece of pliofilm with adhesive surface, presses zinc plate on pliofilm, cuts and places paper cover on zinc plate, deposits black mix (electrolyte) on pliofilm and positions carbon plate over electrolyte. Adjusts machines and equipment for cell size changes or to correct malfunctions, such as faulty timing, sealing and trimming, using hand tools. Monitors workers who perform related duties, such as application of silver wax to terminals, and tamping and sealing cell.

8531-192 COREMAKING-MACHINE TENDER, DRY BATTERY(electric. equip.) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: L 4

Tends machine which moulds core and inserts carbon rod into core to form part of dry-cell battery:

Installs extruder bushing and mould on machine, using hand tools. Places carbon rods in trough of feeding mechanism. Fills machine hopper with electrolyte paste, using shovel. Starts machine that rams paste into mould, inserts carbon rod into paste, tamps paste around carbon rod and ejects finished core onto conveyor belt. Inspects core for defects, such as off-centered rods. Adjusts rod-centering device, length of stroke and force of impact, using hand tools.

May extrude and cut cores for dry-cell batteries, using manually operated extrusion press.

8531-196 STORAGE-BATTERY CHARGER(electric. equip.)
DPT:687
GED: 2 SVP: 3 EC: 1 6 PA: M 4 7

Charges storage batteries at manufacturing or user establishment, performing any combination of the following duties:
Lifts and places batteries on charging table. Places filler-vent caps loosely over cell openings, to allow unrestricted escape of gas from cells. Connects batteries to charger in series, using connecting leads, adds specified amount of water to cells and switches on battery charger. Observes ammeter of charger and adjusts charging- rate controls to specified current. Tests specific gravity of battery cells, using hydrometer. Switches off charger after batteries are fully charged and removes connecting leads. Secures filler-vent caps of charged batteries and removes batteries from charging table.
May clean used battery terminals and case, using soda solution, wire brush and cleaning materials.

8531-200 BATTERY-PLATE WASHER AND DRIER(electric. equip.)
DPT:685
GED: 2 SVP: 3 EC: 1 6 PA: L 4

Tends equipment to wash and dry formed-battery plates used in dry-charged batteries:
Turns valves and actuates switches to fill washing tanks with water, ignite burners and start blower in drying compartment. Observes gauges and adjusts controls to maintain specified temperature and pressure in drier. Removes baskets of plates from forming tanks and loads them into washing tank, to wash off electrolyte, using hoist. Loads baskets of washed elements into drier, using hoist or lift truck. Removes plates from drier and tests plates for moisture content, using ohmmeter. Places dried plates in compartments of battery cases in specified manner.

8531-204 SEALER, DRY CELL(electric. equip.)
DPT:685
GED: 2 SVP: 3 EC: 1 5 6 PA: L 4 7

Tends automatic machine to seal dry cells:
Installs sprocket (rotary type conveyor) or alters conventional conveyor for size of cells to be run, using hand tools. Adjusts compound dispenser and flamer for size of cells, using hand tools. Monitors process to ensure adequate sealing and to detect malfunction. Adds and melts sealant on cell top when sealing is inadequate, using torch.
May remove cells from dry-cell assembling machine preparatory to sealing.

8531-208 CAPPING-MACHINE TENDER, DRY CELL(electric. equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends machine that inserts paper washers and affixes top caps over cores and carbon elements of dry cells:
Inserts washers and caps into feed mechanisms. Starts machine and watches mirror to observe cells passing on conveyor to ensure washers are correctly placed. Inspects capped cells for defects such as off-center carbon rods. Adjusts machine for changes in cell size or to correct malfunction, using hand tools.
May tend machine that cuts paper washers from tape, inserts washer and affixes cap to cell.

8531-212 DRY-CELL TUBER, MACHINE(electric. equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends machine that inserts and seals dry cells in pliofilm-lined paper tubes:
Starts and feeds cells to tubing machine that inserts metal bottom and dry cell into paper tube and crimps tube over bottom. Inspects units for faulty crimping or sealing. Observes machine for malfunction and makes adjustments.
May tend machine that inserts tubed cell into metal sleeve and positions and crimps metal cap on sleeve. May be designated according to type of machine tended; for example,
Sleeve-Machine Tender
Tubing-Machine Tender
Wrapping-Machine Tender

8531-216 ASSEMBLER, DRY CELL AND BATTERY(electric. equip.)
DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles cylindrical dry cells and dry batteries, performing any combination of following duties:
Removes cylindrical zinc cans from cartons and places them in trays. Drops washer into bottom of cans. Pulls lever to drain measured amount of liquid paste into can. Places paper liner over open end of can. Drops battery core into can forcing liner with it. Monitors conveyor-fed electrical mechanism that contacts and tests finished cells. Removes defective cells from conveyor. Inserts cells in partitioned containers to make battery. Bends wires on cells preparatory to soldering. Solders wires to rows of cells to effect series connection of cells. Pours hot asphalt into outer battery container, using dispenser. Places battery in container and presses it into asphalt. Places finished batteries in cartons.

8531-220 ASSEMBLER, FLAT-DRY-CELL-BATTERY(electric. equip.)
DPT:687
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Assembles wafer-type (flat) dry-cell batteries, performing any combination of following duties:
Forms container for battery, using pliofilm sheet and sealing iron. Selects specified number of cells which are provided in strip configuration and inspects and folds them to form stack. Compresses stack to form battery, using hand press, and secures stack, using plastic tape. Places stack in pliofilm container and withdraws air to shape container, using vacuum device. Tests battery voltage. Makes connection to battery electrodes and terminals, using connecting leads and soldering iron. Inserts bottom, pad and battery in container. Positions terminals and crimps top and bottom of container, using crimping press.

8531-224 LEAD-ACID-BATTERY FILLER(electric. equip.)
DPT:687
acid filler.
GED: 2 SVP: 2 EC: 1 4 6 7 PA: L 4 7

Fills lead-acid battery cells with sulphuric acid solution of specified concentration, preparatory to plate-forming and charging processes:
Positions spouts attached to hoses, over battery-cell openings or fits multiple-filler head of vacuum-filler machine over battery vents. Adjusts valves of gravity feed or vacuum filler to start acid flow and fill cells.
May add acid to batteries that are not filled to specified level.

Light-Fixtures and Light Bulbs Fabricating and Assembling Occupations

8531-244 through 8531-272

8531-244 SET-UP MAN, LAMP-MAKING MACHINES(electric. equip.)
DPT:280
GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Sets up and adjusts production machines used in manufacture of electric lamps:
Installs and adjusts machine parts, such as cutters, revolving heads, bulb loaders, burners, and etching stamps, using hand tools and magnifying glass. Lights burners and adjusts gas, air, oxygen and hydrogen valves to attain specified flame. Starts machines, and places bulbs, tubing and other parts into respective machine hoppers that feed them into heads of rotating turret. Operates machines through trial run to ensure accuracy of machine set up, and makes necessary adjustments to ensure specified machine operation. Observes machine operation and examines items produced for quality of cutting, sealing and punching. Examines etching on lamp for cleanliness and definition and readjusts machine as required. Removes expended gas cylinders from machines, using hand tools, and replaces with filled cylinders. Cleans machines, using solvents, lubricates machines, using specified lubricants and replaces defective machine parts, using hand tools.

8531-248 ASSEMBLER, ELECTRIC SIGN(electric. equip.)
DPT:381
GED: 3 SVP: 5 EC: 1 6 PA: L 3 4 7

Assembles electric signs, performing any combination of following duties:

Determines, on basis of experience or from drawing, location of such component parts as lamp sockets, ballast transformers and switches in fluorescent signs, and insulators, step-up transformers and neon-tubing supports used in neon signs. Punches or drills cable-entry holes, using knockout punch or electric drill. Drills mounting holes and mounts components such as ballast transformers, lamp sockets and switches, using hand tools. Completes interconnecting wiring to lamp sockets and ballast transformers, using wiring diagram, connectors, crimping tool and soldering equipment. Installs fluorescent lamps in sockets. Attaches tubing supports, selects and installs specified tubing, and inserts tubing electrode into connecting terminal, using hand tools. Tests between high-voltage terminals and ground, to ensure adequate insulation, using insulation tester. Connects sign to power source to check operation. Fits precut plexiglass or plastic pane to metal frame.

May cut and weld together metal frames for sign housings.

8531-252 ASSEMBLER, QUARTZ LAMPS(electric. equip.)
DPT:684
GED: 3 SVP: 4 EC: 1 3 6 PA: L 4 7

Assembles quartz-arc tubes and quartz lamps used in special lighting applications such as motion-picture projectors and studio lighting, performing any combination of the following duties:

Positions quartz-glass blanks in lathe, starts lathe, adjusts gas torch to heat glass, and positions tool against revolving glass, to shape it to specified contour. Positions electrodes for arc tubes and filaments for quartz lamps in sealing-machine fixture and places glass enclosures over electrodes or filament assemblies. Starts machine to process units through heating and sealing stages to seal internal components into ends of glass enclosures. Fuses air-exhaust tube to glass enclosures, using ring burner and air jet. Heats and bends glass tubing to form mercury traps, and fuses them to exhaust tube, using hand torch. Places mercury in end of trap on arc-tube- glass enclosure. Tends machines that process assembly through specified stages to exhaust air, vaporize mercury, inject inert gas into arc tubes, and seal tubes. Inspects tubes and lamps to detect bubbles, cracks and other defects, using microscope. Passes energized high-frequency probe over lamps and watches for bluish glow to indicate acceptable tube subassembly. Cements porcelain base to ends of lamps and tubes.

8531-256 ASSEMBLER, LIGHT FIXTURES(electric. equip.)
DPT:684
GED: 3 SVP: 3 EC: 1 6 PA: L 4

Assembles component parts to make sub-assemblies or complete lighting fixtures, such as chandeliers, lamps, shades or reflectors.

Fastens parts together with bolts or screws, using hand tools. Threads and pulls electric cord through lighting fixture body or frame. Ties safety knot in cord inside fixture to prevent cord being detached. Strips insulation from ends of wires and attaches ends to terminal of socket, using knife, pliers, stripping tool, and screwdriver. Tests completed units by inserting incandescent bulb or fluorescent tube into fixture and plugging terminal into electrical outlet.

May work from drawings or sketches. May bore holes in fixture, using drill press. May be designated accordingly to type of fixture assembled; for example,

Assembler, Floor Lamp
Assembler, Fluorescent-Light Fixtures

8531-260 ASSEMBLER, BALLAST TRANSFORMER(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Assembles fluorescent light ballast transformers, performing any combination of the following duties:

Feeds machine to shape fuse-elements from length of fuse wire. Positions fuse element in cylindrical-plastic shell and fills shell with molten wax to form fuse. Cuts lengths of coil from prewound square coil stock, using bandsaw, and positions coil leads, using tweezers. Inserts steel laminations in coil ends to form transformer core. Compresses and secures laminations in position, using clamps and crimping fixture. Positions terminal board, coil assembly, fuse and

capacitor in transformer housing. Interconnects parts and attaches transformer leads, using hand tools, soldering iron and sketch. Performs electrical tests, using electrical-test equipment, and makes minor repairs to faulty items. Moisture-proofs transformer with molten asphalt compound, using dispenser. Places cover on transformer case, affixes identification label and places in carton.

8531-264 ASSEMBLER, LIGHT BULB(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Assembles incandescent lamps, sealed-beam headlamps, fluorescent tubes and photoflash bulbs, performing any combination of following duties:

Feeds material, such as lead and fuse wires, flares and getter fluid, into machine that shapes and combines them to make mounts. Positions filament-coil ends on hooked support lead, and secures them, using die press or spot welder. Examines completed mounts for defects and segregates and counts defective items. Feeds glass bulbs and mounts into machines that insert and seal mount in bulb, exhaust air and add mercury vapour or inert gas. Inserts leads protruding through bottom of bulbs into cement-filled base contact points. Starts and observes operation of machines which press bulb into base, bake cement and cut off excess wire and solder from side and bottom contacts. Dips rack of Christmas-tree lamps into lacquer, to colour them. Tends machines that fuse contact wires in one end of glass bulbs, shred zirconium foil and blow it into bulb, add primer powder and exhaust air and seal ends, to produce photoflash bulbs. Places small photoflash bulbs in plastic base plate, secures connecting leads, using crimping machine, places plastic cube over bulb assembly and seals to plate, using ultrasonic welder, to produce photoflash cubes. Cleans reflectors for sealed beam headlights, using alcohol and cloth. Feeds components to machines which assemble components, to make sealed-beam headlights. Tends machines which coat inside of fluorescent lamp tubes, heat tubes, exhaust air, add inert gas and attach and secure connectors.

May perform a particular part of an assembly process and be designated accordingly; for example,
Filament Mounter, Hand
Sealing-Machine Tender

8531-268 ASSEMBLER, MINIATURE BULB(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles miniature lamps by hand, performing any combination of following duties:

Positions hooked ends of stem leads and support wires on press bed and slips coiled tungsten filament into hooked leads, using tweezers. Clamps hooks around filament, using press, or welds filament wires to stem leads, using spot welder. Dips filaments and supports in getter solution or paints getter on lead wires. Trims lead wires from lamp base, using side cutters, and solders lead wires to base terminals, using soldering iron. Inserts screws into lamp base, when required. Positions and solders pre-focus rings to lamp bases, using soldering equipment. Inserts lamps in sockets of aging device, turns control to specified setting, switches on device and allows lamps to age to stabilize their electrical characteristics. Switches off aging device and cleans lamps, using alcohol and cloth.

8531-272 ASSEMBLER, MOTOR-VEHICLE-LIGHTING FIXTURES(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles component parts to fabricate automotive-lighting fixtures, such as parking lights, tail-stop-turn signal assemblies and dome and trunk-light assemblies:

Bolts, screws, rivets or crimps components, such as bulb sockets, springs and lenses, to lamp shell in specified order, using hand tools. Solders or crimps connecting wires to sockets and terminals, using soldering iron or crimping tool. Inspects component parts for defects and rejects defective items.

8531-292 ASSEMBLER, AUXILIARY-POWER AND MOTOR-GENERATOR-SET(electric. equip.)

DPT:381

GED: 4 SVP: 7 EC: 1 PA: M 3 4 7

Assembles gasoline, diesel or electric motor-driven generator sets that provide emergency or auxiliary electric power:

Positions, levels and aligns bearing pedestals on bedplate of auxiliary power unit (APU) and motor-generator set. Mounts gasoline or diesel engine alternator or direct-current generator on pedestals and support structures, using hoist. Inserts shims at specified locations to align couplings. Heats coupling and slides it over drive shaft, using portable gas furnace or torch. Assembles control panels, switches, relays and associated wiring, using hand tools, power tools, welding and soldering equipment. Secures side and end panels and doors, to form power unit housing. Starts power unit and motor-generator set and observes meters and test equipment to determine vibration, on and off-load voltage output, and frequency.

Makes minor adjustments to ensure equipment operates according to specifications. May specialize in assembling a specified type of set and be designated accordingly, Engine-Generator-Set Assembler

8531-296 ASSEMBLER, MOTOR AND GENERATOR(electric. equip.)

DPT:381

GED: 4 SVP: 6 EC: 1 6 PA: M 3 4 7

Assembles electric motors and generators, following production drawings and specifications in repair or manufacturing establishment: Removes burrs from parts, using file, and cleans parts, using solvent and compressed air. Fits bearings, end caps and seals to armature or rotor shaft, using hand tools. Positions and secures field coils to stator housing, using hand tools. Heats and shrinks thrust-collars and couplings on shafts, using oven or torch. Positions rotors and armature into stator housing. Secures assembly, using bolts and wrenches. Aligns heads to allow rotor or armature to turn freely and inserts shims to adjust air gap between rotor and stator, using precision-measuring instruments. Shapes carbon brushes to curvature of commutator by rotating them in seating fixture. Brazes or solders lugs to brush leads and fits brushes in holders. Connects brush leads to brush holders. Packs bearings with specified grease or oils bearings. Assembles and wires associated items, such as starters, junction boxes and control panels.

8531-300 COIL INSTALLER, MOTOR AND GENERATOR(electric. equip.)

DPT:384

GED: 4 SVP: 6 EC: 1 PA: M 4 7

Installs coils into slots of motor and generator armatures, rotors and stators:

Lifts or hoists units to work area, using crane. Removes burrs from core slots, using file or portable grinder. Inserts insulating material, such as fish paper or fibre board, into slots in armature core. Aligns coils in armature core slots and compacts them into position, using mallet, block and drift. Removes insulation, bends wire to form leads and connects stator coil leads, using pliers. Brazes or solders connections, using torch and alloy, such as silver solder. Tapes connections, and laces and ties coil leads to stator windings or commutator risers, using tape hook. Tests coil insulation for short circuits to ground, using electrical-test equipment.

May remove and replace defective coils. May carry out repairs, such as replacing V-rings, turning down commutator on lathe and undercutting mica insulation between commutator bars. May wind new coils on armatures, stators or rotors of used motors.

8531-304 ARMATURE BANDER(electric. equip.)

DPT:382

GED: 3 SVP: 6 EC: 1 PA: M 4

Operates banding machine to wind glass-filament tape (fiberglass composition with adhesive backing) or steel wire around armature of electric motors and generators to ensure that coils remain positioned in armature core slots when armature rotates:

Lifts or hoists armature to horizontal spindle of banding machine. Shapes and positions exposed parts of coils, as specified, using hide-faced hammer. Mounts spool of specified tape or wire and winds it through machine guides. Wraps sheet of insulation around core when wire is used and attaches wire to pin wedged in core or wraps first turn around armature and twists end around turn, using pliers. Inserts metal clips under wire and starts machine to wrap glass- filament tape

or wire around armature. Guides wire or tape manually or with mechanical guide to maintain constant tension. Crimps metal clips over wire and solders wire in place.

8531-308 COIL WINDER(electric. equip.)

DPT:382

GED: 3 SVP: 6 EC: 1 5 6 PA: M 4 7

Operates coil-winding and forming machines to wind and shape coils for heavy-duty electrical equipment, such as generators, motors and transformers:

Studies production specifications and drawings to determine wire type and size, winding block or form, lead lengths, tap position and location of cooling ducts. Places specified mandrel, form, spools of wire and sheet insulation in position. Inserts end of strap or round conductor into slot of mandrel. Starts machine to wind wire onto transformer form and to wind sheet insulation over each layer of winding. Observes counter, stops machine and brazes taps to winding at specified locations, using welding equipment and hand tools. Inserts wooden or plastic blocks between turns, to form cooling ducts. Adjusts wire tension, by turning screws. Pounds strap or other conductors to maintain coil shape and contour, using rubber or leather-covered mallet. Tends machine that compresses and shapes armature, rotor and field coils to specified contour. Verifies coil dimensions, using rule or template. Places insulated sleeving over coil leads.

May specialize in winding a specific type of coil and be designated accordingly; for example, Armature-Coil Winder Transformer-Coil Winder

8531-312 ASSEMBLER, CARBON BRUSHES(electric. equip.)

DPT:684

carbon-brush maker.

GED: 3 SVP: 5 EC: 1 7 PA: L 4 7

Assembles carbon brushes for electric motors and generators, performing any combination of following duties:

Grinds carbon blocks to specified shape and size, using grinding machine, wedge and bevel. Impregnates carbon blocks with resins or waxes, using vacuum-impregnating tank. Drills holes in carbon block, using drill press. Cuts flexible copper connecting leads to specified length, using wire-cutting machine. Feeds machine that inserts wire into drilled holes. Tamps copper powder into hole to secure lead, or secures lead with rivet, clip, screw, cement or by soldering. Secures copper eyelet or lug to free end of wire, using crimping press. Immerses brush in electroplating solution specified for high-current brushes. Stamps brush with manufacturer's name or identifying information, using die.

May assemble carbon wafers to form laminated brushes.

8531-316 COIL FORMER, HEAVY-DUTY(electric. equip.)

DPT:684

GED: 3 SVP: 5 EC: 1 PA: M 4 7

Forms single and half turn armature, rotor or stator coils from bar or strap wire:

Cuts bar or strap wire to specified length, using bench cutting machine or hand tools. Taps wire strap over surface plate to straighten, using mallet. Bends wire to specified shape, using bending fixture, or pounds wire over former, using mallet and fibre blocks, to form coil. Tapes bar wires of similar shape together to form multilayer coil. Drills holes in coil ends, using portable power drill. Tins coil ends, using solder pot. Attaches connecting lugs, using hand tools, or solders on connecting lug, using soldering equipment.

May be designated according to coil formed; for example, Former, Armature Coil Former, Rotor Coil

8531-320 UNDERCUTTING-MACHINE OPERATOR(electric. equip.)

DPT:682

GED: 3 SVP: 4 EC: 1 PA: M 4 7

Operates machine to undercut mica insulation between commutator segments of electric motor and generator:

Mounts commutator on carrier arbor of machine, and saw blade to machine spindle, and positions and secures them with spacing collars, using hand tools. Raises or lowers machine table to bring commutator to level of saw. Moves commutator back and forth under saw to certify correct positioning of mica for cutting. Turns handwheel or crank to regulate depth of cut. Starts machine and moves control to advance

commutator into rotating saw which undercuts mica insulation. Measures accuracy of cut, using ruler or jig. Removes burrs from edges of commutator segments, using file.

8531-324 ASSEMBLER, COMMUTATOR(electric. equip.)
DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Assembles commutators for electric motors and generators: Aligns conducting bars and mica spacers in stacking sleeve, by tapping with soft hammer, and verifies alignment visually or with square and surface plate. Places bar assembly into pressing fixture and clamps bars together, using hydraulic press, or fits clamp over fixture, and tightens, using torque wrench. Positions mica collar over V-shaped grooves at both sides of commutator, fits and secures V-rings over collar and secures them in position, using arbor press. Heats commutators to soften insulation, and compresses unit, using hydraulic press. Tightens heated assembly by adjusting clamps or tapping threaded ring, using hammer and drift. Checks insulation between bars, and between bars and frame of sleeve, using insulation tester. May cut mica insulation between commutator bars to specified depth, using undercutting machine. May assemble commutator and brush holders on motor, using hand tools.

8531-328 ASSEMBLER, ROTATING-FIELD COILS(electric. equip.)
DPT:644
spider assembler.
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Assembles field coil and pole pieces on rotor spider to build rotating fields for synchronous motors, and alternators: Fits pole pieces into dovetail grooves of spider (rotating field frame) and secures with keys, or bolts pieces to spider, using hand or power tools. Places field coils over insulated pole pieces and bolts pole shoes in position over coils and pole pieces, following production drawings. Secures slip rings to rotor shaft, using keys and bolts, or presses rings to shaft, using hydraulic press, or heats rings in oven and positions them over shaft. Connects coils together and to slip rings. May align, press and rivet laminations together to form pole pieces. May attach complete field-magnet assemblies to spider.

8531-332 COIL TAPER, HAND(electric. equip.)
DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 4

Winds asbestos, cotton, glass, mica or varnished cambric wrappers or tape around rotor and stator coils of electric motors and generators to provide insulation and reinforcement: Removes insulation from coil ends by burning, using torch, or immerses enamelled wire in chemical solution to remove enamel. Cleans coil ends, using sandpaper, or holds coil ends against revolving wire brush. Dips or sprays flux on wire ends and dips ends in solder pot to tin ends. Places coil in holding fixture, manually or using hoist, and secures in position. Straightens leads and affixes terminals, using hand tools. Removes temporary binding from coil, using hand tools. Brushes insulating varnish to end of tape and winds tape or covering in specified manner around coil and secures to coil, using adhesive tape. Cuts insulation to size, using scissors or knife. Brushes flux on terminal and dips in molten solder to ensure good electrical connection. May check coil wire size, using micrometer or calipers to ensure conformance to specification. May tape a particular type of coil and be designated accordingly, Field-Coil Taper

8531-336 ARMATURE CONNECTOR(electric. equip.)
DPT:684
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Inserts wire leads of armature coils into commutator slots, and welds leads to make good electrical contact: Places armature in holding fixture, and removes insulation from coil ends, using knife and wire scraper. Shapes winding ends manually or using hammer and fibre block. Positions and seats commutator on armature shaft, using arbor press. Bends wire leads to conform to armature curvature and inserts leads into commutator slots, using hand tools. Winds and ties cord around coil leads to secure them in position. Cuts excess wire from leads, using wirecutter. Brushes insulating and protective varnish on armature coils. Welds leads to

commutator bars, using resistance welder. Tests coil continuity and insulation, using continuity and insulation testers. May set up and operate machine to wind steel or polyester tape around armature.

8531-340 ASSEMBLER, LAMINATED CORE(electric. equip.)
DPT:684
lamination stacker.
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Stacks, aligns and compresses steel laminations to make cores for electrical items, such as armatures, rotors and stators, or spins laminations on fixture shaft to align slots: Places specified number of slotted disk-shaped laminations into cylindrical stacking fixture and over guide or mandrel. Compresses stack manually or with hydraulic press. Measures stack and adds or removes laminations to bring core to specified height. Taps edges to align laminations, using hammer and drift, and files edges and slots to remove burrs. Secures laminations by welding, using arc-welding machine or pushes bolt through laminations, affixes washer and nut and tightens, using hand tools. May be designated according to type of core assembled; for example, Pole-Shoe Assembler Rotor-Core Assembler Transformer-Core Assembler

8531-344 COIL SHAPER(electric. equip.)
DPT:684
GED: 3 SVP: 3 EC: 1 PA: M 4

Spreads and shapes coils to fit armature, rotor and stator slots, using coil-spreading machine: Moves levers and handwheels of machine to position side and end clamps and spreader bars which set specified span and pitch angle. Places coil in clamp holders, and closes clamps, using hand levers. Actuates control to spread and shape coils and align and shape coil ends. Releases clamps, removes coil and verifies coil dimensions, using rule or template.

8531-348 ASSEMBLER, SMALL-ELECTRIC MOTOR(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles small electric motors and dynamotors used in appliances, power tools, radio communications equipment and instruments, performing any combination of following duties: Secures field windings and brush holders to motor housing, using hand tools and holding fixture. Presses bushings and bearings into end brackets, using arbor press. Secures cooling fan and gears to shaft, and fits shaft in end bearings or bushings. Fits brush and spring assembly in brush holder, turns shaft to ensure free movement of brush, and files brushes to prevent binding. Secures power cord to motor frame, using clamp and crimping tools. Solders electrical leads to switch and motor, according to diagram, using soldering iron. Affixes name plate containing operational data to motor frame, using riveting machine. Lubricates gears and other moving parts, using oil can, or packs grease in gear box, using paddle.

8531-352 INSULATION CUTTER AND FORMER(electric. equip.)
DPT:684
GED: 2 SVP: 3 EC: 1 6 PA: L 4

Cuts and forms insulation, gaskets and wedges used in electric motors and generators, performing any combination of following duties: Measures and marks dimensions and holes in insulating materials, such as fibre, fibreglass and fish paper, using drawing or template and drafting instruments. Places marked sheet against shearing machine stop, and presses pedal to lower blade to cut strips, or operates bandsaw or circular saw to cut heavier material. Fits and glues insulation to retaining rings. Cuts holes in wooden or fibre strips to size specified, using jig saw. May cure insulating material in gas-fired oven.

8531-356 LEAD FORMER(electric. equip.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Forms and prepares electrical leads of items, such as field coils and armature windings, for fitting into motors, alternators or other equipment:

Places coil or winding in clamping device of machine, and actuates control to close clamps to shape coil lead, or feeds wire into foot shear to cut leads to specified length. Sands ends of lead wires manually, to remove insulation, or feeds leads into wire sanding or stripping machine. Crimps, welds or solders terminals, eyelets or other parts to lead ends.

May be assigned a specific duty and be designated accordingly; for example,
Lead Cutter
Wire Stripper

8531-360 COIL-WINDING-MACHINE TENDER, AUTOMATIC(electric. equip.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends automatic coil-winding machines that wind fine wire onto bobbins and forms, or into slots of small armatures to fabricate field coils, solenoid coils, motor-armatures and similar components:

Places spool of wire on machine spindle, and threads wire into machine guides and tensioner. Places bobbin, coil form or armature into holding device of machine, and attaches wire end into slot in item to be wound. Sets counter and starts machine that winds specified number of turns on bobbin or into armature slots. For layer-wound coils, stops machine and inserts insulating-sheet material between layers. Bends wires into armature grooves, and twists coil leads together for attachment to commutator. Cuts wire with wire cutters, and removes wound bobbin or armature.

8531-364 LAMINATION-STACKING-MACHINE TENDER(electric. equip.) DPT:685
GED: 2 SVP: 2 EC: 1 6 PA: L 4 7

Tends machine that stacks steel laminations used in armatures, stators and field coils of motors and generators:

Places laminations and spacers in holding device of machine, manually, or using lift. Starts machine which dispenses specified number of laminations and spacers required for each core, and deposits them to form stack. Places stack in automatic welding machine to weld laminations into individual cores, or inserts rivets into holes in laminated core and feeds core into riveting machine to secure laminations.

Other Electrical Equipment Fabricating and Assembling Occupations

8531-384 through 8531-448

8531-384 FITTER-ASSEMBLER, ELECTRICAL-CONTROL EQUIPMENT(electric. equip.) DPT:381
GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Assembles and fits units, components and parts in cabinets or on panels to fabricate equipment, such as automated-processing controls and electrical distribution panels:

Measures to locate reference points, and drills and taps holes in cabinet or panel, to mount assemblies, components and parts, using hand tools and power tools. Mounts components on panels, such as transformers, circuit breakers, and switches with bolts and screws, in predetermined order, following drawings, and using hand tools and power tools. Selects wire, cuts, bends and strips insulation from wire ends to fabricate cable, using hand tools, and wire-cutting- and stripping machine. Affixes terminal lugs and other connecting devices to cable-wire ends, using hand tools, crimping machine and soldering equipment. Checks components and wiring for shorts or leakage to ground, using electrical-test equipment. Adjusts clearance of relay and circuit-breaker contacts, according to specifications, and using hand tools and feeler gauge. Adjusts mechanical parts, such as drive belt and pulleys. Bends, cuts threads, and installs conduit or armoured cable, using hacksaw, pipe cutter and conduit bender. Connects panel or equipment to power source. Switches on power, and actuates switches and controls in prescribed sequence to determine if it meets performance specifications. Replaces defective components, using hand tools and power tools.

8531-388 ASSEMBLER, HEAVY-DUTY TRANSFORMER(electric. equip.) DPT:381
GED: 4 SVP: 7 EC: 1 5 6 PA: M 2 4 7

Assembles electric distribution and power transformers, following manufacturers' specifications:

Moves component parts to work station, using overhead crane or other material-handling device. Assembles core laminations, following production drawings. Compresses laminations, using press or clamps and secures them by inserting bolts through laminations or strapping them with steel, using strapping machine. Lowers and positions laminated core into transformer-coil assembly, using hoist. Drives fibre and impregnated wooden wedges between coil and core, to achieve specified spacing. Brazes, silver-solders, or crimps terminals to transformer-coil leads. Assembles transformer support structure, such as base, angle-iron frame, terminal board, oil-filled tap-selector switch and oil tank, using welding equipment, jigs and hand and power tools. Attaches terminals to tap-changer switch, following production drawings and using power tools. Raises and positions transformer assembly on support structure in tank, using hoist. Connects transformer terminals to terminals on tank, using connecting straps. Secures connecting straps from outer transformer terminals to panel, using power tools. Fits tank cover and welds cover to tank, using welding equipment. Fills tank with specified transformer oil, using oil supply line.

8531-392 CALIBRATOR, ELECTRICAL CONTROLS(electric. equip.) DPT:381
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Calibrates electrical controls, such as thermostats, oil-burner controls, and pressure-vacuum switches, under simulated operating conditions, using hand tools and test equipment:

Places probe of temperature-actuated control in hot-water bath, and observes meter and thermometer that indicate contact closing and opening at specified temperatures. Places thermostats, and refrigeration and air-conditioning controls in air stream, and places electrical fixtures on heated surface or in environmental chamber to subject items to normal operating temperatures. Observes meters, thermometers and timers to assess operating characteristics of controls. Attaches tubing from vacuum devices to pressure-vacuum switch, and observes pressure gauge and meter to determine at what pressure switch contacts open and close. Adjusts contact spacing screws and timing controls, to set controls to meet operating specifications. Disassembles faulty controls, replaces defective parts and reassembles controls, using hand tools.

May calibrate specific types of controls and be designated accordingly; for example,
Pressure-Vacuum-Switch Calibrator
Thermostat Calibrator

8531-396 ASSEMBLER, HEAVY-DUTY CAPACITORS(electric. equip.) DPT:682
GED: 3 SVP: 5 EC: 1 5 6 PA: M 4

Assembles heavy-duty capacitors used for electric power- transmission equipment:

Operates shear and brake machines to cut and bend insulation material, and hydraulic press to form capacitor core into cylindrical shape. Fits capacitor core in wrapping machine, and actuates controls which starts mechanism to wrap a specified number of layers of insulating material around core, and applies tape to secure insulation. Secures resistors to capacitor terminals, using crimping tool. Pushes capacitor leads through porcelain cover bushings, solders leads to feed-through terminals, and places cover over cylindrical core. Places cores in position on power press, sets metal capacitor container in machine fixture, and actuates control to force container over core. Secures top insulator assembly to can, using soldering equipment. Affixes nameplates, using hand tools.

May operate capacitor-winding machine. May repair defective capacitors.

8531-400 HEATING-ELEMENT COIL FORMER(electric. equip.) DPT:682
GED: 3 SVP: 5 EC: 1 PA: M 4 7

Operates wire-coiling machine to coil resistance wire for electrical appliance-heating elements:

Selects wire of specified gauge and mounts reel of wire on machine

spindle. Inserts arbor in wire-coiling machine to make coils of specified diameter. Positions photoelectric device, using hand tools and jeweller's loupe, to activate automatic-cutting mechanism that cuts coiled wire to specified length. Threads wire through guides and onto arbor, and starts machine. Attaches random sample of coils to contacts of ohmmeter, actuates switch and reads resistance value of coil on meter. Readjusts wire-coiling machine to keep coils within specifications. Places lengths of coiled wire in trays, and lowers trays into degreasing tank, to clean wires.
May operate manually-controlled machine to wind resistance wire for use inside heating element.

8531-404 IMPREGNATOR, ELECTRICAL EQUIPMENT(electric. equip.) DPT:682
GED: 3 SVP: 5 EC: 1 PA: M 4

Operates equipment to impregnate armatures, stator and field-coil windings of electric motors and transformer windings with insulating material, by one of following methods:

1. Selects mandrel for transformer core and coil assembly. Actuates controls of hydraulic press to force mandrel into or from core and coil assembly. Loads blocked core and coil assembly, field coil, or stator winding into vacuum impregnating device, manually or using hoist. Actuates controls to achieve vacuum and opens valves to admit impregnating fluid. Removes component after specified time and loads into oven, manually or using hoist. Adjusts oven controls to desired temperature and removes components after specified time. Removes excess insulating material from component, using sawing machine. Lowers component into tank filled with acid solution, to remove insulation from connecting leads, and through neutralizing-solution tanks, to neutralize acid. 2. Adjusts holding fixture of impregnating machine and positions component in fixture. Mixes varnish to obtain specified consistency. Connects leads of component to power source to cause windings to heat and oscillate slightly. Saturates component, using special spray gun. Sets machine controls for optimum temperature and curing time, and removes component from machine after curing has been achieved.

May test component to ensure insulation properties meet specifications. May impregnate a particular component and be designated accordingly; for example, Transformer-Coil Impregnator

8531-408 ASSEMBLER, ELECTRICAL METERS(electric. equip.) DPT:684
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Assembles electrical panel-mounted meters used to measure radio frequency, alternating and direct currents, and voltages:

Winds fine wire around coil forms for moving-coil assembly of meters, using coil-winding machine. Positions parts, such as pointer, hairsprings and jewels, in specified sequence and location, following production drawings, and using hand tools. Attaches and solders leads to items, such as resistors, diodes and meter terminals, using soldering equipment and watchmaker's hand tools. Secures specified scale to meter face, using small screwdriver. Cements glass or transparent plastic to meter case and cleans glass, using solvent and cloth. Inserts completed meter assembly into meter case, using screws and screwdriver. Adjusts electrical-test jig as specified for meter, places meter in test jig, and observes pointer for desired deflection.

8531-412 ASSEMBLER, ELECTRICAL ACCESSORIES(electric. equip.) DPT:684
GED: 3 SVP: 4 EC: 1 6 PA: L 4 7

Assembles small electrical components, such as light sockets, switches, receptacles and plugs, performing any combination of the following duties:

Cuts glass tubing, welds leads to switch contacts, adds mercury and fuses glass to make mercury switches, using glass-cutting and butt-welding equipment and gas torch. Fits together small parts, such as switch-contact fingers, lamp-socket bases, pull-chains and switch-keys in specified sequence, according to production drawings, using hand and power tools. Feeds hoppers of automatic machines with component parts of plug fuses, and removes assembled fuses from machine. Examines samples of machine assembled items for assembly. Tests action of moving parts by actuating switch-keys and pull-chains, to detect defective assembly or faulty parts.

May be designated according to item assembled; for example, Mercury-Switch Assembler

Toggle-Switch Assembler

8531-416 CORE MAKER, TRANSFORMER(electric. equip.) DPT:684

GED: 3 SVP: 4 EC: 1 5 6 PA: M 4

Fabricates laminated transformer cores for heavy-duty transformers, performing any combination of following duties:

Places reel of steel-strip-core-material on spindle of core-winding machine. Places core form on machine mandrel and attaches steel strip to form. Sets machine for required number of turns and starts machine. Checks wound core, using template. Severs steel strip from reel, using hand snips. Secures loose end to core body, using tack welder, and removes core from form. Places core on conveyor which moves it to and from annealing department. Presses annealed core into rectangular shape, using assembly press, and secures with clamps. Cuts out portion of core to form air gap, using core cutter. Inserts core ends into transformer coil to form laminated core.

May be designated according to duties assigned; for example, Core Cutter
Core Winder

8531-420 ASSEMBLER, HEAVY-DUTY RESISTORS(electric. equip.) DPT:684

GED: 3 SVP: 3 EC: 1 PA: M 4

Assembles special-purpose heavy-duty resistors used in controlling speed of electrically-operated equipment and machinery:

Locates helical-shaped resistance coil over metal pins on assembly plate. Fits and cements asbestos strips, cores, dividers, ceramic strips and spacers to form resistor-coil assembly. Fits insulators and center plate in coil, and attaches end plates to secure coil assembly. Aligns and bolts specified number and type of resistor-coil assemblies to support frame. Slips insulated tubing over bolts to insulate coil assembly from mounting frame. Cuts connecting wires, and bends and connects them to terminals of resistor-coils, using wire cutter and crimping tool.

May fit round coils over ceramic forms, using press, and fit and secure connecting clamp to each end of winding, to form element for heavy-duty potentiometer or rheostat, using clamping press.

8531-424 MICA-PRODUCTS MAKER(electric. equip.) DPT:684

GED: 2 SVP: 4 EC: 1 7 PA: L 4

Fabricates mica products, such as laminated sheet, washers and tubing, for use as electrical insulation, by one of the following methods:

1. Selects mica sheet of specified grade, and cuts to size, following production orders and using table saw. Places specified number of similar mica sheets into holding jig and dips sheets in cement. Heats and compresses sheets to fabricate mica-sheet stock of specified thickness. 2. Cuts mica-sheet into strips, and recuts strips into squares, following production orders. Drills centre holes in squares to form washers, using holding jig and drill press. Stacks square washers in jig, immerses stacked washers in cement, and heats and compresses them to fabricate laminated washer stock. Fabricates round washers from laminated square stock, using lathe, or from sheet stock, using punch press. 3. Places mica-sheet on work table, and brushes cement along two sides, following production orders. Places cylindrical jig over sheet, folds sheet around jig, and rolls it over work table. Removes jig, places elastic bands round tubing, and places in upright container to allow glue to set. Places tubes in heated press to press glued edges together, to form mica tubing.

May fabricate a specific product and be designated accordingly; for example, Mica-Tube Maker
Mica-Washer Maker

8531-428 TUBULAR-HEATING ELEMENT MAKER(electric. equip.) DPT:684

GED: 2 SVP: 3 EC: 1 PA: L 4

Operates equipment to insert coiled nichrome wire and insulating material into metal tubes, and to coil wire and tubing assembly into configuration required for heating elements of stoves, electric-water heaters, automobile block-heaters, and small appliances:

Loads tubes and nichrome-wire coils into machine and dumps magnesium oxide into machine hopper. Attaches tubes to holding

device in machine, and attaches wire coils to hook. Starts machine that pulls wire coil into tubes, and injects magnesium-oxide insulation into tube. Secures insulated bushing inside coil, and attaches terminal to wire, using crimping tool. Places length of tubular-heating- element in bending machine that bends element ends, and guides element into rotating coiling-head that forms element for electric stove or other applications. Operates press to flatten element by specified amount. Crimps outer tubing ends over insulting bushings, using crimping press.

8531-432 TAPING-MACHINE TENDER(electric. equip.)
DPT:685
GED: 2 SVP: 3 EC: I PA: L 3

Tends taping machine that winds cotton, paper or plastic tape around armature, rotor and stator coils and wiring harness:
Places roll of tape onto machine spool holder and threads end through machine guides. Ties tape to wiring harness or coil bar to enable coil ring to turn around coil or harness. Adjusts controls to regulate speed of winding and to maintain correct tension to wind tape tightly and uniformly. Cuts tape and secures end by looping it through last turn.

8531-436 ASSEMBLER, SPARK-PLUGS(electric. equip.)
DPT:686
GED: 2 SVP: 2 EC: I 6 PA: L 4

Feeds component parts into and removes completed spark plugs from assembling machines:
Places spark-plug components, such as insulators, electrodes, terminals, gaskets and bases, into hoppers or feed mechanisms of machines that automatically assemble spark plugs, and add and bake insulating compound. Removes completed items from machines, and inspects for cracked insulators or missing parts and other defects.
May assemble low volume, odd size or special order spark plugs by hand.

8531-440 ASSEMBLER, THERMOSTAT(electric. equip.)
DPT:684
GED: 2 SVP: 2 EC: I PA: S 4 7

Assembles thermostats used in air-conditioning, heating and refrigeration equipment:
Positions parts in specified sequence, following production drawings. Screws, rivets or force-fits together, parts; such as, dials, dial shafts, side plates, bellows, diaphragms and micro-switches, using hand tools, pneumatic tools and small hydraulic press. Lubricates pivot points with specified lubricant. Applies locking compound to screws, using oil can.

8531-444 ASSEMBLER, TRANSFORMER-STATIC-PLATE(electric. equip.)
DPT:684
GED: 2 SVP: 2 EC: I 6 PA: M 4 7

Assembles static plates used as a protective device for high-voltage power transformers:
Cuts foil and fullerboard to specified dimensions, using scissors and band saw. Applies glue to surface of fullerboard, positions foil strip over glued surface, positions wires along foil edge, and solders connecting leads to edge wires. Places identical piece of fullerboard over edge wires and foil, and applies temporary strapping to hold assembly in position. Places assembly in hydraulic press, and actuates controls to apply pressure and heat for specified time. Removes cured static plate from press.

8531-448 CLAMPER, TRANSFORMER ASSEMBLY(electric. equip.)
DPT:887
GED: 2 SVP: 2 EC: I PA: M 4

Positions and secures steel plates on two sides of laced transformer-core assembly, to compress and position laminations and core, and to provide a rigid structure:
Positions pre-drilled plates on transformer core assembly, manually, or using hoist. Inserts bolts through upper plate, core assembly and lower plate. Positions nuts and washers and tightens, using power wrench.

8533-ELECTRICAL AND RELATED EQUIPMENT, INSTALLING AND REPAIRING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with installing and repairing electrical equipment; such as, household appliances, domestic air-conditioning, and refrigeration equipment. Activities include: mounting, and connecting equipment to power sources; analyzing faults with test instruments; disassembling and replacing defective parts and internal wiring; and reassembling and testing operation of equipment. Construction electricians and repairmen are classified in Unit Group 8733, CONSTRUCTION ELECTRICIANS AND REPAIRMEN.

8533-110 ELECTRICAL REPAIRMAN(electric. equip.)
DPT:261
GED: 4 SVP: 7 EC: I 6 PA: M 2 3 4 5 7

Repairs, maintains and installs electrical wiring and equipment, such as motors, lighting fixtures and switching and control equipment in commercial, industrial, institutional or other establishments:
Locates and determines reason for electrical failure or equipment malfunction, using electrical-test instruments, such as ammeter and voltmeter. Examines electrical equipment, such as motors, generators and circuit breakers, to detect undue vibration, noise, and overheating. Repairs or replaces defective elements, fuses and motors, using hand tools. Burnishes, adjusts and cleans switches and relay contacts. Cleans and undercuts motor commutators and replaces carbon brushes, bearings and wiring, using hand and power tools. Conducts tests, such as on-and-off load current, and speed in revolutions-per-minute of motors, using electrical and mechanical- test equipment. Installs wiring and control equipment for new machines. Conducts continuous preventive maintenance program and maintains applicable records. Gives directions to helpers.
May repair or replace mechanical, pneumatic, hydraulic or electronic components of electrical equipment. May be designated according to equipment repaired or work location; for example,
Electrical Repairman, Crane Maintenance
Electrical Repairman, Machine Shop
Electrical Repairman, Sugar Refinery

8533-114 ELECTRICIAN, AUTOMOTIVE(motor vehicle)
DPT:261
automotive-electrical repairman.
GED: 4 SVP: 7 EC: I PA: L 3 4 5 7

Repairs and overhauls electrical components in vehicles, such as automobiles, buses and trucks:
Determines cause of electrical malfunction, using electrical test equipment. Adjusts distributor breaker-point gap, using feeler gauge and adjusts timing, using dwell meter or timing light and hand tools. Tests and replaces defective alternators, generators, starters and related items, such as voltage regulators, using electrical test equipment and hand tools. Repairs or replaces defective ignition and electrical wiring. Replaces defective parts, such as fuses, lamps and switches.
May be designated according to specialty; for example,
Electrician, Bus
Electrician, Truck

8533-118 REFRIGERATION MECHANIC(mech. equip., n.e.c.)
DPT:261
GED: 4 SVP: 7 EC: I 6 7 PA: M 3 4 5 6 7

Installs and repairs industrial and commercial refrigerating and cooling systems according to drawings and specifications:
Lays out reference points, according to established plans, for installation of structural and functional components, using measuring instruments, such as tape, transit, levels and square. Drills holes and installs mounting brackets and hangers into floor and walls of buildings, using tools, such as portable drills, wrenches and screwdrivers. Gives directions to contractors in hoisting and lifting of components into position. Installs structural and functional components, such as motors, controls, switches, gauges, valves, pumps, compressors, condensers, cores and pipes, by screwing, bolting, riveting, welding

and brazing. Cuts, threads, and connects pipe to functional components of refrigeration system, using soldering equipment, hack saws and pipe cutters. Pumps specified gas or fluid into systems, using vacuum pump, or turns valves to allow gas to flow into system under pressure. Starts system and observes operation. Watches gauges and instruments and adjusts mechanisms, such as valves and controls, to regulate level of fluid, pressure and temperature in system. Dismantles malfunctioning systems and tests components, using electrical and pneumatic-testing equipment, meters and pressure gauges. Replaces or adjusts defective or worn parts to repair system.
May specialize in installing systems and be designated accordingly,
Refrigeration-System Installer

8533-122 REPAIRMAN, ELECTRIC MOTOR(electric. equip.)
DPT:261

GED: 4 SVP: 7 EC: 1 6 PA: L 4 5 6 7

Repairs electric motors, generators and related equipment:
Disassembles motor, and tests armatures, stator and field coils to detect faulty components, using growler and insulation tester. Examines bearings, shafts and bushings for wear and defects, and removes and replaces defective items. Refaces worn commutators, using lathe, and undercuts mica between commutator segments, using undercutting machine. Replaces defective field coils, using hand tools. Refinishes carbon brushes to contour of motor commutator, using jig, and replaces brushes. Reassembles motors and generators and checks to ensure bearings, bushings and end-play meet specified tolerances. Clamps motors in test fixture, connects voltage supply and observes test meters to ensure torque, horsepower rating and speed, meet specifications. Places generators in test jig, and tests to ensure they meet rated output voltage and current. Inspects auxiliary equipment, such as motor starters, relays, and thermal and overload-circuit breakers, for wear and damage and repairs or replaces defective items. Records parts replaced and time spent.
May specialize in repair of automotive-electric motors, and generators and be designated accordingly,
Automotive-Generator-and-Starter Repairman

8533-126 REPAIRMAN, MAJOR APPLIANCE(electric. equip.)
DPT:261

appliance serviceman and repairman.

GED: 4 SVP: 7 EC: 1 6 PA: H 3 4 5 7

Installs, services and repairs major-electrical appliances, such as air conditioners, clothes driers, refrigerators, stoves and washing machines, in customers' homes or in shop:
Connects appliance to power source. Switches on appliance and manipulates controls to ensure correct operation. Demonstrates appliance operation and explains features. Queries customer regarding unserviceable appliances or refers to work order to assist in fault analysis. Observes operation of appliance and listens for unusual sounds to detect excessive vibration, overheating and loose parts. Makes continuity tests, resistance, voltage and current measurements to locate fault, using electrical-test equipment. Traces electrical circuits, following diagram, and checks for faults such as, short circuits and grounds. Disassembles appliances and examines mechanical parts, such as belts, gears and pumps. Examines, adjusts and calibrates timers and thermostats, and adjusts and burnishes contacts, using hand tools. Replaces defective parts, such as switches, belts, gears, motors and timers. Reassembles appliance, checks for fluid or gas leaks and adjusts and lubricates moving parts, using hand tools and lubricating equipment. Prepares itemized bill detailing parts replaced and man-hours expended.

8533-130 ELECTRICIAN, AIRCRAFT(electric. equip.)
DPT:281

GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Installs, repairs and services aircraft electrical equipment at manufacturing or repair establishment:
Installs prefabricated cable assemblies and bonding connections, following drawings and using clamps and power nut-driver. Attaches and secures terminal lugs to terminals of electrical components, such as relays, electrical instruments and junction boxes. Connects wiring from junction boxes to various systems, such as lighting, flying control, fuel and hydraulic. Observes and checks for correct operation of relays, instruments and lighting, by actuating switches and other controls. Measures voltage, current and resistance at specified locations to diagnose faults, using volt-ohm-milliammeter. Repairs or replaces

defective components and wiring, using hand and power tools. Incorporates modifications to electrical system, following drawings and using hand and power tools and electrical test equipment.

8533-134 ELECTRICIAN, MARINE EQUIPMENT(electric. equip.)
DPT:281
ship's electrician.
GED: 4 SVP: 7 EC: 1 5 6 PA: L 3 4 7

Repairs and maintains electrical equipment, such as generators, motors, and intercommunication systems on board ship, using electrician's hand tools and following wiring diagrams:
Actuates distribution panel controls to switch-in standby generator when electrical load approaches operating capacity of generator. Performs routine inspections of electrically-driven equipment, such as pumps, blowers and refrigeration equipment, to detect malfunctions. Tests wiring for short circuits by testing connected loads and wiring, using volt-ohm-milliammeter and insulation tester and following electrical-wiring diagrams. Replaces motors, relays and wiring to correct malfunction, using electrician's hand tools. Replaces fuses, light bulbs and fluorescent lamps, using hand tools and step-ladder. Investigates failures in intercommunication equipment and replaces defective components, such as amplifiers, speakers and switches, using hand tools.

8533-138 ELECTRICIAN, RAIL TRANSPORT(electric. equip.)
DPT:281

GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Installs and maintains electrical wiring and equipment, such as storage batteries, motors, generators and lighting fixtures of railway locomotives and coaches, streetcars and subway coaches:
Measures, cuts, threads, bends and installs electrical wires in conduit, using hacksaw, pipe-threading tools and electrician's hand tools. Installs conduit or other cable on walls and ceilings, using fastening devices and hand tools. Attaches conduit or other cable to junction boxes and fits and connects outlets, lighting fixtures and other wiring, using hand tools and soldering equipment. Tests electrical equipment, such as electric motors, generators and circuit breakers to locate faults, using electrical-test equipment. Replaces motor and generator brushes, cleans commutators and burnishes relay contacts, using hand tools.
May install heating and air-conditioning equipment.

8533-142 REPAIRMAN, ELECTRICAL INSTRUMENTS
(electric. equip.)
DPT:281
GED: 4 SVP: 7 EC: 1 7 PA: L 4 7

Tests, repairs and calibrates electrical instruments and electrically operated measuring and recording devices, such as ammeters, resistance bridges and temperature controlling and recording instruments:
Tests electrical-instrument equipment to determine factors, such as internal resistance and shunt and multiplier resistance, using wheatstone bridge, potentiometer and other testing devices. Disassembles instruments, using hand tools. Examines parts for defects. Measures, cuts and fits glass into meter cases, using glass cutter and bonding cement. Replaces bearings, shafts, moving coils of meters, shunts and resistors, using jewellers' tools and soldering equipment. Tests new and repaired instruments by comparing meter readings against secondary standards, or test panel. Adjusts meter calibration by altering shunt and multiplier resistor values. Fabricates parts such as shafts, bushings and other mechanisms, using precision lathe and measuring equipment. Lubricates moving parts, using specified lubricant. Reassembles equipment, using hand tools. Records data on item repaired, such as type of instrument and nature of repairs made.
May specialize in repairing specific electrical instruments and be designated accordingly,
Dynamometer Repairman

8533-146 WIRER AND REPAIRMAN, OFFICE MACHINES
(electric. equip.)
DPT:281
GED: 4 SVP: 7 EC: 1 PA: L 4 7

Wires and repairs punched-card office machines in manufacturing establishment or on customers' premises, following manufacturer's drawings and specifications:
Installs prefabricated cable assemblies in machines, such as collators and bookkeeping and keypunching machines. Secures cable at specified locations in machine, using plastic cable clamps and mounting

hardware, and tightens clamps, using hand tools and nut driver. Connects coloured or numbered leads from cable break-out locations to components, such as motors, relays, switches and printed-circuit boards. Attaches and secures wire ends to components by crimping leads to lugs, fitting leads to connector pins or by soldering tinned ends to component terminals, using crimping tool and soldering equipment. Connects machine to special purpose tester, switches on machine and tester, actuates controls and observes oscilloscope and meters to detect malfunctions. Corrects malfunctions, by adjusting relays, resoldering connections and by replacing defective parts. Inspects, tests and repairs previously wired units. Modifies machines on customers' premises, to update them to latest configuration.

8533-150 REPAIRMAN, REFRIGERATION UNIT(mech. equip., n.e.c.) DPT:381
refrigerator serviceman.
GED: 4 SVP: 7 EC: I 6 PA: M 4 6 7

Repairs refrigeration units to specifications: Studies reports from inspection department or customers. Observes functioning of components, such as controls, fan, condenser, evaporator and compressor, to determine cause of malfunction. Tests gas pressure with pressure gauge, and tests for gas leaks, using gas-leak tester. Charges unit with refrigerant, using portable gas cylinder or console charging unit. Drains oil and pumps gas from unit prior to removing cooling unit. Melts soldered or brazed joints to dismantle unit, using hand tools, torch and soldering equipment. Removes and replaces defective components. Repairs defective joints, using soldering and brazing equipment. Reassembles and reinstalls cooling unit, using hand tools. Starts unit and checks operating parameters, using mechanical and electrical test equipment. Records cause of malfunction, repairs made and parts replaced.

8533-154 INSTALLER AND REPAIRER, AUTOMATIC-PINSETTING MACHINE(electric. equip.; sport. & toy) DPT:261
pinsetter mechanic, automatic.
GED: 4 SVP: 6 EC: I PA: M 4 5 6 7

Installs and repairs automatic pinsetting machines used in bowling alleys: Directs material handlers in positioning of equipment. Bolts machines in place, and connects them to electrical mains, using hand tools. Operates machine to detect malfunction. Measures and regulates sweep of rake and adjusts pin pick-up clamps. Removes panels to gain access to electrical components. Measures voltage at transformer, switch and relay terminals, using volt-ohm-milliammeter. Actuates switches and relays to ensure correct operation. Replaces defective parts, such as motor brushes, relays and switches, using hand tools. Adjusts cams, stops and relay contact gaps to specified settings, using hand tools. Maintains inventory of spare parts and orders replacements as required. Records time spent and parts used on repairs.

8533-158 INSTALLER-SERVICEMAN, DENTAL EQUIPMENT (scient. & ind. equip., n.e.c.) DPT:261
GED: 4 SVP: 6 EC: I 6 PA: H 3 4 7

Installs and services dental office equipment, such as hydraulic chairs and electric and pneumatic drills: Discusses equipment operation and installation with dentist. Installs new and reconditioned equipment, using hand tools and power tools. Manipulates controls of equipment, such as hydraulic chairs, dental drills and water jets, to assess equipment serviceability. Checks for leaks in hydraulic mechanisms, electrical faults, rated operation of dental X-ray equipment and operating speed of dental drill in revolutions per minute, using pressure gauges, volt-ohm-milliammeter and tachometer. Repairs or replaces defective components, such as motors, flexible tubing, and clutches. Performs routine servicing of equipment, such as lubricating gears and repacking bearings, following manufacturer's specifications. Repairs or replaces ancillary equipment, such as sterilizers, amalgamators and vibrators, using hand tools.

8533-162 REPAIRMAN, AIR-CONDITIONER (electric. equip.) DPT:261
GED: 4 SVP: 6 EC: B 6 PA: M 3 4 6 7

Services and repairs domestic air-conditioning units in private residences and small business establishments: Queries customer, examines unit and listens to machine in operation, to diagnose malfunction. Dismantles machine or part of machine to gain access to defective part. Performs tests to enable further diagnosis, using mechanical and electrical test equipment and hand tools. Removes and replaces parts, such as switches, relays, fan motors, thermostats and filters, using hand tools and power tools. Adjusts controls and lubricates moving parts. Reassembles machine and makes necessary adjustments. Estimates repair costs, based on parts replaced and repair time. Transports machines requiring major repairs, to workshop, using truck. May repair units rejected by inspectors in manufacturing establishment.

8533-166 REPAIRMAN, ELECTRIC TOOL(electric. equip.) DPT:281
GED: 4 SVP: 6 EC: I 6 PA: M 4 7

Repairs electrical hand tools and bench-mounted devices, such as drills, sanders and grinders: Removes housing-screws to gain access to motor. Examines motor assembly for frayed wires and loose connections. Removes brushes and examines them for wear. Tests switches and wiring for grounds, using insulation tester. Removes armature and examines commutator to detect raised mica and surface pitting. Tests armature for short circuited wires, using growler. Turns motor commutator, using lathe, and undercuts mica insulation, using undercutting machine. Grinds surfaces of brushes to contour of commutator, using jig, and replaces brushes in motor. Replaces defective parts, such as switches, gears, bushings and bearings. Packs gear-assembly housing with specified grease. Operates repaired tool to ensure that it functions properly.

8533-170 REPAIRMAN, PORTABLE APPLIANCE(electric. equip.) DPT:281
GED: 4 SVP: 6 EC: I 6 PA: M 4 7

Repairs household electrical appliances, such as toasters, vacuum cleaners and fans: Consults with customer to assist in fault diagnosis. Examines appliance for mechanical defects. Switches on appliance and actuates controls. Observes and listens to detect symptoms, such as overheating, loose parts or undue vibration. Disassembles appliance to gain access to electrical and mechanical parts. Carries out voltage, current and resistance tests to detect open circuits in windings, wiring or in heating elements, using electrical test equipment. Removes and replaces defective parts, such as armatures, heating elements or switches, using hand tools, soldering equipment and miniature welding equipment. Reassembles appliance and checks operation. Enters time spent for labour and materials used on repair ticket. May be designated according to type of appliance repaired.

8533-174 REPAIRMAN, STORAGE BATTERY(electric. equip.) DPT:281
GED: 3 SVP: 6 EC: I 6 PA: M 4 7

Repairs and recharges industrial storage batteries: Inspects batteries and carries out electrical tests to determine extent and cost of repairs. Scraps batteries determined not repairable. Melts sealing compound on battery cover, using gas torch. Loosens compound from sides of battery case, using putty knife. Removes acid and plates from cells, and flushes cell case with water to remove residue from bottom of cell. Replaces defective plates, using torch and lead or alloy bar, or replaces cell. Reassembles battery, and pours hot tar compound over cover. Fills cells with acid solution of specified concentration. Attaches battery-charger leads to battery terminals, switches on charger and adjusts charger control to obtain specified charging current. Monitors charging process and tests specific gravity of cells, using hydrometer. Performs specific tests to determine condition of individual cells, such as measuring voltage on load, and charging and discharging cells in specified manner to ensure cell or battery meets minimum performance criteria.

8533-178 INSTALLATION MAN, HOUSEHOLD APPLIANCE (electric. equip.) DPT:684 GED: 3 SVP: 6 EC: I 6 PA: H 3 4 7

Installs household appliances, such as driers, electric and gas stoves and washing machines:

Installs heavy-duty wiring for appliances, such as electric stoves and driers, using hand tools. Levels appliances, such as washers and driers by observing spirit level and adjusting levelling devices. Connects flexible hose of automatic washer to water supply, and gas stove to gas supply, using hand tools. Turns on appliance, observes operating cycle and adjusts controls to ensure it operates to manufacturers' specifications. Lights and adjusts pilot flame of gas stoves and examines valves and burners. Explains use, care and features of appliances to customer.

8533-186 ARMATURE WINDER, REPAIR (electric. equip.) DPT:684 GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Winds armature to repair used motors and generators:

Inspects and tests armatures to determine repairs required, using insulation tester and growler. Removes insulation from ends of pre-wound and impregnated coils. Cuts sheet-insulating material and fits strips into slots on armature core. Winds wire manually into core slots or places armature into jig of winding machine, sets turn-counter and winds specified number of turns into armature slots. Shapes pre-wound coils and positions them in armature slots by tapping winding with mallet. Solders or brazes coil ends to commutator segments. Operates undercutting machine to undercut mica insulation below level of commutator bars. Tests repaired armature, using growler.

8533-190 BATTERY REPAIRMAN, PRODUCTION LINE (electric. equip.) DPT:684 GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Repairs batteries rejected from production line by inspection personnel:

Tests specific gravity of rejected batteries and adjusts it to proper concentration by adding water or acid. Adds electrolyte to fill cells to specified level. Examines battery to ensure cells are connected in series, and removes, repositions and reconnects incorrectly connected cells, using torch. Heats asphalt compound on top of battery to correct poor sealing. Recharges batteries, using battery charger. Tests repaired batteries for performance, using electrical test equipment. Segregates and tags non-repairable batteries.

8533-194 COIL WINDER AND REPAIRER (electric. equip.) DPT:684 GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Repairs defective armatures and field and rotor coils used in electric motor and generators:

Inspects coils and reviews production instructions to determine defect. Wraps insulating tape over bare spots, using tapehook and scissors. Removes defective leads, brush clips and connecting lugs from coil, and replaces parts with new ones, using soldering equipment or crimping tool. Winds replacement armature, rotor and stator coils directly into slots or onto forms. Wraps insulating tape over coil, manually or using coil-taping machine. Cuts and positions sheet insulation to fit slots. Positions coils in slots and taps them with mallet to position, compress and shape them. Connects coils in specified sequence, and solders, brazes or welds connections, using soldering or welding equipment. Applies insulating varnish to windings, manually or using impregnating equipment.

May specialize in one phase of repair and be designated accordingly; for example, Coil Connector, Repair Coil Winder, Repair

8533-198 TRANSFORMER-COIL WINDER (electric. equip.) DPT:684 GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Operates machine to wind various sizes and types of coils for replacement in light and heavy-duty transformers:

Strips old coils from power distribution-transformers to obtain or verify specifications, such as wire size and number of turns on primary and secondary windings. Secures form on mandrel of coil-winding

machine. Selects wire and attaches wire end to coil form and places feeder spool on machine. Starts machine and manually guides wire onto form. Saturates each layer with insulating varnish and places sheet insulation between each layer of winding. Observes turn-counter and stops machine when specified number of turns are wound. Removes form and wraps insulation around primary winding. Positions coils and lead wires as specified.

8533-202 REPAIRMAN, ELECTRIC SIGN (electric. equip.) DPT:383 GED: 3 SVP: 4 EC: O 6 PA: L 2 4 7

Repairs electric signs on site:

Visits electric sign locations at night to detect malfunctioning signs, and records location and nature of malfunction. Drives service vehicle to location, and gains access to sign, using ladder. Replaces parts, such as bulbs, fluorescent lamps, neon tubing, sockets, switches and flashers, using hand tools. Sets and adjusts timing devices to regulate on and off times of sign. Requisitions and keeps supply of spare parts.

8533-204 INSTALLER, DOMESTIC AIR-CONDITIONER (electric. equip.) DPT:664 GED: 3 SVP: 4 EC: B PA: H 2 3 4 6

Installs domestic air-conditioning units in private residences and small business establishments:

Inspects existing wiring on customer's premises to ensure that electrical circuits can handle additional load. Recommends wiring change to customer, or requests electricians to make changes. Assembles and mounts window-support brackets, and mounts supports on outer wall, using screw, hand tools and power tools or directs helper to perform these duties. Extends panels from air-conditioner unit to vertical sides of window frame, and secures them to window frame, using screws. Levels unit with adjusting screws or with shims. Starts machine, and adjusts temperature and fan controls to achieve desired cooling. Listens for unusual sounds and checks vibration to detect possible malfunctions. Instructs customer on operation and care of unit.

May service existing installations by replacing controls, air filters and belts, using hand tools.

8533-206 WIREMAN, AUTOMOTIVE (motor vehicle) DPT:684 GED: 3 SVP: 4 EC: I PA: L 3 4 7

Installs electrical wiring in buses, automobiles, trailers and similar vehicles:

Locates and marks positions for outlet boxes, switches and lights, following drawings and using hand and power tools. Threads wire or preassembled cable through holes in floor and through firewall grommets, and attaches wire or cable to frame or fender, using insulated fastening devices. Installs connectors for accessories, such as lights, windshield wipers and relays, and interconnects mating connectors. Attaches terminals to colour-coded wiring, using crimping tool, and connects terminals, following wiring diagram. Connects battery or external power source and actuates switches and controls to test wiring.

8533-210 APPLIANCE REPAIRMAN, PRODUCTION LINE (electric. equip.) DPT:684 GED: 3 SVP: 3 EC: I 6 PA: M 4 6 7

Repairs portable-household-electrical appliances, such as vacuum cleaners, toasters and heaters, rejected by production line inspectors or returned by user to manufacturer:

Refers to inspectors or user's report to locate defect or malfunction. Disassembles appliances, such as vacuum cleaners or toasters, to gain access to defective part or mechanism, using hand tools. Installs new parts, such as motor brushes, heating elements and switches, according to production specifications, using hand tools and soldering equipment. Reassembles appliance, switches it on, manipulates controls and observes and listens to detect faulty operation, and makes corrective adjustments. Records details of repairs made. Maintains stock of frequently used repair parts.

8533-214 ELECTRICAL REPAIRMAN HELPER(electric. equip.) DPT:684
GED: 3 SVP: 3 EC: I 6 PA: M 2 3 4 7

Helps to install, maintain and repair electrical equipment, such as lighting fixtures, electric motors and wiring, in a commercial, industrial or other establishment:

Repairs conduit used in electrical wiring, by measuring, cutting, bending and threading, using tape measure, pipe cutter, hickey and pipe threader. Performs minor repairs, such as replacing bulbs, fuses and switches. Obtains replacement items, such as relays, circuit breakers and lubricants from stock room. Disassembles, cleans, and reassembles electrical equipment such as motors and relays, using hand tools and cleaning solvents. Assists in equipment installation by moving and positioning motors, gear boxes and controls, using hoists, dollies and other material-handling equipment. See also definition for term title, 02-160 HELPER (any ind.).

8533-218 ELECTRICIAN HELPER, AUTOMOTIVE (motor vehicle) DPT:684
GED: 3 SVP: 3 EC: I PA: L 3 4

Helps repair and overhaul automotive-electrical equipment in vehicles, such as automobiles, buses and trucks:

Disassembles components, such as heaters and generators, using hand tools. Removes and replaces defective items, such as motor and generator brushes, sealed-beam headlamps and battery cables, using hand tools. Washes parts, using solvent and brush. Obtains replacement parts from stock room. Prepares generators for overhaul by moving them to repair shop, using mechanical hoist or handtruck, and by cleaning and disassembling item. See also definition for term title, 02-160 HELPER (any ind.).

8533-222 DOMESTIC-AIR-CONDITIONER-REPAIRMAN HELPER (electric. equip.) DPT:687
GED: 2 SVP: 3 EC: B 6 PA: H 2 3 4

Helps to repair, service and install domestic window-mounted air-conditioning units:

Helps workers to move new air-conditioners from delivery trucks to customer's premises, or to pick up unserviceable units at customers' homes. Dismantles unserviceable units by removing air deflector front and side panels, to enable mechanics to service equipment. Reassembles and helps to reinstall repaired or new air conditioners on customer's premises. Installs mounting brackets or other supports on outside wall of house, using hand tools and power tools. Withdraws panels from front vertical surfaces of units, and secures panels to vertical surfaces of window frame to fill in space between body of machine and window frame. See also definition for term title, 02-160 HELPER (any ind.).

8533-226 ELECTRIC-TRUCK SERVICEMAN(electric. equip.) DPT:687
GED: 2 SVP: 3 EC: B PA: H 3 4 7

Services battery-operated vehicles, such as electric trucks, used to transport materials in plants, and battery-operated golf carts:

Cleans and adjusts speed control mechanism, using cleaning solvent and hand tools. Lubricates moving parts, using grease gun and oil can. Removes discharged batteries from electric trucks or golf carts, manually, or using hoist. Cleans battery posts, using soda- water solution and cleaning tool. Connects batteries in series with charger, and unscrews vent caps. Switches on charger and adjusts charging current to specified rate. Tests batteries, using hydrometer, and disconnects and removes charged batteries. Installs charged batteries in trucks and carts.

May service a particular type of conveyance and be designated accordingly.
Electric-Golf-Cart Repairman

8533-230 ELECTRIC-MOTOR-REPAIRMAN HELPER (electric. equip.) DPT:687
GED: 2 SVP: 3 EC: I 6 PA: M 4 7

Helps mechanic to repair electric motors and related equipment: Prepares motors for repair by removing coils from armatures and stators, cleaning mechanical parts of motors, such as shafts, gears and

housings, and by removing brushes, bushings, armatures and windings, using blowtorch, hacksaw, wirecutter, cleaning solvent and hand and power tools. Straightens armature shafts, using jig, straightening bar, or wood block and hammer. Prepares surfaces of motor and starter housings for painting by removing old paint, using sanding equipment and cleaning solvents. Performs reassembly operations by replacing new parts, such as bearings and brushes, and by positioning and securing mounting hardware. See also definition for term title, 02-160 HELPER (any ind.).

8533-234 REFRIGERATION-MECHANIC HELPER (mech. equip., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: I 6 7 PA: M 2 3 4

Helps refrigeration mechanic to install, maintain, and repair industrial and commercial refrigerating and cooling systems:

Lifts or holds parts while mechanic fits, aligns, and fastens them into position. Bolts or unbolts parts, using hand tools. Cuts and threads pipe to specified lengths, using pipe cutter and pipe threader. See also definition for term title, 02-160 HELPER (any ind.).

8534-ELECTRONIC EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS

This unit group includes occupations concerned with fabricating and assembling electronic equipment; such as, radio and television transmitters and receivers and other communications equipment, sound recording and reproduction equipment, radar equipment, analyzing and computing equipment; electron tubes, resistors, semiconducting devices, capacitors, printed circuitry, and other electronic components. Activities include: mounting; securing; and interconnecting and adjusting parts and assemblies, using a variety of common or specialized hand and power tools, jigs and equipment. ELECTRICAL EQUIPMENT FABRICATING AND ASSEMBLING OCCUPATIONS are classified in Unit Group 8531.

8534-110 SET-UP MAN, CATHODE-RAY-TUBE PROCESSING (electronic equip.) DPT:280
GED: 4 SVP: 6 EC: I 5 6 7 PA: M 3 4 5 7

Sets up and maintains cathode-ray-tube processing apparatus, such as tube-exhaust chambers and bulb-coating and bulb-aluminizing equipment, performing any combination of following duties:

Sets controls of bulb-coating equipment to regulate flow of chemicals used to form fluorescent screen. Adjusts height of head on exhaust or aluminizing equipment, using height gauge and magnifying glass. Sets timer to regulate speed of dolly, carrying picture tube through aluminizing and exhaust equipment, according to tube size. Adjusts controls to set specified voltage, air pressure, rates of flow and temperature of exhaust and aluminizing equipment. Observes processing equipment to detect malfunctions. Disassembles, and repairs or replaces defective components, such as motors, switches and shafts, using hand tools. Tests vacuum and diffusion pumps, using vacuum and ionization gauges. Replaces or repairs defective vacuum and water pumps and associated equipment. Mixes tube-coating solutions. Charges bulb-washing and-coating machines with prepared solutions. Cleans and lubricates equipment. Records equipment failures and repair work performed.

May be designated according to type of equipment maintained; for example, Aluminizing-Equipment Maintenance Man

8534-114 SET-UP MAN, EXHAUST EQUIPMENT(electronic equip.) DPT:280
GED: 4 SVP: 6 EC: I 6 PA: L 3 4 7

Sets up and adjusts exhaust equipment used to remove gas and impurities from electron tubes:

Actuates controls to switch on power supplies, pumps and ovens, regulates oven temperature and to achieve specified degree of vacuum required. Observes gauges and meters used to measure temperature

and vacuum, and adjusts controls to ensure correct operating conditions. Monitors machine operation and examines improperly processed electron tubes to detect equipment malfunctions. Locates faults, using mechanical and electrical test equipment. Repairs or replaces defective parts, using hand tools. Notifies maintenance department of equipment requiring major repairs. May fabricate mechanical parts, using machine tools, such as lathe, drill press and bench grinder.

8534-118 ALIGNER, RADIO AND TELEVISION RECEIVER(electronic equip.) DPT:684
GED: 3 SVP: 5 EC: 1 6 PA: L 4 6 7

Adjusts tuned circuits of newly manufactured radio and television receivers to obtain specified performance: Connects electronic-test equipment, such as signal generator and oscilloscope, to receiver. Adjusts tuned circuits of broadcast, frequency modulation and television receivers for specified performance, using alignment tools. Adjusts television tuned circuits for optimum receiver performance on each channel. Writes reject tag containing pertinent information, when unable to carry out alignment. May rectify minor faults by resoldering connections or replacing tubes.

8534-122 ASSEMBLER, ELECTRONIC EQUIPMENT(electronic equip.) DPT:684
GED: 3 SVP: 5 EC: 1 PA: L 3 4 7

Assembles electronic equipment, such as communications transmitters, radar equipment and telemetering systems: Mounts component, such as transformers, modules, milliameters, switches and inductors, in cabinets and on chassis or panels. Installs assembled terminal boards in chassis or on panels. Positions wiring harnesses in cabinets, panels and chassis, according to manufacturing standards, and secures them in place, using insulated clamps and hand tools. Attaches leads at cable-assembly break-out points to switches, terminal boards, transformers and connectors, using soldering equipment, spot welder and crimping devices, and following production drawings. Mounts panel assemblies to cabinet or rack, using hand and power tools. Secures plugs of cable assemblies to mating receptacles on panel, chassis or cabinet. Checks continuity of circuits, following drawings and using electrical-test equipment. Replaces defective components, resolders connections, and makes other changes, such as rerouting wires, following inspection reports. May be designated according to type of equipment assembled; for example, Communications-Transmitter Assembler Radar-Receiver Assembler

8534-126 ADJUSTER, FILAMENT-WINDING MACHINE(mech. equip., n.e.c.) DPT:380
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Sets up and maintains battery of winding machines that form filaments used in electron tubes: Installs specified blades, cutters, gears, carriage cam, and guides in winding machine, using hand tools. Places spool of wire on feed spindle, threads wire around tension pulleys, and inserts it through guide. Sets tension gauge and opens air valve. Starts machine and depresses pedal to form sample filament. Verifies dimensions of filament, using millimeter scale and micrometer. Adjusts machine parts to wind filament to specified standards. Replaces defective machine parts, such as pulleys, rollers, and shafts, using hand tools. Sharpens cutting blades on bench grinder. Keeps record of repairs. May adjust pedal, according to operator's specifications, by varying length of chain or adjusting fulcrum. May fabricate machine parts, as required, using lathe, drill press and grinder.

8534-130 CARBON-RESISTOR-PROCESSING-EQUIPMENT OPERATOR(electronic equip.) DPT:382
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Operates automated-production equipment to produce deposited-carbon-precision resistors: Loads machine with ceramic-resistor cores and resistor lead-wires. Turns valves to admit methane and nitrogen gases into carbon-coating furnace, and sets furnace temperature, according to work order. Actuates controls and valves to start vacuum pump of terminating chamber, to admit argon gas and to deposit gold to form contact

surface on resistor cores. Adjusts temperature of encapsulating oven to specified temperature. Observes temperature and pressure gauges and machine operation to detect equipment failures.

8534-134 ASSEMBLER, ELECTRONIC ORGAN(electronic equip.) DPT:684
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Assembles components of electronic organs, such as amplifier chassis, speakers and tone generators, and installs interconnecting wiring and cable assemblies, performing any combination of the following duties: Fabricates specified cable assemblies, using insulated wire and peg boards, and ties wires together, using nylon lacing cord. Positions and attaches cable assemblies to organ structures, using nylon clamps and following production drawings. Mounts components, such as speakers, keyboard, switches and indicator lights, in specified sequence, using mounting hardware and hand and power tools. Connects coded wires from cable assembly and other leads to components as specified in assembly drawings, and secures leads, using crimping tool or soldering equipment. Positions and installs mechanical items, such as pedals, stop-boards and felt strips, following production drawings. Attaches insulating material, such as heavy felt or rock wool, to inside surfaces of speaker enclosures, using stapling gun. Mounts and fastens decorative grill cloth over speaker openings, using stapling gun. Positions decorative frame over grill cloth, using fastening devices. Tests electrical circuitry and manipulates keys and buttons to ensure conformance to specifications. May assemble specific components of electronic organ and be designated accordingly; for example, Console Assembler Keyboard-Action Assembler Stopboard Assembler Tone-Cabinet Assembler

8534-138 CRYSTAL-DICING-SAW OPERATOR(electronic equip.) DPT:682
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Operates dicing saw (single or multiple-blade circular saw) to cut crystalline material, such as quartz, germanium and silicon, into wafers, blanks or dice, used in crystal oscillators and semiconducting devices: Mounts crystalline material on jig plate, using melted wax. Secures plate to carriage of machine by tightening thumbscrews. Turns handwheel to align blade with cutting lines on crystal. Sets automatic-feed controls according to specifications. Starts machine and observes automatic feed or pulls handle to move blade through crystal to form wafers. Turns jig and repeats sawing to form dice. Removes plate from machine and taps with light hammer to separate parts from plate.

8534-142 AGER, ELECTRON TUBE(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Agers electron tubes to stabilize their electrical characteristics: Inserts electron tubes in sockets of ageing device and connects anode or control-grid lead to top cap of tube. Sets switches and controls for tube to be aged, following specified performance information. Switches on ageing device to connect operating voltages to tube elements, and allows tubes to operate for specified ageing time. Actuates controls and reads meters and indicators to determine operating characteristics, such as emission, and defects, such as interelectrode shorts, filament fracture, internal arcing or incomplete vacuum.

8534-146 ASSEMBLER, ANTENNA(electronic equip.) DPT:684
GED: 2 SVP: 4 EC: 1 5 PA: L 4

Assembles television antennas and antennas for use on frequency modulation broadcast band: Places antenna boom (main support structure) in holding jig. Drills holes in boom to support hardware, using multispindle drill press. Attaches antenna elements and hardware at specified locations along boom, using hand tools and power tools. Fits transmission line terminal block to matching antenna section. Tends anodizing tanks to anodize antenna, to provide protective finish. May tend machine to mould insulators used for transmission line terminal block.

8534-150 ASSEMBLER, CHASSIS(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Assembles chassis of electronic equipment, such as radio and television receivers, audio amplifiers and transceivers, performing any combination of the following duties:
Bolts and rivets parts, such as tube sockets, transformers and terminal strips, to chassis, following production drawings and using hand tools, rivet gun and power wrench. Mounts items, such as potentiometers and rotary switches, using hand and power tools. Inserts ends of precut, coloured, and tinned wires into terminals of mounted parts, secures wires and solders to terminals to interconnect components. Mounts parts, such as resistors, capacitors and semiconducting devices on surface of printed-circuit board by inserting wire leads or contacts through holes in circuit board, and soldering wires to circuit board or chassis terminals. Inserts electron tubes in sockets.
May be designated according to type of chassis assembled or component installed on chassis; for example,
Assembler, Television Chassis
Transformer Mounter

8534-154 ASSEMBLER, CRYSTAL-UNIT(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: S 4 7

Assembles frequency-determining-crystal-units:
Fits parts, such as crystal wafers, electrode plates and spacers in crystal holder, following production drawing and using hand tools. Fastens lead wires to crystal electrodes and secures leads to crystal holder pins, using soldering equipment. Places gasket over open side of holder and snaps cover in place, or secures cover, with screws or nuts and bolts.
May place tinned-metal cover over open end of metal-crystal holder and solder cover in place to fabricate hermetically sealed unit.

8534-158 CHASSIS INSTALLER(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Installs television or radio chassis and associated parts, such as speakers and antennas, in cabinets, by performing any combination of following duties:
Cleans inside of cabinet, using airhose. Staples built-in antenna to inside of cabinet and mounts speaker assembly in cabinet, using hand tools and power tools. Assembles glass plate and picture-tube mask to front of television cabinet and cleans glass. Positions chassis in cabinet and tightens bolts with wrench. Plugs speaker connector into chassis or attaches leads to speaker, using soldering equipment. Attaches leads from built-in antenna to antenna terminals. Mounts dials and knobs on front panel control shafts. Attaches cover to back of cabinet, using power screw driver.

8534-162 CONVEYOR-LINE WORKER, PICTURE-TUBE ASSEMBLY(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: 1 4 5 PA: M 4 7

Carries out process and assembly operations manufacture of television picture tubes:
Fills funnel-shaped bulb of picture tube with distilled water and acetate solution and adds specified chemicals which settle to form picture-tube screen. Places bulb on shaking device to dislodge loose particles from screen area. Sprays or brushes specified interior surfaces of bulb with aquadag (conductive coating), and tests conductivity of aquadag, using test jig. Cleans bulb exterior and interior surfaces, using acid solution, water hose and felt or cork wheel, and particle-sanding machine. Places aluminum pellet into coil of aluminizing dolly and actuates controls to start vacuum vaporization process that deposits aluminum coating on bulb screen. Positions jig on tube base, threads lead wires through base pins and cuts off excess wire. Applies flux to base pins and immerses tube base in molten-solder pot to solder leads to base pins.
May be designated according to specific duties performed; for example,
Aluminizer, Picture-Tube Screen
Bulb Coater, Picture Tube
Fluorescent-Screen Former
Screen Buffer, Picture Tube
Tube-Base Mounter

8534-166 CRYSTAL CALIBRATOR(electronic equip.) DPT:684

crystal lapper.
GED: 3 SVP: 3 EC: 1 PA: S 4 6 7

Monitors electronic test equipment to determine oscillating frequency of crystal in crystal-lapping machine:
Inserts crystal into electrical holder of crystal-lapping machine and connects leads from holder to radio-frequency oscillator. Switches on precision crystal oscillator to provide heat frequency with oscillator connected to crystal. Starts machine and applies crystal-grinding compound to crystal surfaces. Monitors heat frequency output, as crystal polishing progresses, using headphones, to detect continuously decreasing audio frequency. Stops crystal lapping-machine when signal indicates crystal has been reduced to specified size. Removes crystal, rinses in water and dries it in centrifugal drier. Inserts crystal into holder, plugs crystal unit into oscillator, connects leads from oscillator to frequency counter and observes reading to determine crystal frequency.

8534-170 ETCHER AND PLATER, QUARTZ CRYSTAL(electronic equip.) DPT:684
crystal finisher.
GED: 3 SVP: 3 EC: 1 PA: S 4 6 7

Etches or plates quartz crystals to raise or lower their oscillating frequencies:
Dips crystals in cleaning and rinsing solutions, using tweezers or handling jig, and dries crystals, using centrifugal drier. Checks oscillating frequency of crystal, using electronic-test equipment. Places crystal in jig and immerses jig in plating solution to increase crystal size, or immerses crystal in etching solution to reduce its size. Removes crystal from solution after specified time, rechecks frequency and repeats operation as required. Checks frequency of finished crystal, using precision electronic-test equipment. Makes small change to crystal frequency when required, using vacuum- evaporation equipment.

8534-174 ASSEMBLER, CAPACITOR(electronic equip.) DPT:685
GED: 3 SVP: 3 EC: 1 6 PA: L 4 7

Assembles paper, electrolytic, tantalum and other types of capacitors used in electronic equipment, by any of the following methods:
1. Tends capacitor machine that winds specific lengths and types of foil paper to form capacitor core of specified capacity. Solders lead wires to core ends, using soldering equipment. Places core- lead assemblies and paper cylinder or plastic cases into machine that places case over core-lead assembly and fills and seals ends with plastic compound, to form tubular capacitors. Lowers tray of capacitors into molten plastic, to apply protective coating. 2. Tends equipment to wind cores for electrolytic capacitors and impregnate cores with paste electrolyte. Attaches leads to core, places core in cylindrical aluminum can, attaches leads to terminal assembly and secures bottom cap, using spinning machine. Connects electrolytic capacitors to direct-current supply voltage and actuates controls to supply specified voltages for specified times, to electrically form a film on one foil surface. 3. Feeds capacitor components, such as lead wires, metal or plastic cases and cores, into machines that assemble, seal and mark or colour code capacitors. 4. Mixes powdered tantalum with other chemicals and fills machine- press hoppers with mix and tantalum-coated leads. Actuates controls of press to form and compress mix into specified shape and insert lead to form capacitor anode. Tends equipment to coat anode with manganese dioxide to form cathode element and deposit graphite film over element to provide a conductive surface. Actuates machine controls to insert core in metal capacitor case, attach leads, and print identifying data on case.
May rework rejected paper capacitor cores to lower capacity by unwinding foil paper. May be designated according to type of capacitor assembled; for example,
Mica-Capacitor Assembler
Paper-Capacitor Assembler

8534-178 PLATER, VACUUM-EVAPORATION PROCESS(electronic equip.) DPT:685
GED: 3 SVP: 3 EC: 1 PA: L 4 6 7

Tends vacuum-evaporation equipment that deposits metallic film on parts, such as quartz and silicon crystals, used in manufacture of electronic components:

Places parts, such as quartz, silicon or germanium wafers, on fixture, using tweezers or vacuum probe, and places fixture in vacuum chamber. Places aluminum or nickel wire, as specified by production order, into crucible of heating device. Clamps lid on chamber and starts electric pump that creates partial vacuum in chamber. Sets controls to regulate electric current that energizes heating device and vaporizes metal. Observes gauges and readjusts controls to ensure that specified heat is maintained. Turns off equipment after specified time. Checks for correct plating of quartz crystal units, using frequency-measuring equipment.

8534-182 ASSEMBLER, PRINTED CIRCUIT(electronic equip.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Installs electronic components, such as transistors, diodes, tube sockets, resistors and capacitors, on printed-circuit boards, used in radio and television receivers, hearing aids, amplifiers and other electronic equipment:

Prepares component leads for assembly by dipping or brushing, using cleaning solvent. Places circuit board in holding fixture and inserts stripped and tinned wire, component leads, terminals and mounting tabs through holes in circuit board, following production drawings and using tweezers and hand tools. Positions miniature parts, using microscope. Bends leads on underside of boards to secure components in position for soldering. Attaches parts, such as transformers and connectors, to circuit board, using miniature welding machine, or soldering equipment, and places associated leads through specified holes in board to complete electrical circuit.

8534-186 ASSEMBLER, RECORD CHANGER(electronic equip.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles record changers, using hand tools and soldering equipment:

Positions changer frame structure in jig, and fits and secures parts in place in specified sequence, using hand tools. Installs motor, and attaches and solders leads to terminal tie points, using hand tools and soldering equipment. Connects lugs to pick-up leads and attaches leads to tie point. Inserts turntable mounting-springs, control knobs, and installs felt or rubber turntable mat, using hand tools and cement.

8534-190 ASSEMBLER, SPEAKER(electronic equip.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: S 4 6

Assembles loud speakers used in audio equipment, radios and television sets, by performing any combination of the following duties:

Folds precut composition-paper sheets and glues edges to form speaker cone. Fastens flexible lead wires to speaker voice-coils, using soldering equipment. Cements voice coils to speaker cones. Secures speaker frame to magnetic housing, using staking press. Inserts cone and voice-coil assembly over cylindrical pole in speaker housing and inserts centering device between inner surface of voice coil and pole. Secures voice-coil leads to speaker terminals, using soldering equipment. Cements outer rim of cone and voice-coil assembly to speaker frame and cements felt or paper composition gasket over outer edge of cone. Connects oscillator to speaker terminals, varies frequency and listens to speaker response to detect defects, such as cone rattle or distortion due to off-center voice coil. Labels speakers to indicate defect and segregates defective speakers.

May perform specific duties and be designated accordingly; for example,

Cone Assembler
Voice-Coil Assembler

8534-194 ASSEMBLER, ELECTRON TUBE(electronic equip.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Assembles electron tubes, performing any combination of following duties:

Tends equipment that coats cathodes with conductive materials and examines cathodes under microscope to ensure adequate coating. Tends machine that winds wire to form tube filaments. Places filaments in cathode sleeves, using tweezers, or positions straight filament wire around ceramic supports of glass stems. Tends winding, shaping and cutting machines that wind fine wire into specified configuration around supports to form control grid of tube. Verifies correct spacing and dimensions of wound wire, using calibrated microscope. Punches hole in top of tube bulb, for tubes employing top plate or grid cap, using self-indexing punching machine. Feeds tube bulbs into machine that stencils tube type and other data on bulbs. Positions component parts, such as anodes, grids, plates, stem and leads in mica support disk. Secures leads to tube elements, using tweezers, and welds leads to ensure good electrical connection, using resistance-spot welder. Examines assembly to detect misalignment of components and defective welding. Positions assembly in tube bulb. May be designated according to specific duties performed; for example,
Bulb-Mount Assembler
Cathode Coater
Filament Insertor

8534-198 SEALING-MACHINE TENDER(electronic equip.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends equipment that seals electron guns into bulbs to form television picture tubes:

Places electron gun in heating device and adjusts controls to set specified gun temperature. Positions heated gun on sealing machine spindle and places bulb over spindle. Secures bulb to gun, by tightening neck-aligning clamp. Starts machine that indexes gun-bulb assembly through processing stations to seal gun assembly to bulb. Monitors process and adjusts controls to obtain seal. Places sealed unit on conveyor for further processing. Marks identifying data on sealed unit.

8534-202 EXHAUST-AND-SEALING-MACHINE TENDER(electronic equip.) DPT:685
GED: 2 SVP: 2 EC: 1 6 PA: S 4 7

Tends machine that automatically exhausts air from electron tubes and seals exhaust ports of tubes:

Positions tubes in multiple-head sealing machine. Starts machine equipped with heating, cooling and bombarding chamber that automatically evacuates gas and impurities from tube, seals tube, and pinches off excess glass. Examines tubes to detect poor sealing. Observes tubes for bluish glow, indicating gassy tube, as they are carried by conveyor through testing device. Segregates defective tubes.

8534-206 ASSEMBLER, COLOUR-PICTURE-TUBE(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: M 4 7

Assembles colour-picture-tubes, performing any combination of following duties:

Places top-cap (picture-tube screen) on conveyor that carries it through cleaning, drying and phosphor-coating operations. Positions aperture mask and top-cap in fixture of time-cycled light source and starts cycle to expose top-cap coating to light through aperture mask to form colour-emitting dots on phosphor coating. Marks mating top-cap and aperture mask with identifying numbers. Coats neck of glass funnel with nonconductive chemical solution. Positions glass funnel of picture tube on turntable and moves controls to seal edge-ring around funnel mouth and spray interior of funnel with conductive coating. Cleans seal-edge-ring with solvent and actuates control to coat seal-edge-ring with specified amount of frit (bonding cement). Places funnel in jig and removes foreign matter from screen, using airhose. Positions top-cap and aperture assembly on coated funnel rim, aligns top-cap with reference marks on funnel and moves funnel into glass sealing and annealing oven to fuse top-cap to screen. May specialize in a particular aspect of assembly and be designated accordingly; for example,

Frit Dispenser
Funnel Coater
Top-Cap Sensitizer

8534-210 ASSEMBLER, FILTER(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Assembles radio-frequency-interference filters, following production drawings and using hand tools and soldering equipment:

Bolts filter-assembly-support bracket to lid of shield can, using hand tools. Positions and mounts leads on support bracket and bolts bracket to lid, using nut driver. Secures components, such as capacitors and coils, to lead-terminals, and attaches interconnecting leads, following production drawing or prototype and using hand tools. Fits precut insulation paper inside shield can to prevent short circuits. Inserts filter assembly into can and positions and solders base plate to can.

8534-214 ASSEMBLER, PICTURE-TUBE GUN(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Assembles guns (electron emitters) used in colour and black and white picture tubes:

Positions cathode assemblies of colour picture tube on each of three mandrels, using tweezers, and places mandrels in holding fixture. Places and aligns beam shields, and aligns connecting straps on cathode assemblies, using aligning jig, to position cathodes in specified alignment with each other. Welds straps to cathode structure, using spot welder. Places glass bead in each arm of three-arm heating device and actuates controls to heat beads. Positions cathode assemblies in beading device and actuates controls to raise arms and attach beads to cathode assemblies. Welds connecting leads to colour or black-and-white picture-tube-elements, such as grids, cathodes and anodes, using precision holding and positioning jig. Fits connecting leads through hollow pins of tube base, applies flux, and solders tube base, using solder pot.

8534-218 ASSEMBLER, POTENTIOMETER(electronic equip.) DPT:684
assembler, variable resistor.
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles wire-wound or carbon-composition potentiometers, by performing any combination of the following duties:

Removes specified length and gauge of resistance wire from spool, required to fabricate wire-wound resistance element. Moves tester prod along wire until specified resistance is observed, and cuts wire, using wire cutter. Places resistance wire into forming device that forms it over circular strip of insulating material, and applies heat to mould wire into insulating material to form resistance element. Positions element into housing of wire-wound potentiometer, or positions prefabricated carbon-composition element into housing of carbon potentiometer. Secures element in body of potentiometer, by cementing, rivetting or crimping, using contact cement, rivetting machine or crimping jig. Mounts bushing into body of potentiometer, and secures in position, using press. Installs shaft mechanism through bushing and secures in position, using locking ring. Attaches wire ends of element to contact points, using spot welder. Places cover in position and secures tabs, using jig. May attach additional components to fabricate ganged-potentiometer, using single shaft or concentric shafts.

8534-222 ASSEMBLER, SEMICONDUCTOR(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Assembles semiconductor devices, such as diodes and transistors, by performing any combination of the following duties:

Stacks alternate layers of semiconductor wafers, solder chips and nickel disks in holes in graphite boat, using tweezers and vacuum-pick-up tool. Places cover on boat and positions lead wires through holes in cover and onto wafers. Places boat in furnace, to melt solder and bond assembly together. Removes boat from furnace and replaces assemblies in holes in graphite boat, using tweezers. Fits cover on boat and inserts elements into holes in cover. Places boat in tunnel oven that fuses semiconductor assembly and elements together to form junctions on semiconductor material. Removes fused parts from oven and examines for defective fusion. Tests forward conductivity of fused assembly, using electronic-test equipment. Places leads of diode

in holding fixture of fusing machine and positions semiconductor wafer on leads, using tweezers and microscope. Moves machine controls to electrically fuse parts together. Removes parts and places them in fixture for cooling. Positions pieces of precut wire on transistor headers to form transistor leads. Fastens one end of lead to header terminal pins, using spot welder, and bends other end of lead to specified points on surface of semiconductor material, using needle. Positions header under stylus of lead-bonding device and pushes lever to bond leads to semiconductor material.

May tend equipment that automatically welds, bonds, crimps and fuses parts into finished semiconductor devices. May test semiconductor devices, using electronic-test equipment. May perform a specific part of the assembly process and be designated accordingly; for example,

Lead-Welder
Semiconductor Mounter

8534-226 ETCHER, PRINTED-CIRCUIT BOARD(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 6 7 PA: L 4 7

Etches conductive patterns on copper-faced plastic sheet to form printed-circuit boards for electronic equipment, using one of following methods:

1. — Fits silk screen, containing circuit pattern in frame, positions blank copper-faced circuit board in holding fixture and lowers silk screen over circuit board blank. Applies resist-ink to silk screen, using brush and rubber wiper blade and places in rack to dry. Adjusts quantity of acid in immersion tank and starts agitators. Lowers rack filled with circuit boards into tank and removes after specified period.
2. — Places rack in rinsing solution, and removes and stacks etched boards to dry. Places silk-screened boards on etching machine conveyor. Sets controls according to thickness of copper coating. Starts machine to spray silk screened boards with acid to form circuit pattern. Removes boards from machine, immerses in rinsing solution and removes and places in rack to dry. Visually inspects boards for open or short circuits.

May sensitize blank-circuit board to light, by coating board with light sensitive enamel, and transfer circuit pattern to board, using circuit negative and arc light.

8534-230 LAMINATOR, TELEVISION-PICTURE-TUBE(electronic equip.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Laminates safety glass to face of picture tube:

Cleans surfaces of picture tube and safety glass, using solvent and soft cloth. Places tube and safety glass in conveyor jig and inserts separating wire between tube face and safety glass. Places adhesive tape around tube face to provide sealed space between tube face and safety glass. Starts conveyor to carry picture tube past bank of lamps in heating oven. Breaks small opening in tape, inserts nozzle or resin dispenser into opening and applies specified quantity of clear resin to tube face and safety glass surfaces. Removes picture tube from conveyor and removes separating wire. Applies blue barrier lacquer to tube anode, using spray nozzle. Examines laminated tubes for defects, such as streaks and stains. Cleans tube and safety glass surfaces, using solvent, and refinishes surfaces, using pumice. Delaminates tubes which require rework.

8534-234 STEM BEADER, ELECTRON TUBE(electronic equip.) DPT:684
flare beader.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Fuses glass-beaded wire into stems of electron tubes:

Assembles wires and glass beads to form beaded wire, using jig and tweezers. Holds glass stem of tube near flame of gas torch to soften glass and draws beaded wire through stem opening and into stem so that beaded wire is fused to stem. Checks outside diameter of assembly, using ring gauge.

8534-238 ASSEMBLER, TAPE CARTRIDGE AND CASSETTE(electronic equip.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: S 4

Assembles cartridges or cassettes used in tape recorders or players: Places reel of tape on feed spindle of tape-winding machine and places cartridge spool or cassette on take-up spindle of machine.

Threads end of tape from reel through guides and cutting mechanism of machine. Attaches end of tape to cartridge spool, or splices end of tape to leader tape on cassette. Activates machine that winds tape from reel onto cartridge spool or cassette and automatically cuts tape at end of process. Removes loaded cartridge spool or cassette from machine. Splices ends of tape together to complete cassette assembly. Places loaded cartridge spool over spindle on cartridge base. Splices end of tape, using adhesive sensing, to form continuous loop, and positions tape around guides. Fits top of cartridge onto base to complete cartridge assembly.

8534-242 COLOUR CODER, COMPONENT(electronic equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Tends machine that prints colour codes on electronic components, such as capacitors, diodes and resistors:
Fills reservoirs of machines with specified ink. Loads components into feed mechanism of machine. Starts machine, and observes operation to detect jamming and to detect defective printing. Removes coded components from discharge tray. Cleans ink rollers after completion of run, using cloth and solvent. Notifies maintenance personnel of equipment malfunction.

8534-246 COMPONENT-INSERTING-MACHINE TENDER(electronic equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that positions electronic components, such as resistors, capacitors and diodes, on printed-circuit boards:
Loads components, such as resistors, into feeding mechanism of machine. Positions printed-circuit board on bed of machine under inserting tool. Pushes pedal to lower tool that bends component lead-wires and inserts lead-wires into holes in board. Places completed board on conveyor.

8534-250 COMPONENT-LEAD FORMER(electronic equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: S 4

Tends machines that cut and shape wire leads on components, such as capacitors, diodes and transistors, to facilitate their mounting on printed circuit boards:
Installs dies in machine according to specified shape and length of lead, using hand tools. Starts machine, and feeds components into machine, or inserts jig on which components have been mounted, into automatic machine-feed mechanism. Removes components from discharge tray after leads have been formed.

8534-254 DIP-SOLDERING-MACHINE TENDER(electronic equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Operates dip-soldering machine to solder components on printed-circuit boards:
Secures upper side of printed-circuit board against foam-rubber backing of holding fixture to prevent movement of parts. Places and secures fixture in lead-cutting machine and actuates controls of machine to cut excess lead wire from lower side of printed board. Positions fixture with printed board on flux machine and actuates control to deposit soldering flux on component leads and printed-circuit board conducting surfaces. Positions board in soldering machine and actuates controls to lower panel into liquid solder for specified time to solder leads to board conducting surfaces and withdraw excess solder. Waxes surface of element used to withdraw excess solder, removes dross from surface of molten solder and replenishes flux supply.

8534-258 RIM BANDER, TELEVISION-PICTURE TUBE
(electronic equip.)
DPT:685
GED: 2 SVP: 2 EC: 1 6 PA: L 4

Tends machine to fit and secure anti-implosion bands to picture tubes:
Pours adhesive cement into dispenser of banding machine. Installs reel of steel-banding tape on machine and threads tape over rollers and onto tape-clamping device. Positions and locks picture tube on banding machine. Actuates machine controls to place adhesive coated steel band in groove around periphery of tube, apply specified pressure

to tighten band, and cut and crimp band ends together. Examines tube to ensure that band is correctly positioned, and taps incorrectly positioned bands into place, using rubber mallet. Removes excess cement from tube, using solvent and cloth.

8534-262 MACHINE FEEDER, CARBON-COMPOSITION RESISTORS(electronic equip.)
DPT:686
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Feeds machines on automated production line that produce carbon-composition resistors:

Weighs resistor parts, such as cores, leads, and sleeves, following production order. Fills hoppers of machines with resistor parts, fills reservoirs with ink of specified colours, and places forming blocks on conveyor. Examines resistors on conveyor to detect burrs and illegible colour coding. Removes resistors from conveyor and places them in containers. Cleans machines, using compressed-air hose.

8535-ELECTRONIC AND RELATED EQUIPMENT INSTALLING AND REPAIRING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with installing and repairing electronic equipment, such as radio and television broadcast transmitters; sound recording and reproduction equipment; radar equipment; and analyzing and computing equipment. Installing activities include: mounting; securing; interconnecting and adjusting assemblies and units, using hand and power tools. Repairing activities include: disassembling; fault-locating and diagnosis; replacing components; and reassembling equipment, using electronic-test equipment and hand tools. Wire communications installing and repairing occupations are classified in Unit Group 8735, WIRE COMMUNICATIONS AND RELATED EQUIPMENT INSTALLING AND REPAIRING OCCUPATIONS.

8535-110 INSTALLER, AIRCRAFT-ELECTRONIC-EQUIPMENT (electronic equip.)
DPT:281
GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Installs electronic equipment, such as communications, navigation and radar equipment, using hand tools, power tools and electronic test equipment:

Performs preliminary assembly work, such as attaching mounting plates to equipment and attaching flexible bonding wires, using hand tools and following drawings. Installs equipment, such as communications receivers, radar equipment and associated controls, in specified locations in aircraft. Slides equipment into aircraft mountings, secures fastening devices and plugs cable connectors into mating receptacles of equipment. Secures cables at specified locations, using aircraft-cable-clamps and hand tools. Attaches equipment bonding wires to specified terminals on airframe. Installs interconnecting cables between major units and remote controls and indicating devices, using cable clamps. Actuates switches to connect aircraft-power-supply to equipment and tests for specified voltage at junction box terminals and other locations, using volt-ohm- milliammeter. Corrects minor malfunctions by replacing fuses, indicator lamps and connector pins. Removes and tags unserviceable equipment.

May install electronic equipment in rocket propelled devices.

8535-114 REPAIRMAN, ELECTRONIC-EQUIPMENT
(electronic equip.)
DPT:281
GED: 4 SVP: 7 EC: 1 6 PA: L 4 7

Repairs electronic equipment, such as radar, communications, telemetering, data processing equipment and sound-reproducing equipment:
Examines and tests equipment, applying knowledge of functional operation and general electrical and electronic theory, following circuit diagrams and using electronic-test equipment. Tests electronic components and circuits to locate defects such as shorted capacitors or open circuit in transformer or choke-coil windings, and tests circuits to determine such factors as grid-bias voltage, waveform configurations

and radio-frequency output, using capacitor checker, vacuum-tube voltmeter and oscilloscope. Replaces defective components and wiring and adjusts mechanical parts, using soldering equipment and hand tools. Aligns, adjusts and calibrates equipment according to specification, following circuit diagrams and using alignment tools, hand tools and test equipment. Maintains records of repair work.

May install equipment at user's establishment. May install modifications to update equipment. May be designated according to type of equipment repaired; for example,

Communications-Equipment Repairman
Electronic-Organ Repairman
Process-Control-Equipment Mechanic
Radar Mechanic

8535-118 INSTALLER AND REPAIRER, AUDIO-VISUAL EQUIPMENT(electronic equip.) DPT:261
GED: 4 SVP: 6 EC: I 6 PA: H 4 5 6 7

Installs and repairs audio-visual equipment, such as video and sound recorders and reproducers, slide and motion-picture projectors, and closed-circuit television sets, for use in educational institutions and commercial establishments:

Installs sound systems, such as intercommunication amplifiers and sound recorders and reproducers, following wiring diagrams and using hand and power tools. Installs components of closed-circuit television system, such as cameras, video amplifiers, recorders and receivers, following equipment-manual instructions. Installs motion-picture and slide projectors and phonograph equipment as specified by work order. Switches on components of individual installations, checks operation and makes adjustments to ensure optimum performance. Makes minor repairs on location, such as replacement of cable assemblies, electron tubes, and microphones. Transports unserviceable equipment to repair shop. Determines cause of malfunction, using electronic test equipment, and replaces defective components, such as transistors, diodes and capacitors, using hand tools and soldering equipment. Advises user on proper operation and care of equipment. May specialize in installing or repairing a specific type of equipment and be designated accordingly; for example, Closed-Circuit-Television Installer

8535-122 REPAIRMAN, RADIO-COMMUNICATIONS EQUIPMENT (electronic equip.) DPT:261
GED: 4 SVP: 6 EC: I 6 PA: L 4 6 7

Repairs radio transmitting and receiving equipment:

Examines equipment to detect visible defects, such as damaged components, loose or broken wires and poorly soldered connections, and makes repairs by soldering or tightening loose connections, and replacing damaged wiring. Locates faulty components, such as capacitors, electron tubes and transformers, using electronic test equipment. Plugs in replacement items or removes and replaces components, using hand tools and soldering equipment. Switches on transmitting equipment and checks output power, output frequency and modulation, following manufacturer's specifications and using test equipment. Tests receivers for such factors as sensitivity, dial calibration and audio quality, and corrects deficiencies by locating and replacing defective components and by realigning tuned stages. Examines and checks operation of related equipment, such as antennas, remote controls and auxiliary-power units, using test equipment, and effects repairs by replacing defective parts.

8535-126 REPAIRMAN, TELEVISION-STUDIO EQUIPMENT (electronic equip.) DPT:261
GED: 4 SVP: 6 EC: I 6 PA: L 4 6 7

Repairs and maintains television-studio electronic equipment, such as television cameras, telecine equipment, film-editing equipment, film viewers and video recorders, using hand and power tools and electronic-test equipment:

Analyzes reports and consults with operators of equipment, such as video recorders and television cameras to obtain details of equipment malfunction. Makes minor adjustments or replaces plug-in items, to correct malfunction, using hand tools and following manufacturer's manual. Removes panels, to gain access to equipment and removes chassis, using hand tools. Tests voltages and current at specified points, using vacuum-tube-voltmeter. Tests and replaces weak electron tubes. Connects oscilloscope to circuits and observes waveform patterns, to locate malfunction. Replaces assemblies and parts, such as

deflection yokes, horizontal-output transformers, diodes and capacitors, using hand tools and soldering equipment. Connects equipment to power source, switches on equipment and conducts operational check. Makes minor adjustments to ensure optimum performance. Records data, such as details of malfunction, equipment type and serial numbers and corrective action taken.

May perform similar duties as member of remote-telecast-crew. May specialize in repairing specific equipment and be designated accordingly; for example,

Telecine-Equipment Repairman
Television-Camera Repairman

8535-130 INSTALLER AND REPAIRER, PUBLIC-ADDRESS SYSTEM(electronic equip.) DPT:281
GED: 4 SVP: 6 EC: B PA: M 2 3 4 6 7

Installs and repairs audio-amplifying systems used at public gatherings:

Positions speakers and microphones for public-address system and runs connecting lines to audio amplifier. Switches on amplifier, adjusts audio output level and repositions speakers or microphones to avoid feedback. Investigates equipment failures and performs repairs on location, or in shop, using hand tools, soldering equipment and electronic test meters. Determines cause of malfunction, using electronic-test equipment, such as audio-signal generator, vacuum-tube voltmeter and oscilloscope, and replaces defective parts, such as capacitors, transformers and chokes, using hand tools and soldering equipment.

8535-134 REPAIRMAN, NUCLEONIC-CONTROLLER (electronic equip.) DPT:281
GED: 4 SVP: 6 EC: I 6 PA: L 4 7

Repairs and adjusts nucleonic equipment activated by radioactive source, used to control amount of tobacco fed into cigarette-making machines:

Examines functioning of tobacco-feeding device to ensure operation is within specified limits and to detect malfunction. Checks tobacco-feed controller, using portable test set and following equipment manual, to detect malfunction. Removes and disassembles controller and associated components, using hand tools. Examines components to detect loose connections, frayed wiring and signs of overheating. Tests tubes, and replaces defective ones. Interconnects various controller components, following equipment manual. Switches on equipment and observes waveforms on oscilloscope, to determine cause of malfunction. Replaces parts, such as capacitors, resistors and transistors, using soldering equipment and hand tools. Tests for specified radiation from radioactive source, using geiger counter. Reassembles controller and associated components, using hand tools. Records information concerning repairs made.

8535-138 REPAIRMAN AUTOMATED-PROCESSING EQUIPMENT (electronic equip.) DPT:281
GED: 4 SVP: 6 EC: I 6 PA: M 4 5 7

Repairs control cabinet assemblies of automated processing equipment used in industrial plants:

Removes side panels from cabinet. Slides out panel-mounted assemblies, and examines equipment to detect obvious defects, such as overheating of components, malfunctioning or inoperative relays and cracked or broken printed circuit boards. Cleans equipment, using air hose, solvent and rags or degreasing tank. Switches on equipment and test apparatus, following specified procedures. Actuates switches of test jig and observes waveforms and operating voltages of power supply, electron tubes and transistors. Replaces defective sub-assemblies and components, such as printed circuit boards, relays, tubes and capacitors, using hand tools and soldering equipment. Removes, tests, calibrates and adjusts sensing devices, such as pressure and temperature-activated controls. Prepares work orders for fabrication of mechanical parts, such as brackets, and for painting or welding. Observes test operation by quality-control personnel and makes final adjustments or replaces components.

8535-142 HEARING-AID REPAIRMAN(electronic equip.)
DPT:261
GED: 3 SVP: 6 EC: 1 PA: S 4 7

Repairs hearing aids, following schematic diagrams and using electronic-test equipment and hand tools:
Questions customer to assist in diagnosing nature of malfunction. Checks replaceable components, such as battery, microphone and earphone, using vacuum-tube-voltmeter or by substituting new components. Removes amplifier printed-circuit assembly from case and examines it to detect poorly soldered connections, shorts between foil strips or open circuits, using magnifying glass and vacuum-tube-voltmeter. Solders break in foil and removes solder causing short between foil strips, using soldering equipment. Replaces defective parts, such as capacitors, resistors and transformers, using hand tools and soldering equipment. Tests amplifier to ensure performance meets specifications, using audio-signal generator and output meter.

8535-146 PRODUCTION REPAIRMAN(electronic equip.)
DPT:281
GED: 3 SVP: 6 EC: 1 6 PA: M 4 7

Repairs radio transmitters, radar equipment, television and radio receivers, or other electronic equipment, rejected on production line:
Reads inspection tag and examines equipment to detect defects, such as poor solder joints, broken wires or defective components. Replaces wires, repairs solder connections and removes and replaces components, such as resistors, connectors and electron tubes, following drawings and using electronic-test equipment, hand tools and soldering equipment. Replaces scratched cabinets and damaged or missing trim.
May be designated according to type of equipment repaired; for example,
Audio-Amplifier Repairer, Production
Television Repairman, Production

8535-150 ANTENNA RIGGER(telecom.)
DPT:684
GED: 3 SVP: 5 EC: B 6 PA: M 2 4

Installs, inspects and maintains antennas and related equipment used for receiving and transmitting radio broadcasts and radio-communications on high frequency bands:
Installs masts, antennas, transmission lines, guy wires and anchors, working as member of crew. Inspects existing installations to detect broken transmission lines, spacers, and antenna and feed-through insulators. Lowers antenna, climbs tower, or works from bucket attached to aerial-lift-boom to effect repairs to broken transmission lines and to replace defective antenna or spreader-insulators, using hand tools. Fabricates open-wire transmission lines, by placing wire conductors on surface of ground and attaching and securing spacer insulators at specified intervals. Examines guy wires to ensure specified tension, using testing device and alters turnbuckle or other device to achieve correct tension. Climbs towers and replaces bulbs or broken globes on signal lights.

8535-154 RADIO-COMMUNICATIONS-EQUIPMENT-REPAIRMAN HELPER(electronic equip.)
DPT:684
GED: 3 SVP: 3 EC: B 6 PA: L 4 5 6 7

Helps repairman to repair radio-communications equipment:
Replaces defective parts of radio-receiving and transmitting equipment, such as capacitors, resistors and electron tubes, using hand tools and soldering equipment. Cleans cabinets and chassis, using airhose and vacuum cleaner. Cleans and lubricates motor generators and switch contacts, using cloth, solvent, and contact cleaner. Tightens connections, using screwdriver. See also definition for term title, 02-160 HELPER (any ind.).

8535-158 CALIBRATOR, WIRE-WOUND RESISTORS
(electronic equip.)
DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Reworks wire-wound resistors rejected by inspectors to attain a specified resistance value:
Connects test prods of ohmmeter to resistor and observes meter to determine variation in resistor wire required to attain specified resistance. Solders or welds additional wire to resistor wire or cuts piece from wire. Reconnects wire to resistor terminals. Verifies value of resistor, using ohmmeter.

8536-INSPECTING AND TESTING OCCUPATIONS: FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING, ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT

This unit group includes occupations in inspecting and testing work as described under term titles, 02-170 INSPECTOR (any ind.), and 02-430 TESTER (any ind.), concerned with quality-control activities in the fabrication, assembly, installation and repair of electrical and electronic equipment and components.

8536-110 TESTER, CONTROL-PANEL(electric. equip.;
electronic equip.)
DPT:281
GED: 4 SVP: 8 EC: 1 6 PA: L 4 6 7

Tests and inspects wired control panels and control cabinets for use in installations, such as heating, air conditioning and automated processing equipment, for conformance to specifications and quality of workmanship, using electrical and mechanical test equipment:
Verifies layout of panel or cabinet wiring and component placement, following engineering drawings, and makes examination to ensure terminals and mounting hardware are secure, that soldered connections meet specification, and that no components or parts are missing or incorrectly placed. Makes continuity tests, following drawing and using continuity tester. Checks circuit resistance at designated points, using ohmmeter. Connects unit to power source, and makes voltage and current checks, using test equipment. Actuates panel-mounted controls and ensures correct circuit operation as indicated by panel-mounted meters, and correct operation of relays and auxiliary components, such as cooling fan. Makes minor changes to correct deficiencies, using hand tools. Consults with engineering and production personnel on findings. Prepares itemized report to detail malfunctions and deficiencies.
May train workers. May inspect, test and repair installations on customers' premises.

**8536-114 ELECTRICAL INSPECTOR,
LOCOMOTIVE**(electric. equip.)
DPT:281
GED: 4 SVP: 7 EC: B PA: L 2 3 4 7

Inspects electrical equipment used in railway locomotives, using hand tools and electrical-and mechanical-test equipment:
Examines components, such as generators, motors and blowers, to determine wear and extent of repair required. Inspects repair work to ensure that it meets company standards. Conducts tests, such as motor speeds in revolutions per minute, on and off load voltages and current of motors and generators, and operation of starting and regulating devices, using mechanical-and electrical-test equipment. Investigates equipment failures, authorizes removal from service when indicated, and prepares reports.

8536-118 TESTER, MOTORS AND CONTROLS(electric.
equip.)
DPT:261
GED: 4 SVP: 7 EC: 1 6 PA: M 3 4 7

Tests performance of electric motors, generators, alternators and associated control and regulating devices, under simulated operating conditions, following specified procedures and using electrical-test equipment:
Positions motors, generators and associated components, such as switches, relay panels and test panels, and interconnects items to perform specific tests, using hand tools. Actuates controls to reverse motors and regulate speed and load. Observes panel-mounted instruments, such as voltmeter, ammeter, and thermocouple thermometer, to measure on and off load current, speed, and temperature increase after specified time. Holds vibrometer against motor or generator housing, observes vibrometer light-beam dial to determine amount of vibration, and listens for excessive noise. Visually examines components to detect mechanical defects. Records test data and writes reports on equipment failures.
May test a particular item and be designated accordingly; for example,
Alternator Tester
Generator Tester
Motor-Controller Tester

8536-122 TESTER, SYSTEMS(electronic equip.) DPT:281
GED: 4 SVP: 7 EC: I 6 PA: L 4 6 7

Tests electronic systems, such as data-processing computers, radio, television and communications installations, and automated- process-control systems:

Compares layout and installation of system, wiring, cables, hardware, subassemblies and components, against specifications to detect assembly errors. Examines solder connections to locate defects. Checks operation of parts, such as rotary switches, potentiometers and variable inductors, by turning dials, to detect binding shafts or other mechanical defects. Interconnects system components, by plugging in cables or connecting wire terminals to terminal boards, using diagrams and hand tools. Connects system to power source and actuates switches in sequence to observe system in operation. Connects test equipment, such as signal generator, dummy antenna, and oscilloscope, to test-points of system to determine factors, such as distortion, circuit linearity and voltage-standing-wave ratio. Monitors meters installed in units of system, observes test equipment and makes adjustments to obtain specified operating characteristics. Corrects circuit malfunctions, by adjusting or replacing components and correcting wiring errors or adjusting parts, such as relays. Tags and returns faulty items.

May specialize in testing a specific system and be designated accordingly; for example,
Calibration Tester
Computer Inspector-Tester
Tester, Control Systems
Transmitter Tester

8536-126 TESTER, TRANSFORMER(electric. equip.; elec. power) DPT:281
GED: 4 SVP: 7 EC: I 6 PA: M 4 7

Tests insulation, resistance and performance of heavy-duty transformers against specifications, using electrical-test equipment:

Connects transformer and power leads to terminal board of test panel. Performs resistance and insulation tests to detect open windings, leakage to ground, or incorrectly wound coils, using electrical-test equipment. Actuates test-panel controls to supply specified voltages and varying loads to transformer. Monitors test-panel meters and oscilloscope which record voltages, current flow and waveform presentation. Switches in standard transformer to enable comparison with transformer under test. Increases transformer load to check circuit breaker operation and transformer fusing. Tests insulation properties of transformer oil, using special-insulation tester. Records test data and routes transformers which do not meet specification to repair area.

May photograph oscilloscope wave-form presentation, using photographic equipment

8536-130 INSPECTOR AND TESTER, AIRCRAFT-ELECTRICAL EQUIPMENT(electric. equip.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 4 7

Inspects and tests aircraft-electrical equipment to ensure compliance to specifications:

Studies inspection data, such as check lists, drawings and work orders, to determine method of inspection. Examines equipment, such as alternators, solenoids and limit switches, prior to installation to detect visible defects. Places components, such as relays, motors and solenoids, in test jigs, and uses test equipment to check operational characteristics. Examines aircraft wiring to detect loose connections and defective insulation. Removes covers from junction boxes, controls and accessories, and examines wiring to terminal posts and components. Switches on heater, de-icer equipment and lights to verify operation. Compiles reports concerning defects and malfunctions.

8536-134 INSPECTOR AND TESTER, AIRCRAFT-ELECTRONIC EQUIPMENT(electronic equip.) DPT:381
GED: 4 SVP: 7 EC: I PA: L 3 4 7

Inspects and tests aircraft-electronic equipment, such as communications, radar and navigation installations, according to specifications:
Inspects equipment wiring, following drawings and equipment

manuals, to ensure conformance to specifications. Switches on equipment and manipulates controls to evaluate factors, such as sensitivity, calibration and output of communications receivers on several frequencies, using frequency meter and output meter. Evaluates calibration and general operation of radio altimeter, using special test equipment. Installs crystals in transmitters and receivers to enable communication on various control-tower and airline frequencies. Performs specified flight tests on equipment to determine factors, such as output of transmitters on various frequencies, performance of pilot-controlled equipment and operational characteristics of radar equipment. Records details of radio transmissions in log books. Records details of equipment malfunction.

8536-138 TESTER, LEAD-ACID STORAGE BATTERY(electric. equip.) DPT:381
GED: 4 SVP: 7 EC: I 6 PA: L 4 7

Inspects and tests lead-acid storage batteries removed at random from production line, to ensure compliance to specifications:

Examines batteries for defects. Tests specific gravity of battery electrolyte and corrects for temperature, using hydrometer, thermometer and chart. Tests battery for electrical capacity at various temperatures, and charge and discharge characteristics, using environmental chamber and electrical-test equipment. Compares test results against specified performance data. Disassembles batteries which do not meet test criteria to determine cause of failure. Writes failure reports with supporting recommendations.

8536-142 INSPECTOR, HEARING AID(electronic equip.) DPT:381
GED: 4 SVP: 6 EC: I PA: S 4 6 7

Inspects hearing aids and related components and accessories for conformance to manufacturing specifications:

Inspects amplifier-printed-circuit board to detect poor soldering, missing parts or breaks in circuit foil, using stereomicroscope. Examines accessories, such as interconnecting cords, microphone and earphone, to detect apparent defects. Measures battery voltage, inserts battery in holder and interconnects parts, according to instruction manual or drawing. Sets output of audio-signal generator and hearing-aid volume control to specified level. Connects audio generator to amplifier input, and connects audio-output-meter to amplifier-output-stage. Turns on amplifier, observes and records audio-meter reading, and rejects amplifiers with output not within specified limits. Writes and affixes tags to rejected items outlining nature of defects. Records inspection data.

8536-146 PROCESS INSPECTOR AND TESTER(electric. equip.) DPT:381
in-process inspector.
GED: 4 SVP: 6 EC: I PA: L 4 7

Carries out in-process inspections and tests of electrical components and their related assemblies and mechanical parts in manufacturing establishments:

Inspects wiring to ensure correct routing and connection of wires, and to detect poorly soldered connections, frayed wires and loose terminal screws. Measures spacing of relay contacts, using feeler gauge. Examines machined surfaces of motor housings, relay-mounting-blocks and gears to ensure specified finish, and checks dimensions, using measuring jigs, micrometers, rules, calipers and squares. Checks dimension and location of mounting holes. Tests electrical characteristics to determine resistance, and to check for short circuits, continuity and grounds as applicable to items, such as motor armatures, relay coils, heating elements and transformers, using electrical-test equipment, such as volt-ohm-milliammeter, insulation tester and growler. Prepares reports on rejects.

8536-150 INSPECTOR AND TESTER, TELEVISION RECEIVER(electronic equip.) DPT:384
GED: 4 SVP: 6 EC: I PA: M 4 6 7

Inspects and tests assembled-television chassis and fully completed television receivers for conformance to manufacturing specifications:
Places chassis in holding jig, connects test signal source to antenna terminals and connects external speaker to receiver chassis. Connects receiver to power source and switches set on. Checks front and rear controls, such as horizontal, vertical, fine tune and buzz controls, and

observes television screen to check for correct functioning of controls. Listens to receiver output to detect distortion or defective speaker. Rotates chassis in holding jig and examines wiring to detect poorly soldered connections, defects in printed circuitry and incorrect wiring. Taps tubes and components, such as capacitors, while observing picture tube to detect light streaks or flutter, and listens to receiver audio for unusual sounds to detect defective components. Observes colour and black-and-white test patterns to ensure colour quality, correct black through white shades and to detect misalignment of tuned stages. Examines cabinet for marred finish, ensures that dials and knobs are correctly positioned and that back is properly secured. Indicates acceptable receiver by affixing tag or by stamping chassis or back of receiver. Records nature of defects found.

8536-154 INSPECTOR AND TESTER, ELECTRON

TUBE(electronic equip.) DPT:381

GED: 3 SVP: 6 EC: 1 PA: S 4 7

Inspects and tests electron tubes or tube components for conformance to manufacturing specifications:

Reads instructions to determine test and inspection requirements for type of tube, and sets controls of tube-testing console, following test standards. Inserts tube in socket of console, turns specified switches and controls, and compares meter readings against standard chart, to detect any deviation from specified limits. Switches on audio generator, taps tube with cork or rubber hammer, and listens for change of pitch, to detect defective tube. Actuates controls of oscilloscope to obtain visual presentation of tube performance and observes pattern to detect deviation from prescribed standards. Examines tube for defects, such as loose base, loose connections and presence of foreign matter inside bulb, using stereomicroscope and polariscope. Determines dimensional characteristics of tube components, such as spacing and diameter of control grid wires and dimensions of anode, using micrometer, scale and microscope. Records number of tubes and tube components inspected, number rejected and type of defects found.

May perform a specific test or inspection and be designated accordingly; for example,

Grid Inspector
Tube Tester

8536-158 INSPECTOR AND TESTER, HOME-GARDENING AND SNOW-REMOVAL UNITS(electric. equip.)

DPT:381

GED: 3 SVP: 5 EC: 1 PA: M 4 7

Inspects and tests electric snow blowers, lawnmowers, hedge clippers or similar devices:

Examines unit to detect poorly painted or scratched surfaces, improper decal application and loose hardware. Actuates controls to start unit, tests operation of controls, checks for undue vibration and checks motor speed, using vibrometer and tachometer. Dismantles unit to enable further fault diagnosis. Measures parts, such as shafts, housing and blades, using special test jig and micrometer. Inspects packaging of dismantled unit for completeness to ensure inclusion of warranty, instruction book and hardware. Tags defective units and prepares and submits inspection reports to supervisor.

May inspect and test a particular unit and be designated accordingly; for example,

Inspector and Tester, Electric Lawnmower
Inspector and Tester, Electric Snowblower

8536-162 INSPECTOR, QUARTZ CRYSTAL(electronic equip.)

DPT:381

GED: 3 SVP: 5 EC: 1 PA: S 4 7

Inspects cut quartz crystals, used in frequency-determining crystal-units, to verify specified angles and to establish their electrical axis:

Places crystal on jig in path of X-ray beam, switches on X-ray equipment, and reads meter that indicates angle at which crystal has been cut. Rejects crystals that are above or below specified tolerance. Rotates crystal in beam of X-ray, until maximum beam deflection is observed to enable verification of axis. Draws line on crystal to indicate direction of axis, using crayon or pencil. Calculates angle adjustments required to correct angles cut, using standardization scales, conversion chart and precision-measuring equipment. Records inspection data, such as number of items inspected and nature of defects.

8536-166 INSPECTOR, CARBON PRODUCTS(electric. equip.)

DPT:384

GED: 3 SVP: 5 EC: 1 PA: L 4

Inspects brushes, electrodes and other carbon products for conformance to manufacturing specifications:

Weighs carbon electrodes and compares weight against specifications. Examines brushes and electrodes to detect burns, cracks and pits, and to ensure that connecting leads and terminals are firmly attached. Checks dimensional specifications, using precision-measuring instruments, such as micrometers, calipers, straightedge and magnifying glass. Computes density of electrodes, following formula and using slide rule, to ensure that electrodes will conduct specified current. Keeps records of inspection data and marks electrodes with chalk to indicate disposition. Obtains samples of electrodes that have been impregnated with pitch or linseed oil and forwards sample to laboratory for analysis.

May be designated according to product inspected; for example,
Carbon-Brush Inspector
Furnace-Electrode Inspector

8536-170 INSPECTOR, COMPONENTS(electronic equip.)

DPT:384

GED: 3 SVP: 5 EC: 1 PA: S 4 7

Inspects electronic components, such as coils, capacitors, resistors, circuit boards, modules and transformers, by comparing components with sample parts or manufacturing standards:

Lifts component or assembly and observes it under stereomicroscope or illuminated magnifying glass for defects, such as broken wires, defective soldering or welding, voids in sealing materials, unevenly wound coils, poor coating and plating, blemishes, scratches and cracked parts. Verifies that assembly is complete, that all connections have been made and that correct components have been used. Ensures that correct wire has been used in circuits, by checking circuit numbering or wire colour code. Rejects faulty components, such as capacitors, coils and grids. Records type and quantity of rejected and accepted components. Measures parts to verify accuracy of dimensions, using fixed gauges, snap gauge, and gram-weight scales. Returns component for removal of excess solder or removes it with knife or file.

May be designated according to component inspected; for example,

Capacitor Inspector
Coil Inspector
Filament-Stem Inspector
Grid Gauge
Transformer Inspector
Wire-Wound-Resistor Inspector

8536-174 INSPECTOR, HOUSEHOLD APPLIANCE(electric. equip.)

DPT:384

GED: 3 SVP: 5 EC: 1 PA: L 3 4 7

Inspects and tests assembled household appliances, such as refrigerators, ranges and furnaces, for adherence to specifications, using mechanical and electrical-test equipment:

Examines metal, plastic and enamelled surfaces for scratches, dents and colour matching. Inspects items, such as trim, shelves and hydrator pans, against check list and mounting instructions. Opens doors, access panels and sliding compartments to ensure ease of movement, proper fit and operation of catches. Connects unit to power source, listens for excessive noise, runs unit through operating cycle and checks operating characteristics against specifications, using electrical-test equipment. Checks refrigerators for gas leaks, using gas-leak tester. Records type and location of defects on check list or inspection ticket.

May inspect a specific type of appliance and be designated accordingly; for example,

Furnace Inspector
Refrigerator Inspector

8536-178 INSPECTOR, MOTOR AND GENERATOR(electric. equip.)

DPT:384

GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects electric motors, generators, transformers and associated assemblies for conformance to specifications, by performing any combination of the following duties:

Examines assemblies, such as armatures and field windings, for depth

of mica undercutting between commutator segments, for positioning and winding of armature coils, and even placement of laminations. Examines alignment of parts, such as brush holders and armatures, and checks air gap, using precision-measuring devices. Checks armatures, field coils and wiring visually, to detect wrongly connected leads and poor soldering. Checks for continuity, resistance and insulation properties of windings, using electrical-test equipment. Checks armature eccentricity, using bench tester, and straightens off-center or bent shafts, using hide-faced mallet. Routes items to repair section. Prepares inspection reports containing information, such as nature of reject and applicable supporting data.

May specialize according to item inspected and be designated accordingly; for example,

Armature Inspector
Inspector and Shaper, End Windings
Inspector, Motor
Stator Inspector
Winding Inspector

8536-182 INSPECTOR, REFRIGERATION UNIT(electric.
equip.; mech. equip., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Inspects and tests evaporation-type cooling units used in commercial and domestic air conditioners, freezers and refrigerators, according to specifications, by performing any combination of the following duties: Connects unit to test equipment or test panel. Starts compressor and observes and listens to detect obvious malfunction, such as vibration due to loose mounting, and to ensure that cooling is taking place. Tests compressors on malfunctioning unit, using watt meter, or observes test-panel meters. Times unit operating-cycle, using stop watch or observes test-panel indicator. Replaces defective components to correct malfunction. Recommends rework or scrapping of defective components. Records data regarding defects on inspection tag, and attaches tag to unit. Compiles quality-control-statistical data. Dries unit after testing, using dehydrating oven.

8536-186 TESTER, AIR-CONDITIONING-UNIT(electric.
equip.; mech. equip., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Tests efficiency of commercial-air-conditioning units under simulated operating conditions: Connects unit to test panel, or to portable-test equipment, such as hygrometers, thermometers and air-flow meters. Observes instruments and records data, such as relative humidity, temperatures of cooling units and condensers, and movement of air, at specified intervals. Observes panel instruments or connects electrical-test equipment to record characteristics of electric motors. Observes gauges to detect undue vibration of motor-driven devices. Prepares test data on units and installations tested.

8536-190 TESTER, LIGHT BULB(electric. equip.) DPT:484
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Tests and inspects completed light bulbs or light-bulb parts for conformance to specifications, by performing any combination of the following duties:

Places lamp filaments on lighted table top and inspects them for length, concentricity, number of turns per inch and for sharp bends and fractures, using optical comparator. Stretches sample filament to breaking point, to determine brittleness. Selects completed bulbs or parts from each machine and examines them for defects, such as poorly soldered bases, cracked stems and damaged filaments, using magnifying glass or optical comparator. Tests internal gas pressure in bulbs, using gas-pressure gauge. Performs mechanical checks, such as torsion test, to detect poorly cemented bases. Inserts light bulbs, photoflash bulbs and sealed-beam units into appropriate fixtures, and measures light output, using electrical-test equipment. Records defects and prepares reports.

May examine machine processes, such as air evacuation, gas filling and soldering, when bulb failures indicate these processes as probable causes of defects.

8536-194 TESTER, ELECTRICAL CONTACTS(electric.
equip.) DPT:684
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Tests and adjusts electrical switching devices, such as relays, circuit breakers and mercury switches to ensure conformance to specifications:

Examines items to detect defects, such as bent springs and contact arms, misaligned armatures and contacts, and cracked glass housings. Verifies contact clearances and spring tension, using feeler gauges and tension gauge. Determines factors, such as current required to close relay contacts or open circuit breaker contacts, and operating sequence and release timing of contacts, using electrical-test equipment. Verifies correct mechanical operation of devices, by manipulating with fingers. Bends parts, such as armature, flat springs and coil springs, manually or using hand tools, to ensure correct operation. Adjusts calibrating screws to alter contact spacing and spring tension, using hand tools. Adjusts mercury switch contacts to ensure correct operation.

May be designated according to item tested or adjusted; for example,
Circuit-Breaker Tester
Mercury-Switch Tester
Relay Tester and Adjuster

8536-198 INSPECTOR, ELECTRICAL CONTROLS(electric.
equip.) DPT:384
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Inspects thermal and mechanical controls, such as thermostats, thermal-overload relays and timers, for conformance to specifications: Makes random selection of items, such as timers and overload relays, from assembly area. Examines units for defects, such as surface blemishes, poor soldering and loose terminals. Verifies dimensions, such as shaft diameter, end play, and contact-point spacing, using fixed or dial gauges, micrometers, and magnifying glass. Connects control to electrical-test panel to provide simulated operating conditions. Observes meters and lights to detect malfunctions, such as incorrect thermal action or incorrect positioning of contacts. Inspects equipment at various stages of production to verify correct assembly. Stamps acceptable components and prepares inspection reports.

8536-202 INSPECTOR, ELECTRONIC UNIT(electronic
equip.) DPT:384
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Inspects electronic units, such as communications receivers, transmitters, data-processing equipment, and subassemblies, for conformance to specifications:

Examines unit on assembly line for soldering defects, using magnifying glass, pick and mirror. Compares unit with parts list and assembly drawings to detect missing or incorrectly placed parts. Traces cable assembly to verify routing of wires to specified component, and examines cable lacing, following drawings and specifications. Verifies dimensions of parts, using precision-measuring equipment. Records nature of defects found, and tags unit or stamps unit to indicate acceptance.

May run continuity tests to detect open circuit in units, such as transformer windings and coils. May be designated according to unit inspected; for example,
Antenna-Tuner Inspector
Radar-Indicator Inspector

**8536-206 INSPECTOR, ELECTRON-TUBE-STEM-
ASSEMBLIES**(electronic equip.) DPT:384
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Inspects electron-tube-stem-assemblies for conformance to manufacturing specifications:

Verifies dimensions of stems, using micrometer and rule. Tests tensile and compression strength of stems, and hardness of stem leads, using mechanical-test equipment. Examines stem assemblies under magnifying glass to detect flaws, such as poor lead to glass seal, missing wires and defective welding. Analyzes and records defects found.

May measure weight of filament wire, using balance scales. May remove glass envelope of selected tubes, using glass file, and measure tube components, such as anode, grids and cathode, using gauges, scales and micrometers.

8536-210 TESTER, DRY-CELL BATTERY(electric. equip.)
DPT:384
GED: 3 SVP: 4 EC: 1 PA: L 4

Tests dry cells and dry-cell batteries to determine factors, such as capacity, shelf life and effects of temperature on battery output: Places cells or batteries on test racks and connects battery terminals to test equipment. Actuates switch to connect fixed resistors of specified value, to provide simulated load for battery. Observes test-equipment meters, and records voltage and current at specified intervals. Disconnects load and repeats test after specified time. Records off-load voltage at specified intervals. Turns switch to select resistors of lower values to provide greater load on battery, and repeats test. Performs tests at specified temperatures, using environmental chamber. May prepare sample cells to test various core mixes and electrolyte pastes, using hand tools.

8536-214 TESTER, PICTURE TUBE(electronic equip.)
DPT:384
GED: 3 SVP: 4 EC: 1 6 PA: L 4 7

Tests television-picture tubes for conformance to manufacturing standards: Positions picture tube against rubber facing of holding jig. Attaches cable assembly of monoscope (testing apparatus that produces test patterns) to base of picture tube, and switches on monoscope. Observes tube under test, and sets controls to adjust brilliance and focus. Activates control to connect colour or black-and-white video-source to tube, adjusts control knobs, and observes shades of gray, colour resolution and sharpness of lines. Compares tube under test with reference tube installed in monoscope and observes tube to detect defects, such as presence of gas in tube envelope. Inspects tube for visible defects, such as poorly soldered base pins, scratches and stains. Records number of defective tubes and types of defects.

8536-218 BATTERY-CHARGER TESTER, HEAVY DUTY(electric. equip.)
DPT:384
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Tests high-amperage-type-battery chargers for conformance to manufacturing standards: Removes panels, and inspects charger wiring to ensure connections are secure and parts are properly mounted. Inspects outer surface to detect marred finish. Connects battery-charger cables to specified terminals of tester. Switches on charger, and operates tester controls to connect a resistive load to charger. Turns charger control to various output settings and turns tester controls to increase load on charger. Observes voltmeter and ammeter of tester to ensure charger meets specifications, and compares charger ammeter reading with tester meter, to ensure it's accuracy. Increases load on charger to ensure correct functioning of overload relays. Records test data and tags chargers that do not meet specifications.

8536-222 INSPECTOR, AUTOMOTIVE-WIRING-HARNESS(electric. equip.)
DPT:384
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Inspects electrical-wiring-harnesses used in automobiles, trucks and buses, for quality of workmanship and electrical continuity, using mechanical-and-electrical-test equipment: Checks length of harnesses and location and length of individual break-out leads, using wire-measuring jig-board. Inspects to ensure that specified terminals are fitted and that crimped or soldered connections meet specifications. Inspects colour coding to ensure leads at break outs, and other locations, are of size and colour of wire specified. Checks wiring for continuity between specified points, using continuity tester. Notifies supervisor of defects that would affect production. Prepares inspection reports outlining nature of defects found.

8536-226 TESTER, ELECTRONIC COMPONENTS(electronic equip.)
DPT:384
GED: 3 SVP: 3 EC: 1 PA: S 4 7

Tests electronic components, such as capacitors, coils, diodes and resistors, for conformance to manufacturing standards: Connects component to test equipment, such as capacity tester, ohmmeter or production tester. Switches on test equipment and reads

instrument dial or other indicating device to determine factors, such as current leakage, capacity, tolerance limit, inductance, and breakdown voltage of capacitors, resistors, and coils. Checks dimensions of components against specification, using standard gauges and precision-measuring instruments. Examines components for defects, such as short leads, broken envelope or defective seal. Records number of rejects and related information. May be designated according to component tested; for example, Crystal-Unit Tester
Variable-Capacitor Tester

8536-230 TESTER, QUARTZ-CRYSTAL UNIT(electronic equip.)
DPT:384
frequency measurer, crystal.
GED: 3 SVP: 3 EC: 1 PA: S 4 7

Measures frequency of quartz-crystal units at various specified temperatures, to determine frequency deviation due to temperature change: Attaches test leads from frequency-measuring instrument to connecting pins of quartz-crystal units. Places crystal units in environmental chamber with opposite ends of leads through aperture leading from chamber. Sets controls to obtain specified temperature inside chamber and monitors thermometer inside chamber to ascertain when specified temperature is reached. Observes digital readings on frequency-measuring device to determine oscillating frequency of crystal unit, and records frequency and temperature. Readjusts chamber temperature to other specified temperatures and repeats frequency-measuring procedure.

8536-234 TESTER, TEMPERATURE-ACTUATED CONTROLS(electric. equip.)
DPT:384
GED: 3 SVP: 3 EC: 1 4 6 PA: L 4 6 7

Tests temperature-actuated devices, such as thermostats and thermocouples, for conformance to manufacturing standards, by one of the following methods: Positions controls on jig and submerges capillary tubes of controls in temperature-controlled bath. Observes thermometer to ensure correct temperature. Adjusts calibrating screw of thermostat, using special tool, and observes indicator lights and thermometer to determine temperatures at which contacts open and close. Stamps acceptable controls, and tags rejects and records nature of defects. Places thermostats in rotating rack and ensures that capillary tubes are immersed in water. Attaches nut at specified location on face of thermostat, using nut driver, fits disk-shaped tool over nut and turns disk until clicking sound is heard from contacts and secures locknut. Rejects units unresponsive to adjustment and records relevant test data. May determine electrical characteristics of thermocouples, using electrical-test jig.

8536-238 INSPECTOR, LAMP PARTS(electric. equip.)
DPT:384
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Inspects moulded-glass beads and other parts used to fabricate incandescent lamps: Inspects glass beads to detect flaws, and measures bead diameter, using prong-type measuring gauge. Inspects glass envelopes and tubing for cracks and other defects. Measures envelopes, tubing, lead wires and bases for conformance to specifications, using micrometer, vernier calipers and gauges. Counts parts and verifies quantity against purchase order. Rejects and segregates parts that do not meet specification and records pertinent information.

8536-242 HELPER, MOTOR TESTING(electric. equip.)
DPT:684
GED: 3 SVP: 3 EC: 1 PA: M 3 4 7

Helps to test electric motors, alternators and associated equipment: Sets up rigid platforms, to provide a base for heavy motors. Directs crane operators in positioning of equipment. Secures motors, alternators and other equipment, using bolts. Obtains and prepares for use, test equipment, such as vibration tester, dynamometer and electrical and mechanical devices, to simulate actual operating conditions. Makes electrical connections to motors, alternators and relays, using hand tools. Assists during test by operating test equipment and

observing and recording meter readings. See also definition for term title, 02-160 HELPER (any ind.).

8536-246 INSPECTOR AND TESTER, RECORD PLAYER(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: I PA: M 4 6 7

Inspects, tests and adjusts record players according to manufacturing standards:

Adjusts turntable speeds according to manufacturing specification, using stroboscope and screwdriver. Places records on turntable and switches on changer. Observes transfer action, pickup movement and transfer lever, to ensure specified operation. Adjusts travel of pick-up arm and transfer arm. Listens for motor noise and undue vibration, and tightens loose components, using hand tools. Tests installed changers and associated amplifiers, using test record and audio-level meter.

May install changers, amplifiers, receiver-amplifiers and associated components, in cabinets or enclosures.

8536-250 INSPECTOR, LEAD-ACID BATTERY PARTS(electric. equip.) DPT:684
GED: 3 SVP: 3 EC: I 5 PA: L 4 7

Inspects lead-acid battery parts for conformance to specifications:

Examines cast-lead parts, such as grids and connectors, and other battery parts, for defective casting, discolouration and other defects. Removes excess lead, burrs, or flashing from parts, using knife, scraper and file. Checks parts against dimensional specifications, using precision-measuring equipment. Segregates rejects from acceptable parts and prepares inspection reports.

May inspect and test stored wet-charge batteries, using hydrometer. May be designated according to part inspected; for example, Grid Inspector

8536-254 INSPECTOR, PRINTED-CIRCUIT BOARD(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: I PA: S 4 7

Inspects printed-circuit boards for conformance to manufacturing specifications:

Verifies conformance of holes in printed-circuit board against specifications, using plug gauge. Measures thickness of plating, against specification, using micrometer. Verifies printing registration, by measuring distance from edge of conductor areas to side of board and to circuit holes, using radius gauges. Checks board against production drawing and parts list, to verify installation of hardware, such as brackets, eyelets and lugs, and to ensure eyelets and lugs make good contact with conducting foil. Examines plastic coating of board to detect sealing defects, such as cracks and pinholes. Stamps acceptable boards, and tags rejects describing nature of defects.

May test circuit continuity, using continuity tester.

8536-258 INSPECTOR, SCREEN AND APERTURE-MASK ASSEMBLY(electronic equip.) DPT:684
GED: 3 SVP: 3 EC: I PA: L 4 7

Inspects television-tube screen and aperture mask to ensure adherence to quality standards:

Examines aperture-mask and screen of colour-picture tube for identifying numbers to ensure mask matches screen. Examines mask and screen for defects, such as coating streaks, contaminants, chips and dents, and blows dust from parts, using air jets. Places mask over screen to ensure holes in mask fit over matching projections on screen. Positions electron-beam shields on mask-support ring and fits spring clips to hold assembly together. Places screen portion over source of ultraviolet light to detect misaligned, missing or discoloured phosphorus dots. Measures diameter of dots, using vernier-scale-equipped microscope. Paints conductive coating around tube screens and anode buttons. Records defects on label and pastes label on defective assembly.

8536-262 TESTER, ELECTRICAL-WIRE INSULATION(wire prod.) DPT:684
GED: 2 SVP: 4 EC: I 5 6 PA: M 4 7

Tests electrical-wire insulation and repairs defective insulation:

Adjusts tester to accept wire diameter to be run. Threads wire through tester, over high-voltage terminal, and onto take-up reel. Adjusts voltage setting on tester, as specified for particular wire, using chart. Connects jumper to electrical conductor at end of pay-out reel and actuates switch to supply power to tester and motor that drives take-up reel. Monitors operation and stops machine when break in wire insulation is indicated by warning light or buzzer. Examines wire for burn or dark spot to locate defect in insulation. Removes defective insulation, using knife, and wraps uncured rubber tape around break in insulation to form patch. Clamps electric curing block of vulcanizer around patch, switches on vulcanizer and removes device after specified time. Smooths cured patch, using power grinder. Joins wire lengths together, using resistance-butt welder. Observes counter to determine when correct length of wire has been wound on take-up reel and cuts wire, using hand cutters.

8536-266 INSPECTOR, ELECTRIC-CLOCK COMPONENTS(electric. equip.) DPT:664
GED: 3 SVP: 3 EC: I 5 6 PA: L 4 5 6 7

Inspects electric-clock components for conformance to manufacturing standards:

Inspects components and assemblies for quality of workmanship and correct assembly of parts. Inspects motor assembly to detect broken wires, poor soldering, uneven coil winding and to ensure correct application of protective varnish over windings. Makes random samplings of designated parts, and inspects them to detect uneven plating, blemishes and scratches, using eye loupe and tweezers. Tests motor windings for continuity and grounds, using electrical-test equipment. Rejects and tags defective items, records relevant data and reports abnormal conditions to supervisor.

8536-270 INSPECTOR, TAPE CARTRIDGE AND CASSETTE(electronic equip.) DPT:387
GED: 2 SVP: 3 EC: I PA: L 4 6

Inspects master tapes, tape cartridges and cassettes to ensure that quality of sound reproduction meets manufacturer's specifications:

Selects random samples of master tapes, tape cartridges or tape cassettes for quality inspection. Threads master tape through guides in sound-reproduction equipment, or inserts cartridge or cassette in housing-unit of sound-reproduction equipment. Listens to sound reproduction to detect imperfections in sound quality, such as distortion, flutter and fade and drop-out, using earphones. Observes meters on sound-reproduction equipment to ensure that all sound tracks have been recorded on master tape, tape cartridge or tape cassette. Compares recordings with printed codes, listings or labels to ensure that recorded selections conform to printed data. Rejects faulty tapes, cartridges or cassettes, and records defects found.

8536-274 INSPECTOR AND TESTER, BATTERY CASE(electric. equip.) DPT:687
GED: 2 SVP: 3 EC: I PA: M 4 7

Inspects and tests storage-battery cases for conformance to manufacturing standards:

Inspects battery case dimensions, using templates and acceptance scales. Examines containers for surface defects and quality of painted surfaces and lettering. Places case over form of dielectric tester and actuates switch that applies high voltage across opposite surfaces of battery case. Observes tester panel-lights which indicate defects, such as cracks or pin holes in cell partitions. Places wire-grid cage over case and repeats test to detect defects in outer walls of container. Marks defective cases with chalk.

8536-278 PRODUCTION TESTER, LEAD-ACID BATTERY(electric. equip.) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Tests assembled storage batteries to ensure conformance to specifications:

Adjusts test equipment to voltage of battery under test. Places test prods across intercell connecting-straps and observes indicating device

to detect incorrect connection of cells. Places test leads across battery posts and observes voltage tester that indicates pass or reject. Examines batteries for defects, such as omission of polarity symbols on battery posts, cracked covers and uneven sealing. Attaches tickets to rejected batteries, indicating nature of defects.

May perform additional tests, such as on-load voltage measurements, capacity and specific gravity, using electrical-test equipment and hydrometer.

8536-282 TESTER, ELECTRICAL CONTINUITY(electric. equip.) DPT:687
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tests wide range of electrical components to detect open circuits, leakage or shorts and to measure resistance, using electrical-test equipment:

Connects test leads from tester across components, such as transformer windings, chokes and relay coils. Observes lamp or meter, or listens to buzzer that indicates acceptable component. Reads meter to measure resistance of windings. Connects test-leads to toggle, rotary or mercury switch and actuates switch to check make-and-break action. Places armature in growler (armature tester), rotates armature and listens for growling sound, or watches for attraction of steel strip to armature surface that indicates short circuit or shorted turns.

May label components tested, indicating nature of defect. May route defective components to other departments for reworking or repair. May be designated according to component tested; for example, Armature Tester.

8536-286 INSPECTOR, BATTERY PLATES(electric. equip.) DPT:685
GED: 2 SVP: 2 EC: 1 6 PA: L 4 7

Tends machine that splits battery plates, and inspects split battery plates to detect defects in casting and pasting, such as broken or cracked grid structures, and incomplete or uneven pasting:

Starts conveyor to move battery plates to machine. Starts plate-splitting-machine and feeds plates into machine to split them in two. Examines split plates to ensure even application of oxide material throughout grid structure. Examines grid structure to detect broken, cracked or bent members, using magnifying glass. Cleans edges of lugs, using wire brush, and examines lugs to detect flaws in casting. Stacks plates on truck. Records type of plate and defects found, and stamps or signs inspection record.

8536-290 INSPECTOR AND TESTER, LAMPS(electric. equip.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects and tests lamps, such as automotive sealed-beam units, fluorescent tubes, and household lamps, for mechanical defects, quality of workmanship, air leaks, and filament continuity:

Places lamps on table in darkened test booth, passes radio-frequency probe over lamps, and observes lamps to detect abnormal bluish glow that indicates presence of air in lamp. Plugs automobile sealed-beam units into test jig and reads meter that records light intensity. Screws household lamp into socket and observes lighted lamp to ensure that light intensity meets specifications. Touches test prods to end and side contacts, and observes meter deflection that indicates filament continuity and resistance. Inspects lamps for cracked lenses, loose bases or lamp colour. Segregates rejected lamps and records number and nature of defects. Stamps acceptable lamps.

8536-294 INSPECTOR, DRY BATTERY(electric. equip.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects in-process or finished dry-cell batteries for defects, such as dents, short electrodes or missing parts:

Examines dry cells as they pass on conveyor. Picks out defective batteries, examines tactually, and rejects defective batteries. Drops rejects in tote box and places acceptable batteries back on conveyor. Tests samples of batteries, using ammeter and voltmeter. May replace damaged parts and reposition incorrectly placed parts.

8536-298 INSPECTOR, SMALL-ELECTRICAL-APPLIANCES(electric. equip.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects small electrical appliances, such as food mixers, toasters and hair driers:

Examines case and appliance to detect marred or scratched finish and loose fittings and control knobs. Checks accessories, such as hoses for driers, and bowls and paddles for mixers, against packing list, to ensure that parts are correctly packaged and complete. Removes smudges from finish, using sponge or cloth. Performs operational tests, such as toasting bread to test thermostat and ejection mechanism. Places tags outlining defects on appliances that do not meet specifications.

May inspect a specific appliance and be designated accordingly; for example, Checker, Hair Drier Toaster Inspector

8536-299 OTHER INSPECTING AND TESTING OCCUPATIONS, ELECTRICAL AND ELECTRONIC EQUIPMENT FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING

This group includes electrical and electronic equipment inspectors and testers, not elsewhere classified; for example, those who inspect and test mobile-transceivers and navigation-aids, using electronic-test equipment, and those who test electric-railway and subway circuits for power leaks, using electrical-testing devices. Typical examples of occupational titles covered by this residual group definition are:

Inspector, Mobile-Transceivers(electronic equip.)

Inspector, Navigation-Aids(electronic equip.)

Tester, Electrolysis(electric. equip.)

8537-RADIO AND TELEVISION REPAIRMEN

This unit group includes occupations concerned with repairing radio and television receivers, recorders, phonographs and related equipment. Activities include: disassembling, adjusting and calibrating; and soldering and replacing parts, modules and assemblies, using a variety of common and special hand tools and electronic equipment.

8537-110 TELEVISION REPAIR SERVICEMAN(electronic equip.) DPT:281
television repairman.
GED: 4 SVP: 7 EC: 1 PA: M 3 4 6 7

Repairs and services television receivers:

Queries customer to determine nature of television malfunction. Switches on set, listens to sound and observes picture and other tubes to assist in fault diagnosis. Replaces defective tubes and adjusts receiver controls and tuned circuits to correct minor faults. Transports receivers requiring major repairs to repair shop, using delivery truck. Places chassis on repair bench, switches on set to determine fault location, and makes voltage and resistance tests and waveform checks, using vacuum-tube-voltmeter, oscilloscope and schematic diagram. Tests continuity and resistance of windings in components, such as fly-back and vertical-output transformers. Corrects misalignment, using signal generator, oscilloscope and alignment tools. Adjusts controls of colour receiver for colour purity, using colour-bar generator. Replaces defective components, such as capacitors and transformers, using soldering equipment and hand tools. Records time spent and parts replaced.

May repair receivers rejected by inspectors in manufacturing establishment.

8537-114 RADIO SERVICEMAN(electronic equip.) DPT:281
radio repairman.
GED: 4 SVP: 6 EC: 1 PA: L 4 6 7

Repairs radio receivers, phonographs, tape recorders and related equipment, following circuit diagrams:

Removes equipment from cabinet or disassembles it to gain access to chassis or mechanism. Examines underside of chassis of record

players, tape recorders and radios, to detect charred components and worn parts, or defective items, such as drive belts or sprockets. Adjusts or replaces defective parts, following circuit diagrams. Switches on equipment, observes mechanical operation of tape deck and turntable and listens to detect distortion, weak signal or spurious oscillations. Tests electron tubes, resistors and capacitors and reads voltage at specified points, to diagnose faults. Replaces defective parts, such as electron tubes, transistors and capacitors. Aligns receiver tuned-stages.

May be designated according to equipment repaired; for example, Hi-Fi Repairman

Tape-Recorder Repairman

8538-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT

This unit group includes occupations in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), concerned with fabricating, assembling, installing and repairing electrical, electronic and related equipment.

8538-110 BATTERY-ACID DUMPER(electric. equip.) DPT:886
GED: 1 SVP: 2 EC: 1 4 6 PA: M 4

Feeds lead-acid storage batteries to machine which inverts batteries over tank to drain off sulphuric acid solution:

Starts conveyor leading to machine-dumping mechanism and places batteries on conveyor. Places emptied batteries in upright position on conveyor leading to refilling station.

8538-114 DRY-CELL-ASSEMBLY-MACHINE FEEDER
(electric. equip.) DPT:886
GED: 1 SVP: 2 EC: 1 PA: L 4

Feeds machines that insert cores and carbon rods, affix caps and seals, and position cardboard tubes over zinc containers, to fabricate dry cells:

Removes such items as zinc containers, rods and caps from cartons or conveyor. Places them on ramp, conveyor, turntable or other mechanism that feeds them to capping, sealing, tubing, sleeving or wafer machines. Removes processed units from discharge conveyor and places them on other conveyor mechanism for further processing or places them in trays or boxes.

May be designated according to task performed or machine fed; for example,

Carbon-Rod Inserter, Machine

Dry-Cell Remover

8538-118 TAKE-OFF-MAN, BATTERY PLATES (electric. equip.) DPT:886
plate take-off man.
GED: 1 SVP: 2 EC: 1 4 7 PA: M 4

Removes lead-acid battery plates from plate lug buffing-machine or pasting-drying machine:

Removes twin plates from discharge end of buffing machine and breaks twin plates into separate ones by bending over angle iron. Segregates defective plates and counts and stacks good plates according to type. Removes plates from pasting-drying machine, and brushes excess lead-oxide from plates, using wire brush.

8538-122 RESISTOR-LEAD-WIRE ASSEMBLER(electronic equip.) DPT:887
GED: 1 SVP: 2 EC: 1 6 PA: L 4 7

Attaches connecting clamps and wire leads to ceramic cores of wire-wound resistors:

Fits circular flat-metal-terminal clamps around ends of ceramic cores of wire-wound resistors. Positions rivet through clamp and actuates lever of rivetting device to secure clamps. Twists precut wires around ends of ceramic core, using wrapping tool, to fabricate resistors with axial leads. Solders or spot welds resistor wire to terminal clamps or

lead wires, using soldering equipment or spot welder. Bends ends of lead wire into slots of ceramic cores to recess resistor-wire and lead-wire junctions, using hand operated swaging press.

8538-199 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, ELECTRICAL AND ELECTRONIC FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING

This group includes labourers and other elemental workers, not elsewhere classified, engaged in fabricating, assembling, installing and repairing electrical and electronic equipment; for example, those who convey materials and products to and from work areas, bend or straighten lead-wires of resistors and capacitors by hand, and clean electrical or electronic components and parts. Typical examples of occupational titles covered by this residual group definition are:

Cleaner, Electronic Components(electronic equip.)

Labourer, Electrical Products(electric. equip.)

Lead-Wire Bender(electronic equip.)

8539-FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS: ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating, assembling, installing and repairing a variety of electrical and electronic equipment and components.

8539-110 PRECISION ASSEMBLER(electric. equip.: electronic equip.) DPT:381
GED: 4 SVP: 7 EC: 1 PA: L 4 7

Assembles, tests and repairs precision electromechanical devices, such as servomechanisms, gyros, gear trains and motors, used in computers, radar, guidance systems and similar equipment, performing any combination of the following duties:

Measures and fits parts, such as pivots, jewelled bearings, cams and shafts, to specified tolerances, using precision-measuring instruments. Examines parts for burrs, scratches and dents, and measures surface roughness, using profilometer. Measures hole diameters, clearances, and other dimensions, using precision-measuring equipment. Fits parts together, installs them in housing and aligns parts, using shims, to ensure smooth operation within torque limits. Rubs abrasive paper over surfaces or laps-in close-fitting mechanical parts to prevent binding. Installs mechanical equipment, such as gear trains, bearings and gyro mechanisms, following drawings and using tweezers, stereomicroscope and illuminated magnifying glass. Installs electrical or electronic components, such as motors, power supplies and control and sensing devices, and connects wiring. Tests and adjusts electromechanical devices to synchronize operation, and locates defects, using functional-test equipment. Dismantles unserviceable equipment and replaces worn and defective parts.

8539-114 TEST-EQUIPMENT REPAIRMAN, OIL EXPLORATION(electric. equip.; electronic equip.) DPT:261
GED: 4 SVP: 6 EC: 1 PA: L 4 5 7

Repairs and modifies electrical-and electronic-test equipment used in oil and natural gas exploration:

Removes equipment from case to enable testing, using hand tools. Interconnects components of measuring equipment on bench or test facility, using cable assemblies and hand tools. Connects equipment to special test apparatus to assess their operation. Inspects wiring, relay contacts, rotary switches and mechanical and soldered connections. Measures electron-tube voltages and current, examines waveforms, and checks output of various stages, using vacuum-tube-voltmeter, oscilloscope and signal generator. Checks and corrects calibration of equipment, such as seismometers, electrical-logging equipment and radio transmitters and receivers, using precision testing and measuring equipment. Modifies equipment to improve performance or provide additional facilities. Instructs field personnel on use, care and servicing of equipment.

8539-118 PHOTOELECTRIC-SORTING-MACHINE REPAIRMAN (electronic equip.) DPT:281
GED: 3 SVP: 6 EC: I 6 PA: L 4 7

Repairs photoelectric-sorting equipment that sorts items or materials according to degree of colour:
Assembles components, such as scanning disks, piping and electrical wiring, using hand tools and electronic-test equipment. Inspects equipment and examines sorted product to detect malfunctions. Disassembles and examines equipment for defects. Locates defective parts, using electrical- and electronic-test equipment. Replaces defective parts, such as photoelectric cells, electron tubes and connectors, using hand tools and soldering equipment. Adjusts sensitivity control for product to be sorted. Maintains equipment log book. Recommends purchase of parts, attachments and other equipment required to update installation.

8539-122 ASSEMBLER, DIELECTRIC AND INDUCTION HEATERS(electric. equip.; electronic equip.) DPT:381
GED: 3 SVP: 6 EC: I PA: M 3 4 7

Assembles dielectric and induction heaters, according to production drawings:
Mounts controls, transformers, reactors and rectifiers in specified locations and secures them in position, using bolts, nuts and other fastening devices. Drills holes in cabinets and panels, and mounts parts, such as switches, terminal blocks and meters, using hand tools and power tools. Installs wiring harness in cabinet and secures harness in position, using plastic clamps. Brazes hose nipples on tanks and coils, and connects coil to water supply, using oxy- acetylene torch and soldering equipment. Runs leads from wiring harness to components, such as rectifiers, relays and electron tube sockets.

8539-126 ASSEMBLY-MACHINE SET-UP MAN(electric. equip.; electronic equip.) DPT:260
GED: 3 SVP: 5 EC: I PA: M 3 4 5 7

Sets up and maintains production machines and equipment, such as coil-winding machines, wire-stripping-and-cutting machines, induction heating units, spot welders and name-plate-stamping machines, used in the production of electrical and electronic equipment, by performing any combination of the following duties:
Reviews instructions, specifications and production schedules to determine tooling, material and parts requirements for items to be produced or assembled. Sets machine stops and counting mechanisms. Installs dies, welding electrodes and holding fixtures in machines, using hand tools. Adjusts machine speeds, material feed mechanisms and stops. Arranges work flow on assembly lines to facilitate production. Makes trial runs to ensure correct machine operation and informs operators regarding production requirements. Samples machine output and makes adjustments when necessary.
May expedite material from stockroom.

8539-130 ELECTRIC-TOY REPAIRMAN(electric. equip.) DPT:264
GED: 3 SVP: 5 EC: I PA: L 4 5 7

Repairs electrically-operated-hobby equipment and toys, such as components of model-railroad equipment, slot cars and animated toys, using hand tools and electrical-test equipment:
Examines equipment to detect loose or broken conductors or damaged or binding gear-train mechanisms. Checks continuity of voltage supply input to small drive motors, switches and controls, using volt-ohm-milliammeter. Ensures that motor brushes move freely in holder and replaces damaged or worn brushes. Cleans commutator surfaces, using swab and cleaning solvent. Replaces defective motors and light bulbs. Resolders broken wires, using soldering gun. Cleans wheels and electrical contacts, using cleaning solvent. Lubricates moving parts, using specified lubricant. Advises customers on care, installation and maintenance of equipment.
May replace mechanical parts of electrically-operated toys or hobby equipment.

8539-134 ELECTROLYTIC-CELL REPAIRMAN(chem., n.e.c.) DPT:384
GED: 3 SVP: 5 EC: I 6 7 PA: M 3 4

Assembles, installs and repairs electrolytic cells used in production of chemicals, such as chlorine, caustic soda and hydrogen, by performing any combination of the following duties:
Starts concrete mixer and pours concrete slurry into assembled moulds, to cast replacement sections of electrolytic cells. Positions copper bars, graphite plates or carbon electrodes in cylindrical form and secures them by pouring molten lead into form to fabricate anode unit. Assembles cathode rings on ends of cylindrical form. Wraps asbestos paper and steel wire screen around jig assembly to fabricate cathode pot. Applies putty, asbestos compound and paint, using putty knife, putty extruder and brush, to seal cathode connections and joints. Replaces spent or defective cell units, such as anodes and cathodes. Cleans electrical-connecting devices, electrolytic cells, and level gauges. Washes cathode screens to remove asbestos. Coats screens by dipping them in asbestos slurry. Measures voltage drop from anode to cathode of operating cell to determine effectiveness, using voltmeter. Records data, such as condition of cell units and parts used.

8539-138 IMPREGNATOR AND DRIER(electric. equip.; electronic equip.) DPT:682
GED: 3 SVP: 5 EC: I 3 6 7 PA: M 4 7

Controls ovens, vacuum equipment and impregnating tanks to impregnate and dry or bake electrical and electronic components, such as transformers, relays and capacitors, with insulating and protective varnishes, oil, and other materials, employing either of the following methods:

1. Places small components on racks. Sets controls of impregnating tank to maintain specified liquid temperature. Lowers rack into tank and removes impregnated components after specified time. Places components in oven and sets timer for specified baking. Removes components and examines them for adequate sealing and to detect peeling. Dips leads into thinner bath to remove varnish or cleans leads and terminals, using knife and wire brush. 2. Places components into vacuum-impregnating tank, manually or using hoist. Sets controls to maintain specified impregnating-liquid temperature and flow of liquid. Operates controls to start vacuum and liquid pumps, and to regulate pressures, to impregnate components. Records information, such as temperature and degree of vacuum from recording instruments. Tests liquid viscosity and adds thinner as required. Cleans equipment, using stripping tank.
May be designated according to component treated; for example, Capacitor-Treating-Tank Operator

8539-142 CRYSTAL GROWER(electronic equip.) DPT:384
GED: 3 SVP: 4 EC: I PA: L 4 7

Grows crystals from material, such as germanium and silicon, for use in semiconductor devices, such as transistors, diodes and micro-circuits:
Places germanium in graphite boat and places boat in gas-reduction furnace. Actuates controls to regulate flow of hydrogen into furnace and ignites burner jets. Removes boat from furnace after specified time, weighs pig (reduced material) and records weight. Replaces pig in boat and fastens boat to conveyor in electric-refining-furnace. Moves controls to regulate furnace and flow of helium gas used as a purifying agent in furnace to refine pig. Places seed crystals (nucleus on which crystal forms) and refined pig into crucible, using tweezers or vacuum-pickup tool, and adds specified amounts of ionizing impurities, such as arsenic or boron. Places crucible into crystal grower and actuates controls to regulate temperature. Observes crystal formation and adjusts controls to regulate crystal growth. Records data, such as seeding time, turning speed, growing time and type of impurities added. Disassembles grower and cleans vacuum chamber.
May form crystal by melting ingot in crucible of electric draw crystallization-furnace and lowering seed crystal into melt. May be designated according to material processed or by type of process; for example, Germanium Processor Ingot Processor

8539-146 DIFFUSION-FURNACE OPERATOR(electronic equip.) DPT:384
GED: 3 SVP: 4 EC: 1 PA: S 4 7

Diffuses chemicals into surface of silicon or germanium wafers used in the manufacture of transistors, diodes and solar cells: Measures or identifies specified quantities of treating agents, such as arsenic trioxide, boron and phosphorous gases, and injects or pours these agents into quartz boats or quartz spoon (gas generating device). Places boats in preheater or connects spoon to gas or furnace valves. Turns valves to regulate flow of argon, nitrogen or helium gas, and starts preheater to expand and disseminate gas and treating agents in furnace. Immerses wafers in acid solution to remove surface contamination and rinses wafers in de-ionized water. Removes boat from preheater, places wafers on boat, using vacuum-pickup tool, and places boat in furnace to diffuse wafers. Removes boat after specified time and cleans and rinses wafers. Reheats wafers in furnace for specified time to diffuse additional agents into wafers. Records relevant processing data. May compute diffusion time and temperatures, following formulas. May verify diffusion depth, using calibrated microscope.

8539-150 ANTENNA INSTALLER(electronic equip.) DPT:664
GED: 3 SVP: 4 EC: B 6 PA: M 2 3 4 7

Installs antennas for reception of television and frequency-modulation-broadcast stations: Secures antenna-mounting-base to roof or other structure, using lag screws other fasteners. Assembles mast sections and secures antenna to mast. Attaches guy wires to mast. Attaches transmission line to antenna and mast and secures it in position, using stand-off insulators. Attaches mast to mounting base and secures antenna in position, using hand tools. Attaches guy wires to roof or adjacent structures and tightens guy-wire turnbuckles to achieve an even tension on each guy wire, using hand tools. Threads transmission line through insulators to television receiver. Switches on receiver and observes picture or test equipment, and directs worker to orient antenna for optimum receiver performance, using hand-held transceiver. May install and adjust television receivers in customers' homes.

8539-154 ASSEMBLER, ELECTRICAL-WIRE GROUP (air & space-craft; electric. equip.; electronic equip.) DPT:684
harness builder.
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Assembles electrical-wire conductors to specified configuration to fabricate wiring harnesses and cable assemblies used in electrical and electronic equipment, such as aircraft-electrical systems, radio transmitters and receivers, and electronic-computing equipment: Cuts wire or coaxial line and insulating sleeving to length, and strips insulation and metal braid from wire ends, using mechanical cutting and stripping devices. Slips insulated sleeving over wire ends. Selects wire or coaxial line of gauge, colour, number, length and type specified by drawing, and routes wires along and around upright pegs of cable-harness board, following coloured lines or numbers marked on board. Applies temporary binding to hold wires in place. Withdraws wire ends from bundle at predetermined locations along cable, to form breakouts. Laces wires together and reinforces cable at breakouts and bends, using nylon or waxed cord. Tins wire ends, using flux and solder pot. Attaches terminals and connecting devices to wire ends, and fastens wire ends to fixtures, plugs, terminal strips and printed-circuit boards, using hand tools, soldering equipment, stereomicroscope and miniature-welding equipment. Attaches identifying bands to cable or individual conductors. May brush or pour plastic-sealing compound into cable end of plugs to provide protective seal. May enclose cable inside insulated tubing to insulate and protect cable.

8539-158 AUTOMATIC-WIRE-WRAPPING-MACHINE TENDER (electric. equip.; electronic equip.) DPT:685
GED: 3 SVP: 4 EC: 1 PA: L 4 7

Tends machine that automatically wires control panels and plugboard-type subassemblies used in manufacture of machines, such as punched-card and magnetic-tape business machines: Reads work order to determine number and type of units to be wired, and specified punched-card deck to be used in card reader for machine

control of wire-wrapping machine. Places card deck in feed hopper of card reader. Verifies alignment of terminal pins in unwired panel or plugboard, visually, or using template guide. Straightens misaligned pins, using special hand tool. Mounts unwired unit in wiring pallet (holding fixture), and positions pallet in machine. Actuates controls to start machine that automatically routes, cuts, strips and wraps ends of wires around terminal pins, to install wiring. Monitors machine operation and indicator lights on control console to detect machine malfunctions. Removes wired panel from machine. Corrects minor machine malfunctions, using hand tools. Notifies repairman of serious malfunctions or need for change in machine setup. Tests completed work at specified intervals to determine mechanical strength of connections, using tensile tester.

8539-162 PHOTORESIST PRINTER(electronic equip.) DPT:381
GED: 3 SVP: 3 EC: 1 PA: S 4 7

Etches patterns on crystal wafers to be used for subsequent cutting of wafers into transistor crystals, using projection or contact printer: Sprays or brushes photoresistant solution on wafer to sensitize it to light. Positions wafer on vacuum chuck. Fits specified mask in holder over wafer to align pattern of mask with specified cutting planes, or to superimpose one pattern over another, and verifies alignment, using microscope. Brings mask in contact with wafer and exposes sensitized wafer to arc light to print pattern on wafer. Removes wafer from printer and places it in developing solution to dissolve unexposed photoresistant material, leaving pattern imprinted on wafer. Immerses wafer in etching solution to remove oxide coating or to etch unexposed surfaces. Inspects wafer to detect pin holes, undercutting and misalignment defects, using microscope.

8539-166 GAUGER, SEMICONDUCTOR MATERIAL (electronic equip.) DPT:384
GED: 3 SVP: 3 EC: 1 PA: S 4 7

Measures thickness of sliced or diced semiconductor wafers or pellets used in manufacture of solid-state devices, such as transistors and diodes: Positions gauge block on instrument bed under spindle tip, and turns screws on gauge head to set specified distance between spindle tip and block. Places wafer or pellet of semiconductor material, such as germanium or silicon on block, using tweezers or vacuum-pick-up tool. Pushes plunger that presses spindle tip on wafer or pellet, and reads thickness dimension from gauge dial. Places wafers on numbered cards, according to thickness. Records thickness of individual pellets and places pellets in containers. Computes average size and size-range of pellets in container, using calculating machine. Labels containers, indicating size-range of contents, type of material and machine number.

8539-170 ELECTRODE INSTALLER(non-metal. min. prod., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: 1 5 7 PA: VH 4

Assembles and installs electrodes in arc furnaces used during manufacture of abrasives: Constructs working platform over furnace well, using planks and timbers. Presses buttons to lower furnace head and electrodes to convenient working position. Removes used electrode sections from sockets, using wrenches and leather-faced grips. Collects new-electrode sections from storage area, using handtruck. Cleans sockets, using air hose and rebuilds electrodes with new sections, using grips and wrenches. Insulates sides of electrodes to ensure current arcs at bottom. May use adhesive to assemble electrode sections. May fabricate electrodes, using resistor mix (mixture of carbon and sand).

8539-174 COIL-WINDING-MACHINE TENDER(electric. equip.; electronic equip.) DPT:685
GED: 3 SVP: 3 EC: 1 PA: L 4 7

Tends coil-winding machine that automatically winds wire coils used in fabrication of small electrical and electronic components, such as transformers, solenoids and chokes: Fits spools of wire onto machine spindle and threads wire through guide mechanisms. Places coil form in position on machine, and sets winding speed, turn counter and regulator. Adjusts wire-tension device according to size of wire being wound. Starts machine and observes

winding process to detect wire abrasion or uneven spacing. Stops machine and pulls out loops of wire, as specified, to form tap wires. Tapes coil to secure taps and windings in position. May be designated according to type of coil wound; for example, Audio-Transformer-Coil Winder(electronic equip.) Radio-Frequency-Choke Winder(electronic equip.)

8539-178 ELECTROLYTIC-ANODE CHANGER(non-ferrous metal) DPT:664
GED: 2 SVP: 3 EC: I 3 5 6 7 PA: H 3 4

Replaces and renews carbon anodes of electrolytic cells used in processing aluminum or magnesium, by performing any combination of the following duties:

Bolts copper rod to steel studs embedded in carbon blocks to facilitate removal of anode. Disconnects anode-assembly from connector arm, using wrenches. Signals other worker to operate crane that lifts burnt anode from pot and lowers new one in place. Cleans connector arms, using sandblasting hose. Fastens anode rod to connector arm and suspends it in bath. Plants stubs in new anode through channel holes to permit flow of current. Spreads alumina on bath to prevent oxidation, using shovel and rake. Breaks burnt carbon block embedded in desintegrated anode, using sledge hammer. Unbolts steel studs from copper rod, using wrench. Shovels broken carbon into boxes and loads rods and stubs on hand truck for removal. Cleans and straightens stubs and rods, using chipping gun or disk grinder. Chips solidified metal from pots, using chisel and hammer. May fabricate carbon-graphite anodes, using lathe, material-handling equipment, gas torch and hand and power tools.

8539-182 CELL-MAINTENANCE MAN(non-ferrous metal) DPT:684
GED: 2 SVP: 3 EC: I 6 7 PA: H 3 4

Cleans, replaces and repairs components of electrolytic cells in non-ferrous metal refinery, by performing any combination of the following duties:

Disconnects electrical and pipe connections, and removes retaining bolts to free cells, using wrenches. Removes top of closed cells and cathode and anode assemblies, using tension handles, prybars and hoist. Inspects anodes and cathodes for deterioration. Adjusts anode and cathode spacing, to prevent pointing, using gauges and hand tools. Cleans and smooths electrical connections for better contact, using emery cloth, sand paper or electric buffer. Repositions cell bottom, anode, cathode and cell top in place, using hoist. Bolts assemblies together and replaces sight glasses, funnels and percolator pipes. Turns valves to start electrolyte or brine flow. Measures thickness of cathode-blade and length of anode to determine remaining usable life. Scrapes and washes putty, manganese or dirt from cell assembly, using hand scraper and hose. Applies coating of non-oxide grease to remove oxide and scale, using grease gun. Transfers defective units to repair room and obtains replacement parts. Secures electrical connections to bus bar. Seals joints with putty, mortar and asbestos. Cleans deposits from cell walls and bottoms, using scraper. May plate pots, anodes and other components with nickel to ensure proper contact. May fabricate and repair cell components. May be designated according to type of cell or solution processed; for example, Mercury-Cell Cleaner

8539-186 COIL WINDER, MANUAL FEED(electric. equip.; electronic equip.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Winds coils used in manufacture of items, such as transformers, relays, solenoids and inductors, using manually-fed coil-winding machine:

Installs arbor in chuck of machine, using hand tools. Fits coil form or part on which coil is to be wound, on arbor. Fits spools of specified wire on machine spindle. Tapes coil-end to coil-form or secures end to coil terminal. Turns handle or switches on motor to turn spindle, and guides wire to achieve even winding on form. Observes counter, stops machine and pulls out loop of wire to form coil tap when required number of turns have been wound, or stops machine to place insulation between layers of coil when winding layer-wound coils. Wraps coil with tape or brushes insulating varnish over windings. May solder coil taps and ends to terminals.

8539-190 ENCAPSULATOR(electric. equip.; electronic equip.) DPT:684

GED: 2 SVP: 3 EC: I 3 6 PA: L 4 7

Encases electrical and electronic components, such as transformers, chokes and semi-conductor devices, with protective materials:

Pours liquid or powder encapsulating material into encapsulating device. Positions tray of items under outlet of tank containing molten-encapsulating material. Actuates controls to force specified amount of encapsulating liquid onto surface of items. Tends press that moulds epoxy compound around components, or dips tray of items into encapsulating liquid. Removes and places items on drying frame or in oven to bake sealing compound. Inspects encapsulated items for defective sealing, such as chips or pin holes. Cleans and polishes surface of encapsulated items, using solvent. Removes excess coating from leads and terminals, using hand tools and solvent.

8539-194 TRANSFORMER ASSEMBLER(electric. equip.; electronic equip.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles small electrical and radio components which use laminated steel cores, such as power transformers and low-frequency chokes:

Inserts E-shaped laminations inside transformer or choke-coil-form openings, alternately from side to side, and places I-laminations across legs of each E to complete magnetic circuit. Aligns laminations, using mallet. Compresses laminations, using clamp, to enable fitting of specified number of laminations. Attaches coloured lead-wires to transformer windings, following colour code, or connects windings to terminal board, following production drawings. Secures leads to transformer core, using tape and cement. Positions side or top and bottom covers, inserts bolts through covers and laminations, and tightens nuts to secure covers and compress laminations, using hand tools. Places core-terminal assembly in case, pours molten asphalt over windings, and secures base and terminal board, using soldering equipment, to produce hermetically sealed component.

May specialize in the assembly of a particular component and be designated accordingly; for example, Filter-Choke Assembler(electronic equip.) Specialty-Transformer Assembler(electric. equip.)

8539-198 WIRE-STRIPPING-AND-CUTTING-MACHINE TENDER, AUTOMATIC(electric. equip.; electronic equip.) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Tends machine that automatically straightens, cuts to length, and strips insulation from ends of wire for use in electrical or electronic applications:

Places spool of specified wire onto play-out spindle, and threads wire through feed rolls. Adjusts machine controls for wire diameter and to cut and strip wire to specifications. Starts machine and monitors operation. Places boxes under machine ejection roll to collect processed wire or gathers, bundles and tags cut and stripped wire. Periodically examines processed wire to ensure cutting and stripping specifications are met. Observes counter and records quantity of wire processed. Replaces dull or broken cutter or stripping blades.

May install drive adjustment and tension or adjustment rolls. May tend wire-making machine.

8539-202 CODING-MACHINE TENDER(electric. equip.; electronic equip.; wire prod.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that prints identification codes on material, such as insulated copper wire, tape, and plastic tubing:

Installs specified code letters, numbers and symbols in machine mandrel, using tweezers. Moves controls to regulate pressure of stamping die and heating device on mandrel, and adjusts machine for diameter or size of item to be marked. Starts machine and inserts end of material between feed rollers of machine. Feeds end of printed material into machine take-up reel. Monitors printing process and makes machine adjustments when necessary.

May be designated according to material marked; for example, Cable-Coding-Machine Tender Wire-Numbering-Machine Tender

8539-206 CRIMPING-MACHINE TENDER, CONNECTORS
(electric. equip.; electronic equip.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Attaches bare ends of insulated wires to connecting lugs and connector pins, according to production standards:

Fits specified dies into pneumatic-crimping equipment, according to lug, connector pin and wire sizes to be used. Places wire into lug or connector pin opening, and positions lug or pin into jaws of crimping mechanism. Crimps lug or connector pin by actuating control of crimping device. Uses hand-crimper for special applications or low-volume production runs.

8539-210 FILLING-MACHINE TENDER(electric. equip.; electronic equip.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that fills bases or top caps of electron tubes or light bulbs with bonding cement:

Feeds bases or top caps into holding device or hopper of automatic-filling machine. Adjusts temperature controls for prescribed cement viscosity, and opens valves to dispense measured amounts of cement. Checks bases or top caps for adequate soldering of leads, and observes filling operation to ensure conformance to specifications.

May be designated according to item filled; for example,

Base-Filling-Machine Tender

Top-Capping-Machine Tender

8539-214 COIL FINISHER(electric. equip.; electronic equip.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Finishes coils for assembly in electronic or electrical equipment, by performing any combination of the following duties:

Pulls out tap wires from coils, using pick and tweezers. Wraps coil with adhesive tape and bends coil-leads into specified position. Removes enamel or cotton insulation from ends of wires, using solvent or knife. Tins wire ends, by dipping them in solder pot. Brushes protective varnish over coil-turns. Tins prepared insulated-wire leads and connects them to coil-wires, using soldering equipment. Wraps tape around coils. Tests coil, using continuity tester.

8539-218 LAMP-FILAMENT PROCESSER(electric. equip.) DPT:687
GED: 2 SVP: 2 EC: 1 6 7 PA: L 4 7

Dissolves wire mandrels on which tungsten wire has been wound, to produce incandescent-lamp filaments:

Mixes acid solution, following formula, and pours solution into

revolving bowl positioned in heated and vented tank. Empties tray of wire-wound mandrels into acid. Observes action of acid to detect dissolution of mandrels. Pours solution from bowl into acid neutralizer. Rinses filament-coils with water to remove any traces of acid. Places tray of coils into oven to dry, and removes tray after specified time.

8539-222 SALVAGE MAN, STORAGE BATTERY(electric. equip.) DPT:687
GED: 2 SVP: 2 EC: 1 4 PA: H 4

Recovers lead oxide, lead and other material from defective lead-acid storage batteries, for reprocessing and reuse:

Transports containers filled with salvageable material, such as defective battery plates and lead-oxide paste, to recovery station. Dumps salvage into screening tank, using hoist. Runs water into screening tank to wash lead oxide from plates and through screen into lower part of tank, using hose. Drains water from screening and settling tanks. Removes washed-lead plates from screening tank and places them in shipping containers. Shovels lead oxide from tank and salvage trap of drain into steel drums. Segregates other reusable scrap.

8539-226 WIREWORKER(electric. equip.; electronic equip.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Prepares electrical wire or coaxial cable for various applications such as wiring for radio and television chassis, communications equipment and control systems, by performing any combination of the following duties:

Cuts wire or coaxial cable to specified length and removes insulation and braid from wire ends, using hand tools, measuring jig and wire-cutting-and-stripping devices. Twists and inserts wire ends into terminal lugs, and crimps lugs, using crimping tool. Dips wire ends into solder pot to tin wire, and solders ends to terminal lugs, using hand tools and soldering equipment. Stamps code numbers on individual wires, using wire numbering machine. Wraps identification band or tape around individual wires.

8539-299 OTHER ELECTRICAL AND ELECTRONIC FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS

This group includes electrical and electronic assemblers, installers and repairmen, not elsewhere classified; for example, those who assemble electrical connectors, and rebuild television- tuners. Typical examples of occupational titles covered by this residual group definition are:

Connector Assembler(electric. equip.)

Television-Tuner Rebuilder(electronic equip.)

854-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS

This minor group includes occupations concerned with fabricating, assembling and repairing a variety of products made from wood, such as furniture and display cabinets and doors; frames for doors, windows and pictures; barrels, caskets and boxes; and stringed and fretted musical instruments. These occupations are classified in the following unit groups:

8540 Foremen: Fabricating, Assembling and Repairing Occupations, Wood Products

8541 Cabinet and Wood-Furniture Makers

8546 Inspecting and Grading Occupations:
Fabricating, Assembling and Repairing,
Wood Products

8548 Occupations in Labouring and Other Elemental Work: Fabricating, Assembling and Repairing, Wood Products

8549 Fabricating, Assembling and Repairing
Occupations, Wood Products, n.e.c.

8540-FOREMEN: FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating, assembling and repairing a variety of products made from wood.

8540-110 FOREMAN, CABINET AND WOOD FURNITURE MAKERS(furn.; woodworking) DPT:138

Supervises and co-ordinates activities of workers engaged in the assembly and repair of wooden products; such as, home furniture, picture frames, office equipment, doors, window and door frames, and store fixtures, (Unit Group 8541):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise activities of workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Cabinetmakers(furn.)
Foreman, Furniture Assembly(furn.)
Foreman, Gluing(furn.)
Foreman, Laminating
Foreman, Sash and Door Shop(woodworking)

8540-114 FOREMAN, INSPECTING AND GRADING OCCUPATIONS: FABRICATING, ASSEMBLING AND REPAIRING, WOOD PRODUCTS(furn.) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting and grading cabinets, furniture, and other products made from wood, (Unit Group 8546):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise and co-ordinate activities of workers engaged in inspecting and grading a particular product and be designated accordingly; for example,
Foreman, Furniture Inspectors
Foreman, Television Cabinet Inspectors
Foreman, Wood-Product Graders

8540-199 OTHER FOREMEN: FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS

This group includes wood products foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in fabricating, assembling and repairing caskets, boxes, barrels, buckets and other wood products. Typical examples of occupational titles covered by this residual group definition are:
Foreman, Box Maker(woodworking)
Foreman, Coopers(woodworking)

8541-CABINET AND WOOD FURNITURE MAKERS

This unit group includes occupations concerned with fabricating, assembling and repairing wooden articles, such as cabinets, furniture, store and office equipment, doors, and frames for doors, windows and pictures from stock or previously prepared parts, and fitting and installing associated hardware, such as latches, hinges and handles. Activities include operating, manipulating and tending a variety of common and special woodworking machines, equipment, hand and power tools to assemble, fit, fasten and glue products. Occupations concerned with the machining of

wooden parts are classified in Unit Group 8355, PLANING, TURNING, SHAPING AND RELATED WOOD-MACHINING OCCUPATIONS. Occupations concerned with painting and polishing wooden furniture are classified in Unit Group 8595, PAINTING AND DECORATING OCCUPATIONS, EXCEPT CONSTRUCTION.

8541-110 CABINETMAKER(furn.) DPT:280
GED: 4 SVP: 7 EC: 1 5 7 PA: M 4 7

Constructs and repairs wooden articles, such as domestic, store and office furniture, fixtures and other related equipment, following specifications and drawings and using woodworking machines and power and hand tools:
Studies specifications and drawings of articles to be made or prepares specifications. Marks outline or dimensions of parts on paper or lumber stock as specified. Matches materials for colour, grain or texture. Sets up and operates such woodworking machines as power saws, jointer, mortiser, tenoner, moulder and shaper to cut and shape parts from stock. Trims parts or joints for snug fit, using tools, such as planes, chisels or wood files. Bore holes for insertion of screws or dowels, by hand or by use of boring machine. Glues, fits and clamps parts and subassemblies together to form complete units, using clamps or clamping machine. Drives nails or other fasteners to reinforce joints. Sands and scrapes surfaces and joints of articles to prepare them for finishing. Installs hardware, such as hinges, catches and drawer pulls.
May repair and refashion high-grade articles of furniture. May dip, brush or spray assembled articles with finishing materials, such as stain, varnish or paint. May make particular types of cabinets and be designated accordingly; for example,
Furniture Cabinetmaker
Refrigerator Cabinetmaker
Television Cabinetmaker

8541-114 LAY-OUT MAN(furn.; woodworking) DPT:281
GED: 4 SVP: 7 EC: 1 5 PA: L 4 7

Lays out outlines of frames and furniture parts on wood stock, working from engineering drawings, job orders, models and specifications, to guide machine operators:
Studies drawings of assembly to be made. Selects stock lumber of necessary size. Measures and marks stock, outlining cuts to effect maximum utilization of material, and provide a guide for subsequent machine operations, using rule, square, pencil or crayon.
May trace outlines from engineering drawings for decorative or irregular cutting on bandsaw. May construct wooden models of products, using woodworking machines. May trace around patterns to indicate cutting lines.

8541-118 ASSEMBLER, FRAME AND MIRROR(furn.) DPT:484
trim and mirror installer.
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Attaches decorative moulding and mirrors to bathroom cabinets, using hand tools:
Measures cabinet and orders pre-cut moulding, according to measurements and job specifications. Assembles moulding to make frames for cabinets and mirrors, using hand tools. Trims frame to fit cabinet, using knife blade, and fastens frame to cabinet using screws and screwdriver. Screws sliding rails to cabinet, sets mirrors in rails, and adjusts rail screws to ensure smooth sliding action, using screwdriver. Attaches hinged vanity mirrors to cabinet, using screwdriver. Cleans and polishes mirrors and cabinet to prepare unit for shipment.
May cut and mitre moulding, using handsaw and mitre box. May paint and decorate moulding with lacquer, using paint brush.

8541-122 DOWEL-INSERTING-MACHINE SET-UP
OPERATOR(woodworking) DPT:380
 GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Sets up and operates machine that bores holes and glues and inserts dowels in ends of door and sash rails:
 Adjusts stock guides, pressure arms, and glue discharge pipes, and inserts and spaces drills in chucks to accommodate size of rails to be processed, using stock sample, jig, gauge, rule and wrench. Pours glue into reservoir, loads dowel hopper, and starts machine. Feeds rail into machine and checks spacing of dowels, using rule and caliper. Operates machine by pressing buttons to activate automatic feed mechanism or feeds machine by placing stack of rails in feed hopper. Observes operation of machine to prevent malfunctions.

8541-126 REPAIRMAN, ASSEMBLED WOOD PRODUCTS
 (furn.; woodworking) DPT:684
 GED: 3 SVP: 4 EC: I 5 PA: M 4 7

Repairs surface defects of wood products; such as, sashes and doors, furniture, cabinet work, picture frames and other wood pieces to prepare them for finishing, gilding and painting:
 Visually inspects workpiece for rough edges or surface nicks, nail holes, cracks, open seams, veneer blisters, glue, dirt or inspector's marks. Trims and smooths rough edges and surfaces and removes scratches, dents, dirt and glue, using knife, scraper and sandpaper. Fills cracks, seams, dents and nail holes with filler, such as putty or plastic wood. Touches up defects and filler, using stain or paint. Glues loose veneer to surface.
 May cut out damaged or blistered veneer or moulding, and trim, fit and glue matching piece in place. May reglue defective joints. May be designated by product repaired; for example,
 Repairman, Picture Frame(furn.)
 Repairman, Sash and Door(woodworking)
 Repairman, Wood Furniture(furn.)

8541-130 ANTIQUER(furn.) DPT:684
 distresser.
 GED: 3 SVP: 4 EC: I PA: M 4 7

Simulates antique finish on furniture:
 Studies furniture to visualize desired effect and to determine working procedure. Marks surface of furniture using stylus, crayon or spray paint, or beats surface with rough-edged object, such as chain, broken bottle, cinder bag or rock to distress (simulate antique) furniture finish. Uses hand roller to round sharp edges to give effect of normal wear.
 May devise own method to distress furniture to customer's specifications.

8541-134 WEAVER, CHAIR SEAT(furn.) DPT:684
 GED: 3 SVP: 4 EC: I PA: L 4 7

Weaves chair seats from materials, such as fibre, rattan, reed or willow, by performing any combination of the following duties:
 Softens weaving material by placing it in humidifying cabinet and steaming it for prescribed time. Clamps seat frame in clamp table and weaves material in, through and around frame, pulling material tight by hand and twisting ends around and between rows to prevent slackening and to conceal them. Cuts off surplus material, using snips. Consolidates rows of weaving by forcing rows together, using wood block or special tool.
 May bleach woven chair seats. May brush liquid glue on chair seat to harden fibre and varnish finished chair seat.

8541-138 GLUE-BONDING-MACHINE TENDER(furn.;
 woodworking) DPT:585
 GED: 3 SVP: 4 EC: I 5 7 PA: M 4 7

Tends machine that utilizes heat and pressure to cure glue between wooden furniture parts to bond them together:
 Reads work order to determine gluing specifications according to type of glue, thickness of parts, and density and moisture content of wood. Turns controls to adjust position, pressure and speed of feed rollers and clamping units, and to regulate temperature of heating unit and length of curing cycle according to specifications. Starts machine and slides pre-glued parts onto rollers that carry them through machine and curing tunnel.

May tend machine that cures glue between wooden parts by electronic heating and be designated accordingly,
 Gluing-Machine Tender, Electronic(woodworking)

8541-142 CASE FITTER(furn.) DPT:684
 GED: 3 SVP: 3 EC: I PA: M 3 4 7

Fits doors, trays, shelves and drawers into unfinished wooden furniture and display cases:
 Trims and shapes edges of uneven or improperly fitted parts using chisel, file, sandpaper, or hand plane or by drawing edge over jointer blade. Pushes thumbtacks or inserts plastic into drawer slides to level drawers and to facilitate sliding. Fits prehinged doors to cases and marks and drills holes for insertion of screws, using portable electric drill. Attaches doors to cases or sets them aside for painting. Tests fit of drawers by sliding them in and out and tests doors for ease of opening and closing. Installs hardware, such as drawer handles and sliding tracks according to specifications, using hand tools.
 May fit a specific part and be designated accordingly; for example,
 Door Fitter
 Drawer Fitter

8541-146 EDGE BANDER(furn.; woodworking) DPT:684
 GED: 3 SVP: 3 EC: I 5 PA: M 4 7

Glues veneer strips to edges of cases, tabletops or doors, or to edge of veneer panels used for manufacture of furniture, using one of the following methods:
 1. Sprays or brushes glue on edge of workpiece and applies and positions strip of veneer by hand. Places workpiece in electrically heated clamp and closes clamp to hold veneer strip in place for specified time. 2. Passes strips of veneer over automatic glue spreader and positions glued strip on edge of veneer panel by hand. Places parts in power clamp for specified curing time. Presses pedal to release clamp, examines work to ensure conformance to specifications and removes edged panels to designated area. 3. Places stack of veneer strips in feed chutes of automatic banding machine and adjusts conveyor to width of panel to be banded. Feeds panels into machine that applies glue to edges, pulls veneer strip from feed chute onto panel edge, and dries glue on electrically heated or cold pressure plates. Regulates speed of belts that convey panels through machine.
 May mix glue and refill glue reservoirs. May trim or smooth glued joint and edges, using hand router, file and sandpaper. May match colours and patterns of veneer strips to workpiece.

8541-150 FURNITURE ASSEMBLER(furn.) DPT:684
 GED: 2 SVP: 4 EC: I 5 PA: M 3 4 7

Assembles and fastens together wooden furniture parts or assemblies to form sections, frames, or complete articles of furniture, performing any combination of the following duties:
 Trims joints to fit, using hand tools. Applies glue to joints, using brush, and knocks parts or assemblies together, using mallet. Places assembled parts in clamp or assembly jig until glue has dried and reinforces joints with dowels, screws, staples or nails, using power screwdriver, staple gun or hammer. Attaches glue blocks, corner blocks, drawer glides, tops, moulding, shelves and dust bottoms with nails, screws, glue or staples. Drills holes and attaches parts of automatic drawer locks, hinges, pulls and casters. Fastens arms, legs or back pieces to furniture, using screwdriver.
 May be concerned with assembly of a particular product and be designated accordingly; for example,
 Bed Assembler
 Box-Spring-Frame Assembler
 Studio-Couch-Frame Assembler

8541-154 ASSEMBLER, SASH AND DOOR(woodworking) DPT:684
 knock-up man.
 GED: 2 SVP: 3 EC: I PA: M 4 7

Assembles wood products having mortise-and-tenon or dowelled joints, such as doors, door frames and window sashes, using glue and maul or mallet:
 Brushes glue on tenons or dowels and into mortises on dowel holes. Places wood parts on work table or in assembly jig, according to specified pattern and sequence, and drives tenons or dowels of parts into mortises or dowel holes of adjacent parts, using maul or mallet. Inserts mullions between stiles and rails of multipane windows and

fastens them with glue. Inserts wedges into mortises to fasten parts together. Stacks completed items on pallet or in designated area for clamping or further processing.
May adjust spacing of glue-discharge pipes that inject glue into several dowel holes simultaneously. May operate clamping machine to squeeze tenons or dowels into mortises or dowel holes.

8541-156 CABINET ASSEMBLER(furn.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 3 4 7

Assembles wooden cabinets or cabinet frames, using hand tools:
Fits prefabricated parts together. Inserts screws or dowels in pre-drilled holes and fastens parts together, using screwdriver, glue, and clamps. Installs hardware, such as hinges, catches and knobs on assembled cabinet, using hand tools.
May trim wooden parts to ensure tight fit, using sandpaper, chisel or file.

8541-158 FURNITURE CANER(furn.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Installs or replaces prewoven panels of synthetic or natural cane or rattan in furniture; such as, chairs, headboards, doors or cabinets:
Cuts damaged cane or rattan from furniture frame, using knife. Removes wooden splines from grooves in frame, using chisel. Places frame in water, or runs water into grooves, to soften dried glue and adhering cane or rattan, using hose. Scrapes surfaces clean, using knife. Brushes glue into grooves and stretches water-soaked panel of cane or rattan over frame opening. Hammers edges of panel into grooves, using wedge and mallet. Brushes glue into grooves over panel and taps or presses splines into grooves. Trims excess cane or rattan, using knife.
May operate hydraulic press to force panel into frame opening.

8541-162 LAMINATOR, HAND(furn.) DPT:684
GED: 2 SVP: 3 EC: I 7 PA: M 4

Cements pre-cut covering materials, such as laminated plastic or linoleum, to plywood panels to form furniture parts, such as tops for cabinets, counters, tables and desks:
Applies adhesive, such as glue or cement, to surface of panel, using brush or sprayer. Positions covering material on adhesive-coated work surface. Smooths and presses covering onto surface, using hand roller or wooden block. Removes excess adhesive by wiping work surface with solvent, such as acetone. Trims and smooths edges of material, using file, hand router or electric trimmer. Cleans and polishes finished surface, using air hose, cloth and liquid cleaner.
May place covered panel in vise or attach clamps to hold covering material in place until adhesive sets.

8541-166 PATCHER, DOOR(woodworking) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Repairs defects in wooden doors, using hand tools:
Places door on worktable and cuts defective wood, such as pitch pockets, knots, and cracks from door, using knife, chisel, rabbet plane, or portable saw. Selects wooden patch of matching grain and shapes and trims patch to fit cut out area, using knife. Glues patch in cut and applies heat to patch to set glue, using electric iron. Smooths patch, using sanding block or portable sander. Tapes or tacks edges of patch to hold patch to door until glue sets. Smooths plastic wood into cracks around patch, using putty knife. Brushes water on dents in door to raise grain and dries and smooths wood, using hot iron and sandpaper.
May cut and set shims in finished wood stock, such as door rails where defects have been cut out, by tapping glue-covered shim into place.

8541-170 PICTURE-FRAME ASSEMBLER(furn.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles pre-cut pieces of moulding to make picture frames, using one of the following methods:
1. Determines location, size and angle of nail holes to be drilled. Bore partial holes in one end of each piece of moulding, using electric drill. Clamps piece in vise and brushes glue on mitred ends. Fits frame together in vise and drives nails through pre-drilled holes, using hammer. Sets nails, using hammer and nail set. 2. Butts mitred pieces of moulding together in V-shaped holding fixture and drives staple across joint, using hand-held staple gun or holds joint under ram of

automatic stapling machine. Repeats operation on each joint to assemble picture frame.

8541-174 HDYRAULIC-PRESS TENDER(furn.) DPT:685
cold-press tender.
GED: 2 SVP: 3 EC: I PA: H 4

Tends hydraulic press that cures adhesive binder in veneered products, such as tabletops and veneered doors:
Places clamp rails and backing board in press. Loads layers of assembled items from conveyor or hand truck into press by hand or by use of hoist. Places backing board and clamp rails on top of stack. Turns hand wheels to set pressure specified for material and pushes button to start press. Attaches retainer rods to top and bottom clamp rails and tightens turnbuckles on rods to maintain pressure on stack after removal from press. Releases press by turning hand wheel and pressing button and removes clamped stack from press bed for drying.

8541-178 LAMINATING-PRESS TENDER(furn.; DPT:685
woodworking)
GED: 2 SVP: 3 EC: I PA: M 4 7

Tends hydraulic press and adhesive-spreading machine to laminate sheets of pre-cut plastic or paperboard to plywood or similar backing to form furniture parts, such as tops for cabinets and tables, or to produce laminated panels for manufacture of such products as packing trunks:
Assembles and stacks selected materials on work table. Feeds sheet of material or backing into machine that coats it with glue or cement. Assembles adhesive-coated plywood, fibreboard, paperboard or plastic in specified sequence for laminating. Wipes excess adhesive from exposed surfaces, using cloth moistened with water or solvent. Sets press for specified temperature or pressure by adjusting controls. Places materials to be laminated in bed of press, either singly or in piles, and moves lever to close press for prescribed period. Lifts laminated materials from press and examines for imperfect bonding. Trims excess material from edges, using knife or electric trimmer. Stacks finished materials in designated area.
May keep production records. May clean and maintain adhesive-spreading machine, using wrenches, brushes and solvents. May be concerned with a particular type of press, material, or product and be designated accordingly; for example, Hot-Press Tender(furn.) Plastic Laminator(furn.) Table-Top Laminator(furn.) Trunk-Panel Finisher(woodworking)

8541-182 CHAIR LEVELER(furn.) DPT:687
GED: 2 SVP: 3 EC: I 5 PA: M 4 7

Levels wooden chairs by cutting excess length from legs:
Lifts chair on frame from conveyor or dolly and places it on level bench to determine if chair will rock. Slides uneven chairs over circular saw, set flush with top of bench, to cut excess length from legs. Stacks chairs in designated area for further processing.
May inspect chair for defects, such as cracks or splits or for imperfect finish, and mark defects for repair.

8541-190 HARDWARE INSTALLER(furn.; woodworking) DPT:684
mounter.
GED: 2 SVP: 2 EC: I PA: L 3 4

Installs metal trimmings and hardware on finished furniture:
Screws hardware, such as drawer pulls, locks, latches, and metal ornaments to finished furniture, using hand tools and power or ratchet screwdrivers. Inserts felt-back-metal clips between drawers and case to hold drawers during shipment. Wraps keys, trays, and drawer dividers in paper and places them inside cabinet. Hangs doors by screwing hinges into predrilled holes.

8541-194 BANDING-MACHINE TENDER(furn.) DPT:685
edger, table top.
GED: 2 SVP: 2 EC: I 5 PA: M 3 4

Tends machine that wraps band of metal or plastic moulding around edges of table tops:
Positions table top in rotary bed of machine and moves lever to lower

ram that holds table top in place. Inserts shank or lip of moulding of specified shape and colour into grooved edge of table top. Starts rotation of machine that presses table top against rollers to force band of moulding into grooves. Lifts finished table top from machine. May hold or rotate table top manually against pressure rollers to band edges. May seat moulding manually by tapping band into grooves, using rubber mallet. May band edges of counter and desk tops with moulding.

8541-198 CLAMPING-MACHINE TENDER(furn.; woodworking) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that clamps pre-glued parts together to assemble products, such as furniture and door frames:
Starts machine and places pre-cut wooden parts in specified order and position on table or in jig or clamping machine. Depresses pedal to activate mechanism that clamps parts together. Releases clamp pressure and stacks assembled products in designated area. Adjusts machine according to dimensions of parts to be processed, by turning hand wheels and setting guides.
May squirt glue into dowel or tenon holes or brush glue on parts before clamping. May fasten clamped parts together by driving nails or screws, using hand tools.

8541-202 DOWELLING-MACHINE TENDER(woodworking) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that glues and drives dowel pins into holes in parts of wooden articles preparatory to assembly:
Positions stops on machine to align dowels with pre-drilled holes in wooden parts. Dumps dowel pins into hopper and pours glue into reservoir of dowelling machine. Starts machine by pressing button. Positions wooden parts against stops and depresses pedal to apply glue and drive dowels into holes. Releases pedal and removes dowelled part from machine. Cleans and lubricates machine, using compressed- air blower, brush, cloth, grease gun and oil can.
May mix glue.

8541-206 LAG-BOLT-MACHINE TENDER(furn.) DPT:685
GED: 2 SVP: 2 EC: 1 5 7 PA: L 4 7

Tends machine that screws lag bolt into pre-drilled hole in table lag:
Inserts lag bolt in chuck of machine. Adjusts machine to automatically release lag bolt when required depth of penetration in table leg is reached. Starts machine and pushes table leg against rotating lag bolt. Measures depth of penetration of lag bolt, using gauge, to verify machine adjustment and conformance to specifications.
May tend bench-mounted electric drill that turns lag bolts into pre-drilled holes in table legs.

8541-210 ASSEMBLER, WOODENWARE(furn.; woodworking) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 3 4 7

Assembles articles; such as, coat hangers, towel racks, ladders, stools, benches, desks, and solid or folding chairs, from prefabricated wooden parts, by performing any combination of the following duties:
Places prefabricated wooden parts in holding jig or on table of press-fitting machine. Applies glue to parts, using brush or by holding parts against revolving glue wheel. Fits parts together by hand and secures them with clamps, staples, nails, bolts or screws, as specified, using hand tools, or depresses pedal of machine to press-fit glued parts together. Inserts reinforcing rods through pre-drilled holes and secures rods with nuts, using wrench.

8541-214 SANDER, HAND(furn.) DPT:687
GED: 2 SVP: 2 EC: 1 7 PA: L 4

Smooths surfaces of wooden articles, using sandpaper or steel wool:
Smooths surfaces of wooden articles, such as furniture parts, mirror and picture frames, chairs and other small pieces of furniture by hand, preparatory to finishing or between finish coats, using sandpaper or steel wool.
May work on a particular phase of the sanding process and be designated accordingly.

Finish Sander

8541-218 DOOR LAY-UP MAN(woodworking) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 4

Assembles hollow-core or solid-core doors from preassembled cores and cut-to-size parts, working as member of team:
Inserts hollow or solid door cores between glue rollers that coat both sides with glue. Alternately stacks glued cores on press dolly between pairs of face sheets (veneer panels) to complete doors. Positions lock blocks, cross sticks and spacers within frame of hollow cores. Pushes dolly loaded with doors into press.

8546-INSPECTING AND GRADING OCCUPATIONS: FABRICATING, ASSEMBLING AND REPAIRING, WOOD PRODUCTS

This unit group includes occupations in inspecting and grading work, as described under the term titles, 02-170 INSPECTOR (any ind.) and 02-150 GRADER (any ind.), concerned with quality control activities in the fabrication, assembly and repair of wood products.

8546-110 GRADER, SMOKING PIPE(misc. prod. fab., n.e.c.) DPT:287
GED: 3 SVP: 7 EC: 1 PA: S 4 7

Inspects and evaluates finished smoking pipes to establish selling price:
Handles pipe and evaluates factors; such as, weight in relation to size, hardness, straightness and closeness of grain, balance, proportion and symmetry of pipe and bit, carving and burling of bowl for pleasing effect, and uniformity and depth of colour. Assigns grade to pipe. Stamps pipes according to grade and style, using dies and hand-operated press. Places pipes in storage trays according to style, size and grade. Marks and returns rejected pipes for reprocessing.
May grade rough-machined briar bowls to determine quality of briar and be designated accordingly,
Briar Grader

8546-114 STAVE INSPECTOR(woodworking) DPT:687
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Inspects barrel staves after they have been jointed:
Examines bilge (curvature) of jointed staves and rejects those not conforming to specifications. Examines and rejects staves containing defects, such as knots, worm holes, and checks. Arranges and fits number of staves between stops of matching rack, the distance between stops being equal to the circumference of barrel. Ties staves in bundles.

8546-118 PANEL MATCHER(furn.) DPT:687
lay-up man.
GED: 2 SVP: 4 EC: 1 PA: M 4 7

Selects boards and assembles panels of specified grain, colour, and width for use in furniture manufacturing:
Examines boards and selects sides with matching grain and colour for panel surface. Assembles matched boards on table or conveyor, in sequence, and marks them for reassembly in gluing machine, using pencil or crayon.

8546-122 BOX INSPECTOR(woodworking) DPT:667
GED: 2 SVP: 3 EC: 1 6 PA: L 4 7

Inspects wooden bores, crates or wirebound box blanks to ensure quality and adherence to specifications:
Inspects partially or completely assembled products for defects; such as, cracks, nicks, holes, diagonally driven and protruding nails, and misplaced, missing or broken wiring. Places seriously defective product on conveyor for repair by other workers. Notifies workers of defective processing or assembly.
May make minor repairs to product on production line, such as removing or driving nails, bending back protruding wires, or hand sanding rough spots and edges.

**8546-199 OTHER INSPECTING AND GRADING
OCCUPATIONS, WOOD PRODUCTS**

This group includes wood products inspectors and graders, not elsewhere classified; for example, those who feel and examine products to detect defects, verify size and alignment of sash and doors, open and close doors and drawers on assembled furniture to verify smoothness of action, and verify laminated beams for conformance to specifications. Typical examples of occupational titles covered by this residual group definition are:
Inspector, Assembled Furniture(furn.)
Inspector, Furniture Parts(furn.)
Inspector, Laminated Beams(woodworking)
Inspector, Sash and Door(woodworking)

**8548-OCCUPATIONS IN LABOURING AND OTHER
ELEMENTAL WORK: FABRICATING, ASSEMBLING
AND REPAIRING, WOOD PRODUCTS**

This unit group includes occupations in labouring and other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), which are concerned with fabricating, assembling and repairing wood products.

8548-110 COOPERAGE LABOURER(woodworking) DPT:687
GED: 1 SVP: 2 EC: 1 PA: M 4 7

Applies compressed air to barrels containing water to ensure that they are liquid tight:
Pours hot water into barrel, using dipper. Rolls and tumbles barrel to spread water over interior, and inserts air hose and attached bung check valve into bung hole. Admits compressed air into barrel at specified pressure by turning hand valve while observing air pressure gauge. Examines barrel for leakage as revealed by moisture, or air bubbles on surface, and for defects, such as knots or worm holes. Marks position of leaks or defects, using chalk, and sets defective barrels aside for repair by other workers. Rolls barrel over to permit water to drain out and taps bung or plug into bung hole to exclude foreign matter, using hammer. Stencils prescribed information on barrel head, using stencil and paint brush. Lifts and piles barrels on cart or wheelbarrow and removes to designated area for storage

8548-114 LABOURER, BOX FACTORY(woodworking) DPT:687
GED: 1 SVP: 2 EC: 1 PA: M 4 7

Assembles wooden boxes and crates by performing any of the following simple duties:
Taps wooden partitions into grooves of other partitions to subdivide wooden boxes into sections, using hammer. Nails metal reinforcing strips around boxes or in recesses in top, bottom and sides of boxes. Bends projecting binding wire over wood to make wire-bound box blanks easier to handle, using pliers.
May be primarily concerned with a particular activity and be designated accordingly; for example,
Band Nailer
Partition Assembler
Strap Nailer
Wire Bender

8548-118 WIPER(furn.) DPT:687
rubber, wood.
GED: 1 SVP: 2 EC: 1 4 7 PA: L 3 4 7

Rubs and wipes wood filler into furniture and furniture parts:
Spreads filler evenly over the surface of furniture or furniture parts, using cloth, waste or brush. Removes surplus filler, using cloth or waste.
May place rubbed unit on conveyor for drying oven.

8548-122 ANTICHECKING-IRON MAN(woodworking) DPT:887

GED: 1 SVP: 2 EC: 0 PA: H 3 4

Hammers shaped steel bands into ends of timbers and railroad ties to prevent checking (splitting) while seasoning:
Pulls designated ties or timbers from pile, by hand, and hammers steel bands into ends of ties, using sledgehammer. Piles banded ties or timbers for further seasoning.
May clamp, drill hole, and insert bolt or metal dowel through split timbers or ties to hold split parts together. May insert S-shaped band and be designated accordingly,
S-Iron Man

8548-126 CLAMP REMOVER(furn.) DPT:887
GED: 1 SVP: 2 EC: 1 PA: M 3 4

Detaches clamping devices from stack of veneered products, such as tabletops and veneered doors after removal from cold press, working as member of a team:
Loosens turnbuckles, using handle or metal rod, and removes retaining rod attached to rails at top and bottom of stack. Removes top rail from stack and removes and stacks veneer panels and caul boards on separate handtrucks. Pushes truck loaded with veneer panels to drying oven or storage area for drying. Separates layers of veneer with spacer sticks. Scrapes glue from caul boards, and cleans work area, using broom, water hose and scraper.

8548-130 HOGSHEAD ASSEMBLER(woodworking) DPT:887
GED: 1 SVP: 2 EC: 1 PA: H 3 4

Assembles collapsible hogsheads from prefabricated mats (staves wired together), hoops and headings, performing any combination of following duties:
Stands mat on end or positions mat around circular form to make shell. Fastens shell by inserting tie wire between loops of mats and twisting ends together, using hand tool, or by aligning hinges attached to hoops and inserting metal pin through hinge. Positions header in hogshead shell. Encircles bottom of hogshead with metal band and inserts ends of band in strapping tool. Pumps handle of tool to tighten bands around shell, or places hoops around hogshead, using hammer. Breaks or cuts surplus ends of bands, using hatchet, and drives nails through holes in band to secure bands to staves.
May fasten precut lengths of wire (hoops) around hogshead to secure staves, and be designated accordingly,
Hogshead Hooper

8548-134 BAND NAILER(sawmill) DPT:887
GED: 1 SVP: 1 EC: 1 PA: L 4

Makes shingle bands used for binding bundles of packed shingles:
Nails or staples wooden sticks and metal strips together to form shingle bands, using hammer or staple gun.
May stencil identifying information on bound bundles. May pile bundles on conveyor, platform, or in truck.

8548-138 BARREL-STAVE LEVELER(woodworking) DPT:887
leveler man.
GED: 1 SVP: 1 EC: 1 PA: H 4

Evens ends of staves of partly assembled barrels or kegs:
Lifts partly assembled barrel or keg and drops it end down on floor to even ends of staves. Hammers temporary hoops around barrel or keg to facilitate complete assembly of container.

**8548-199 MISCELLANEOUS OCCUPATIONS IN
LABOURING AND OTHER ELEMENTAL
WORK, WOOD PRODUCTS**

This group includes wood products labourers and other elemental workers, not elsewhere classified; for example, those who fill defects in the surfaces of smoking pipes, or split hickory logs into billets used to manufacture lacrosse sticks. Typical examples of occupational titles covered by this residual group definition are:
Hickory Splitter(sport. & toy)
Smoking-Pipe Patcher(misc. prod. fab., n.e.c.)

8549-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating, assembling and repairing wooden products; such as, barrels, tanks, buckets, caskets, boxes, stringed and fretted musical instruments, household and sporting goods, fabrication and assembly jigs, shoe lasts, and wooden reels for cable and wire. Activities include wood carving, shaping, bending, nailing, fastening and glueing, using a variety of common and special woodworking machines, equipment and hand tools.

**Barrelmaking and Cooperage Occupations
8549-110 through 8549-154**

8549-110 COOPER(woodworking) DPT:661
GED: 3 SVP: 6 EC: 1 PA: M 3 4 7

Repairs wooden barrels by performing any combination of the following duties:

Loops cable around top of barrel and turns handle to compress staves and loosen hoops. Removes defective stave and inserts and aligns new stave, using mallet. Shapes top edge of staves to conform to others, using saw to trim, and spokeshave to bevel inside edge. Cuts croze, using hand crozer. Replaces and tightens hoops. Removes head hoop and pries head out, using cooper's hammer and pry bar. Inserts edge of new head in croze of staves and forces it into place, using heel of hand or mallet. Replaces head hoop. Plugs knotholes and worm holes with wooden plugs. Loosens hoops and forces caulking between staves to repair leaking joints. Directs other workers engaged in barrel building, and repair.

May rebuild entire barrel. May build new barrels, buckets, casks, kegs and tubs, using hand tools. May repair circular wooden tanks by shaping, jointing and fitting boards, using hand and power tools.

8549-114 SAWYER AND ASSEMBLER, TANK BOTTOM (woodworking) DPT:362
GED: 3 SVP: 5 EC: 1 5 PA: M 3 4 5 7

Saws lumber to specified dimensions for bottom and sides of wooden tank and assembles and cuts out tank bottom, using hand and power tools:

Measures, marks and saws lumber to specified length for staves and tank bottoms, using carpenter's tools and power saw. Drills matching holes in edges of bottom boards according to specified measurements, inserts dowels into appropriate holes, and knocks boards together to form tank bottom assembly. Directs other workers to position bottom assembly on worktable and operates power saw to cut out circular tank bottom, following scribed line, or adjusts radius of traveling radial-arm saw to cut out a circle of prescribed dimensions. May operate band saw and revolving turntable that turns bottom assembly against band saw to cut out tank bottom.

8549-118 BARREL ASSEMBLER, MACHINE(woodworking) DPT:682
GED: 3 SVP: 4 EC: 1 3 6 PA: H 4 7

Operates equipment to assemble barrels from components, performing any combination of following duties:

Stems barrel shells (barrels without ends) to make staves pliable, and heats shell over gas burner or in oven to drive off steam. Aligns staves, using vibrating platform and cooper's hammer. Positions shell in hoop driver that forces truss rings (temporary hoops) onto shell to secure staves for cutting. Secures shell in machine and starts shell rotating against cutting heads that cut croze (groove in barrel stave), and trim staves to specified length. Positions shell in truss-pulling machine, and moves lever to remove temporary hoops for installation of barrel end. Positions barrel end in croze of shell and moves lever to start machine that forces end into croze. Installs permanent hoops, using hoop driver. Sands barrel, using belt sander. Drills bunghole in barrel side, using drill press. Inspects barrels for defects.

May be designated according to machine operated or duty performed; for example,
Croze Cutter
Heater Man
Hoop-Driving-Machine Operator

Leveler
Truss Puller

8549-122 TANK ASSEMBLER(woodworking) DPT:684
GED: 3 SVP: 4 EC: 1 PA: H 4 7

Assembles boards, staves and rods to form tanks:

Arranges boards in shape of tank bottom, and staves to form sides, and marks identification on each piece to facilitate assembling on site. Fits croze (groove) of staves onto bottom pieces and drives in place, using hammer, repeating operation until tank is assembled. Inspects tank for workmanship, and smooths uneven joints, using drawknife. Disassembles pieces for shipment.

May mark location and drill dowel holes in boards or staves. May place and tighten washers, rods and nuts on rectangular tanks, or place metal hoops around staves to withstand pressure. May be designated according to shape or section of tank assembled; for example,

Circular-Tank Cooper
Rectangular-Tank Cooper
Tank-Stave Assembler

8549-126 BUCKET CHUCKER(woodworking) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Operates machine that smooths inside surface of bucket:

Places bucket in chuck of machine. Forces bottom of bucket into chuck, using iron bar. Starts machine by pressing button. Depresses pedal to start chuck and bucket rotating. Feeds cutting and smoothing tool into inner surface of bucket to smooth it. Cuts croze near bottom of bucket and trims top and bottom edges, by rotating lever on machine. Stops machine and rubs edge and inside of bucket with sandpaper. Examines bucket for smoothness and removes bucket to designated area for further processing.

8549-130 BUCKET-LATHE OPERATOR(woodworking) DPT:684
bucket turner.
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Operates machine that smooths and finishes outer surfaces of bottom-less wooden buckets:

Clamps bucket between chucks of machine to rotate bucket. Shifts lever on tool carriage to feed finishing tool that smooths and finishes outer surface of bucket. Stops feed of tool by moving lever and holds sanding block against surface of rotating bucket to smooth it. Stops machine and examines bucket for defects. Places temporary hoop on bucket and removes it from machine.

May remove assembling ring from bucket, using hammer, before starting bucket-turning machine.

8549-134 BARREL CHARRER(woodworking) DPT:684
GED: 2 SVP: 3 EC: 1 3 7 PA: M 4

Chars interior of barrel shells to prepare them for aging whiskey:

Places barrel shell over lighted gas burner and allows burning to continue for specified period according to depth of char desired. Quenches burning interior, using wet mop, rag, or spray from hose. Chars one side of whiskey barrel headings over fire pot.

May fit charring rings in each end of barrel to protect surface in which croze is to be cut. May cover top end of shell with metal plate to control rate of burning.

8549-138 HOGSHEAD REPAIRMAN(woodworking) DPT:684
GED: 2 SVP: 3 EC: 1 PA: H 3 4

Repairs collapsible hogsheads for reuse as tobacco containers:

Examines hogsheads to determine extent of damage. Removes damaged parts, such as staves or hoops, using hammer or crowbar. Positions and nails precut staves into hogsheads. Encircles hogshead with precut wire hoop and staples hoop to staves. Positions and fastens metal band at top edge of container, using strapping tool or hammer and nails.

May tend band saw to cut headings (covers).

8549-142 HEADING MATCHER AND ASSEMBLER(woodworking) DPT:687
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Assembles wooden heading boards to form blank from which barrel head is sawn:
Selects heading boards of correct length and width and arranges them to produce tight fit when assembled. Hammers wooden or metal dowels into one edge of each board and assembles head blank by fitting dowels into dowel holes and knocking boards together, using hammer. Piles assembled heading blanks in designated area for further processing.
May lay strips of flagging along dowelled edges before assembly. May trim and smooth edges of heading boards, using circular saw and jointer. May apply glue to edges of heading boards for assembly by other workers.

8549-146 LEAK HUNTER(woodworking) DPT:584
leak repairman.
GED: 2 SVP: 2 EC: 1 PA: M 2 3 4 7

Detects and repairs leaks in barrels filled with whiskey or wine:
Walks between rows of stacked barrels to examine barrels for leaks, using miner's lamp or flashlight. Repairs leaks by caulking hole with twisted cotton or flax, driving wooden plug into hole, or by applying strip of adhesive canvas over hole. Records serial number of barrel repaired, and date of repair.
May move barrels by pushing barrel manually onto automatic lifter. May work from ladder or scaffolding or climb on stack of barrels to examine or repair them. May look for and repair leaks in wooden tanks containing wine.

8549-150 BARREL RAISER(woodworking) DPT:684
trusser man.
GED: 2 SVP: 2 EC: 1 PA: H 3 4

Assembles wooden barrel shells (barrels without ends) in raising stand (jig):
Places staves inside truss hoop and forming rings to form barrel shell. Loops cable of windlass around top of barrel and moves leg control to draw staves together. Slips truss ring on top of barrel shell and presses pedal to release cable. Removes shell from jig.
May insert truss and forming rings in jig. May place barrels on heat tunnel conveyor.

8549-154 HEADER, BARREL(woodworking) DPT:684
headerman; head setter.
GED: 2 SVP: 2 EC: 1 PA: M 4

Installs head (bottom) in croze (groove) of slack or tight barrels:
Loosens temporary head hoop on barrel or hoghead by striking hoop with hammer. Picks up head with spiked tool, or by hand, and fits head into croze of barrel. Draws staves around head, using windlass machine, adjustable circular clamp or other equipment. Replaces temporary head hoop with regular head hoop. Taps hoop lightly with hammer to tighten it around barrel and sets barrel aside.
May install bottom in croze of bucket and be designated accordingly.
Bucket-Bottom Setter

Boxmaking Occupations
8549-174 through 8549-202

8549-174 CASKET ASSEMBLER(woodworking) DPT:381
GED: 3 SVP: 6 EC: 1 PA: M 4 7

Assembles wooden caskets from preformed panels and mouldings and attaches supplemental hardware:
Fits and assembles sides, ends, bottom and preformed sections of top frame together to form casket body, using hammer, glue, clamping nails, bar clamp, or staples and pneumatic stapling machine. Glues and nails or staples panel board and brace block between sides for reinforcements. Locates and marks mid-point of top frame, using ruler and pencil. Positions template over top edge of casket body or measures with ruler to locate position for hinges and catches. Installs hinges and catches, using screwdriver. Attaches top panel to frame, using screwdriver. Measures, cuts and attaches ornamental moulding or beading to casket, using saw, hammer, stapler, mitre box and ruler.

Sets nail heads, using hammer and nail-set. Fills cracks and holes with wood-filler by hand, or using putty knife. Sands and planes joints and edges, using planer, portable sander or sandpaper to tight fit and smoothness.

May assemble particular part of casket and be designated accordingly; for example,
Moulding Fitter
Panel Fitter
Top-Frame Assembler
Top-Frame Fitter

8549-178 BOX-BLANK-MACHINE OPERATOR(woodworking) DPT:662
GED: 3 SVP: 4 EC: 1 5 PA: L 4

Operates machine to assemble box sections by stapling cleats and wiring boards together:
Adds or removes links from chain-feed belt, and spaces stops and stapling heads, according to dimensions of box, using wrench. Mounts spools of wire on machine or vertical machine spindles and threads ends through stapling heads. Makes sample run to verify machine performance and conformance to specifications. Starts machine, and directs workers engaged in feeding cleats and boards to machine and removing finished product.
May thread binding wire through guides so that staples fasten binding wire to box, and be designated accordingly; for example,
Wire-Bound-Box-Machine Operator

8549-182 BOX MAKER(woodworking) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: M 3 4

Cuts lumber and assembles cut lumber to make boxes and crates, using hand and power tools:
Measures, marks and saws lumber to specified size, using ruler, pencil and power saws. Assembles box or crate, using hammer and nails, power staples or nailing machine.
May repair damaged containers by replacing wooden parts, using hand and power tools. May salvage used crating by removing nails from boards, using hammer, nail puller or crowbar and by sawing ends, using portable power saw.

8549-186 STAPLING-MACHINE TENDER, BOX END
(woodworking) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends stapling machine that staples batten down center of wirebound box ends to stiffen and strengthen them:
Starts machine and aligns batten in groove of stapler and positions end board on batten. Moves lever or pedal to move batten and box end under stapler and to staple batten to box end.
May slide batten and box end onto feed belt of machine by hand. May adjust pressure of stapling machine by turning set screw.

8549-190 BOX ASSEMBLER(woodworking) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 3 4

Assembles wooden boxes, packing and carrying cases, or pallets from prepared sections by performing any combination of the following duties:
Positions workpiece on table, floor, or in nailing jig, and fastens materials together at designated points, using hammer or staple gun. Turns unit over to position and fasten top, bottom, or side panels. Clinches exposed nail heads. Nails battens to box panels or attaches metal cleats or strapping to boxes for reinforcement. Trims and smooths edges of finished box, using hand tools. Assembles lids or trays for boxes. Fits and nails or rivets hardware, such as metal hinges, lock plates and latches to tops and backs of wooden boxes. Stacks boxes in designated area for further processing.

8549-194 LOOPING-MACHINE TENDER(woodworking) DPT:685
wire-turning-machine tender.
GED: 2 SVP: 2 EC: 1 5 6 PA: L 4 7

Tends machine that cuts binding wires between successive wirebound box blanks, forms loops in wire ends, and drives wire tips into wood:
Starts machine by pressing button. Observes box blanks on conveyor to detect uncut wire and to ensure that wire ends have been formed

into loops and wire tips have been driven into wood. Removes boxes from machine.
May repair broken wires, using pliers.

8549-198 BOX-BLANK-MACHINE FEEDER(woodworking) DPT:686

stitcher feeder.

GED: 2 SVP: 2 EC: 1 5 PA: L 3 4

Feeds machine that assembles box sections by stapling cleats to boards or slats and wiring boards together:

Lays cleats against stops of feed belt and places boards or slats over cleats, or loads hoppers of automatic machine with boards and cleats. Assists machine operator to add or remove links from chain feed belt and spaces stops and stapling heads, using hand tools.

May be concerned with a particular activity and be designated accordingly; for example,

Board Layer

Cleat Layer

8549-202 BOX-BLANK FORMER(woodworking) DPT:687
end nailer.

GED: 2 SVP: 2 EC: 1 5 PA: L 4

Fastens ends to wirebound box blanks to form boxes:

Bends wirebound box blank so that sides, top, and bottom are perpendicular. Inserts and fastens sides to cleats by nailing or stapling or by looping wire around cleats. Fastens top to sides by looping wires together.

Stringed and Fretted Musical Instrument Fabricating and Repairing Occupations 8549-222 through 8549-226

8549-222 STRINGED-INSTRUMENT MAKER(misc. prod. fab., n.e.c.) DPT:281

GED: 4 SVP: 8 EC: 1 PA: L 4 6 7

Constructs fretted or bowed musical instruments, such as guitars and violins, applying knowledge of wood properties, instrument design and construction, using hand and power tools:

Selects materials and lays out parts to be cut, using templates. Operates woodworking machines, such as bandsaw, router, fly cutter and drill press to cut, shape, trim and drill wooden parts. Soaks and bends wooden strips over forms to shape instrument rims. Glues wooden parts together to form complete instrument, using jigs, forms and clamps. Cuts and fits frets, using hand tools, and installs parts, such as tuning keys or pegs and trim. Applies varnish or lacquer, using spray gun or brush, and buffs instrument to obtain pleasing finish. Strings instrument and plucks or bows strings to test tonal quality and makes changes to improve tone, if necessary.

May repair, rebuild or restore instruments and bows. May make a particular instrument and be designated accordingly; for example,

Balalaika Maker

Guitar Maker

Mandolin Maker

Violin Maker

8549-226 STRINGED-INSTRUMENT REPAIRMAN(misc. prod. fab., n.e.c.) DPT:281

GED: 4 SVP: 7 EC: 1 PA: L 4 6 7

Repairs, rebuilds or restores fretted or bowed musical instruments, such as guitars and violins, using hand tools:

Inspects and plays instrument to determine defects. Disassembles instrument, using hand tools. Removes cracked or broken sections, using knife. Glues cracked part, places in plaster cast, and clamps cast in hand press. Cuts out broken sections, carves replacement parts and fits replacements to original shape and dimensions of instrument. Reassembles body of instrument, using glue and clamps. Planes fingerboard of bowed instruments and fits tailpiece and pegs. Replaces and fits frets and other parts, using hand tools. Touches up or refinishes wooden parts with paint or lacquer, using spraygun, brush, cloth and buffing wheel. Fits bridge and soundpost of bowed instruments to obtain specified string tension and height. Tunes and plays instrument to assess tonal quality and makes adjustments as necessary. Repairs bows. Replaces skin or plastic heads of banjos.

May repair a particular instrument and be designated accordingly; for example,
Bass-Viol Repairman
Guitar Repairman

Wood Carving, Shaping and Bending Occupations 8549-246 through 8549-250

8549-246 WOOD CARVER(furn.; woodworking) DPT:281
GED: 4 SVP: 8 EC: 1 PA: L 4 7

Carves ornamental designs into wooden furniture and other wood products, using hand tools and woodworking machines:

Studies design supplied by customer, architect or design department, or sketches own design, using drawing instruments. Makes full-size pattern and traces design on wood, using carbon paper, stylus and pencil. Secures workpiece in vise. Selects appropriate tool and roughs out design freehand or by cutting along traced lines, using chisel, gouges, mallet, jigsaw and router. Finishes roughed-out design, using chisels, gouges, rasps, and files. Verifies dimensions of carving with measuring instruments.

May stipple design by tapping stippling tool with mallet. May finish carvings roughed out on woodworking machines.

8549-250 SHAPER, HAND(furn.; woodworking) DPT:684
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Dresses and smooths curved wooden furniture parts to specified contours and finish:

Clamps roughly sawed or shaped part in vise and shapes it to specified contours and finish, using spokeshave, plane, chisels, rasps and power sander.

May shape and smooth wood to make finished wooden articles, such as salad forks, spoons, bowls, and coat hangers.

Nailing, Fastening and Gluing Occupations 8549-270 through 8549-282

8549-270 NAILING-MACHINE OPERATOR(furn.; woodworking) DPT:582
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Operates machine that drives nails into boards to fasten assemblies, such as furniture frames, crates, boxes and pallets, or to fasten moulding, scroll-work or overlay panels to wooden stock:

Spaces nail chucks and rails according to specifications and turns setscrews to fasten chucks to rails. Turns handwheel to raise or lower table according to size of pieces to be nailed. Fills hopper with nails and starts machine. Positions boards on table or in nailing jig under chucks and depresses foot pedal to drive nails into boards. Fastens stops and jigs to machine table to facilitate assembly. Piles assemblies in designated area. Maintains production records. Lubricates and cleans machine, using oil can, grease gun and cloths.

May operate nailing machine that cuts own nails from reel of nail wire and be designated accordingly,

Nailing-Machine Operator, Automatic

8549-274 SQUEEZER TENDER(woodworking) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends machine that squeezes tongue and groove boards together to form box panels:

Adjusts machine for length, width and thickness of finished panel. Starts machine and positions matched boards on feed table from which they are automatically fed into machine that squeezes them together.

May examine and measure tongue and groove to ensure conformance to specifications.

8549-278 CORRUGATED-FASTENER DRIVER(furn.; woodworking) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends machine that drives corrugated fasteners across joints to fasten boards together:

Loads hopper with corrugated steel fasteners or lifts spool of

corrugated metal stripping onto machine spindle and threads end between clamps of automatic feeding mechanism. Starts machine and positions boards on table to bring joint under driver head. Depresses pedal to lower ram that forces fastener into boards. May reinforce and repair boards by driving corrugated fastener across split or crack.

8549-282 GLUER, ASSEMBLY-LINE(woodworking) DPT:687
GED: 2 SVP: 2 EC: I 5 PA: M 4 7

Applies glue to surfaces of wooden pieces and clamps them together to form larger pieces, sub-assemblies or complete units; such as, panels, chair seats, tub bottoms, table tops, and tennis racquets: Spreads glue on surfaces to be joined, using brush or roller or by drawing wood across roller partially submerged in glue. Assembles and aligns pieces by hand and clamps assemblies together until glue dries, using vise or various types of clamps. Reinforces joints with nails, screws, or brads, using hand tools. Glues and nails reinforcing blocks to inside joints of furniture. May place glued pieces in clamps on endless chain carrier for drying and be designated accordingly, Clamp-Carrier Man

Other Fabricating, Assembling and Repairing Occupations, Miscellaneous Wood Products 8549-302 through 8549-399

8549-302 JIG BUILDER(furn.; woodworking) DPT:381
GED: 4 SVP: 6 EC: I 5 PA: L 3 4 7

Builds jigs used as guides for assembling wooden products such as oversized or special types of box shooks, or furniture parts: Measures and marks lines on parts to be made into jigs, or on worktable to indicate position of stops, according to blueprint, sketch or verbal instructions, using tape measure and chalk. Cuts out jig parts, using power or hand tools. Fastens together jig parts, using hand tools, glue, bolts and screws, or nails stops to work table according to specified markings. May assemble first product of series to verify that jig meets specifications.

8549-306 GOLF-CLUB-HEAD FINISHER, WOOD(sport. & toy) DPT:481
GED: 3 SVP: 5 EC: I 5 PA: L 4 7

Finishes wood golf-club heads as member of an assembly line by performing any combination of the following duties: Installs wood head in fixture of saw and cuts hosel to specified length. Shapes wood and drills shaft to specified length, using belt sander and drilling machine. Cuts slot for face plate, using routing machine. Brushes glue in slot, inserts face plate and places unit in drier for specified time. Shapes face of wood head to specified contours and removes ridges, using belt sander. Cuts recess for sole plate, using routing machine. Weighs head and sole plate and determines amount of lead to be added to assembled unit to conform to standard. Drills hole in sole, brushes in glue and screws in lead weight. Removes excess metal by cutting and sanding and uses cutter to taper hosel. Sands contours and surfaces of head. Dips head of club in stain, and wipes off excess stain. Drills hole in hosel and inserts screw to hold shaft in place. Applies finishing coat by using water, steel wool, priming and sealing solution, lacquer and paint. Places finished product on drying rack. May finish face of club and be designated accordingly, Golf-Club Facer

8549-310 FLASK MAKER, FOUNDRY(iron & steel; non-ferrous metal) DPT:684
GED: 3 SVP: 4 EC: I 6 PA: M 4 7

Constructs and repairs wooden flasks or boxes used in foundries to make sand moulds: Constructs new flasks by laying out measurements on boards from drawings, or according to dimensions of mould box matchplates. Cuts boards to size with powersaw and prepares them for assembling, using hand and power tools, and woodworking machines. Assembles wooden sections of flask, using glue and screws. Installs fittings, such as steel facing strips, hinges, turnbuckles and guides, using screws,

bolts and hand tools. Repairs flasks by replacing worn and damaged parts.

8549-314 LAST REMODELER(woodworking) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4 7

Remodels and repairs outmoded, worn or damaged shoe lasts, by performing any combination of the following duties: Builds up toe area of last by sawing kerfs into specified areas and hammering wedges of last material into kerfs, using hand tools. Saws, files and sands toe of last to specified shape, using hand and power tools. Verifies shape of last, using templates and sole patterns. Replaces worn or damaged hardware and trim on last, using hand tools and powered bench tools. Sands, varnishes and polishes last, using power sander, spray gun or dip tank and power buffer. Paints or stamps identification data or remodeled last. May remodel and repair plastic shoe lasts.

8549-318 LACROSSE-STICK MAKER(sport. & toy) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Fabricates lacrosse-stick frames from wood, using hand tools and powered machines, performing any combination of the following duties:

Cuts rough billets to size, using band saw. Trims billet to desired shape, using two-handed draw knife. Steams frame in oven for specified time to facilitate bending. Places frame in form and bends frame to required shape by hand. Drills holes in frame for lacing, using horizontal drill. Clamps frame in vise and carves frame to final shape with draw knife. Finishes surface, using belt sander, and applies varnish or lacquer to finished frame. Cuts laces and gut to required length, using knife. Bundles together required number of frames, laces and gut for lacing. Examines frames at various stages of production for defects, such as knots, cracks, warps or weak spots, and discards defective frames. Packs finished lacrosse sticks in cartons for shipping. May specialize in one of the above duties and be designated accordingly; for example, Band Saw Operator, Lacrosse Sticks Belt Sander, Lacrosse Sticks Bender, Lacrosse Sticks Gouger, Lacrosse Sticks Horizontal Drill Operator, Lacrosse Sticks

8549-322 LAST REPAIRMAN(woodworking) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4

Repairs wooden shoe lasts by performing any combination of the following duties: Sorts out splintered shoe lasts. Drills holes in splintered areas of last, using electric drill. Brushes glue on wood or fibre pegs and hammers pegs into holes in last. Cuts pegs off at surface of last, using hand or powered saw. Files repaired areas of last to smooth surface. Removes and replaces worn cords or springs that join block and last, using hand tools. Builds up last by gluing patches of leather to designated points. Nails heel plates to last to clinch over tacks driven through upper and insole. Fills tack holes and grooves around bottom of last with plastic wood or putty, using putty knife.

8549-326 WOODEN-REEL ASSEMBLER(woodworking) DPT:684
GED: 2 SVP: 2 EC: I 7 PA: H 3 4

Fabricates, assembles and repairs wooden reels for winding cables or strands:

Cuts lumber according to templates, using portable saw, or measures pre-cut parts selected from storage racks to ensure conformance to specifications, using measuring tape and rule. Bolts, screws or nails pieces together to assemble reel and reel heads. Installs steel or steel and plastic axle core in reel, using hand and power tools. Paints reels with spray gun or paint roller and stencils specifications on sides of reel. Repairs reels or dismantles reels for scrap or salvage. May roll finished reels to storage area or onto floor scales to weigh them. May operate pneumatic press to force core staves into routed slots in reel ends before bolting pieces together. May grease reels to waterproof them.

8549-399 OTHER FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, WOOD PRODUCTS

This group includes wood products fabricating, assembling and repairing workers, not elsewhere classified; for example, those who bend wood into prescribed shapes by steaming and forming, assemble

wooden buckets from staves, and repair wooden boxes rejected during production. Typical examples of occupational titles covered by this residual group definition are:

Box-Blank Repairman(woodworking)
Bucket-Stave Assembler(woodworking)
Setter-Up, Bucket(woodworking)
Wood Bender(furn.; sport. & toy; woodworking)
Wooden-Hoop Maker(woodworking)

855/856-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS

This minor group includes occupations concerned with fabricating, assembling and repairing textile, fur and leather products such as: garments, headwear, gloves and footwear; house furnishings, drapes and carpets; commercial and industrial products; textile surgical goods; and tentage, sacks, harness and felt goods. These occupations are classified in the following unit groups:

- 8550** Foremen: Fabricating, Assembling and Repairing Occupations, Textile, Fur and Leather Products
- 8551** Patternmaking, Marking and Cutting Occupations: Textile, Fur and Leather Products
- 8553** Tailors and Dressmakers
- 8555** Furriers
- 8557** Milliners, Hat and Cap Makers
- 8561** Shoemaking and Repairing Occupations
- 8562** Upholsterers
- 8563** Sewing Machine Operators, Textile and Similar Materials
- 8566** Inspecting, Grading and Sampling Occupations: Fabricating, Assembling and Repairing, Textile, Fur and Leather Products
- 8568** Occupations in Labouring and Other Elemental Work: Fabricating, Assembling and Repairing, Textile, Fur and Leather Products
- 8569** Fabricating, Assembling and Repairing Occupations: Textile, Fur and Leather Products, n.e.c.

8550-FOREMEN: FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, TEXTILE, FUR AND LEATHER PRODUCTS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating, assembling, inspecting and repairing textile, fur and leather products.

8550-110 FLOORLADY, MILLINERY(garment & fabric)

DPT:138

Supervises and co-ordinates activities of workers involved in fashioning materials into desired styles, shapes and sizes to make women's hats, (Unit Group 8557):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). Interprets design patterns and directs workers in matching, marking, cutting and assembling materials to meet production needs.

May supervise workers engaged in a particular activity and be designated accordingly; for example, Floorlady, Hat Finishers

Floorlady, Hat Makers

8550-114 FOREMAN, DRESSMAKERS(garment & fabric; ret. trade) DPT:138

Supervises and co-ordinates activities of workers engaged in making and repairing women's made-to-measure garments, such as dresses, coats and suits, and in fitting and altering ready-to-wear garments, (Unit Group 8553):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers who are concerned with a particular activity and be designated accordingly; for example,
Alterations Supervisor
Foreman, Dressmaking Shop
Foreman, Dress Repair

8550-118 FOREMAN, FURRIERS(fur goods) DPT:138

Supervises and co-ordinates activities of workers engaged in designing, making, altering, re-styling and repairing natural fur garments and accessories, (Unit Group 8555):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). Verifies that pelts conform with dressing and dyeing specifications. Sorts, matches and cuts pelts to fill special orders.

May confer with buyers concerning such matters as prices, styles and rush orders. May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Finishing
Foreman, Production
Fur Finisher, Head

8550-122 FOREMAN, HAT AND CAP MAKERS(garment & fabric) DPT:138

Supervises and co-ordinates activities of workers engaged in cutting, assembling, sewing, trimming, and blocking and finishing men's and boy's caps and hats, (Unit Group 8557):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Felt-Finishing Foreman
Foreman, Felt-Hat-Pouncing Department
Foreman, Fur-Hat-Blowing Department
Foreman, Hat Flanging
Foreman, Hat Trimming
Foreman, Straw-Hat Department
Hat-Dye-House Foreman

8550-126 FOREMAN, INSPECTING, GRADING AND SAMPLING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS(any ind.) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting, grading, sampling and other quality control work in the fabrication, assembly and repair of textile, fur or leather products, (Unit Group 8566):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Sample-Room Foreman(textile)

8550-130 FOREMAN, PATTERNMAKING, MARKING AND CUTTING OCCUPATIONS(garment & fabric) DPT:138

Supervises and co-ordinates activities of workers engaged in making patterns, laying out, marking, cutting or punching textile, fur and leather to make or prepare pieces or parts for products, such as garments, footwear, sails and upholstery, (Unit Group 8551):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Cutting-Department Foreman
Foreman, Lay-Out and Marking

8550-134 FOREMAN, SEWING-MACHINE OPERATORS(garment & fabric) DPT:138 sewing-room foreman.

Supervises and co-ordinates activities of workers engaged in machine-sewing of textiles and similar materials to produce or repair articles; such as, garments, draperies, bedding, carpets, tents and felt goods, (Unit Group 8563):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). Examines garment parts or finished articles for defects, such as double or irregular stitches, misaligned parts, variances in colours, untrimmed edges or loose thread ends, and verifies that ornaments and buttons or fasteners are attached to article. Notifies sewing-machine repairman or makes required repairs and adjustments to machines.

May supervise workers engaged in a particular type of sewing activity or in manufacturing a particular product, and be designated accordingly; for example,
Embroidery Foreman
Foreman, Finishing Department
Foreman, Glove Making
Foreman, Jackets
Foreman, Shirts
Foreman, Stitching Department

8550-138 FOREMAN, SHOE MAKING AND REPAIRING OCCUPATIONS(shoes) DPT:138

Supervises and co-ordinates activities of workers engaged in making and repairing leather, and leather-soled fabric-topped footwear, (Unit Group 8561):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,
Bottoming-Room Foreman
Cutting-Room Foreman
Foreman, Finishing
Foreman, Fitting
Foreman, Lasting
Milling-Room Foreman

8550-142 FOREMAN, TAILORS(garment & fabric; ret. trade) DPT:138

Supervises and co-ordinates activities of workers engaged in making, altering and repairing men's made-to-measure or ready-to-wear garments, and in performing the more difficult tasks in manufacturing men's ready-to-wear clothing, (Unit Group 8553):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers who are concerned with a particular tailoring activity and be designated accordingly; for example,

Foreman, Custom-Tailoring Shop
Garment-Repair Foreman
Men's Alterations Supervisor

8550-146 FOREMAN, UPHOLSTERERS(furn.) DPT:138

Supervises and co-ordinates activities of workers engaged in upholstering, rebuilding and repairing upholstered products, such as chairs, sofas, automobile and aircraft seats, cushions, mattresses and caskets, (Unit Group 8562):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example,

Foreman, Covering and Lining
Upholstery-Cutting-and-Sewing Foreman

8550-199 OTHER FOREMEN: FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS

This group includes textile, fur and leather product fabricating, assembling and repairing foreman, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in manufacturing canvas goods, assembling luggage or

handbags, or manufacturing textile bags. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Canvas Products(garment & fabric)
Foreman Framing(leather goods)
Foreman, Handbags(leather goods)
Foreman, Luggage Assembly(leather goods)
Foreman, Textile-Bag Manufacturing(garment & fabric)

8551-PATTERNMAKING, MARKING AND CUTTING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS

This unit group includes occupations concerned with making patterns and laying out, marking, cutting or punching textile, fur and leather to make or prepare pieces or parts for products; such as, garments, footwear, sails and upholstery, prior to assembling, fastening or sewing.

8551-110 LAYOUT-AND-PATTERN MAN, SAIL(garment & fabric) DPT:281
sail-layout man; sailmaker.
GED: 4 SVP: 7 EC: I PA: L 3 4 7

Calculates dimensions and allowances, and lays out pattern of sail employing knowledge of sail-patternmaking techniques: Analyzes sail requirements for particular type, size and usage of boat. Calculates sail dimensions, using sail-calculation tables. Computes dimensional allowances for hemming and stretching of sail-cloth, and for draft and roach of sail, using sail-specification computer card. Draws full-size pattern of sail on floor, employing knowledge of sail-patternmaking techniques, using chalk, chalk line and measuring tape. Spreads sail-cloth over floor pattern, marks pattern outline on cloth, and cuts into parts for subsequent assembly, using pencil and hand shears.

8551-114 DESIGN-AND-PATTERN MAN, CANVAS GOODS (garment & fabric) DPT:381
GED: 4 SVP: 6 EC: I PA: M 4

Designs and makes patterns for articles such as awnings, boat covers, car seat covers, camper trailer tops, tarpaulins and tents: Sketches design of articles for customer approval. Draws pattern according to sketches and design specifications, using pattern paper and marking pencil, and employing knowledge of patternmaking techniques. Marks cutting, assembly and sewing lines on pattern according to specifications, using instruments such as calipers, measuring tape, pencils, and straight and curved edges. Cuts out pattern using hand shears.

8551-118 PATTERNMAKER(furn.; garment & fabric) DPT:381
GED: 4 SVP: 6 EC: I PA: L 4 7

Draws sets of master patterns for articles such as garments and upholstery parts, following sketches, sample articles and design specifications:

Examines sketches or sample articles and design specifications to ascertain data such as number, shape, and size of pattern parts and quantity of cloth required to make finished article, using knowledge of manufacturing processes and characteristics of fabrics. Draws outlines of parts on paper, using drafting instruments. Draws details such as position of pleats, pockets, buttonholes and buttons, on outlined parts. Marks outlined garment or upholstery parts with lines and notches that serve as guides in joining parts. Cuts out master patterns, using scissors and knife, or perforates cutting lines to form stencil, using perforating machine. Marks size, identification and style information on patterns.

May sketch and make patterns for specific fabrication process and be designated accordingly; for example, Patternmaker, Embroidery

8551-122 PATTERNMAKER, SHOE(shoes) DPT:381
GED: 4 SVP: 6 EC: I PA: L 4 7

Makes patterns from design specifications for cutting or trimming upper shoe parts and fabricates cutting templates, using one of the following methods:

Examines shoe design specifications and sketches to determine pattern requirements for uppers. 1. Covers sized last with overlapping layers of special material or tape to make form. Draws section, cutting, stitching and ornamental lines on form according to pattern requirements. Removes form from last in two halves, using scissors. Cuts notches in form to facilitate flattening and spreads flattened form onto paper, cardboard or pressboard. 2. Pencils markings of section such as cone, back seam and shank edge onto sized last. Positions paper or special design material on last and trims along markings to make form, using scissors or knife. Spreads form on paper, cardboard or pressboard. Traces outline of form to make master pattern. Draws detail such as stitching and ornamentation according to design specifications, freehand or using drafting instruments. Cuts traced design into individual patterns of upper parts such as quarters, saddles and vamps, using scissors or knife. Makes pattern templates of upper parts from sheet metal for use on pattern grading machine, using tinsmith's hand tools.

May compile manufacturing and costing data from design specifications.

8551-126 PATTERN MODIFIER(garment & fabric) DPT:381
blue-pencil man; dooper.
GED: 4 SVP: 6 EC: I PA: L 4 7

Determines variations in style and size of standard patterns to be used in cutting out made-to-measure clothing:

Prepares work order ticket (dope slip) using notations made on ticket by retail establishment worker who recorded customer's measurements and style, and fabric preference. Selects standard patterns to be used in cutting out each article of clothing. Performs elementary arithmetic calculations to determine variations, according to customer specifications, to be made to standard pattern during subsequent pattern marking operation, and makes notations of variations on dope slip.

May mark pattern outline on fabric and be designated accordingly; for example, Doper-and-Marker

8551-130 PATTERN CUTTER(garment & fabric; knit goods) DPT:384
grader; pattern grader.
GED: 3 SVP: 5 EC: I PA: L 4 7

Draws and cuts out sets of patterns for specified ranges of garment sizes increasing or decreasing the grade (dimensions) of master patterns, using either of the following methods:

1. Positions master pattern in clamp of single or multiple grading device and places sheet(s) of paperboard under pattern. Turns knob(s) to set device at specified size(s) and moves master pattern through series of reference points on paperboard. Draws lines between reference points to produce outline of graded pattern(s). 2. Obtains data from charts that specify modifications of master pattern dimensions to produce patterns of various sizes. Positions master pattern on one or more sheets of paperboard and drafts reference points to modify dimensions of master pattern, using drafting instruments. Draws lines between reference points to produce outline of graded pattern. Marks location of notches in graded patterns to serve as guides for joining garment parts. Cuts out graded patterns, using scissors, or knife and rule. Marks garment size, section and style number on each pattern piece.

8551-134 SLIPCOVER CUTTER(garment & fabric) DPT:484
GED: 3 SVP: 4 EC: I PA: L 4 7

Lays out, cuts and fits material for slipcovers according to size and shape of furniture to match patterns and ensure economical use of material:

Reads order to determine type and amount of material required and obtains materials from stockroom. Determines from experience and knowledge of materials approximate yardage necessary to cover furniture, allowing for shrinkage and stitching. Measures, drapes and smooths material over sections of furniture to ensure most economical use and to serve as guide in matching shades, colours and designs in cloth. Determines cutting lines by pinning or marking fabric, using

shape of furniture as outline. Cuts fabric along marked lines. Pins cut pieces together and fits assembled units over furniture, making adjustments with pins to attain required fitting. Wraps fitted pieces together and writes sewing instructions on attached work ticket. Delivers bundle to shop for sewing. Records amount of time spent on each assignment.

May cut material for draperies and be designated accordingly; for example,
Drapery Cutter

8551-138 CUTTER, SHOE PARTS(shoes) DPT:484
leather cutter.
GED: 3 SVP: 4 EC: I PA: L 4 7

Cuts shoe parts from leather or other materials:
Selects material and cutting dies according to specifications on work ticket. Lays material on cutting bed of machine. Positions die on material so that maximum number of shoe parts can be obtained and that grain, finish, and pattern of parts match when assembled. Ensures that parts can be cut to minimize stretch. Pulls stamper over die and pushes handle or pedal to lower stamper onto die and cut parts. Counts parts or observes automatic counter to verify quantity against work ticket specifications. Bundles or boxes parts and marks them with data such as size, style, and cut.

May cut out shoe parts using hand knife. May be designated according to machine operated or shoe part cut; for example,
Clicking-Machine Operator
Hand Cutter
Upper Cutter

8551-142 PATTERN MARKER(any ind.) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4

Arranges patterns and marks outline on cloth, leather, plastic, paper or other materials to facilitate cutting and sewing operations:

Selects sheet or lay of material and patterns according to specifications. Compares pattern with cutting order to verify size- scale, type and amount of material, and number of parts to be cut. Positions pattern on sheet or lay according to type, print, grain or weave of material so that parts match when assembled and waste is minimized, using rules and squares. Outlines patterns on top of materials, using dust bag, crayon, soap or ball-point pen.

May stencil pattern outline on lay, using spray-marking device or perforated pattern and chalk. May notch and mark holes in lay to serve as guides for attachment of other parts, using notcher. May be designated according to part or article marked, or method used; for example,

Marker, Garment(garment & fabric; knit goods)
Marker, Made-to-Measure(garment & fabric)
Marker, Stuffed Toy(sport. & toy)
Stenciller(furn.; garment & fabric)

8551-146 CUTTER, PORTABLE MACHINE(garment & fabric) DPT:684
cloth-cutting-machine operator.
GED: 3 SVP: 4 EC: I PA: L 4 7

Cuts lay of fabric following pattern outline to form parts for articles such as awnings, cloth slippers, cushions, fitted sheets, garments, seat covers and sleeping bags, using portable electric cutter:

Inserts base of portable electric cutter under layers of fabric. Starts, and guides cutter around edges of pattern or along markings on top layer of fabric to cut out parts. Presses control on cutter to engage attached abrasive stone or belt against blade to sharpen when quality of cut indicates dull blade. Changes cutter blades, using screwdriver and wrench.

May spread fabric on table preparatory to cutting. May arrange patterns on top ply of fabric and mark outline of pattern on fabric, using chalk or crayon. May drill holes through layers of fabric parts or cut notches in edges of parts according to pattern on top ply to mark parts for assembly, using electric hand drill and electric cutter. May separate cutting waste according to colour of material. May be designated according to type of portable electric appliance used or article part cut; for example,

Circular-Knife Cutter
Garment Cutter, Machine
Straight-Knife Cutter
Tent Cutter, Machine

8551-150 FELT CUTTER, MACHINE(explosives; garment & fabric) DPT:685
GED: 3 SVP: 4 EC: I 5 PA: M 4

Tends machine to cut non-woven fabric such as felt, filter material and batting into specific shapes, by one of the following methods:

1. Positions dies into automatic die-cutting machine and aligns upper cutting die with surface of bed. Inserts shims between die and bed to set specified gap. Locks dies in place, using wrenches and other hand tools. Mounts rolls of fabric in feed holders, turns knobs to synchronize action of feed rolls with ram, and threads end of fabric through feed rolls and die bed to take-off conveyor. Presses button to start machine, cutting fabric into products; such as, filter cloth, explosive shell wadding, upholstery padding and undercarpeting. Inspects sample cuts to verify conformity to specifications. Observes operation of machine to detect malfunction. 2. Spreads fabric from roll onto cutting table. Measures fabric according to length specifications, using cutting-table graduations of tape measure. Clamps traverse rod across fabric at point where length-cut is to be made. Clamps circular cutting knives to crossbar at measured intervals to cut or trim fabric to specified widths. Presses button to start machine, pulling traverse rod with fabric attached through rotating cutting knives to cut fabric to specified widths. Depresses pedal when traverse rod reaches cutting-off knife to cut widths of fabric to specified length for products such as haircloths and hatter's fur. 3. Staples cardboard pattern on lay of fabric. Pushes lay of fabric against revolving blade of bandsaw on table, cutting around edges of pattern to make felt pads or parts, such as insoles, according to specifications. 4. Lifts and positions stack of fabric sheets onto machine apron. Turns handwheel to adjust feed rollers for accommodation of thickness and width of stacked sheets to be slit, and adjusts feed guide bar for specified strip width. Presses button to start machine. Pushes stacked sheets against guide bar and into feed rollers to cut off individual strips of desired width. Measures width of strips to verify conformance to specifications, using meter and gauges.

May be designated according to machine used or method of cutting; for example,
Band-Saw Tender, Felt Goods(garment & fabric)
Die Cutter, Felt(garment & fabric)
Felt-Slitting-Machine Tender(explosives)

8551-154 MARKER-AND-CUTTER, UPHOLSTERY(furn.) DPT:684
GED: 2 SVP: 4 EC: I PA: L 4 7

Marks and cuts cloth, leather or synthetic fabric into upholstery parts, such as arm rest, back, and cushion cover:

Spreads material in single or multiple layers on cutting table. Positions pattern or stencils pattern outline on lay or sheet of material, following finish, grain or shape of fabric so that parts match when assembled. Cuts fabric around pattern to make parts according to specifications, using shears, electric scissors or portable electric cutter.

May sew upholstery parts together to form completed covers, by hand or using sewing-machine and be designated accordingly; for example,
Marker, Cutter and Sewer, Upholstery

8551-158 SAIL CUTTER(garment & fabric) DPT:684
GED: 2 SVP: 4 EC: I PA: M 3 4 7

Marks and cuts cloth into parts for subsequent sewing into complete sail:

Lays successive widths of sail-cloth to cover floor pattern allowing margin of material to overlap for seams. Marks outline of sail on material following pattern, using pencil. Cuts material along outline to form sail parts, using hand shears. Draws lines across joins of parts as match-guides for assembly, using pencil. Marks and stacks parts in order for machine-assembly. Cuts assembled widths to shape and size of sail, using hand shears. Creases sail edges preparatory to hemming, using fingers or warm iron. Lays out, marks and cuts reinforcing patches for sails to specifications, using pencil, measuring tape and hand shears.

May open seams and cut out defective material to repair sails, using knife and hand shears. May shrink cotton sail-cloth before cutting by soaking in water or by steaming.

8551-162 CUTTER, HAND(any ind.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Cuts single or several layers of textile, leather or fur, following pattern outline, to make parts for articles; such as, tents, drapes, garments, hats and gloves:

Holds textile, leather or fur material securely with hand. Cuts around edges of pattern or along markings on single or top layer of material to make parts according to specifications, using shears, hand-knife or electric scissors. Marks or notches edges of parts, according to pattern, to indicate assembly points, using marking pencil and shears, hand-knife or electric scissors.

May cut damaged part out of article, place part on replacement material as pattern, and cut around pattern to make replacement part, using shears, hand-knife or electric scissors. May be designated according to material, article or part cut; for example, Canvas Cutter, Hand(garment & fabric)

Glove Cutter, Hand(garment & fabric; leather goods)

Leather Cutter, Hand(leather goods)

Mink-Tail Slitter(fur goods)

8551-166 RE-CUTTER(garment & fabric) DPT:684
waste salvager.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Cuts garment parts from salvaged pieces of usable material discarded after cutting operation:

Examines material for defects such as holes, miscuts, and runs. Cuts out defective areas, using hand shears. Positions pattern of garment part on salvaged material and cuts around pattern, using electric knife. Stacks garment parts according to size, style and colour.

8551-170 CUTTER, MALLET-AND-DIE(garment & fabric; leather goods; rubber) DPT:684
GED: 2 SVP: 3 EC: 1 PA: M 4 7

Cuts out parts of articles from materials, such as cloth, leather or rubber, using dies and mallet:

Spreads one or more layers of material on table. Positions specified die on material according to grain, weave or size so that maximum number of parts may be obtained or parts will match when assembled. Strikes die with mallet to force die through material and cut out part.

May be designated according to material cut or article produced; for example,

Die Cutter, Gloves(garment & fabric)

Die Cutter, Rubber(rubber)

8551-174 LAY-OUT-TABLE GIRL(garment & fabric) DPT:684
hem baster.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Measures, trims and pins hems in fabric parts to form articles, such as drapes and bedspreads:

Clamps edge of fabric part to straight edge of layout table and spreads part over table. Measures part to verify that length is according to specifications, using graduated marks of table as a criterion. Cuts part along graduated mark to remove surplus material, using shears. Unclamps fabric from straightedge, folds edges according to specifications and pins them in place to form hems. Presses hems into article, using hand iron.

May hem article, using sewing-machine equipped with hemming attachment.

8551-178 PERFORATOR, PATTERN(garment & fabric) DPT:684
pattern-perforating-machine operator; sketcher.
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Punches designs on paper to form stencils (patterns), using one of the following methods:

1. Inserts needle in holder of electric perforating tool and turns dial to regulate perforating speed. Positions paper on felt pad or cardboard sheet beneath tool. Presses button to start tool. Guides needle over paper following predrawn design to perforate paper and form stencil.
2. Inserts pins into foam rubber pad, following drawings on paper patterns. Positions paper over pins and presses it against pins to perforate paper and form stencil.

May lay out and trace patterns on paper to make stencils. May perforate paper pattern by hand, to form stencil, using pin. May apply powder or paste to perforated stencil to mark material for subsequent embroidering, and be designated accordingly; for example, Stamper and Perforator
Stenciller and Perforator

8551-182 RUG CLIPPER(garment & fabric) DPT:684
carving-machine operator.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Operates powered cutter to trim nap or cut design into articles such as rugs and mats, using one of the following methods:

1. Pushes button to light ultra-violet lamp, positioned over head of machine, that illuminates coloured stencil on back of mat or rug. Depresses pedal to lower rotary cutting head below surface of bed of machine. Positions rug or mat under pressure foot on bed of machine. Releases pedal to raise and rotate cutting head. Guides rug or mat over cutting head to cut design following stencil outline. 2. Guides cutting head of powered hand clipper over surface of woven rug or mat to cut nap to uniform length.

May sew fringe to finished mat or rug, using sewing machine. May guide power cutter over surface of bedspread to cut tufted threads and be designated accordingly; for example, Bedspread Clipper

8551-184 CUTTING-MACHINE TENDER(textile) DPT:585
rotary cutter.
GED: 2 SVP: 3 EC: 1 5 6 PA: H 3 4 7

Tends rotary-shear cutting machine that cuts and folds cloth into specified lengths for making bags:

Reads copy of invoice to ascertain size, type and number of bags to be cut. Places roll of material on brackets at rear of machine. Threads material through machine feed and tension rollers. Adjusts tension rollers to control feed of material into machine. Changes gears, using hand wrenches, or turns dial, to regulate speed of machine. Adjusts bolts on drive wheel of folder, using hand wrench, to ensure correct fold. Starts, controls and stops speed of machine, using hand switch, to cut lengths of material, fold lengths and deposit folded material on catch-bar. Removes folded material from catch-bar and stacks it on hand trucks. Measures cut material with ruler to ensure correctness of fold and length of cut. Replaces empty roll with full roll of material to ensure continuous operation. Reads automatic counter after each run of material and records number of lengths cut. Removes unused portion of roll from brackets and attaches tag to identify material and indicate amount left. Cuts cloth to provide material for sewing odd-size and over-size bags, using knife or portable electric cutter.

May take monthly inventory of rolls of material in stock. May be designated according to type of bag cut; for example,

Cotton-Bag-Cutting-Machine Tender

Jute-Bag-Cutting-Machine Tender

Waterproof-Bag-Cutting-Machine Tender

8551-186 BIAS-CUTTING-MACHINE TENDER(knit goods; textile) DPT:685
bias' cutter.

GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine to cut tubular cloth into narrow widths for bias tape or binding:

Positions roll of cloth on shaft, or dolly of flat-folded cloth on stand at feeding end of machine. Places tubes on take up roller. Turns set screw to space circular knives on cutting shaft according to width specified for tape, using rule and wrench. Pulls open end of tubular cloth over arm of machine, under guide bars, through feed rollers and under rotary knives. Laps ends of bias-cut cloth around take-up tubes. Depresses pedal to start, control speed and stop machine, and guides cloth under guide-bars and through feed rollers to cut cloth on bias. Removes rolls of bias tape or binding from machine.

May turn handwheel of valves to admit steam to feed rollers to soften material before cutting. May wrap rolls of bias tape or binding for storage or shipment.

- 8551-190 LEATHER-STRIPPING-MACHINE TENDER**
(leather goods; shoes) DPT:685
stripping-machine tender.
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machine that cuts leather into strips of specified width for fabrication into articles, such as belts, laces and shoe trimmings: Positions cutters and spacers on arbor at specified intervals and tightens set-screws, using wrench. Inserts leather between machine guides and turns setup screws manually to adjust guides for material accommodation. Depresses pedal to start machine. Guides leather through cutters to cut into strips of specified width. Measures width of cut strips to verify conformity with specifications. Trims imperfections from strips, using scissors or knife.

- 8551-194 WELT-TRIMMING-MACHINE TENDER**(garment & fabric) DPT:685
welt cutter.
GED: 2 SVP: 3 EC: 1 PA: S 4

Tends machine that trims excess welting material from inside edge of hat body or brim: Turns screws to adjust depth of cut of welt-trimming-machine, using screwdriver. Positions edge of hat body or brim against machine guide. Pulls lever to lower pressure foot onto material and hold in place. Depresses pedal to start machine that cuts inside welt of hat body or brim according to specifications. Removes cut welt from inside edge of hat body or brim.

- 8551-198 CUFF-CUTTING-MACHINE TENDER**(knit goods) DPT:685
knit-wrist cutter.
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends one or more automatic cutting machines to cut knit tubing into specified lengths for glove or garment cuffs: Carries spool or carton of knit tubing from storage area to machine. Mounts spool of knit tubing on spindle of machine. Turns screws on machine cams to control speed and motion of cutting blade and feeding mechanism to ensure tubing is cut to specified length, using screwdriver. Threads end of tubing through machine guides and feeder rollers, over spreader arms and under cutting blade. Starts and observes functioning of machine that automatically cuts and folds cuffs. Removes carton of cut and folded cuffs from delivery end of machine. Replaces dull cutting blades, using hand tools.

- 8551-202 GARMENT NOTCHER**(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that notches and pierces cut garment parts to serve as guides for attachment to other parts: Places garment part over template or against guide on machine bed. Depresses pedal to lower blade that notches or pierces part. May change blade on machine, using hand tools. May be designated according to garment part notched; for example, Sleeve Notcher

- 8551-204 MARKER, SHOE PARTS**(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that stamps identifying symbols or guide lines on shoe parts: Selects and mounts plates on machine. Inks plates, using brush or pad. Positions and aligns part in guide on machine bed. Depresses pedal to lower inked head that stamps lines or symbols on part. May adjust temperature of heated machine head. May stamp symbols of guide lines on other leather articles. May mark parts by tracing pattern, using pen, pencil or crayon.

- 8551-206 SCALLOP CUTTER, MACHINE**(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that cuts lengths or belts of embroidered fabric into scalloped strips for use as decorative trimmings: Turns setscrews to raise or lower blade according to thickness of fabric. Places fabric on machine table and aligns prestitched line on

fabric with edge of blade. Sets machine guide according to fabric alignment. Starts machine and observes flow of fabric to detect damage and irregular scalloping as fabric passes under blade. Adjusts height of blade to restore scalloping to specifications. Positions fabric for subsequent runs through machine and repeats process until fabric has been cut into specified number of scalloped strips. May sharpen and insert replacement blade in machine head.

- 8551-210 STRIP-CUTTING-MACHINE TENDER**(textile) DPT:685
slitting-machine tender.
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Tends machine that cuts rolls of textiles or plastic into narrow rolls of specified width: Lifts roll of material onto machine bar and hammers wedge into core of roll or attaches face plates to secure roll to bar. Turns handwheel to move rotary blade into cutting position, following markings on calibrated scale to obtain specified cutting width. Starts machine that rotates blade and roll in opposite directions. Presses hand lever to move rotating blade forward and cut through roll of material. Releases lever and positions blade for subsequent cut. Removes narrow rolls and stacks in handcart or container. May tend machine equipped with device to wind bolts and loosely wound rolls into rolls suitable for subsequent cutting and be designated accordingly; for example, Slitter-and-Rewinder

- 8551-214 MARKER**(garment & fabric; knit goods) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4

Marks position on garment or garment parts for items such as buttons, buttonholes and dome fasteners, and for alignment of parts such as pockets and flaps, using any of the following methods:

1. Measures specified distance from edge or reference marks on garments, using tape measure or rule. Marks positions with chalk, crayon or pencil.
 2. Selects spacing gauge according to size of garment and positions gauge on garment. Marks position with chalk or pencil.
 3. Positions garment or garment part on table beneath bar of lever-type pinhole marking device. Presses pedal to lower bar that marks with pinholes, reference points for alignment of garment parts.
 4. Folds buttonhole edge of garment over button edge and inserts chalk, crayon or pencil to mark position for buttons.
 5. Measures on top layer of knit-fabric parts the distance specified for position of other parts, such as pockets and flaps, using fabric edge or pre-marked references as datums. Marks position of corner points of other parts on top layer according to measurements. Passes long needle and chalked-thread through lay of knit-fabric parts at marked positions to transfer corner assembly points onto each layer.
 6. Positions lay of garment parts on bed of stitching machine. Depresses hand lever that forces threaded needle downward to draw thread through lay, following pre-marked points on top layer of fabric. Cuts thread between each layer of fabric, leaving thread through each part to serve as guide for attachment or alignment of other parts such as pockets and flaps.
- May be designated according to marking objective; for example, Button Marker
Marker, Quarter(garment & fabric)
Marking Stitcher(garment & fabric)
Pocket Marker(knit goods)

- 8551-299 OTHER PATTERNMAKERS, MARKERS AND CUTTERS, TEXTILE, FUR AND LEATHER PRODUCTS**

This group includes patternmakers, markers and cutters not elsewhere classified; for example, those who enlarge embroidery designs, mark and fold pleats, make dies and templates, trim parts to remove defects, and perform other patternmaking, marking, or cutting of textile, fur, or leather. Typical examples of occupational titles covered by this residual group definition are:

- Cartoon Enlarger, Embroidery(garment & fabric)
- Glove Cutter(garment & fabric)
- Patternmaker, Pleat(garment & fabric)

8553-TAILORS AND DRESSMAKERS

This unit group includes occupations concerned with making, altering and repairing complete items of tailored clothing, dresses and other made-to-measure garments, and performing the more difficult tasks in the manufacture of ready-to-wear garments. Occupations concerned with the making, altering and repairing of fur garments are classified in Unit Group 8555, FURRIERS. Occupations concerned with routine machine-sewing operations in the manufacture of garments are classified in Unit Group 8563, SEWING MACHINE OPERATORS, TEXTILE AND SIMILAR MATERIALS.

Tailors

8553-110 through 8553-122

8553-110 TAILOR, MADE-TO-MEASURE GARMENTS(garment & fabric; ret. trade) DPT:261 master tailor.
GED: 4 SVP: 8 EC: 1 PA: L 4 7

Makes men's garments; such as, suits, topcoats, overcoats and other dress clothing, applying knowledge of men's garment design, construction and styling:

Confers with customer to determine type of material to be used, style and design of garment desired. Measures customer for size, using measuring tape, and records measurements for use in preparing patterns. Draws original pattern for garment, or alters existing pattern to fit customer measurements. Applies pattern to fabric with pins, and cuts fabric along outlines of pattern, using shears. Assembles garments, sewing padding to coat fronts, lapels, and collars to give them shape, and bastes garment parts, using needle and thread or sewing machine. Fits basted garment on customer and marks areas requiring alterations, using chalk. Alters garment and joins parts, using needle and thread and sewing machine. Sews buttons and buttonholes to finish garment. Directs activities of other workers in tailoring shop.

8553-114 TAILOR, READY-TO-WEAR GARMENTS(garment & fabric; ret. trade) DPT:381 shop tailor.
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Performs specialized hand-and machine-sewing operations in manufacture of made-to-measure and ready-to-wear clothing, applying knowledge of garment construction and fabrics:

Trims and shapes edges of garment parts according to pattern prior to sewing, and cuts excess material from seam edges, using shears. Fits collar facing to underfacing with pins, trims edge of undercollar with shears, and sews undercollar to collar using sewing machine. Bastes collar and sleeves to coat body, using needle and thread, prior to sewing collar and sleeves with permanent stitches, using sewing machine. Stitches shoulder padding, coat facing and lining together at armhole. Bastes and sews canvas material in various coat parts, such as undercollar, shoulder, and front edge to give garment shape and body. Joins shoulder padding to coat with basting stitches. Sews on buttons, makes buttonholes and presses seams, using steam iron to finish garment.

8553-118 TAILOR, MEN'S GARMENT ALTERATIONS(garment & fabric; ret. trade) DPT:381
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Alters men's clothing, or repairs defective garments, following instructions on alteration or repair tags, or marks on garments, applying basic knowledge of men's clothing:

Examines tag and garment to ascertain necessary alterations. Removes stitches from garment, using hem ripper or razor blade. Shortens, lengthens, or tapers sleeves and legs. Lets out or takes in waist and chest. Raises or lowers collar, and inserts or eliminates padding in shoulders; while maintaining drape and proportions of garment. Trims excess material, using shears. Resews garment, using needle and thread or sewing machine. Repairs or replaces defective parts, such as pockets, pocket flaps, coat linings and other items.

May fit garment on customer to determine required alterations. May press garment, using hand iron or pressing machine.

8553-122 MEN'S GARMENT FITTER(garment & fabric; ret. trade) DPT:364
GED: 3 SVP: 5 EC: 1 PA: L 3 4 7

Fits men's ready-to-wear garments on customer; according to customer's needs and tastes:

Studies garment on customer, and discusses customer style preferences to assure satisfactory fitting. Measures parts of garment such as sleeves and pants, using measuring tape, and marks garment, using chalk and pins to indicate alterations required. Calls out, or writes alteration instructions on alteration tag.

May fit boys' ready-to-wear clothing. May make major or difficult alterations using sewing machine.

Dressmakers

8553-142 through 8553-154

8553-142 DRESSMAKER(garment & fabric; ret. trade) DPT:261
GED: 4 SVP: 8 EC: 1 PA: L 4 7

Makes women's garments; such as, dresses, coats, suits and other dress clothing, applying knowledge of women's garment design, construction and styling:

Confers with customer to determine type of material, pattern or style to be used in making garment. Takes customer's measurements, using tape measure to determine modifications from pattern. Draws original pattern or drafts standard pattern according to measurements of customer and modifies pattern to obtain specified style. Positions and pins pattern sections; such as collar, sleeve, or waist, on fabric, and cuts fabric with scissors following pattern edge. Pins, or bastes fabric parts together in preparation for final sewing. Sews fabric parts together, using single-needle sewing machine to form garment. Sews felling stitch in hem of garment by hand to conceal thread. Presses seams as each section is sewn on, using hand iron, to smooth seams and remove wrinkles. Makes garments according to pictures furnished by customers.

8553-146 SEAMSTRESS(garment & fabric; ret. trade) DPT:381
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Makes, alters and repairs garments such as dresses, coats and uniforms, according to pattern or customer specifications, by hand or machine sewing:

Positions and pins pattern sections on fabric, and cuts fabric with scissors, following pattern outline. Bastes, or pins fabric parts in preparation for final sewing. Joins fabric parts together and sews felling stitch in hem of article. Presses article, using hand iron, to smooth seams and remove wrinkles. Repairs fabric articles, replaces parts and makes alterations such as, patching or darning tears and holes. Replaces worn collars, pockets, and metal closures. Lengthens or shortens garments and alters width of skirts and size of waistband. May keep records of materials used, and issue requisitions to maintain stock. May oil, and change needles on sewing machine. May discuss alterations with customers.

8553-150 SEAMSTRESS, WOMEN'S GARMENT ALTERATIONS(garment & fabric; ret. trade) DPT:381
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Alters women's clothing, or repairs defective garments, following instructions on alteration or repair tags or marks on garments, applying basic knowledge of women's clothing:

Examines tag and garment to ascertain necessary alterations. Removes stitches from garment, using hem ripper or razor blade. Shortens, lengthens, or tapers sleeves or skirt. Lets out or takes in waist and bust. Raises or lowers collar, and inserts or eliminates padding in shoulders, while maintaining drape and proportions of garment. Trims excess material, using shears. Resews garment, using needle and thread or sewing machine. Repairs or replaces defective parts; such as, pockets, pocket flaps, suit and dress linings and other items.

May fit garments on customer to determine required alterations. May press garment, using hand iron or pressing machine.

8553-154 WOMEN'S GARMENT FITTER(garment & fabric; ret. trade) DPT:364
GED: 3 SVP: 5 EC: I PA: L 3 4 7

Fits women's ready-to-wear garments on customers, according to customer's needs and tastes:
Studies fit of garment on customer to determine alterations required. Pins altering folds at seams, or darts, to arrive at desired fit. Measures and marks hem to specified length, using measuring tape and chalk. Calls out or records instructions concerning alterations on alteration tag, and attaches tag to garment. Suggests other garments or different styles when it becomes difficult to fit customer.
May assist in altering and pressing garments, using sewing machine and steam iron.

Other Tailors and Dressmakers and Related Occupations 8553-174 through 8553-199

8553-174 COSTUMER(broadcast., motion pic. & stage; garment & fabric) DPT:261
GED: 4 SVP: 7 EC: I PA: L 3 4 7

Selects, fabricates and fits costumes to members of cast according to style of period and characters to be portrayed:
Discusses script with production staff, and reviews reference material to determine costumes and accessories required to dress cast according to styles of period and characters to be portrayed in script. Fits wardrobe costumes to members of cast, makes minor alterations and repairs by hand, or uses sewing machine. Cuts, assembles, and sews material to fabricate costumes according to specific patterns or own design.
May buy material for wardrobe specialty items and costumes. May keep inventory of wardrobe contents. May press and spot-clean costumes, using electric iron and cleaning fluid.

8553-178 SAMPLE-GARMENT MAKER(garment & fabric; ret. trade) DPT:381
GED: 3 SVP: 6 EC: I PA: L 4 7

Sews sample garments for new designs, according to pattern specifications:
Selects garment parts and threads, according to design specifications. Positions, aligns and sews parts of garment together, using needle and thread or sewing machine, following markings on parts, sketches and patterns. Positions garment on model form, to examine fit and drape. Indicates position of fasteners and trimmings; such as, sashes, belts, buttons and emblems on garments, using chalk.
May mark and cut materials to obtain garment parts, following patterns or designer's sketches. May press garments by hand or machine.

8553-182 CORSETIERE(garment & fabric; ret. trade) DPT:364
corset fitter.
GED: 3 SVP: 5 EC: I PA: L 4 7

Fits and alters made-to-measure foundation garments such as, girdles and corsets, according to customer's measurements and tastes:
Discusses customer's needs to determine type of fitting or garment required. Measures customer's waist and hips, using measuring tape, and records measurements on alteration tag. Pins or marks garment at various points, using chalk or blue pencil to indicate alterations required. Alters length of garment, garters or straps or takes in darts by hand or machine sewing.

8553-186 WARDROBE MISTRESS(broadcast., motion pic. & stage; garment & fabric) DPT:674
GED: 3 SVP: 4 EC: I PA: L 4 7

Cares for costumes and wardrobe accessories of theatrical, television or motion picture production cast:
Repairs, alters, and revamps special wardrobe items and accessories; such as, hats and caps, badges, shoes, belts, leather pouches, or other

leather, suede, and canvas items, using hand tools and sewing machine. Examines, cleans, mends, refits and presses costumes as required. Arranges costumes of cast on dress racks in stage appearance sequence, and aids cast members to don complicated costumes to facilitate quick changes. Packs costumes for cast when accompanying show on tour.
May fabricate wardrobe items and accessories.

8553-190 GARMENT MARKER(garment & fabric; ret. trade) DPT:684
GED: 2 SVP: 2 EC: I PA: L 4

Marks length of pants, slacks, dresses, coats and other garments according to instructions on alteration tags, and cuts off excess material:
Lays garments on table. Consults instructions on alteration tags and measures lengths, using measuring stick. Marks cuff crease, coat or dress and hem lines, using ruler and chalk, and cuts off excess material, using shears.
May specialize in marking specific men's or women's garments and be designated accordingly; for example,
Dress Marker
Pants Marker

8553-199 MISCELLANEOUS TAILORS AND DRESSMAKERS

This group includes tailors and dressmakers, not elsewhere classified; for example, those who specialize in making complete garments, such as shirts, blouses or lingerie. Typical examples of occupational titles covered by this residual group definition are:
Blouse Maker(garment & fabric; ret. trade)
Shirt Maker(garment & fabric; ret. trade)

8555-FURRIERS

This unit group includes occupations concerned with making, altering, restyling and repairing natural fur garments and accessories. Activities include: pattern making, arranging, laying out; blocking, selecting and cutting fur pelts; estimating fur garment repair costs; and sewing fur pieces, linings, fitting, paddings and other parts to make finished fur garments. Occupations concerned with dyeing and tinting fur pelts are classified in Unit Group 8295, HIDE AND PELT PROCESSING OCCUPATIONS.

8555-110 FURRIER, ALL ROUND(fur goods) DPT:261
fur tailor.
GED: 4 SVP: 7 EC: I PA: L 4 7

Makes, alters, restyles and repairs fur garments:
Estimates cost of new garments, alterations, renovations and repairs. Selects and modifies patterns for fur garments to suit customer's size, and style preferences. Grades, sorts and matches furs to be used. Cuts furs according to pattern, using fur-cutting knife. Joins furs together, using sewing machine. Lays out, stretches and trims sewn parts to conform to patterns. Assembles and sews together fur parts and lining to produce finished article. Repairs garments by cutting out worn or damaged skins, cutting matching replacement furs to size and sewing in place. Adds or removes skins from garments to change style.
May glaze fur articles, using steam-ironing machine to restore glossy appearance. May supervise activities of workers engaged in one or more of the described operations.

8555-114 FUR CUTTER(fur goods) DPT:381
GED: 3 SVP: 7 EC: I PA: S 4 7

Selects and cuts pelts required to make, alter or repair garments or other fur articles:
Selects required number of fur pelts and matches them for size, colour, texture and quality. Arranges pelts on pattern, according to design, colour and quality to achieve best appearance and symmetry. Numbers pelts to indicate their location on pattern. Cuts off unusable parts; such as, heads, necks, sides, rumps and tails. Slits skin of fur into diagonal strips, leaving uncut margin at edge, to obtain specified

length and shape of pelt, using furrier's knife. Cuts and trims pelts to shape them, according to garment patterns. May direct the sewing of fur pelts or fur strips into garments. May trim blocked furs prior to sewing, by removing excess fur around chalk-marked patterns, using hand knife or scissors, and be designated accordingly, Fur Trimmer

8555-118 FUR-REPAIR ESTIMATOR(fur goods; ret. trade) DPT:367

GED: 3 SVP: 6 EC: I PA: L 4 7

Examines fur garments to determine cost of remodeling or repair: Discusses customers' preferences as to changes in style. Examines garment for frayed linings, worn spots and tears, and determines cost of alterations needed. Marks work ticket to indicate alterations or repairs to be made. Grades and matches furs to be added to garments, according to quality, colour and size, to ensure even appearance of finished garment. Places repairs with outside contractors when work required is beyond scope of firm. Examines remodeled or repaired garments to verify completion of work.

8555-122 FUR FINISHER(fur goods) DPT:684
fur seamstress.

GED: 3 SVP: 5 EC: I PA: S 4 7

Assembles complete fur garments, using sewing machine, by performing any combination of the following duties: Joins strips of fur into let-out pelts or joins pelts into garment parts or garments. Attaches tape to edges of precut fur garment pieces to prevent stretching. Selects pattern according to specifications and cuts lining materials. Sews together lining parts by machine and presses complete garment lining, using iron. Sews interlining and lining to inside of fur garment, by hand or using blind-stitching machine. Stitches padding for cuffs and collars into position and sews on buttons, hooks, fasteners, and monograms. Examines finished garment on dummy for flaws such as puckered stitching and uneven hems.

May repair fur garments by hand and machine. May be concerned with only one phase of garment assembly and be designated accordingly; for example, Feller Lining Cutter Taper

8555-126 FUR BLOCKER(fur goods) DPT:684
fur nailer.

GED: 2 SVP: 4 EC: I PA: L 4

Lays out pelts and nails them to pattern outlined on flat surface to stretch and block pelts into desired shape: Draws chalk outline of paper pattern on board of worktable. Brushes skin side of fur with water to dampen it. Positions, stretches, and shapes pelt, skin side up, according to pattern outline and nails or staples it to board. Allows furs to dry in stretched position for setting and removes nails or staples. May rip old fur garments into strips to salvage skins, using hand knife.

8557-MILLINERS, HAT AND CAP MAKERS

This unit group includes occupations concerned with fashioning and making hats, caps and related accessories. Activities include: designing, laying out, cutting, piecing, sewing, forming and pressing textile, fur, felt, leather and other materials into desired styles, shapes and sizes.

8557-110 MILLINER(ret. trade) DPT:261
millinery maker; women's hat maker.

GED: 4 SVP: 7 EC: I PA: L 4 7

Fabricates women's hats completely, to customer specifications or for stock, from materials; such as, straw, felt, fabric and fur: Marks out and cuts patterns to desired size and shape based on original or existing designs, or according to customer specifications. Lays pattern on hat material, and cuts material following pattern and

using scissors. Shapes, wires, sews, glues and blocks material, using hat forms, needle and thread, sewing machine, steamer and hand iron. Sprays sizing solution onto hats to stiffen them as required. Sews lining, ribbon, veil, flowers, feathers and other trimmings to hat. Alters stock hats to customer's wishes by changing shape, ornaments or trimmings. May shape and trim pre-fabricated hat bodies to make hats. May renovate hats. May display, fit and sell hats and accessories.

8557-114 HAT MAKER, FACTORY(garment & fabric) DPT:684

assembler, hats; draper, hats.

GED: 3 SVP: 5 EC: I PA: S 4 7

Assembles women's hats in millinery factory by folding, draping, pinning and sewing material, trimmings and pre-sewn hat parts to unfinished hat bodies or hat frames, following specifications or sample hat:

Fits hat body or frame onto block to secure it for assembly. Folds, twists and drapes material, such as, satin, silk or velvet, around crown and brim to shape and decorate hat. Pins material in place. Sews parts, such as brim and trimmings, to hat body or frame, using needle and thread.

May cut, tie, glue or sew cloth or ribbon, to form trimmings, such as bows and artificial flowers. May glue trimmings to hat, using brush.

8557-118 HAT FINISHER, FELT(garment & fabric) DPT:684
slicker.

GED: 2 SVP: 4 EC: I PA: L 4 7

Finishes felt hats, by any combination of the following methods:

1. Selects hat block according to specifications and clamps to turntable. Fits hat over block and depresses pedal to start turntable rotating. Rubs exterior surface of hat with sandpaper to remove excess fibres and impart smooth finish. Feels surface of hat to ascertain when specified texture has been attained. Removes hat from block and places aside for further processing. 2. Fits hat over hat block and holds over steam jet to moisten felt. Passes hat over gas flame to singe off protruding hairs and fibres without damaging felt. Removes hat from block. 3. Removes dust, lint and loose fibres from hat surface, using hand brush or air hose. Fits hat over hat block on turntable. Applies wax or grease to lure (cloth pad) and rubs pad on hot plate to heat pad and wax. Depresses pedal to start turntable rotating, and rubs surface of hat with lure to smooth and finish surface. Removes hat from block when specified finish has been attained. 4. Fits hat over hat block and dampens brim, using sponge. Covers hat with damp cloth, and presses top of brim to smooth and shape it, using hand iron. Removes hat from block, places hat, crown down, into recessed hat form and presses underside of brim. Removes hat from form and examines it for smoothness of finish.

8557-122 HAT BLOCKER, HAND(garment & fabric) DPT:684

GED: 2 SVP: 3 EC: I 3 4 PA: L 4

Blocks hats, hat bodies or caps to specified size and shape, by hand or using electric iron:

Places article in steam cabinet, or holds article over steam jet, to soften it prior to blocking. Positions article over heated block and presses, pulls or rubs article to smooth it and impart specified size and shape, by hand or using iron. Removes article from block, and places on rack or in drying cabinet.

May form brims on hats, by tying cord around body near base, and turning edge of body over cord. May cover article with damp cloth to protect it during blocking operation.

8557-126 HAT-BRIM CURLER(garment & fabric) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4

Curls, shapes and smoothes hat brims, by either of the following methods:

1. Adjusts temperature of special curling iron according to type of hat material to be pressed. Moistens hat brim, using sponge, and positions hat on worktable, with brim extending over edge. Curls, shapes and smoothes brim, using curling iron. Inverts hat on table and shapes underside of brim, on hats requiring partially reversed brims. Removes excess welt from hat brims, using special razor-blade hand tool. 2. Tends machines that curl, shape and smooth hat brims. Moistens hat brim, using sponge. Depresses pedal to open feeding rollers of

curling machine, and positions hat brim between rollers. Releases pedal to close rollers, and moves lever to start machine. Removes hats from machines at end of curling cycles. May cut hat brims to specified width, or remove excess material, using rounding jack or machine. May be designated according to method used; for example, Curling-Machine Operator Hand Curler

8557-130 HAT-CONE SHRINKER(garment & fabric) DPT:684
GED: 2 SVP: 3 EC: I 4 5 PA: L 4

Dampens, folds and feeds felt hat cones into roller machines that squeeze fibres together, to harden and shrink cones preparatory to further processing: Dampens felt hat cones to soften fibres by immersion or sprinkling with water. Folds cones in prescribed manner. Wraps cones in burlap or woolen cloth during initial processing stages to protect fibres. Squeezes out excess water with hands. Feeds bundle of cones into machine rollers to squeeze fibres, or places flat cones on conveyor belt that moves cones beneath water sprinkler pipes, between rollers and onto second belt that returns cones to worker. Measures cones, using ruler. Repeats process until cones have hardened and shrunk to size specified. Inspects cones and works fibres into thin spots, using fingers, to repair damaged cones. May be designated according to processing stage or machine fed (as cones pass through several hardening and shrinking operations); for example, 'A' Machine Operator Hardener Starter

8557-134 HAT-DECORATION MAKER(garment & fabric) DPT:684
trimming maker.
GED: 2 SVP: 3 EC: I PA: S 4 7

Prepares decorations and trimmings for hats or millinery from ribbons, feathers, cloth and other materials: Measures and cuts material, using ruler and scissors or cutting machine. Folds and sews parts together by hand to make bows, rosettes and other items. Cements coloured bird feathers or artificial flowers to forms to make decorations. Strings or sews coloured beads, or folds and shapes cloth-covered wire to make ornaments.

8557-138 HAT DECORATOR(garment & fabric) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Attaches decorations and trimmings to hats, caps or millinery, by performing any combination of the following duties: Pins, sews or glues trimmings, such as flowers, ribbons and feathers, to article, using needle and thread or brush, and following sample or specifications. Inserts, laces and ties trimming material, such as leather and nylon, through precut slots or holes in hat brim or crown. Attaches buttons, snaps, chin straps, braid and ornamental bands to caps, using needle and thread, or hand or kick press. Sews or glues hat size or code labels inside hats or caps. May be designated according to specific duty performed or article decorated; for example, Cap Trimmer Hat Lacer Hat Trimmer

8557-142 HAT-FOUNDATION MAKER(garment & fabric) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Makes foundations that provide form and shape for hats, caps or millinery, by performing any combination of the following duties: Measures and cuts wire or plastic band to specified length, using ruler and foot-operated cutting machine. Bends wire or plastic band to form circle, and fastens ends together with metal clip or staples, using crimping or stapling machine. Fits formed circle inside hat or cap to give article required shape. Positions formed circle, buckram, cardboard or cotton between layers of fabric, and sews fabric together to make foundations, using sewing machine. May brush paste on cap-visor linings, and apply fabric or plastic covering to linings, to make cap visors.

8557-146 HAT BLOCKER, MACHINE(garment & fabric) DPT:685
blocking-machine operator.
GED: 2 SVP: 3 EC: I 3 4 PA: L 4

Tends one or more machines that stretch or press hat bodies or hat-body material to specified size and shape, by one of the following methods: 1. Places felt hat body in container of hot water, or on rack in steam cabinet, to soften body prior to blocking. Pulls softened body onto hat block and positions block on holding device in machine bed, or places body directly on lower hat form in machine. Pulls upper hat form down onto hat body. Moves lever or turns knob to close machine fingers that grasp rough-formed brim on body and pull brim outward, to stretch and shape brim. Moves lever to activate ram that forces block or lower form upward into body, to shape crown. Depresses pedal or turns valve to spray water or air through hat body to stiffen it. Releases levers or turns knobs, raises upper hat form, and removes hat from machine. Places hat in tank of cold water to chill hat and set shape. 2. Dampens sheets of cardboard by dipping in water. Places hat-body material, such as crinoline, buckram or nylon, between layers of wet cardboard to soften material prior to blocking. Stretches softened material over heated lower die in machine and depresses pedal, causing upper die to descend and press material into shape of hat or hat frame. Depresses pedal to open machine and removes shaped hat or hat frame. May be designated according to type of machine used; for example, Steam Blocker Water Blocker

8557-150 HAT-BRIM CUTTER(garment & fabric) DPT:685
brim rounder.
GED: 2 SVP: 3 EC: I PA: L 4

Cuts hat brims to specified width, or removes frayed, irregular or excess material from hat brims, by either of the following methods: 1. Moves lever on rounding jack to adjust brim guide, according to specified brim width. Places hat brim in guide, and pulls hat brim through guide and against razor blade, to cut excess brim material from hat. 2. Turns setscrew to adjust cutting blade on rounding machine, according to specified brim width. Places hat on machine hat block, and moves lever to expand block collar to hold hat firmly in place. Moves second lever or presses button to start machine turntable rotating, forcing hat brim against razor blade or rotary cutting blade, to cut excess brim material from hat. Removes hat from machine after cutting cycle. Replaces worn blades in rounding jacks or machines. May tend automatic sewing machine that sews line of reinforcing stitches around hat brim. May tend machine that curls, shapes and smoothes hat brims. May tend machine that crimps snap fasteners onto hats.

8557-154 HAT-BRIM-FLEXING-MACHINE TENDER DPT:685
(garment & fabric)
brim flexer; ragging-machine operator; steamer and ragger.
GED: 2 SVP: 3 EC: I 4 PA: L 4

Tends machines that flex hat brims and raise nap, to improve pliability and appearance of brims: Places felt hat on block in steam cabinet and depresses pedal to saturate hat with steam to soften it. Removes hat from block. Moves lever or depresses pedal to start machine. Inserts hat brim between rotating canvas or cloth-covered pads or rollers that bend and flex brim and raise nap. Removes hat from machine and places aside for final inspection. May remove dust, lint and loose fibres from hat surface, using hand brush and air hose. May prepare and attach code labels and trim feathers to hat.

8557-158 HAT-CONE FORMER(garment & fabric) DPT:685
coner.
GED: 2 SVP: 3 EC: I 4 5 PA: M 4

Tends machine that mats together fur fibres into felt hat cones: Positions perforated metal cone on revolving turntable of machine, and closes machine doors to preserve vacuum around metal cone. Depresses pedal to discharge preweighed amount of fur fibres into dome of machine that draws fibres onto revolving metal cone by

suction. Observes flow of fibres onto cone, and opens doors at end of forming cycle. Wraps wet burlap around formed felt cone, and places metal cover over burlap. Immerses cone in tank of heated water to strengthen fibre cohesion. Removes cone from water after required period and removes metal cover, burlap and felt cone from perforated cone.

8557-162 HAT-CROWN-AND-BRIM FORMER(garment & fabric) DPT:685
stretcher; tipper and brimmer.
GED: 2 SVP: 3 EC: 1 4 PA: L 4

Tends stretching machines that rough-form crowns and brims on felt hat cones:

Soaks hat cones in heated water to soften them preparatory to stretching. Secures specified hat form in machine, or moves lever or handwheel to adjust expanding hat form in machine to specified crown height and brim width. Pulls softened cone onto hat form in tip-stretching machine. Depresses pedal to raise form and cone against moving machine fingers that knead tip of cone, stretching it onto form and shaping crown. Grasps base of cone and rotates it to ensure symmetrical shaping of crown. Removes resultant hat body from machine and pulls it onto hat block to smooth crown and set shape. Removes hat body from block after specified period and resoaks body. Pulls softened body onto hat form in brim-stretching machine. Depresses pedal to raise form and start movement of machine fingers that stretch brim. Turns body on form and repeats stretching operation until brim is formed around entire hat body. Measures width of brim to ensure conformance to specifications, using ruler. Removes hat body from machine and places aside on rack or table for further processing.

8557-166 HAT-GREASING-MACHINE TENDER(garment & fabric) DPT:685
grease ragger.
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machine that applies grease or wax to felt hats, to add lustre and impart finished appearance:

Mounts rolls of cloth, impregnated with grease or wax, on machine holders. Threads cloth under feed rollers, over guides and applicator pads onto take-up spool. Fits hat over block mounted on machine. Moves lever or depresses pedal to start machine that rotates hat against moving cloth to impart finish to hat. Removes hat from machine at end of greasing cycle and feels and inspects hat for completeness of finish.

May tend machine that abrades or buffs hats to raise, smooth or polish nap prior to greasing. May rub coloured powder into hats to impart finish, using cloth bag. May be designated according to hat part greased; for example,
Brim Greaser
Crown Greaser

8557-170 HAT-POUNCING-MACHINE TENDER(garment & fabric) DPT:685
pouncer.
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends one or more machines that abrade or buff felt hats or hat bodies, to remove excess fibres, and raise, smooth or polish nap:

Positions hat in guide, or over hat block, in pouncing machine. Depresses pedal or moves lever to start machine that rotates hat between or against rotating sandpaper or sharkskin rollers or belts to abrade or buff surface. Removes hat from machine at end of automatic cycle. Inverts and repositions hat in machine, and repeats operation on inside of hat. Removes hat from machine and inspects and feels surface to ascertain that specified texture or finish has been attained. Changes hat blocks in machine according to size of hats to be pounced.

May hold hat manually against rotating belt to impart finish. May tend machine that applies grease or wax to hats, to add lustre and impart finished appearance. May rub coloured powder onto hats to impart specified finish, using cloth bag. May be designated according to type of finish imparted, or hat part finished; for example,
Brim Jigger
Buffer
Crown Pouncer

8557-174 HAT PRESSER, MACHINE(garment & fabric) DPT:685
ironer, hats; presser, hats.
GED: 2 SVP: 3 EC: 1 3 4 PA: L 4

Tends one or more machines that press or iron caps, hats or hat parts, to set shape and impart specified finish, by one of the following methods:

1. Selects pressing die(s) according to specifications, and positions die(s) in pressing machine, by hand or using hand tools. Positions article, crown down, directly into die in machine bed, or places article over saddle (rubber hat-shaped liner) before positioning in machine, to protect article during pressing. Moves lever or presses button to close machine that presses, shapes and smoothes article. Removes article from machine and examines for flaws and wrinkles. 2. Inserts hat block into crown of hat, and places hat brim between upper and lower heated rollers in ironing machine. Pulls lever to lower upper roller onto brim and to start rollers rotating. Steadies hat with hand while allowing it to rotate with rollers. 3. Positions seam of article over form on bed of ironing machine and under feed wheel guide. Depresses pedal to lower heated iron onto seam, and feeds material under iron to smooth and flatten seam. 4. Places article over heated hat block in pressing machine. Smoothes and straightens article with hands, and lowers pressing form onto article. Depresses pedal to force steam through perforations in hat block to moisten and press article. Raises pressing form after specified period and removes article from block.

May tend pressing machines enclosed in steam-heated cabinets. May use flange (brim-shaped collar) in pressing machine to curl hat brims. May curl hat brims, using hand iron and hand press. May be designated according to hat part or material pressed, or machine used; for example,
Brim Ironer
Brim Presser
Crown Presser
Flanger
Hat-Lining Blocker
Hydraulic-Press Blocker
Seam Presser
Straw-Hat Presser

8557-178 HAT SORTER(garment & fabric) DPT:687
hat sizer.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Sizes hats, and sorts according to size, colour, style and material, for further processing:

Pulls hat over marked sizing block to measure hat size. Marks size in hat crown, using pencil or crayon. Stacks hats on shelves or racks, according to size, colour, style and material specified.

May compare and sort hats according to height of crown and width of brim.

8557-182 SERVICE GIRL, HAT FACTORY(garment & fabric) DPT:687
bundler, hat and cap parts.
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Gathers, sorts and distributes hat, cap or millinery parts and trimmings, according to colour, size, style or quantity, to facilitate assembly of hats or caps:

Gathers, sorts and bundles parts and trimmings; such as, feathers, ribbons, flowers, sweatbands and linings, for each lot of hats or caps, using pins, twine or supply box. Distributes material to workers engaged in assembling and trimming hats or caps.

May measure and cut ribbon or other material, according to specifications, using ruler and scissors or cutting machine.

8557-186 EAR-MUFF ASSEMBLER(fur goods; garment & fabric) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles ear-muffs from fur and wire components:

Selects presewn fur ear-covers according to colour and material specifications. Assembles ear-muffs by inserting wire loops of adjustable headband into selected ear-covers.

8561-SHOEMAKING AND REPAIRING OCCUPATIONS

This unit group includes occupations concerned with making and repairing leather, and leather soled, fabric-topped footwear. Activities include: forming materials over last into desired styles, shapes and sizes; cutting, trimming, skiving, sewing, nailing, tacking, buffing and finishing footwear. Occupations concerned with cutting parts for footwear prior to shoe assembling, fastening or sewing are classified in Unit Group 8551, PATTERNMAKING, MARKING AND CUTTING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS. Occupations concerned with fabricating, assembling and repairing rubber and plastic footwear are classified in Minor Group 857, FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS.

8561-110 SHOEMAKER, CUSTOM(ret. trade; shoes) DPT:381
GED: 3 SVP: 7 EC: I PA: L 4 7

Makes custom boots and shoes, using hand and machine tools: Selects patterns and leather for upper parts, and outlines patterns on leather. Cuts out parts with shears and knife, and sews parts together on machine to form uppers. Marks and punches out eyelets, inserts metal rings, and clinches rings on machine. Selects or assembles last, tacks insole to last and draws upper over last, tacking it in place. Trims upper with knife and sews on welt. Sews outer sole to lasted upper or cements sole in place. Tacks on rand, leather lifts to build heel base, and heel. Trims and buffs edges of sole and heel, using knife and buffing wheel. Brushes dressing dye on shoe and polishes shoe with rotating power brush. May build lasts. May make and repair prescription footwear for deformed feet and be designated accordingly; for example, Orthopaedic-Shoe Maker Orthopaedic-Shoe Repairman

8561-114 SHOE REPAIRMAN(ret. trade; shoes) DPT:661
cobbler; shoemaker.
GED: 3 SVP: 7 EC: I PA: L 4 5 6 7

Repairs or refinishes shoes, following customer specifications, or according to nature of damage, or type of shoe: Positions shoe on last and pulls and cuts off sole or heel with pincers and knife. Starts machine and holds welt against rotating sanding wheel or rubs it with sandpaper to bevel and roughen welt for attachment of new sole. Selects blank or cuts sole or heel piece to approximate size from material, using knife. Brushes cement on new sole or heel piece and on shoe welt and shoe heel. Positions sole over shoe welt or heel piece on shoe heel, and pounds it with hammer so that piece adheres to shoe, drives nails around sole or heel edge into shoe, or guides shoe and sole under needle of sewing machine to fasten sole to shoe. Trims sole or heel edge to shape of shoe, using knife. Holds and turns shoe sole or heel against revolving abrasive wheel to smooth edge and remove excess material. Brushes edge with stain or polish and holds it against revolving buffing wheel to polish edge. Nails heel and toe cleats to shoe. Restitches ripped portions or sews patches over holes in shoe uppers by hand or machine. Stretches shoes by dampening portion of shoe and inserting and twisting adjustable stretcher that enlarges (stretches) material. Builds up portions of shoes by nailing, stapling, or stitching additional material to shoe sole to add height or make other specified alterations to orthopaedic shoes. Repairs belts, luggage, purses, and other products made of material, such as canvas, leather, and plastic. May assist in training new employees. May quote charges, receive articles, and collect payment for repairs.

8561-118 SHOE REPAIRER, FACTORY(shoes) DPT:681
cripple worker.
GED: 3 SVP: 6 EC: I PA: L 4 7

Repairs shoes damaged in manufacturing process: Inspects shoe or reads ticket to determine defects. Removes damaged parts, using hand tools, such as knife, hammer, lasting tool, prying tool, and tack puller. Operates stitching machine or stitches by hand, to repair broken or missed stitches and to replace parts. Relasts shoe to

remove defects, such as wrinkles in outer parts, bunching of inner parts, and crooked seams. Cuts out replacement parts, using knife. Aligns and cements parts, such as edges, bindings, heels, soles, and uppers of shoe by hand. May repair cracks, scratches, and restore colour to blemished areas on shoe. May nail metal toe and heel plates to shoe bottoms.

8561-122 HEEL-SEAT FITTER(shoes) DPT:684
GED: 3 SVP: 4 EC: I 5 PA: L 4

Cuts heel seat of leather sole, preparatory to mounting heel, using cutting machine: Adjusts guides and stops on machine, according to specifications for shoes being processed, using hand tools. Adjusts rotary cutting blades on machine for specified width, depth, and bevel, using wrench and rule. Starts machine and positions shoe between guides. Pushes shoe against cutting blades that makes marginal cut around heel seat, to provide snug fit when heel is attached.

8561-126 STITCHING-MACHINE OPERATOR(shoes) DPT:682
stitcher.
GED: 2 SVP: 4 EC: I PA: L 4 7

Operates single, double, or multiple-needle stitching machine to join, decorate or reinforce shoe parts, or attach findings to shoe: Selects and places spool of thread on spindle or looper, and draws thread through guides, slots, and needles. Aligns parts and presses knee control or pedal to raise presser foot or roller. Positions parts under needle and lowers presser foot or roller. Starts machine and guides parts under needle, following seams, edges, or markings, or moves edges of part against guide. Cuts and trims excess thread or material from parts, using scissors or knife. May be designated according to finding sewn on shoe, number of needles in machine, type of stitch used, machine operated, or part of shoe stitched; for example, Buckle Sewer Double-Needle Stitcher Fancy-Stitch-Machine Operator Vamp Seamer

8561-130 HAND STITCHER, SHOES(shoes) DPT:684
hand lacer.
GED: 2 SVP: 4 EC: I PA: L 4 7

Hand sews shoe parts, such as heel ends, plugs, and quarters to vamp: Soaks skived parts in water to soften them. Pulls lasted shoe on pin jack, and tacks parts to last, using lasting tool. Punches stitch openings in parts with awl. Inserts waxed thread through punched openings, to join skived shoe parts to vamp. Removes tacks and shapes seam, using lasting tool. Smooths and polishes seams, using rubbing stick or buffing cloth. May sew sole to shoe by hand. May sew particular type of footwear and be designated accordingly, Moccasin Sewer

8561-134 COUNTER AND UPPER TACKER(shoes) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: L 4

Inserts cement covered parts between lining and shoe upper, and tacks upper to last: Places counter and tip support (box toe) on rack, dips rack in liquid cement and drains excess cement from parts. Positions last on pin jack. Inserts cemented parts between lining and upper. Pulls shoe upper onto last, and aligns back seam of upper with guide marks on last. Tacks upper to last by machine or by hand, using lasting tool. Maintains level of liquid cement in container.

8561-138 HEEL BREASTER(shoes) DPT:684
GED: 2 SVP: 3 EC: I 5 6 PA: L 4

Trims and shapes breast of leather heels according to specifications, using trimming machine: Turns wheel to adjust cutting stroke of machine to height of heel. Sets lasted shoe on moveable pin jack, and pushes pin jack under cutting blade to trim and shape heel, or depresses pedal to lower cutting blade to trim and shape heel. Trims rough edges missed by breasting

machine, using knife. Removes dull cutting blades from machine, using wrench, and sharpens them on grinding wheel.

8561-142 LASTER(shoes) DPT:684
GED: 2 SVP: 3 EC: I 5 PA: L 4

Shapes and joins upper parts of footwear to insole, performing any combination of following duties:
Tacks insole on last. Positions and secures last in holding device. Pulls upper onto last by machine to shape toe, vamp, and quarters of shoe, or stretches edges of upper over last, using lasting tool. Checks alignment of toe and heel of upper. Secures bottom of upper in pincers of machine which hold it evenly and closely over edge of insole. Attaches folded part of upper to insole by operating tacking device, by spreading adhesive substance along edge of insole, or by pressing pre-cemented upper onto insole.

May place upper in steamer to soften leather prior to lasting. May perform certain lasting operations by hand rather than machine. May be designated according to machine tended, securing device employed, or part lasted; for example,
Pulling-Over-Machine Operator
Side Laster, Staple
Toe Laster

8561-146 NOVELTY-SHOE LACER(shoes) DPT:684
fancy stitcher.
GED: 2 SVP: 3 EC: I PA: S 4

Assembles and decorates parts for novelty shoes, such as moccasins, using shoe making tools, performing any combination of following duties:

Fashions upper portion of shoe by lacing quarters to vamp, using needle. Aligns perforated upper and sole, inserts tipped lacer, and draws parts together by lacing around shoe, using awl. Cuts slits in upper to accommodate weaving, using knife. Draws strips of material, such as fabric or leather, between slits in shoe upper to weave decorative design, using needle. Positions lasted vamp in holder on work table, places pattern over vamp and marks stitch positions, using marking pen. Stitches design in vamp following pattern marks, using needle and decorative cord.

8561-150 SHOE-DECORATION ASSEMBLER(shoes) DPT:684
bow maker.
GED: 2 SVP: 3 EC: I PA: S 4 7

Assembles and attaches bows and other decorations to shoe uppers, performing any combination of following duties:

Selects precut strips of material, such as leather, plastic, or fabric, and ties strips into bows by hand. Joins bow parts, using hand or foot stapler. Sews decorative parts together by hand. Brushes cement onto parts and presses parts together. Matches parts for size, colour, and appearance for attachment to uppers. Staples bows or other decorative parts, such as buckles, to uppers.

8561-154 SHOE DYER(ret. trade; shoes) DPT:684
shoe tinter.
GED: 2 SVP: 3 EC: I 7 PA: L 4 7

Dyes or tints shoes for customers of shoe repair or shoe shining shops: Inserts shoe tree or stuffs paper into shoe to stiffen shoe upper, forming smooth working surface on shoe. Cleans shoe with acetone, alcohol, water, or prepared cleaning solutions to remove dirt, dye, and grease, using cloths, brushes or sponges. Selects prepared dye or mixes dyes to match shade specified by instructions or colour chart. Applies coat of dye or tints onto shoe upper, using spray gun or swab.

8561-158 SHOE-REPAIRMAN HELPER(shoes) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Helps to repair or refinish shoes, performing any combination of the following duties:

Rips worn heels and soles from shoes, using hammer and knife. Tacks new heels and soles in place, using hammer and stitching machine, and trims excess leather with knife or revolving trimmer. Sands and finishes sole edges by holding them against sanding rollers and revolving metal disk. Shines, stains and dyes shoes. See also definition for term title, 02-160 HELPER (any ind.).

May sell merchandise, such as shoestrings, polishes and other accessories.

8561-162 STEEL-TOE PLACER(shoes) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4

Inserts steel box toe into forepart of safety shoe:
Selects designated size of steel box toe from stock. Draws upper leather back from toe area by hand and inserts box toe over lining. Applies cement onto vamp edge of box toe, using brush, and covers edge with felt or rubber strip to prevent friction between metal and upper leather. Pulls upper leather back over toe area, using lasting pincers.

8561-166 WOOD-HEEL FINISHER(shoes) DPT:684
heel finisher.
GED: 2 SVP: 3 EC: I PA: L 4

Finishes leather covered wooden heels, performing any combination of the following duties:

Trims and splits projecting edges of breast flap, using knife or scissors. Brushes cement onto shank and lodge. Inserts and cements flap of outsole to breast of heel. Bevels and smooths edges of breast flap with beveling stick. Smooths wrinkles from heel covering with heated iron or hot air. Sands dried cement from finished heels.

8561-170 BURNISHER(shoes) DPT:685
burnishing-machine operator; polisher.
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Tends machine that burnishes shoes, or shoe parts, to give smooth finish by any of the following methods:

1. Starts burnishing machine and coats revolving burnishing wheel with wax, using wax block. Holds shoe against waxed wheel to apply wax to shoe, then against bristle and cloth brushes to polish. 2. Positions edge of shoe upper against guides and under heated burnishing iron. Starts machine and guides edge under iron and edge-rolling wheel to roll and press edge of upper. 3. Selects vibrating heating irons according to thickness of heel lift or sole, and clamps them in chuck of machine. Turns dial to heat and regulate temperature of irons. Pushes lever that rotates chuck to bring heel lift or sole into working position. Burnishes edges by pressing and guiding heel or sole against vibrating iron.

May bundle shoe parts for further processing. May burnish a specific part of shoe and be designated accordingly; for example,
Edge Setter
Heel Burnisher

8561-174 CHANNELER(shoes) DPT:685
insole channeler.
GED: 2 SVP: 3 EC: I PA: L 4 7

Tends machine that cuts two parallel grooves near edge of insole, prior to welting:

Positions insole against machine guide. Depresses pedal to raise machine bed against cutting blades that cut grooves (channels) in insole. Adjusts machine to control width of cut according to shoe specifications, using hand tools.

May channel outsoles and be designated accordingly,
Channeler, Outsole

8561-178 FASTENER, SHOE PARTS(shoes) DPT:685
nailer; riveter; stapler.
GED: 2 SVP: 3 EC: I 5 PA: L 4

Tends nailing, slugging, stapling, or tacking machine that attaches shoe parts, such as heel, insole, and shank to partially assembled shoes:

Aligns parts on bed of machine, or positions them under machine head on jack pin. Holds parts against guide, and depresses pedal that drives fasteners into parts. Fills hopper of nailing or tacking machine, or replaces wire spool on spindle of slugging or stapling machine.

May join specific shoe part or operate particular type of machine and be designated accordingly; for example,
Heeler, Machine
Insole Tacker

8561-182 HEEL ATTACHER(rubber; shoes) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4

Attaches heels to leather and nonleather shoes, or shoe soles, by either of the following methods:

1. Loads nailing machine hopper with nails or sets head of screw in holding device of screw driving machine. Positions inverted shoe and heel against stop guides, and depresses pedal that forces shoe and heel together and automatically drives nails or screws in heel. 2. Brushes liquid cement on heel seat. Positions heel on heel seat of shoe and pushes pedal to lock shoe and heel in holding fixture of machine until cement dries.

May tend machine that punches holes in leather heels to facilitate nailing. May operate specific type of machine and be designated accordingly; for example, Heel-Nailing-Machine Operator

8561-186 HEEL BUILDER(shoes) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Builds shoe heels from materials, such as leather, fibreboard, rubber, and plastic:

Runs lifts through, or over cement-covered rollers of machine according to material, size, and style of heel specified. Stacks cement-covered lifts against face plate of machine. Places nail in holding device of machine ram, and depresses pedal to start machine that drives nail into stacked lifts. Places cemented heels in press to dry.

8561-190 SOLE MOULDER(shoes) DPT:685
archer; moulder.
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends machine to mould outsoles or insoles to conform to shoe last at shank and arch:

Turns thumbscrews to adjust last and size guides to specifications. Sponges grained surface of leather soles at arch to soften leather. Positions sole on die and against guides. Depresses pedal to lower mould that presses sole against die, shaping arch and shank. Replaces dies and moulds when last sizes change, using hand tools.

May mould particular type of sole and be designated accordingly; for example, Insole Moulder

8561-194 TRIMMER, SHOE PARTS(shoes) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends machine that trims edges of shoe parts, such as heels, outsoles or uppers, to remove excess material and impart finished appearance: Turns specified knobs or setscrews to adjust guides and cutting blade of machine. Depresses pedal to start machine, and guides edges against revolving cutter to trim excess material from parts. Replaces cutters and guides on machine, according to thickness of sole and design of shoe, using hand tools.

May trim specific area or part of shoe, or operate particular type of machine and be designated accordingly; for example, Heel Trimmer Inseam Trimmer Rough Rounder, Machine

8561-198 STOCK SORTER, SHOE PARTS(shoes) DPT:587
bundle assembler; caser, shoe parts; parts distributor.
GED: 2 SVP: 3 EC: 1 PA: L 4

Gathers and sorts shoe parts for delivery to other departments or workers, performing any combination of following tasks:

Collects parts, such as heels, quarters, and outsoles from baskets, bins, or racks, following quality, quantity, size, and style specifications. Sorts parts according to identifying numbers and bundles or places them in containers for delivery or storage. Receives and stores parts. Examines parts for defects, such as cracks or rough finishes. Carries or routes parts to workers. Copies identifying numbers from order ticket onto shoe parts or containers, using crayon or pencil.

8561-202 BOTTOM FILLER(shoes) DPT:684
insole filler.
GED: 2 SVP: 2 EC: 1 PA: L 4

Fills insole depression with compound to provide cushion for ball of foot and even surface for attachment of outsole:

Spreads heated or cold compound on insole, using spatula, or turns valve that dispenses measured amount of compound into insole depression. Positions insole on machine, and depresses pedal to activate heated roller or plate that presses and smooths compound. Fills steam heated reservoir (pan) with compound, using scoop. Stacks filled insoles on rack for removal to next work station. May press and smooth compound by hand.

8561-206 BOTTOM WHEELER(shoes) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Imprints designs, lines, or notches on bottom of outsole to decorate or finish shoe sole:

Presses and guides heated scoring tool, or notching tool (branding iron) on sole or heel of shoe to imprint design. Loads processed shoes on wheeled rack, and pushes to storage area. May guide shoe against fixed scoring or notching tool.

8561-210 INKER, HAND(shoes) DPT:684
shoe dresser; shoe sprayer.
GED: 2 SVP: 2 EC: 1 7 PA: L 4 7

Finishes shoe or part of shoe by hand, applying liquid dressing, ink, or dye:

Cleans shoes or shoe parts, using sponge or cloth and cleaning fluids, such as ammonia and ether. Applies ink, stain, wax, or filler, such as dope or plastic solution onto edges or along seams of shoe parts to colour, fill, or protect parts, using brush, cloth, sponge, spray gun, or striping tool. Applies liquid dressing or dye to produce glossy finish.

May treat a specific part of shoe or use a particular type of finish and be designated accordingly; for example, Antiquer Edge Inker

8561-214 LAST IRONER(shoes) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Fits and nails steel plates to bottoms of plastic shoe lasts:

Straps last to ironing jack (holding device), and positions steel plates of specified size on bottom of lasts. Nails pre-shaped steel plates to last bottoms, using hammer. Files edges of last bottoms and steel plates to form smooth, flush edges.

8561-218 NAIL CUTTER(shoes) DPT:684
rasper.
GED: 2 SVP: 2 EC: 1 PA: L 4

Cuts and files nails that protrude through insoles of shoes:

Cuts protruding nail ends, using wire cutters. Presses and holds shoe against revolving shaft of rasping machine to file nails and smooth insole. Holds shoe under vacuum nozzle to remove filings from inside shoe.

8561-222 RELASTER(shoes) DPT:684
slip laster.
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Replaces last in shoe upper to facilitate application of the sole, using either of following methods:

1. Places broken last (open at hinge) on stationary pin jack. Positions shoe upper on last and pulls heel section of last down to stretch upper. 2. Places toe of upper onto last. Inserts shoe horn device in heel section of upper, and depresses pedal to pull upper onto last.

May align sponge heel pad between last and insole. May attach upper parts, such as vamp strap or wrapper onto last, using stapler. May immerse uppers in softening solution to prevent seams from splitting.

8561-226 THREAD LASTER(shoes) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Sews shoe upper to insole, using stitchdown thread-lasting machine: Positions insole on last, and pulls upper over last by setting toe and end of upper in jaws of machine. Holds upper against insole on shoe rest. Depresses pedal which lowers feeder onto upper edge. Regulates lever or pedal to start machine, and guides shoe into feeding mechanism that sews upper to insole. Stops machine. Removes shoe from machine, and cuts thread, using knife.

8561-230 WRINKLE REMOVER(shoes) DPT:684
ironer; presser.
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Applies heat to shoes or shoe parts to remove wrinkles: Inspects shoes or shoe parts for inside or outside wrinkles. Removes wrinkles, using equipment, such as heated hand, stationary irons or plates, blue flame torch and rounded stick, hot air blower and awl-shaped hand tool, or heated forming die. May remove wrinkles by running parts between pressing rollers. May smooth a particular part of shoe and be designated accordingly; for example, Upper Ironer

8561-234 BEVELER(shoes) DPT:685
skiving-machine operator.
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends skiving machine that bevels edges of shoe parts, to prevent ridges at stitched, cemented, or folded edges: Depresses pedal or activates switch to start machine. Holds and guides part against guide and between feed rollers that force edges of part against blade. Turns setscrews to adjust feed rollers, guides, and blade angle to specifications. Verifies width and thickness of beveled edges visually and using micrometer. May use pedal to regulate speed of rollers along curved, straight, or angled edges of part. May tend machines that roughen edges prior to cementing, or skive narrow parts, such as straps and backstraps. May feed automatic machine that bevels edges of shoe parts. May bevel specific part of shoe and be designated accordingly; for example, Insole Beveler

8561-238 BUFFER, SHOE PARTS(shoes) DPT:685
buffing-machine operator; rougher; scourer.
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that smooths or roughens shoe parts by any of following methods:
1. Holds and presses part against abrasive cylinder or belt that polishes and sands part, or against wire roughing wheel to clean and prepare part for cementing. 2. Feeds sole between rubber presser roller and abrasive-covered roller that roughens part for cementing. 3. Presses sole against inflated buffing pad which scours and smooths shank and breast. May work on specific part of shoe and be designated accordingly; for example, Heel Sander Sole Rougher

8561-242 CEMENTER, HAND(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends pressing machine that joins pre-cemented shoe parts by any of following methods:
1. Turns setscrew that adjusts distance between pressure rollers, feeds aligned parts between rollers, and observes joining of parts. 2. Positions parts on machine bed, and depresses pedal that forces heated presser head against parts to join them. 3. Positions pre-cemented insole between horizontal disks. Depresses pedal to cause disks to press lining or rib into insole channel. May place shoe parts in heater to soften leather prior to cementing. May brush solvent on pre-cemented parts to soften cement prior to joining parts. May apply cement to parts by hand or machine. May join specific parts and be designated accordingly; for example, Sole Layer

8561-246 CHANNEL CLOSER(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that closes channels of outsoles: Brushes cement in channeled edge of outsole of lasted shoe, after sole-stitching operation. Guides edge of outsole between revolving corrugated wheels of machine which close and seal lip of outsole.

8561-250 CUT-OUT-AND-MARKING-MACHINE TENDER(shoes) DPT:685
framing-die-machine operator.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that simultaneously trims leather shoe parts to size, punches perforations, and marks stitching outline: Bolts specified die to ram or bed of machine, using wrench. Brushes ink on roller which marks stitch outline on part. Positions part on machine, and presses pedal to start machine. Stacks processed parts in container.

8561-254 FEATHEREDGER AND REDUCER(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that shaves outsole to reduce thickness and increase flexibility: Positions specified die rollers on machine shaft. Turns handwheel to set cutting gauge according to outsole size. Places outsoles against guides on machine bed, and depresses pedal to start rollers that force shank, heel seat, forepart, or edges of outsole against machine blade. May reduce thickness of insoles at edges to increase insole flexibility. May reduce or bevel a specific part of shoe and be designated accordingly; for example, Heel Reducer

8561-258 FOLDER, SHOE PARTS(shoes) DPT:685
folding-machine operator.
GED: 2 SVP: 2 EC: 1 5 6 PA: S 4 7

Folds and presses pre-cemented edges of shoe parts, such as insoles, quarters, vamps, toe tips, and tongues to strengthen and smooth edges: Positions shoe part against guide on bed of machine. Depresses pedal to lower presser foot onto part, or runs part through rollers of machine to fold part and press pre-cemented edges together. May tend machine that applies cement to edges of shoe parts in conjunction with folding operation, or may pre-cement edges of shoe parts by hand and be designated accordingly; for example, Binding Folder Folder, Hand

8561-262 FORMER, SHOE PARTS(shoes) DPT:685
moulder, shoe parts.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends equipment to shape shoe parts, such as collars, arch supports and counters: Positions shoe or shoe part on heated forming die, or in mould. Adjusts rheostat to regulate temperature of forming device as specified for material being used. Pulls lever or depresses pedal to bring padded pressing arm, or die against shoe or shoe part to impart designated shape. Releases lever after specified time and removes shoe or part from device. Loads shaped items onto rack truck for removal to next work station. May complete forming of certain shoe parts by hand. May feed moccasin uppers between heated rollers of knurling machine to press and shape seams into ridge. May operate a specific type of machine, or form or mould a particular part of shoe and be designated accordingly; for example, Counter Moulder Knurling-Machine Operator Top Former

8561-266 GROOVER AND TURNER(shoes) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machines that cut heel blanks (rough forms) of wood, leather, or fiberboard into heels:

Inserts blank in holding device of machine. Pushes heel against revolving knife blades to shape outside of heel. Positions shaped heel in holding device of second machine, and starts machine that hollows out face of heel. Removes, installs and sharpens cutting blades of machines.

8561-270 HEEL COMPRESSOR(shoes) DPT:685
heel moulder.
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that compresses heels or top lifts to give them better wearing quality:

Starts machine and feeds pre-cut heels of leather or composition material into machine, and observes operation to detect malfunction. Transports heels and top lifts from storage to work location, using cart.

May change dies and adjust stroke of ram.

8561-274 HEEL SCORER(shoes) DPT:685
scorer.
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that scores insole of shoe to provide guideline for installation of heel and indicate where channel of insole begins:

Turns setscrews and moves guides on machine to hold specified insoles. Positions insole against guides, and presses switch or pushes lever to start machine that cuts score across heel seat of insole.

May make cut in toe of welt insole to prevent puckering when stitched to shoe upper.

8561-278 HEEL SHAPER(shoes) DPT:685
GED: 2 SVP: 2 EC: I 5 7 PA: L 4

Tends cutting machines that shape heels by either of the following methods:

1. Inserts heel into holding device of machine. Depresses pedal to start machine that automatically forces heel against revolving cutting blades, following and shaping front of heel. 2. Bolts specified cutting disk to machine, using wrench, and turns setscrews to adjust machine for length and depth of cut. Loads heels into feeding device. Starts machine that automatically cuts gauge in heels to form heel seat and ejects them into storage container.

May change and sharpen cutting tools. May tend a specific type of machine, or shape a particular part of shoe and be designated accordingly; for example, Concaving-Machine Tender
Heel Gouger

8561-282 INKER, MACHINE(shoes) DPT:685
staining-machine tender.
GED: 2 SVP: 2 EC: I 7 PA: L 4 7

Tends machine that applies ink or stain to colour edges of shoe soles or heels, by any of the following methods:

1. Inserts and guides outsole or midsole between pressure roller and ink-covered rollers of machine. 2. Depresses pedal that separates feed rollers; releases pedal that closes and starts rollers that hold and turn sole edge against inked wheel. 3. Positions and guides soles under machine nozzle that applies ink or stain to edge of attached outsole. 4. Positions heel against machine guide, and turns heel against revolving brush that applies ink to heel edge.

May colour particular part of shoe and be designated accordingly; for example, Sole-Edge Stainer

8561-286 PERFORATING-MACHINE TENDER(shoes) DPT:685
cut-out-machine operator.
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that cuts out decorative designs or ventilating holes in shoe parts by either of following methods:

1. Clips guide plate on machine bed and turns knobs to adjust position.

Clamps hammer block or punch in machine head. Aligns part, such as saddle, strap, or vamp on guide plate, and starts machine that cuts designs or holes in part. Turns knob to accelerate reciprocal action of punch or to regulate cutting pressure of head. 2. Selects and positions die plate on machine, and clips shoe part on plate. Pushes plate on rails under machine head, and starts machine that cuts designs or holes in parts.

8561-290 SHOE LACER, MACHINE(shoes) DPT:685
lacer; lacing-machine operator.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that laces string through shoe eyelets to close throat, prior to lasting operations:

Turns knob that adjusts length of string according to specifications. Pushes or pulls lever to adjust distance between protruding needles on machine bed to correspond with eyelet spacing. Positions part on machine bed so that needles extend through eyelets. Depresses pedal to start machine that laces string through eyelets, and ties and cuts string.

8561-294 SMOOTHING-MACHINE TENDER(shoes) DPT:685
leveler; pounder.
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that flattens and smooths shoe parts, such as uppers, insoles and outsoles, by any of the following methods:

1. Positions part under roller, and guides part while machine rolls seams flat and smooth. 2. Positions shoe on pin jack and against holding device. Starts machine that forces shoe against presser roller and moves roller back and forth over sole to flatten ridges, bulges, and nicks. 3. Positions part over or under preheated form and depresses pedal that lowers head of machine over part, pressing part to smooth seam. 4. Positions part on anvil under power hammer, and depresses pedal or pushes button that raises anvil and starts reciprocating hammer to flatten and smooth shoe part. 5. Guides bottom of lasted shoe against wheel that pounds out puckers on edges of upper.

May operate particular type of machine, or smooth a specific part of shoe and be designated accordingly; for example, Seam-Press Operator
Sole Leveler

8561-298 SPLITTING-MACHINE TENDER(shoes) DPT:685
shaver; splitter.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that splits shoe parts to uniform thickness or cuts parts into two or more layers by one of the following methods:

1. Feeds part between rollers that force part against blade. 2. Positions part against machine guides, and depresses pedal to force splitting blade against part. Turns setscrews or handwheels to adjust blade or rollers as specified. Verifies thickness of parts with specifications, using gauge. Bundles and stacks shoe parts on rack.

May sharpen machine blades. May operate particular type of machine, or split a specific part of shoe and be designated accordingly; for example, Ball-Point Splitter
Sole Splitter

8561-302 STITCH SEPARATOR AND SIMULATOR(shoes) DPT:685
welt wheeler; wheeler.
GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that presses decorative indentations on welt to separate or simulate stitches:

Mounts specified indenting blade on wheel on machine, using hand tools. Positions shoe against guide on machine bed. Pulls lever to adjust blade for stitch length when separating stitches. Depresses pedal to raise bed, pressing welt against machine head. Holds welt under indenter blade to separate stitches, or under heated corrugated wheel that forms simulated stitching.

May be designated according to type of indenter used.

8561-306 TACK-PULLER(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends tack-pulling machine that removes temporary holding tacks or staples from lasted shoes:
Pushes pedal or presses button to start machine. Holds and guides lasted shoe under revolving arm or under machine jaws that pull tacks from last and insole of upper.
May pull temporary holding tacks from upper by hand, using tack-pulling tool or pincers.

8561-310 TAPER, SHOE PARTS(shoes) DPT:685
beveling taper.
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that applies adhesive tape to reinforce seams of upper shoe parts:
Positions first of series of parts connected by thread on machine feed roller. Sets cutting device on machine to cut tape at designated length for parts being taped. Depresses pedals that actuate roller to feed parts into machine and apply tape. Cuts thread connecting parts, using scissors. Replaces tape roll on machine.
May tape particular shoe part and be designated accordingly; for example,
Top Taper, Machine

8561-314 TOE AND HEEL SPRAYER(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 7 PA: L 4 7

Tends machine that sprays toes and heels of shoes with finishes, such as wax, lacquer, or paint:
Pours finishing liquid into dispenser. Turns valve to adjust spray mechanism, and seats shoe on spindle. Activates revolving spindle and spray mechanism to spray finish on heel or toe. Examines shoe to determine coverage. Adds thinning solution to finishing liquid as required. Places finished shoes on rack to dry.
May finish a particular part of shoe, or use a specific type of finishing liquid and be designated accordingly; for example,
Heel Sprayer
Wax Sprayer

8561-318 VAMP CREASER(shoes) DPT:685
creaser; crimper.
GED: 2 SVP: 2 EC: 1 PA: L 4

Creases shoe vamps by either of following methods:
1. Positions leather model of vamp on vamp to be creased, and places them under heated machine head. Depresses pedal to lower head and crimp vamp and model against parallel walls. Positions weights over crimped vamps to obtain permanent crease. 2. Places assembled shoe over die in machine head, and stamps crease into vamp where foot bends.
May crease turn-stitched seams of lined vamp straps.

8561-322 WELT-BUTTER AND TACKER(shoes) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that cuts welt strip at heel seat of lasted shoe and tacks welt ends to insole, preparatory to bottoming operations:
Turns wheel to adjust holding device to fit shoe. Positions shoe on movable pin jack. Pushes pin jack under machine head, and depresses pedal to start machine that cuts welt strip and tacks welt ends. Fills machine receptacle with tacks. Sharpens cutting blades, using hone.
May cut off excess welt at heel seat of lasted shoe, using knife and be designated accordingly; for example,
Welt-Butter, Hand

8561-326 CEMENT APPLICATOR(shoes) DPT:686
GED: 2 SVP: 2 EC: 1 4 PA: L 4

Applies cement onto shoe parts for subsequent joining:
Feeds parts between pressure and cementing rollers of machine, and removes cemented parts, or holds parts under machine applicator nozzle that applies cement to parts. Suspends cemented parts from bar, or places them on wire rack for drying. Applies cement to irregular shaped or odd size parts by hand, using brush. Maintains level of cement in machine reservoir. Removes sections from machine, using hand tools to clean cement buildups.

May coat a particular part of shoe and be designated accordingly; for example,
Bottom Cementer

8561-330 SHANKER(shoes) DPT:687
shank cementer; shanking operator.
GED: 2 SVP: 2 EC: 1 PA: L 4

Positions and glues metal, wood, or plastic shank piece to shank of footwear, such as shoes and skates, to support arch:
Applies glue to shank piece by dipping shank in pot of glue, or by passing shank under glue dispensing spout. Presses glued shank piece in place on footwear by hand. Replaces footwear in rack, and pushes rack to next work station.
May tend machine that inserts shank in place on footwear.

8561-334 TRIMMER, HAND(shoes) DPT:687
skiver, hand.
GED: 2 SVP: 2 EC: 1 PA: L 4

Trims shoe parts by hand:
Trims excess material from edges or decorative openings of shoe parts, using hand tools, such as knife and shears, and following specifications, markings, or template outline.
May remove cement spots from upper linings. May trim particular part of shoe and be designated accordingly; for example,
Vamp Trimmer

8562-UPHOLSTERERS

This unit group includes occupations concerned with making, rebuilding and repairing various upholstered products; such as, chairs, sofas, automobile seats, cushions, mattresses, casket interiors and exteriors. Activities include: cutting, forming, padding, stuffing, compressing, springing, tying, sewing, gluing, tacking and trimming textile, leather, plastic and various other upholstery materials.

8562-110 UPHOLSTERER, ALL AROUND(furn.) DPT:361
upholsterer.
GED: 4 SVP: 7 EC: 1 PA: M 4 7

Repairs and rebuilds upholstered furniture, using hand tools and knowledge of fabrics and upholstery methods:
Discusses such matters as fabric, colour, style and cost with customers. Removes covering, webbing, and padding from seat, arms, back, and sides of workpiece, using tack puller, chisel, and mallet. Removes defective springs by cutting cords or wires that hold them in place, using scissors or wire cutters. Replaces webbing and springs or reties springs, using tackhammer, hand shears, needle and twine and clinching tool. Measures and cuts new covering material with measuring tape and scissors. Installs material on inside of arms, back, and seat, and over outside back and arms of wooden frame. Tacks, glues, or sews ornamental trim, such as decorative nails, braid, and buttons, to cover or frame. Operates sewing machine to seam cushions and join various sections of covering material, or sews by hand.
May remove stains from furniture fabrics, using cleaning agents, brush, and cloth. May estimate yardage required to reupholster furniture to determine fabric costs. May repair wooden frame of workpiece, using cabinetmaker's hand tools. May refinish wooden surfaces on furniture. May upholster cornices and be designated accordingly.

8562-112 PATTERNMAKER-AND-UPHOLSTERER,
AIRCRAFT(air & space-craft) DPT:481
GED: 4 SVP: 7 EC: 1 PA: L 3 4 7

Lays-out, cuts and fabricates aircraft upholstery and interior linings, according to sketches and design specifications:
Draws cutting lines of patterns on wood or cardboard following blueprints, oral instructions or dimensions of parts to be covered, using draughting instruments and employing knowledge of pattern-making techniques. Cuts along marked lines to form patterns, using band saw, shears or electric cutter. Positions patterns on upholstery and interior linings. Marks and cuts prototype parts, using marking

pencil, shears or electric cutter, and assembles parts, using sewing machine. Verifies accuracy of fit before using patterns for production. Fabricates production-run upholstery and interior linings from plastic or fabric material, using patterns, marking pencil, shears or electric cutters, and sewing machine. Fabricates sample and special or short run items of upholstery and interior linings without using patterns.

8562-114 VEHICLE-UPHOLSTERY REPAIRMAN(furn.) DPT:361
GED: 3 SVP: 6 EC: 1 PA: M 3 4 7

Repairs, or replaces upholstery in vehicles, such as automobiles, buses, trucks, boats and railroad cars:
Inspects vehicle to determine need for repairs and material required. Removes old upholstery from seats and door panels of vehicle, using tack puller and knife. Measures and cuts new padding and covering materials to required dimensions, using knife or shears. Replaces seat springs and ties them in place. Operates sewing machine to join material or sews by hand. Fits covering to seat frame and secures it with glue, tacks and hammer.
May repair or replace materials on the interior of automobile roofs and be designated accordingly; for example,
Top and Trim Man

8562-118 UPHOLSTERER, AIRCRAFT(air & space-craft) DPT:684
GED: 3 SVP: 5 EC: 1 PA: M 3 4

Fabricates and installs upholstering and other materials, and installs fittings and accessories, to insulate, furnish and decorate aircraft interiors:
Cuts, fits and secures insulating materials to structural members and surfaces of compartments, using hand tools and adhesives or fasteners. Lays out, cuts, fits and secures carpeting, using tape measure, shears and screws or other fasteners. Cuts, sews and fills upholstery cushions, using shears and sewing machine. Installs accessories, such as safety belts and storage harnesses, and decorative items, such as curtains and panels, using bolts, screws or other fasteners, and hand tools. Lays out and cuts patterns or templates when required for repeat production.
May work principally in aircraft manufacturing upholstery shop, laying out, cutting and sewing carpets, upholstery, interior furnishings and items, such as insulating blankets and covers. May work principally in aircraft, installing precut and pre-assembled materials, fittings and accessories and be designated accordingly, for example,
Trimmer, Aircraft

8562-120 CUTTER-AND-INSTALLER, SEAT COVER(motor vehicle) DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 3 4 7

Cuts, fits and installs seat covers:
Examines standard pattern or removes and measures automobile seat to determine amount of material required, using hand tools and tape measure. Cuts material according to measurements or standard pattern, using hand shears. Places material on pattern or pins it to seat cover and marks material with chalk to indicate where it is to be sewed, reinforced or decorated. Secures completed cover to seat with tacks or staples, using upholstery tools or stapler.
May operate sewing machine to make alterations to pre-finished standard cover. May cut, fit and install convertible tops and be designated accordingly; for example,
Cutter-and-Installer, Convertible Top

8562-122 UPHOLSTERY REPAIRMAN(furn.) DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 3 4 7

Repairs or replaces damaged or defective upholstery materials and show-wood on chairs and sofas:
Examines upholstery materials and show-wood to locate damage or defects. Sews tears or rips with needle and thread. Pulls tacks or staples from upholstery, using hammer or pliers to remove fabric cover from frame. Obtains replacement covering from cutting department. Tacks, sews or staples replacement materials to frame. Refinishes scratches, scrapes or other damage on show-wood, using sandpaper, wood-filler, wood-stain and varnish.
May repair mechanical part of adjustable reclining chair or convertible sofa-bed by replacing or adjusting parts, using pliers, wrenches, screwdrivers and other hand tools.

8562-126 SPRINGER(furn.) DPT:684
GED: 2 SVP: 4 EC: 1 PA: M 3 4

Installs webbing and springs in furniture frames preparatory to upholstering by either of the following methods:
1. Attaches ends of sinuous springs to inside of back or seat section, using hammer, metal clips and nails. Arches springs across section of frame from back to front, manually, and attaches front ends with metal clips to inside front of frame. Attaches spiral springs at specified intervals between sinuous springs by crimping ends, using pliers. Attaches spiral springs to side edges of frame opening, using metal clips, nails and hammer, and crimps spiral springs around sinuous springs, using pliers to secure in place. 2. Tacks or staples ends of webbing strips to side of frame, using tack hammer or staple gun. Stretches webbing across frame with webbing stretcher and tacks ends to opposite side of frame. Tacks strips to back of frame and weaves them through crosspieces to cover opening. Cuts webbing overlap with hand shears. Positions coil or sagless springs on webbing and fastens spring to webbing with metal clips, using clinching tool. Tacks twine to edges of frame opening and laces and ties twine to springs to stabilize and secure them in place. Cuts burlap or canvas to cover springs, places cover on springs, and tacks to edges of frame. Fastens border wire to springs, using metal clips. Bends thin wire band around outside of webbing for extra strength. Sews or tacks prepared edging over border wire, using needle and twine or tacks. Applies webbing or burlap to inside arm of upholstered furniture for strength.

8562-130 CASKET COVERER(furn.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: M 3 4

Fits and glues fabric covering to outside of casket, using hand tools:
Brushes glue over sides, ends and top of casket. Fits fabric over glued surface, by pulling, pressing and smoothing cover over casket surfaces. Trims excess fabric at corners and seams with scissors. Folds edges of cover under bottom, and glues, tacks or staples it to bottom. Glues, tacks or staples trimming material over seams and exposed edges. Cuts and places paper cover in bottom of casket.
May attach hinges to fasten top frame to body of casket and top panel to top frame with screwdriver. May trim moulding on frame of casket to allow for thickness of covering material, using mitre box and saw. May attach corner protectors and exterior hardware to outside edges of casket.

8562-134 CASKET LINER(furn.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 3 4

Pads and lines interior of caskets:
Spreads layer of excelsior evenly over bottom of casket and spreads layer of cotton over excelsior. Cuts cloth from supply roll, according to dimensions of casket, using hand shears and tacks or staples cloth over bottom padding. Pads and covers sides and ends of casket with cotton and crepe. Cuts, and fits lining material to inside of casket lid, using tacks or staples to secure fabric.

8562-138 CHAIR UPHOLSTERER(furn.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Pads and covers sections of chairs, such as seats, arms, or backs, with fabric, using pneumatic stapler:
Obtains appropriate padding, covering material and chair frame, according to specifications. Fits foam or other padding to frame, and folds corners to shape article. Fastens padding to frame, using staple gun. Covers padding with pre-cut leatherette, vinyl, canvas or other material, by pulling and stretching fabric to fit frame. Secures fabric to underside of complete form using stapler. Cuts and trims excess fabric with scissors.
May attach label that indicates style number, colour, and fabric, using stapling machine. May cover buttons with fabric, using press, and attach to chair.

8562-142 MATTRESS MAKER(furn.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: M 3 4

Pads and covers spring assemblies to upholster mattresses, performing any combination of the following duties:
Moves specified padding, springs and covering fabric to work table by hand or using hand truck. Loads spool of wire into stapling machine. Spreads sisal, leno, burlap or other padding material on table. Positions spring assembly on material and spreads padding around top and sides of spring. Draws ends over edge wire and into coils, and fastens to edge wire, using stapler or wire clips. Places padded unit on covering material and lifts sides of covering over assembly. Pulls lever to lower press arm that compresses assembly. Staples covering to wood frame, using stapler. Lifts completed spring assembly from work table onto conveyor for packing.
May cushion corners of innerspring with felt. May tack dust cloth to bottom of frame. May sew cover over padding, using tape edge machine.

8562-146 PANEL COVERER(furn.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Pads and covers metal, wood or synthetic sections or panels of furniture, such as armrests and chair seats, by either of the following methods:
1. Selects section to be covered, type of padding and upholstery materials, according to specifications. Coats surface of section with glue, using brush or spray gun. Positions and presses padding on panel by hand. Stitches padding to panel with wire, using air-powered hand-stitching machine when glue is not used. Trims excess padding from edges, using scissors. Positions upholstery material over padding and pulls material taut to remove wrinkles. Fastens material to section, using staple gun or presses edges of material onto prongs protruding from back of section. Bends prongs around section, using hammer. 2. Places cover, right side down on form, under air press. Lays padding, fibre filling and backing panel over cover. Opens valve to lower press against backing panel to compress assembly. Trims excess padding and filler from panel, using scissors. Draws edges of cover over panel and tacks or staples edge to panel.
May staple, tack or paste material-content tag to backing panel. May attach upholstered panel or section to chair frame or table top, using hand tools.

8562-150 WIRE-BORDER ASSEMBLER(furn.) DPT:685
edgewire man.
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that attaches edge-wire frame to coil-spring assemblies with spiral springs for use in upholstered furniture:
Places spring assembly on table and positions edge wire on top of springs. Inserts wire in spring forming machine and depresses pedal to start and control speed of machine. Guides emerging spiral spring so that it laces and joins edge wire and tops of coil springs on ends and sides of assembly. Removes surplus spring and wire, using nippers, and crimps end with pliers. Turns spring assembly over and repeats same process on bottom side.

8562-154 ASSEMBLER, CAR SEATS(furn.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Assembles padded automobile and truck seats and backs, performing any combination of the following duties:
Positions bottom of back seat cover, padding and springs on bed of press. Inserts wire in seam around edge of cover. Pushes pedal to start press that compresses springs. Pulls cover taut to remove wrinkles and attaches it to springs, using pneumatic hog ring pliers. Turns valve and pulls lever of steam press to smooth cover of completed article.
May depress springs manually during assembly.

8562-158 BACK Padder(furn.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles padded wooden backs for chairs:
Covers wooden backplate with padding material, such as wood fibre, cotton, or foam rubber, using hand stapler or staple gun. Inserts end of padded backplate into stretched cover. Positions cover on bed of press and pushes pedal to lower ram that forces entire padded plate into cover. Staples edges of cover to backplate. Trims excess material from edges with scissors. Bore holes in backplate, using awl.

May insert and align cardboard strips between cover edges and bottom edge of backplate.

8562-162 BOX-SPRING MAKER(furn.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Assembles box-springs by performing any combination of the following duties:
Fastens coil springs to slats of wood frame, using pneumatic hand stapler. Attaches edge-wire to border coils with metal clips, using pliers, and interlaces coils with twine to secure springs in position. Measures and cuts padding and fabric, using tape measure and shears. Spreads padding and fabric materials over coils and staples them to frame.
May cut and staple dust cloth to bottom of frame.

8562-170 SPRING ASSEMBLER(furn.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Assembles coil springs in wire frames to form box spring units for beds or chairs:
Lays bed of crossed wiring in jig and fastens springs to wiring. Fastens tops of coils together with tie wires or metal clips. Clips edge wire to tops of outside coil springs, using power clipping tool. Cuts protruding ends of wire, using wire cutters.
May staple spring assembly to wooden frame. May install spring assembly in seat section of frame by driving turned down ends of lower cross-wires into pre-drilled holes, using hammer.

8562-174 FILLING-MACHINE TENDER(furn.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends filling machine that compresses and covers spring assemblies to make mattresses or cushions:
Spreads precut and weighed cotton or other padding on floor of compression box of filling machine. Places spring assembly on top of padding and spreads more batting over spring unit, stuffing excess at ends into springs. Positions cushion or mattress cover over discharge spout. Pulls lever to contract sides of box that compresses spring unit. Depresses pedal to release ram that forces spring assembly from box and inserts it into cover.
May operate sewing machine to stitch open side of cover. May build up layers of batting in compression box to make crib pads and bunk or cot mattresses. May change machine guides and parts, according to specifications, using hand tools. May be designated according to item filled.

8562-178 PAD ASSEMBLER, HEAT SEAL PRESS(furn.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles seat, backrest and side pads for metal furniture and baby carriages, using pneumatic heat seal press:
Positions specified material, such as sheet plastic, foam-rubber padding, or masonite, on base of pneumatic heat seal press. Depresses pedal or pushes handle to lower press onto materials. Removes excess covering with shears, or tears off excess by hand. Releases pedal, or pulls handle to raise press. Examines sealed cushion for conformity to standard.
May assemble backrest pads or arm covers, using pliers, scissors, glue, and wire.

8562-182 UPHOLSTERY TRIMMER(furn.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 4

Applies trimming to upholstered furniture:
Attaches braid, binding, skirts, or other trimming material to upholstered frames, using glue, staples, nails or tacks. Pierces edges of fabric cover of upholstered furniture with pick or skewer and lifts edges of cover over heads of attaching nails or tacks to conceal them.

8562-186 UPHOLSTERER HELPER(furn.) DPT:687
GED: 2 SVP: 1 EC: 1 PA: M 4

Helps upholsterers to make, rebuild or repair furniture and boat or car seats:
Removes worn covering material and padding from frames, using scissors, or rips material out manually. Pulls tacks and clips from

frames, using tack puller. Measures and cuts covering materials, using tape measure and shears. Assists in rebuilding or repairing fabric boat and automobile convertible tops. See also definition for term title, 02-160 HELPER (any ind.).

May remove stains from upholstery, using cleaning fluid. May operate sewing machine to join pieces of covering material or sew material by hand. May tack, glue or nail trim to upholstered frame.

8562-199 OTHER UPHOLSTERERS

This group includes upholsterers, not elsewhere classified; for example, those who operate machines that stitch gauge backing to padding for use in automobile seat upholstery. A typical example of an occupational title covered by this residual group definition is, Fales-Machine Operator(furn.)

8563-SEWING MACHINE OPERATORS, TEXTILE AND SIMILAR MATERIALS

This unit group includes occupations concerned with machine- sewing of textiles, leather, fur, synthetic and similar materials to produce or repair items; such as, garments, draperies, bedding, carpets, tents, harnesses and felt goods. Activities include: beading, binding, button-holing, edging, hemming, joining, patching, scalloping and tucking, which normally occur in production operations. Occupations concerned with sewing footwear are classified in Unit Group 8561, SHOEMAKING AND REPAIRING OCCUPATIONS

8563-110 MENDER, TEXTILE PRODUCTS(textile) DPT:684 GED: 3 SVP: 4 EC: I PA: L 4 7

Operates machines to mend defective stitching or tufting on articles, or on material used in the fabrication of articles; such as, bedspreads, bath mats, robes, or rugs:

Mounts rolls of material in brackets of examining frame or places bundles of articles on work table. Examines material or article for defects and ravel defective fringing, stitching, or tufting by hand or using razor blade. Operates equipment, such as sewing machine, mending gun, and fringing machine to replace defective tufting, fringes or seams. Cuts excess thread from seam ends, tufts, and fringes, using scissors.

May clean spots and dirt from articles, using soap and water or cleaning fluid. May repair a particular type of product and be designated accordingly; for example, Material Mender
Mender, Tufted Carpets

8563-114 SEWING-MACHINE OPERATOR(any ind.) DPT:684 joiner; sewer, machine. GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Operates single- or multiple-needle sewing-machine to join, gather, hem, reinforce, decorate, or attach fasteners to textile products; such as, garments, gloves, hats, awnings, carpets, bags, and upholstery: Selects thread according to specifications or colour of fabric. Places spool on spindle and draws thread through machine guides, tensions, and needle eye. Inserts bobbin into shuttle and draws thread through slot in shuttle wall, or draws thread through guide and looper eye. Presses knee lever, depresses pedal, or moves hand lever to raise presser foot or spread feed cups. Positions parts to be sewn under presser foot and needle, and lowers presser foot. Starts, stops, and controls speed of machine with pedal or knee lever and guides parts under needle, following edges, seams, or markings on parts. Observes stitching to detect defects and notifies repairman of machine malfunctions. Cuts excess material or thread, from items, using blade attached to machine, or scissors. Lubricates machine, using oil can.

May change needles, and secure modifying attachments to machine. May be concerned with operating a specific type of machine, or sewing a particular part or article and be designated accordingly; for example, Elastic Attacher
Glove Sewer
Hemstitching-Machine Operator

Multi-Needle-Machine Operator
Seamer
Single-Needle Operator
Sleeve Maker

8563-118 EMBROIDERY-MACHINE TENDER(textile) DPT:685

automatic-embroidery-machine tender.

GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Tends machine that automatically embroiders designs on fabric: Threads roll of perforated cardboard that controls stitching operation through guide rollers and attaches end to automatic control mechanism or inserts punched cards in machine. Aligns pointers on cloth frame with marks on machine chassis to position frame within prescribed stitching action limits. Turns handwheel to make first stitch, observing needle and shuttle action, thread tension, and alignment of stitch. Starts machine and observes operation to detect malfunction. Marks stitching errors with pins or tape. Makes adjustments, such as replacing or rethreading needles and inserting new shuttles.

May direct or assist workers in machine set up. May operate semi-automatic machine to embroider decorative design on fabric. May operate a specific type of equipment and be designated accordingly; for example, Embroiderer, Pantograph
Stitcher

8563-122 RUG SEWER(textile) DPT:685 rug joiner. GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends travelling sewing machine that joins rugs into continuous lengths:

Butts rug ends to be joined between tension bars of holding mechanism, by hand. Secures butted rug ends together by depressing lever to activate holding mechanism. Repositions rug ends in holding mechanism under needle of sewing machine. Starts sewing machine and auxiliary cutting device that joins rug ends and removes excess material while moving along rail across width of rug. Observes sewing and trimming operation to detect malfunctions. Releases joined rugs by pressing button. Rethreads machine and performs routine maintenance, such as replacing needles.

8563-126 SEWING-MACHINE TENDER(any ind.) DPT:685 sewing-machine operator, automatic. GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends one or more sewing machines that automatically seam continuous lengths of cloth; or automatically join, reinforce or decorate textile articles, such as garments, draperies, and rugs; or automatically perform specific sewing functions, such as hemming, quilting, tufting, tacking, embroidering, pleating, and buttonhole making:

Places spools of thread on thread holders and draws ends through guides, tensions, and needle eyes. Inserts bobbins into shuttles and draws threads through slot and shuttle wall or draws threads through guides and looper eyes. Places roll of material on brackets at entry end of machine and threads material through feed rollers and guides. Moves lever to raise pressure foot, draws material under needles, and lowers presser foot. Presses pedal or button to start machine. Patrols work area when operating more than one machine to detect defective stitching, breaks in thread, or machine malfunctions. Rethreads machine, replaces defective or broken needles, or notifies repairman of machine malfunction. Selects supplies, such as fasteners and thread according to work ticket or colour of fabric.

May remove rolls or trucks of material from discharge end of machine. May specialize in working with a particular type of machine or article or filling a specific sewing function and be designated accordingly; for example, Buttonhole Maker
Quilting-Machine Operator
Sewing-Machine Operator, Zipper
Tufting-Machine Operator

8563-199 OTHER SEWING MACHINE OCCUPATIONS, TEXTILE

This group includes textile sewing-machine operators, not elsewhere classified; for example, those who sew tape and label on mop heads. A typical example of an occupational title covered by this residual group definition is:
Mop-Head Sewer(misc. prod. fab., n.e.c.)

8566-INSPECTING, GRADING AND SAMPLING OCCUPATIONS: FABRICATING, ASSEMBLING AND REPAIRING, TEXTILE, FUR AND LEATHER PRODUCTS

This unit group includes occupations in inspecting, sorting, grading and sampling work as described under the term titles, 02-170 INSPECTOR(any ind.); 02-150 GRADER(any ind.); and 02-330 SAMPLER(any ind.); concerned with quality control activities in the fabrication, assembly, and repair of textile, fur and leather products.

8566-110 FUR SORTER(fur goods; leather tan. & fur dress.) DPT:387
fur grader; fur matcher.
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Sorts fur skins into single garment bundles according to shade, size, pattern and density of fur:
Makes visual comparison of pelts with sample pelt of each grade. Stokes fur to feel its density, to reveal its undercolour and to judge height of fur. Selects those pelts that match or blend and have the same density and length of fur, and places in separate bundles.
May estimate number of pelts required for particular garment to be manufactured. May store matched and dressed pelts in stockroom and keep inventory of pelts on hand. May sell pelts to customers.

8566-114 LEATHER GRADER(garment & fabric) DPT:687
GED: 3 SVP: 5 EC: 1 PA: M 4 7

Examines and grades leather hides and various animal skins to make articles such as, garments, gloves and mittens, according to specifications:
Visually examines leather to detect defects; such as scars and holes, and feels leather to detect thin and thick areas. Grades and stacks leather according to thickness, colour and quality. Cuts out defective parts, using knife. Weighs stacks of leather and records information; such as, weight, quantity and quality.
May pass leather through a measuring machine to determine size. May direct other workers. May spread hide or skin over illuminated draughting table to examine leather for defects.

8566-118 INSPECTOR, LEATHER GOODS(leather goods) DPT:584
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Examines handbags, wallets and similar leather products for defects, such as missing seam stitches, variation in colour and blemishes:
Trims excess material and thread from articles, using clippers. Wipes spots and stains from articles, using cleaning solution and cloth. Places inserts, such as coin purses, combs, and tissue paper into articles. Attaches inspection tag to articles and records articles inspected. Groups articles of same grade, size, style and colour, and stacks them in lots.

8566-122 SHOE INSPECTOR(shoes) DPT:584
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Inspects finished and partially finished shoes and shoe parts for imperfections:
Examines parts of or complete shoes for defects; such as, uneven or broken stitching, lining wrinkles, faulty colouring, or excess cement. Marks faulty parts or shoes with pencil or chalk, or attaches repair tag and routes them to departments responsible for repair. Makes minor

repairs, using hand tools and power sander. Records number of defective shoes and shoe parts.
May sort and grade parts of leather shoes; such as, soles, shanks and lasts. May pack shoes or shoe parts in containers for further processing, storage or shipment. May be designated according to area of work, or part of shoe inspected; for example,
Fitting-Room Inspector
Lasting Inspector

8566-126 DRAPER(garment & fabric; knit goods) DPT:684
garment finisher.
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Verifies fit of garment on form, marks location of trimmings, fasteners and defects, and presses garment:
Positions garment on sized model form and examines fit and hang of garment for conformity to model. Indicates defects; such as, wrinkles, bulges, or puckers, and positions of fasteners and trimmings; such as, belts, buttons, sashes and snaps, by pinning garment or marking with chalk. Presses finished garments, using hand iron to remove wrinkles, flatten seams, and give shape to garment. Places garment on hanger and stuffs garment manually with tissue paper to enhance appearance.

8566-130 INSPECTOR, GARMENT(garment & fabric; knit goods) DPT:687
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Inspects finished garments for workmanship and conformance to standards, performing any combination of the following duties:
Spreads garments on table or draws them over inspection forms. Visually examines garments for defects in assembly and finish; such as, puckers, bulges and splits in seams, lining and collar settings, misplacement of pockets, loops, snaps, buttons and button holes, faulty pressing, runs and variations in colour. Marks defective garments, using chalk, thread, tags or pins, for reworking or removal from stock. Measures garment at designated places, using tape measure or ruler, or following markings on table, to determine conformity to standard size. Trims excess material or thread ends from garment, using scissors. Removes lint, threads, spots and stains from garments, using brush or lint remover and cleaning fluid. Attaches identification tags, price tickets or labels to garments and compares with hanger ticket to ensure correct marking of style, size and material content. Smooths, folds and stacks garments on table or hangs them on rack to avoid wrinkling. Records number of garments accepted or rejected.
May hand sew buttons to complete garment when buttons cannot be machine-fastened. May be designated according to phase at which inspection takes place, or according to type and part of garment inspected; for example,
Final Inspector, Garments
Inspector, Foundation Garments
Inspector, Jackets
Inspector, Shirts

8566-134 CUSHION-AND-COVER INSPECTOR(furn.) DPT:587
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Inspects finished upholstered cushions and furniture covers for defects and conformance to specifications:
Marks defects, using chalk, tag or adhesive colour-coded tape. Rips out faulty seams and returns rejected items for re-working. Measures valances with yardstick to verify conformity to specifications. Records number of defects.
May repair minor defects, using needle and thread. May correct irregularity of shape or surface, using pick. May be designated according to product inspected; for example,
Cover Inspector
Cushion Inspector

8566-138 INSPECTOR-GRADER, SECONDS(garment & fabric; knit goods) DPT:587
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Inspects, sorts and packages repaired garments according to quality, size and style: Sorts and stacks repaired garments as first or second quality, according to size, style, order number and types of defects. Examines garments for defects in assembly and in material. Trims excess material and thread ends from garments, using scissors.

Removes trade labels from second-quality garments. Folds, bags and boxes garments, according to requisition. Records size, style and number of seconds packed. Stacks boxes on hand truck.

8566-142 EXAMINER, GLOVES AND MITTENS(garment & fabric) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects finished gloves and mittens for defects and grades them according to specifications:
Examines gloves and mittens for flaws in material, variations in colours, and pulls at seams to detect defective stitching. Separates articles with stitching defects for resewing. Pairs articles of same grade, size, style and colour. Staples together pairs of dress gloves. Grades gloves and mittens according to weight, evenness of stitching or colour shading and stacks them in lots for packing.
May cut threads from seam ends, using shears, and draw gloves or mittens between rotating brushes to remove loose threads. May verify quality and fitness of article by stretching it over form. May tag gloves and mittens according to size and quality. May keep production records.

8566-146 FUR SORTER, HAT(fur goods) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Divides small fur pelts, such as mink tails, into lots, according to colour, size, density of fur, and number required for making each hat: Spreads fur pelts on table. Removes matted or greasy furs and shreds of skin. Examines and matches fur pelts into lots and wraps each lot in tissue paper prior to manufacture of hats.

8566-150 INSPECTOR, HAT(garment & fabric) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects finished or partially finished hats for defects, damage and conformity to standards:
Examines hats for irregularities; such as, faulty colouring, shaping, sizing, stitching and improperly placed bands or ornaments. Returns damaged hats to originating department for repair. Trims excess material and loose or protruding threads, using scissors. Removes spots or stains, using sponge and water. Brushes surface of hat to remove dust or foreign matter. Places hats on racks or stacks them on table for packing or further processing.
May apply stiffening solution to inside of hat. May sew in missed stitches. May pack hats in containers, line boxes or cartons with tissue paper and mark contents on outside of containers.

8566-154 INSPECTOR, MATTRESS(furn.) DPT:687
GED: 2 SVP: 3 EC: I PA: H 4 7

Inspects finished mattresses and box-springs for conformance to specifications, finish and appearance:
Examines mattress and box-spring surfaces for puckers, irregular corners and matching of colours. Measures length and width of mattress and box-spring to verify conformity with specifications, using tape measure. Cuts loose threads and fabric ends from mattresses meeting standards and removes defective mattress or box-springs from conveyor. Blows dust and loose threads from surface folds, using air gun.
May wrap mattresses and box-springs by hand, using kraft paper, and seal with gummed tape. May stamp identifying information; such as, size, colour and serial or lot number, on package.

8566-158 INSPECTOR, PARACHUTES(garment & fabric) DPT:687
GED: 2 SVP: 3 EC: I PA: L 4 7

Inspects parachutes and parachute parts at end of manufacturing process to detect flaws in materials and workmanship:
Spreads parachute or part, such as canopy and shroud webbing, on arborite or glass-topped table or over fluorescent light. Examines closely for minute flaws, such as defective material and stitching, crooked hems, and tears. Pulls on shroud lines and suspension cords to ensure tightness of knots. Marks defective stitching, hems, seams, and taped edges. Pins pieces of coloured cloth over defective areas and stacks rejected parachutes aside. Folds flawless parachutes for shipment.

8566-162 SAMPLE CLERK(garment & fabric) DPT:587
swatch clerk.
GED: 2 SVP: 2 EC: I PA: L 4

Collects and catalogues samples from goods, such as knitted material, hosiery or other fabric:
Marks each lot to identify goods, such as bolts of cloth, from which samples were cut. Selects samples according to specifications and examines them to ensure conformance to standard. Records lot number from which sample was taken. Staples sample to card for filing or slips sample under elastic band attached to cardboard display. May trim samples, using scissors.

8566-199 OTHER INSPECTING, GRADING AND SAMPLING OCCUPATIONS, TEXTILE, FUR AND LEATHER PRODUCTS

This group includes textile, fur and leather products inspectors, graders and samplers, not elsewhere classified; for example, those who examine altered garments to ensure quality workmanship, and inspect and sort used clothing gathered for welfare agency. Typical examples of occupational titles covered by this residual group definition are:
Garment-Alterations Examiner(garment & fabric; ret. trade)
Sorter, Used Clothing(social wel.)

8568-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: FABRICATING, ASSEMBLING AND REPAIRING, TEXTILE, FUR, AND LEATHER PRODUCTS

This unit group includes occupations in labouring and other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), which are concerned with fabricating, assembling and repairing textile, fur, and leather products. Activities include: opening bales of textile materials, cutting materials into lengths, trimming threads from garments, impregnating hats to impart finish, framing material for machine embroidery, stuffing pillows, comforters, and padded sports equipment, removing blemishes from finished shoes, and staining edges of leather belts.

8568-110 CONE DRYER, HAT(garment & fabric) DPT:686
whizzer.
GED: 1 SVP: 2 EC: I 4 PA: L 4

Places felt hat cones in centrifugal extractor that removes excess water from hat cones after water blocking:
Removes felt hat from tank of cold water. Pulls hat over hat-shaped holder on machine, or places it in machine basket. Presses button or depresses pedal to start machine spinning, to remove excess water from hat. Presses button or releases pedal to stop machine and removes hat.
May feel hat during drying cycle to ascertain degree of dampness. May place hat cone on conveyor that carries it through drying room to complete drying operation.

8568-114 GLOVE-TURNER-AND-FORMER, AUTOMATIC(garment & fabric) DPT:686
GED: 1 SVP: 2 EC: I PA: L 4

Feeds and offbears gloves to and from automatic turning and forming machine:
Positions hand-shaped forms of pre-determined size in slots of rotating disk of machine and lowers clamps to secure forms. Presses button to start machine and pulls each glove over form, covering multiple forms in single revolution of disk. Removes turned and pressed gloves from exit conveyor of machine. Examines gloves for defects. Pairs and stacks gloves ready for packaging.
May cut threads, using scissors. May fold thumb inside palm. May turn gloves or mittens right-side out, manually, using glove turning device and be designated accordingly.
Glove Turner, Hand

8568-118 HAT TREATER(garment & fabric) DPT:686
GED: 1 SVP: 2 EC: 1 4 PA: L 4

Applies sizing liquids, such as shellac, lacquer and paint, to felt or straw hats or hat parts, to stiffen, waterproof, or impart finish: Pours premixed liquid into container, or thins liquid according to specifications. Applies prepared liquid to hat or hat parts, using brush, sponge, or spray gun, by dipping in liquid, or by feeding articles between rollers of liquid coating machine. Places articles in machine that spins them to remove excess liquid. Places articles on racks to dry, or loads them on to conveyor that carries them through drying room. May be designated according to type of hat or hat part treated; for example, Brim Stiffener Hat Stiffener Straw-Hat Dipper

8568-122 LABEL-HEAT TACKER(garment & fabric) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Feeds heat-tacking machine that affixes glue-impregnated trade- mark labels to shirt yokes: Selects labels according to specifications. Loads labels in feed hopper of machine preparatory to labelling. Depresses button to heat machine. Places shirt yoke on bed of machine and depresses foot pedal to lower label-holding arm that affixes label to shirt yoke. Places labelled yokes aside for shirt assembly. Cleans machine, using cloth and cleaning solution.

8568-123 PERFORATING-MACHINE TENDER(garment & fabric) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Tends perforating machine that punches holes in hat parts to make ventilating, decorative and assembly perforations: Positions hat part against guide or on mould under single or multiheaded punch in ram of perforating machine according to specification markers. Depresses pedal to clamp part in bed of machine. Manipulates lever to lower ram-punch and perforate part. May tend machine that automatically feeds part across machine bed as punch perforates part. May be designated according to part perforated; for example, Brim Slotter Sweatband Perforator

8568-124 PINKING-MACHINE TENDER(garment & fabric; shoes) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 3 4

Tends machine that cuts serrated edges on garment seams or footwear parts to prevent ravelling or to decorate: Positions raw edge of seam, hem, or part between pressure and pinking rollers of machine. Depresses pedal to start machine. Feeds raw edge between rollers and guides to serrate material. May tend machine equipped with a lever-type blade to cut sample swatches of cloth.

8568-126 PRESSING-MACHINE FEEDER(garment & fabric; knit goods) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Feeds textile products such as garments, hosiery, or folded sheets into machine that presses articles preparatory to packing: Starts machine and adjusts steam pressure and tension of conveyor belt, by turning hand controls. Places garment, hosiery or folded sheets on conveyor belt. May remove articles as they emerge from pressing machine and place them on handtruck or tray.

8568-127 SOLE FLEXER(shoes) DPT:686
GED: 1 SVP: 1 EC: 1 5 PA: L 4

Bends shoe soles to create sole flexibility: Feeds leather outsoles or insoles through machine equipped with series of powered rollers that bend outsoles or insoles to make them more flexible. Catches soles coming from machine and stacks them on rack or handtruck for further processing. Pushes truck or wheeled rack to next work station.

8568-130 ANTI-SQUEAK FILLER(shoes) DPT:687
cushion cement.
GED: 1 SVP: 2 EC: 1 PA: L 4

Applies liquid coating to shoe parts, or cements cushioning material between parts, to prevent shoe squeaking due to friction or wear, using any of the following methods:

1. Brushes coating of liquid chalk or wax on parts, such as heel bases, flares and outsoles to prevent squeaking. 2. Applies cement with fingers or brush onto pieces of cloth, leather, or sponge rubber, and positions pieces between shoe parts, such as insole, midsole and steel box toes. 3. Presses strips of gummed tape on steel shoe shanks.

8568-134 BAG LINER(misc. prod. fab., n.e.c.) DPT:687
doubler.
GED: 1 SVP: 2 EC: 1 5 PA: L 4

Lines cotton and jute bags with cotton or plastic liners: Unloads bags from handtruck and stacks them on doubling table. Adjusts spacing between two rods projecting horizontally from side of table according to size of bag, using wrench. Slides plastic or cotton liner on to horizontal rods and pulls outer bag over liner(s) by hand to produce double or triple bag. Carries lined bags from doubling table and stacks them on handtruck. Transports stacks of bags between work areas, using handtruck.

8568-138 BUCKLE SHAPER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Covers and shapes buckles, using either of the following methods: Pushes reinforcing wire through tubular fabric. Cuts off material to match length of reinforcing wire, using scissors. Inserts covered wire into bending device and pulls lever to form one side of buckle. Repeats action to form other side of buckle. Inserts metal joint to cover buckle ends, and positions and secures prongs, using pliers. Cuts piece from strips or sheets of brass according to size of buckle blanks, using shears. Positions and shapes brass over wooden buckle blank, and presses brass with fingers to ensure adherence to blank. Trims excess brass so as to uncover buckle center, using knife. Folds in and shapes edges, corners, and center with fingers to give buckle final shape. Solders joints of buckle, using soldering gun.

8568-142 BUFFING-DISK ASSEMBLER, CLOTH(non-metal. min. prod., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Assembles layers of cloth disks used to make fabric buffing wheels: Inserts rod in centre hole of stack of disks. Turns disks so weave in cloth layers is at different axis to those of adjoining layers, to reduce fraying. Counts specified number of disks required to make one wheel, while turning them. Removes disks from rod and stacks them into carton or in tray. Lays paper strip between stacked disks required to make one wheel. May sew cloth disks together to make fabric buffing wheels, using sewing machine.

8568-146 LABOURER, DRAPERY(garment & fabric) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Performs any of the following or similar duties in fabrication of curtains and draperies, working as a member of a team: Spreads fabric and lining on cutting table according to dimensions, continuity of printed design, and model to be processed. Places lining over drapery panel. Hangs resulting assembly over rack preparatory to seaming, respecting size, continuity of pattern and model. Turns lined draperies right-side-out, by hand, and hangs them on rack preparatory to pleating. May fold and bag draperies. May place information on labels.

8568-150 EDGE STAINER, BELT(leather goods) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Stains edges of leather belts, using dye and sponge: Inserts individual belt between holding bars of frame and secures frame to table edge, using wooden blocks. Taps belt with wooden block to align exposed surface. Applies liquid dye or stain to belt edges, using sponge. Wipes off surplus dye, using rag. Removes belts

from holder and reverses position in frame for staining of other edge or places them in box for further processing.

8568-154 EMBROIDERY-FRAME MOUNTER(garment & fabric; knit goods) DPT:687
spanner.

GED: 1 SVP: 2 EC: 1 PA: L 4

Performs the following duties related to machine embroidering of fabrics or garment parts:

Clips garment piece to top of frame. Pulls fabric taut and clamps or pins overhanging material under frame to maintain tautness. Adjusts frame on machine and aligns needles and shuttle rails, using spanner. Pins applique cloth strips over spanned fabric. Cuts threads and excess applique material from embroidered garment section before removing pieces from frame. Threads needles, replaces depleted bobbins, and cuts threads between needle and embroidered fabric.

8568-158 FINAL ASSEMBLER, GARMENT(garment & fabric) DPT:687

GED: 1 SVP: 2 EC: 1 PA: L 4

Prepares manufactured garments for final inspection:

Closes slide fasteners, buttons and snaps. Draws belt through belt loops and fastens buckle. Ties bows. Trims ends of threads protruding from garments, using scissors.

May carry out preliminary inspection of buttoned coats on hanger to ensure straightness of overlays indicating correct alignment of buttons and sets aside unsatisfactory coats.

8568-162 GARMENT FOLDER(garment & fabric) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Folds garments manually, prior to shipping:

Inspects garments to detect and mark defects, using contrasting coloured thread and needle, and discards defective garments. Spreads garment on table. Positions board over article and folds garment over board. Secures garment, using pins, and removes board from folded garment.

May sew labels on article, using sewing machine. May insert folded articles in polyethylene bags, seal opening, using tape or heat sealer, and place bags into boxes or cartons for shipping. May fold a specific type of article and be designated accordingly, Handkerchief Folder

8568-166 GLOVE LINER(garment & fabric) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Inserts cloth linings in gloves or mittens:

Positions and secures specified size of glove or mitten form on stand. Unties bundles of linings, and gloves or mittens and places in proximity to glove form. Places lining on form and pulls glove or mitten over lining. Removes lined glove or mitten from form.

May stack and bundle finished gloves and pack bundles into carton. May trim thread ends from lining, using scissors. May write information on packing label; such as, quantity, size, style and colour. May close and seal cartons, and attach label, using glued kraft paper.

8568-170 GLOVE PAIRER(garment & fabric) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Pairs and matches gloves or mittens prior to packaging:

Matches right and left hand gloves or mittens according to size, style, code number, and colour. Tacks each pair of gloves or mittens together by hand or using tacking machine, or folds and staples labels on cuffs of paired gloves. Stacks gloves or mittens in specified lots. May fold thumb inside palm of glove or mitten before pairing. May pack gloves in boxes or bags.

8568-174 HAT BRUSHER(garment & fabric) DPT:687
hat duster.
GED: 1 SVP: 2 EC: 1 PA: L 4

Removes dust, lint, and loose fibres from felt hats after rough or final pouncing operations, using hand brush and air hose:

Fits hat over hat block on turntable, and depresses pedal to start turntable rotating. Holds brush against outside surface of hat, or

presses valve on air hose to direct air over hat surface, to remove dust from hat. Releases pedal, removes hat from block, and dusts inside of hat, while holding it with hand. Examines hat for cleanliness and places aside for further processing.

May tend machine that flexes hat brims and raises nap on brim, to improve pliability and appearance. May prepare and attach code labels and trim feathers to hats.

8568-178 HAT-LINING CEMENTER(garment & fabric) DPT:687

hat liner.

GED: 1 SVP: 2 EC: 1 PA: S 4

Cements linings into crowns of hats:

Lifts sweatband in hat and brushes cement on inside of hat crown and underside of sweatband. Positions lining in crown and presses with fingers to smooth and join lining to crown and sweatband. Repositions sweatband in hat.

8568-182 LABOURER, BOOT AND SHOE(shoes) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 3 4

Performs any combination of the following duties in a shoe factory:

Treats lasts with substances, such as wax, powder, or grease, to prevent lining from sticking at box toe and counter when shoe is lasted. Off-bears products of leather-cutting and shaping machines. Stacks and stores leather parts according to size and shape. Gathers, sorts and trims salvageable leather scraps. Transports shoes in various stages of completion to workers, for processing. Places plastic covering over partially assembled shoe to protect shoe-uppers during some stages of production. Removes lasts from assembled shoes, and cleans wooden shoe lasts by pressing them against rotating abrasive wheel to remove dried cement. Sorts lasts, patterns and templates according to size, and places them in bins or on shelves. Sprays shoes with disinfectant, using spray-gun. Threads laces through eyelets, or buckles straps of finished shoes. Pairs shoes and ties them. Sweeps floors and cleans work benches.

May be designated according to task performed; for example, Scrap Sorter
Shoe Pairer

8568-186 LABOURER, COATING AND EMBOSSING(linoleum prod.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: H 3 4

Performs any combination of the following duties in manufacture of batting, padding and coated vinyl material:

Transports rolls of material, engraved printing or embossing rolls, and drums of liquid plastic and print colour, to and from machine, using handtrucks. Positions rolls to let-off and wind-up racks, using hoist. Joins ends of material to form continuous rolls, using automatic sewing device. Observes material at wind-up rack, and notifies operator of processing defects. Starts rolls winding onto core, changes knives and threads vinyl plastic sheet into machine. Scrapes and cleans equipment, removes scrap material, and sweeps area.

May measure width of rolls of material and identify them with colour code card. May weigh rolls of material before and after coating processes. May feed and off-bear coating-and-embossing machine.

8568-187 LABOURER, FURRIER SHOP(fur goods) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Performs any combination of the following duties in furrier shop:

Dampens skin side of furs, using brush and water, and stretches skins manually to prepare skins for cutting. Carries skins to work tables as directed. Brushes sections of unfinished garments with water-dampened brush to smooth fur, remove dust and loose hairs. Keeps work area clean and places scraps of fur in container.

May assist in packing and shipping fur garments and in loading delivery trucks.

8568-190 LACER(sport. & toy) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Laces sporting equipment such as footballs, volleyballs, and hockey gloves.

Pushes end of fabric, plastic, or leather lace through eyelets of article, using awl or lacing needle. Pulls lace through eyelets. Repeats

operation and ties and cuts lace, using scissors, after article is laced as specified. Pushes cut ends under lacing to secure and finish.

8568-194 LAY-UP MAN(garment & fabric) DPT:687
cloth spreader.
 GED: 1 SVP: 2 EC: 1 PA: M 4

Spreads layers of cloth on table preparatory to marking and cutting parts for such articles as garments, upholstery covers, bedspreads, and toys:

Mounts roll of cloth on reel at end of table, or movable carriage. Threads end of cloth through rollers. Unwinds material from roll or moves roll on movable carriage to spread first layer of cloth on table. Pulls and places cloth to align layer with marks on table, or edge of table. Repeats spreading action until required number of layers are on table. Clamps edges of cloth to table or stitches layers of cloth together to facilitate cutting or handling, using awl and twine. Keeps record of fabric lengths cut.

May lap ends of cloth at markings, and carry folded cloth to storage bin. May position pattern on top layer of cloth ready for cutting. May spread cloth, using spreading machine.

8568-198 LENGTH CUTTER, HAND(any ind.) DPT:687
 GED: 1 SVP: 2 EC: 1 PA: M 4 7

Cuts single or multiple layers of materials or articles, such as cloth, narrow fabrics and rugs to specified lengths, using shears, hand or powered knife or circular saw:

Mounts bolt of material on rack manually or with hoist, or positions handtruck of cloth, carpeting or other material at end of cutting table. Unrolls material from spool, bolt, or handtruck, and spreads material along calibrated scale on cutting table. Smooths and aligns edges of material. Cuts material to specified lengths. Rolls or stacks lengths of cut material and places them on handtruck.

May wind strand of material, such as elastic, braid and ribbon around reel or pegs on cutting table and cut material at specified points, using scissors or knife. May pull material directly from end of machine to table prior to cutting. May tie lengths of material into bundles. May be designated according to material or product cut; for example,

Blanket Cutter, Hand(textile)
 Carpet Cutter, Hand(textile)
 Cloth Cutter, Hand(garment & fabric; textile)
 Elastic Cutter, Hand(garment & fabric; textile)
 Ribbon Cutter, Hand(garment & fabric)

8568-202 LINK CUTTER(knit goods) DPT:687
clipper.
 GED: 1 SVP: 2 EC: 1 PA: L 4

Separates circular or flat knitted fabric into lengths of garment parts prior to cutting or sewing:

Folds fabric in regular sequences, placing connecting rows of loops on fold. Cuts thread ends, using scissors. Pulls thread to ravel- connecting rows. Turns pile of knit tubing and repeats raveling until all pieces are separated.

May examine, sort, count, and tie articles into bundles, according to style, colour, and size. May use winding beam to unroll connecting threads, pressing button to actuate winding beam and guiding thread on beam to prevent tangling. May cut several stitches with scissors and unravel rows of excess fabric and be designated accordingly, Raveler

8568-206 SHOE CLEANER(shoes) DPT:687
shoe polisher.
 GED: 1 SVP: 2 EC: 1 4 7 PA: L 4 7

Cleans and polishes shoes before or after finishing, performing any of the following duties:

Holds and turns shoe against revolving brush to remove dust and dirt from surface prior to or after finishing. Cleans shoes by hand, using brush and compressed air gun. Places shoes on rack in spray booth and sprays with warm water to remove dirt. Removes foreign matter, such as grease and cement from finished shoes, using art gum, knife, and cleaning fluids. Restores colour to blemishes on shoes by applying prepared colours with cloth, hand spray, or crayon. Applies prepared filler to fill cracks and scratches on shoe. Sprays polish on white leather shoes and rubs shoes with rag to give glossy and finished appearance. Applies bleaching liquid to outsoles of lasted shoes to lighten colour,

using brush or cloth. Stains, waxes and polishes outsoles and heels of shoes, using spray gun, power brush and buffing wheel.

May be designated according to functions performed; for example,
 Blemish Remover
 Bottom Finisher
 Brusher
 White-Shoe Polisher

8568-210 SHOE-PARTS DIPPER(shoes) DPT:687
dipper.
 GED: 1 SVP: 2 EC: 1 4 PA: L 4

Dips shoe parts in various solutions to harden, insulate or stiffen leather, as required for further processing:

Places heels, insoles or uppers and other shoe parts in containers, such as wire basket, rack or dipping frames. Lowers containers into tank containing treating solution, using power hoist. Raises containers and allows excess solution to drain from shoe parts. Places containers in drying area, or removes treated parts from containers and places them on drying rack.

May feed shoe parts or uppers onto conveyor leading to muller (leather softening machine). May apply softening solution to uppers, using cloth or sponge. May be designated according to part processed; for example,
 Heel Doper
 Insole Dipper
 Sole Wetter

8568-214 SPIKE INSTALLER, GOLF-SHOE(shoes) DPT:687
 GED: 1 SVP: 2 EC: 1 PA: L 4

Attaches spikes to golf-shoe soles and heels by either of the following methods:

1. Threads spikes into metal inserts that have been moulded into plastic soles and heels of completed shoes. Inserts spike head into socket, and presses shoe against revolving air wrench until spike is threaded securely. Repeats operation until each spike in sole and heel is fastened to shoe. 2. Sets shoe right side up on padded anvil. Inserts stud in auger and revolves tool against sole of shoe until spike is completely threaded.

8568-218 SPORTS-EQUIPMENT FILLER(sport. & toy) DPT:687
 GED: 1 SVP: 2 EC: 1 PA: L 4

Stuffs sports equipment, such as baseball base markers, football dummies and medicine balls manually with excelsior or other filling material:

Fills bag, ball or hide, with excelsior, cotton, felt or animal hair. Places the filled object on bed of press and pulls lever to lower head that compresses stuffing to prescribed thickness. Inserts anchor straps through loops sewn on baseball base and football dummies.

8568-219 STEAM-CABINET ATTENDANT(garment & fabric) DPT:687
 GED: 1 SVP: 2 EC: 1 3 4 PA: L 4

Places rolled pleat patterns in steam cabinet to set permanent pleating: Places rolled patterns or cylinders in upright position in steam cabinet for specified period of time. Turns knobs to set temperature and humidity in steam cabinet, according to specifications. Turns valve to admit steam into cabinet. Removes steamed patterns and places them on rack to cool.

8568-222 STUFFER(misc. prod. fab., n.e.c.) DPT:687
filler.
 GED: 1 SVP: 2 EC: 1 7 PA: L 4

Fills pillows, cushions, comforters, sleeping bags, athletic equipment, or insulated clothing with down, feathers, or other filler, using fanning machine:

Weights out specified quantity of filling material on scale, and distributes filler into smaller containers. Inserts blower hose of fanning machine into article or segment of article to be filled and places suction hose into filler container. Depresses foot pedal to start machine which blows filler into cover.

May stuff pillows or cushions by hand. May close open end of cushion cover, using sewing machine.

8568-226 THREAD TRIMMER, MACHINE(any ind.)

DPT:687

thread cleaner; thread cutter.

GED: 1 SVP: 2 EC: 1 PA: L 4

Trims loose threads from edges or seams of articles, such as knitted garments, draperies, dresses and handbags, using either of the following methods:

1. Moves edges or seams over stationary cutting head equipped with vacuum attachment that draws threads between reciprocal blades to cut threads. 2. Spreads article on table or pulls article over form and guides electric hand clippers equipped with vacuum hose along edges or seams of article to cut threads. Pulls loose threads through several stitches with latch needle or ties threads from converging seams to secure stitching, when trimming knitted garments.

May cut short or thick threads unsuitable for machine cutting, using scissors.

8568-230 TRIMMER, HAND(any ind.) clipper.

DPT:687

GED: 1 SVP: 2 EC: 1 PA: S 4 7

Trims ravellings, loose thread or excess material from articles such as, garments, hosiery, textile products, embroidered articles, handbags, or shoe parts:

Breaks, cuts, and trims excess material or loose threads from completed garments or garment parts, using scissors. Pulls through basting or loose ends of stitching threads from outside to inside of knitted garments and socks, using hook or bodkin and knots thread, and cuts off loose ends with scissors.

May scan trimmed articles for soiled spots and stitching or dyeing defects. May carry bundle of trimmed articles to next department for further processing. May be designated according to particular task assigned; for example,

Basting Puller(garment & fabric; knit goods)

Embroidery Trimmer

Puller-Through(knit goods)

8568-234 TURNER(any ind.)

DPT:687

GED: 1 SVP: 2 EC: 1 PA: L 4

Turns garments, assembled textiles or leather articles right-side out, using turning devices:

Pulls article over lower rod of holding device and folds up lower end of article. Depresses pedal that closes jaws of holding device and pulls article right-side out. Releases pedal and removes article from rod. Piles turned articles on handtruck or table, for further processing.

May reverse article by hand. May clip thread between chain-sewn articles, using scissors. May be designated according to type of article reversed; for example,

Bag Turner

Footwear Turner(knit goods)

Garment Turner(garment & fabric; knit goods)

8568-238 HAT-SWEATBAND FLANGER(garment & fabric)

DPT:686

sweatband flanger; sweatband roller.

GED: 1 SVP: 1 EC: 1 PA: L 4

Feeds hat sweatbands into flanging machine that curls sweatband to fit contour of hat:

Depresses pedal to start machine. Feeds sweatband between rollers and against guide on machine roller that curls sweatband. Repeats operation until sweatband is completely curled to shape.

May be designated according to type of sweatband material flanged; for example,

Leather Flanger

8568-242 LABOURER, PADDING(textile)

DPT:686

GED: 1 SVP: 1 EC: 1 PA: M 4

Performs any combination of the following duties in the production of padding:

Carries or trucks rolls of batting, gauze and reels of thread to machine. Lifts and positions rolls of batting and gauze on feed holder of padding machine. Laps gauze over padding at start of run. Pushes button to activate automatic shear on machine that cuts finished padding into specified lengths.

May perform other elemental duties during set-up of machine.

8568-246 BALE OPENER(textile)

DPT:687

GED: 1 SVP: 1 EC: 1 5 7 PA: H 3 4

Opens bales of textiles, such as cotton and jute:

Loads bales on handtruck, using hook, and transports them to work area. Cuts steel bands, using wire cutters, and removes bale cover. Cuts strings around individual bolts, using knife. Stacks bolts on dolly and pulls out ends of material in individual bolts to prepare them for joining into continuous strips. Removes bale cover, steel bands and strings for salvage, and to maintain cleanliness of work area.

May join cloth in continuous strip, using sewing machine.

8568-250 DRAW-STRING INSERTER(knit goods) drawcord threader; ribbon inserter; taper.

DPT:687

GED: 1 SVP: 1 EC: 1 PA: S 4

Threads ribbon, tape or elastic, through neck or waist bands of garments:

Lays garment on pile so that opening in band is readily accessible. Measures and cuts strips of threading material to required length, using yardstick and scissors. Threads bodkin with ribbon, tape or elastic. Inserts bodkin into opening in band and draws bodkin through tubing attached to garment.

May tie ends of threaded tape into bow. May repair minor defects in garment, by hand or using sewing machine.

8568-254 GARMENT RIPPER(garment & fabric)

DPT:687

GED: 1 SVP: 1 EC: 1 5 PA: S 4

Rips open seams of garments to be altered or repaired and removes loose threads from garments:

Cuts or rips stitches from sections of garment to be altered, following chalk marks, using razor blade, scissors or seam ripper. Pulls out loose threads by hand.

May trim ends of threads from finished garments by hand, or using scissors. May remove damaged parts of new garments, pin replacement parts to article, and be designated accordingly,

Match-Up Girl

8568-258 HANDLE MOUNTER(leather goods) handle riveter.

DPT:687

GED: 1 SVP: 1 EC: 1 PA: S 4

Attaches handles or shoulder straps to ladies' handbags by either of the following methods:

1. Inserts opened rings into handbag frame. Slips handle ends into rings and closes rings with pliers. 2. Positions opened rings into handbag loops, manually. Inserts rod in holes in rings and places rings under ram of powered press. Depresses pedal to activate ram and rivet end of rod.

8568-262 LINING INSERTER, SKATES(shoes)

DPT:687

GED: 1 SVP: 1 EC: 1 PA: L 4

Inserts padded leather lining into skate boots:

Spreads glue in boot on rack, using brush. Inserts and presses lining evenly inside boot to ensure adherence of lining to boot.

8568-266 PADDING CUTTER(furn.)

DPT:687

GED: 1 SVP: 1 EC: 1 PA: L 4

Tears or cuts cushioning materials to specified size or shape to be used as padding for upholstered furniture:

Unrolls bale of cotton or other padding material and measures specified length using tape measure. Tears or cuts padding or places form over it and cuts around form, using shears. Cuts edging to required length.

8568-299 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, TEXTILE, FUR AND LEATHER PRODUCTS

This group includes textile, fur and leather products labourers and other elemental workers, not elsewhere classified; for example, those

who bend flare of shoe parts, turn down cuffs of hose, form tassels on ends of shoelaces, sort belts according to size and style, assemble blackboard erasers, knot hairnet ends and cut them to size, stretch rugs, remove protective covers from shoes, and insert and trim mattress springs. Typical examples of occupational titles covered by this residual group definition are:

Blackboard-Eraser Maker(textile)
Finishing Trimmer(shoes)
Flare Breaker(shoes)
Rug Stretcher(textile)
Spring Inserter(furn.)
Tasseler(textile)

8569-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating, assembling and repairing products made of fur, leather, textile, and similar materials; such as, canvas goods, harness and luggage, drapery, nets, parachutes and knit goods. Activities include: cutting, bevelling, folding, shaping, joining by gluing, bonding or cementing, attaching findings, crocheting, embroidering, pleating, covering, coating, spraying, and operating and tending machines.

8569-110 CANVAS WORKER(garment & fabric) DPT:381
GED: 3 SVP: 7 EC: B PA: H 2 3 4 7

Lays out, cuts and assembles canvas or similar materials into products, such as awnings, sails, tents and tarpaulins:

Lays out full scale drawings on floor, according to blueprints or sketches. Cuts pattern from paper, according to full scale drawing. Marks outline of material with crayon. Cuts material with shears or power cutter. Sews sections of material together, using sewing machine. Measures and marks off grommets holes on material. Punches holes, using mallet, punch and hardwood block or anvil. Attaches grommets, metal fitting and fasteners to product by machine or hand sews grommets. Sews galvanized iron ring to edge of hole in sailcloth, using sailmaker's palm and sail twine. Splices inserts and hems manila or wire rope in edges of material to relieve strain. Secures ropes or cables to finished article, using hand tools. Wraps and sews parts of rope or wire that are subject to chafing.

May stencil company title on article, using stencil and ink brush. May be designated according to product, or duties performed; for example, Rigger

Tarpaulin Maker

8569-114 RUG REPAIRMAN(textile) DPT:381
GED: 4 SVP: 6 EC: I PA: M 4 7

Repairs carpets and rugs by reweaving damaged areas, conforming to colour, pattern and weave of carpet or rug:

Tacks damaged area of rug or carpet onto table or frame. Trims and removes tuft yarns and backing twine of damaged area, using scissors, knife or razor blade. Inserts needle and twine into edge of damaged area, draws twine across area and into opposite edge and interlaces twine to form rug backing. Selects tuft yarn, to match colour, pattern and yarn of rug or carpet. Weaves yarn, into backing twine, using needle and following pattern and weave of piece being repaired, to form rug pile. Trims loose thread ends, using scissors.

May cut patch from defective rug or carpet, or from rug of similar model, and stitch its edges to edges of rug being repaired, using needle and thread. May remodel rug by cutting to required size and shape, using hand shears, and sewing edges, using needle and thread. May specialize in reweaving particular types of rugs and be designated accordingly; for example, Oriental-Rug Repairman

8569-118 HARNESS MAKER(leather goods) DPT:681
GED: 3 SVP: 6 EC: I PA: M 4

Cuts, assembles, and joins leather and other materials, to fabricate or repair harnesses:

Traces outline of harness part on material such as, leather or canvas, using pattern and tracing instrument. Cuts out parts, using knife. Assembles and sews edges of parts, using needle and thread, or stitching machine. Inserts harness strap ends through buckles, rings, or other hardware, and loops and joins end to body of strap, using stitching machine or hand riveting tool. Punches buckle holes in harness, using awl or punch. Applies paint and liquid dressing to harness to produce glossy finish, using brush or sponge. Repairs harnesses by replacing damaged or worn parts, such as bridle, rein and collar.

May repair saddles by replacing damaged or worn parts, such as cushioned seat, girth and cinches.

8569-122 INSOLE-TAPE MAKER(shoes) DPT:682
insole-tape-machine operator.
GED: 3 SVP: 6 EC: I PA: M 4 7

Operates machine that combines and glues in continuous operation, canvas-duck tape to leatherette tape, to produce insole tape used to make shoes:

Installs roll of gummed canvas duck tape and roll of leatherette tape on unwinding spindles of insole tape machine and closes catch to hold rolls in place. Threads unwinding ends of material carefully through roller guides, heating and combining devices and inserts the combined end of insole tape into slot of take-up spool. Depresses button to start machine and observes its operation to detect malfunctioning. Inspects and measures regularly insole tape strip, using small ruler to verify that close tolerance standards be met. Stops machine if measurements or quality of product is sub-standard. Adjusts roller guides and combining device, using wrench and screwdriver, and re-threads machine. Cleans machine regularly to prevent accumulation of foreign matter, using knife, air hose and brushes.

8569-126 LAMP-SHADE SEWER(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 6 EC: I PA: S 4 7

Fabricates lamp-shades from material, such as silk, following patterns, and using shears, needle, thread and sewing machine:

Places specified material on table and marks cutting lines on material, following pattern. Cuts shade sections from material, using scissors or power cutter. Sews sections together to form shade covering, using single needle sewing machine. Draws shade covering over frame and bastes covering to tape on rings. Sews material to frame and trims material with scissors. Sews trimming around top and bottom of shade.

May wind tape around upper and lower rings of shade frame before drawing shade covering over frame. May sew wire to edge of shade to reinforce edge and retain shape. May sew elastic band around polyethylene tubing to make protectors for complete shade.

8569-130 LUGGAGE REPAIRMAN(leather goods) DPT:681
GED: 3 SVP: 5 EC: I PA: M 4

Repairs and renovates worn or damaged luggage made of leather, fibre or other materials, such as satin, nylon, and acetate:

Sews rips by hand or machine, inserts or repairs linings. Cuts and bends fibreboard pieces, using knives, scissors, and pliers. Glues frame together and rivets on locks, catches, corner protections and other metal parts.

May fabricate leather or fibre articles, such as briefcases, sample cases and instrument cases, according to customers' specifications. May specialize in repairing trunks and other heavy luggage and be designated accordingly.

8569-134 ORTHOPEDIC-APPAREL ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:681
GED: 3 SVP: 5 EC: I PA: L 4 7

Fabricates and assembles supports and orthopedic devices, such as cuffs, braces, straps, corsets, and half-limbs:

Positions patterns on fabric, leather, or over plaster cast to obtain optimum use of material, and traces outline with pen, pencil, or awl on cutting area. Cuts material, using scissors or knife, and punches holes

for laces, using hand or power punch. Rivets metal eyelets in holes, using riveting machine. Assembles leather parts, and stitches stay holders, elastic inserts, and fabric pieces by hand or machine. Attaches leather to parts of artificial limbs. Sews pieces over rubber or foam shock absorbers, using needle and thread.

May take body and limb measurements of patient being fitted for orthopedic device. May fabricate and assemble orthopedic parts made from metal. May be designated according to device assembled; for example,

Artificial-Limb Assembler

8569-138 REPAIR WEAVER(garment & fabric; textile)

DPT:681

art weaver; mender; weaver, hand.

GED: 3 SVP: 5 EC: I PA: S 4 7

Repairs holes or small defects in apparel or fabrics, applying hand weaving technique (invisible mending):

Pins garment to padded block. Reweaves defective area by either of the following methods: 1. Threads needle with yarn and stitches material at edge of damaged area, interlaces it over and under perpendicular strands, across hole and into fabric on opposite side. Pulls needle until both yarn ends protrude from fabric. Replaces each missing yarn running parallel to first. Subsequently weaves in same manner perpendicular strands to reproduce exact replica of original pattern. Uses needle and fingers to pull projecting yarn ends to reverse side of material, to leave a neat and invisible mend. 2. Cuts patch of similar material, to approximate dimension of damaged area. Ravels yarn from edges of hole and patch, leaving frayed appearance. Pins or bastes patch under hole so that pattern matches. Weaves yarn protruding from patch into article, and yarns protruding from article into patch, using sewing needle, latch needle and fingers.

May cut patch or pull required number of cross and length yarns from hidden parts of garment such as seam or hem allowance, for use as repair material. May pull out coarse and surplus yarns or remove slack by pulling on loosely woven yarns, using tweezers and needle. May remove weaving defects, such as burs or slubs.

8569-142 BEAD WORKER(shoes, leather goods) DPT:684

GED: 3 SVP: 5 EC: I PA: S 4 7

Sews beads and other ornaments to leather articles, such as belts, purses, and moccasins, to form Indian-type decorative designs:

Stitches beads individually or in clumps onto leather articles, using needle and thread, following designs drawn on paper or own creation. Prepares deerskin or other hide for beading by rubbing hide with stones or kneading with hands to soften leather. Stitches other ornaments, such as bird claws, feathers, and animal teeth, to leather to form contrasting design. Prepares thread from leather sinews for attaching ornaments.

8569-146 SEAMSTRESS, LINEN ROOM(cater. & lodg.; laund., clean. & press.) DPT:684

GED: 3 SVP: 5 EC: I 5 PA: M 4 7

Alters and repairs articles of clothing and linen, performing various hand-and machine-sewing tasks:

Bastes or pins and sews fabric parts together by hand or machine. Repairs fabric articles, replaces parts, and makes alterations, such as patching or darning tears and holes, replacing worn collars, pockets and metal closures, lengthening or shortening garments. Mends, hems and repairs articles, such as bed and table linen, towels and uniforms, and inserts patches to cover large holes or tears. Sews binding ribbon to edges of blankets, and fringe, tassels and ruffles onto drapes and curtains. Replaces lost or broken buttons on shirts and uniforms. Replaces thread, fills bobbins and replaces broken needles as required.

8569-150 DRAPERY-HEADING MAKER(garment & fabric; ret. trade) DPT:684

GED: 3 SVP: 4 EC: I PA: L 4 7

Measures, trims, presses, pleats and sews fabric sections to form drapery headings:

Positions drapery section on layout table to straighten fabric. Fastens section to table to facilitate measuring and trimming, using sizing device, clamps and pins. Measures section according to specifications, using measuring tape. Cuts uneven edges and trims surplus material

from section, using shears. Folds top of section over crinoline and presses to form heading, using steam iron and pressing cloth. Pleats material, using one of the following methods: 1. Lays cardboard pleat pattern over heading and marks pleat positions on material, using marking pencil or powdered chalk. Sews heading at marked positions to form pleats, using sewing machine. Tacks hook in specified place on heading to hang drape, using thread and needle. 2. Turns control knobs of automatic pleating machine to adjust for specified pleat size. Starts machine and inserts drapery heading into mouth of machine. Guides drape through machine to keep fabric straight as pleat is made automatically, according to specifications.

May sew drapery panels together according to specifications to form complete drape, using sewing machine. May hem drapes, using sewing machine or thread and needle.

8569-154 FINISHER, HAND(garment & fabric) DPT:684

GED: 3 SVP: 4 EC: I PA: M 4 7

Fastens grommets, and hand sews reinforcing patches, ropes, rings and snaps to canvas products, such as awnings, tents, sleeping bags and tarpaulins:

Sews reinforcing patches, ropes, snaps and other fittings to specified areas of canvas, using thread, palm, and needle. Measures and draws grommet holes on canvas with ruler and pencil. Cuts holes and fastens grommet to canvas, using hammer, punch, and wooden block, or operates machine to fasten grommets to canvas. Splices rope to metal fittings, binds ends and sews to canvas. Threads rope through grommets or ties to canvas, or splices to tarpaulin. Repairs defective canvas by patching or replacing ropes or grommets.

May taper rope by shaving it with knife, and sew rope to canvas. May be engaged in finishing a specific product and be designated accordingly; for example,

Sleeping Bag Finisher
Tarpaulin Finisher
Tent Finisher

8569-158 LEATHER WORKER(leather goods) DPT:684

GED: 3 SVP: 4 EC: I PA: L 4

Fabricates or repairs leather articles, such as holsters, rifle cases, slings, and billiard table pockets, using clicking, skiving and stitching machines:

Cuts leather to specified size and shape and bevels edges, using clicking and skiving machines. Fastens parts together, using rivets and stitching machine or adhesive. Attaches eyelets and metal decorations to article, using hammer and punch or arbor press.

May be designated according to article fabricated; for example, Rifle-Case Maker

8569-162 LUGGAGE-SHELL BONDER(leather goods)

DPT:684

GED: 3 SVP: 4 EC: I PA: L 4 7

Bonds leather covering material to luggage shell, using vacuum-forming machine:

Prepares adhesive solution, by mixing specified amount of ingredients. Fills spray-gun with adhesive solution, and sprays exterior of plastic-luggage shells and covering material. Places open trays loaded with sprayed shells into oven for preheating. Removes preheated shells from oven and places shells into vacuum-forming- machine jig. Fastens piece of presprayed leather covering material to inside of lid of vacuum-forming machine, using sealing frame and clamps. Depresses button to lower machine lid against shell to heat and bond covering material to luggage shell and to create a vacuum on shell surface area being covered. Removes covered shell from jig and trims excess material from shell, using knife. Inspects finished product to verify adhesion of covering material to luggage shell.

8569-166 SKIVER, MACHINE(leather goods) DPT:684

GED: 3 SVP: 4 EC: I PA: S 4 7

Bevels edges of leather components for articles, such as handbags, briefcases, and belting, using skiving machine:

Turns skiving machine's setscrews adjusting gauge, guide, feed roller and blade, to regulate angle of bevel. Depresses foot pedal to start machine. Positions leather piece on bed of machine, against gauge and beneath guide. Guides leather piece over feed roller that forces edge of material against blade to skive edge for easier folding and better

joining. Turns button to move built-in emery wheel against blade to sharpen cutting edge, whenever necessary. May manually pull leather pieces across fixed cutting edge to reduce thickness.

8569-167 CANVAS-COVER REPAIRMAN(any ind.) DPT:684
GED: 2 SVP: 4 EC: I PA: M 4 7

Repairs damaged or worn canvas parts, such as tents, awnings and filters:
Spreads canvas on work table and examines it for holes, tears and worn areas. Trims edges of damaged area, using scissors or knife. Patches holes, sews tears, or darns defective area, using needle and thread, or sewing machine. Stamps grommets into edges of canvas, using mallet and punch or eyelet machine.
May dismantle, clean, repair and re-assemble canvas filters used for removing impurities from slurry. May be designated according to article repaired; for example,
Awning-and-Tent Repairman(textile)
Filter Tailor

8569-170 CROCHETER, HAND(knit goods) DPT:684
GED: 2 SVP: 4 EC: I PA: S 4 7

Crochets decorations for custom-made garments, often as home worker:
Crochets edges, seams and decorative pieces for garments according to specifications, using crochet needles and yarn, making loops and knotting yarn to form pattern. Finishes garments by covering buckle frames, buttons and other trimmings with crochet work.
May crochet complete dresses or other garments. May form pattern of own design.

8569-174 EMBROIDERER, HAND(garment & fabric; knit goods) DPT:684
GED: 2 SVP: 4 EC: I PA: S 4 7

Embroiders decorative designs on garment parts or other materials by hand stitching, following stencilled or stamped pattern:
Fastens embroidery hoop or frame over fabric to keep fabric taut. Threads needle with type and colour of thread or yarn specified. Embroiders along stamped or stencilled design or according to diagram, utilizing knowledge of various stitches that may be required. May use strings of beads instead of coloured thread for ornamental work. May pin design on fabric before commencing embroidery. May specialize in one or more types of embroidery.

8569-178 BALL STITCHER, HAND(sport. & toy) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Sews leather covers on baseballs and softballs:
Places glue-dipped ball in vise, and stretches leather over ball. Pulls perforated edges of cover together, using pliers, and secures into place with staples. Sews cover onto ball with waxed nylon thread, using harness needle in each hand.

8569-182 CASE MAKER(leather goods) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles articles made of leather or similar material, such as pocketbooks, briefcases, or wallet cases, prior to final sewing:
Trims uneven edges of parts, using scissors and knife. Folds edges of parts, such as cover or utility pockets, and tamps edges, using hammer, to crease material. Applies cement onto edges, using brush. Joins cemented parts of articles, preparatory to final sewing, by manually pressing parts together.

8569-186 FINDING ATTACHER(leather goods) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Attaches metal findings onto leather to decorate articles, such as belts, wallets, and handbags, by either of the following methods:
1. Positions template on precut leather article. Punches holes in leather, following markings on template, using hammer, and punch or die. Inserts findings, such as, buckles, locks and ornaments, into holes, and clinches findings, using hammer and prying tool or by applying pressure with fingers. 2. Brushes cement onto fittings, positions fittings manually on premarked leather article, and presses fittings to leather.

8569-190 GRIP WRAPPER(sport. & toy) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Wraps leather strips around articles, such as golf clubs, and tennis rackets to form grips on handles:
Positions workpiece in machine that rotates article. Brushes adhesive on area to be wrapped. Glues end of leather strip to starting position of grip. Starts machine, and feeds leather strip onto rotating work-piece to wrap handle area, taking care to align edges of strip against one another without overlap or open spaces. Chamfers excess leather at end of grip, using knife, and fastens down with tape sleeve. Presses wrapping with hand to smooth leather. Wraps material, such as crepe paper, electrician's tape or rubber sleeves, to build up handle area, and prepares list of materials used.

8569-194 HAND SEWER(any ind.) DPT:684
GED: 2 SVP: 3 EC: I PA: S 3 4 7

Sews parts, trimmings, fasteners or labels, to items, such as garments, curtains, lamp-shades, parachutes, stuffed toys and moccasins, using needle and thread:
Selects thread and needle according to specifications and colour of objects. Aligns parts, fasteners, labels or trimmings, following seams, edges or markings. Sews by hand, to join objects, with stitches, such as felling, tacking and basting. Trims excess thread and edges of parts, using scissors, knife or razor blade. Sews basting stitches on garment parts to mark position of vees and pleats to be sewn, and closes garment pleats, using criss-cross stitches to facilitate pressing. May be engaged in a particular activity and be designated accordingly; for example,
Basting Marker

8569-198 KNIT GOODS MENDER(knit goods) DPT:684
GED: 2 SVP: 3 EC: I PA: S 4 7

Repairs defects, such as holes, runs and pulled threads in knit goods, by one or combination of following methods:
1. Sews up holes, using needle and thread. 2. Stretches damaged portion of garment and secures one end of broken thread, using needle and thread. Reknits dropped stitch or run, using latch-up needle. Bastes across other end of broken thread and clips loose ends, using snips or scissors. Pulls knots to reverse side of garment. 3. Stretches garment over mending cup and moves mending disk across garment to return picked or pulled thread to position.
May operate sewing machine to resew defective seams. May use electric iron to straighten and smooth mend. May be designated according to product repaired; for example,
Garment Mender
Hosiery Mender
Sock Mender

8569-202 NET MAKER(misc. prod. fab., n.e.c.) DPT:684
stringer.
GED: 2 SVP: 3 EC: I PA: L 4 7

Makes nets, interlacing and knotting twine, by either of the following methods:
1. Selects gauge and twine according to specifications. Wraps twine around twine holder (needle) that facilitates interlacing and knotting of twine. Extends and ties ends of foundation line to poles. Ties twine to end of line with clove hitch and positions gauge against line. Loops twine around gauge and knots twine onto foundation line, forming half mesh. Removes gauge and repeats operation to form row of half meshes. Holds gauge against half-mesh, pulls twine around gauge, and ties sheep bend knot onto half-mesh, forming mesh. Repeats operation with succeeding half meshes to form net. Unties foundation line from net. 2. Fastens ends of two parallel meter lines or ropes to posts or hooks in wall so that meter lines are waist high from floor. Ties seaming twine or thread to end of meter line or rope and draws shuttle-type wooden needle through successive meshes of netting. Brings needle over and under rope at specified distances and makes half-hitch to fasten twine to rope. Fastens plastic floats at intervals along one meter line. Clinches lead weights to second meter line of gill net, using hand tools.
May repair nets or make a specific type of net and be designated accordingly; for example,
Fish-Net Maker
Net Repairman

8569-206 PARACHUTE STRINGER(garment & fabric) DPT:684

GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles, threads, and ties shroud lines of parachutes to connect canopy to parachute harness:

Punches holes in centers of panel seams for insertion of shroud lines, using pointed metal punch. Flattens end of shroud lines to facilitate threading of stringer needle, using mallet. Threads and ties shroud lines through eyelets in edge of parachute. Inserts shroud lines through holes in opposite seams, when shroud lines are continuous, so that line lies in semi-circle around top hem. Threads and pulls line down through panel seam, drawing it out just above reinforcements attached to bottom hem of canopy. Ties ends of shrouds through metal swivels or fittings for attachment to harness, or threads asbestos-suspension lines of flare parachute through metal swivels for attachment to flare.

8569-210 PASSEMENTERIE SEWER(misc. prod. fab., n.e.c.) DPT:684

GED: 2 SVP: 3 EC: 1 PA: S 4 7

Fashions and hand sews ornaments for dresses, coats or jackets, using braid, gimp, silk, cord, and other trimming materials:

Measures and cuts material into lengths, according to specifications, using ruler and scissors. Weaves or knots yarn or cord to make braid or fringe, and hand sews knots to prevent ravelling. Shapes and sews braid, gimp or other material with invisible stitches directly onto garment or over paper pattern to reproduce design. Removes paper pattern from completed article. Attaches fasteners and trimmings, such as tassels, braids, fringe, loops or beads, according to design. May make novelty buttons by knotting and intertwining strips of leather or gimp.

8569-214 PLEATER, HAND(garment & fabric) DPT:684

GED: 2 SVP: 3 EC: 1 PA: L 4 7

Forms and tapes pleats in cloth fabrics or unfinished garments, using pleat patterns and masking tape:

Places opened pleat pattern on table, using iron weights to hold pleats open. Lays fabric or unfinished garment such as skirt on pattern, and folds creases in pattern by hand to form pleats. Rolls pattern with fabric inside into cylinder preparatory to steaming, or tapes waistline of skirts with masking tape, to keep pleats in place.

May pin pleated skirts on hanger, attach customer's order slip on skirts, and place hanger on bar. May be designated according to article pleated; for example, Pleater, Skirts

8569-218 BAG-TURNING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685

bag turner.
GED: 2 SVP: 3 EC: 1 5 6 7 PA: M 3 4 7

Tends machine that turns textile bags right side out:

Unloads bags from hand truck and piles them on turning machine table. Adjusts machine to size of bag by turning crank that expands or contracts holding jaws and ram. Starts machine and slides open end of bag over jaws to allow ram to invert bag through open end. Loads inverted bags onto hand truck. Records number of bags turned, for production control purposes.

May be required to change ram of machine to handle bags of unusual size, using hand tools.

8569-222 FIBRE-STRAP-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685

GED: 2 SVP: 3 EC: 1 PA: L 4 7

Tends machine that twists, glues, compresses and dries multiple strands of synthetic fibre yarn to form rolls of strapping material used for packaging:

Hangs cones of yarn on creel and empty spool on winder. Turns valves to fill glue troughs. Opens steam valves and observes thermometer to heat glue and drying cans to specified temperature. Threads strands of twisted-fibre yarn through tension device, glue bath, compression dies, infra-red-tacking lamps, around drying can and through rollers and counter to spool. Starts machine and inspects finished strapping for strand separation, thickness and width. Cuts out faulty areas, using scissors, and splices ends together. Replaces empty cones and full

spools on machine. Repairs breaks in yarn by splicing ends. Tags and marks full spools for identification.

8569-226 ORNAMENT SETTER(leather goods) DPT:685

GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends machine that attaches nail-heads or other ornaments to clothing or articles made of leather, plastic or other material:

Selects dies, according to specifications, and secures them in ram and bed of machine, turning setscrews. Selects nail-heads or other ornaments according to specifications. Places self-fastening ornaments in die of ram or metal fastener in upper and lower dies of machine. Positions leather or plastic material onto base of template, pulls adjacent side of template down onto material, places template under machine ram, and depresses pedal to lower ram that clinches metal fasteners through holes in template to attach ornament.

8569-230 SHOELACE-TIPPING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685

lace tipper.
GED: 2 SVP: 3 EC: 1 PA: L 3 4 7

Tends machine that wraps plastic tipping material around strands of braid at specified intervals to form shoelace tips, and cuts braid into laces:

Sets measuring device to cut laces of specified length, using hand tools and rule guide on machine. Threads end of braid through guides and carrier and around measuring device and feeder wheels, or ties end of braid to braid machine to avoid interruption of production. Places roll of plastic tipping material in holder and draws end through guides and feed roller of tipping mechanism. Starts machine that feeds braid through gluing, tipping and cutting mechanism, and drops laces onto racks. Removes laces from rack. Inspects and removes defective laces. Ties laces into bundles. Pours glue solution into container attached to machine. Records production data, such as type and size of shoelaces cut and tipped.

May tend machine that clamps metal tips on shoe laces. May tend semi-automatic-tipping machine and manually place each length of braid around measuring device, and depress foot pedal to wrap and seal tipping material around braid.

8569-234 LEATHER STOCKMAN(shoes) DPT:587

GED: 2 SVP: 3 EC: 1 PA: M 2 3 4

Gathers and examines hides, and schedules leather cutting operations for shoe production, according to standard procedures:

Gathers bundled hides from storage bins according to work ticket. Records quantity and length of hides from tag on bundle to keep inventory records up-to-date. Sorts work tickets according to number of shoes, stock number, type of hide, and shoe widths, to arrange daily production schedules. Inspects hides for quality, and returns sub-standard hides to tannery.

May receive and store hides for future use. May scrape labels from hides with knife, preparatory to cutting hide.

8569-238 WATERPROOFER, GARMENTS(garment & fabric) DPT:687

GED: 2 SVP: 3 EC: 1 4 PA: M 4 7

Applies waterproofing solutions to garments, such as aprons and rainwear and, to cloth by one of the following methods:

1. Immerses garment in tub to saturate with waterproofing solution. Removes excess solution, using hand-operated wringer. Hangs garments in dry-kiln. 2. Places garments on form. Applies solution with brush. Places forms on dolly racks and pushes dollies into dry-kiln. 3. Threads end of bolt of cloth around tensioning and scraping bars, through dipping trough, and manually wraps it around take-up reel.

8569-242 BASEBALL-GLOVE SHAPER(sport. & toy) DPT:684

GED: 2 SVP: 2 EC: 1 PA: L 4 7

Shapes baseball gloves, using heated, hand-shaped forms, mallets and hammers:

Pulls glove over heated hand-shaped form to open and stretch finger linings. Pounds finger and palm of glove with rubber mallet and ball-shaped hammer to smooth seams and bulges and to form pocket. Removes gloves from form, inserts hand into glove, and strikes pocket

with fist to shape pocket properly. Examines glove visually and tactually to ensure conformity to standards.

8569-246 COVERER, LUGGAGE(leather goods) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Glues leather or vinyl covering or lining onto frame or interior of articles, such as luggage, briefcases and handbags:
Selects frame, covering material, lining, and cardboard strips according to specifications. Creases cardboard strips lengthwise to provide rigidity to complete assembly, using bending machine. Positions strip of covering material on feed rollers of glue-spreading machine, or lays material on table and applies glue, using brush. Places frame on glued strip and wraps covering around frame. Smooths material manually or uses moistened bone to avoid marking material. Cuts slits at corners and in material for clasps or other frame attachments, and removes excess material, using knife. Positions lining in interior of shell and presses with fingers to smooth lining onto shell.
May tape rivets in luggage frame holes to prepare for riveting.

8569-247 CRUSHER(garment & fabric) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Crushes cloth to form three-dimensional geometric patterns for fancy linings in caskets:
Selects shaping die and fabric according to specifications. Lays material over female crushing die, and fits male crushing die or crushing rod over material and into depression of female die, manually. Steams material on crushing board to set shape, using steam hose. Removes male die or crushing rod. Applies glue to backing material through screen with roller and presses backing material against screen, using brush. Lays backing material on raised portion of facing material on crushing board. Rubs cloth over backing material to stick fabrics together. Removes material from crushing board and hangs finished article to dry.
May tend crushing machine that lowers rotary crushing rod onto fabric.

8569-250 HANDBAG FRAMER(leather goods) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Attaches hinged metal frames to leather, fabric or plastic articles, such as handbags and billfolds:
Spreads grooves in frame, using automatic opening device or pliers. Clamps frame in frame-tightening device, and pushes edges and corners of bag into grooves with fingers and punch. Depresses pedal of tightening device to pinch sides of grooves around edges and corners of bag fabric.
May examine articles for defects and repair damaged frames, using hand tools.

8569-254 HARNESS RIGGER(garment & fabric) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Threads breast shields, buckles, snaps, and other hardware devices on straps of parachute harness to position them for stitching into place:
Clamps harness onto wooden jig with wire clamps. Slides canvas breast shield fitted with snap onto one harness strap and slides shield fitted with buckle ring onto other strap. Attaches pair of backstraps to harness and slides snap onto one strap and buckle ring onto other strap. Crosses backstraps and pulls them through buckles mounted on opposite harness straps.

8569-258 LUGGAGE-HANDLE MAKER(leather goods) DPT:684
handle coverer.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Glues layers of kraft paper around metal or plastic form and covers it with leather or similar material to form handbag or luggage handle:
Glues wet strip of gummed kraft paper around form to provide shape and padding. Positions pre-cut leather or plastic covering around kraft paper covered form. Attaches covering to padding, using sewing machine, staples or glue. Dries finished handle in electric oven. Punches holes into extremities of handle and inserts supporting rings, using punch press.
May compress and shape finished bundle, using power press.

8569-262 NYLON-HOSE SLITTER(knit goods) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Operates machine equipped with electrically heated knife or with wire that cuts and fuses edges of nylon tubing to make hip part of panty hose:
Depresses button to heat knife or wire. Slides nylon tubing over hip-shaped form or places nylon tubing on top of machine bed having hip-shaped groove. Pulls down handle, or guides heated knife along groove, to slit leg opening and fuse edges to prevent ravelling. Removes panty hose from form or from machine bed, and stacks them aside, prior to joining legs.

8569-266 PARACHUTE FOLDER(garment & fabric) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Folds circular or rectangular parachutes preparatory to further processing or shipping:
Spreads circular parachute canopy on table, after shroud lines are attached, and straightens canopy and lines to eliminate wrinkles, tangles, or coils. Clamps shroud lines to table top with vise, and pulls lines taut. Ties and sews over ends of shroud lines. Folds canopy lengthwise on its seams, one panel over another. Rolls folded canopy from top to bottom, removes shroud lines from vise, wraps lines around rolled canopy, and slides bundle into plastic bag. Folds rectangular parachute canopy fanwise so that shroud lines are grouped together.

8569-267 UPHOLSTERY CLEANER AND FINISHER(furn.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 3 4

Cleans and adjusts upholstery on new furniture preparatory to storage or shipping:
Inspects spots to ascertain composition. Selects solvent and applies it to spot with cloth or brush. Cleans dust, lint, and cloth scraps from fabric, using air hose and vacuum cleaner. Applies steam to upholstery, from steam hose or iron, to raise nap, brighten colour and tighten fabric. Smooths upholstery into folds and pushes padding to corners of cushion and backs with pick. Rubs exposed wooden parts with furniture polish if required.
May attach advertising and brand-name tags in specified locations, using needle and thread.

8569-270 BUTTON-ATTACHING-MACHINE TENDER(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that attaches buttons to articles of apparel, such as work clothing and shirts:
Places tack in holder on machine bed. Positions premarked article over tack on bed and positions button on garment over tack and under machine ram. Depresses pedal that lowers ram to join button to article.

8569-274 COLLAR AND BELT TURNER(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that reverses partially finished collars and belts on garments, such as shirts and ladies' dresses, and flattens seams of collars:
Folds collar or belt back along seam and draws folded seam under upper jaw of machine. Depresses pedal that raises lower jaw of machine to spread seam. Grasps collar or belt and moves it back and forth under upper and over lower steam heated jaw to flatten seam. Releases pedal and removes article from machine.

8569-278 CREASING-MACHINE TENDER(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that creases edges of garment parts, such as pockets and cuffs, to shape and prepare them for sewing by either of the following methods:
1. Positions part in heated die on bed of machine. Pushes buttons to start machine that automatically lowers upper die onto garment part and into lower die, releases steam from lower die, and moves horizontally - sliding plates over edges of part to fold and press part.

2. Inserts edges of garment part through folding device and guides folded edges between heated pressing rollers.
May be designated according to part of garment creased; for example, Cuff Creaser
Pocket Creaser

8569-282 CRIMPING-MACHINE TENDER(any ind.) DPT:685

GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that crimps fasteners, such as buttons, eyelets, grommets or snaps, to products made of textile, leather, or similar material:

Pours fasteners of specified type and colour into hopper on vibratory feeder of machine. Adjusts machine for proper spacing between fastener, placing peg in appropriate hole of machine. Pulls switch to start machine, and positions material on calibrated machine bed, according to markings on material. Depresses pedal to start mechanism that feeds fastener to machine head, lowers machine head to force fastener through material, crimps fastener edges into material and forwards material into position for insertion of next fastener.

May insert fasteners at irregular intervals and locate and mark positions of fasteners on material. May be designated according to type of fastener used, or article made; for example, Eyelet-Machine Tender

Machine Fastener, Gloves(garment & fabric)
Snap-Machine Tender

8569-286 DRAPERY PLEATER, MACHINE(garment & fabric) DPT:685

GED: 2 SVP: 2 EC: 2 PA: L 4 7

Tends machine that folds pleats into top of drapery panels, and staples folded pleats in position for sewing:

Inserts staples in machine. Positions drapery on bed of machine according to width of pleats and distance between each pleat. Starts machine that forces material between dies to form and staple pleats. Folds and stacks pre-pleated drapery ready for sewing.

8569-287 EMBOSSESSER, FOOTWEAR(shoes) DPT:685

embossing-machine operator.

GED: 2 SVP: 2 EC: I 5 PA: L 4

Tends machine that imprints trade name on shoe parts:

Pulls lever to adjust height and pressure of machine head according to thickness of leather, or other material to be embossed. Positions specified embossed plate in heated upper stamping beam of machine. Places spool of coloured embossing ribbon on machine spindle and draws it through guides, under stamping beam, and between feed rollers. Positions shoe part on machine bed. Depresses pedal that lowers stamping beam and embossed plate, pressing coloured ribbon against shoe part and imprinting data on part.

8569-290 EYELET-PUNCHING-MACHINE TENDER(furn.) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that automatically fastens fabric, padding, and scrim together with eyelets to form felted-border panels for mattresses:

Loads material, such as fabric, padding and scrim on machine reels, inserts ends between rollers, and drops metal eyelets into feed slots of machine. Starts machine, by depressing button, and threads end of boxing emerging from machine onto windup reel. Removes windup reel of boxing from machine when full for transport to sewing area.

8569-294 FOLDING-MACHINE TENDER(leather goods) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that folds edges of articles, such as handbag parts, billfolds, and wallets to strengthen and smooth edges:

Positions part, such as flap, body front and back, against machine guide and under presser foot. Depresses pedal to move part edge against folding bar of machine that forms folded edge.

May apply two-way tape between parts, moving knee-lever that brings two-way tape into position under presser foot of machine. May spray silicone over parts when folding patent leather or smooth finished plastic material, to prevent sticking to machine bed.

8569-298 GARMENT STEAMER(laund., clean. & press.)

DPT:685

GED: 2 SVP: 2 EC: I 3 4 PA: L 4 7

Tends machine that removes wrinkles from knitted garments, with steam and hot air:

Inserts garments on studs of machine, or positions and shapes them on steam table following graduated scale printed on steam table cover. Starts machine, by depressing foot pedal, that subjects garments to steam spray and hot air. Turns garment manually to steam opposite side. Removes steamed garments and stacks them on table.

8569-302 GAUZE-PAD-MACHINE TENDER(textile) DPT:685

GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that forms gauze covered pads used as surgical dressings:

Manually mounts rolls of cotton or non-woven fabric and gauze on machine spindle. Threads materials through feed rollers of machine. Depresses button to start machine that cuts gauze and absorbent cotton or non-woven fabric to specified size, and folds gauze around material in prescribed manner to form surgical pad. Observes operation of machine and examines ejected pads for size, folding of gauze, and defects in material. Places pads into bags or cartons, and seals cartons, using glue and brush.

May tend gauze-pad-machine that wraps pads in paper before ejection.

8569-306 HANDLE-AND-VENT-MACHINE TENDER(furn.) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that automatically punches holes, crimps grommets, inserts ventilators and attaches handles to mattress borders:

Fills feed hoppers of machine with grommets, ventilators and handles. Slides border into marked position under machine head. Pushes button to start machine that punches holes in borders, crimps grommets, inserts ventilators and attaches handles to mattress borders. Observes operation to detect machine malfunction.

May select and install control tape on machine equipped with automatic device to measure off distance between handles, and cut side panel to specified length. May tend machine that only attaches handles and be designated accordingly, Handle-Machine Tender

8569-307 LABEL-CUTTING-MACHINE TENDER(garment & fabric) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that cuts, folds cut-edges, presses, counts and packs woven labels:

Positions roll of labels on feeding holder and inserts end in machine feeder mechanism. Turns handle to set level of offbearing holder and turns dial to set counter that stops machine when specified number of labels have been processed. Presses lever to start machine and observes labels to detect defective cutting, folding or pressing. Stops machine and turns handle to disengage cutting mechanism. Removes defective labels and notifies machine fixer to adjust machine. Removes labels from offbearing holder and packs them in boxes.

8569-310 LEATHER-BELT MAKER(leather goods) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machines that cut, punch, rivet, or staple parts to leather to make belts:

Positions leather manually against guides in stapling or riveting machine or punch press. Depresses pedal to punch buckle or tongue holes in belt, shear and shape belt ends, or attach snap fasteners to join parts.

8569-314 MANGLER(garment & fabric) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine consisting of pressing roll and ironing shoe, that shapes and smooths knitted garments:

Presses control lever to revolve roll and to engage ironing shoe with revolving roll while machine is heating. Adjusts rheostat, turning dial to heat ironing shoe and maintain specified temperature. Disengages

heating ironing shoe from roll, and stops roll. Spreads garments evenly on roll. Starts roll and re-engages ironing shoes to press garment.

8569-318 PERMANENT-PRESS SPRAYER, MACHINE(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that sprays chemical solution on pressed pants to impart permanent creases:
Places pants to be sprayed on screen table of spray booth and smooths fabric evenly to ensure complete spraying. Presses button to start machine that sprays chemical solution to give pressed pants permanent creases. Flips pants over and repeats operation. Stacks sprayed pants on handtruck and pushes them to pressing area. Fills tank with chemical solution.
May trim excess material or loose thread from pants, using scissors.

8569-322 PLEATING-MACHINE TENDER(garment & fabric) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends one or more machines that fold and press pleats into cloth:
Turns controls to adjust pleating knife according to specified width of, and distance between pleats, and to set temperature of pressing rollers. Manually mounts rolls of paper on rod at entry end of machine. Hand-feeds machine when pleating small articles, such as scarves and tie knots. Places roll of material at feed end of machine and draws fabric between layers of paper, through guides, under pleating knife, between heated-pressing rollers, and around take-up roll. Starts machine and observes pleating operation. Places rolls of pleated material in steam cabinet to set pleating.

8569-326 ROLLER-MACHINE TENDER(leather tan. & fur dress.) DPT:685
GED: 2 SVP: 2 EC: I 4 PA: M 3 4 7

Tends roller machine that stretches, smooths, or accentuates natural leather grain:
Positions leather on bed of machine and depresses pedal to lower roller onto leather. Starts machine to move roller over leather. Shifts position of leather to impart specified finish to entire surface. Pulls leather from machine table and stacks it on cart.
May be designated according to condition of leather rolled; for example,
Dry Roller
Wet Roller

8569-327 SLITTER TENDER, KNIT TUBING(knit goods) DPT:685
GED: 2 SVP: 2 EC: I 6 PA: M 3 4 7

Tends machine that slits knit tubing to open width:
Positions truck of knit tubing in front of machine. Tightens screws to fasten knife and side guides in precise position at center of tubing. Places tubing in position between side guides. Starts machine by pressing button and guides fabric over knife, using both hands. Wraps cut fabric around take up roll to open width. Removes and sharpens slitting knife as required, using grind stone and hand tools.

8569-330 SPREADER, MACHINE(garment & fabric; knit goods; textile) DPT:685
cloth layer; layer up.
GED: 2 SVP: 2 EC: I PA: M 4 7

Tends machine that spreads cloth in successive layers on table to facilitate pattern marking and cutting:
Places marked ply of cloth on cutting table and positions metal stops on track according to length of ply desired. Positions bolt of cloth on carriage of machine and turns handle to align edge of cloth with marks on table. Threads cloth end through feed rollers and turns handwheel to adjust feed rollers according to gauge of cloth. Starts machine that automatically spreads cloth in even layers as it moves back and forth over table, or pushes machine along track over table. Laps head of cloth at points marked on edge of table. Inspects cloth as it is spread to detect defects, such as dye shadings and holes. Straightens edges and smooths layers of cloth manually. Cuts out

defects, using hand shears. Cuts cloth from roll, using hand shears or electric knife.
May mark pattern outlines on top ply of cloth. May cut spread cloth following outlines and be designated accordingly,
Spreader and Cutter(garment & fabric)

8569-334 THREAD-CUTTER TENDER(textile) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that cuts and removes threads which connect designs on machine-embroidered fabrics:
Stitches length of embroidered fabric to lead cloth, using portable sewing machine. Adjusts clearances, starts thread-cutting machine, and guides fabric in machine to break threads. Turns fabric over to repeat operation. Rips seam to separate embroidery from lead cloth, pulling out thread with fingers. Cleans and oils machine, using hand tools.

8569-338 SOCK BOARDER(knit goods) DPT:686
GED: 2 SVP: 2 EC: I 3 PA: M 4 7

Feeds boarding equipment that shapes and dries knitted socks:
Adjusts steam pressure, turning valves, to heat metal forms used in shaping and drying socks. Pulls socks over leg-shaped boarding form, aligns toe and heel with form, and smooths out wrinkles in leg. Removes boarded socks from forms and stacks them for further processing. Changes toe tips on drying boards, using screwdriver, to shape socks to required sizes. Cleans and lubricates machines periodically.

8569-342 DRAPERY PLEATER, HAND(garment & fabric) DPT:687
pre-pleater, hand.
GED: 2 SVP: 2 EC: I PA: L 4 7

Pre-pleats and clips custom made draperies:
Determines number of pleats required, according to width of finished drapery and customer's requirements. Forms evenly spaced pleats across drapery, either by placing fabric over slotted device and by pressing it into slots, at pleat's location, with flat metal bar, or by using flat hooks to fold fabric as required. Clips fabric with clothes pins to hold pleats ready for sewing and removes bar or hooks.
May turn up hem and stitch edge, using sewing machine, giving desired length to drapery.

8569-346 GARMENT-PARTS SORTER(garment & fabric; knit goods) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4 7

Sorts, assembles into bundles, and tags specified numbers of garment parts for distribution to production workers:
Selects parts required to make complete garment according to size, style, colour, and number required. Ties garment parts into bundles and attaches work ticket to bundles to indicate production operation. Places bundles in bags, bin compartments, or on table for distribution to production workers.
May mark garment parts to indicate points of assembly or opening to be cut, using chalk or fluorescent marking pen, or by cutting notches, using scissors. May replace defective parts found while assembling bundles.

8569-350 BELT LINER(leather goods) DPT:687
GED: 2 SVP: 2 EC: I PA: L 4 7

Glues linings to belts, and presses them together, using mangle:
Lays belt tops in straight rows over wax covered frames to avoid staining. Applies coat of paste to belt backs and linings, using brush. Aligns and presses belt tops and linings by hand and runs them through mangle to smooth and press them together. Places assembled belts into box.

8569-351 EMBROIDERY-MACHINE CHANGER(garment & fabric; textile) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Helps in operation of embroidery machine, performing any combination of the following duties:

Carries frames to and from embroidery machine. Installs and removes frames from machines. Inserts and threads prewound bobbins into empty shuttles, by hand. Places shuttles into slot of shuttle rail to maintain embroidery operation. Inserts cloth and backing in machine, manually. Regulates thread tension by turning wheel. Adjusts, or replaces shuttle when thread is broken or bobbin empty. Assists in changing or setting material in machine. Keeps shuttles clean and oiled. Removes embroidery pieces from forms, and bundles them according to size. See also definition for term title, 02-160 HELPER (any ind.).

8569-354 FLOCKER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Cements flock onto fabric articles, such as banners, crests and emblems, to give them velvety or woolly appearance:

Brushes sizing or coloured enamel onto article to stiffen article and to hold flock. Spreads flock by hand over sized material, and places article on tray. Presses button to start vibrating rollers on machine. Positions and holds tray on vibrating rollers that fluff flock over article, to produce velvety or woolly appearance. Cleans and dusts trays, when changing shades of flock, to prevent mixing of colours.

8569-358 FLOOR WORKER, PARACHUTES(garment & fabric) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4

Prepares parachutes for assembly and sewing, by performing one or more of the following duties:

Folds edges of parachute canopy over pre-cut tape, and inserts pins at seams to secure assembly in place for stitching. Lays out precut panels on table and marks reference points for sewing, using jig and pencil. Lays out canopy assembly parts, using jig, and secures components together, using heat-tacker to prepare sewing. Folds rectangular signal-flare parachutes in four, and marks corner representing center of parachute, prior to stitching.

May be designated according to function performed; for example, Parachute Marker
Vent-Tape Pinner

8569-399 OTHER FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS: TEXTILE, FUR AND LEATHER PRODUCTS

This group includes textile, fur and leather workers, not elsewhere classified; for example, those who hand-finish knitted gloves, tend synchronized machines, which produce sanitary napkins or tampons, and tend machines that fuse decorative emblems onto garments. Typical examples of occupational titles covered by this residual group definition are:

Band-Label Machine Operator(textile)
Emblem-Fuser Operator(knit goods)
Sanitary-Napkin-Machine Tender(pharm. & toil.)
Tipper(knit goods)

857-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This minor group includes occupations concerned with fabricating, assembling and repairing a variety of products made from rubber, plastics, and related materials; such as, tires, tubes, belts, gloves, tanks, fibreglass boat hulls and rubber footwear. These occupations are classified in the following unit groups:

- 8570** Foremen: Fabricating, Assembling and Repairing Occupations, Rubber, Plastic and Related Products
- 8571** Bonding and Cementing Occupations, Rubber Plastic and Related Products
- 8573** Moulding Occupations, Rubber Plastic and Related Products
- 8575** Cutting and Finishing Occupations, Rubber, Plastic and Related Products
- 8576** Inspecting, Testing, Grading and Sampling Occupations: Fabricating, Assembling and Repairing, Rubber, Plastic and Related Products
- 8578** Occupations in Labouring and Other Elemental Work: Fabricating, Assembling and Repairing, Rubber, Plastic and Related Products
- 8579** Fabricating, Assembling and Repairing Occupations, Rubber, Plastic and Related Products, n.e.c.

8570-FOREMEN: FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating, assembling and repairing, rubber, plastic and related materials products.

May supervise workers engaged in the production of a particular type of belt and be designated accordingly; for example,
Foreman, Conveyor Belt
Foreman, Snowtrack
Foreman, V-Belt

8570-110 FOREMAN, BELT BUILDING(rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in producing a variety of conveyor, transmission, traction and v-belts by building up layers of rubberized fabric and rubber on building drums or tables; by trimming, cutting or skiving belts to shape or size; by curing belts in horizontal heaters, steam or hydraulic presses; by splicing to form continuous belting; and branding, packaging or crating belts for shipping, dependent upon type, size and style of finished product:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

8570-114 FOREMAN, HOSE BUILDING(rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in production of a variety of domestic, automotive and industrial hose by extruding rubber to form tubing; by covering tubing with braided or knitted wire or cord; by building up layers of rubberized fabric and rubber on mandrels; by covering hose with lead sheath or wrapping hose with fabric for curing; and curing hose by placing in horizontal heaters, attaching couplings and filling hose with steam or sliding hose over steam filled forms; by cutting hose to length; by attaching fittings, couplings or expansion joints; and branding and packaging hose for shipping in forms dependent upon type, size and style of finished product.

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular method of hose fabrication and be designated accordingly; for example,

Foreman, Formed Hose
Foreman, Lead-Press-Cured Hose
Foreman, Wrap-Ply Hose

8570-118 FOREMAN, INSPECTING RUBBER, PLASTIC AND RELATED MATERIALS PRODUCTS(plastic prod.; rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in quality control functions; such as, inspecting, testing, grading and sampling of in-process, finished and repaired rubber, plastic and related materials, parts or products; such as, tire tubes, hose, linoleum, matting, footwear, foam products, automotive parts and accessories, electrical goods and household ware, (Unit Group 8576):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers concerned with a particular product and be designated accordingly; for example,

Foreman, Electrical-Rubber Goods Testing(rubber)

Foreman, Foam Products Inspection

Foreman, Footwear Inspection

Foreman, Hose Inspection and Testing(rubber)

Foreman, Matting Inspection(rubber)

Foreman, Retread-Tire Inspection(rubber)

8570-122 FOREMAN, PLASTIC PRODUCTS FABRICATING, ASSEMBLING AND REPAIRING(plastic prod.) DPT:138

Supervises and co-ordinates activities of workers engaged in laying out, cutting, sawing, cementing, assembling, grinding, reaming, milling, routing, drilling, tapping, trimming, repairing, sewing, heat sealing, painting, decorating, pressing, extruding, laminating, casting, moulding and finishing plastic items by hand or special machine to produce a variety of parts or finished products; such as, skylights, display signs, tile, automotive parts and accessories, phonograph records, foam cushions, water hose, toys, packaging materials and fibreglass boat hulls and parts:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a specific activity or the production of a particular product and be designated accordingly; for example,

Foreman, Blow-Moulding

Foreman, Compression Moulding

Foreman, Extrusion

Foreman, Fibreglass Plastics

Foreman, Finishing

Foreman, Injection Moulding

Foreman, Plastic Shop

Foreman, Plastic Toys

Foreman, Preform

Foreman, Record Press

Foreman, Reinforced Plastics

Foreman, Thermoforming

8570-126 FOREMAN, RUBBER PRODUCTS FABRICATING, ASSEMBLING AND REPAIRING(rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in laying out, cutting, fitting, shaping, splicing, cementing, assembling, moulding, vulcanizing, curing, trimming, grinding, buffing, repairing, measuring, cleaning and finishing by hand or special machine, a variety of parts or finished products; such as, tubes, footwear, retreaded tires, rolls, mats, automotive and household ware:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a specific activity or in the production of a particular product and be designated accordingly; for example,

Foreman, Curing

Foreman, Finishing

Foreman, Roll Building

Foreman, Rubber Footwear

Foreman, Stock Preparation

Foreman, Tire Retread

Foreman, Tire Tubes

8570-130 FOREMAN, TIRE BUILDING(rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in assembling rubberized fabric, tire beads, sidewall and tread stock in specified sequence on collapsible building drum to produce pneumatic tires; inspecting and repairing green tires; and lubricating green tires preparatory to curing:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in building a particular type of pneumatic tire and be designated accordingly; for example,

Foreman, Automobile-Tire Builders

Foreman, Bus-Tire Builders

Foreman, Off-Highway-Tire Builders

Foreman, Truck-Tire Builders

8570-134 FOREMAN, TIRE INSPECTION(rubber) DPT:138 foreman, tire finishing.

Supervises and co-ordinates activities of workers engaged in finishing and inspecting cured tires; by trimming excess rubber formed on tire in curing process; by buffing to remove specified width of black rubber overcoating to reveal white sidewall; by inspecting tires to detect defects, such as cracks, blisters or ply separations; by sorting tires according to type of defect and repairing them; by changing brands on repaired tires that do not meet first grade specifications; by determining static balance of tires; by testing tires on forced variation machine; and by cleaning and painting tire surface and applying protective coating on white sidewalls preparatory to shipping:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

8570-138 FOREMAN, TIRE STOCK PREPARATION(rubber) DPT:138

Supervises and co-ordinates activities of workers engaged in preparing stock for use in pneumatic tire building by bias-cutting and splicing rubberized fabric to form plies; by forming and finishing tire beads; by assembling and wrapping bands; by cutting and weighing rubber sidewall and tread stock; and assembling chafer strips:

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

8570-199 OTHER FOREMEN, RUBBER, PLASTIC AND RELATED PRODUCTS

This group includes rubber, plastic and related products fabricating, assembling and repairing foremen, not elsewhere classified; for example, those who supervise and co-ordinate the activities of workers engaged in laying out, cutting, cementing, assembling, trimming, forming, moulding, casting, shaping, curing, repairing, finishing and cleaning a variety of parts or products; such as, display balloons, solid tires, gaskets, fuel tanks, display mannequins, rubber bands, rubber stamps, tank linings, samples and rubber gloves. Typical examples of occupational titles covered by this residual group definition are:

Foreman, Dipped Goods(rubber)

Foreman, Mannequin(plastic prod.)

Foreman, Tank Lining(rubber; plastic prod.)

8571-BONDING AND CEMENTING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations concerned with bonding and cementing rubber or plastic materials to produce a variety of parts or finished products, such as re-capped tires, belts and footwear. Activities include: fitting, shaping, cleaning, cementing and finishing articles by hand or special machines.

8571-110 BELT BUILDER(rubber) DPT:664 GED: 3 SVP: 5 EC: 1 7 PA: H 3 4 5

Builds up layers of rubberized fabric and gum to produce transmission and conveyor belts:

Pulls fabric and gum plies, of specified width, from rolls on letoff rack onto building table. Brushes cement on plies and aligns edges with

previously laid plies. Cuts plies to length with scissors, and bonds plies together, using hand and special rollers. Builds up specified number of plies and trims irregular edges with scissors and knife. Splices plies to obtain specified lengths. Inserts end of finished belt between pressure rollers that bond plies and roll belt onto windup rack. Signals crane operator to lift and position rolls of stock and belting in work area. Measures finished belts with ruler and gauges for conformance to drawings.

8571-114 TIRE REPAIRER-VULCANIZER(rubber) DPT:684
GED: 2 SVP: 4 EC: 1 5 7 PA: H 3 4 7

Repairs breaks and holes in casings and treads of large motor vehicle tires:

Cuts and trims defective area of tire, using knife. Scrapes and cleans area, using electrically-powered wire brush and abrasive wheel. Coats defective area on inside of tire with rubber cement. Positions precut rubber repair patch over cemented area, and rolls it into rupture to ensure adhesion, using special hand roller. Covers rupture on outside of tire with tread rubber and works rubber into hole, using roller. Trims patch, using knife. Inserts mandrel inside tire. Clamps tire in tire mould of pre-heated vulcanizing machine, to vulcanize rubber and fuse patch with surrounding rubber. Regrooves repaired portion of tread, using electrically-heated grooving knife or abrasive wheel. May use air or steam bag and steam-heated mould to vulcanize tire.

8571-118 TIRE RETREADER(rubber) DPT:684
tire recapper.
GED: 3 SVP: 3 EC: 1 7 PA: H 4

Applies new rubber tread to buffed tire casings, and cures tread in bonding chamber:

Mounts buffed casing on spreader to ensure tread will lie flat. Selects roll of tread material according to width and pattern. Cuts tread length to suit tire circumference, using knife. Applies chemical bonding tape, or brushes rubber cement onto tire casing. Loads mounted casing onto mandrel and presses pedal to rotate casing. Feeds tread strip between rollers that press tread against casing to ensure close bonding. Joins butt ends of tread, using rubber cement or hand stapler. Mounts curing envelope over tire tread and attaches exhausting tube to valve. Installs and inflates tube inside casing to maintain tire shape. Hangs tire from rail in curing chamber, seals chamber door and adjusts vacuum and steam valves to cure tread. May set tire aside after tread bonding, to be cured in vulcanizing mould. May operate extruding machine to form rubber tread of desired dimensions.

8571-122 TIRE-RETREADING-MACHINE TENDER(rubber) DPT:685
GED: 3 SVP: 3 EC: 1 7 PA: H 4

Tends automatic machine that applies extruded strip of uncured rubber tread to buffed tire casing:

Selects data card according to job order specifications. Places card over control panel, and sets dials and gauges to correspond with diagrammatic settings on data card. Mounts tire on expanding drum. Pushes lever to expand drum to tire size and inflate tire. Turns switch to start mounted tire revolving. Presses button to start extruding machine, and feed uncured rubber ribbon into machine. Pulls end of extruded rubber strip from machine outlet, feeds through roller assembly and applies it to revolving tire. Observes operation and adjusts extruded rubber thickness as required. Cleans machine and equipment, using solvent.

8571-126 ROLL BUILDER(rubber) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: M 4

Builds up rubber plies on metal cores for use as printers' rolls: Positions metal core in building machine by hand or using hoist, and applies rubber cement with brush. Pulls ply of rubber from roll in rack onto worktable. Measures and cuts ply to specified length with scissors. Vacuums rubber ply to ensure removal of dust and lint. Starts machine to revolve core. Wraps specified number of plies around core and splices ends. Compresses rubber plies and removes wrinkles and trapped air, using automatic machine rollers and hand roller. Cuts roll to length with knife. Weighs roll to ensure that specified thickness of finished roll covering is attained. Wraps finished roll with strips of cloth preparatory to curing.

8571-130 RUBBER-FOOTWEAR ASSEMBLER(rubber) DPT:684

GED: 2 SVP: 3 EC: 1 PA: M 4 7

Assembles rubber footwear articles by performing any combination of the following duties:

Places last on conveyor jack. Wraps upper around last and presses back seam at heel to hold upper onto last. Joins seams; such as, back, toe, pocket and top, allowing specified margin. Presses and rolls seams with fingers to ensure complete union. Attaches parts to workpiece in designated location, and aligns them, using other parts or templates as guides, or according to markings stamped on parts. Swabs dry parts with benzine or naphtha to restore tackiness.

8571-134 SNOWTRACK BUILDER, RUBBER(rubber) DPT:684

traction-belt builder.

GED: 2 SVP: 3 EC: 1 7 PA: M 4

Builds snowtracks for winter recreation vehicles, by one of the following methods:

1. Adjusts drum-type building machine to specified diameter. Mounts building sleeve over drum of machine and clamps in place. Pulls ply stock from machine spool and aligns with edge of sleeve. Depresses pedal to rotate drum, and winds specified length of ply onto sleeve. Cuts ply stock from spool with knife and splices ends, using fingers. Brushes ply layers with solvent to ensure adhesion. Positions pre-cemented and precut steel rods on ply layers at specified locations. Applies layer of gum stock to cover rods, and hand rolls gum stock and piles as drum revolves. Cures snowtrack in automatic hydraulic-curing-press.
2. Pulls fabric and gum rubber plies of specified width onto table rack from rolls on letoff rack, and aligns edges with previously laid plies. Cuts plies to length with scissors, and bonds plies together, using hand roller. Builds up specified number of plies, and trims irregular edges with scissors or knife. Inserts narrow protective strips between ply layers at each end of belt to facilitate splicing. Measures finished belt with ruler and gauges for conformance to drawings. Sprays wax on surface of belt to prevent rubber from sticking to mould. Pushes table rack into press that moulds and cures belt. Stacks cured belts on skids or pallets for removal to splicing area.
3. Places precured moulded rubber and fabric belt in machine that slits belt length-wise into widths. Lays sections side by side on assembly table. Punches holes in belt widths at specified locations, using automatic punch press. Positions preformed metal tread bars and ice cleats laterally over holes punched in belt sections. Inserts rivets into holes for automatic riveting of rods to belt strips to form completed belt.

8571-138 V-BELT BUILDER(rubber) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: M 4

Builds up plies of rubber and filler to form V-belts:

Positions building drum of specified circumference on shaft of building lathe. Measures and cuts one or more plies of rubber from roll, using rule and scissors. Brushes cement on surface of rubber. Lays one or more plies around drum and splices ends, using hand rollers. Threads end of cemented belt cord from spool through lathe guide, and positions at edge of base rubber on drum. Sets gauge and starts drum revolving, by depressing pedal, to wind specified cords per inch around length of base rubber. Positions layer of filler rubber on cord and splices ends. Starts drum revolving and lowers pressure rollers to compress material on drum. Wipes soapstone on compressed material to prevent sticking. Positions notched cutting bar across front of drum. Starts drum revolving and presses cutting bar against material to cut belting to specified width and V-shape. Collapses drum and places cut V-belts on rack.

8571-142 BRAIDING-MACHINE TENDER(rubber) DPT:685
GED: 2 SVP: 3 EC: 1 5 7 PA: M 4

Tends machine that braids and cements fabric cord or wire around rubber hose for reinforcement:

Mounts specified spools of cord or wire in letoff rack. Changes pitch gears as required. Threads hose and cord or wire into braiding machine. Adjusts machine controls to maintain uniform tension on cord or wire stock. Starts flow of rubber cement and pushes button to start machine. Observes operation for defects, such as broken cords and loose braiding. Ties broken cords. Coils braided hose in box. May operate machines that knit yarn onto rubber hose, or weave yarn

and wire jacket around hose, and be designated accordingly; for example,
Knitting-Machine Tender
Loom Tender

8571-146 STRAP-FOLDING-MACHINE TENDER(rubber) DPT:485
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machines that fold uncured rubber strip or coated friction tape over parallel reinforcing cords, to form strap material to which buckles, eyelets, or snaps are attached for use on rubber footwear: Reads work order and calculates width, length, and quantity of stock to be made, and sets automatic counter on machine. Selects cord, strip or tape and folding attachment according to work order. Mounts spools of cord on machine spindles and roll of strip or tape on arbour. Secures folding attachment to machine bracket by turning thumb-screws or using screwdriver. Cuts end of strip or tape on bias, using scissors, and threads strip or tape and cord through folder and pressing rollers. Positions carton or wind-up reel at discharge end of machine. Starts machine that forms strap material and observes machine for malfunctions.

8571-150 AUTOMOTIVE-DOOR-PANELLING ASSEMBLER(plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles automotive door panels, by either of the following methods:

1. Sprays adhesive onto one side of precut baseboards, using spray gun. Places material, such as vinyl or fabric, on board, and smoothes out material by hand. Cuts excess material, using shears. Cleans excess adhesive from panel, using cloth and chemical solution, and places panel on conveyor leading to drying unit. Places dried panel in automatic machine that embosses design on panel. 2. Places baseboard and vinyl sheet in tray on table of dielectric press, and smoothes out material by hand. Pushes tray under ram of press. Pushes buttons to lower ram and start dielectric action that bonds vinyl to baseboard and embosses design on panel. Removes panel from press at end of cycle.

May attach metal trim to panel, using hand tools. May cement risers (shaped blocks or strips) between baseboard and covering material to impart decorative shape to panels. May staple covering material to baseboard, using stapling gun. May assemble plastic or fabric-covered panelling for marine craft or aircraft and be designated accordingly; for example,

Assembler, Aircraft Panelling
Assembler, Marine-Craft Panelling

8571-154 BAND BUILDER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Cements together bands of ply stock for use in manufacturing tires: Positions rubberized fabric on drum and aligns with sides of drum. Depresses pedal to rotate drum, guiding ply onto drum to form band. Wipes wrinkles with benzol and smoothes by hand. Splices ends of ply by pressing with fingers. Repeats operation, reversing angle of splice until specified number of plies are formed into band. Depresses pedal or pulls lever to move rollers against band and rotates drum to bond plies. Pushes pedal to collapse drum and pulls band from drum.

8571-158 BELT-BUILDER HELPER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: H 3 4

Helps to build up layers of rubberized fabric and gum rubber, to produce transmission and conveyor belts, by performing any combination of the following duties:

Moves rolls of stock to belt-building area, using lift-truck or hand-truck. Positions stock rolls in letoff rack, using hoist. Pulls fabric and gum plies of specified width onto belt-building table from roll in letoff rack or calender. Brushes cement on each ply and helps align edge with previously laid ply. Compresses plies together, using rollers and special hand tool. Builds up specified number of plies and trims irregular edges with scissors or knife. Helps insert end of finished belt between pressure rollers that bond plies. Rolls finished belt onto power-windup rack. See also definition for term title, 02-160 HELPER (any ind.)

8571-162 CONVEYOR-BELT SPLICER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: H 4

Splices ends of belt lengths together, to form endless belts: Measures and cuts belt lengths to specified dimension, using knife. Measures and cuts consecutive stepoffs in plies, on each end of belt, using splicing jig and knife, to fit ends together evenly for splicing. Brushes cement on ends and presses ends together, using hand roller. Positions splice in sewing machine and sews splice to reinforce joint. Coats splice with cement and applies gum strip covering.

8571-166 RUBBER-AND-CANVAS-FOOTWEAR DIPPER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Dips last-mounted shoe or boot casings in liquid neoprene latex and coagulant, to build up coating on surface, and provide bonding agent for further assembly:

Mounts lasted casings, soles down, on screen of dip pan. Depresses pedal to lower screen and dip casings in latex for specified time. Places dipped casings on conveyor leading to drying oven. Examines coating for defects, such as bubbles, lumps or thin spots, denoting poor mixture. Replenishes latex in reservoir of dip tank as required.

May immerse latex dipped casings in separate coagulating tank to harden coating. May redip casings to eliminate defects.

8571-170 SPLICER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Splices bias-cut ply stock into continuous strip for use in tire building: Inspects plies and removes defective sections. Aligns and splices sections of ply stock, by overlapping ends and pressing together with fingers. Presses pedal of winding device to wind spliced plies on spool. Determines when spool is loaded, by counting plies or observing stop mark on spool. Guides ply onto spools by hand to prevent wrinkling.

8571-174 SPONGE-GASKET ASSEMBLER(rubber) DPT:684
gasket gluer.
GED: 2 SVP: 2 EC: 1 PA: L 4

Cements and joins end of precut sections of sponge rubber, to form individual gaskets:

Brushes rubber cement on bevelled or butt ends of sponge rubber sections. Joins cemented ends in specified sequence and lays seams flat on work bench. Presses seams to make firm bond, using hand roller or fingers. Examines completed gaskets for uneven overlapping or butting of seams, and throws rejects in scrap bin.

May tie completed gaskets in bundles of specified number and pack them in cases for shipping.

8571-178 TUBE SKIVER AND SPLICER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Bevels and splices ends of rubber tubes to form inner tubes for tires: Cuts bevel on ends of tube, using knife, or slips tube over form set at angle to power-driven rotary knife that automatically cuts bevel. Brushes rubber cement on each end of tube. Aligns ends of tube and rolls and presses ends together to form splice.

8571-182 WADING-BOOT-TOP ASSEMBLER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles and joins tops to boots to produce rubber wading boots, by performing any combination of the following duties:

Selects precut parts according to worksheet and lays them on workbench for cementing. Brushes rubber cement on edges to be joined, and assembles cemented parts in specified sequence to form completed top. Cements top to boot and places strip of gum rubber over joined seam. Rolls seam with hand roller to make firm bond. Attaches eyelets and snap buttons at designated points, using grommeting tool. Hangs completed wading boot on rack to allow cement to dry. Lays out and cuts parts, such as straps or reinforcement tabs from spare stock, using template and scissors.

8571-186 BAND-STOCK PREPARER(rubber) DPT:685
squeegee splicer.
 GED: 2 SVP: 2 EC: 1 PA: M 4

Tends section of bias-machine to roll uncured stock and gum strip onto ply stock used for bands in pneumatic-truck-tire construction: Lifts rolls of gum strip and uncured rubber onto letoff rods of machine, and threads stock through guide rollers. Lifts bias-cut stock from conveyor to apron of machine. Turns setscrews to adjust apron guide and provide even application of uncured rubber and gum on ply stock. Starts machine to apply material onto ply stock and to accumulate ply stock in festoon of machine for band builder.

8571-190 CEMENTER, MACHINE(rubber) DPT:685
gluing-machine operator.
 GED: 2 SVP: 2 EC: 1 7 PA: L 4 7

Tends machines to apply margin of rubber or latex cement to rubberized-fabric footwear parts, by one of the following methods: 1. Draws edge of workpiece between cement-coated, revolving rollers to apply even coating of cement. 2. Depresses pedal to bring rollers together on material as it is passed between rollers. 3. Holds top of skirtlike upper along bottom edge between rollers to apply cement for subsequent bonding of shoe bottom. 4. Holds sponge rubber insoles against revolving disk that applies cement. Turns setscrews to adjust distances between pickup, wiper and applicator rollers and blades, to regulate amount of cement deposited on workpiece. Places processed parts on conveyor belt or in books, frames or stacks for subsequent processing.

8571-194 GREEN-TIRE LUBRICATOR(rubber) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: H 4 7

Tends machine that lubricates uncured tires to prevent them from sticking to mould and bladder during curing process: Examines uncured tires for defects. Lifts tire from conveyor and positions on lubricating machine that sprays soapstone solution on inside and outside of tire. Presses button to commence spraying cycle. Lifts tire onto conveyor for transfer to storage.

8571-198 HEAT-SEALING-MACHINE TENDER (plastic prod.) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that heat-seals precut or preformed plastic material or film to form book covers, brief cases, wallets, purses, novelties and other plastic products: Loads feeding mechanism with rolls or sheets of plastic materials or positions precut pieces on jig. Aligns edges of continuous plastic strips or pieces, and guides them into position under electrode. Starts machine and depresses pedal to lower electrode that seals edges of material. Sets controls on machine to adjust temperature, pressure and time cycle. Removes product from machine and stacks it for subsequent removal. May place plastic sheets and paperboard against stops in tray on revolving table which automatically positions them under electrode. May remove excess material, using scissors. May examine articles for defects, such as smeared paint, cuts and wrinkled seams.

8571-202 PRESS TENDER(rubber) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: M 4

Tends pneumatic presses to bond together rubber strips, used in manufacturing tarpaulins, footwear and other rubber products: Lifts and positions rubber strips on machine bed between ram and press table or fixture. Moves lever to lower ram or raise table and press workpiece, bonding tacky parts together. Observes gauges and turns valves to maintain required air pressure. Examines workpiece for defects, such as loose edges or misaligned parts. Folds or rolls strips of material and places on handtruck, using chain hoist. May apply bonding medium to seams, using hand brush or adhesive tape.

8571-206 RUBBER-TUBING SPLICER(rubber) DPT:685
 GED: 2 SVP: 2 EC: 1 PA: L 4

Tends battery of small vulcanizing presses that splice rubber tubing into continuous strips for use as automobile window, door and trunk seals: Brushes rubber cement on ends of tubing and positions tubing in press for splicing. Sets automatic timer for specified curing time and closes press. Trims excess rubber from splice, using scissors or knife. Examines splice for breaks and places lengths of acceptable spliced tubing in container for removal to next process stations. May bind end of tubing with rubber tape to reinforce splice.

8571-210 SPLICING-MACHINE TENDER(rubber) DPT:685
 GED: 2 SVP: 2 EC: 1 7 PA: L 4

Tends machine that fuses together ends of rubber tubing to form tires for industrial equipment, lawn mowers, golf carts and similar products: Lifts rubber tube and bends it into circular shape with hands. Inserts ends of tube into clamps on machine. Depresses pedal to activate vulcanizing unit that fuses ends of tube-forming tire. Releases pedal and removes vulcanized tire.

8571-214 TUBE SPLICER, MACHINE(rubber) DPT:686
 GED: 2 SVP: 2 EC: 1 PA: L 4

Feeds machine that splices uncured rubber tubes to form inner tubes for tires: Positions ends of tube in machine and starts machine that butt-splices ends. Lifts tube onto hook and places cylinders on hook under fold to prevent creasing. May cut tube to specified length with knife before splicing. May punch hole at valve location, and secure valve to tube, with valve- press machine.

8571-218 HAND BONDER, RUBBER FOOTWEAR (rubber) DPT:687
 GED: 2 SVP: 2 EC: 1 PA: M 4 7

Presses together layers of uncured rubber parts or sections of rubber footwear, using hand roller or special tool: Presses tool against designated area or part of workpiece; such as, shank, midsole, toecap, outsole or foxing, and rolls tool back and forth, or follows edge or seam until layers are pressed together. Removes footwear from end of conveyor line and rolls seams around edge of outsole as final assembly operation.

8571-222 PLASTIC-TOY ASSEMBLER(sport. & toy) DPT:687
 GED: 2 SVP: 2 EC: 1 PA: L 4 7

Fits and cements cast plastic parts together to assemble toys; such as, automobiles, boats, dolls, and animals: Places male and female castings on solvent-saturated blanket jig, or sponges adhesive on parts. Fits and clamps castings in drying jig, or presses parts together to bond them, by hand or using foot- operated press. Inspects plastic toys and games for colouring and casting defects. May assemble toys from parts made of various materials; such as, metal, cloth, vinyl and cardboard, by stapling, riveting or fitting in punched slots, or fastening with elastic bands. May fasten eyelets in parts, using automatic eyelet machine.

8571-226 RUBBER-CLOSURE INSTALLER(rubber) DPT:687
 GED: 2 SVP: 2 EC: 1 PA: L 4

Cements and installs closures in rubber products, such as, water bottles, ice bags and throat collars: Selects closure according to size and type, and examines it for conformance to specifications. Brushes cement on contact areas of closure and product to be fitted, and allows it to dry. Dips closure in solvent before installing. Installs closure and applies hand pressure to ensure effective bond. Wipes excess cement from product and places on drying rack. Places dried products in tote-boxes and moves them to storage area, using handtruck. May insert shields inside product to prevent soiling by cement during drying. May install valves in sundry items.

8571-299 OTHER BONDING AND CEMENTING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This group includes bonding and cementing workers, not elsewhere classified, concerned with bonding and cementing rubber or plastic materials; for example, those who butt-join rolls of sponge rubber underlay to produce double-width product, build up rubber strips to form cups and rings for industrial-air-brake parts, fabricate rubber vacuum bags to withdraw moisture from laminated windshields and tend pressing machines to fuse latex to items such as belts, pocket books or handbag parts. Typical examples of occupational titles covered by this residual group definition are:

Latex Laminator, Machine(rubber)
Roll Joiner(rubber)
Rubber Cup and Ring Builder(rubber)
Vacuum-Bag Maker(rubber)

8573-MOULDING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations concerned with operating or tending machines that mould rubber, plastic or related materials by injection, compression or lamination to produce parts for mechanical or electrical equipment, and items such as household ware or rubber gloves; and shaping and vulcanizing by heat to produce tires and tubes or other items.

Pressing Occupations 8573-110 through 8573-146

8573-110 PLASTICS-MOULDING-MACHINE SETTER(plastic prod.) DPT:380
set-up man, plastics.
GED: 4 SVP: 6 EC: 1 5 6 PA: M 3 4 7

Sets up and adjusts compression, injection, or transfer machines, used to mould plastic materials according to specifications:

Positions assembled mould on press bed of moulding machine, or bolts matrix of unassembled mould to bed, aligns die (attached to ram) with matrix, and adjusts stroke of ram, using hand tools. Connects steam, oil and water-lines to mould, or adjusts controls to regulate temperature. Sets machine controls to regulate forming pressure of machine and curing time of plastic in mould, and installs knock out pins in mould, using gauges and hand tools. Starts machine to produce sample product. Examines sample for surface defects, such as bubbles, warping and scratches, and adjusts machine to eliminate defects.

May perform spot checks to ensure machines produce product according to specifications. May discuss production techniques with customer.

8573-114 RUBBER-STAMP MAKER(misc. prod. fab., n.e.c.) DPT:581
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Sets type and operates mould presses to make printing face for rubber stamps:

Reads work order and studies sketch to determine wording and layout of finished stamp. Selects suitable type, places type in chase and proofreads assembled type face. Secures chase in press and places sheet of plastic moulding compound on press bed. Operates press, by pulling levers, to imprint type characters in moulding compound to form mould. Removes type chase and mould. Inserts soft rubber sheet above mould in vulcanizing press. Operates press by pressing pedal, so that combination of heat and pressure forms rubber printing stamp. May cut rubber printing stamp to fit mounting block, using scissors. May join parts, such as mounting block and handle, to form complete stamp.

8573-118 PLASTICS-PRESS OPERATOR(plastic prod.) DPT:682
GED: 3 SVP: 4 EC: 1 3 6 PA: M 4

Operates hydraulic press to emboss, laminate, or draw plastic sheets: Starts gas oven and sets thermostat to regulate oven temperature. Clamps sheet to overhead rack and pushes rack into oven to soften

sheet. Bolts dies or plates to bed of press and adjusts length of travel of ram arm, using hand tools. Positions softened sheet or layers of sheets on press bed and lowers pressure plate to hold sheets in place. Moves controls to lower ram that draws sheet through open die to specified shape, embosses sheet with specified design, or compresses layers of sheets to form laminated plastic board. Turns valves to regulate flow of water or steam through dies or plates to maintain forming temperature. Trims plastic, using shears, powersaw or knife. May operate vacuum machine to mould plastic products.

8573-122 BEAD-FORMING-MACHINE OPERATOR(rubber) DPT:682
GED: 3 SVP: 3 EC: 1 PA: M 4

Operates machine to coat strands of steel wire with rubber to form beads for use in making pneumatic tires:

Installs bead-forming wheel, dies, and baffles, and turns setscrews to adjust guides, spring tension, bead cutter arm, and bead forming wheel cycle according to specifications, using wrenches and screw-driver. Threads specified number of wires from spools through tuber die for rubber coating and into machine for forming into bead layers. Starts machine to feed wire through die and onto forming wheel. Cuts wire to remove bead layer from forming wheel when cycle is complete. Tapes cut end to hold bead together for wrapping or places bead in wrapping machine.

8573-126 STRIP-MACHINE OPERATOR(rubber) DPT:682
GED: 3 SVP: 3 EC: 1 7 PA: L 4

Operates machine to produce wire-mesh-backed rubber strip for applications such as automobile weatherstripping or gasket material: Installs machine parts such as engraved rollers and forming channels or tubes, using hand tools. Mounts spool of wire mesh onto holder and spot welds mesh leader to end of previous spool, threaded through machine. Adjusts rollers and guides to centre rubber strip in guides and to align mesh at correct depth in strip, using hand tools. Starts machine by pressing switch and observes emerging formed strip to ensure conformance to specifications. Adjusts roller speed or width and heat of vulcanizing units by turning screws or rheostats.

8573-130 PLATE CHANGER(plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Installs stamper disks (matrices) in presses that mould phonograph records:

Wipes press dies and backs of stampers with lint-free cloth to remove foreign particles. Examines surface of stampers under lamp to ensure that disks are clean and free from defects. Bolts stampers on press dies, using socket wrench. Places retaining rings over edges of stampers, inserts screws in rings and tightens screws, using screw-driver. Operates press to form sample record. Cleans and polishes stampers on polishing wheel, using brush, emery cloth, wax, detergent, or jeweller's rouge.

May connect steam and water-lines and adjust controls to regulate temperature, pressure and curing time.

8573-134 CURING-PRESS TENDER(asbestos & min. wool) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends heated press to mould and cure brake lining material: Places metal pattern of specified contour into press bed. Fills mould of preforming press with asbestos compound and operates press to preform linings. Positions preformed brake linings on press bed. Operates press for specified time by pressing buttons, to set shape and harden linings. Removes cured linings from press and loads them on handtruck for further processing. May measure and cut lining stock to size, using shear.

8573-138 PRESSMAN(plastic prod.; rubber) mouldman. DPT:685
GED: 2 SVP: 2 EC: 1 3 PA: M 4

Tends heated press to mould and cure rubber or plastic products, such as floor mats and plastic contour chairs:

Sprays inner surfaces of moulding dies with parting agent to facilitate removal of cured product. Places thermoplastic material on lower die of press and aligns edges of die and material. Inserts metal parts, to be

bonded to rubber or plastic, into die contours. Operates press by pushing buttons, to mould and cure product for specified time. Opens press and strips away moulded article. Cleans residue from dies, using air jet and fine abrasives.

May inspect moulded products for defects. May spread bonding solution on lower die when producing plastic or fibreglass chairs. May draw material into contours of mould, prior to pressing, using vacuum device. May laminate and mould sheets of upholstery material, such as textile fabrics and rubber or plastic sheeting, and be designated accordingly; for example, Floor-Mat Pressman Moulder, Rubber Gears Upholstery Moulder Footwear Moulder

8573-142 RECORD-PRESS TENDER(plastic prod.) DPT:685
record maker.
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends one or more hydraulic presses that mould phonograph records from heated biscuits (vinyl squares) or plastic compound: Centers biscuit and record label on spindle in press bed, or moves controls to deposit measured amount of heated compound in press bed. Starts press that compresses biscuit or compound, under high temperature and pressure, to shape of stamper disks (matrices). Removes moulded record and mounts it on cutting-machine that automatically trims excess material from rim of record. Examines record surface for defects, such as pits in grooves, scratches, or burrs. May punch out large centre hole in 45 r.p.m. records, using punch press.

8573-146 VACUUM-FORMING-MACHINE TENDER(plastic prod.) DPT:685
blister former.
GED: 2 SVP: 2 EC: I PA: L 4

Tends vacuum forming machine to mould plastic products such as automotive and appliance panels, luggage components and display or packaging material: Places plastic sheet on top of mould. Positions sealing frame around sheet and clamps frame to mould rim. Starts machine, by pushing buttons, to form product by heating and vacuum-drawing sheet against mould. Releases vacuum and removes formed product from frame. May set up forming machine by installing moulds and heating elements, using hand tools. May clean and polish moulds using abrasives and wax. May trim or punch formed panels, using shears or punch press.

Moulding Occupations
8573-162 through 8573-206

8573-162 HEARING-AID-EARPIECE MAKER(scient. & ind. equip., n.e.c.) DPT:681
GED: 3 SVP: 5 EC: I PA: S 4 7

Moulds and finishes plastic ear pieces for hearing aids: Mixes ingredients to make plaster and pours it over wax pattern of ear canal to form mould. Allows plaster to set and removes wax pattern from mould. Mixes ingredients to make plastic compound and pours it into mould to form ear piece. Applies hot and cold water and air to mould, to cure plastic. Removes ear piece from mould and finishes surface, using knives and grinding and polishing wheels. May provide channel for sound tube in earpiece, by inserting wire rod in mould before pouring plastic or by drilling hole after removal from mould.

8573-166 EXTRUDING-MACHINE OPERATOR(plastic prod.; rubber) DPT:682
tuber operator.
GED: 3 SVP: 4 EC: I 7 PA: M 4 7

Sets up and operates machine to extrude rubber or thermoplastic material into rod, sheet or tubular form: Installs dies and sizing rings in extruding machine, using hand tools. Couples air, steam or water hoses to machine and die-head connections. Weighs, mixes and dumps powdered or pelletized thermoplastic and pigmenting materials into hopper. Regulates vacuum, pressure and temperature controls to specified levels and starts machine by turning switches. Synchronizes speed of emerging extrusion with take-up reel or conveyor by turning knob. Examines extruded product for

defects, such as wrinkles, bubbles and splits. Measures extruded material for conformance to specified dimensions, using gauges and calipers.

May test physical properties of extruded material, using acid bath and burst or impact testing devices. May cut extrusions to desired lengths, using shears.

8573-168 PRINTING-ROLLER MOULDER(plastic prod.; rubber) DPT:682
composition man.
GED: 3 SVP: 4 EC: I 7 PA: M 4 7

Prepares rubber, plastic or glycerine composition and operates moulding equipment to form printing press rollers: Removes worn composition from roller shaft, using knife or stripping machine. Separates reusable composition segments from scrap. Loads segments into chopping machine and starts machine to reduce material to uniformly sized pieces. Dumps chopped material into melting kettle. Weighs and adds sufficient new compound or glycerine, water and other ingredients to form desired quantity of moulding material. Melts and mixes ingredients for specified time by turning heater, timer and agitator switches. Applies parting compound to roller mould to facilitate removal of moulded roller. Fits centering devices onto core and loads it into horizontal mould, using hoist. Seals moulding cylinder cover plate, using wrenches, and couples air and liquid lines between compressor, kettle and cylinder. Opens valves to force moulding composition from kettle into mould cylinder. Cures moulded roller by allowing hot water to flow through hollow jacket of mould. Frees roller from mould by turning valves to force kerosene and air between roller and inside face of moulding cylinder. Removes moulded roller from cylinder, using hoist. Inspects roller surface for defects and trims roller edges, using knife. May remove wrinkles from surface of roller, using gas torch and hand roller.

8573-170 DISPLAY-MANNEQUIN MOULDER(plastic prod.) DPT:684
GED: 2 SVP: 4 EC: I 7 PA: L 4

Constructs hollow plastic mannequin parts, such as arms, legs and torsos, using either of the following methods: 1. Brushes release agent onto inside surfaces of moulds to facilitate removal of cured part. Selects and positions aluminum limb attachment blocks in mould recesses. Brushes liquid plastic onto mould inner surfaces. Builds up laminated form by placing layers of fibreglass strands on prepared surfaces, and brushes successive coats of liquid plastic onto fibreglass strips. Applies thickened layer of liquid plastic to edges of moulds to form seam. Bolts mould halves together, using nut runner, and places assembled mould on drying rack. Opens mould after specified time and removes cured form, using screwdriver or pry bar. 2. Brushes release agent onto mould surfaces. Places layers of cloth in mould halves and smooths wrinkles from cloth. Presses pliable plastic composition material into mould contours. Fits wooden and aluminum stiffeners and limb attachment blocks into place. Closes mould halves. Builds up moulded form by pouring successive coatings of liquid plastic into mould, using pail, and allowing each coating to dry. Opens mould and removes form after specified curing time. Trims projections from moulded form, using knife.

8573-174 RUBBER MOULDER(rubber) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4

Moulds rubber display statuettes and models of hands, feet, and heads for attachment to display mannequins: Brushes lubricant onto interior of mould. Pours latex into mould until full. Pours surplus latex from mould after shell has formed to specified thickness on inside of mould. Strips cured form from mould. Trims edges of form with knife and smooths surface with sandpaper. May place mould in cabinet oven to cure latex.

8573-178 COMPRESSION-MOULDING-MACHINE TENDER(plastic prod.) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: M 4

Tends compression-moulding machines to mould plastic products by heat and pressure according to specifications: Brushes or sprays paste wax onto inside surfaces of dies or mould halves to facilitate removal of moulded form. Sets thermostat to regulate mould temperature. Casts part, using either of following

methods: 1. Dumps specified amount of plastic compound or pellets into hopper of machine, or positions pellets in mould installed on machine. Presses button to start machine that compresses plastic into mould under heat and pressure. Allows plastic to set for specified time. 2. Weighs premixed plastic compound and pours compound into die well. Pulls lever to lower hydraulic ram that compresses compound between dies to form and cure part. Removes product from mould and cleans mould, hopper, and bed of machine, using airhose and hand tools.

May verify conformance of moulded product to specifications, using fixed gauges. May place thermosetting plastics material on hot grid or in oven to soften it prior to moulding. May mix catalysts and colouring pigments with plastic compound, using paddle or mixing machine. May tend machine to compress powdered plastics into pellets used in moulding plastic products and be designated accordingly. Preform-Machine Tender

8573-180 IMPREGNATOR-CORRUGATOR, PLASTIC SHEETS(plastic prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: M 4 7

Tends machine that impregnates fibreglass matting with plastic resins and forms and cures it to produce corrugated plastic sheets:

Weighs specified quantities of plastics ingredients on scale and dumps them into feed hopper. Pours premixed resins into spray tank. Draws sheets of fibreglass matting and cellulose film or wax paper from feed reels, and threads sheets through rollers of impregnating machine. Moves lever to regulate tension on sheeting. Starts machine and opens valve to spread resin compounds over cellulose or wax paper sheeting prior to its contact with fibreglass matting. Observes passage of sheeting through rollers, corrugating moulds in forming frame and curing oven. Moves frame to ensure alignment of laminations. Maintains specified flow of resins, speed and temperature, by monitoring gauges, valves and switches. Patches tears in sheeting, using gummed tape. Changes corrugating moulds as required to conform to product specifications.

8573-182 PLASTICS CASTER(plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Casts thermosetting plastic resins in mould to form plastic products: Coats mould sections with parting agents, such as soap, wax, or lacquer, using brush or spray gun. Clamps or bolts together sections of mould, using hand tools. Weighs or measures specified amounts of resin, catalyst, pigment, and hardening agent, using balance scale or measuring cups, and mixes them in container, using mixing machine or paddle. Pours mixture into mould and places mould in oven or water-bath cooker to cure. Removes product from mould, using airhose and hand tools.

May trim product, using knife, scissors, or file.

8573-186 EXTRUDING-MACHINE-OPERATOR HELPER(plastic prod.; rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Helps extruding machine operators in extruding rubber or thermoplastic material into rod, sheet or tubular form:

Attaches end of extruded product to take-up reel. Starts machine to rotate reel and wind product into spool. Removes wound spool from holder, using hoist. Weighs spool and records weight and length of extruded material. Feeds scrap thermoplastic material into mill to grind it for re-processing. See also definition for term title, 02-160 HELPER (any ind.).

May mix thermoplastic ingredients and pigments according to formula and dump mixture into feed hopper. May adjust slitting device to cut extruded product to specified dimensions. May inspect extruded material for defects, using gauges, and advise machine operator of deviations from specifications.

8573-190 BLADDER MOULDER(rubber) DPT:685
GED 2 SVP: 2 EC: 1 PA: M 4

Tends heated press to mould and cure rubber bladders used in tire manufacturing:

Weighs specified quantity of rubber blocks, using scales. Positions bag core in mould, using hoist. Fills mould with rubber blocks. Closes mould and starts timed curing cycle by pressing switch. Opens mould and removes core at end of cycle. Clamps bag core firmly, by pulling lever, and pulls bladder free, using hoist.

8573-194 INJECTION-MOULDING-MACHINE TENDER(plastic prod.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends injection-moulding machines to form products from thermoplastic materials:

Dumps premixed plastic powders or preformed plastic pellets into hopper of moulding machine. Starts machine that automatically liquifies pellets or powder in heating chamber, injects liquified material into mould, and ejects moulded product, or starts machine and pulls lever to close dies and inject plastic into dies to cast part. Observes gauges to ensure specified moulding temperature and pressure are maintained. Removes product from dies or mould, using hand tools. Examines moulded product for surface defects, such as cracks, dents, and voids. Trims excess material from product, using knife. May grind scrap plastic into powder for reuse.

8573-198 SKIN FORMER(plastic prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine to form padded automotive products, such as dashboards and door panels, by performing any combination of the following tasks:

Lifts precut skin (plastic sheeting) from oven conveyor and stretches it over jig. Depresses pedal to create vacuum in jig to draw skin over jig contours, and smooths wrinkles with hands. Sponges or hoses skin with water, or presses button to rotate skin under water and air jets to cool skin and set shape. Trims skin to specified shape, using knife or shears. Releases vacuum and lifts formed skin to rack. Sets oven controls for specified temperature. Moves skins to and from oven, using conveyor.

8573-200 SOFTBALL-CENTER MOULDER(sport & toy) DPT:685
GED: 2 SVP: 2 EC: 1 3 PA: M 4

Tends moulding press to mould cork and rubber compound into softball centers:

Weighs cork and rubber compound on scale. Pours specified amount of compound into packing machine which forms a slug of compressed compound. Positions slug in mould cavity of press, closes press, and sets heating cycle. Removes moulded softball-core on completion of heating cycle and trims flash from core using hand tools.

May tend compression moulding machine to form rubber golf-club grips. May tend moulding press to mould solid golf-ball centers and be designated accordingly.

Golf-Ball-Center-Moulder

8573-202 TIRE-TREAD MOULDER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 3 PA: H 4

Tends moulds that vulcanize new rubber to form tread patterns on tire casings in retreading plant:

Places tubular air-bag inside tire casing, to which new tread rubber has been cemented, using spreading device. Opens half of doughnut-shaped tire mould and clamps tire into mould. Inflates air-bag to specified pressure and closes mould. Opens steam valve to heat mould to form and cure tread pattern. Removes tire after predetermined time and trims loose rubber from tread, using knife.

8573-206 MOULD FILLER AND STRIPPER(plastic prod.) DPT:887
GED: 2 SVP: 2 EC: 1 PA: M 4

Casts and cures plastic products; such as, dolls and other toys, by performing any combination of the following duties:

Cleans moulds, using cloth and solvent. Fills mould with pre-measured amount of plastic compound by pressing trigger of dispensing gun or by opening tank discharge valve. Clamps cover on mould and loads mould onto oven conveyor for curing for specified time. Removes mould from conveyor after cooling. Sets mould into stripping position by moving lever. Removes cover plate and plugs from mould, using power wrench. Strips products from mould, using pliers.

May inspect products for defects.

Curing Occupations
8573-222 through 8573-299

8573-222 CURING PRESSMAN(rubber) DPT:660
GED: 3 SVP: 5 EC: 1 3 PA: L 4 5 6

Sets up and operates single or double-deck platen curing press to cure transmission or conveyor belting:
Directs and assists crew members engaged in setting up, according to specified width of belt, pressure, temperature, and curing time. Sets up sections of press by positioning guide stops to accommodate thickness of belt to be cured. Examines sections of press for conformity to set-up specifications and verifies temperature and time settings. Observes machine operation to detect malfunction.

8573-226 FOAM-RUBBER CUREMAN(rubber) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends control panel to process latex mixture into foam rubber blocks:
Turns switches to pump latex liquid and air into foaming tank. Verifies density of sample cup of mixture by weighing sample on scales and comparing weight with known standard. Fills moulds from foaming tank by operating valve controls. Regulates heat in curing tunnel and starts conveyor to carry moulds through tunnel, by turning switches.

8573-230 V-BELT CURER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Operates equipment to cure v-belts, using either of the following methods:

1. Brushes parting agent onto grooved drums at each end of adjustable frame to facilitate removal of cured belts. Fits belts onto frame and aligns belts in parallel rows in individual v-shaped grooves of drums. Applies tension to belts by turning handwheel. Pushes loaded frame under curing press. Starts press to cure sections of belt adjacent to heated face for specified time, by pressing buttons. Turns crank to move belts to cure successive sections. Removes frame from curing press when entire length of belts has been cured. Releases tension from belts and removes belts from drum grooves, using wooden paddle. 2. Fits belts to individual, grooved, disk-shaped moulds. Combines moulds into cylinder-shaped unit by drawing them together, side-by-side, using threaded rod and power wrench. Positions assembled moulds between parallel, contra-rotating rollers. Threads water-soaked cloth liner through tension guides and around moulds. Rotates rollers to wrap cloth tightly around perimeter of moulds, by pressing switch. Ties securing cord around cloth-faced mould. Loads moulds into heated, horizontal curing compartment, using handtruck and hoist. Seals door and admits steam to compartment, for specified time, by turning wheel and opening valve. Removes cured belts from compartment and places mould on bench. Unwraps cloth binding from mould, using winding device. Disassembles mould, using nut runner. Removes cured belts from disks and places belts on racks.

8573-232 FIRE-HOSE CURER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 4 6 PA: H 3 4

Tends steam-heating equipment that cures rubber in jacketed firehose:
Lifts precut lengths of specified rubber tubing and braided fabric hose jacket onto assembly table. Dusts rubber tubing with chemical compound to prevent tubing from sticking to jacket. Turns crank to wind tubing onto stock wheel. Aligns jacket with mechanical threading device and clamps threading fixture to end of rubber tubing. Depresses button to start winch that pulls tubing into jacket. Lifts and clamps ends of jacketed hose to fixtures on steam lines. Presses hose into curing cavities on table that hold hose in flattened position when curing. Observes gauges and turns valve to inject steam into hose at specified temperature and pressure for curing. Coils and lifts cured hose onto storage rack.

8573-233 HEATER TENDER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 6 7 PA: M 4 7

Tends horizontal pot heaters or cylindrical ovens that cure rubber goods:
Places trays of rubber goods such as hose, footwear, or airplane fuel tanks on truck. Moves loaded truck into heater. Turns capstan wheel

to secure heater door. Turns valves to control steam flow and regulate temperature and to admit ammonia, when specified. Observes heating time, or sets automatic timer to ascertain that curing cycle is completed, and releases steam from heater. Removes truck from heater and unloads it. Keeps record of temperature and pressure graphs.

May place weights, pads and rubber sheet around airplane fuel tanks preparatory to heating to prevent blistering, improve heat circulation and facilitate curing. May observe instrument panel to detect malfunctions of equipment.

8573-234 VULCANIZER TENDER(rubber) DPT:685
tire cureman; tube-vulcanizer tender.
GED: 2 SVP: 2 EC: 1 3 6 PA: M 4

Tends battery of automatic presses to vulcanize pneumatic tires and tubes, performing any combination of the following duties:

Cleans moulds, using air hose, and sprays mould with parting agent to prevent tires from sticking. Conveys tires containing air bags to presses, on handtruck, or lifts tires from conveyor and positions them in moulds. Places uncured tubes around pre-forming mould and partially inflates tube, using air hose. Lifts partially inflated tubes from mould and positions them in curing moulds. Couples air or steam hose to air bag or tube valve to expand tires or tubes and press them against mould, or places tires over steam bladders in mould, and inserts serial number die in mould. Sets timer for automatic curing cycle, and pushes switch and turns steam valve to close press and start curing process. Lifts tires and tubes from moulds at end of cycle, using hoist or hydraulic hook, and places them on handtruck or conveyor. Places uncured tires on press bed and pushes switch to start machine that automatically picks up, cures, and places tires on conveyor in programmed series of operations.

May insert air bags in tires before curing, and debag tires after curing. May inflate tube after curing to prevent distortion while cooling. May be designated according to product cured or type of press tended; for example,

Air-Bag-and-Tube Cureman
Watchcase-Vulcanizer Tender

8573-299 OTHER MOULDING OCCUPATIONS, RUBBER AND PLASTIC PRODUCTS

This group includes rubber and plastic products moulding workers, not elsewhere classified; for example, those who mould footwear components, plastic prosthetic appliances, and shotgun shell casings. Typical examples of occupational titles covered by this residual group definition are:

Ankle-Patch Moulder(plastic prod; rubber)
Arch-Cushion-Press Operator(plastic prod; rubber)
Encapsulator(plastic prod.)

8575-CUTTING AND FINISHING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations concerned with cutting, assembling and finishing rubber and plastic stock to produce parts and products by setting up, operating, adjusting and tending machines, and by using hand tools. Includes activities such as: laying out, cutting, fitting, splicing, cementing, assembling, measuring, trimming, grinding, buffing, and repairing products made of rubber, plastic and related materials.

8575-110 FLOOR-COVERING-INSET CUTTER(linoleum prod.) DPT:481
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Lays out and cuts decorative insets for hard-surface floor covering:
Lays out design and makes pattern, using drafting tools. Selects floor covering material according to pattern specifications. Lays out materials according to pattern colours, ensuring maximum utilization of material. Transfers design to material, using carbon paper or jig. Heats area of material to be cut, to soften and prevent material from cracking, using heated warming table and portable heater. Gouges or cuts out design, using gouging tools or electrical cutting machine.

Forms complete design by fastening sections together, using masking tape. Fills in gouged lines with colours to enhance appearance of finished product.

8575-114 PLASTIC-SHEET WORKER(plastic prod.) DPT:481
GED: 3 SVP: 6 EC: I 5 PA: M 4 7

Fabricates products; such as, signs, windows, boat windshields and aircraft parts from plastic sheet, by performing any combination of the following duties:

Lays out pattern on plastic sheet according to specifications, using templates, rule, compass and marking pencil. Cuts part from sheet, using router or power saw. Softens plastic part in oven, and shapes heated part to specifications, using form, air mould, press or jig. Cuts, drills, slots, trims or shapes part, using router, milling machine, power saw, power drill, shaper or lathe. Fits and assembles parts in jigs, using clamps, clips, bolts, screws, rivets, glue and hand tools. Sands and polishes part or assembly, using rouge, portable sander and buffing machine. Verifies dimensions, using rule, calipers and gauges. Examines article for defects.

May fabricate articles, using plastic rod or tubes. May fit plastic sheets to wood or metal frames to make skylights, using cork-line sealing tape, adhesives and caulking gun. May repair damaged or defective plastic products. May be designated according to type of product produced; for example,

Aircraft-Plastic-Trim Assembler
Sign Trimmer and Assembler

8575-118 DISPLAY-BALLOON MAKER(misc. prod. fab., n.e.c.) DPT:284
GED: 4 SVP: 5 EC: I PA: L 2 3 4 7

Designs and fabricates stationary or airborne inflatable balloon- type figures for use in parades, carnivals and advertising displays:

Designs patterns according to customers' requirements and prevailing ranges of climatic conditions, using knowledge of fabrics and aerodynamic principles. Marks cutting lines on material, such as plastic, nylon and rubberized fabric, following pattern, and cuts out pieces, using shears. Assembles figures, using either of the following methods: 1. Sews pieces to form stationary figures, using double-needle sewing machine. Installs electric inflation blowers in figures. 2. Cements pieces to form airborne figures, using rubber cement and solvent. Inserts bladder and air hose connections in specified locations of figures. Inflates figures and inspects for leaks.

May install zippers and illumination units in stationary figures. May spray lacquer on figures. May print designs on balloons, using silkscreen method.

8575-122 ARCH-CUSHION-SKIVING-MACHINE OPERATOR(rubber) DPT:682
GED: 3 SVP: 4 EC: I PA: M 4

Operates machines to cut arch cushions from sponge rubber sheeting for rubber footwear:

Selects die plate or die drum to produce specified size cushions, and bolts it in feeder slide or locks it in cradle, using wrenches. Turns setscrews to adjust distance between hold-down roller, belt knife and plate or drum, verifying clearances with feeler gauges. Produces arch cushions using either of the following methods: 1. Pulls plate length of sheeting from roll, cuts with knife and places on die plate. Moves lever to open suction valve that draws rubber sheeting into die plate cavities. Depresses pedal causing sheeting on plate to be carried through belt knife that cuts cushions flush with plate surface. Returns plate to starting position. Removes scrap and places in bin. Removes cut-out cushions from die cavities and places in storage box. 2. Mounts roll of sheeting in cradle, threads around hold-down and guide rollers, over rotary die drum and onto takeup reel. Starts automatic machine that cuts cushions from sheeting. Positions carton under discharge end of conveyor to catch cushions. Records number of cushions cut.

8575-126 BIAS-MACHINE OPERATOR(rubber) DPT:682
GED: 3 SVP: 3 EC: I PA: M 4

Operates machine to cut rubberized fabric on bias for use as plies or other components in tire construction:

Turns thumb or setscrew to adjust measuring arm, protractor and liner roll, to feed and cut fabric to specified width and angle of bias. Pulls fabric from roll on leftoff rack, inserts through liner roll, and positions under knife on bias machine table. Starts machine and adjusts speed

of feed and cutting action. Measures plies to verify width and angle, using ruler and protractor.

May align and splice plies by overlapping ends and pressing together with fingers

8575-130 OUTSOLE-CUTTING-MACHINE OPERATOR(rubber) DPT:682
sole cutter.

GED: 3 SVP: 3 EC: I PA: M 4

Operates machine that cuts outsoles for rubber footwear from slabs of uncured rubber:

Reads work ticket to determine number of pairs required of each size sole. Selects follower (template) from storage rack according to number specified on work ticket, and bolts it in machine, using wrench. Selects and mounts cutting blade in traveller against follower, using screwdriver. Lifts slab of stock from carrying frame or slides slab onto table. Places slab on metal cutting board and positions end beneath cutting blade. Adjusts height of machine to thickness of slab. Depresses pedal to elevate table and push stock against template, and to activate blade and cut outsole from slab. Works pedal to alternately raise and lower table, sliding cutting board width of one sole each time table descends, until maximum number of soles have been cut from slab. Slides board onto workbench. Observes cut outsoles for ragged edges denoting dulled blade. Sharpens dulled blades, using hand file and grindstone or electric grinder.

May grasp corner of slab and flip off scrap web, leaving outsoles on board. May throw web on scrap rubber pile or into scrap truck, and place outsoles on mobile storage racks. May set up and operate machine that automatically cuts outsoles from slabs of uncured rubber and be designated accordingly,
Outsole Cutter, Automatic

8575-134 RUBBER-GOODS CUTTER-FINISHER(rubber) DPT:682
GED: 3 SVP: 3 EC: I PA: L 4 7

Operates one or more of a variety of machines to cut, drill, punch or grind moulded and extruded rubber goods:

Changes dies, drills, knives, grinding wheels and cutter bars as specified. Adjusts equipment; such as, boring machine, tubing cutter, notch cutter and washer cutter, using hand tools. Positions material, such as moulded rubber parts, gaskets and tubing, in specified machine and starts machine to bore or punch holes in parts, cut washers from tubing or cut tubing to length. Verifies size of rubber goods with calipers, ruler, plug gauge and template. Inspects material and rejects defective items.

May be designated according to machine operated or product finished; for example,

Boring-Machine Operator
Cutting-Machine Operator
Gasket Notcher
Roll Grinder(plastic prod.; rubber)
Washer Cutter

8575-138 AIR-BRAKE-HOSE BUILDER AND FINISHER(rubber) DPT:684
GED: 3 SVP: 3 EC: I PA: L 4

Builds, cures, inspects and packages rubber air-brake hose used on railroad cars and transport trucks:

Pulls rubber tubing onto mandrel and positions in machine. Brushes rubber cement on tubing to provide adhesive surface. Applies layers of plystock and gumstock, according to specifications, by pressing pedal of machine to revolve mandrel and wind layers around tubing. Presses plies together to insure adhesion, using hand roller. Places brand impression plates at specified locations on hose. Places caps in ends of hose and winds fabric wrapper around hose preparatory to curing. Cures hose in horizontal heater. Removes wrapper and caps, positions cured hose in air-powered stripping fixture, and pulls lever to blow hose from mandrel. Buffs ends of hose to specifications, using electric buffing wheel. Verifies hose dimensions, using fixed gauge and rule. Examines hose for defects, such as cuts, blisters and cracks. Pulls brand plates from hose and packages hose for shipment.

8575-142 CUTTER, RUBBER AND PLASTICS(plastic prod.; rubber) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Cuts rubber and plastic sheet to produce parts for footwear, gaskets, diaphragms and similar products:

Mounts specified roll of sheet material in letoff rack. Pulls material from roll onto worktable. Cuts material into specified sizes and shapes, using templates or patterns, knife, scissors or cutting machine. Records information on work ticket.

May cut articles from slab rubber or plastic, using ruler and knife. May trim, grind, buff or drill articles, using a variety of machines.

8575-146 GASKET MAKER, CONCRETE PIPE(rubber) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Fabricates rubber-ring gaskets for concrete pipes by either of the following methods:

1. Measures out specified amount of extruded rubber strip by feeding it into water tank until tank gauge indicates correct displacement. Marks rubber at waterline, places it in mitre box and cuts off measured length, using tenon saw. Forms ring-shaped gaskets by joining ends of rubber, using vulcanizing cement and electrically heated vulcanizer. Tests strength of gasket by stretching it to twice its diameter, using pneumatic puller. 2. Places rubber strip on measuring table and cuts to predetermined over-size length, using knife and clamping device. Weighs strip and cuts end to reduce to desired weight. Forms ring-shaped gasket by joining ends of rubber strip, using vulcanizing cement and electrically heated vulcanizer. Tests strength of gasket by hand pulling at vulcanized joint.

8575-150 PADDED-PRODUCTS REPAIRMAN(plastic prod.; rubber) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Repairs defects and finishes padded products, such as automotive dashboards, by performing any combination of the following duties: Cleans surface of padded article, using solvent and rags. Inspects article for defects, such as voids, wrinkles, abrasions, faulty adhesion and faulty trimming. Pours or injects rubber foam solution between padding and plastic covering to rectify faulty adhesion. Repairs abrasions, faulty trimming and other defects, using knife, scissors, hand buffing wheel and rubber foam solution. Removes wrinkles by softening plastic with hot air blower or heat gun and pressing out wrinkles by hand.

May weigh and mix ingredients to make rubber foam solution. May verify size, colour and quality of articles for conformance to standards, using micrometers, checking fixtures and gauges, and colour samples.

8575-154 REELER AND CUTTER, PLASTIC MATERIAL(plastic prod.) DPT:684
cutter, barrel drum. GED: 2 SVP: 3 EC: 1 PA: H 3 4

Slits and winds plastic material onto reel, and cuts into pre-determined lengths, for use in making articles, such as curtains and draperies:

Positions roll of plastic material on machine brackets, threads end of material through tension rollers, and clamps or tapes material to rod on reels. Turns handwheel or loosens bolts with wrench, and moves rods to specified length. Adjusts knives to slit material into specified widths. Depresses pedal to start, stop and control speed of machine. Observes material as it is slit and wound onto reel, to detect uneven winding, and straightens uneven edges by hand. Stops machine after specified number of revolutions, and cuts material on reel by drawing knife through slot in reel rod. Removes lengths of material from reel and places on table.

May lubricate and repair machine.

8575-158 WINK CUTTER(rubber) DPT:684
uncured-hose cutter, machine. GED: 2 SVP: 3 EC: 1 4 PA: M 4

Cuts extruded uncured hose into specified lengths:

Sets cutting blades to specifications by turning adjusting dial. Threads extruded strip between feeder belts to cutter. Turns wheel to adjust

feed speed to length of hose cut. Starts machine and measures hose blank for conformance to specifications. Inspects green hose for defects as it emerges from tuber machine and cooling tank, into cutter. Removes cut pieces from discharge belt and places them in containers.

8575-162 AIRCRAFT-TIRE-TUBE BALANCER(rubber) DPT:684

tube balancer.

GED: 2 SVP: 2 EC: 1 PA: M 4

Balances tubes for aircraft tires:

Inflates tube with airhose. Fits tube over hub of gravity balance wheel to locate heavy area. Selects balance patch to equalize weight. Buffs area manually, to roughen surface for better adhesion, using buffing paper. Brushes on cement and applies patch to correct imbalance, using hand roller.

8575-166 BEAD ROLLER, BALLOON(rubber) DPT:684
collar roller, balloon; ring-rolling-machine operator. GED: 2 SVP: 2 EC: 1 PA: L 4

Rolls beads on necks of balloons prior to curing:

Lifts latex-dipped form boards from wheeled rack onto bead-rolling table. Turns wheels to adjust spacing and height of parallel revolving brush arms, to correspond with diameter and edge of balloon necks. Pushes sliding table forward to roll balloon necks into beads. Lifts form boards of beaded balloons from bead-rolling table onto wheeled rack.

8575-170 FOAM-CUSHION FABRICATOR(furn.; plastic prod.; rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Cuts, cements and assembles cushion interiors from rubber or urethane foam slabs or sheets:

Positions pattern on foam slab or sheet and marks outline with chalk. Cuts around outline, using electric knife, air scissors or bandsaw. Places two pieces together, sprays cement along edge and presses edges of pieces together to form cushion interior. Cements strips around edges of assembled pieces and over seams to provide smooth finish and to reinforce seams, preparatory to upholstering.

May insert assembled cushion interior into cushion case preparatory to sewing. May stuff cushion cases with foam rubber or urethane scrap to form cushions.

8575-174 LUGGAGE-BINDING ASSEMBLER(leather goods; plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Cuts, splices and fits plastic binding to luggage:

Positions corner posts on stretching device, using screwdriver. Inserts stop pin in channel of cutting jig at specified length. Lays binding in channel up to stop pin and cuts to length, using knife. Presses switch to heat electric knife. Positions ends of binding on either side of knife slot. Raises knife by depressing pedal, and melts binding by holding ends against knife. Lowers knife by releasing pedal, and joins ends of binding to form loop. Fits binding loop around posts of stretching device. Stretches binding by pulling handle or depressing pedal of stretching device. Releases handle or pedal and simultaneously slides binding onto luggage.

8575-178 RUBBER BUFFER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: M 4 7

Roughens or cleans rubber surfaces on tires, inner tubes, belts, or parts for rubber footwear:

Mounts buffing wheel on mandrel according to type of finish required, using wrench. Starts buffer and holds article against it, or holds buffing wheel against article. Places buffed articles on conveyor, skid or in container.

May mount pneumatic tire on rotating spindle and remove specified width of black rubber overcoating, to reveal white sidewall, using hand grinding wheel. May measure and cut belt lengths to specified dimensions prior to buffing, using scissors or knife. May brush rubber cement on buffed ends of belt, preparatory to splicing. May be designated according to article buffed; for example,

Belt Buffer	Tire Finisher
Buffer, Rubber Footwear Parts	White-Sidewall-Tire Buffer, Hand

8575-182 SKYLIGHT ASSEMBLER(plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Assembles and polishes plastic dome skylights:
Places aluminum frame on assembly table. Masks frame with adhesive- backed cork tape. Attaches dome to frame with nuts, bolts and screws, using electric drill and electric screwdriver. Polishes dome to remove blemishes, using electric buffer.
May fit metal spacing ring between upper and lower domes when assembling double-insulated skylights.

8575-186 SOLID-TIRE FINISHER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: H 4

Trims, inspects and buffs solid tires:
Trims mould flash from center of tread, and excess rubber from edge of rim band, of cured solid tire, using knife. Brushes paint on inside edge of rim band to prevent rust. Buffs tire to remove defects and foreign material and impart smooth finish, using power buffing wheel. May brand solid tires according to specifications, using hand brander. May cure solid tires, using pot heater.

8575-190 STOCK LAY-UP MAN(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: H 4

Supplies plies of cloth, rubber or rubberized fabric to lay-up table for cutting rubber footwear parts:
Selects roll of material according to job order. Positions roll in cradle, using hoist. Clamps end of material in slot in winding drum and notes yardage indicator reading. Starts material winding by moving lever to engage clutch of winding drum. Stops machine when specified number of turns have been recorded on indicator. Partially cuts through plies, using knife. Climbs onto wide lay- up table, completes cut and pulls lay-up from drum onto table. Smooths material to remove wrinkles and lay it flat for cutting.
May convey material to wind-up drum, using handtruck. May tape or tie ends of unused material and return it to storage, using handtruck.

8575-194 TIRE TRIMMER, HAND(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Trims excess rubber formed on tires during curing process:
Positions tire on machine-driven rollers. Holds knife at angle to tire to cut off excess rubber while rollers are revolved mechanically. Pulls lever to remove trimmed tire from rollers and places on conveyor.

8575-198 TRIMMER, MACHINE(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Trims flash from moulded rubber articles, such as rubber heels, soles and tops, using cutting machine:
Starts machine and positions workpiece against guard, presenting all edges to reciprocating or rotating blade to remove excess material. Depresses pedal to raise guard so that seams will not be jagged or torn. Trims heels by setting them on base plate and turning heels by hand against matching circular knives.
May be designated according to type of moulded rubber article trimmed; for example,
Heel Trimmer
Sole Trimmer
Top Trimmer

8575-202 AUTOMOTIVE-RUBBER-PARTS CUTTER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 Tends press that

cuts and trims cured-rubber automotive parts, such as floor mats and splash guards, from moulded rubber sheets by either of the following methods:

1. Seats die on table of press. Positions rubber sheeting on die and lowers cover plate. Presses button to move pressure roller across cover plate to die cut and trim rubber sheet. 2. Selects and secures cutting die to press head, using clamps or bolts. Positions and aligns rubber sheet on press bed, using aligning marks on bed as guide. Pushes buttons to raise press bed and die-cut and trim rubber sheet.

8575-206 EDGE GRINDER, FLOOR TILE(linoleum prod.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: M 4

Tends machine that squares and smooths edges of plastic floor tile:
Places stack of tile on table of machine. Taps edges with mallet to align them against preset guide shoes. Presses button switches to engage guide shoes and move stack of tile between abrasive grinding drums or grinding wheels. Rotates tile on table and repeats operation on opposite edges. Places finished tile on conveyor or skid.
May adjust guide shoes for squareness, using wrenches and tile gauge. May replace worn abrasive paper on grinding drums.

8575-210 FOOTWEAR-TREAD-MACHINE TENDER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 5 6 PA: L 4 7

Tends automatic machine that cuts patterns in soles of rubber footwear:
Clamps sole on slide carriage under blade of machine. Starts machine by depressing button and moves lever to depress tool that cuts single wavy or zigzag row in sole. Raises tool by moving lever and returns carriage to starting position by depressing pedal. Repeats process to cut additional rows. Removes finished workpiece and examines depth of cut, using mould mark on sole edge as guide. Raises or lowers blade to adjust depth, using wrench.

8575-214 FREEZE-TUMBLER TENDER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 3 4

Tends dry-ice tumbling machine to remove moulding flash from rubber products:
Moves boxes of moulded products from storage area to tumbling machine, using handtruck. Loads tumbling machine with specified quantity of product. Breaks dry ice into pieces, using hammer, and dumps into machine. Starts machine to mix product and dry ice. Stops machine for specified time to allow freezing of mould flash. Restarts tumbler and runs for specified time to break off flash. Dumps load into containers and separates product, dry ice and mould flash.

8575-218 INNER-TUBE-PROCESSING-EQUIPMENT TENDER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends inner-tube processing equipment that automatically applies soapstone to tube, cuts valve hole, presses valve to tube, imprints identifying information on tube and cuts tubed stock to length:
Sets transmission levers, that synchronize automatic devices, according to job order specifications. Presses button to start machine and observes stock for defects as it moves on conveyor. Washes valve base, using solvent, and lays valve manually on acceptable stock after machine cuts valve hole and prior to machine pressing valve to tube. Changes imprinting dies and cleans devices. Replenishes supply of paint and soapstone.

8575-222 RUBBER-BAND CUTTER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that cuts cured-rubber tubing into rubber bands:
Fills tank in front of machine feed rolls with soap solution and places quantity of tubes into tank to facilitate cutting. Selects switch to start machine and conveyor. Pulls tubes from tank and starts ends into feed-rolls.
May change gears that regulate speed of cutting-machine feed-rolls.

8575-226 SPLITTING-MACHINE TENDER(rubber) DPT:685
tires debader.
GED: 2 SVP: 2 EC: 1 5 PA: H 4

Tends machine that cuts scrap tires for reclaiming rubber:
Adjusts guides to accommodate tire size and cut to be made, and installs blades, using hand tools, or tends machine equipped with endless-belt-type saw. Lifts tire onto powered rollers by hand or with hoist. Starts rollers that force tire against blade of saw to split tire into plies, shear tire into sections, sever bead from tire and trim rubber from carcass.
May tend machine that splits rubber or vinyl sheets into plies.

8575-230 STRAP-CUTTING-MACHINE TENDER(rubber; shoes) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that cuts strip of plastic-coated fabric or leather into exact lengths, for use as buckle or decorative stitching straps on shoes: Bolts appropriate cutoff wheel to drive shaft, using wrenches. Positions and bolts backing wheel against cutoff wheel, using wrenches. Mounts roll of strip in holder and threads end through guide and between wheels. Positions carton to catch straps. Starts machine and observes automatic counter to determine when required number of straps are cut. Observes strip for flaws and removes defective straps.

8575-234 TILE CUTTER(linoleum prod.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends punch press that cuts floor tiles from plastic sheet: Starts machine to move plastic sheet through press, to punch out floor tiles. Feels material for flexibility as it enters machine and has temperature of feed rolls adjusted as required. Observes sheet for uniformity of colour pattern and presses button to bypass defective sections. Stops machine to clear press when jams occur. May manually feed vinyl sheet into punch press. May adjust press controls as required.

8575-238 TREAD CUTTER, MACHINE(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that cuts extruded rubber for tire treads: Turns crank and observes dial to adjust automatic cutter frame for specified cutting cycle. Starts machine to cut rubber as it passes on conveyor. Measures and weighs treads. Swabs beveled ends of tread with cement to prepare them for splicing. Lifts treads onto trays for storage and places rejects on conveyor for retubing. Tags trays to identify treads. May convey loaded trays to storage area, using handtruck.

8575-242 TREAD CUTTER, TRUCK TIRES(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: H 4

Tends machine that cuts truck treads and sidewalls to specified lengths preparatory to tire building: Adjusts stop on machine to set specified length, by turning handwheel. Positions and clamps stock under cutting blade and against stop. Pulls rotating blade across stock to cut and bevel ends. Brushes liquid cement on underside of tread and sidewall for subsequent bonding. Attaches identification tags to treads and sidewalls and places them in tray trucks.

8575-246 V-BELT FINISHER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends any of a variety of machines that notch, measure, test and print identifying information on rubber V-belts: Positions V-belt on expandable wheel of notching machine. Presses button to start machine that notches inside surface to make belt flexible. Adjusts specified weight tension on measuring machine and positions belt on machine spindles. Presses button to rotate spindles that register belt length on gauge and stamp it on belt. Inserts plate in branding machine. Feeds belts into machine to print them with identifying information. Positions belt on spindles of vibration test machine. Pushes lever to start machine that drives belt at specified speed. Observes belt for wobble and scraps defective belts. Stamps acceptable belts, ties them in bundles and hangs them on rack. May operate normalizer machine that applies heat and adjusts belts to identical length and width to produce matched belt sets. May be designated according to machine tended; for example, Belt Brander
Belt Cogger
Belt Measurer

8575-250 V-BELT SKIVER(rubber) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that cuts and shapes edges of uncured rubber belts into V shape: Turns belt inside out and fits it over machine holding spindles. Adjusts angle of cutting knives by turning screws. Presses button to start machine to rotate and skive belt. Removes belt from machine and

hangs it on storage rack. Weighs trim and adjusts knives, using hand tools, to meet belt shape specifications.

8575-254 WASHER-DRIER, RUBBER PRODUCTS(rubber) DPT:685

tumbler tender.

GED: 2 SVP: 2 EC: 1 PA: M 3 4

Tends tumbling machines to wash and dry rubber products, such as rubber bands, bath caps and nipples: Loads containers of rubber product onto handtruck and pushes it to washer-tumbler. Dumps products into washer and opens valves to admit water and cleaning solution. Starts machine to tumble wash for specified time. Opens valves to drain machine and admit rinse water. Unloads products from washer onto wheeled table and moves table to dryer. Loads specified quantity into dryer and sets controls for specified heat and tumble time. Unloads products from dryer into containers and removes to storage area or bundling and boxing machines by handtruck. May trim excess rubber from edges of article, using scissors. May tend tumblers that dry and screen latex balloons preparatory to testing, printing or stocking and be designated accordingly, Tumbler Tender, Balloons

8575-258 INNER-TUBE-PROCESSING-EQUIPMENT UTILITY MAN(rubber) DPT:686

GED: 2 SVP: 2 EC: 1 7 PA: M 4

Services automatic inner tube processing equipment that cuts tubed stock to length, prints identifying information, punches valve holes, presses valves on tubing, and applies soapstone to stock: Places marking stamp in machine and clamps it in place. Fills reservoir with marking ink or paint. Fills soapstone tanks. Trucks valve assemblies from storage to work area. Verifies that tubes are cut to specified length and receive adequate external soapstone coverage. Sorts and removes valves from uncured scrap tubes, using knife, and transports tubes to mills for remilling, using handtruck. Relieves or substitutes for tube processing equipment crewmembers. May assist millman to load and unload mills and start feeder strip from mill to tuber machine. May assist in cleaning tube processing equipment and changing dies.

8575-262 HOSE CUTTER, HAND(rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: H 4

Winds, measures and cuts rubber hose to specified length: Positions reels of hose in letoff rack and empty reels in powered windup rack. Verifies hose diameter, using gauges. Threads hose through measure meter, printing machine and onto empty reel. Starts powered windup by depressing pedal and guides hose onto reel in windup rack. Examines hose for defects, such as snags, cuts and bulges. Observes measure meter and cuts hose to length, using knife. Records information on identification tag. Ties and packages coiled hose.

8575-299 OTHER CUTTING AND FINISHING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This group includes rubber, plastic and related products cutting and finishing workers, not elsewhere classified; for example, those who cut and inspect vinyl sheet; mask and finish, by hand or machine, plastic sheets or products; cut extruded rubber into specified lengths for inner tubes; tend machines that punch valve stem holes in inner tubes, change brands on cured repaired tires, buff rubber soles, heels and taps to obtain soft or suede finish, clip threads connecting rubber footwear parts, sand flash from moulded golf ball covers, cut plastic tile into small squares for samples, fabricate polyurethane covering for pipes, punch-out and shape plastic button blanks, and perform a variety of operations in manufacturing bowling balls from pre-moulded blanks. Typical examples of occupational titles covered by this residual group definition are:
Finisher, Plastic Sheets(plastic prod.)
Inner-Tube Cutter(rubber)
Tile-Sample Cutter(plastic prod.)
Tire Rebrander(rubber)
Windshield-Plastic Processor(plastic prod.)

8576-INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS: FABRICATING, ASSEMBLING AND REPAIRING, RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations in inspecting, testing, grading and sampling work as described under the term titles 02-170 INSPECTOR (any ind.), 02-430 TESTER (any ind.), 02-150 GRADER (any ind.), and 02-330 SAMPLER (any ind.), concerned with quality control activities in the fabricating, assembly, and repair of rubber and plastic and related products.

8576-110 EXPERIMENTAL-TIRE INSPECTOR(rubber) DPT:281
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Tests experimental tires and determines strength, wearability, and cause of failure:
Inflates tire on test machine and adjusts controls to simulate road conditions. Maintains periodic follow-up on test until tire fails, or has run for specified time. Cuts cross section from test tires, new experimental tires, or actual road tested tires, using power saw. Counts bead wires and plies in cross section, verifies angle of plies with protractor, and measures specified areas on tire to ascertain effects of testing. Records test results and prepares graphs to compare test results.

8576-114 ELECTRICAL-RUBBER-GOODS TESTER(elec. power) DPT:381
GED: 3 SVP: 5 EC: 1 6 PA: L 4 7

Tests and inspects rubber protective articles; such as, gloves, sleeves, blankets or mats, used during repair work on high-voltage powerlines and equipment:
Examines rubber goods to detect defects, such as blisters, breaks or deterioration. Clips test electrodes of dielectric-strength- testing machine to rubber article and partially submerges article in water tank of machine. Adjusts controls to apply excessive voltage to electrodes and article. Observes apparatus for flash-over or opening of circuit breaker, indicating defective article. Reads milliammeter on panel to determine if amount of current passed through article is within prescribed tolerance. Tests rubber mats by placing them on aluminum table top and lowering overhead electrode to testing position and applying voltage. Tests other types of rubber articles, using specialized test equipment. Inflates gloves on special apparatus to detect holes or weak areas. Discards defective goods.
May make mechanical tests on articles, using apparatus, such as tensile-testing machine, micrometers and rule.

8576-118 INSPECTOR, PLASTIC AND RUBBER PRODUCTS (plastic prod.; rubber) DPT:367
GED: 3 SVP: 5 EC: 1 PA: M 3 4 7

Inspects completed rubber or vinyl products, or products in process, for conformance to specifications:
Measures product width, length and inspects markings, using ruler, thickness gauge, protractor and book specifications. Verifies temperatures and pressures on machine recording instruments. Tags substandard products and discusses defects with department supervisor. Writes reports on all substandard products.
May inspect storage area to ensure specified racking of finished goods.

8576-122 GREEN-TIRE INSPECTOR(rubber) DPT:487
uncured-tire inspector.
GED: 3 SVP: 5 EC: 1 PA: M 4 7

Inspects uncured tires to ensure conformance to standards:
Measures tread width and side wall dimensions with ruler and gauge. Weighs randomly selected tires for conformance to specified tolerance and records weights. Examines tires for defects; such as, open splices, loose edges, wrinkles and trapped air between plies. Stamps approved tires and marks rejected tires for further processing.
May repair defects, using solvent and hand tools.

8576-126 LINOLEUM INSPECTOR(linoleum prod.) DPT:367
GED: 3 SVP: 4 EC: 1 PA: L 4 5 7

Inspects floor covering, such as linoleum and vinyl for pattern or colour defects, and grades according to quality:
Assists other workers to mount roll of finished floor covering on unwind stand. Signals operator to start machine that pulls floor covering across cutting table. Visually examines material for defects, such as cracks, flaws and variations in colouring as it unwinds onto table. Marks defective areas with tape or cuts indicator mark into material, depending on length of defective area. Signals other worker to cut out defective sections. Resets counter after each cut. Grades floor covering for quality in accordance with company specifications. Removes sample for laboratory tests.

8576-130 LINOLEUM-LINE INSPECTOR(linoleum prod.) DPT:367
GED: 3 SVP: 4 EC: 1 PA: S 4 5 7

Inspects linoleum for processing defects during manufacture:
Examines material, as it passes between processing equipment and roll winder, for coating, colour, saturation or pattern defects. Identifies and records defects. Measures thickness of material to ensure compliance with specifications, using micrometer or snap gauge. Advises machine operator of deviations from standard.

8576-134 TIRE CLASSIFIER(rubber) DPT:387
GED: 3 SVP: 4 EC: 1 PA: M 3 4 7

Examines defective tires, rejected at inspection station, to determine extent of repair and disposition of tires:
Probes tire defects with hand tools to determine extent of damage. Classifies and groups repairable tires according to defects; such as, spread, cords, ply separations, buckles, and blisters and sends tires for repair. Prepares daily report of defects.

8576-138 TIRE-RETREADING INSPECTOR(rubber) DPT:387
GED: 3 SVP: 4 EC: 1 PA: H 3 4

Inspects used tires to be retreaded or repaired for automobiles, buses, trucks and other automotive vehicles:
Visually examines cord, bead and sidewall of tire for breaks and other defects. Places tire on tire-spreading machine and examines inner surface of tire for defects. Marks defect with chalk to indicate repairs required prior to retreading. Rejects tires that cannot be retreaded.

8576-142 FOAM-RUBBER-GOODS INSPECTOR(plastic prod.; rubber) DPT:387
GED: 3 SVP: 3 EC: 1 PA: M 4 7

Inspects and classifies foam rubber or plastic cushions and mattresses for conformance to specifications:
Examines cushion or mattress to locate defects, such as lumps, tears and snags. Steps on treadle to lower hydraulic plunger onto cushion to test pressure resistance. Stamps cushions with grade mark if accepted, or marks defective areas, and places in piles according to classification. May verify weight of mattress, using scale. May be designated according to type of product inspected; for example, Mattress Inspector
Rubber-Cushion Inspector

8576-146 PHONOGRAPH-RECORD TESTER(misc. prod. fab., n.e.c.) DPT:387
GED: 3 SVP: 3 EC: 1 PA: S 4 6 7

Inspects and tests newly pressed phonograph records:
Inspects records for defects, such as high spots, stains or scratches. Places record on turntable and observes lateral movement of stylus to ensure it is within prescribed tolerance, using concentricity tester or calibrated microscope. Plays record on sound reproducing equipment, checks fidelity and listens for pops, ticks or distortion. Compares number imprinted on record with serial number of label, and ensures that selections on record conform to printed label. Checks center hole diameter, outside diameter, thickness and weight, using center hole gauge, outside diameter gauge and scale. Records details of defects found and returns record to pressing department.

8576-150 TIRE INSPECTOR(rubber) DPT:684
GED: 2 SVP: 3 EC: 1 I PA: M 4 7

Inspects cured tires to ensure conformance to standards:
Examines tires, mounted on revolving turntable or suspended from hooks on moving conveyor, for defects, such as sidewall cracks, foreign material and blisters. Feels beads to detect kinks and feels inner surface of tire to detect spread cords, ply separations or buckles. Marks defects, and sorts tires for removal to other departments. May inspect inner tubes. May trim toe of bead and mould overflow with knife. May lift tire manually or with hoist onto turntable.

8576-154 PICKER, BEAM PRESS(rubber) DPT:487
clicker.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects, counts, bundles and racks footwear parts cut from layers of cloth and rubber or plastic-coated fabric:
Picks up parts at receiving table. Examines parts for defects, such as double thickness of stock. Counts parts by multiplying number of cuts by number of plies (layers) specified for ply-up on work ticket. Arranges similar parts in stacks containing set number to prevent crushing and ties bundles with string. Places bundles on shelves of rack cart, in order of use by part numbers and sizes. Records number of parts processed.

8576-158 FORCED-VARIATION TESTER(rubber) DPT:685
tire measurer.
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends automatic machines that measure circumferences and tread widths of cured tires:
Sets measuring machines to accommodate specified tire sizes by turning dials. Sorts cured tires according to size shown on sidewall and loads conveyor leading to machines. Removes tires from conveyor and positions on hubs of machines. Presses button to activate machines that automatically inflate and rotate tires according to specifications. Observes indicator lights on machine panels and records result of tests on tire treads. Removes tires from machines and sorts for final disposition.

8576-162 HOSE INSPECTOR AND TESTER(rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 3 4

Inspects and tests rubber hose for manufacturing defects:
Sorts hoses by type and examines them for defects; such as, cuts, blisters, irregular colour and faulty printing. Measures inside and outside diameters of hose, using steel rule, gauges and plugs. Attaches hose to waterline and caps open end of hose, using wrenches. Subjects hose to specified water pressure, examines hose and marks leaks. Records inspection data and attaches inspection tag to hose. May attach couplings to hose, using assembly press and hand tools. May paint brand or identification markings on hose, using brush and stencil.

8576-166 INNER-TUBE INSPECTOR(rubber) DPT:687
inner-tube deflator.
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Inspects cured rubber inner tubes for defects:
Inflates inner tube, using air hose. Examines tube and valve assembly for defects, such as blisters, cracks and thin spots. Marks defective tubes and places them in scrap container. Deflates acceptable tubes, using vacuum pump and stacks them in storage area according to size and type. May install cores and locknuts in valve stems of acceptable tubes, using power tools. May bend valve stem, using hand-operated device.

8576-170 INSPECTOR-TRIMMER, MOULDED PLASTIC AND RUBBER(plastic prod.; rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects and trims moulded plastic and rubber articles, such as plastic shotgun shells and rubber-coated metal parts:
Visually inspects parts for defects, such as cracks, tears and blisters. Trims flash from part, using knife, scissors or cutting machine. Weighs and packs acceptable parts in containers.

May buff mould flash, using hand buffing wheel. May verify size of part, using plug gauge, calipers and micrometer. May return rubber-coated metal parts to moulders for repair and recure.

8576-174 MATTING INSPECTOR(rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Inspects rolls of sponge and solid rubber floor matting for defects:
Positions roll of matting in letoff rack, using hoist, and unwinds onto inspection table. Examines matting for defects, such as blisters, tears and irregular colouring, while matting winds onto powered windup spindle. Cuts out defective sections, using knife. Splices matting as required, using gumstock filler, and spot cures, using portable vulcanizer. Cuts to length according to customer specifications. May insert inspected roll of rubber matting in bag and tag it for shipment.

8576-178 RUBBER-FOOTWEAR INSPECTOR AND TESTER(plastic prod.; rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects, classifies and sorts component parts or finished rubber or plastic footwear, by performing any combination of the following duties:
Examines footwear parts; such as, insoles, outsoles, heels and uppers for blisters, folds, pits or ragged edges. Visually examines completed articles of footwear for defects; such as, misplaced or misaligned parts, bulges, improper colour, loose or dropped stitching. Compares items with work ticket and specifications for quantity, part number, size and colour. Sorts items into piles according to colour, size and lot number. Classifies items as firsts, seconds or rejects, and records quantities. Removes soiled spots during inspection, using cloth and solvent. Notifies supervisor of recurring defects.

8576-182 GRADER, RUBBER BALLOONS(rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Inflates, examines and grades rubber balloons:
Inflates balloon by fitting balloon orifice over nozzle, and moving knee-operated air valve. Examines inflated balloon for leaks or weak spots. Sorts deflated balloons, according to inspection, as scrap, seconds or approved.

8576-186 TIRE-BALANCE INSPECTOR(rubber) DPT:687
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Inspects cured tires for conformance to balance specifications:
Lifts tire onto balance table, manually or with hoist. Pulls lever to spread holding fixture that secures tire in position. Releases lock that permits balance table to float freely on mounting, and bubble gauge to function. Observes bubble gauge to determine if tire balance is within specified limits. Marks tire where gauge indicates lightest area, for location of inner-tube valve, or where dough (uncured rubber) is to be added on unacceptable tires. Lays aside unacceptable tires and lifts acceptable tires onto conveyor.

8576-199 OTHER INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This group includes rubber, plastic and related products inspectors, testers, graders and samplers, not elsewhere classified; for example, those who inspect air bags, golf balls or other rubber products, sort and pair footwear, sort rubber tires, and inspect foam plastic products. Typical examples of occupational titles covered by this residual group definition are:
Inspector, Golf Ball(rubber; sport. & toy)
Inspector, Sample Parts(plastic prod.; rubber)
Rubber-Goods Tester, Water(rubber)
Sorter, Footwear(rubber)

8578-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: FABRICATING, ASSEMBLING AND REPAIRING RUBBER, PLASTIC AND RELATED PRODUCTS

This unit group includes occupations in labouring or other elemental work, as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.), concerned with fabricating, assembling and repairing a wide variety of rubber, plastic and related products.

8578-110 MOULDING-MACHINE OFFBEARER(plastic prod.)
DPT:686

GED: 1 SVP: 2 EC: I 3 5 PA: L 4

Offbears moulded products, such as fountain pen bodies, novelty goods and appliance components, from compression or injection moulding machines:

Removes moulded products from machine outlets. Inspects parts for obvious defects, such as cracks and gouges. Dumps acceptable parts into container. Opens machine outlet gate at regular intervals and removes waste plastic pieces. Dumps waste pieces into grinder for re-use.

May maintain specified temperature and pressure within machine by turning dials and switches.

8578-112 BALLOON-FORM STRIPPER AND CLEANER(rubber)
DPT:686

GED: 1 SVP: 2 EC: I PA: M 4

Strips cured and dipped rubber balloons from forms and cleans forms by performing any combination of the following duties:

Pulls form boards bearing balloons from curing oven, using hooked rod. Places boards on rack and dips assembly into detergent solution, to facilitate removal of balloons and impart glossy finish, using hoist. Lifts form boards from solution and places board on holding jig. Expands and frees balloon from form by directing air jet into balloon mouth. Strips balloon from form and drops balloons into box. Smooths, washes and dries balloon forms, using abrasives, water and compressed air jet. Positions form in vise and straightens and tightens components of form, using hand tools.

May immerse forms in cleaning solution, at specified intervals, to remove built-up residue.

8578-114 BIAS-MACHINE-OPERATOR HELPER(rubber)
DPT:686

GED: 1 SVP: 2 EC: I PA: VH 3 4

Helps machine operators to cut rubberized fabric for use as plies or other components in tire construction:

Conveys fabric and liner rolls to machine area, using hand truck. Positions rolls in letoff and windup racks of bias-cutting machine, using hoist. Threads fabric over machine-guide rolls. Lifts cut plies from bias-cutting machine and places them on table for splicing. Tags filled rolls according to type of stock and conveys them to storage area, using handtruck. See also definition for term title, 02-160 HELPER (any ind.).

May splice plies by hand.

8578-118 FOOTWEAR-MOULD-PRESS FEEDER(rubber)
DPT:686

GED: 1 SVP: 2 EC: I 3 6 PA: M 4

Feeds presses which cut and form rubber footwear parts, such as uppers and arch-cushions, by performing any combination of the following duties:

Folds prepared rubber sheeting longitudinally and feeds folded sheeting beneath dies of toggle press to cut shoe uppers. Places uncured rubber arch-cushion blanks in mould cavities. Positions loaded moulds on conveyor leading to vulcanizing press. Unloads moulds from press output conveyor. Shakes moulds to release cured cushions into containers. Places empty moulds on return conveyor. May spray release agent on moulds to facilitate removal of cured cushions.

8578-122 HOSE LOADER AND STRIPPER(rubber) DPT:686
pole-up man.

GED: 1 SVP: 2 EC: I PA: H 4

Fits tubular rubber core onto hollow mandrel and removes finished hose from mandrel after winding and curing process:

Lifts hollow, steel, pole-shaped mandrel, onto bed adjacent to friction

belt, using hoist. Pulls end of rubber hose core onto tapered end of mandrel. Starts friction belt and lowers mandrel onto belt, to draw rubber tubing along mandrel pole. Expands tubing, by applying air pressure gun to end of tubing, to facilitate movement onto mandrel for hose manufacture. Moves mandrel loaded with finished hose onto stripping table, using hoist. Clamps end of mandrel pole in vise. Presses pneumatic or hydraulic pressure gun against end of hollow mandrel. Applies pressure, by pressing trigger, to blow cured hose from mandrel.

8578-126 MOULDED-PRODUCTS FINISHER(plastic prod.; rubber)
DPT:686

trimmer, moulded products.

GED: 1 SVP: 2 EC: I PA: L 4

Trims, forms and finishes moulded products, such as stair treads, tiles and foam cushions, by performing any combination of the following duties:

Places section of moulded composition material on bed of shear. Cuts section into individual tiles or stair treads and trims edges by pressing pedal on shear. Cuts flash and trims excess material from moulded cushions, using power scissors. Clamps stair treads in fixture, and pulls lever to press edge of treads against heated pipe for specified time to form moulded lip on tread edge. Sorts and loads finished items into cartons or onto conveyor.

8578-130 MOULD FILLER(plastic prod.; rubber) DPT:686
pour man.

GED: 1 SVP: 2 EC: I PA: L 4

Fills curing moulds with liquid plastic or latex to form moulded products, such as shoes or seat cushions:

Inserts hose nozzle in orifice to fill closed moulds, or presses hose trigger or pulls lever to fill open moulds passing on conveyor. Passes scraper across top of open mould to remove surplus plastic or latex and ensure smooth surface of product after curing.

May stir liquid in mould, to remove air bubbles, using paddle. May rub compound between fingers to determine consistency.

8578-138 RUBBER-SOLE BUFFER, AUTOMATIC(rubber)
DPT:686

GED: 1 SVP: 2 EC: I 5 7 PA: L 4

Feeds pair of automatic machines that grind edges of moulded soles to roughen them for foxing and to remove sprue:

Starts machines and depresses pedal of first machine to separate toothed feeder wheels. Clamps sole between wheels and against rotating vertical buffing wheel that grinds excess material from sole edge as feeder wheels automatically turn sole. Observes sole edge after one rotation to verify complete removal of sprue. Removes buffed sole from machine and places it in container. Loads second machine while first is operating and alternates between both.

8578-142 STRIPPER, MOULDED PRODUCTS(plastic prod.; rubber)
DPT:686

GED: 1 SVP: 2 EC: I PA: L 4

Strips moulded rubber or plastic products, such as gloves, toys or shoes from moulds and lasts, by performing any combination of the following tasks:

Lifts mould from drying oven conveyor and clamps mould in holder. Removes form-mounted glove from mould by striking form to loosen glove. Strips glove from form and sets form aside for re-use. Mounts cotton gloves on wooden forms ready for coating and smooths glove on form to avoid wrinkles. Strips plastic toys or parts from moulds. Dips articles in solvent to cleanse them. Cleans moulds, using cloths, and returns moulds to casting department. Grips heels of each alternate pair of shoes on conveyor to loosen them and facilitate removal by next worker on line. Removes moulded boots and shoes from lasts on conveyor by simultaneously pulling top of article, using hooked air-pressure pipe, and grasping heels with hand. Mounts lasted shoes on floor jack, and strips shoes from lasts by pressing pedal to force compressed air between shoe and last.

May count and record number of articles handled. May inspect articles for defects.

8578-146 TIRE CLEANER AND PAINTER(rubber) DPT:686
tire finisher.

GED: 1 SVP: 2 EC: I 7 PA: M 4

Cleans, trims and feeds tires into spray painting machine by performing any combination of the following duties:

Observes automatic feeding of tires into trimming machine. Frees tires jammed in machine or feed conveyor. Cleans surface of tires to remove inspection markings and prepare tire for painting, using glycerine solution and brush. Feeds tires into spraying machine to spray decorative and protective coating on finished tires.

May trim loose rubber, white sidewall covering or protrusions from tire, using grinding wheel or hand-held blade. May fill spraying machine reservoir.

8578-150 TIRE-VALVE WORKER(rubber) DPT:686

GED: 1 SVP: 2 EC: I PA: L 4

Prepares valves for fitting to rubber tubes by performing any combination of the following duties:

Loads valves into buffing fixture to remove mould flash and to roughen valve base to facilitate bonding. Examines valves to ensure satisfactory buffing. Places valves, core-end first, into rotating fixture that applies rubber cement to valve base. Assembles laminated valve tube mounts by cementing together alternate oval layers of rubber and rubberized fabric. Presses flat steel valve base into orifice on large truck and tractor tubes. Fits washer and nut onto threaded valve stem and tightens nut, using wrench. Dumps valve cores into machine hopper. Blows foreign matter from valve stem orifice, using air-jet. Holds valve stem against machine outlet and presses pedal to screw core into stem.

May spread rubber cement onto valve bases, using brush. May inflate tubes, using air hose, and inspect tubes for leaks. May install valve cores manually, using special tool. May be designated according to task performed during valve assembly; for example,

Valve Buffer

Valve Cemente

Valve-Core Insert

Valve Fitter

8578-154 MOULD PREPARER(plastic prod.) DPT:687
mould waxer.

GED: 1 SVP: 2 EC: I 7 PA: M 3 4

Cleans and waxes moulds used in the manufacture of fibreglass products, such as boats, automobile bodies and buoys:

Washes mould with solvent to remove old wax, using cloth or sponge. Waxes and polishes surface of mould with cloth or brush. Sprays or brushes parting agent on mould to facilitate removal of product. Applies masking tape to edge of mould to prevent resin from adhering to mould.

May remove products from moulds, using air hose or wooden pegs and mallet. May fill and sand rough or damaged sections of moulds.

8578-158 EYEGLASS-FRAME TRIMMER(scient. & ind. equip., n.e.c.) DPT:886

GED: 1 SVP: 2 EC: I PA: S 4 7

Attaches ornamental trim to plastic eyeglass frames:

Places plastic frame and metal or plastic trim parts in jig to hold trim in position during drilling and rivetting operations. Holds assembly on bed of drill press and pulls lever to drill holes through trim parts and frame. Inserts rivets into holes and places assembly on bed of arbor press. Peens rivets to attach trim to frame. Removes finished frame from jig.

8578-162 RUBBER-FOOTWEAR SUB-ASSEMBLER(rubber) DPT:886

booker.

GED: 1 SVP: 2 EC: I PA: L 4

Assembles alternate pre-cemented layers of rubber and rubberized fabric to form book-like components for rubber footwear by performing any combination of the following duties:

Places alternate strips of rubber and treated fabric between layers of cloth attached to boards, to prevent adherence between layers and to form books. Places books on conveyor leading to calendering machine. Removes assembled layers from books passing on conveyor

from calendering machine. Hangs boards on hooks of handtruck. Places alternate rubber and fabric layers on sheet. Aligns layers to allow adequate margin for subsequent bonding. Repositions parts to avoid wrinkles and presses parts together, using hand roller. Removes poorly cemented or badly wrinkled parts.

May apply cement to strips, using brush. May write identifying data on wooden book covers. May clean covers, using water and sponge.

8578-166 BELT LAMINATOR, HAND(plastic prod.; rubber) DPT:887

GED: 1 SVP: 2 EC: I 7 PA: L 4

Applies bonding solution on leather and plastic belt laminations, prior to decorative stitching operation:

Rubs wax on plywood board to prevent belt laminations from sticking to board. Positions row of laminations on board. Presses button to start electrically powered spray gun to coat laminations with latex bonding solution. Carries board of coated laminations to drying racks. Fills spray gun with latex solution when required.

8578-170 EYEGLASS-PAD CEMENTER(scient. & ind. equip., n.e.c.) DPT:887

GED: 1 SVP: 2 EC: I 7 PA: S 4

Cements plastic nose pads to eyeglass frames:

Soaks tray-mounted sponge with acetone. Fits plastic eyeglass frames to metal jig. Presses exposed area of frame against sponge to prepare surface for fitting of pads. Picks up pad with tweezers and dips pad in acetone solution. Presses pad against specified point on eyeglass frame and maintains pressure until pad is firmly bonded to frame.

8578-174 TIRE-BAND WRAPPER(rubber) DPT:887

GED: 1 SVP: 2 EC: I PA: L 4

Wraps anti-adherent cloth liners around tire component bands:

Places tire band between pair of cloth liners. Hangs assembly over arm of wrapping device. Turns crank to wrap band between cloth liners. Places wrapped bands in trays according to size.

May build laminated tire ply bands, using ply stock, solvents and rotating drum device.

8578-178 STRING-TOP SEALER(plastic prod.) DPT:686

GED: 1 SVP: 1 EC: I PA: L 4

Seals string in top of plastic produce bags:

Places bag on sealing machine mandrel and positions string on bag with ends under holding clip. Depresses pedal to fold and seal hem around string at top of bag. Removes bag from mandrel. Examines hem for defective sealing.

8578-182 AIR-BAG EXTRACTOR(rubber) DPT:886

GED: 1 SVP: 1 EC: I 3 7 PA: H 4

Extracts air bags from cured tires:

Lifts tire from conveyor, using hoist. Fits protective metal ring over tire bead. Positions and secures tire in chuck by pulling lever. Fits chain hook around air bag inside tire. Starts machine by pressing switch, to pull air bag from tire. Loads de-bagged tire onto conveyor. May draw off water from air bag by fitting suction tube into orifice of bag.

8578-186 CEMENTER, HAND(plastic prod.; rubber) DPT:886

GED: 1 SVP: 1 EC: I PA: L 4

Applies cement to edges and surfaces of plastic or rubber footwear to facilitate bonding of parts:

Dips applicator in cement and spreads cement along designated surfaces, or positions template on part and applies cement around it. Loads prepared footwear parts onto conveyor or into container with edges overlapping, to facilitate subsequent assembly with other parts.

8578-190 OPENING-MACHINE FEEDER(rubber) DPT:886
GED: 1 SVP: 1 EC: 1 PA: L 4

Feeds machine that forces apart sides of channeled rubber stripping stuck together during curing:
Starts machine and pushes end of stripping through machine opening onto die and under feed rollers that pull strip along die to separate sides.
May feed strip through machine attachment that punches air vent holes in stripping.

8578-194 TREAD-SPLICE PRESSER(rubber) DPT:886
GED: 1 SVP: 1 EC: 1 7 PA: M 3 4

Feeds hydraulic press that bonds tread splice of uncured tires:
Lifts tire and positions tread splice on arm of rotating press that automatically lowers roller arm that bonds splice. Places bonded tire on conveyor leading to spray booth, for spraying with light oil prior to curing.

8578-198 SOLID-TIRE MOUNTER(rubber) DPT:887
GED: 1 SVP: 1 EC: 1 5 PA: L 4

Mounts solid rubber tires on wheel rims for articles, such as tricycles and baby carriages:
Places tire into hydraulically operated machine jaws. Depresses pedal to close jaws which grip and stretch tire. Positions wheel rim on spindle mandrel at centre of tire. Pushes button to open jaws to mount tire on rim.

8578-299 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, RUBBER AND PLASTIC PRODUCTS

This group includes rubber and plastic products labourers and other elemental workers, not elsewhere classified; for example, those who dust and spray rubber products prior to curing, pick bead wires from ground rubber tires on conveyors, clean foreign matter from inside of rubber fuel tanks, and load, wind, unload and coil rubber and plastic tubing from various machines. Typical examples of occupational titles covered by this residual group definition are:

Bead Picker(rubber)
Breakout Man(rubber)
Flour-Stock Man(rubber)
Hose-Tubing Backer(rubber)
Tuber-Machine-Operator Helper(rubber)

8579-FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating, assembling and repairing a variety of rubber, plastic and laminated-fibreglass products.

8579-110 RUBBERIZING MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: 1 PA: M 4 7

Repairs and maintains rubber-covered and rubber-lined equipment, such as impellers, pipes, pumps, valves, conduits and ventilators:
Dismantles equipment and removes damaged parts. Examines exposed rubberized equipment or part for flaws and excessive wear. Selects rubber stock according to type of materials and manufacturer's specifications. Prepares surfaces of equipment, to ensure adherence of lining, by grinding surface, using air grinder and electric polishing machine, and filling surface cracks and holes with caulking compound, using putty knife. Brushes adhesive material onto surfaces to be covered and presses and smooths lining material into place, using hand roller.

May make paper patterns for equipment lining and cut rubber or neoprene material, following pattern and using scissors and knife. May place material in time and temperature controlled oven for curing. May remove air bubbles in lining, using hypodermic needle.

8579-114 ROLLER REPAIRMAN(plastic prod.; rubber) DPT:681
GED: 3 SVP: 6 EC: 1 7 PA: M 4

Repairs damaged or defective plastic and rubber rollers used in a variety of printing presses and machines:
Positions damaged or defective roller on repair stand, manually or using hoist. Examines defect tag on roller to determine roller hardness. Cuts piece of plastic material from repair stock, using knife, or selects appropriate rubber roller repair kit. Lights torch and carefully heats damaged or defective area. Applies repair material to damage or defect to blend in with surrounding area, using knife and torch. Rolls repaired area with hand roller to compress and smooth repair and remove air. Regrinds and polishes repaired roller surfaces, using lathe and polishing machine.

8579-118 WET-SUIT MAKER(garment & fabric) DPT:381
GED: 3 SVP: 5 EC: 1 PA: L 4 7

Measures, cuts and assembles diving outfits, such as wet suits, hoods and jackets:
Measures customer for size, using tape measure. Draws pattern for suit, to customer's measurements, on paper, using crayon. Cuts out paper pattern, using scissors. Outlines pattern on wet-suit material and cuts along outlines, using shears. Fits dome fasteners and zippers to suit sections, using press and adhesives. Assembles suit by joining sections, using needle and thread, sewing machine and adhesives. Fits suit on customer and makes alterations as required. Applies water-proof tape over seams to prevent water seepage through needle holes.

8579-122 FOAM-PLASTIC-SPRAYING-MACHINE OPERATOR (plastic prod.) DPT:662
GED: 3 SVP: 5 EC: 1 7 PA: L 4 5 7

Operates machine that sprays thermosetting resins onto conveyor to produce rigid foam material:
Sets up machine by directing workers in the loading and threading of paperboard backing onto conveyor and through coating and drying units, switching on drying lamps and fan and regulating mixture of resin and catalyst. Starts pumps and opens valves to supply pressurized compound to spray nozzles. Presses switches and turns controls to start conveyor and sprayers and adjusts controls to ensure that material is sprayed onto backing on conveyor to produce foam material of specified width, thickness and density. Cuts sample piece of solidified material and examines it to verify maintenance of production standards. Directs cut-off man to adjust saws to cut material to specified dimensions.
May spray foam into hollow panels of cooler cases and refrigerators to act as insulating medium.

8579-126 HOSE MAKER, HAND(rubber) DPT:682
GED: 3 SVP: 5 EC: 1 6 PA: M 4

Fabricates large reinforced hose by performing any combination of the following duties:
Positions and secures building sleeve on mandrel in motorized chuck, by hand. Cleans ply stock (rubberized fabric and gum rubber) with solvent and applies rubber cement. Aligns ply stock onto specified building sleeve. Starts mandrel rotating, by depressing pedal, and guides ply stock onto building sleeve to form hose. Rolls assembled hose to ensure adherence of plies, and smooths wrinkles in ply stock with hand roller. Measures hose with rule, calipers and gauges and cuts off excess rubber, using knife. Winds wire or rope between plies for reinforcement of hose. Wraps fabric around hose to maintain shape during cure cycle. Cements or clamps metal fittings to ends of hose, using hand tools. Positions hose in horizontal curing heater, using overhead crane. Sets temperature gauge and timer for specified curing cycle. Unwraps fabric strips from cured hose.
May wind rope around hose on corrugated mandrel to hold hose against contours of mandrel during cure.

8579-130 LATEX-RIBBON-MACHINE OPERATOR(rubber) DPT:684
latex-thread-machine operator.
GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Operates machine to produce and cure latex ribbon and thread used for products, such as elastic tape and garters:
Opens valve from reservoir and adjusts flow to regulate level of

coagulant in trays. Positions number of dip belts, according to gauge of finished latex ribbon or thread required, over belt spindles. Starts equipment to actuate dip belts and conveyor system. Observes belts, as they float on top of latex in tray and through coagulant, to verify cohesion of latex to dip belts. Observes separation of coagulated ribbon or thread from bottom of dip belt to conveyor carrying ribbon or thread through rinsing area and drying ovens. Inspects ribbon and thread for defects, such as holes and dried coagulant. Threads end of ribbon or thread through guides leading to curing drum. May cut, weigh and examine samples to verify adherence to specifications, using scissors, scale and gauge.

8579-134 PLASTICS FABRICATOR(air & space-craft; plastic prod.) **DPT:684**
GED: 3 SVP: 5 EC: 1 7 PA: M 4 7

Fabricates plastic accessories, trim and structural parts of aircraft by performing any combination of the following duties:
Cuts glass cloth to specifications, following templates or drawings, using scissors, knife or cutting machine. Impregnates cloth with plastic solution, using brush or impregnating machine. Places layers of impregnated cloth on mould. Attaches metal mounting plates to structure. Presses cloth to fit contour of mould. Slits cloth with scissors or knife to fit and lap ends. Smooths surface by hand or scraper and removes air pockets and excess plastic. Places coated mould in vacuum bag. Installs air and bleed valves in bag and connects vacuum line to valves. Opens valves to collapse bag and draw it tightly over layers of cloth. Places laminated unit in oven and adjusts thermostat to regulate specified curing cycle. Removes vacuum bag, using scissors, and pries lamination from mould, using hand tools. Smooths surface of lamination, using disk sander, and repeats wrapping operation as required to build unit to specified number of layers.
May build honeycomb laminated radomes. May build laminated radomes, using winding process, on cast iron tapered mandrel. May repair aircraft plastic parts, using heating and vacuum equipment, to cure repaired area and be designated accordingly,
Aircraft-Parts Repairman, Plastic

8579-138 RUBBER-LINING INSTALLER(rubber) **DPT:684**
tank liner.
GED: 3 SVP: 5 EC: 1 7 PA: M 3 4 7

Installs rubber sheeting applied to interior of tanks, valves, pipes, ducts, cells and similar articles to prevent corrosion and to minimize contamination or explosion hazards to contents:
Prepares article for application of lining by sandblasting, scraping or painting interior surfaces. Marks out pattern for rubber lining on heavy paper, from blueprints and sketches and cuts it out with scissors. Places pattern on specified rubber sheeting and cuts around it, using knife or scissors. Coats surfaces to be lined with required type of rubber cement. Bonds rubber lining to surfaces, using special tools. Steam cures rubber lining in autoclave or by using steam hose and hood. Tests installed rubber linings for conformance to specifications, using spark tester.
May repair rubber linings by cutting out damaged or worn areas and cementing in self-curing rubber patches. May visit equipment sites to install or repair rubber linings.

8579-142 FUEL-TANK FINISHER AND REPAIRER(rubber) **DPT:384**
GED: 3 SVP: 4 EC: 1 7 PA: M 3 4 7

Finishes and repairs rubberized fuel tanks to rigid specifications, performing any combination of the following duties:
Removes foreign material from inside of fuel tank, using wire brush, portable buffer, and vacuum hose. Cleans inner surface of tank with cloth and solvent. Examines fuel tank for defects; such as, blisters, ply separations, cracks, and loose seams. Marks location and repair code on defective area with crayon and records types of defects. Cuts away defective area with knife and smooths edges with portable buffer. Positions and cements specified patching material in defective area and rolls with hand roller to ensure adhesion. Cuts out and replaces defective fittings and rubber reinforcement strips, using hand tools. Fills blisters with rubber cement, using hypodermic needle. Clamps electric platen on repaired area to vulcanize it. Washes tank and applies lacquer to repaired areas, using roller and brushes. Positions fuel tank on jig to verify location of fittings and screw holes. Verifies thickness of fuel tank walls, using gauges. Marks identification codes on tank, using rubber stamps, stencils and spray gun.
May install additional fittings and hangers according to specifications.

8579-146 DE-ICER ASSEMBLER, PNEUMATIC(rubber) **DPT:684**
GED: 3 SVP: 4 EC: 1 7 PA: M 4

Assembles precut rubberized fabric and gum-rubber ply stocks to make pneumatic aircraft de-icers:
Determines location for rubber ply stock on building form, following guidelines on form or using template and blueprints. Positions ply stock, tubes, manifolds and beadwires in specified sequence on building form and secures them in place with rubber cement. Compresses assembled ply stocks with roller to remove wrinkles and promote adherence. Trims excess ply stock from assembled de-icer with knife and moves de-icer to curing area. Moves cured de-icers to work area on portable form and drapes de-icers over rack. Brushes specified coats of cement on designated areas of de-icers.
May lay out, cut out and assemble special tubes and manifolds from rubberized fabric, using rule, templates, knife, scissors and forming bar.

8579-150 FIBREGLASS LAMINATOR(electronic equip.; plastic prod.; ship & boat bldg.) **DPT:684**
lay-up man, fibreglass; mould laminator.
GED: 3 SVP: 4 EC: 1 7 PA: M 3 4

Builds up layers of fibreglass and resin on plastic, steel or wooden moulds to make parts for plastic products; such as, boats, automobile bodies, buoys or components for electronic equipment, performing any combination of the following duties:
Fills cracks, depressions or holes in mould surface with plastic, and smooths surface, using sandpaper. Cleans mould with water or cleansing solution and waxes and polishes surface, using sponge and cloth. Brushes or sprays parting agent on mould to facilitate removal of moulded product. Sprays mould with coloured resin to produce glossy surface on finished item. Mixes specified amounts of resin and catalyst, using mechanical mixer. Cuts fibreglass cloth to size, using pattern and shears. Covers mould with cloth and brushes on mixture or saturates cloth by dipping in mixture before placing on mould. Removes air bubbles and smooths surface, using squeegee or roller. Sprays mixture of chopped fibreglass, resin and catalyst on mould to form laminations, using specialized spraying equipment. Applies additional fibreglass and resin to obtain specified thickness or to bond preformed wooden parts, such as reinforcing strips, flotation tanks or flooring to structure. Examines moulded item, after hardening, and removes rough spots or air bubbles, using sandpaper. Repairs fibreglass products, using power tools to drill, cut out and smooth defective areas. Cuts and fits fibreglass patches and fills holes with plastic fillers. Mixes resins or plastic paint with catalyst and sprays repaired surfaces. Buffs surfaces of finished products to provide lustrous finish, using buffing compound and portable buffer.
May place article in baking oven to facilitate curing. May specialize in fabricating or repairing a particular fibreglass product and be designated accordingly; for example,
Electronic-Component Fabricator, Fibreglass(electronic equip.)
Fibreglass-Boat Repairer(ship & boat bldg.)

8579-154 FUEL-TANK BUILDER(rubber) **DPT:684**
GED: 3 SVP: 4 EC: 1 7 PA: H 3 4 7

Builds and cures rubberized fuel tanks, performing any combination of the following duties:
Positions cardboard or plaster building form in jig. Cuts and fits strips of uncured rubber along fluted areas of form. Marks outlines of specific shapes and dimensions on rubber sheeting, using stencils and powder. Cuts or stamps out sections, from rubber sheeting, with shears or mallet and die. Fits specified layers of synthetic and rubber sheeting on form. Smooths out wrinkles, using hands and hand roller. Applies specified number of coats of rubberized paint, between layers of wrapping, to build up tank walls to specified thickness. Locates areas for fittings on fuel tank, using templates and ruler. Cuts out locations with scissors or electric hot knife. Stamps or cuts out rubber flanges. Buffs and cleans surfaces of flanges with hand buffer and solvent. Cleans metal fitting rings or hangers in degreasing solution before bonding. Assembles rubber and metal fittings by cementing and screwing parts together. Loads assembled fittings on racks and cures in horizontal heater or cures individual fittings in pneumatic vulcanizing press. Cements fittings on fuel tank. Places rubber reinforcement strips over base of fittings and along seams of fuel tank.

Cures assembled fuel tank in horizontal heater for specified time.
Applies lacquer sealant to tank, using paint roller and brushes.
May build self-sealing tanks and required shock absorbers.

8579-158 ZIPPER-FORMING-MACHINE TENDER(plastic prod.) DPT:685
coil-zipper-machine tender.
GED: 3 SVP: 4 EC: I 6 PA: L 4 7

Tends battery of machines that heat and form nylon filament into spiral, for toothed portion of zippers:
Mounts reel of filament on machine spindle and threads filament through guides and tension bars into electrically heated device. Threads filament between forming dies and through cooling tube to takeup reel. Starts machine and observes filament for loose spiral or kinks, indicating variations in temperature, and adjusts rheostat knob to regulate heat. Measures filament for conformance to specified dimensions, using micrometer. Inspects samples of formed filament for number and spacing of teeth, using comparator. Notifies repairman of machine malfunction.
May tend forming machine with automatic sewing mechanism attached, that sews nylon spirals onto tapes to produce continuous lengths of nylon zipper.

8579-162 CURED-TIRE REPAIRMAN(rubber) DPT:684
GED: 3 SVP: 3 EC: I 7 PA: M 4 7

Repairs defects in rejected cured tires:
Examines and probes tire with awl to determine extent of defect. Buffs blemishes from tire, using portable buffer. Cuts out rubber around defect, using knife and buffs area to prepare it for patching. Cements uncured rubber patch into cutout to build up defective area. Rolls patch with special hand tool to remove trapped air. Buffs and trims excess patch rubber from tire. Cuts defective tread from plies and buffs ply surface. Cements new tread onto plies.
May tend vulcanizing machine to cure patch on tire.

8579-166 EXPANSION-JOINT BUILDER(rubber) DPT:684
GED: 3 SVP: 3 EC: I PA: H 4

Fabricates expansion joints for ends of rubber hose:
Applies solution of soapstone and water, or dry talc to end of hose. Forms expansion joint by cementing together specified number of layers of rubber and fabric around end of hose or on mandrel. Covers joint with nylon tape and steel curing plates, preparatory to vulcanizing. Removes excess rubber from joint after vulcanizing, using knife and portable grinder. Builds up low spots with precured rubber patches. Marks out and drills bolt holes in joint, using templates, scribe and hand drill. Paints joint, using brush.

8579-170 NEOPRENE SPRAYER(plastic prod.) DPT:684
GED: 3 SVP: 3 EC: I 7 PA: H 4

Operates equipment to spray and cure neoprene on fibreglass rovings, to produce chemically-resistant duct liners:
Examines roll of fibreglass rovings for conformance to specifications. Pours liquid neoprene into reservoir. Starts equipment and feeds rolls of fibreglass onto conveyor. Adjusts position of spray heads and speed of conveyor to minimize overspray and ensure coverage and penetration. Operates switches to activate heating units and exhaust fans, used to cure neoprene. Adjusts temperature and conveyor speed as required. Repeats coating and curing operations to obtain specified impregnation. Cleans sprayheads, using solvents.
May spray neoprene on other materials, such as steel, wood and concrete. May spray neoprene, using manually operated airless spray equipment.

8579-174 RUBBER-FOOTWEAR MAKER, HAND(rubber) DPT:684
GED: 2 SVP: 4 EC: I 7 PA: L 4 7

Fabricates rubber footwear by hand, using pre-cut and pre-cemented parts:
Mounts specified last on worktable, using hand tools. Selects pre-cut and pre-cemented parts in prescribed sequence and positions and aligns them on last, using form gauges. Assembles parts and rolls them to obtain tighter bond, using handroller. Removes excess rubber from footwear, using knife and scissors.
May record type and quantity of rubber footwear completed.

8579-178 RUBBER-FOOTWEAR REPAIRER(rubber) DPT:684
GED: 2 SVP: 4 EC: I 7 PA: L 4 7

Repairs defective rubber footwear:
Applies benzine or naphtha to loose edges of seams to restore tackiness and rolls seams to tighten bond. Smooths edges by pressing them with heated knife or hand roller. Repositions or replaces misaligned, creased or wrong parts such as bindings, toecaps, heels and outsoles. Removes bulge of outsole or heel by trimming excess rubber from insoles, using knife or scissors. Repairs cuts, pits, and blisters by cutting, cementing and filling defect with colour-matched uncured rubber. Revulcanizes repaired areas, using portable, electrically heated vulcanizer. Buffs repaired area, using emery cloth or emery wheel.
May grade repaired footwear according to type of repair and general condition. May record quantity and type of shoes repaired.

8579-182 TIRE BUILDER(rubber) DPT:684
GED: 3 SVP: 3 EC: I 5 PA: H 4

Builds pneumatic tires on rotating drum machine:
Adjusts ply-stitcher-pressure rollers and drum on machine according to width of stock, using gauges and hand tools. Rubs cement stick on drum edge to provide adhesive surface for plies. Pulls ply from machine spool and aligns with edge of drum. Starts drum revolving by depressing pedal, to wind specified length of ply onto drum. Splices ends and brushes solvent onto ply to ensure adhesion. Repeats operation as specified, alternating direction of each ply to strengthen tire. Depresses pedal to move bead setters and position rollers that press prefabricated bead onto plies and turn edge of plies under and over beads. Winds chafers and breakers onto plies. Aligns tread with guide on drum and starts drum to wind tread onto plies. Splices ends of tread and starts drum and rollers that bond tread and plies as drum revolves. Removes tire, by depressing pedal to collapse drum.
May apply additional belts of fibreglass to regular plies to build glass-belted tires. May bond tread splice of uncured tires, using hydraulic press. May build a particular type of tire and be designated accordingly; for example,
Earth-Mover-Tire Builder
Passenger-Tire Builder
Truck-Tire Builder

8579-186 UNCURED-TIRE REPAIRMAN(rubber) DPT:684
green-tire repairman.
GED: 2 SVP: 4 EC: I 7 PA: M 4 7

Disassembles, repairs and rebuilds rejected uncured tires:
Removes defective tire components; such as, tread, chafing strip, plies and beads, using solvent. Repairs defects, such as wrinkles, loose beads and damaged or missing plies, using solvent, cement and hand tools. Refinishes tires to conform to specifications.

8579-190 AIRCRAFT-TIRE-TUBE BUILDER(rubber) DPT:584
GED: 2 SVP: 3 EC: I PA: L 4 7

Cuts and cements rubber stock to build aircraft tire tubes:
Places templates on calendered gum stock, traces patterns and cuts stock with scissors, holding edges at angle to obtain beveled cut. Washes edges with solvent and brushes on cement. Joins stock together to form tube by lapping and bonding edges with hand roller. Marks valve location with template. Cuts out valve hole in tube with mallet and die and cements valve in position.

8579-194 LASTER, RUBBER FOOTWEAR(rubber) DPT:684
hand laster.
GED: 2 SVP: 3 EC: I PA: L 4

Positions uppers of rubber footwear over lasts and secures uppers to insoles:
Reads work orders to determine size and quantity of footwear to be produced and selects uppers from trays or racks. Stretches and draws uncured rubber upper or cement-coated-fabric upper over last and insole, by hand. Presses upper margin against insole all around, using fingers, to ensure bonding.

8579-198 LEAD-STRIPPING-MACHINE OPERATOR(rubber; wire prod.) DPT:684
GED: 2 SVP: 3 EC: I 7 PA: H 4

Operates machine to strip lead covering from cured stock, such as rubber hose and rubber-covered cord or cable:
Bolts specified stripping fixture to machine and adjusts guides to accommodate stock, using hand tools. Positions reel of cured stock on turntable and aligns with stripping machine, using hoist. Cuts and bends back lead on end of stock, using knife. Inserts end of stock into machine and ends of lead covering between cutter rollers. Turns setscrew and wheels to adjust stripping blades. Starts machine to strip lead from stock and chop lead for return to melting pot. Observes operation of machine to ensure stripping blades do not cut into stock. Starts stripped stock onto take up reel or conveyor for removal to next process station.

8579-202 PADDED-DASHBOARD MAKER(plastic prod.) DPT:684
GED: 2 SVP: 3 EC: I 7 PA: L 4

Pours foam-padding solution into shaped skin in mould to form padded dashboards:
Waxes mould to prevent pre-shaped plastic skin from sticking to mould. Positions shaped skin in mould. Positions metal or plastic inserts in mould to locate defroster outlets, speaker grille and instrument cluster. Fills cone-shaped paper container with specified amount of padding solution. Pours solution into mould in specified pour pattern. Clamps lid over mould. Positions mould in curing oven or allows padding to cure in mould. Inspects cured product and marks defects, such as soft spots and voids, using chalk or crayon. Cleans moulds, using solvent, cloth, air hose and scraper.

8579-206 PLASTICS REPAIRMAN(plastic prod.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Repairs defects in plastic products, such as luggage, contour seating and billiard table parts, by performing any combination of the following duties:
Examines product for defects; such as, blisters, cracks, broken joints and improper fitting. Grinds defects to smooth surface and form base for bonding compound, using power grinder. Fills cracks and ground-out areas with bonding compound. Cements broken joints. Removes excess bonding compound with sandpaper or rag dipped in solvent. Patches tears, using electric heat gun. Paints repaired patch to match original colour, using brush or spray.
May adjust defective luggage, using riveter and hand tools. May salvage parts from unrepairable luggage, using hand tools.

8579-210 TIRE REPAIRMAN(motor trans.) DPT:684
GED: 2 SVP: 3 EC: I PA: M 3 4

Repairs punctured tires of automobiles, buses, trucks and other vehicles by either of the following methods:
1. Locates puncture in tubeless tire by visual inspection or by immersing inflated tire in water bath and observing air bubbles. Separates tire from rim, using mechanical tire changer. Buffs damaged area, using scraper and power buffer. Inserts adhesive mixture into puncture. Seals puncture with rubber plug, using plug insertion tool. Reassembles tire onto rim, using mechanical tire changer. 2. Separates tubed tire from rim, using hand tools and mechanical tire changer. Removes inner tube from tire and inspects tire casing for defects, such as holes and cuts. Cements tire patch over rupture in casing. Inflates inner tube and immerses it in water to locate leak. Buffs defective area, using scraper and power buffer. Patches tube with adhesive rubber patch or seals rubber patch to tube, using hot vulcanizing plate. Reassembles tire onto rim, using hand tools and mechanical tire changer.
May remove and remount vehicle wheels.

8579-214 AIR-BAG BUILDER(rubber) DPT:684
GED: 2 SVP: 3 EC: I PA: M 4

Assembles rubber-ply stock on metal pole to build air-bags, used in curing tires:
Measures and cuts ply stock on table, using marker and shears. Dusts ply stock with soapstone to prevent sticking to pole. Positions pole on table brackets. Winds and cements layers of ply onto pole to build up bag to specified thickness. Measures and skives ends of base stock

(tubed rubber), using marker and knife. Measures and cuts step-offs on ends of assembled plies to provide smooth splice. Brushes solvent on base stock and positions it on assembled plies. Rolls plies and base stock to ensure adherence and remove air pockets, using hand tools. Drills hole and cuts out flap in air bag to facilitate valve insertion, using drill press and knife. Removes pole from assembled air bag. Inserts and positions valve. Brushes cement over valve area and replaces rubber flap. Attaches fittings to valve, using hand tools. Brushes solvent on ends of air bag and splices ends together. Wraps rubberized reinforcing strips around air bag splice.
May build air bags from tubed rubber stock only.

8579-216 CENTRIFUGAL CASTER(chem., n.e.c.; plastic prod.) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: M 4

Tends centrifugal casting machine to produce plastic sheets:
Mixes specified quantities of liquid resin, pigment and catalyst, using mixing machine, to produce resinous plastic compound of desired quality and colour. Presses switch to rotate open-ended cylindrical casting drum. Sprays interior of drum with release agent, such as wax. Pours resinous compound into rotating drum and sprays surface of compound with hardening agent to produce plastic sheeting. Stops rotation of drum after specified time. Removes plastic sheeting from forming drum, manually or using roller device. Cuts plastic to form flat sheet and places sheet on curing rack or in water tank to harden.

8579-218 TIRE BUFFER(rubber) DPT:685
GED: 2 SVP: 3 EC: I 5 7 PA: H 4 7

Tends buffing machine that removes rubber from tire body to prepare tire for retreading:
Inspects tires and rejects those with damaged casings. Lifts tire manually or by hoist and positions it on buffing machine holder. Bolts required template against tire to indicate total depth of tread removed, using wrench. Starts machine to rotate tire and moves tire against buffing wheel. Adjusts machine buffing arm against template to obtain specified depth of cut. Sets automatic travelling device to remove tread across width of tire. Measures buffed tire to determine size of retreading mould, using tape measure. Records information on work order.

8579-222 BEAD FINISHER(rubber) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: L 4

Operates machine to reinforce and build up formed tire beads with uncured rubber or rubberized fabric:
Adjusts machine rollers and guides, using wrenches. Trims edges of bead covering fabric, using shears or knife. Positions bead on guide wheels of bead building machine and sets roller clamps to hold bead. Starts machine and manually guides stock (uncured rubber or rubberized fabric) from roll onto bead as bead rotates. Cuts stock with scissors, and presses ends against bead with fingers. Tags and ties specified quantities and types of beads into bundles.
May cover V-belts with rubberized fabric and be designated accordingly,
V-Belt Coverer

8579-226 BED LASTER(rubber) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: L 4

Operates bed-lasting machine that bonds toe and heel of lasted-rubber-footwear upper onto insole:
Adjusts plates of machine to accommodate footwear size, by turning knobs and wheel. Places article of footwear, such as fabric top boot or sneaker, onto metal last and positions last on ram of bed-lasting machine. Pulls sufficient margin of upper material over insole to make firm bond, using pincers. Bonds margin of upper onto insole, by pulling handles to move plates over heel and toe and depressing pedal to raise ram and article against plates. Repeats operation to achieve complete bonding.

8579-230 DE-ICER-KIT PREPARER(rubber) DPT:684
GED: 2 SVP: 2 EC: I PA: M 4

Prepares assembly kits for use in making pneumatic de-icers for airplanes:
Threads specified bead wire into holding device. Wraps wire manually with rubberized fabric tape. Cuts bead wire to specified length, using

pliers. Cuts rubber plies to specified length, using knife and verifies thickness, using snap gauge. Selects moulded rubber parts and other specified items; such as, punches, dies, blueprints, templates and gum stock. Places selected items in kit box with bead wire and plies. Weighs and tags packed kit box. Collects used de-icer assembly kits from production areas and salvages reusable material.

8579-234 FOAM-CUSHION REPAIRER(plastic prod.; rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: L 4

Repairs defects in plastic or foam rubber cushions:
Cuts out defective area of cushion and forms piece of repair material to comparable size and shape, using knife, saw, shears or clicking machine. Brushes adhesive on repair piece and hand fits it to cut-out to ensure proper adhesion. Applies fabric tape or netting to underside of repair area for reinforcement. Smooths and shapes repaired areas to contour of cushion, using air powered hand buffer. Repairs splits or tears, using brush and adhesive.
May apply fabric tape, netting and support insulators to automotive cushions and be designated accordingly,
Foam-Cushion Reinforcer

8579-238 HOSE CURER, OPEN STEAM(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 5 PA: M 4 7

Cures industrial hose, using open steam method:
Fills hose with water and seals ends with connector caps, using wrenches. Moves hose to curing area and positions it in curing unit, using overhead crane. Opens steam valves and sets timer for curing cycle. Removes connector caps and blows water from hose, using air pressure. Pressure tests cured hose to specifications, using air or water pressure pump.

8579-242 MOULD CLEANER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 5 7 PA: H 3 4

Cleans, stores and distributes moulds, used to form rubber or plastic products, by performing any combination of the following duties:
Positions mould on worktable manually or using hoist. Sprays mould with steam or solvent to remove protective oil. Heats mould on electric plate or by immersing it in hot cleaning fluid to loosen adhering particles. Cleans mould, using buffing wheel or wire brush and scraper. Inspects moulds for defects and to ensure surfaces are smooth and clean. Sprays or brushes oil on mould to prevent corrosion during storage. Selects and distributes moulds according to work orders.
May use acetylene torch or abrasive blast to remove imbedded material in mould.

8579-246 NET APPLICATOR(plastic prod.) DPT:684
GED: 2 SVP: 2 EC: 1 5 7 PA: L 4

Applies fabric tape or netting in specified locations on moulds, to reinforce plastic foam automotive cushions, by performing any combination of the following duties:
Cuts tape or netting to specified size, using hand cutter and shears. Heats wax in melting pot, using portable heater. Dries mould with rags. Applies tape or netting to specified locations on mould and secures with wax or holding pins. Positions pour head over mould and observes automatic pouring operation. Depresses button to stop pouring operation when necessary.
May position metal inserts in mould to form high back seats.

8579-250 RUBBER-FOOTWEAR MOUNTER(plastic prod.; rubber) DPT:684
desma laster; hooker-laster; puller laster.
GED: 2 SVP: 2 EC: 1 PA: L 4

Produces fabric top shoes with moulded rubber or plastic soles by performing any combination of the following duties:
Moves lever to turn last to sole-up position. Brushes last with lubricant to prevent sticking. Pulls fabric top over last, and draws string in hem around upper edge so that heel is centered and upper fabric is aligned evenly around sole of last. Pulls string in hem tight around sole of last and ties knot. Pulls and stretches fabric upper and hooks hemmed edge over pins protruding from instep and heel of last, using claw-tipped lasting tool. Smooths puckered fabric at toe and heel and cuts ends from draw string. Positions precut outsole in cavity of mould.

Pulls lever to invert last. Starts machine that lowers lasted upper into die cavity and vulcanizes outsole to upper. Removes shoe from mould and last when vulcanizing cycle ends. Strips excess moulded material from shoe, by hand.
May vulcanize moulded outsoles to leather uppers. May operate machine that automatically injects rubber or plastic into mould to form sole.

8579-254 RUBBER-GOODS REPAIRMAN(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Repairs defects; such as, cuts, breaks, wrinkles and thin spots in rubber goods:
Cuts out defective area with shears, and buffs cut edge with abrasive paper. Cleans defective area with solvent, and brushes on cement. Applies uncured gum patch and bonds with hand roller. Dusts defective area with soapstone to prevent sticking while curing patch. Spot cures rubber patch, using air ram press (hot plate). Smooths repaired areas, using hand-buffing machine.
May cure repairs, using autoclave. May replace defective valves or fittings. May be designated according to type of rubber goods repaired; for example,
Air-Bag Repairman
Inner-Tube Repairman
Life-Raft Repairman

8579-258 SOLID-TIRE BUILDER(rubber) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: H 4

Fabricates solid rubber tires used on industrial trucks:
Bevels ends of uncured rubber tread, using beveling machine. Weighs beveled tread and cuts off or cements on pieces, to bring tread within allowable weight tolerance. Positions pre-painted and pre-cemented steel rim band under pressure rollers of tread-binding machine. Starts machine and feeds specified number of layers of tread onto band.
May pre-paint steel rim bands with priming solution. May apply rubber cement to steel rim band.

8579-262 LINER-REROLL MAN(rubber) DPT:585
wrapper rewriter.
GED: 2 SVP: 2 EC: 1 PA: H 4

Tends machine to clean, smooth, and reroll fabric liners for use in winding calendered rubber or fabric:
Positions liner roll in let-off bracket, by hand or using hoist. Threads liner under yardage gauge and onto powered windup spindle. Turns valve on vacuum fixture to remove dust from liner. Starts machine and guides liner through rollers to ensure evenness of liner and removal of wrinkles. Examines liner for adhering rubber particles and torn areas. Scrapes rubber particles from liner with hand tool. Weighs and records length and weight of roll on roll tag.
May repair damaged areas of liner or sew additional fabric on liner to extend length, using portable sewing machine.

8579-266 ATOMIZER-CAP-MACHINE TENDER(plastic prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that assembles dip tubes and plugs used in plastic squeeze bottles:
Places reel of plastic tubing onto spindle. Feeds tubing through retaining wheels and channel to edge of blade. Fills bowl on machine with plugs. Pushes button to start machine that assembles tubes and plugs, and ejects assemblies into tote box. Adjusts machine to correct faulty operation. Replaces dull and unusable blades, using hand tools. Inserts sample dip tube into water filled plastic bottle and tests it for defects.

8579-270 BACK-STRIP-MACHINE TENDER(rubber) DPT:685
slitter.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that rolls strips of self-adhesive tape onto continuous sheeting of uncured-rubber stock and cuts into specified widths and lengths to form backseam-reinforcing strips for rubber footwear:
Selects rubber stock of specified colour and thickness. Mounts parallel rolls of tape in individual holders and roll of sheeting on machine

frame, using hoist. Installs reel in cradle for winding sheeting wrapper. Threads sheeting and tape around rollers that guide and press them together. Fastens end of wrapper to reel for rewinding. Starts machine, rewinding motor and conveyor that pulls assembly under rotary gang knives and guillotine to slit sheets into strips and cut strips to length. Removes strips from conveyor and places them between cloth leaves to form book. Examines strips and discards those that are reversed and wrinkled.

8579-274 BALLOON LEACHER AND CURER(rubber) DPT:685

GED: 2 SVP: 2 EC: 1 PA: M 4

Tends equipment to leach and cure balloons:
Lifts latex-dipped form boards from wheeled rack and stacks them on rack suspended above leaching tank. Lowers rack into leaching solution for specified time, using hand winch. Replaces leached form boards on wheeled rack and pushes it into oven. Secures door with locking handle and sets oven timer for specified curing cycle. Observes oven temperature indicator and adjusts controls as required.

8579-278 CHAFER BUILDER(rubber) DPT:685

GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that cuts and winds rubberized fabric strips into chafers, used to prevent tire beads from rubbing against tire rim:
Threads rubberized fabric through machine guides, cutter blades and tension rollers onto liner roll at windup rack. Adjusts guides, by turning set screws, to place cut strip in alignment with previously wound strip. Starts machine and observes operation to ensure width uniformity and alignment of strips. Lifts completed roll of chafers from windup rack and attaches identification tag.

8579-282 GOLF-BALL-COVER TREATER(sport. & toy) DPT:685

GED: 2 SVP: 2 EC: 1 7 PA: M 4

Tends machines and equipment that vulcanize, etch and cure golf ball covers preparatory to painting:
Pours specified amounts of chemicals and water into dip tanks. Fills dip buckets with golf balls and moves buckets through series of dip tanks, using hoist. Empties balls into boxes and moves boxes to curing room for specified time. Loads tumbler with golf balls. Opens valves to fill tumbler with water and pumps in specified amounts and types of chemicals. Tumbles balls for specified time. Empties solution and runs tumbler through rinse cycle. Repeats chemical treating and rinse cycles as specified. Moves golf balls in buckets to drying room.

8579-286 HOSE CUTTER AND BRANDER, MACHINE(rubber) DPT:685

GED: 2 SVP: 2 EC: 1 PA: M 3 4

Tends automatic cutting and branding machines that cut various types of hose to specified lengths and print brand name on hose:
Feeds cured rubber hose into machine that automatically cuts hose to specified lengths. Coils cut hose as it emerges from machine and lifts it onto skid. Bolts specified printing plate on machine fixture. Adjusts guides and feed rollers to accommodate hose, using wrench. Fills feed tank with specified colour of ink and starts machine. Lifts hose to table manually or with hoist and starts hose into feed rollers. Examines hose to ensure that printing meets specifications. Attaches coupling hardware to hose. Packages hose to specifications and places on skids for removal to warehouse.
May cut hose, using mitre box and knife.

8579-290 TIRE-BAGGING-MACHINE TENDER(rubber) DPT:685

GED: 2 SVP: 2 EC: 1 5 PA: H 3 4

Tends tire-bagging machine that inserts air bags into tires prior to curing process:
Hangs air bag on ram hook of tire-bagging machine and couples air hose to air bag valve. Lifts tire onto machine table, by hand or with hoist, and positions it under ram. Starts machine that inserts and inflates air bag in tire.
May move bagged tires to curing presses, using handtruck.

8579-294 HOSE-COUPLING ASSEMBLER(plastic prod.; rubber) DPT:687

GED: 2 SVP: 2 EC: 1 PA: L 4

Attaches metal couplings to rubber or plastic hoses:
Cuts hose to specified lengths, using mitre box and knife. Attaches expansion shaft to pneumatic expander device, using hand tools, and positions specified expansion ring on expansion shaft. Slides coupling on end of hose and hose assembly over expansion shaft. Operates expander to spread expansion ring and lock coupling to hose.
May attach metal couplings to vacuum cleaner hose. May bolt coupling hardware to hose, using wrench.

8579-298 INNER-TUBE INSERTER(rubber) DPT:687

GED: 2 SVP: 2 EC: 1 7 PA: H 4

Installs inner tubes and flaps in truck tires preparatory to shipping:
Positions tire under hydraulic spreader clamps. Presses button to activate clamps that spread sidewall of tire. Inserts inner tube in tire manually, with valve located at specified position. Inflates inner tube, using airhose. Inserts flap over inner tube to prevent damage.

8579-302 PREPARATION MAN, LEAD PRESS(rubber) DPT:687

GED: 2 SVP: 2 EC: 1 PA: M 3 4

Prepares uncured rubber hose for covering:
Inspects hose for defects such as cracks, cuts or blisters. Cuts out defective sections and joins hose ends, using metal connectors. Measures inside and outside diameters of hose to ensure conformance to specifications, using tape measure and calipers. Fits couplings on hose ends to join short lengths, using hand tools. Vents hose to specified depth, using awl. Coils hose on large pan or rotating circular table.

8579-399 OTHER FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS

This group includes other rubber and plastic products fabricating, assembling and repairing workers, not elsewhere classified; for example, those who dust inner tubes prior to curing, fit and repair plastic safety glasses and goggles, remove urethane foam cushions from conveyORIZED moulds, assemble inner and outer shells of cooler cases, heat and hand bend rubber or plastic smoking pipe bits to shape, replace missing colour chips on floor covering and assemble plastic components of film developing and processing machines. Typical examples of occupational titles covered by this residual group definition are:
Bit Bender(rubber) ~
Cooler-Shell Assembler(plastic prod.)
Safety-Goggle Repairman(plastic prod.)
Tube-Splice Duster(rubber)

858-MECHANICS AND REPAIRMEN, N.E.C.

This minor group includes occupations, not elsewhere classified, concerned with repairing, adjusting, servicing and installing machines or equipment primarily of a mechanical nature; such as, motor vehicles, trailers, aircraft, railway rolling stock, farm and construction machinery, industrial and production machines, business machines, precision instruments and watches. A knowledge of a specific machine or product is normally required. Electrical repairing occupations are classified in Minor Group 853 - FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS, ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT. Occupations

concerned with installing and repairing marine engines are classified in Unit Group 8592 - MARINE CRAFT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS. MECHANICS AND REPAIRMEN, N.E.C. are classified in the following unit groups:

- 8580** Foremen: Mechanics and Repairmen, n.e.c.
- 8581** Motor-Vehicle Mechanics and Repairmen
- 8582** Aircraft Mechanics and Repairmen
- 8583** Rail Transport Equipment Mechanics and Repairmen
- 8584** Industrial, Farm and Construction Machinery Mechanics and Repairmen
- 8585** Business and Commercial Machine Mechanics and Repairmen
- 8586** Inspecting and Testing Occupations, Equipment Repair, n.e.c.
- 8587** Watch and Clock Repairmen
- 8588** Precision-Instrument Mechanics and Repairmen
- 8589** Other Mechanics and Repairmen, n.e.c.

8580-FOREMEN: MECHANICS AND REPAIRMEN, N.E.C.

This unit group includes occupations as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating the activities of workers engaged in repairing mechanical equipment; such as, motor vehicles, aircraft, rail-transport equipment, industrial, farm and construction machinery, business and commercial machines, precision instruments, and watches and clocks.

8580-110 FOREMAN: AIRCRAFT MECHANICS AND REPAIRMEN(air & space-craft) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing aircraft, airframe components and related equipment, (Unit Group 8582):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in repairing a particular type of aircraft, equipment or phase of repair and be designated accordingly; for example,
Foreman, Aircraft Servicing
Foreman, Helicopter Maintenance
Foreman, Hydraulic Shop

8580-114 FOREMAN: INDUSTRIAL, FARM AND CONSTRUCTION MACHINERY MECHANICS AND REPAIRMEN(mech. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing, adjusting, installing and servicing mechanical equipment; such as, tractors, combines, bulldozers, production machinery and engines, (Unit Group 8584):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular phase or type of mechanical equipment repair and be designated accordingly; for example,
Fuel-System-Maintenance Foreman
Maintenance-Mechanic Foreman, Production Machinery
Millwright Foreman

8580-118 FOREMAN: MECHANICAL-EQUIPMENT-REPAIR INSPECTORS(mech. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in inspecting and testing work, concerned with quality control of mechanical equipment repair, (Unit Group 8586):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular quality control activity and be designated accordingly; for example,
Automotive-Test-Shop Supervisor

8580-122 FOREMAN: MOTOR VEHICLE MECHANICS AND REPAIRMEN(motor vehicle) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing automotive vehicles, such as automobiles, trucks and buses, (Unit Group 8581):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular repairing and servicing activity and be designated accordingly; for example,
Body-Shop Foreman
Engine-Repair Foreman
Garage Foreman

8580-126 FOREMAN: OFFICE-MACHINE REPAIRMEN(misc. prod. fab., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing business and commercial machines; such as, calculating, bookkeeping, addressing and duplicating machines and typewriters, (Unit Group 8585):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in repairing a particular machine and be designated accordingly.

8580-130 FOREMAN: PRECISION INSTRUMENT MECHANICS AND REPAIRMEN(scient. & ind. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in installing, adjusting, altering, calibrating or repairing scientific, engineering, optical, photographic or medical instruments and apparatus, (Unit Group 8588):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in repairing a particular instrument and be designated accordingly; for example, Meter-Shop Foreman

8580-134 FOREMAN: RAIL TRANSPORT EQUIPMENT REPAIRMEN(rail. rolling stock) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing railway-rolling stock and related equipment, (Unit Group 8583):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in disassembling, servicing and repairing a particular part or type of railway equipment and be designated accordingly; for example, Carman Foreman

Foreman, Wheel Shop
Roundhouse Foreman

8580-138 FOREMAN: WATCH AND CLOCK REPAIRMEN(scient. & ind. equip., n.e.c.) DPT:138

Supervises and co-ordinates activities of workers engaged in repairing watches and clocks and mechanical movements used in clockwork-operated devices and related equipment, (Unit Group 8587):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in repairing particular types of equipment, such as timers, meters and recorders, and be designated accordingly.

8580-199 OTHER FOREMEN: MECHANICS AND REPAIRMEN

This group includes foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in repairing and servicing miscellaneous mechanical equipment; such as, small domestic gasoline-powered-lawn mowers, snow blowers, chain saws, and portable generators and pumps. A typical example of an occupational title covered by this residual group definition is:

Pump-Serviceman Foreman(mech. equip., n.e.c.)

8581-MOTOR-VEHICLE MECHANICS AND REPAIRMEN

This unit group includes occupations concerned with repairing and servicing gasoline-or diesel-powered-motor vehicles; such as, automobiles, trucks, buses, motorcycles, snowmobiles, hovercraft, and industrial and farm tractors. Activities include: testing, diagnosing, disassembling, replacing parts and assemblies; tuning, adjusting or making body repairs, using common and special hand and power tools, machines and equipment.

8581-110 MOTOR-VEHICLE MECHANIC(motor vehicle) DPT:261
automobile repairman; automobile mechanic.

GED: 4 SVP: 7 EC: I 5 7 PA: M 3 4 5 6 7

Repairs and overhauls automobiles, buses, trucks and other automotive vehicles:

Examines vehicle and discusses with operator or foreman the nature and extent of malfunctions or repairs required. Plans work procedures, using manufacturers' charts, technical manuals and experience. Locates malfunctions, using test equipment, such as timing lights, electrical meters and analyzers, and adjusts to specification. Raises

vehicle, using hydraulic jack or hoist to gain access to mechanical assemblies bolted to underside of vehicle. Removes assemblies, such as engine, transmission or differential, using hand tools and hoists. Dismantles faulty assembly, and visually inspects, and checks parts, such as valves, rods, pistons, gears and bearings, using tools, such as micrometers, calipers and gauges. Repairs or replaces parts of these assemblies, and reassembles, adjusts and tests them prior to reinstalling on vehicle, using hand tools. Overhauls or replaces ancillary equipment, such as carburetors, generators, distributors, starters and pumps. Relines and adjusts brakes, aligns front ends, replaces shock absorbers and balances wheels. Solders leaks in radiators, and replaces radiator hoses. Replaces and adjusts headlights, panel, rear and running lights. Installs accessories, such as radios, heaters, mirrors and windshield wipers. Rewires ignition systems, lights and instrument panels.

8581-114 ENGINE REPAIRMAN(motor vehicle) DPT:281
GED: 4 SVP: 7 EC: I 5 6 PA: H 3 4 6 7

Repairs and overhauls gasoline and diesel-powered engines, such as those used in automotive vehicles and hovercraft:

Positions and bolts engine to test stand. Tests engine to determine malfunctions, using instruments, such as vacuum gauge, and compression gauge. Disassembles engine and cleans parts, such as cylinder heads, pistons, ring grooves, and cylinder sleeves, using cleaning solvent, sand-blasting equipment, grinders and wire brushes. Operates lathes, grinders, and boring and honing machines to rebore and hone cylinders, and turn and undercut armatures according to chart tolerances. Repairs or replaces and adjusts parts, such as valves, valve guides and tappets, using valve-grinding machine and hand tools. Assembles and starts engine, and adjusts carburetor and distributor to ensure optimum performance. Records motor number and repairs made.

May compute customer's bill, detailing parts and labour charges, and collect payment. May be designated according to type of engine repaired; for example,

Diesel-Engine Repairman
Gasoline-Engine Repairman
Hovercraft-Engine Repairman

8581-118 INDUSTRIAL-TRUCK MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: I 5 PA: H 3 4 7

Repairs and maintains gasoline-powered or electrical-industrial trucks, used to lift and transport materials:

Observes and listens to truck in operation to determine malfunction. Installs new ignition systems, aligns front wheels, changes or adjusts brakes, changes or recharges batteries, and replaces transmissions and other parts, using hand tools. Overhauls engines, using mechanic's hand tools, welding equipment, hoists, charts and reference manuals. Examines, adjusts and repairs lifting devices and associated drive mechanisms. Examines protective guards, and other safety devices on trucks, and adjusts them as required, using hand tools. Lubricates moving parts, and operates repaired truck to verify conformance to specifications.

8581-122 TRANSMISSION MECHANIC(motor vehicle) DPT:281
GED: 4 SVP: 7 EC: I PA: H 3 4 7

Repairs manual and automatic transmissions for automobiles, buses, trucks, and other automotive vehicles:

Inspects vehicle and analyses faults to ascertain extent and location of defects, and plans work sequence. Raises vehicle, using hydraulic hoist, and removes transmission, using mechanic's hand tools and hydraulic lifting device to lower transmission. Disassembles transmission unit and measures parts for wear, using micrometer and calipers. Replaces broken or worn parts, such as bands, gears, seals, and valves. Adjusts pumps, bands, and gears to precise tolerances, as indicated in manufacturers' specifications, using wrenches. Installs repaired transmission in vehicle, and fills it with transmission oil. Adjusts operating linkage and road-tests vehicle to ensure correct operation. Verifies idle speed of motor, using equipment, such as tachometer, and adjusts carburetors, when they affect the operation of automatic transmission. May specialize in repair of automatic transmissions and be designated accordingly; for example,

Automatic-Transmission Mechanic

8581-126 TROLLEY-COACH MECHANIC(motor vehicle) DPT:281

GED: 4 SVP: 7 EC: I 5 7 PA: M 3 4 7

Repairs and maintains electrical and mechanical units and accessories of electrically-powered-transit coaches according to specifications: Determines malfunctions and repairs to be made through periodic inspections, road tests, or from drivers' reports. Inspects, replaces, and repairs specified mechanical and electrical units, such as generators, auxiliary motors, air compressors, regulators, brake systems, doors and door motors. Replaces worn brake shoes and linings and worn or damaged seats. Performs emergency road repairs, and drives wrecker truck to tow disabled vehicle. May perform duties of 8583-110 STREETCAR AND SUBWAY-CAR MECHANIC (rail. rolling stock).

8581-130 SHOP ESTIMATOR(motor vehicle) DPT:287
damage-repair estimator.
GED: 4 SVP: 7 EC: I PA: L 4 7

Estimates cost of repairing damaged automobile and truck bodies, by visual examination of vehicle and utilizing knowledge of replacement parts and labour costs: Examines damaged vehicles for dents, scratches, broken glass and other items requiring repair, replacement or repainting. Sights along fenders, doors and roof to detect possible frame damage, or positions vehicle in frame-aligning rig that indicates location and extent of misalignment. Examines interior of vehicle for evidence of fire or water damage to upholstery and other parts. Determines feasibility of repair or replacement of parts, such as bumpers, fenders, and doors, according to comparative costs and extent of damage. Computes cost of restoring vehicle to condition specified by customer, using parts-cost manual and labour rates. Enters itemized estimate on work order or estimate form and explains estimate to customer or insurance adjuster. May estimate cost of mechanical, electrical, or other repairs where shop performs both body work and mechanical servicing of vehicles. May estimate cost of repainting, customizing or converting vehicles to special purposes.

8581-134 TUNE-UP MAN(motor vehicle) DPT:281
automobile-service mechanic.
GED: 4 SVP: 6 EC: I 7 PA: M 3 4 7

Tunes automotive vehicle engines to ensure efficient operation: Inspects vehicle for performance and diagnoses poor performance. Uses analyzer to check valves, ignition and fuel systems. Makes separate tests on engine compression, timing and fuel pump pressure. Removes spark plugs, using socket wrench, and tests them, using spark-plug tester. Cleans electrodes in sandblasting machine, sets spark gap with feeler gauge, and replaces plugs. Inspects distributor-breaker points for wear and pitting, and replaces or resets points, using screwdriver and feeler gauge. Checks ignition timing, using test equipment, such as timing light and dwell meter, and adjusts timing to specifications, using hand tools. Adjusts carburetor-needle setting, using screwdriver, and verifies adjustment, using precision-measuring instruments. Sets valve tappets, using feeler gauge or dial indicator. Removes, cleans, adjusts or replaces defective coils, electrical connectors, carburetors, condensers, generator, fuel and water pumps, and voltage regulator. Examines battery and connections. Removes and services heat-riser valve and positive-crank-case-ventilation valve, using hand tools, solvents and lubricants. Adjusts or replaces fan belt. May tune engine while vehicle runs on rollers connected to dynamometer.

8581-138 MECHANICAL-UNIT REPAIRMAN(motor vehicle) DPT:381
GED: 4 SVP: 6 EC: I PA: M 3 4 7

Repairs, tests, and installs various types of mechanical units, such as fuel and water pumps, control valves, governors, distributors, and windshield wiper motors on trackless trolleys and buses: Reads work order or examines vehicle to diagnose faults. Disconnects and removes faulty units from vehicle, using hand tools. Disassembles unit and cleans components with solvents. Examines parts for damage and wear. Repairs, replaces, or adjusts components, such as needles, springs, bolts, relays, and air lines. Tests air lines for leaks, using air-pressure gauge. Tests hydraulic, pneumatic or electro-magnetic control valves, and door-opening and closing mechanisms. Examines

radiator shutters, and other mechanical units, and adjusts for correct operation. Reassembles and installs repaired units in vehicle.

8581-140 TRUCK-TRAILER REPAIRMAN(motor vehicle) DPT:381
trailer mechanic.
GED: 4 SVP: 6 EC: I PA: M 2 3 4 7

Repairs used commercial truck trailers, and installs parts and accessories on new trailers: Examines and dismantles or removes wheels, bearings, lights, and air and electric brake assemblies of trailers. Replaces or repairs worn and defective parts. Test-operates repaired equipment to ensure satisfactory performance. Overhauls used and wrecked trailer bodies, following shop orders or specifications. Lays out, fits, drills, screws, rivets, and welds new metal sections to other trailer sections, using hand and pneumatic tools, and welding equipment. Installs metal or wood flooring, using hand tools. May install, adjust, and service motor-cooling systems in refrigerated trailers.

8581-142 BODY REPAIRMAN(motor vehicle) DPT:461
body-and-fender man.
GED: 3 SVP: 7 EC: I 5 6 7 PA: M 3 4 7

Repairs damaged body parts and interior finishings of automotive vehicles: Examines damaged vehicles and estimates cost of repairs. Removes upholstery and accessories to gain access to damaged areas. Places metal block against surface of dented area and pounds opposite surface with hammer to remove dents. Fills depressions with solder or plastic filler. Removes excessively damaged fenders, panels, and grills, using wrenches and cutting torch, and attaches replacements by bolting or welding them in position. Straightens bent frames, using hydraulic jack and pulling device. Files, grinds, and sands repaired surfaces, using power and hand tools. Paints repaired surface with primer coat, and sands surface smooth with abrasives. Inspects, cleans, and repairs interior furnishings, such as floor coverings, seats, and upholstery. Replaces windshields and window glass. May adjust headlights, align wheels and bleed hydraulic brake systems. May spray paint surfaces after performing body repairs.

8581-146 AUTOMOTIVE-AIR-CONDITIONING MECHANIC(motor vehicle) DPT:281
GED: 3 SVP: 6 EC: I PA: M 3 4 7

Installs and repairs automotive-air-conditioning units: Bolts compressor to engine block, and installs drive pulley on front end of crankshaft. Places fan belt on pulleys, adjusts tension, and tightens bolts. Bolts evaporator unit under dashboard, in trunk or in rear-engine compartment. Passes hoses through panel holes, and connects hoses to compressor, evaporator, and cool-air outlet. Removes foreign matter and moisture from system, and tests for leaks, using high-vacuum pump. Fills compressor with refrigerant and starts unit. Measures compressor pressure to determine efficiency, using gauge. Listens to unit operating to detect malfunctions. Removes faulty units from vehicles, disassembles them, and replaces worn or broken parts. Installs and connects electrical wiring to unit, power source and controls.

8581-150 CARBURETOR REPAIRMAN(motor vehicle) DPT:281
GED: 3 SVP: 6 EC: I PA: L 4 7

Repairs carburetors and gasoline-filter units: Tests engine performance to determine cause of faulty fuel system. Disassembles carburetor as necessary and examines parts for defects. Tests valves with wire gauges and flowmeter. Cleans parts in solvents, and uses air hose, to remove dirt and gum deposits. Repairs or replaces defective parts. Reassembles carburetor and gasoline filter, and installs them in vehicle. Starts engine and turns adjustment screws to regulate flow of air and gasoline through carburetor, using screwdriver. May operate drill press, lathe, and other power tools to retap jets, ream throttle bodies and chokes, and machine-seating surfaces of carburetor housings.

8581-154 FRONT-END MAN(motor vehicle) DPT:281
alignment man; wheel aligner.
GED: 3 SVP: 6 EC: 1 PA: M 3 4 7

Aligns wheels, axles, torsion bars and steering mechanisms of automotive vehicles:

Drives vehicle onto wheel-alignment rack, and tests steering geometry of vehicle for faulty camber, caster and toe-in of front-end to determine bent axle, worn ball joints and bent steering rods, using alignment-testing machine. Straightens axle and steering rods and adjusts shims, tie rods, and joining-pins to align wheels, or installs new ball joints, pins and bushings, using hand tools. Balances wheels by placing wheel on balancing machine to determine where counter-weights must be added. Hammers counterweights onto rim of wheel.

8581-158 MOTORCYCLE REPAIRMAN(motor vehicle) DPT:281
GED: 3 SVP: 6 EC: 1 5 PA: M 3 4 7

Repairs and overhauls motorcycles and similar vehicles, using hand and power tools, cutting and welding equipment, and manufacturers' manuals:

Examines cycle for damage with customer to determine nature and extent of malfunction and damage. Listens to engine for defective operation. Measures generator output, ignition timing, and other vehicle-performance indicators, using test equipment, and repairs or replaces parts as necessary. Dismantles engine to gain access to defective parts, and removes, repairs and replaces parts, such as cylinder heads, pistons, valves and rings. Cleans, adjusts and repairs carburetors. Repairs or replaces other vehicle parts, such as headlights, horn, gasoline and oil tanks, starter and muffler. Repairs and adjusts clutch, brakes and drive chain. Hammers out dents, straightens frame, and welds broken parts. Repairs, balances, and aligns wheels. May road test repaired motorcycles.

8581-162 NEW-CAR SERVICEMAN(motor vehicle) DPT:381
new-car-get-ready man.
GED: 3 SVP: 6 EC: B PA: M 3 4 7

Services new automobiles on delivery to dealer, and makes minor repairs or adjustments to place vehicle in saleable condition:

Inspects vehicle for obvious damage and missing major components, and records discrepancies on acceptance slip. Inspects vehicle for loose or misaligned trim, doors, hardware, and other items, and corrects defects, using hand tools. Starts engine and activates power equipment, such as electric windows, radio, lights, cigarette lighter and other electrical components to detect faulty units or systems. Observes minor chips or scratches in paint and touches up imperfections, using brush or spray applicator and matching paint. Installs optional equipment specified by customer or dealer, such as remote control mirrors, rugs and snow tires. Installs standard components, such as hub caps and wiper blades. Adds antifreeze solution and tops up fuel, oil and water levels. Polishes car to remove preservative coating and road film accumulated during transit. Completes registration application and affixes temporary certificate to windshield of vehicle.

May tune engine, using mechanic's tools and test equipment, and road test vehicle. May install or repair major mechanical, hydraulic, or electro-mechanical equipment, such as radios, power steering units and power brakes.

8581-166 AUTOMOTIVE-BRAKE REPAIRMAN(motor vehicle) DPT:384
brake repairman.
GED: 3 SVP: 6 EC: 1 PA: M 3 4

Repairs and overhauls brake systems in automotive vehicles:

Raises axle of automotive vehicle, using hydraulic jack or hoist. Removes wheels, using pneumatic wrench, and brake drums, using wheel puller and sledge hammer. Examines brake shoe units for wear and damage, and repairs or renews as required. Measures brake drum for excessive wear, using gauge. Inserts vacuum gauge into power-brake cylinders to ensure vacuum pressure is at specified level. Repairs or replaces leaky brake cylinders. Repairs or replaces defective air compressor in air-brake systems. Replaces wheel on axle and adjusts drum-shoe clearance, using wrench. Fills master-brake cylinder with brake fluid, pumps brake pedal, or uses pressure tank, and opens valves on hydraulic-brake system to bleed air from brake lines. Closes valves, and refills master-brake cylinder.

May attach new linings to brake shoes by bonding or riveting.

8581-170 AUTOMOTIVE-RADIATOR REPAIRMAN(motor vehicle) DPT:684
radiatorman.
GED: 3 SVP: 6 EC: 1 PA: M 3 4 7

Repairs radiators in automotive vehicles:

Tests radiator for obstructions or leaks by pumping water or compressed air through it. Flushes radiator with cleaning solvents to remove obstructions, such as rust or mineral deposits. Removes radiator core from vehicle and cleans it by inserting a rod, boiling in water or immersing in solvent. Solders leaks in core or tanks, using soldering iron or acetylene torch. Installs new cores and water hoses, using hand tools.

May dismantle, repair or replace defective water pump. May replace faulty thermostats and leaky head gaskets. May clean, test and repair gasoline tanks.

8581-174 SNOWMOBILE REPAIRMAN(motor vehicle) DPT:684
GED: 3 SVP: 5 EC: 1 5 PA: M 3 4 7

Repairs snowmobiles, performing any combination of the following duties:

Dismantles snowmobile and examines parts for serviceability and alignment, visually or using gauges. Replaces defective parts, using hand and power tools. Changes transmission and engine oil. Adjusts drive chain, clutch, and choke and throttle cables, according to specifications. Aligns track and pulleys. Retorques cylinder head and base. Cleans and regaps spark plugs, using sand-blasting machine and feeler gauge. Cleans gas line and filter, using air hose and solvent. Checks electrical system for proper functioning. Cleans battery terminals, and tests specific gravity of battery electrolyte, using hydrometer. Adjusts clearance between distributor points, and adjusts timing according to specifications, using automotive- test equipment. Test-drives snowmobile to ensure satisfactory performance. Performs minor body repairs, such as removing of dents and scratches, and painting repaired areas.

8581-178 USED-CAR RENOVATOR(motor vehicle) DPT:684
GED: 3 SVP: 5 EC: B PA: H 3 4 7

Renovates used cars for resale at used car lots:

Visually inspects cars for defects, such as dents, scratches, torn upholstery, worn tires, oil and water leaks, and poor mechanical operation. Smooths out dents, using hammer, block, and file. Fills small holes and scratches with plastic metal, and sands and polishes with emery cloth. Touches-up paint imperfections, using spray gun, brush and matching paint. Mends rips and tears in upholstery, using thread, needle and glue. Cleans and vacuums interiors. Washes and polishes exteriors, using water, soap and chamois. Replaces missing or defective small parts, such as door and window weather stripping, nuts, bolts, wiper blades and lights, using hand tools. Performs minor repairs and adjustments, such as adjusting doors for proper fit, and replacing spark plugs. Road tests cars to verify correction of mechanical defects, rattles and squeaks.

8581-182 AUTOMOBILE WRECKER(motor vehicle) DPT:684
wrecker; wrecking mechanic.
GED: 3 SVP: 4 EC: B 6 PA: VH 3 4

Salvages usable parts from wrecked cars and trucks in automobile salvage yard:

Removes accessories, such as mirrors, radio, aerial and battery, using hand tools. Dismantles vehicles, using mechanic's hand tools, bolt cutters and oxy-acetylene-cutting torch. Cleans parts, using solvents and brush, or degreasing machine. Stores parts in bins according to vehicle make, model, body style, part number and condition. Sorts, piles, and loads scrap on railroad cars or trucks.

May drive tow-truck to haul damaged vehicles to salvage yard. May sell salvaged automobile glass, tires, and parts.

8581-184 GLASS INSTALLER(motor vehicle) DPT:684
glassman.
GED: 3 SVP: 4 EC: 1 6 PA: M 4

Replaces safety glass, windows and windshields in motor vehicles:

Unscrews frame and removes damaged glass, using hand tools. Selects appropriate paper pattern from stock or traces new one, using frame

as template. Places glass stock over pattern on flat surface and scores glass around pattern outline, using straightedge, curves and glasscutters. Inverts glass and pattern and repeats cutting procedure on other side of glass, taps coremarks to deepen cut. Cuts plastic laminate in glass, using razor blade, and removes shaped glass. Smooths edges of glass against belt-sander. Applies weather-stripping along edges of glass and fits it into window frame, or paints edge of windshield glass with adhesive compound and inserts glass into rubber channeling of windshield frame. Installs pre cut curved or tempered glass windows and windshields. Repairs or renews damaged frames or window-winding mechanisms.
May repair or renew faulty door handles.

8581-186 MUFFLER INSTALLER(motor vehicle) DPT:684
GED: 2 SVP: 4 EC: I 6 PA: M 3 4

Replaces defective exhaust systems on automotive vehicles:
Removes defective manifold, exhaust pipe, muffler or tail pipe, using cutting torch and hand tools. Selects replacement part according to vehicle make, model and year, using automotive-parts catalogue. Clamps or tack-welds new part in place. Aligns muffler and tail pipe and bolts hangers to frame to secure them.
May replace defective shock absorbers, using cutting torch and hand tools.

8581-190 SQUEAK, RATTLE AND LEAK MAN(motor vehicle) DPT:684
GED: 2 SVP: 4 EC: I PA: M 3 4 6 7

Determines location of squeaks, rattles and leaks by test driving vehicle, or adjusts components to eliminate cause of defect:
Drives vehicle, or accompanies customer on test drive, to listen for rattles, squeaks, or other noises reported by customer, indicating malfunctioning or loose components. Diagnoses cause and determines location of defect. Makes minor repairs to vehicle, such as tightening muffler and exhaust-pipe brackets, loose bolts and door handles. Sprays area suspected of water leak, as identified by customer, using water hose. Repairs leaks, using adhesive compound, or replaces faulty rubber moulding on doors and windows, using hand tools. Reports need for more extensive repairs by automobile mechanic.

8581-194 AUTOMOBILE-ACCESSORIES INSTALLER(motor vehicle) DPT:684
GED: 2 SVP: 3 EC: I PA: M 3 4 7

Installs automobile accessories, such as car heater, block heater, radio and antenna, clock, rear-seat speaker, seat covers and mirrors at automotive service center:
Drills and taps holes, assembles and fits accessories to automobile, and tightens bolts and clamps, using hand and power tools. Positions custom made seat covers over seats, and fastens them by closing zippers, joining snap fasteners or securing them to cushion frame or springs, using hand tools.
May replace automobile parts, such as shock absorbers, tail lights, tires and muffler systems, using hand tools and welding equipment.

8581-198 MOTOR-VEHICLE-MECHANIC HELPER(motor vehicle) DPT:684
GED: 2 SVP: 3 EC: I 4 6 PA: H 3 4

Helps motor-vehicle mechanic to repair automotive vehicles by performing the following duties:
Raises vehicle to required height, using hydraulic jack or hoist. Removes and dismantles automotive units, such as engines, transmissions or differentials to be repaired, using hand and power tools. Cleans units, using prescribed solvent, steam hose or sand-blasting machine. See also definition for term title, 02-160 HELPER (any ind.).
May lubricate and wash vehicles.

8581-202 SPRING SERVICEMAN(motor vehicle) DPT:684
GED: 2 SVP: 2 EC: I 5 PA: H 4

Removes and installs leaf springs of vehicles, such as automobiles, buses, and trucks:
Raises vehicle, using hydraulic jack or hoist. Places mounting stands under vehicle to relieve pressure from springs. Removes V-bolts, shackle pins and shackles to gain access to springs, using impact

wrench and hand tools. Removes leaf springs and carries them to repair shop. Installs repaired springs, brackets and bushings.
May repair springs by replacing cracked or pitted-spring leaves with sound leaves of same length and thickness.

8581-206 BODY-REPAIRMAN HELPER(motor vehicle) DPT:687

body-and-fender-man helper.

GED: 2 SVP: 2 EC: I 5 6 7 PA: M 3 4

Helps repair damaged body parts and interior finishings of vehicles:
Removes upholstery and accessories to gain access to damaged areas. Assists in the removal and installation of body parts, such as fenders, panels, grills, radiators, bumpers, and windows, using hand tools, cutting torch, and hoists. Files, grinds, sands and cleans repaired surfaces, using power tools, such as grinders and buffers, and cleaning materials, such as rags, water and solvents. See also definition for term title, 02-160 HELPER (any ind.).

8581-210 STEAM CLEANER(motor vehicle) DPT:687
GED: 2 SVP: 2 EC: I 3 4 6 PA: M 4

Cleans engines, bodies, and parts of automotive vehicles, using steam hose and detergent solution:
Starts electric or oil-fired boiler to generate steam. Opens valves on steam, water, and detergent lines. Sprays steam and detergent solution over vehicle body, engine, or parts, such as radiator cores and gas tanks, to remove dirt and grease. Raises vehicle or heavy parts above ground to facilitate cleaning of underside, using pneumatic or hydraulic hoist. Scrapes off dirt and grease, using wire brush or scraper. Cleans and dries treated surfaces, using vacuum cleaner or compressed-air blower.
May lower engine or chassis parts into tank of detergent solution, by hand or using hoist, to clean inaccessible surfaces.

8582-AIRCRAFT MECHANICS AND REPAIRMEN

This unit group includes occupations concerned with repairing aircraft airframes, engines, accessories and related equipment. Activities include: servicing, disassembling, replacing, fitting and adjusting parts and equipment, using common and special hand and power tools, machines and equipment.

8582-110 AIRCRAFT MECHANIC(air & space-craft) DPT:261
aircraft-and-engine mechanic.
GED: 4 SVP: 7 EC: B 5 6 PA: M 2 3 4 7

Services, repairs, and overhauls aircraft and aircraft engines to ensure airworthiness, performing any combinations of the following duties:
Repairs, replaces and assembles parts, such as wings, tail assembly, landing gear, propeller assembly, and fuel and oil tanks, using hand and power tools, and welding equipment to rebuild or replace the airframe or its components. Consults manufacturers' and companies' maintenance manuals to determine feasibility of repair or replacement of parts according to malfunction. Examines engines for cracked cylinders and oil leaks, and listens to detect sounds of malfunctioning, such as sticking or burnt valves. Tests engine operation, using testing equipment to locate source of malfunction. Replaces worn or damaged components, such as carburetors, magnetos and superchargers, using hand tools. Disconnects supply lines, and removes engine from aircraft, using hoist or forklift truck. Disassembles and inspects parts for wear, warping or other defects, using hand tools and measuring instruments. Repairs or replaces defective engine parts. Reassembles, adjusts and tests engine operation for conformance with specifications. Installs engine in aircraft, and connects supply lines. Inspects, services and repairs pneumatic and hydraulic systems. Services aircraft by performing duties, such as flushing crankcase, cleaning screens, greasing moving parts, and checking brakes.
May adjust and repair electrical wiring system and aircraft accessories and instruments. May repair particular types of engines or aircraft and be designated accordingly; for example,
Helicopter Mechanic
Piston-Engine Mechanic
Turbine-Engine Mechanic

8582-114 AIRCRAFT-ACCESSORIES MECHANIC(air & space-craft) DPT:281
GED: 4 SVP: 6 EC: I PA: M 4 7

Repairs, assembles and tests aircraft accessories, such as power- brake units, superchargers, auxiliary electric motors, fuel-injection systems and hydraulic and vacuum pumps:
Disassembles unit, using hand or power wrenches and screwdrivers. Cleans and finishes parts by hand, using cleaning solutions, and polishing and lapping compounds. Measures parts to determine wear, using micrometers and dial indicators. Replaces defective parts and reassembles units. Connects accessories to appropriate test panels and test equipment, and tests units for conformance to specifications under simulated operating conditions. Enters test data on log sheets, and affixes tag to acceptable units.

8582-118 DOPE-AND-FABRIC MAN(air & space-craft) DPT:381
airplane coverer.
GED: 3 SVP: 6 EC: I 6 7 PA: M 3 4 7

Installs and repairs fabric-aircraft-surface coverings:
Covers edges, rough surfaces or projections of structural framing with adhesive tape to prevent chafing of lacing-cords and fabric cover. Plans and lays out dimensions of surface to be covered on fabric, so that weave of fabric and placement of seams conform to specifications. Cuts fabric to size, using hand or electric shears. Stitches seams, using upholster's needles or sewing machine to form envelope or blanket that fits structure to be covered, applying knowledge of approved seam types and stitching specifications. Reinforces seams, envelope, or blanket with fabric tape. Stretches fabric over frame and fastens it to structure, using dope-cement, needle and lacing-cord, or metal strips and screws. Shrinks and smoothes fabric covering, using steam hose. Applies diluted dope to prime and tighten fabric, using hand brush or spray. Reinforces and smoothes seams by applying surface-tape and dope after first coat of dope has dried. Brushes or sprays on clear and silver dope to strengthen and preserve fabric. Applies pigmented dope with brush, roller, or spray to colour and finish surface.

8582-122 AIRCRAFT-MECHANIC HELPER(air & space-craft) DPT:684
aircraft-and-engine-mechanic helper.
GED: 3 SVP: 5 EC: B 5 6 PA: M 2 3 4 7

Helps mechanic to service and repair aircraft and aircraft engines, performing any combination of the following duties:
Adjusts and replaces parts, such as control cables, fuel tanks, spark plugs and tires, using mechanic's hand tools. Disconnects instruments, ignition system, and oil lines to facilitate repair. Helps in dismantling, assembling and cleaning engines and aircraft parts, using mechanic's hand tools and solvents. Inflates tires according to specifications. Fills oil reservoirs, and greases aircraft, using lubricating equipment. See also definition for term title, 02-160 HELPER (any ind.).

8582-126 AIRCRAFT DE-ICER REPAIRMAN(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I 7 PA: L 4 7

Repairs pneumatic de-icers used in aircraft:
Inflates de-icers to specified amount of air pressure, using hose, and observes air pressure gauge and rubberized-fabric tubes for leaks. Cuts out defective spots, such as cracks and blisters, from rubber plies of air tubes, manifold and de-icer, using knife. Bufts defective area to prepare it for patching, using portable electric or air buffer. Swabs defective area with rubber cement to provide adhesive surface. Positions uncured rubber patch on defective area and rolls it with hand roller to improve adherence. Trims excess rubber from patch, using knife. Cures and vulcanizes patch, using portable vulcanizing equipment. Rechecks de-icers for leaks.

8583-RAIL TRANSPORT EQUIPMENT MECHANICS AND REPAIRMEN

This unit group includes occupations concerned with

repairing and servicing railway rolling stock, motive-power units, and related equipment. Activities include: testing, examining, and replacing parts and assemblies, and adjusting to specifications, using special hand and power tools, machines and equipment.

8583-110 CARMAN(rail. rolling stock) DPT:361
car repairman.
GED: 4 SVP: 7 EC: B 5 7 PA: H 3 4 5 6 7

Repairs and rebuilds mechanical and structural components of railway passenger and freight cars:
Examines car, car components and equipment; such as, cabinets, panels, floors, wheels, brake assemblies, reservoirs, valves and coupler assemblies, and side, end and roof sections to determine defects and extent of wear and damage. Replaces metal or wooden sections, using cutting or welding torch, plumber's tools, hand and power tools. Positions width gauge between car sides, aligns sides, and installs car ends and cross ties, using pneumatic or hydraulic hoist, turnbuckles, jacks, and hand and power tools. Removes, disassembles, repairs, reassembles, and installs car parts and related units, such as air valves, air cylinders and piping, using hand and power tools. Tests and adjusts reassembled parts and equipment, using gauges and test equipment, to verify correct installation and operation. Fabricates or repairs and installs wooden fixtures, using hand and power tools. Performs a variety of other repair and maintenance duties, such as refinishing painted or varnished surfaces, repairing upholstery, and replacing glass, using appropriate power and hand tools. Directs helper in performing various duties concerned with repair of railway freight and passenger cars.

8583-114 STREETCAR AND SUBWAY-CAR MECHANIC(rail. rolling stock) DPT:381
GED: 4 SVP: 7 EC: I PA: M 3 4 7

Repairs, adjusts or replaces electrical, mechanical or pneumatic equipment on streetcars and subway cars:
Tests and adjusts traction, control, and pneumatic equipment; such as, switches, pneumatic-door valves, wind-shield wipers, accelerator gear units, and brake cylinders. Repairs or replaces defective units; such as, traction motors, springs, brakes, wheels and bearings, trolley assemblies, third-rail-collector shoes; drive shafts, compressors and related components according to manufacturers' specifications. Replaces worn carbon brushes or brush holders on motors and generators. Disassembles and replaces defective parts in axle, wheel and gear assemblies, using wheel press, hoist, hand and power tools. Raises vehicle, using hydraulic jack or hoist to repair or inspect underside of vehicle. Operates wheel-grinding machine to grind wheels to correct flange and tread contours. Oils and lubricates units as required.
May perform duties of 8581-126 TROLLEY-COACH MECHANIC (motor vehicle). May answer trouble calls concerning defective vehicles and make necessary repairs to enable the return of the vehicle to repair shop and be designated accordingly,
Emergency Repairman, Transit Vehicle

8583-118 AIR-VALVE REPAIRMAN(rail. rolling stock) DPT:381
GED: 3 SVP: 5 EC: I PA: L 4 7

Repairs compressed-air valves, such as triple-air, cutoff, and retainer valves used in railway rolling stock:
Disassembles valves, using power wrench and hand tools. Cleans parts with cleaning solvent and air hose. Measures parts; such as, gaskets, valve seats, pistons, and slides, using gauges, for conformance to specifications. Scrapes, grinds, and polishes metal-contacting surfaces to make them airtight, using grinding and polishing tools. Replaces defective parts and reassembles valves. Tests reassembled valves for correct operation.

May replace defective valves in railway cars, using hand tools.

8583-122 CARMAN HELPER(rail. rolling stock) DPT:684
car-repairman helper.
GED: 3 SVP: 4 EC: B 5 6 PA: H 3 4 5 6

Helps other worker to repair and rebuild mechanical and structural components of railway cars, such as freight, tank and mine cars by performing any combination of the following duties:
Helps in disassembling parts and moving heavy metal components.

Threads nuts and bolts, and drills holes in metal stock, using taps, dies, and drill press. Cuts metal sheet and bar stock to specified dimensions, using shears and hacksaw. Straightens metal parts, using hammer and sledge. Bolts steel top frames to side frames of car, using power wrench. Caulks seams of car and checks for leaks. Repairs or replaces steam and air hoses. See also definition for term title, 02-160 HELPER (any ind.).

8584-INDUSTRIAL, FARM AND CONSTRUCTION MACHINERY MECHANICS AND REPAIRMEN

This unit group includes occupations concerned with repairing and servicing a wide variety of industrial machinery, such as that used in printing, textile manufacturing, mining and in other production processes; material-handling and conveying equipment; farm machinery, such as combines, ploughs, mowers and milking machines; construction equipment, such as bulldozers, graders and cranes; and gasoline and diesel engines associated with industrial, farm and construction machinery. Activities include: diagnosing, disassembling, replacing parts and assemblies, reconditioning, aligning, fitting, reassembling and adjusting to specifications, using common and special hand and power tools and equipment.

Industrial Machinery 8584-110 through 8584-306

8584-110 PRINTING-MACHINERY MECHANIC(mech. equip., n.e.c.) DPT:261
GED: 4 SVP: 8 EC: I 5 PA: H 3 4 7

Repairs and services printing machinery, such as linotype machines, line-and-character-type casting machines, offset or letter-type presses, proof presses, teletypesetter-keyboard converters and reproduction units, according to manufacturers' service manuals: Inspects and operates machines to detect potential malfunctions, listening for evidence of excessive wear and improper adjustment. Discusses nature of malfunction with operator. Dismantles machines and components, using hand tools. Repairs, straightens, files, or machines worn or defective parts, using hand and power tools, and machine-tools, such as lathe, drill press and grinder. Verifies dimensions of new or repaired parts, using micrometer and fixed gauges. Replaces repaired parts or installs new parts to restore machine to efficient operating condition. Cleans parts, and lubricates grease fittings and moving parts of machines according to prescribed schedule.

8584-114 LOOM FIXER(textile) DPT:280
fixer; loom repairman.
GED: 4 SVP: 7 EC: I 5 7 PA: M 3 4 7

Sets up, adjusts and repairs looms that weave cloth of specified quality and design, using diagrams, manuals, and knowledge of loom function and weaving: Examines loom or woven cloth to determine adjustments or repairs needed. Repairs or replaces parts, such as harness straps and shuttles, and adjusts tension and timing of parts, using hand tools. Levels and aligns parts, such as shuttle boxes, race plates, and reeds, to prevent excessive wear, using straightedge, level and square. Lubricates and cleans loom, using oil, grease, and compressed air. May change setup of loom to weave different pattern or different type yarn. May set up and repair looms equipped with pile-wire mechanism to weave piled carpeting. May be designated according to type of loom serviced or component repaired; for example, Carpet-Loom Fixer Jacquard-Loom Fixer Shuttle Fixer

8584-118 MACHINE FIXER, TEXTILE(textile) DPT:280
GED: 4 SVP: 7 EC: I 5 6 7 PA: M 3 4 6

Adjusts, sets up and repairs yarn-manufacturing and processing machines:

Changes and adjusts gears, pulleys, rollers, cylinders and guides, according to type of sliver of yarn processed, type of wind, draft, or number of twists per inch, using hand tools and knowledge of machine operation. Verifies adjustments, using gauges and instruments, such as tensiometer, tachometer and densimeter. Patrols work area to detect operating defects. Inspects machine, and adjusts to correct malfunctions. Sharpens straight and spiral blades of cloth-shearing machines, using grinding machine. Carries out preventive maintenance program and replaces worn and broken parts; such as, spindles, rollers, carriages and bobbins, guides, gears, cylinders, tapes and belts, using hand tools.

May erect new machines and be designated according to machines maintained; for example,

Card Fixer
Quiller-Machine Fixer

8584-122 MILLWRIGHT(mech. equip., n.e.c.) DPT:261
GED: 4 SVP: 7 EC: I 5 6 PA: H 2 3 4 5 6 7

Installs machinery and supporting structures in an industrial or other establishment according to manufacturer's specifications, layout plans and drawings:

Reads diagrams and schematic drawings to determine work procedures. Dismantles machines, using hammers, wrenches, crowbars, and other hand tools. Moves machinery and equipment, using hoists, dollies, rollers, and trucks. Assembles and installs equipment, such as pulleys, shafts and belts on machines, conveyors, rollers and presses, using hand and power tools. Constructs foundations for machines, using hand tools and building materials, such as wood, cement, and steel. Aligns machines and equipment, using hoists, jacks, hand tools, squares, rules, micrometers, level and plumb line. Assembles machines, and directs welders or mechanics to fasten them together or to foundation or other structures. Directs erection of scaffolds and performs simple rigging to erect or dismantle machines. Tests reassembled equipment and makes necessary adjustments. Repairs or replaces defective parts.

May operate metalworking machines, such as lathes and grinders, to grind, file and turn machine parts to dimensional specifications. May repair machines and equipment, such as conveyors, grinders, crushers and cookers and be designated accordingly, Plant-Maintenance Man

**8584-126 ORE-PROCESSING-EQUIPMENT
REPAIRMAN**(mech. equip., n.e.c.) DPT:261
GED: 4 SVP: 7 EC: B 5 6 PA: M 2 3 4 7

Repairs machinery and equipment used in transporting and processing ore:

Repairs machinery and equipment, such as ball mills, crushers, classifiers, flotation machines, conveyor-belt systems, thickener tanks and vibrating screens used in transporting and processing ore. Dismantles machinery, or directs dismantling operations, and replaces and fits parts in accordance with manufacturer's manuals and drawings, using hand and power tools, drill presses, lathes and other machine- tools. Adjusts mechanical clearances and drive belt tensions, using wrenches and gauges.

8584-130 POWERHOUSE REPAIRMAN(mech. equip., n.e.c.) DPT:261
GED: 4 SVP: 7 EC: I 5 6 PA: H 2 3 4 6 7

Installs, adjusts and repairs mechanical equipment and parts of machinery in electric-generating stations, such as generators, water-wheels, valves and piping:

Installs machinery and equipment, according to lay-out plans and drawings, using hoists, lift trucks, hand and power tools. Examines and listens to equipment in operation to diagnose malfunctions. Dismantles machinery and such auxiliary equipment as compressors and pipe systems, using instruction manual. Repairs or replaces defective parts and reassembles machinery and auxiliaries. Conducts performance tests on new or repaired equipment, following specifications.

May fabricate special tools and replacement parts for equipment. May specialize in repairing mechanical equipment in a particular type of

electric-generating station and be designated accordingly; for example,
Gas-Turbine-Machinery Repairman
Nuclear-Power-Station-Machinery Mechanic
Steam-Turbine-Machinery Repairman

8584-134 METALWORKING-MACHINERY MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: 1 5 6 PA: M 4 6 7

Repairs and maintains metalworking machines, such as lathes, milling machines and grinders:
Observes and listens to machines in operation, and examines finished products to locate causes of malfunction. Dismantles machines and equipment to gain access to defective parts, using hand and power tools. Examines and measures parts for defects and excessive wear, using precision-measuring instruments. Installs and adjusts replacement parts. Measures, cuts, threads, and replaces air and water lines. Assembles machines and equipment, and starts them to test their operation. Cleans and lubricates machines and related equipment, using solvent, rags and grease gun.
May repair broken parts, using welding, brazing and soldering equipment. May fabricate and fit safety equipment to machines. May set up and operate metalworking tools to make and repair parts.

8584-138 CHEMICAL-PROCESS-EQUIPMENT MECHANIC(mech. equip., n.e.c.) DPT:261
GED: 3 SVP: 7 EC: 1 5 6 7 PA: H 2 3 4 5 7

Repairs, adjusts and installs process equipment in chemical plant according to knowledge of equipment operation and plant specifications:
Observes equipment, such as pumps, compressors, generators, reactors, heat exchangers, filters, and stripping towers in operation, or confers with operators to detect and diagnose mechanical malfunctions. Disassembles equipment, using hand tools, portable power tools and rigging equipment, such as hoists and slings. Examines parts for defects, such as breakage or excessive wear. Verifies dimensions of parts, using calipers and micrometers. Replaces defective parts, and reassembles equipment. Adjusts clearance and timing of control devices to specifications, using hand tools. Installs new equipment or modifies existing installations, following drawings and directions from supervisor. Directs helper in performing tasks, such as dismantling and assembling equipment.
May operate welding equipment, lathe, drill press, and other metalworking machines, to repair or fabricate parts.

8584-142 BAKERY-MACHINERY MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 PA: M 3 4 7

Repairs and maintains bakery machinery and equipment, such as ovens, dough-mixers, conveyors, and icing and wrapping machines:
Observes and listens to equipment in operation to diagnose malfunctions. Dismantles bakery machinery and equipment, to remove damaged or worn parts, using hand tools. Repairs or replaces defective parts, such as belts, shafts, cutting blades and other machine parts, using hand and power tools, welding equipment and sewing machine. Assembles and tests equipment and makes necessary adjustments. Changes and sets dies on machines, according to form of product required.
May sharpen cutting blades.

8584-146 BOILERHOUSE REPAIRMAN(mech. equip., n.e.c.) DPT:281
steam-plant maintenance man.
GED: 4 SVP: 6 EC: 1 3 5 6 PA: M 3 4 7

Maintains and repairs stationary-steam boilers and auxiliary equipment:
Examines boilers and auxiliary equipment to detect or diagnose malfunctions. Repairs boiler fittings, such as safety valves, regulators and automatic-control mechanisms, and auxiliary equipment, such as pumps, draft fans, stokers, and burners, following manufacturer's specifications, and using hand and power tools. Replaces or repairs damaged boiler tubes, plates and high-pressure piping, using pipe-fitting tools and welding equipment. Patches boiler insulation with

asbestos cement. Oversees cleaning of boilers and furnaces, preparatory to inspection, by ensuring that boiler tubes and interior are free of soot, scale, dust and ashes.
May re-align crank shafts, and seat valves on pumps and engines. May machine new or worn parts, using metalworking machines and tools.

8584-150 FORGE-SHOP-MACHINERY REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 3 5 7 PA: H 3 4 7

Repairs and maintains forge-shop machinery, such as hammers, presses and furnaces:
Observes machine in operation to determine malfunction. Disassembles machine, using hand tools, and examines parts for defects. Obtains replacement parts from stock, or prepares sketches of parts for fabrication in forge shop or machine shop. Replaces drophammer boards, and adjusts steam, pneumatic, hydraulic, fuel and blower controls of presses, hammers and furnaces, following manufacturers' manuals and drawings, and using hand tools. Measures and fits parts together to reassemble machine, using measuring instruments, hand and power tools. Examines and repairs auxiliary equipment, such as pumps, valves, and compressors. Starts machine, and observes operation to verify its performance.
May weld broken or cracked parts.

8584-154 GUM-WRAPPING-MACHINE MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 5 PA: M 3 4 7

Repairs and adjusts automatic-gum-wrapping and packaging machines:
Dismantles machine and inspects, cleans, and oils parts, using hand tools. Repairs or replaces worn parts. Operates metal-working machines, such as lathes, milling machines, pedestal and bench drills, grinder and shaper to make replacement parts, in accordance with specifications, and checks dimensions, using measuring instruments. Sets up and adjusts gum-wrapping and packaging machines, using hand tools. Operates and adjusts machine to ensure correct operation.

8584-158 TANNERY-MACHINERY REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 4 5 6 7 PA: H 3 4 7

Repairs and adjusts tannery equipment, and machines that flesh, split, shave and soften hides:
Disassembles malfunctioning equipment, using hand tools, to ascertain nature and location of defects. Repairs damaged parts, using welding and other equipment. Repairs or replaces machine drive-belts and conveyor belts. Installs blades in fleshing, shaving and dehairing machines. Reassembles and adjusts machinery, to manufacturers' specifications, using precision-measuring instruments, such as micrometers, verniers and gauges.
May install new tannery machinery.

8584-162 PACKAGING-MACHINE MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 5 PA: M 3 4 7

Repairs, adjusts and maintains machines and equipment that package products, such as food and drugs:
Installs filling, capping, wrapping and sealing mechanisms on machine, and adjusts machine for operation. Connects power source and product-feed hoses to machine. Turns set screws to adjust guides, jigs, and speed of conveyors and transfer mechanisms, to accommodate dimensions of package and specified production volume. Starts machine and diagnoses and locates causes of malfunctions by observing machine in operation. Dismantles machine and repairs or replaces worn or defective parts, using hand tools. Cleans and lubricates machines to ensure efficient operation.
May collect samples of packaged products, and forward to quality-control department for inspection. May attach safety guards to machines.

8584-166 QUILTING-MACHINE FIXER(mech. equip., n.e.c.)
DPT:281
quilter mechanic.
GED: 4 SVP: 6 EC: I PA: M 3 4 6 7

Repairs and adjusts quilting machines, according to charts and knowledge of machine construction and operation:
Consults charts to determine adjustments necessary to effect change in quilting design. Selects cams that will alter movement of machine bed and needle stroke to produce specified design, and installs cams on machine, using wrenches. Synchronizes looper or shuttle motion with needle stroke, using screwdriver. Examines machine for defects, locating defects by listening to machine in operation, and examining finished products. Dismantles machines and repairs or replaces broken or defective parts, such as motors, loopers and feed dogs, using hand and power tools. Cleans and oils machines.
May turn screws to regulate tension on thread, length of needle stroke, and rate of feed, according to type of fabric or thread.

8584-170 MAINTENANCE MECHANIC, COMPRESSED-GAS PLANT (mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: B PA: M 3 4 7

Repairs, tests and maintains equipment, such as converters and compressors that liquify and compress gases for industrial and therapeutic uses:
Dismantles, tests, and analyzes malfunctioning equipment, using drawings, manufacturers' manuals, hand and power tools, and test apparatus, to determine nature and location of defects. Repairs or replaces defective parts or pipes, using hand and power tools, pipefitter's tools, and welding equipment. Repacks compressors and pumps. Checks, adjusts and lubricates equipment to ensure proper operation. Records repair work performed and condition of equipment.
May test, repair and adjust electrical circuits and equipment, using schematic diagrams and power and hand tools. May install gas-compressing and liquefying equipment at customers' sites.

8584-174 MINING-MACHINERY MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: I 5 6 7 PA: VH 2 3 4 6 7

Repairs, maintains and installs mining machinery, such as stripping and loading shovels, drilling machines, conveyors and compressors:
Diagnoses mechanical defects in mining machinery, visually and aurally, by examining parts for signs of wear, and listening to machinery in operation. Repairs or replaces defective equipment or machine parts, or modifies existing equipment, working from manufacturers' manuals and drawings, and using hand tools, portable power tools and other work aids. Requisitions replacement parts or forwards defective parts to maintenance workshop for repair. Performs routine preventive maintenance, such as greasing, and checking lubricant and coolant levels. May perform oxy-acetylene torch cutting and minor arc welding to remove, install, or repair machinery.

8584-178 OIL-TOOL-MAINTENANCE MAN(mech. equip., n.e.c.; oil & nat. gas) DPT:281
tool-maintenance man.
GED: 4 SVP: 6 EC: B PA: M 4 7

Repairs and maintains oil-well tools and equipment used in performing special services, such as cementing, acidizing, or electrical logging:
Dismantles and repairs equipment at well site, using special tools, hand tools and pneumatic tools. Reconditions and maintains tools and equipment, working in shop, and using hand and power tools. Tests equipment to detect defects or to verify specified operation, using hydraulic gauges and electrical testing apparatus.
May specialize in maintenance of tools and equipment used for one type of operation; such as, cementing, acidizing, electrical logging, or gun-perforating.

8584-182 POWDER-LINE REPAIRMAN(explosives; mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: I 6 7 PA: M 3 4 7

Repairs and adjusts mixing and packing machines used in production of nitroglycerine and dynamite:
Washes machines and parts with sodium carbonate or other neutralizing compound, prior to and during dismantling, to minimize danger of explosion, using brush and rags. Determines cause of equipment malfunction, utilizing knowledge of machine operation and report of operator or maintenance workers. Dismantles, repairs, replaces and adjusts nipple plates, scales, pulleys, belts, crimpers, nitroglycerine nitrators, separators and other machine parts, using spark-proof-hand tools. Observes specified safety rules and regulations while working in explosive areas. Lubricates machines, using oil can and grease gun.

8584-186 TREATMENT-PLANT MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: I PA: M 3 4 7

Services and repairs machines and equipment used to process and distribute water for human consumption and industrial use:
Examines faulty machinery and equipment to determine nature and location of defects. Dismantles equipment, such as electric motors, turbines, pumps, hydraulic valves, chlorinators, lime slakers, meters, and gauges, to gain access to or remove faulty parts, using hand and power tools. Repairs or replaces defective parts, such as bearings, pump-shafts and impellers. Lubricates moving parts.
May operate, or supervise the operation, of plant equipment to process and distribute water.

8584-190 WELDING-EQUIPMENT REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 7 EC: I 5 6 7 PA: M 3 4 7

Repairs and maintains welding, brazing and flame-cutting machines, according to drawings and manufacturers' specifications, applying knowledge of electricity, machine repair and welding procedures:
Examines equipment and observes operation to detect cause of malfunction. Dismantles equipment and replaces or repairs damaged parts, such as hoses, torch tips, valves, regulators, transformers, cables, electrodes, bearings and gears, using hand tools and bench- power tools. Solders loose connections, and welds cracked or broken frames and housings, using welding equipment. Dresses nonconsumable electrodes, using grinding wheel. Reassembles, adjusts, operates and tests equipment to ensure specified performance, using electrical testing apparatus.
May repair specific type of welding equipment and be designated accordingly; for example,
Arc-Welding-Burning-Equipment Repairman
Gas-Welding-Equipment Repairman

8584-194 OVEN-EQUIPMENT REPAIRMAN(mech. equip., n.e.c.) DPT:261
GED: 3 SVP: 6 EC: B 3 6 7 PA: H 2 3 4 5 6 7

Repairs and maintains coke-oven machinery and auxiliary equipment:
Examines faulty equipment or listens to machinery in operation, such as pushers, coal chargers, door-removers and coke guides, to determine nature and location of defects. Dismantles, or directs other workers to dismantle equipment, and adjusts or replaces defective parts, using bars, air-hammers, and hand tools. Assembles equipment, and checks for correct operation. Notifies foreman of major repairs required, such as replacement of defective bearings or gears and shafts.
May perform simple rigging, pipefitting and metal cutting tasks.

8584-198 SEWING-MACHINE MECHANIC(mech. equip., n.e.c.) DPT:261
sewing-machine repairman.
GED: 3 SVP: 6 EC: I 5 6 PA: L 3 4 6 7

Repairs and adjusts domestic and commercial textile sewing machines:
Inspects machines and observes operation to locate cause of malfunction. Dismantles machine, using hand tools, and examines parts, such as automatic counter, cutting knives and needles for excessive wear or damage. Repairs, or replaces and adjusts worn or defective parts, using hand and power tools. Reassembles equipment with new or

repaired parts, using hand tools. Sets depth of blades on cutting knife to ensure smooth action. Regulates length of needle stroke and horizontal movement of feeding mechanism, using hand tools. Sets tolerance of needle looper, using screwdriver and tolerance gauge. Observes operation of reassembled machine for proper functioning. Maintains stock of replacement parts, and keeps performance records of machines. Instructs machine operators in operator's maintenance techniques.
May operate machine-tools, such as lathes and drill presses to make parts.

8584-202 AMMUNITION-ASSEMBLING-MACHINE

ADJUSTER (explosives; mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 5 6 7 PA: M 3 4 7

Adjusts, repairs and maintains various types of machines that assemble, charge, crimp, waterproof, measure, weigh and stamp-out parts for shotgun shells and cartridges:

Examines samples of ammunition and their component parts for defects, such as dents, scratches, incomplete crimping and blurred printing, and for conformance to specifications, using gauges. Dismantles machines to remove defective parts and to clear jams not removable by operator. Repairs or replaces defective bushings, punches, crimpers, hoppers, springs, pins, dies, tension belts and other components, using hand tools. Assembles parts and tests operation of machines. Adjusts machines by turning setscrews, stop-nuts, bolts and wing-nuts to synchronize and regulate feeding, ejection, gauging, weighing, coiling, and pressing mechanisms, until machines produce acceptable work, using hand tools and gauges. Cleans machines and lubricates moving parts.

May specialize in repairing, adjusting and maintaining a particular type of ammunition-assembling machine and be designated accordingly; for example,

Foiling-Machine Adjuster

Inspecting-Machine Adjuster

Loading-Unit Toolsetter

Primer-Charging Toolsetter

8584-206 CARTON-FORMING-MACHINE

REPAIRMAN (mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 5 PA: M 3 4 7

Repairs and adjusts carton-forming machines:

Observes machine in operation, and examines finished product to determine malfunctions. Adjusts glue rollers, code-stamping unit, guide rails, spring loader feed gauge, and carton-forming tips, using hand tools. Dismantles machine, following manufacturers' manuals or drawings, to remove, repair and replace defective parts, using hand tools. Sets up and operates bending brakes, drill presses, shapers and other metal-working machines to manufacture or repair machine parts. Requisitions spare parts from stockroom.

May oversee activities of carton-forming-machine operators and instruct them in operation and maintenance of machine.

8584-210 FIBREGLASS-FORMING-MACHINE

REPAIRMAN (mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 3 5 7 PA: L 3 4 7

Repairs and adjusts parts of fibreglass-forming machines, applying knowledge of machine operation:

Examines machine parts and product to determine type of defect. Removes, replaces, and repairs worn or damaged parts, such as conveyor and collector systems, graphite shoes, guides and bushings, binder applicators, and spray guns, using hand tools. Turns setscrews and nuts to align machine parts. Mounts graphite shoes on shaft and inserts shaft into chuck of turning lathe. Starts lathe and holds abrasive cloth against shoes to remove nicks, dirt, and burrs. Holds and turns spiral traverse against buffing wheel to smooth and clean traverse. Cleans glass and binder solution from binder applicators, wiper bars and idler rolls, using chemical solution or abrasives. Records production information, such as volume of fibreglass produced, and parts changed or repaired.

May direct crew in fibreglass production and set up and adjust machines as required.

8584-214 LAUNDRY-MACHINE MECHANIC (mech. equip., n.e.c.)

DPT:281

maintenance mechanic, laundry.

GED: 3 SVP: 6 EC: I 4 5 6 PA: H 3 4 7

Repairs and maintains commercial laundry equipment, such as washers, dryers, extractors, presses and pumps:

Examines faulty equipment to determine nature and location of malfunction. Dismantles equipment, and replaces defective parts, using hand tools. Assembles machines, and tests them for conformance with manufacturers' manuals. Replaces defective steam and water pipes, and air and gas lines, using pipefitter's tools. Greases and oils equipment periodically, using grease gun and oil can.

May fabricate replacement parts, using welding equipment and power tools. May install, repair and maintain electrical systems of laundry equipment.

8584-218 RECORD-PROCESS-EQUIPMENT

REPAIRMAN (mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 5 6 PA: M 3 4 6 7

Repairs and adjusts phonograph-record-processing equipment, such as injection-moulding machines, presses and electroplating tanks:

Determines mechanical defects in record-making equipment, by examining and measuring parts for signs of excessive wear, and listening to and observing equipment in operation. Dismantles, or partially dismantles equipment, and removes, replaces, adjusts, or repairs defective parts, and reassembles equipment, using hand and power tools and manufacturers' specifications.

8584-222 SEAMER-MACHINE REPAIRMAN (mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 5 PA: M 3 4 7

Repairs and maintains automatic can-closing or seaming machines:

Observes operation of machine during production runs to detect faulty machinery. Disassembles machine and replaces defective parts, using hand tools. Cleans and oils parts. Changes and adjusts fixtures to accommodate containers of various sizes. Tests machines for proper accommodation of container, and examines seams on cans for defects. Instructs machine operators as required.

8584-226 TOBACCO-MACHINE ADJUSTER (mech. equip., n.e.c.)

DPT:281

GED: 3 SVP: 6 EC: I 5 PA: M 3 4 6 7

Repairs and adjusts machines used in processing tobacco products, utilizing knowledge of machine function and mechanical repair:

Listens to and observes defective machine operation to determine cause of malfunction. Turns setscrews, nuts, or bolts to adjust parts, such as tension, timing and feeding devices, drive belts, cutoff knives and gears, using hand tools. Dismantles machine, following manufacturers' manuals, drawings, or diagrams, and repairs or replaces worn or damaged parts, such as springs, belts, and bushings. Notifies or confers with supervisor when major overhaul is indicated.

May give directions to workers in machine operation. May be designated according to type of machine adjusted; for example, Cigarette-Making-Machine Adjuster
Cigarette-Packing-Machine Adjuster
Slide and Shell Adjuster

8584-230 CARD GRINDER (mech. equip., n.e.c.)

DPT:681

carding-machine fixer; card setter.

GED: 3 SVP: 6 EC: I 5 6 7 PA: H 3 4 6 7

Repairs and sharpens metal teeth of textile-carding machines, using emery wheel:

Examines carding machines for damaged wire teeth, and removes and cleans teeth, using hand tools. Lifts grinding rollers onto brackets above flats and carding and doffing cylinders of machine. Places drive belt between carding-machine-drive mechanism and grinder rolls, and starts machine. Turns setscrew and listens to sound of grinder to regulate pressure of grinding roller on teeth of drum. Examines and feels teeth to verify that grinding meets specifications. Adjusts clearances between card rolls and flats to set up machine, using gauges, and listening for contact of surfaces.

May sharpen teeth without removing them, by attaching emery wheel

to carding machine. May operate machines to replace worn clothing on carding machine flats.

8584-234 SHEARING-MACHINE FIXER(textile) DPT:681
fixer, cutting machine.
GED: 3 SVP: 6 EC: I PA: M 4 7

Adjusts and repairs machines that cut pile on fabrics, such as velvet and corduroy, employing knowledge of machine operation and cutting process:

Turns thumbscrews to raise or lower straightedge, so that blades will cut through filling floats without damaging ground cloth, using thickness gauge as guide. Patrols work area and examines cloth and machines to detect operating defects. Replaces worn or broken parts, such as belts, cams, gears, pulleys, and cutting blades, using hand tools. Operates grinding machine to sharpen cutting blades. Lubricates and cleans machines.

8584-238 MACHINE-CLOTHING MAN(pulp & paper) DPT:384
feltman.
GED: 3 SVP: 6 EC: I 5 6 PA: M 2 3 4 7

Replaces felt, canvas and continuous-wire-mesh belts on papermaking machines:

Reviews clothing-service records of each machine to determine when belts should be replaced. Examines belts for defects, such as wear, holes and rotted areas. Schedules times for repair or replacement to minimize production delays. Lifts feed, tension, press and drier rolls from machine frame, using hoist, wrench and pinchbar. Removes lacing or rivets from worn canvas and felt belts, and unwinds belts from machine rolls. Pulls worn wire-mesh belt from machine over end of rolls. Threads canvas and felt belts around rolls and rivets, or laces ends together. Slides and pushes mesh belt over end of rolls into position on machine. Repositions rolls on machine frame, and starts machine. Moves levers and turns handwheels to adjust speed and pressure of rolls and belt tension. Keeps records of belts used.

8584-242 ROLL BUILDER(mech. equip., n.e.c.) DPT:664
roll setter.
GED: 3 SVP: 6 EC: I 5 6 7 PA: M 2 3 4 7

Dismantles, repairs, assembles, installs and adjusts roughing stands used in rolling mills:

Signals crane operator to position specified rolls in stands. Inserts rolls in housing, installs roll bearings, and bolts rolls in place, using hand tools. Assembles and installs specified guides on stands, using hand tools. Grinds guides, using portable grinder, to ensure smooth passage of steel through mill. Dismantles roll stands removed from line, and examines parts with measuring instruments, to determine need for replacement. Repairs and replaces unserviceable parts, and assembles roll stands. Sorts and stores roll stand equipment. Records size, quantity and condition of rolls.

May lubricate rolls by packing housings and bearings with grease.

8584-246 CHEMICAL-PROCESS-EQUIPMENT-MECHANIC HELPER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 5 EC: I 5 6 7 PA: H 2 3 4 7

Helps mechanic to repair, install and maintain process equipment in chemical plant:

Examines equipment for leaks or defective valves. Tightens flange connections and valves, using wrenches. Replaces driving belts, spray nozzles, gaskets and seals. Lubricates pumps and valves, using grease gun. Grinds and reseats valves, using power grinder. Dismantles and assembles equipment, using wrenches, portable power tools and rigging equipment to assist in repair and installation. Cleans dirt and rust from equipment and parts, using brushes, buffer and cleaning solutions. Tests equipment for leaks, using air hose and vacuum gauge. See also definition for term title, 02-160 HELPER (any ind.).

May repair piping systems, using pipefitter's hand tools. May operate welding equipment to repair broken or cracked parts, fill holes, and increase size of metal parts.

8584-248 STONE-SAW SETTER(cement, stone & clay) DPT:684
GED: 3 SVP: 5 EC: I 5 6 7 PA: M 4 7

Repairs or replaces stone-cutting blades in gangsaws:

Removes worn, bent and broken saw blades from gangsaws. Straightens blades, using hammer and anvil or block. Replaces removable diamond teeth on saws, using hand tools. Cuts blade stock to length, and cuts holes in ends to fit sawframe, using hand tools. Installs saw blades on gangsaws, and adjusts tension and spacing, using gauges and wrenches.

8584-250 LOOM-REED MAN(textile) DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Cleans, polishes and repairs loom reeds:

Cleans lint and gum from reeds with brush or airhose. Examines reeds for alignment of wires, rough edges, and breaks. Straightens and aligns bent wires, using hand tools, and solders broken wires. Smooths and polishes reeds, using pumice, lime, emery cloth, steel wool, and brush, according to condition of reed. Inspects new reeds, and stores them together with reconditioned reeds, according to size.

May record receipt and transfer of reeds. May replace defective reeds on loom.

8584-254 POWERHOUSE-REPAIRMAN HELPER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I 5 6 PA: H 2 3 4

Helps install, repair and maintain mechanical equipment and mechanical parts of machinery in electric-generating station:

Helps dismantle power-plant machinery, using hand and power tools. Replaces defective parts, and reassembles machinery, as directed. Lubricates recording instruments, such as meters and water gauges. Changes recording charts and refills ink containers on panelboard. Constructs scaffolds, using wood and metal poles. See also definition for term title, 02-160 HELPER (any ind.).

May operate metal-forming machines, such as punch press and drill press, to form machine parts and fittings.

8584-258 ROLLER COVERER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: I PA: L 4

Replaces worn covers on roller arbors of drawing, roving, and carding frames:

Cuts worn cot (cork or rubber covering) from roller arbor, and cleans arbor with solvent. Screws arbor guides into handpress, and turns knob to adjust press stroke, according to length of roller. Dips new cot into solvent solution to soften adhesive. Positions arbor and cot in press, and pulls lever to press cot onto arbor. Positions assembled roller between centres on buffing-machine carriage. Adjusts carriage stop on machine to reduce cot diameter to specified size. Starts machine, and turns handwheel to feed revolving roller against buffing wheel. Measures buffed roller with calipers to verify accuracy of diameter, and places roller in gauge to ensure that cot is not tapered. Presses wooden tool against ends of cot, as roller turns in lathe, to shrink cot onto arbor. Cuts cloth covering and glues it onto clearer-rollers that clean lint from drawing, roving and carding rollers.

May make or repair leather straps, bumpers, and binding for spinning frames, looms, carding machines and roving frames, using tooling knife. May make patterns in wood or leather for metal parts, using woodworking tools.

8584-262 SEWING-MACHINE-MECHANIC HELPER(mech. equip., n.e.c.) DPT:684
sewing-machine-repairman helper.
GED: 2 SVP: 5 EC: I PA: M 4

Helps mechanic to repair domestic and commercial textile sewing machines:

Helps lift machines onto work bench and disassemble parts, using hand tools. Cleans parts, using solvent and rags. Replaces defective parts and reassembles machines as directed. Starts machines by pressing foot pedal, and observes operation to test performance. Uncrates and assembles new machines, using hand tools. See also definition for term title, 02-160 HELPER (any ind.).

May adapt sewing machines to modify stitches, embroider designs, and apply trimmings by installing and adjusting attachments, using hand tools. May repair parts, using lathe and soldering iron.

8584-266 SPINNERET CLEANER(syn. fibres) DPT:584
jet cleaner.
GED: 2 SVP: 4 EC: I 7 PA: M 4

Cleans and stores jets (spinnerets) used on spinning machines that produce synthetic fibres by extrusion.
Disassembles spinnerets, using hand tools. Cleans spinnerets by washing them in acid or acetone bath. Places parts in oven to dry, or dries with compressed-air hose. Examines holes in cleaned spinnerets for blockage, damage, or wear, using microscope. Reassembles satisfactory units, using wrench and jig. Keeps records of stock on hand, issued and cleaned. Reports any stock shortages.
May dismantle candle filters, after soaking in acetone, and remove soiled filter paper. May buff surface of spinnerets with electric buffer. May keep inventory records.

8584-270 CIGARETTE-MACHINE-DRUM REPAIRMAN(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: I PA: M 4

Adjusts and repairs cigarette-making-machine drums:
Disassembles drums to remove parts for repair or cleaning, using hand tools. Examines and measures parts, such as bushings, to detect damage or wear. Soaks, or wipes parts with cleaning solvents, to remove glue and other residue. Reassembles drums with cleaned parts or installs replacement parts. Verifies clearance between knives, using gauges or micrometers.
May remove drums from machines and convey them to repair room, using handtruck. May adjust or replace tobacco cut-off knives, using gauges and hand tools.

8584-274 LINERMAN(mech. equip., n.e.c.) DPT:684
liner repairman.
GED: 2 SVP: 4 EC: I 5 6 7 PA: H 2 3 4

Replaces metal liners in ore-processing equipment, such as mills, crushers, chutes and hoppers:
Loosens worn liners, using wrenches and cutting torch. Operates power-chain hoist to remove old liner and position replacement, or signals crane operator to move liner. Fits and adjusts new liner, using hammer, pry bar, and hydraulic jacks. Bolts liner in place, using wrenches.

8584-278 WIRE REPAIRMAN(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: I PA: L 4 7

Repairs pile wires used on carpet looms:
Examines wire for defective points and wear. Cuts defective ends or worn sections from wire, using metal snips. Welds corresponding length of metal to pile wire, using spot-welding equipment or hand torch. Traces outline of pile wires on metal strip, following pattern. Places wire in vise and files weld to smooth and shape wire according to tracing. Stores wires according to size and pattern design.

8584-282 FLYER REPAIRMAN(mech. equip., n.e.c.) DPT:684
flyer builder.
GED: 2 SVP: 3 EC: I PA: L 4

Repairs flyer wires for use on textile throwing, drawing and twisting machines:
Collects damaged, dirty or rusted flyers from boxes near machines, and carries them to worktable. Removes wire arm from flyers, using wrench. Inserts and tightens new wires on hub, using wrench. Places repaired flyers into box. Records number and type of flyers repaired. May clean dirt and dust from flyers, using brush and cleaning oil.

8584-286 MILLWRIGHT HELPER(mech. equip., n.e.c.) DPT:684
mill-mechanic helper.
GED: 2 SVP: 3 EC: I 5 6 PA: VH 2 3 4

Assists millwrights to install, dismantle, and move machinery and supporting structures in an industrial or other establishments:
Erects scaffolding and block and tackle. Builds forms and mixes cement for machine foundation. Melts and pours babbit into bearing housing, using metal pot, blow torch and ladle. Moves materials, using handtruck, lift truck or hoist. Drills holes in steel, wood or cement, using portable electric drill. Measures, cuts and installs hangers, using

hand tools and ladders. Installs and dismantles machines and equipment, under close supervision of millwright, using crow bars, chain falls, hoists and wrenches. See also definition for term title, 02-160 HELPER (any ind.).

8584-290 ORE-PROCESSING-EQUIPMENT-REPAIRMAN HELPER(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: B 5 6 PA: H 2 3 4

Helps repairman in repairing machinery and equipment used in processing and transporting ore:
Cuts out worn parts of conveyor belts with shears. Draws ends of belt together, using block and tackle, and splices them with metal fasteners. Loosens sections of machines and equipment, such as vibrating screens, air compressors, conveyors, crushers, condensers and boilers, using hand tools and electric hoist. Removes worn pipe sections from air, oil, steam and water lines, using wrenches and chain hoist. Cleans soot and scale from water-cooling pipes of pressure boilers and slurry lines, using brush and air hose. See also definition for term title, 02-160 HELPER (any ind.).

8584-294 SHAKER REPAIRMAN(feed & flour mill) DPT:684
GED: 2 SVP: 3 EC: I 4 5 7 PA: H 2 3 4 7

Repairs shaker tables and reel frames used in processing corn products:
Examines screen surface to detect weak spots and holes. Removes old bolting cloth, using hand tools. Measures and cuts new cloth, stretches it over panel, and tacks it in place. Tacks strip of reinforcing tape over edges, or folds edges of cloth to hold cloth securely. Repairs damaged wood frames and builds new ones, using carpenter's hand tools. Remounts reel frames on reels, using wrench and screwdriver, and replaces shaker tables on supporting springs.

8584-298 SIPHONING-HEAD CONDITIONER(non-ferrous metal) DPT:684
GED: 2 SVP: 3 EC: I 5 6 7 PA: H 4

Maintains siphon tubes used to transfer molten metal from melting furnace to holding furnace:
Removes and dismantles furnace-transfer siphons, using hand tools. Visually examines siphon heads for pitting and metal residue lodged in siphon. Places dismantled sections of siphons in holding hearth to melt metal residue, using hoist. Cleans siphon, using rags and wire wheel. Assembles siphon, using nuts, bolts, asbestos gaskets and hand tools. Keeps record of siphon serviceability and hours in use.

8584-302 ANODE MAN(mech. equip., n.e.c.) DPT:684
pin puller.
GED: 2 SVP: 2 EC: I 3 5 7 PA: H 4 7

Removes, replaces and straightens studs from anode pots to condition them for re-utilization and to ensure continuous combustion of alumina, using pneumatic press and stud-pulling machine:
Removes end-frames of pot to free exterior part of anode, using hooking stud. Opens pot doors to remove side frames, using bar. Pulls pins (studs) from anode to straighten or to remove scale, using hydraulic puller. Straightens, cleans and replaces studs in anode to ensure continuous combustion of alumina, using stud driver. Moves stud rack and pneumatic press in position, to perform straightening operation, using handtruck. Fills stud holes in anode with aluminum, using shovel. Removes aluminum from stud-pulling machine, and cleans working area, using air hose, broom and shovel.
May be designated according to work performed; for example, Channel Man
Stud Driver

8584-306 SIEVE REPAIRMAN(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I 7 PA: M 3 4

Makes and repairs sieves, used in machines that sift powder, such as flour and carbon black, using hand tools:
Fits cloth lining and wire screen onto sieve frame, and staples lining and screen across frame. Places free-moving cloth pads in frame. Staples strips of cotton fabric around outer sides of frame so sieve fits correctly into recess of mounting plate. Removes and replaces defective or damaged sieves.
May inspect filter bags and screens for holes or defects.

Farm Machinery 8584-326 through 8584-330

8584-326 DAIRY-EQUIPMENT REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: I 5 PA: M 2 3 4 6 7

Repairs and maintains dairy machinery and equipment, such as cream separators, milking machines, butter churns and pasteurizing equipment. Observes and listens to machine in operation to locate causes of malfunction. Dismantles machine and repairs or replaces faulty parts, using hand and power tools. Assembles and starts machine to test its operation. Replaces defective wiring, burnt fuses, worn switches and electric motor parts. Fabricates metal parts and pipe lengths by cutting and fusing metals, using welding equipment. Threads and installs gas, steam, water and air pipes, using pipe-fitter's tools. Fabricates, alters, and installs sheet-metal chutes, covers, tubing, containers, and fittings. May affix special attachments and repair tension belts. May repair refrigerating systems, and test components; such as, electric motors, pumps, compressors, and water filters. May operate refrigeration equipment to cool refrigerating rooms.

8584-330 FARM-EQUIPMENT MECHANIC(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: B 5 6 PA: M 3 4 6 7

Repairs and overhauls, on farms or in repair shops, farm machinery, such as combines, tractors and mowers. Examines machinery and parts visually, listens for operational defects, and checks adjustments and tolerances, using precision-measuring instruments, test equipment and manufacturers' manuals. Repairs or replaces defective assemblies and parts, such as engines, fuel pumps, and generators, using hand tools, welding equipment, and chain hoist. Reassembles, adjusts and lubricates machines and equipment to manufacturers' specifications. May assemble new farm machinery and equipment.

Material Handling Equipment 8584-350 through 8584-358

8584-350 MINE-HOIST REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: I 6 PA: H 2 3 4 7

Repairs and adjusts hoisting equipment used in mines. Inspects components of hoisting equipment, such as motors, clutches, brakes, cables and safety devices to determine nature and location of defects. Dismantles equipment, and replaces or repairs defective parts, using hand and power tools and cutting torch. Assembles parts and adjusts components, such as brakes, controllers and clutches, using hand tools. Installs vertical track on mine walls for hoisting-machines.

8584-354 CRANE REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 7 EC: B 5 6 PA: M 2 3 4 7

Repairs and maintains cranes, according to manufacturers' specifications and operation manuals. Examines cranes and related equipment for signs of wear or other defects. Dismantles equipment to remove damaged cables, wheels, gears, brakes, axles, pulleys and hoist drums or other parts, using hand and power tools and precision-measuring equipment. Reads drawings to determine parts required and correct alignment of moving components. Makes load-tests of overhead crane by hoisting loads heavier than rated capacity. Installs replacement motors. May perform duties of crane operator when required. May repair a particular type of crane and be designated accordingly; for example, Tractor-Crane Repairman(construction)

8584-358 CONVEYOR REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: B 5 PA: M 2 3 4 7

Repairs and adjusts conveyor systems. Diagnoses mechanical defects in conveyor systems, by visually examining parts for signs of wear. Installs belts and pulleys, and adjusts tension rolls to specification, using wrenches. Aligns roller tracks, cables and belts, to prevent malfunctions, using hand tools, levels and gauges. Fills gearboxes with lubricant, to specified level, and lubricates moving parts, using hand gun. May repair cracks or fractures in metal parts of conveyor system, using welding equipment. May install, set-up and test-operate new conveyor systems, following diagrams and using hand tools and material handling equipment, such as crane or fork-lift truck.

Construction Equipment 8584-378 through 8584-398

8584-378 CONSTRUCTION-EQUIPMENT MECHANIC(mech. equip., n.e.c.) DPT:261
mobile-equipment repairman.
GED: 4 SVP: 7 EC: B 5 7 PA: H 3 4 6 7

Repairs, rebuilds and adjusts heavy mobile equipment, other than internal combustion engines, such as cranes, power shovels, scrapers, graders, powered conveyors, trench-digging machines and bulldozers. Listens to or observes equipment in operation to assist in locating fault. Inspects machines at intervals for worn or damaged parts, according to maintenance schedule for each machine. Dismantles equipment, using hoist and hand tools, to gain access to defective parts. Cleans and examines parts for damage or excessive wear. Verifies dimensions of parts, such as shafts, bearings, bushings, pins, gears and rollers by gauging or measuring with calipers or micrometers to ensure compliance with manufacturers' specifications. Repairs or replaces broken or worn parts, using mechanic's hand and power tools and welding equipment. Makes necessary adjustments to ensure efficient operation. Directs helpers engaged in disassembly, cleaning and assembly of machinery. May be required to estimate maintenance, repair or replacement costs of equipment. May specialize in making field repairs to equipment sufficient to resume operations but not including major overhaul or rebuilding, or specialize in the repair of a particular type of equipment and be designated accordingly; for example, Field Mechanic Power-Shovel Mechanic

8584-382 DIESEL MECHANIC(mech. equip., n.e.c.) DPT:261
GED: 4 SVP: 7 EC: I 5 6 PA: H 3 4 6 7

Repairs and maintains diesel engines used to power a wide variety of industrial, farm and construction machinery. Observes and listens to equipment in operation and reads meters and gauges to diagnose malfunction. Disassembles engines and examines parts for defects and excessive wear. Replaces parts, such as pistons, rings, bearings, gears, valves, and bushings, using valve-grinding machine, and hand tools. Replaces and adjusts parts, such as valves, gears, and carburetors, to specified tolerances, using hand and power tools and precision-measuring instruments. Directs helper to disassemble engine, clean parts and reassemble engine. Orders replacement parts from parts catalogue. Writes reports, indicating data, such as nature and extent of repair. May grease engine and auxiliary equipment, using grease gun.

8584-386 DIESEL-MECHANIC HELPER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 5 EC: I 5 6 PA: H 3 4

Helps mechanic to repair and maintain diesel engines used to power a wide variety of industrial, farm and construction machinery. Helps diesel-engine mechanic to disassemble engine, clean parts and re-assemble engine, using hand and power tools and cleaning materials. Obtains parts and material from stock room, using hand cart, hoist or crane. Holds engine parts in position for assembly, and hands tools to mechanic. See also definition for term title, 02-160 HELPER (any ind.). May machine parts, using drill and grinder.

8584-390 CRAWLER-TRACK REPAIRMAN(mech. equip., n.e.c.) DPT:664
track repairman.
 GED: 3 SVP: 4 EC: 1 5 PA: M 4 5 7

Disassembles and assembles press-fitted, crawler-track links for construction equipment, such as cranes, power shovels and tractors, using horizontal-arbor press:

Directs workers engaged in placing and removing crawler tracks. Removes or tightens bolts fastening track pads to track links, using pneumatic impact wrench. Reads chart to select specified insert jaws, and disassembly and assembly rams. Installs rams in arbor press sockets, using wrench. Moves levers to position track over insert jaws, and to advance or retract rams that press pins and bushings into sockets on track links. Directs other workers engaged in removing or positioning track pads, track links, pins, and bushings, using press. Operates press to disassemble and reassemble track, and to replace worn or damaged pins and bushings. Removes pins from bushings, using cutting torch or hammer and chisel.

8584-394 CONSTRUCTION-EQUIPMENT-MECHANIC HELPER(mech. equip., n.e.c.) DPT:684
mobile-equipment-repairman helper.
 GED: 2 SVP: 3 EC: B 5 7 PA: H 3 4

Assists mechanic to maintain and repair mobile construction equipment, such as cranes, compressors, trucks, tractors, bulldozers and power shovels:

Installs jacks and hoists to raise equipment and lift dismantled assemblies. Disassembles and assembles machinery, using power wrenches and hand tools. Cleans parts with naphtha, gasoline or other cleaning solution. Lubricates and greases machines. See also definition for term title, 02-160 HELPER (any ind.).

May be designated according to worker helped; for example, Field-Mechanic Helper

Power-Shovel-Mechanic Helper

8584-398 CRAWLER-TRACK-REPAIRMAN HELPER(mech. equip., n.e.c.) DPT:687
track-repairman helper.
 GED: 2 SVP: 3 EC: 1 5 PA: H 4

Helps repairman to disassemble and assemble crawler tracks for mobile construction equipment, such as cranes, power shovels and tractors:

Helps disassemble and reassemble track pads and track links, by removing track pads, links, pins, and bushings, using hand tools or press. Cleans parts to remove rust, dirt and grease, using solvent and rags. Helps lift and move track and heavy parts. See also definition for term title, 02-160 HELPER (any ind.).

8585-BUSINESS AND COMMERCIAL MACHINE MECHANICS AND REPAIRMEN

This unit group includes occupations concerned with repairing and maintaining business and commercial machines; such as, typewriters and calculating, accounting, card-punching, duplicating and adding machines. Activities include: replacing worn or damaged parts and adjusting inter-related parts to synchronize their operations, using hand and power tools and gauges.

8585-110 MAIL-PROCESSING-EQUIPMENT MECHANIC(mech. equip., n.e.c.) DPT:281
 GED: 4 SVP: 7 EC: 1 PA: M 4 7

Repairs and maintains mail-processing equipment, such as letter-cancelling machines, mail-sorting machines, and conveyor systems, using hand and power tools:

Inspects machines for signs of wear or malfunction. Dismantles faulty machinery and related equipment. Repairs or replaces defective parts, such as gears and bearings, or fabricates replacement parts, using machine-shop equipment, such as lathe, drill press, wet-band metal saw and welding equipment. Modifies equipment according to

specifications. Reassembles and starts machines to test their performance. Repairs hydraulic and pneumatic systems. May install new machines and related equipment.

8585-114 REPAIRMAN, PUNCHED-CARD MACHINES(electronic equip.) DPT:281
repairman, punched-card-office machines.
 GED: 4 SVP: 7 EC: 1 PA: M 4 7

Repairs and maintains collating, sorting, card reading, key-punch, and other punched-card-office machines, using hand and special tools and test equipment:

Assembles and installs machines, following wiring diagrams. Operates and examines faulty machines to determine nature and location of electrical and mechanical defects. Dismantles machines to repair or replace parts, such as belts, gears, bearings and shafts. Reassembles and operates machines, using prepunched cards to verify correct operation. Observes and listens to operation of moving parts, measures clearances and contact gaps, using gauges, and measures voltages and continuity, using electrical-test equipment. Adjusts clearances of moving parts, electrical-contact gaps, and alignment of printing units and contact-brush units to meet specifications. Cleans and oils moving parts.

May set up machines to obtain particular information, by wiring and inserting circuit-boards in machines, and moving switches and levers. May give instruction in operation and care of machines to machine operators.

8585-118 OFFICE-MACHINE SERVICEMAN(mech. equip., n.e.c.) DPT:281
 GED: 4 SVP: 6 EC: 1 PA: L 4 6 7

Repairs and maintains office machines, such as accounting, adding and calculating machines, and typewriters:

Operates machines to test moving parts, and listens to sounds of machines to locate causes of malfunction. Disassembles machines and examines and measures parts, such as gears, guides, rollers, and pinions for wear and defects, using micrometers. Repairs, adjusts, or replaces parts, using hand and power tools, and soldering equipment. Bends, grinds, and taps parts to correct binding, looseness, and misalignment. Incorporates modifications to update machine, or adds special features to machine ordered by customer. Cleans and oils moving parts.

May give instructions in operation and care of machines to machine operators. May assemble new machines. May specialize in repairing one type of machine and be designated accordingly, Typewriter Serviceman

8585-122 SERVICEMAN, DICTATING AND TRANSCRIBING MACHINES(mech. equip., n.e.c.) DPT:281
 GED: 4 SVP: 6 EC: 1 PA: L 4 6 7

Repairs and maintains magnetic tape and grooved-tape-dictating and transcribing machines:

Tests machines to isolate defective circuits, using wiring diagrams and electronic-testing equipment. Replaces faulty parts, such as tubes, transistors, microphones, relays, and resistors, using soldering equipment and hand tools. Replaces or adjusts mechanical elements, such as playback mechanisms, remote control switches and tape reels. Operates repaired machines to test their performances.

May be designated according to type or trade-name of machine repaired.

8585-126 CASH-REGISTER SERVICEMAN(mech. equip., n.e.c.) DPT:281
 GED: 4 SVP: 5 EC: 1 PA: H 4 7

Repairs and maintains cash registers:

Examines mechanical assemblies, such as printing mechanisms, counters, and keyboards, to determine nature and location of defects. Removes and replaces defective parts, using hand tools and soldering equipment. Tests electrical controls, wiring, and motors, for insulation breakdown, using insulation resistance measuring equipment. Cleans and lubricates moving parts.

May repair defective parts by reshaping them on bench lathe or grinder.

8586-INSPECTING AND TESTING OCCUPATIONS, EQUIPMENT REPAIR, N.E.C.

This unit group includes occupations in inspecting and testing work, as described under the term titles, 02-170 INSPECTOR (any ind.) and 02-430 TESTER (any ind.), concerned with quality control activities in the repair and servicing of mechanical equipment.

8586-110 AIRCRAFT INSPECTOR, REPAIR(air & space-craft) DPT:281
GED: 4 SVP: 8 EC: B 5 6 PA: M 2 3 4 7

Inspects airframes, engines, and operating equipment of aircraft in all stages of repair to ensure that repairs are made in compliance with standards and specifications designated on drawings and in manuals: Tests tightness of airframe connections, using hand tools. Examines fit of parts, using flashlight and mirror, and checks disassembled units for wear, cracks, splits and other evidence of internal damage, using precision measuring equipment, to ensure specified tolerances have been met. Manipulates aircraft controls to check action. Examines components for correct assembly and reviews results of shop tests. Checks installed equipment for function and adjustment in aircraft. Records data, such as engine performance, during test runs. Checks work records and lists, to verify that required work and inspections on aircraft have been completed, and prepares certifications. Sends parts, which are suspect, for special testing. May certify airworthiness of completed aircraft. May prepare overhaul schedules for aircraft. May examine aircraft wreckage, and study maintenance records to determine causes of accidents. May destroy faulty parts, using hand tools.

8586-114 LOCOMOTIVE INSPECTOR(rail. rolling stock) DPT:281
GED: 4 SVP: 8 EC: I PA: L 2 3 4 7

Inspects railroad locomotives in shop to determine extent of wear and needed repairs, and to ensure conformance with standards: Examines firebox, journal boxes and bearings to detect wear. Strikes areas, such as rods, wheels and bolts with hammer to detect ruptures or cracks. Measures wheel flanges with calipers and depth gauge to detect excessive wear or flat spots. Inspects and tests locomotive engine and components, and mechanical, hydraulic, pneumatic and structural elements or systems, using drawings and test equipment, to ensure conformance with established standards. Reports defects to maintenance personnel and authorizes removal of locomotive from service until repairs have been made.

8586-118 INSPECTOR, HEAVY EQUIPMENT(mech. equip., n.e.c.) DPT:283
GED: 4 SVP: 8 EC: O 5 PA: L 2 4 6 7

Inspects and tests construction and mining machinery and equipment, such as tractors, bulldozers, cranes, power shovels, graders, scrapers and conveyors to determine operating condition and needed repairs: Starts equipment, listens to motor, and test-operates machinery to analyze performance. Determines if equipment should be taken out of service for overhaul, considering project requirements, time lost and availability of spare equipment. Estimates time required and cost of repairs, and prepares work order for maintenance personnel. Test-drives equipment after repair, and records information on equipment performance charts.

8586-122 INSPECTOR AND TESTER, METEOROLOGICAL EQUIPMENT(scient. & ind. equip., n.e.c.) DPT:261
GED: 4 SVP: 7 EC: B PA: M 4 7

Inspects, installs, repairs and calibrates meteorological equipment, such as thermographs, barographs and anemometers, at airports and weather stations: Consults with meteorological office officials to obtain information on equipment serviceability. Visually examines equipment, such as barographs, thermographs and anemometers, to detect physical defects or mechanical malfunction. Tests mechanical operation of graph recording devices, following equipment specifications and manuals and using mechanical-test equipment. Lubricates moving parts of anemometer-rotating-cup mechanism, using specified lubricants. Removes and replaces defective bearings and shafts of

anemometers, and mechanical parts of graph recording devices. Checks barometers, hygrometer and thermograph readings against readings obtained with standard-type instruments and recalibrates instruments. Checks ceiling projector for alignment and focus, using spirit level. Checks precipitation gauge mounting, using level. Removes and replaces equipment requiring major overhaul. Modifies equipment to latest configuration to improve equipment performance and reliability. Recommends installation of new equipment. Prepares inspection reports and records findings.

8586-126 TESTER, AUTOMOTIVE VEHICLE(motor vehicle) DPT:261
GED: 4 SVP: 7 EC: I PA: L 3 4 5 6 7

Examines and tests automotive vehicles, such as automobiles, buses and trucks, to determine need for and cost of repairs: Reads work order and talks with customer regarding vehicle's performance. Starts engine of automotive vehicle and listens for indication of malfunction. Road tests vehicle to determine defects in parts and assemblies; such as, steering, braking, transmission and suspension units. Tests motor timing, cylinder compression, fuel consumption, wheel alignment and steering, using timers, pressure gauges and wheel alignment equipment. Examines engine and auxiliary systems, such as fuel, ignition, cooling, generating and hydraulic systems to determine adherence to specifications, using feeler gauge, pressure gauges and other testing devices. Operates electrical and hydraulic systems and equipment to evaluate their performance. Examines vehicle body for scratches and dents. Estimates cost of repair and prepares itemized listing of cost of parts and labour. May examine disassembled engine, differential gear or other parts during repair. May test-drive vehicle on completion of repairs.

8586-130 AIRCRAFT-ENGINE TESTER(air & space-craft) DPT:281
GED: 4 SVP: 7 EC: I 5 PA: M 3 4 7

Tests performance of aircraft engines after overhaul: Positions or directs other workers in positioning engine, with aid of chain or power hoist, on test stand. Inspects connections of oil and fuel lines, instruments, controls, and installation of engine accessories, such as generators, magnetos, and fuel injectors. Connects test instruments, such as dynamometers and manometers, to engine. Starts engine and inspects for fuel or oil leaks. Operates engine for specified time, at various throttle and mixture settings, according to manufacturer's maintenance and overhaul instruction manual. Reads and records test data, such as revolutions per minute, manifold pressure and temperature, and oil pressure. Compares engine performances at various speeds, using performance charts and manufacturer's performance standards. Certifies that tested engines are ready for service or indicates reasons for their rejection.

8586-134 AIRCRAFT-HYDRAULICS TESTER(air & space-craft) DPT:281
hydraulic tester.
GED: 4 SVP: 7 EC: I PA: M 3 4 7

Tests the mechanical functioning of aircraft-hydraulic units and systems: Connects hydraulic units and systems to test panels, and attaches ancillary equipment, such as hoses, valves, gauges and mechanical and electrical control devices at designated locations, using hand tools. Starts pump that forces liquid through unit or system at various pressures to test for leaks. Manipulates controls to test operation of units and systems under various conditions. Records test results. Evaluates test data to determine causes of malfunctioning of hydraulic units and systems and makes adjustments and repairs. May install hydraulic units and systems in aircraft.

8586-138 MAINTENANCE ANALYST(mech. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: I PA: L 4 7

Investigates cause of mechanical failures of operating, maintenance and related equipment, and recommends corrective measures: Studies shop and purchase records to determine frequency of recurring malfunctions. Reviews maintenance manuals, manufacturers' catalogues, drawings, and other references, for specifications and

performance information. Observes operating conditions of equipment and machines where excessive breakage and defects in products occur, utilizing testing and measuring devices and instruments, to collect data. Verifies that equipment design and material and processing techniques conform to standards. Determines corrective measures and writes report of findings and recommendations. Prepares drawings for recommended design changes in equipment, machines or parts.

May compute labour and equipment repair costs. May investigate and report on design suggestions for replacement of worn-out machinery.

8586-142 RAILWAY-CAR INSPECTOR(rail. rolling stock) DPT:281
car inspector.
GED: 4 SVP: 7 EC: B PA: M 2 3 4 7

Inspects railway cars, such as passenger, sleeper, dining and freight cars for structural defects, and tests equipment for efficient operation, performing any combination of the following duties:

Inspects cars for damage; such as, broken windows, defective locks, worn or damaged seats and malfunctioning rest room facilities. Examines car roof, ice hatches, brake beams, doors and floor for structural defects. Inspects food storage equipment for satisfactory operation and cleanliness. Inspects sleeping cars to determine structural condition of berths. Turns on controls of passenger car systems, such as heating, lighting, water and ventilation, to check efficiency of operation. Turns handwheel to test brakes. Inspects and checks airhoses for leakage. Opens journal boxes to determine that they are filled with oil. Places flags in front and rear of train to warn other workers that inspection is being performed. Prepares inspection report and notifies other workers if damage requires car to be removed for repair.

May be designated according to type of car inspected; for example, Freight-Car Inspector
Passenger-Car Inspector

8586-146 INSPECTOR, BUS PARTS(motor vehicle) DPT:281
GED: 4 SVP: 6 EC: I 5 PA: M 4 7

Inspects new and used bus parts for conformance to company's specifications, to ensure quality control of parts used in repair of buses:

Examines used metal parts to determine if they should be repaired or scrapped. Examines broken and worn parts to determine nature and cause of defects. Measures new and used parts to verify specified dimensions, using measuring tools, such as micrometers, calipers, scales and gauges. Forwards parts to laboratory for hardness tests and analysis, to repair shop, or to purchasing and stores department for sale as scrap. Records inspection data, such as parts inspected, types of defects, and disposition of material on quality control report.

8586-150 WHEEL-AND-AXLE INSPECTOR(rail. rolling stock) DPT:281
wheel inspector.
GED: 4 SVP: 6 EC: I 5 PA: L 3 4 7

Inspects railway-car axles and wheel assemblies for defects, and for conformance to specifications:

Verifies diameter of wheel and journal seats on axle, using calipers and micrometers. Measures space between wheels and from center of axle to each wheel, using fixed-clearance gauge and needle-pointed space gauge to verify conformance to specifications. Measures wheel flange for wear, using micrometer. Observes pressure-gauge indicator on wheel-pressing machine, as wheels are pressed onto axles, to ensure conformity to tolerances. Examines and feels surface of wheels for cracks and wear and strikes wheel with hammer and listens to sound to detect flaws in metal. Marks defective area with chalk or paint. Prepares reports describing defects in wheels and amount of wear in wheel flange with recommendations for repair or disposal.

8586-154 GAS-METER TESTER(scient. & ind. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: B PA: L 4 7

Tests accuracy of gas flowmeters for conformance to specified requirements:

Changes recording charts on gas flowmeters. Inserts measuring orifice between metal pipe sections, and bolts sections together. Fastens one end of pipe to gas main leaving flowmeter, and attaches rubber hose

to discharge end of pipe to deflect air currents. Sets frame containing manometer instruments on tripod, and connects instruments to nipples on pipe and to flowmeter with rubber tubing. Reads instruments to obtain data, such as specific gravity and temperature of gas, and clocks number of seconds required for specified volume of gas to pass through meter. Determines accuracy of meter by mathematical computations based on readings, clocking tests and standard data stamped on orifice disk, and verifies calculations by use of tabulated charts. Adjusts meter settings to correct inaccurate meters.

May dismantle, clean, repair and pressure-test regulators. May modify regulators to specific requirements.

8586-158 PRESSURE-CONTROL CALIBRATOR(scient. & ind. equip., n.e.c.) DPT:684
calibrator, pressure.
GED: 3 SVP: 4 EC: I PA: L 4 7

Tests accuracy of pressure-activated controls (valves):

Seats controls in holding fixture, and couples air-pressure lines to capillary tube of control. Opens air valve and observes action of scale pointer on graph. Compares reading of scale pointer with reading on pressure gauge to verify accuracy of control. Turns screws or fits plunger-rod pin to alternate positions to calibrate control to specifications. Records calibration settings of control units.

8586-162 TANK-CAR INSPECTOR(rail. rolling stock) DPT:684
GED: 3 SVP: 4 EC: B 6 PA: M 2 3 4 7

Inspects and services railway-tank cars used to transport refinery products, such as oil, liquid chemicals and liquified gases, performing any combination of the following duties:

Inspects wheels, bearings, brakes and safety appliances for defects. Replaces defective components, such as brake-rod pins, and safety and flow-control valves, using hand tools. Tightens safety appliances, and packs bearings and journal boxes with grease. Examines valves, plugs and tank seams for leaks, and seals leaks, using calking gun. Removes residual gas from used tank cars by connecting flexible hose from suction line to car and opening valves on car and blowoff line. Visually inspects car interior for defects and cleanliness, by passing light into car and viewing it through valve openings or by personally entering car through dome. Washes interior of tank with water and dries it with steam. Routes cars requiring major repairs to maintenance shop. Prepares serviceability reports on tank cars and approves cars for specified usage.

May couple pipes between tank-car-drains and appropriate storage tanks.

8586-166 REFRIGERANT-GAS-LEAK TESTER(mech. equip., n.e.c.) DPT:684
GED: 3 SVP: 3 EC: I PA: L 3 4 7

Tests refrigeration units for refrigerant leaks by any of the following methods:

1. Sets balance and range of electronic leak-tester by turning control knobs. Moves nozzle of tester along refrigerant lines, condenser and compressor, and listens for buzzer or observes signal light indicating presence of gas. Adjusts controls to narrow range of tester and probes area to pinpoint exact location of leak. 2. Turns valve of gas tester to adjust flow of gas to copper flame-ring and ignites gas. Moves suction hose, joined to flame-ring along surfaces of refrigeration unit and observes flame for change in colour denoting presence of leaking refrigerant gas. 3. Wraps wet litmus paper around joints of refrigeration unit and observes paper for colour change indicating refrigerant leak. Marks number of defective part or joint on inspection tag, according to drawing numbering chart and attaches tag to unit. Records number and location of leaks on inspection chart.

May charge refrigeration unit receiver tanks with refrigerant gas to specified pressure in preparation for test. May repair leaks detected during test, using soldering torch.

8586-170 HEDDLE EXAMINER(mech. equip., n.e.c.) DPT:687
frame changer.
GED: 2 SVP: 2 EC: I PA: L 4 7

Examines, reconditions and sorts heddles onto frame for use in drawing-in machine:

Examines heddles for rust, using magnifying glass, and measures

heddle dimensions, such as length, width, and eye spacing, for conformance with specified tolerances, using gauge. Polishes and straightens heddles, using abrasive paper, steel wool, and pliers. Separates right and left heddles and transfers them onto rods according to size and type. Counts specified number of heddles for use in drawing-in machine.

**8586-199 OTHER INSPECTING AND TESTING
OCCUPATIONS, EQUIPMENT REPAIR**

This group includes mechanical equipment inspectors and testers, not elsewhere classified; for example, those who inspect diesel and gasoline trucks for the presence of accessories prescribed by law. A typical example of an occupational title covered by this residual group is:

Truck-Accessories Checker(motor trans.)

8587-WATCH AND CLOCK REPAIRMEN

This unit group includes occupations concerned with repairing watches and clocks and mechanical movements used in clockwork-operated devices, such as timers, meters and recorders. Activities include: replacing parts, adjusting, calibrating and refinishing, using common and special hand tools, machines and equipment.

**8587-110 WATCH REPAIRMAN(scient. & ind. equip., n.e.c.)
DPT:281**

clock repairman; watch adjuster; watchmaker.
GED: 4 SVP: 7 EC: I PA: S 4 7

Repairs, cleans, and adjusts mechanisms of instruments, such as watches, time clocks, and dial indicators: Examines faulty timepiece to discover malfunction, using magnifying glasses. Removes defective parts, such as balance staff, wheels and hairspring, using watchmaker's hand tools. Removes broken and damaged screws, and taps screw holes. Cleans parts with benzine or other cleaning substance. Trues balance wheel and hairspring, and corrects overcoiling of hairsprings, using tweezers. Replaces damaged components; such as, mainsprings, jewels, stems, escape wheel, and pinions. Observes minute parts with aid of loupe, and makes fine adjustments to assembly to obtain proper play among parts. Lubricates moving parts. Places mechanism in demagnetizing machine that automatically removes magnetic properties from mechanism. Regulates timepiece movement, testing it in various positions, using watch-rate recorder.

**8587-114 TAXIMETER REPAIRMAN(mech. equip., n.e.c.)
DPT:681**

GED: 3 SVP: 6 EC: I PA: L 4 7

Repairs, cleans and adjusts taxicab meters: Disassembles and inspects meters to determine cause of incorrect or non-registration of time, mileage, or fare. Cleans meters, using vacuum cleaner or compressed air blower. Repairs or replaces broken or worn parts, and adjusts registering-mechanism gears, using hand tools. Reassembles meters and makes final adjustments to registering-mechanism-control gear to meet specifications. May test, service and repair parking-meter-clock mechanisms.

**8587-118 PARKING-METER SERVICEMAN(scient. & ind. equip., n.e.c.)
DPT:384**

parking-meter repairman.

GED: 3 SVP: 4 EC: O PA: L 4 7

Inspects, services and repairs parking meters: Winds meters according to schedule, and adjusts mechanisms. Repairs or replaces worn or damaged parts, using hand tools. Straightens meter standards, using wrenches. Replaces broken glass in meter face. Cleans parts with carbon tetrachloride or gasoline and oils them. Keeps records of machine service histories to assist in scheduling preventive maintenance inspections or replacing worn out meters.

**8587-122 CASER(scient. & ind. equip., n.e.c.)
DPT:684**

GED: 2 SVP: 3 EC: I PA: L 4

Inserts clock and watch movements into new or repaired cases: Removes watch movement from damaged case, using hand tools. Blows dust and dirt out of back of new or repaired case, using air hose. Inserts movement into case and screws case in place, using hand tools. Winds timepiece by rubbing crown against strip of plastic, or pressing revolving plastic cup against crown. Sets timepiece to correct time preparatory to testing.

**8588-PRECISION INSTRUMENT MECHANICS AND
REPAIRMEN**

This unit group includes occupations concerned with installing and repairing scientific, engineering, optical and medical instruments and apparatus, and photographic, meteorological, and similar equipment. Activities include: disassembling, replacing, adjusting, calibrating and refinishing instruments and instrument parts, using common and special hand tools, machines and equipment.

**8588-110 AIRCRAFT-INSTRUMENT MECHANIC(scient. & ind. equip., n.e.c.)
DPT:261**

instrument technician, aircraft.

GED: 4 SVP: 7 EC: I PA: L 4 7

Repairs, modifies and bench-tests aircraft instruments used for measuring, controlling and indicating physical characteristics, such as temperature and pressure:

Tests instruments; such as, gyroscopic controlled turn-indicators, rate of climb indicators, auto-pilots, pressure regulating valves, servomechanisms, and fuel, temperature or oxygen indicators, using electrical and electronic test equipment, micrometers, pressure gauges, and vacuum-pump testers. Records test results and diagnoses cause of malfunctions from findings. Disassembles faulty instruments, using hand tools and loupe. Replaces defective or worn parts, such as pivots, shafts, and bearings. Burnishes and laps new shafts and other parts, using jeweler's lathe, precision grinder, and lapping machine. Modifies units to latest design specifications by replacing components detailed on modification instruction sheet. Adjusts components to revised tolerances, by reshimming or replacing components. Magnetizes or demagnetizes parts as required, using special shop equipment. Cleans, repaints, and lubricates parts. Reassembles and tests instruments for conformity with operating specifications.

**8588-114 INSTRUMENT MECHANIC, UTILITIES(scient. & ind. equip., n.e.c.)
DPT:261**

GED: 4 SVP: 7 EC: I 5 PA: L 2 3 4 7

Adjusts, repairs and maintains electrical and mechanical metering instruments in electric-power generating station: Inspects gauges and meters used to indicate conditions; such as, temperature, pressure, flow, volume and consumption. Visually observes dials or graphic charts for indications of abnormal or erratic fluctuations. Disconnects and removes defective instruments and installs new ones. Tightens loose connections on panel board, using hand tools. Evaluates wear and obsolescence of defective instruments and determines if they warrant repair. Repairs and adjusts instruments, such as telemetering and remote control devices. Tests electrical wiring of panel, using electrical test equipment. Repairs electric clocks and electrical timing devices found in electric meters. Engraves identification tags for electric-power- utility equipment, using portable electric engraver.

**8588-118 INSTRUMENT REPAIRMAN(scient. & ind. equip., n.e.c.)
DPT:261**

instrument man.

GED: 4 SVP: 7 EC: I 5 PA: L 3 4 7

Installs, repairs, maintains and adjusts indicating, recording, telemetering and controlling instruments used to measure and control variables, such as pressure, flow, temperature, motion, force and chemical composition: Disassembles malfunctioning instruments, and examines and tests

mechanism and circuitry for defects. Troubleshoots equipment, in or out of control system, replaces or repairs defective parts, and cleans filter screens and dirt traps on instrument pipe lines. Reassembles instruments and tests assembly for conformance to specifications, using test instruments; such as, potentiometers, resistance bridges, manometers and pressure gauges. Adjusts spring-loaded screw-down calibrating and variation-limiting devices in thermograph instruments. Conducts periodic inspections and makes minor calibration adjustments to ensure functioning within specified standards. Adjusts and repairs final control mechanisms, such as automatically controlled valves or positioners on equipment, such as heat exchangers, for heating units and solution-preparing equipment. Orders necessary spare parts and charts or equipment to complete work assignments. Records equipment inspected and repaired, indicating department concerned, instruments inspected, and date and nature of inspection. Instructs plant personnel in correct and safe operating procedures for various instruments.

May repair a specific type of instrument, and be designated accordingly; for example,

Meter Serviceman

Panel-Instrument Repairman

8588-122 SURVEYING-AND-OPTICAL-INSTRUMENT REPAIRMAN(scient. & ind. equip., n.e.c.) DPT:261
surveying-and-optical-instrument technician.
GED: 4 SVP: 7 EC: 1 PA: M 4 7

Repairs, cleans and adjusts precision instruments, such as surveying, optical, and photogrammetric instruments:

Disassembles precision instruments, using hand tools, tweezers, gauges and jigs. Cleans optical parts with ether, and metal parts with varsol, carbontetrachloride, naptha gas or alcohol. Replaces broken or worn parts. Removes defects, such as burrs, from gears of rack and pinion mechanisms, using oil stone, and laps vertical axis. Resets devices; such as, clamping, tilting and slow-motion screws, circle-reading microscope, and mask-fine-reading scale, to manufacturer's specifications. Overhauls and adjusts assemblies, such as diagram-circle housing, telescope, and optics, using hand tools and special tools. Lubricates equipment with all-season lubricant. Fabricates or modifies equipment for special requirements, using machine shop equipment, such as lathe, milling machine and grinder. Reassembles and adjusts instruments by focusing instrument on fixed target or against a collimator, and setting dial readings on instrument to correspond to manufacturer's specifications.

8588-126 CAMERA REPAIRMAN(scient. & ind. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: 1 PA: L 4 7

Repairs and adjusts cameras, movie projectors and associated equipment, such as exposure meters:

Disassembles camera and related equipment, using hand tools, to examine and determine nature and location of defect. Replaces defective parts and fabricates or modifies parts as necessary, using bench lathe, grinder, drill press and precision tools. Tests and aligns diaphragm, lens mount, and film transport to adjust lens focus and minimize optical distortion, using precision gauges. Adjusts range and view finders, using fixed focusing target. Calibrates operation of shutter, diaphragm, and lens carrier with dial settings, according to manufacturer's specifications, using electronic or stroboscopic-timing instrument.

8588-130 PHOTO-FINISHING-EQUIPMENT REPAIRMAN
(scient. & ind. equip., n.e.c.) DPT:281
GED: 4 SVP: 7 EC: 1 PA: L 3 4 7

Adjusts and repairs photo-finishing equipment:

Examines automated, semi-automated, and manual-processing equipment; such as, cine and still-developing machines, slide-mounting machines, continuous-printing machines, enlargers, driers and mounting presses. Replaces defective or broken metal parts by making replacements, using metalworking and machine tools. Makes physical repairs, such as cleaning and tightening connections, soldering and welding broken metal parts, and bending and installing pipes. Adjusts speed and timing of automated processes according to tolerances required for quality control, using timing meter and hand tools. Checks and lubricates moving parts of machinery according to equipment maintenance schedules. Requisitions parts and materials.

May repair electronic circuitry in malfunctioning equipment, such as automatic-colour printers and video analyzers.

8588-134 GAS-METER REPAIRMAN(scient. & ind. equip., n.e.c.) DPT:261
GED: 4 SVP: 6 EC: 1 PA: M 4 7

Inspects, tests, repairs and adjusts residential and industrial gas meters:

Examines work ticket and performs appropriate tests to determine cause of meter malfunction, such as leaking valves or ruptured diaphragm. Removes top, front and back plates of meter case to gain access to internal working parts. Dismantles and repairs diaphragm assembly, gear assembly and recording mechanism. Soaks meter parts in acid or other solvents to remove deposits of tar or corrosion accumulated on surfaces of parts exposed to gas. Reassembles meter with new or reconditioned parts; such as, toe-plates, cranks, crank-arms, worm-gears, spindle shafts and indexes, using a variety of hand tools. Adjusts components, such as valves and valve-motion mechanisms to conform to specifications. Tests meters to detect leaks around gaskets and housings. Verifies accuracy of registration, using meter-calibrating equipment. Adjusts, calibrates and repairs meter-testing equipment. Instructs and directs work of helpers.

May install gas meters and regulators or repair special meters and be designated accordingly; for example,

Gas-Meter Installer

Special-Meter Repairman

8588-138 GYROSCOPE REPAIRMAN(scient. & ind. equip., n.e.c.) DPT:281
GED: 4 SVP: 6 EC: 1 PA: L 4 7

Repairs gyroscopes, using hand tools and following wiring diagrams: Dismantles faulty gyroscopes to ascertain nature and location of defects. Unsolders and disconnects necessary wires to disassemble gimbal (stabilizer). Removes ball bearings from pivots of gimbal. Washes ball bearings in cleaning solvent and dries them with jet of warm air from hose. Replaces ball bearings in pivots and inserts shims between bearings and retainer plate to fill space and keep play of bearings within acceptable limits, using dial gauge. Resolders connecting wires to terminals of gyroscope, using soldering iron. Tests reassembled gyroscope in simulated working conditions by mounting gyroscope in jig and positioning it at various angles.

May test continuity of electronic-control circuitry, using ohmmeter.

8588-142 WATER-METER REPAIRMAN(scient. & ind. equip., n.e.c.) DPT:281
GED: 4 SVP: 5 EC: 1 4 PA: L 4 7

Tests, adjusts and repairs water meters:

Connects meter to testing apparatus to test for leaks and recording accuracy by permitting specified volume of water to pass through meter under varying pressure. Disassembles meter by removing gear train and disk assembly, using hand tools. Cleans internal housing and parts by removing plant growth, rust and scale with wire brush and acid solution. Replaces warped or broken disks and gears. Repairs gears and disks by grinding to specified tolerances, using grinder, and fitting them in meter. Reassembles and tests meter. Tests large capacity meters in industrial plants to determine accuracy of operation. Keeps records of materials used and meters repaired.

8588-146 SPEEDOMETER REPAIRMAN(mech. equip., n.e.c.) DPT:681
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Repairs and adjusts automotive speedometers:

Disassembles speedometer, using hand tools, and cleans parts with cloth. Inspects parts for wear and warp and replaces defective parts. Reassembles speedometer and tests it to determine whether it is magnetized, using testing device. Places magnetized speedometer in demagnetizer to correct malfunction. Tests speedometer for accuracy, using speedometer tester, and makes necessary adjustments, using hand tools.

May repair automobile tachometers, using testing equipment and hand tools. May ensure accuracy of speedometer tester, using stroboscope.

8588-150 STEAM METERMAN(scient. & ind. equip., n.e.c.)
DPT:681
GED: 3 SVP: 5 EC: B PA: M 4 7

Repairs, tests and adjusts steam-condensate meters and flow meters used to measure and record steam output and consumption: Dismantles meter, using hand tools, and cleans components in solvent. Examines parts for defects, and makes minor repairs, such as straightening bent pieces. Reassembles meter, replacing excessively worn or damaged parts. Connects meter to steam line and turns valve to pass steam through meter. Weighs condensation collected in condensate reservoir of meter and compares weight with meter reading and standard deviation chart to verify accuracy of meter. Adjusts meter valves to correct metering deviations. Installs meters in steam systems.

8588-154 THERMOSTAT REPAIRMAN(scient. & ind. equip., n.e.c.)
DPT:681
GED: 3 SVP: 5 EC: I PA: L 4 7

Repairs defective thermostats used in refrigeration, air conditioning and heating equipment: Reads work order, engineering specifications or instruction sheets for data related to type of thermostat to be repaired. Disassembles and examines thermostat to locate and remove defective parts, using screwdriver and other hand tools. Replaces defective parts; such as, bellows, capillary, range spring, and micro, relay or mercury switches. Cleans valve, using steel wool, chlorothene and air hose. Reassembles thermostat according to methods sheets, specification charts or parts book, using cam press, soldering iron and hand tools. Performs various types of tests, such as gas or pressure tests and measures tolerances of assembled parts, using devices, such as micrometer, scale, and calipers. Repairs leaks in valve seats or bellows of thermostats by replacing defective components. Examines thermostats for loose screws and dents. Applies paint touch-up to valves. Restamps number to identify thermostat and places repaired thermostats in tote boxes. Calibrates thermostats for specified temperature, and valves for pressure and flow rate by adjusting regulator screw and observing dial gauge for pressure reading.

8588-158 AIRCRAFT-INSTRUMENT-MECHANIC HELPER
(scient. & ind. equip., n.e.c.)
DPT:684
instrument-technician helper, aircraft.
GED: 3 SVP: 5 EC: I PA: L 4 7

Helps mechanic to repair and test aircraft instruments: Removes faulty instruments from aircraft and disassembles them, using hand tools. Adjusts and repairs instruments as directed, using testing equipment, tweezers and instrument-maker's hand tools. Cleans out instrument pressure lines, using compressed air equipment. Reinstalls instruments in aircraft. See also definition for term title, 02-160 HELPER (any ind.).

8588-162 INSTRUMENT-MECHANIC HELPER,
UTILITIES(scient. & ind. equip., n.e.c.)
DPT:684
GED: 3 SVP: 5 EC: I 5 PA: L 3 4 7

Helps mechanic to repair and maintain metering instruments used in electric-power-generating station: Disconnects and removes defective instruments, as directed by mechanic, using mechanic's and electrician's hand tools. Disassembles and reassembles instruments to assist in making repairs. See also definition for term title, 02-160 HELPER (any ind.).

8588-166 INSTRUMENT-REPAIRMAN HELPER(scient. & ind. equip., n.e.c.)
DPT:684
instrument-man helper.
GED: 3 SVP: 5 EC: I 5 PA: L 3 4 7

Helps repairman install, repair and adjust recording and controlling instruments, used to measure and control variables, such as pressure, flow, temperature, motion, force and chemical composition: Changes and collects charts on recording instruments. Observes operating condition of instruments and reports abnormal readings to instrument repairman. Drills holes in masonry or metal panels for installation of instruments, using electric or pneumatic drill. Drills, grinds and buffs parts to repair and finish them, using portable or bench tools. Paints instrument casings and panels, using brush or

spray-gun. Performs minor repairs to instrument-control systems as directed, by replacing defective parts, using instrument-repairman's tools and electrician's hand tools. See also definition for term title, 02-160 HELPER (any ind.).

8588-170 SURVEYING-AND-OPTICAL-INSTRUMENT-REPAIRMAN HELPER(scient. & ind. equip., n.e.c.)
DPT:684
GED: 3 SVP: 4 EC: I PA: M 4 7

Helps repairman to disassemble, clean, repair, and adjust precision instruments, such as surveying, optical, and photogrammetric instruments: Disassembles damaged or faulty instruments and removes defective parts, using hand tools. Cleans optical parts with ether, and metal parts with varsol. Examines parts for ease and freedom of movement. Positions and secures instruments, such as theodolite, compass or transit in test-mounts or fixtures. Focuses instruments on specified target and makes trial observation to verify optical accuracy and calibration. Tends machines, such as lathe, milling machine and grinder to fabricate or modify parts for instruments. See also definition for term title, 02-160 HELPER (any ind.).

8588-174 CALIBRATOR, TORQUE WRENCH(scient. & ind. equip., n.e.c.)
DPT:684
GED: 2 SVP: 4 EC: I PA: L 4 7

Calibrates and repairs torque wrenches: Sets torque indicator, on end of wrench handle, to torque desired, and inserts head of wrench into socket on test scale. Twists wrench until wrench mechanism releases and notes corresponding indication on test scale. Adjusts wrench mechanism so that indications on test scale coincide with releases of torque wrench and settings on torque indicator, using allen wrench. Disassembles defective wrenches and examines and replaces or repairs parts, using hand tools. May calibrate other measuring devices, such as micrometers, vernier calipers, and snap gauges.

8588-178 GAS-METER-REPAIRMAN HELPER(scient. & ind. equip., n.e.c.)
DPT:684
GED: 2 SVP: 3 EC: I PA: M 4 7

Helps repairman dismantle, clean, repair, install and test gas meters: Dismantles meters, using hand tools. Cleans meter parts, such as panels, diaphragms, tangent arms, indicator shafts, and valves to remove grease, paint, rust and dirt, using cleaning solvents. Cleans outside of meter cases, using sandblasting machine. Examines cleaned parts for dents and excessive wear and discards unusable parts. Straightens bent parts, using rawhide hammer. Replaces worn gaskets, diaphragms, diaphragm disks and rings in meter, and tests diaphragm for leaks, using testing device. Solders small leaks, using soldering iron or returns meter to repairman for replacement of defective parts. Tests function of repaired meters, using low-flow apparatus. Solders tops on repaired tin-case meters, and wires tops on iron and aluminum case meters. Paints repaired meters, using spray gun. Replaces identification plate numbers, and places seal on meter according to government specifications. Repacks gas-meter-stuffing boxes with tallow-soaked yarn, and grinds, fits, and adjusts meter valves to prevent leaks. See also definition for term title, 02-160 HELPER (any ind.).

8589-OTHER MECHANICS AND REPAIRMEN, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with repairing and servicing miscellaneous mechanical equipment; such as, small domestic gasoline-powered lawn mowers, snow blowers, chain saws and portable generators and pumps. Occupations primarily concerned with oiling and greasing mechanical equipment are classified in this unit group. Oilers working in ships are classified in Unit Group 9157, ENGINE AND BOILER-ROOM CREW, SHIP. Oiling and greasing occupations at the level of the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.) are classified in Unit Group 9918, OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK,

N.E.C. Occupations concerned with repairing and servicing marine outboard and inboard engines are classified in Unit Group 8592, MARINE CRAFT, FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS.

8589-110 FIELD SERVICEMAN(mech. equip., n.e.c.) DPT:251
mechanical-service representative.

GED: 4 SVP: 7 EC: I 5 PA: M 3 4 5 6 7

Repairs plant and office machinery, and sells machinery, service contracts, parts and modernization kits at customers' premises: Inspects machine and estimates repair costs, using charts and service manuals. Recommends company's maintenance services to customer. Requisitions replacement parts, such as drive belts, valves, seals, motors and gearboxes. Repairs and adjusts machines, using hand and power tools. Test-runs machine to verify conformance to manufacturer's specifications. Prepares records, showing nature of malfunction, cost of parts installed and labour charges. Sells machine parts, modification kits, and service contracts.

8589-114 AUTOMOTIVE-MAINTENANCE-EQUIPMENT
SERVICEMAN(mech. equip., n.e.c.) DPT:281

GED: 4 SVP: 7 EC: B 67 PA: M 3 4 7

Repairs and adjusts equipment used to service, repair and test automotive vehicles:

Examines faulty equipment, such as oil or gasoline pumps, air compressors, lubrication equipment, hoists and dynamometers to ascertain nature and location of defects. Dismantles equipment and removes defective parts. Replaces or repairs defective parts, using pipe-fitting and other hand tools. Reassembles, adjusts and test-operates repaired equipment, using hand and power tools. Adjusts meters, registers and gauges of fuel and oil pumps to meet federal standards.

May install new equipment.

8589-118 DREDGE MECHANIC(mech. equip., n.e.c.) DPT:281

GED: 4 SVP: 7 EC: B5 PA: H 3 4 7

Repairs and services pumps, engines, and related equipment on suction dredge:

Examines faulty machinery and related equipment to determine nature of defects. Dismantles, cleans, repairs or replaces parts, using hand tools. Lubricates and reassembles pumps, engines, and other equipment, such as compressors and deck winches. Operates winches to move heavy equipment, such as work-boat.

May weld cracks or seams in pontoons and pipe, using gas or electric-arc-welding equipment.

8589-122 GUNSMITH(mech. equip., n.e.c.) DPT:281
small-arms repairman.

GED: 4 SVP: 7 EC: I PA: L 4 7

Repairs and modifies firearms according to blueprint or customers' specifications:

Examines parts of gun, such as barrel, firing mechanism, sights and stock for condition and accuracy of fit. Chisels, files, scrapes and performs other tooling to correct inaccuracies. Rebore barrels, using boring machine, to enlarge caliber of bore or to repair damaged bore. Operates broaching machine to cut rifling in barrel of small arms. Installs choke device on shotguns to control shot pattern. Operates machine to grind and polish metal parts. Immerses metal parts in bluing-salt-bath to impart rust resistant surface and blue colour to metal. Assembles parts, attaches and adjusts sights, and tests completed gun to determine strength characteristics, correct alignment, and assembly of fire-arm, using hand tools. Fabricates new wooden stock for guns according to customers' specifications, using wood-working tools. Refinishes wooden stocks by hand sanding and rubbing with special finishing oil and quick-drying lacquer.

May make metal parts for guns, using hand tools and metalworking machines.

8589-126 PUMP INSTALLER AND REPAIRMAN(mech. equip., n.e.c.) DPT:261
pump-installation-and-service man.

GED: 4 SVP: 6 EC: O 6 PA: H 3 4 7

Installs and repairs various types of pumps in wells, such as centrifugal pumps, deep-well jet pumps, submersible pumps and vertical turbine pumps:

Drives hoisting equipment (rig) into position alongside of well. Starts hoisting engine and moves levers and pedals to raise and extend telescoping hoisting mast. Bolts guy wires and struts to mast for support. Raises pump section to vertical position and installs section in well casing, using hoist. Screws coupling, or bolts flange, to connect pump base to pipe column. Drives wedges under pump base of vertical-turbine-type pump to align base with pump shaft. Verifies alignment of pump by centering pump shaft in opening until it fits without interference, or by using machinists' dial indicator. Hoists electric-power unit or engine-drive gearbox into position over pump base, of vertical turbine type pumps, verifying alignment of pump shaft by inspection of clearance between shaft and hollow spindle of driver. Attaches pressure gauge and orifice meter or electric recorder to pump outlet, and pumps air into well to measure static and dynamic water levels and capacity of well. Dismantles and examines pump to determine cause of malfunction. Cleans, repairs, and replaces worn or damaged parts.

May direct truck-crane operator to hoist pump motor into position. May work in shop and repair several types of pumps.

8589-130 FUEL-INJECTION SERVICEMAN(mech. equip., n.e.c.) DPT:281
fuel-injection-equipment repairman.

GED: 4 SVP: 6 EC: I 5 6 PA: H 3 4 7

Repairs, tests and calibrates fuel injection units used on equipment, such as diesel engines, trucks, construction equipment and power plants:

Studies repair-order and disassembles unit to locate cause of malfunction. Repairs assemblies by replacing parts. Examines fuel-injection pump and governor parts for compliance with specifications. Assembles pumps and governors, and tests and calibrates fuel flow and pressure to meet operating specifications, using hand tools, special tools and measuring devices.

8589-134 PUMP REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 7 EC: B 5 6 PA: M 3 4 7

Repairs pumps, such as centrifugal and plunger-type pumps:

Examines pumps for malfunctioning and to locate damage or wear, such as poor alignment of pump shaft, slippage of drive belt or worn bearings. Observes pump in operation and feels for excessive heat and vibration of parts to detect cause of malfunction. Dismantles pumps, and repairs or replaces defective parts, using hand and power tools, hoists and welding equipment. Grinds and reseats valves, using valve grinding machine or hand drill with grindstone attachment. Reassembles pumps and checks performance of repaired pumps. Records nature and extent of repairs performed.

May wire motor to switchboard and install fuse box. May requisition replacement parts from supply department. May repair and adjust pump power units, such as diesel or gasoline-engines, and electric-motors.

8589-138 AIRPORT-MAINTENANCE MAN(construction; electric. equip.; mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 7 EC: B 6 7 PA: M 2 3 4 7

Inspects and maintains airport buildings and equipment incidental to air transport, such as fuel and water supply services, beacons and landing-field lights, performing any combination of the following duties:

Inspects fuel system to detect and correct leakage, corrosion, faulty fittings, and other malfunctions of mechanical units, meters and gauges, including fuel hydrants, tank pits, distribution lines, storage tanks, turbines, and control rooms. Repairs, replaces and adjusts malfunctioning equipment according to specifications, using repair manuals and hand tools. Disassembles, adjusts, aligns and calibrates gauges and meters. Inspects electrical wiring, switches, controls, beacons and lights for safe operating conditions, and makes minor repairs. Performs other maintenance work, such as cleaning storage

tanks and drains, removing and installing filter systems, painting buildings and doing rough carpentry work.

8589-142 SAFE-AND-VAULT SERVICEMAN(mech. equip., n.e.c.) DPT:681
GED: 3 SVP: 7 EC: I 6 PA: VH 3 4 7

Installs and repairs safes and vaults in banks and other establishments:

Installs vaults, vault doors, safes and deposit boxes in prepared vault shell, according to blueprints, using equipment, such as wooden supports, hoist or forklift, dolly, and hand tools. Removes and repairs vaults, safes, vault compartments, hinges, dials, handles, and other related equipment, using hand tools, and machines and equipment, such as drill presses, and oxy-acetylene-welding and cutting apparatus. Adjusts safe and vault combinations to obtain new number sequence. Tests and repairs locks and locking devices [8589-150 Locksmith (mech. equip., n.e.c.)]. Removes interior and exterior paint finishes, and sprays on new finishes, using spray-painting equipment. May install safe and vault-alarm systems in banks and offices.

8589-146 LOCKSMITH(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: I PA: L 4

Repairs, installs and adjusts locks, makes keys and changes lock combinations:

Examines lock parts to check accuracy of fit. Manipulates lockpick in cylinder to open jammed locks or locks without keys. Disassembles locks, such as padlocks and door locks, to locate defect. Replaces worn tumblers, springs and other parts, or repairs them by chiseling, filing, scraping or other tooling to correct dimensions. Inserts new or repaired tumblers into lock to change combination. Cuts new or duplicate keys, using key-cutting machine.

May keep records of location, type and series of company locks and keys. May install locks on doors. May make lock parts, using metalworking machines and precision tools.

8589-150 PNEUMATIC-TOOL REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: I 5 PA: M 4 7

Repairs air motors and pneumatic tools, such as hammers, drills, chisels and reamers:

Starts motor or tool and listens to its sound to locate cause of malfunction. Disassembles motor, and repairs or replaces defective gears, pistons, connecting rods and other parts, such as hose coupling, gaskets and washers, using mechanics' tools. Routes components requiring machining or welding to machine shop.

May record repairs made and requisition replacement parts.

8589-154 PNEUMATIC-TUBE REPAIRMAN(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: I PA: M 4 7

Repairs pneumatic-tube-carrier systems:

Locates sources of trouble, such as jammed carriers, insufficient carrier speed, and defective station detectors, using installation diagrams and knowledge of system. Dismantles equipment to remove worn or damaged parts, using hand tools. Repairs or replaces parts to correct mechanical and electrical failures, using hand tools and schematic drawings. Tests repaired system for circuit continuity and proper functioning of mechanical equipment.

May install pneumatic-tube-conveyor systems or modify existing installations.

8589-158 SALVAGE MAN, MACHINERY(mech. equip., n.e.c.) DPT:281
GED: 3 SVP: 6 EC: I 5 PA: M 4 7

Repairs salvageable mechanical parts of machines and equipment: Dismantles machinery, equipment, and parts, using hand tools. Inspects parts to determine salvageability and deviation from standards, using fixed gauges and electrical test equipment. Operates metalworking tools, such as grinding, drilling, polishing and buffing machines to repair parts. Reconditions parts by filing, bending and straightening, using hand tools. Verifies dimensions and tolerances, using measuring instruments.

May reassemble parts, using hand tools. May direct or perform

cleaning, storing, and issuing of reclaimed parts and packing of usable materials for return to supplier. May keep inventory of salvaged parts in stock.

8589-162 HYDRAULIC-UNIT REPAIRMAN(mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I 4 PA: H 3 4 7

Repairs hydraulic units, such as door closers, car hoists, jacks, fork-lifts and pumps:

Disassembles units, and drains oil from cylinder, using hand tools and vise. Immerses parts in cleaning solution. Removes encrusted dirt and rust, using electric-rotary-wire brush and grinding wheel. Examines and feels component parts, such as cylinders and pistons, for rust, dirt and scoring. Measures parts for wear, using micrometers, calipers and thickness gauges. Repairs or replaces components, such as bushings, rods and cylinders, using grinders, buffers, and hand tools. Welds cracked casings, using welding equipment. Fills oil chambers, and repacks spindles with packing, seals or washers. Assembles, adjusts and tests units, according to specifications, using hand tools and testing equipment.

May fabricate parts, using lathe, drill press, shaping and milling machines.

8589-166 PNEUMATIC-UNIT TESTER AND REPAIRER(mech. equip., n.e.c.) DPT:381
GED: 3 SVP: 6 EC: I PA: L 4 7

Repairs, adjusts and tests pneumatic units, such as regulators and switches:

Disassembles unit, using hand tools, and examines parts for defects. Drills-out broken screws or bolts, using portable electric drill, and rethreads hole, using tapping tool. Removes burrs, dirt, scale and rust from parts, using solvents, rags and airhose. Replaces defective parts, and reassembles unit. Mounts unit on test stand, and connects air or vacuum lines to unit. Observes gauges and manometers, records vacuum or pressure input on data sheets, and turns setscrews on unit to make adjustments as specified. Maintains record of repairs done, showing nature of malfunction, date of repair and spare parts used.

8589-170 SCALE MECHANIC(mech. equip., n.e.c.) DPT:381
scale repairman.
GED: 3 SVP: 6 EC: I PA: H 4 7

Installs, repairs and adjusts weighing scales:

Moves scale into position, manually, or using hoists and rollers. Inserts shims between scale base and foundation to level scale. Rolls test-weights to and from position on scale platform and reads dial indications or weight tickets to verify accuracy of scales. Determines type of error, and co-ordinates readings with weights by adjusting parts, such as loading box, rack, pendulum weights, and cams, for travel and leverage. Adjusts and tightens parts, such as locking handle, cam holdowns and ribbons, pendulum-lever assembly, and stops for tare-beam lever, using hand tools. Minimizes friction in all bearings and parts of scale, using hand tools, such as chisels, tin snips, hacksaw, plumb bob and wrenches. Repairs or replaces defective parts. Installs new parts in conjunction with balancing operation.

May be concerned with balancing scales and be designated accordingly, Balancer, Scale

8589-174 FAREBOX SERVICEMAN(mech. equip., n.e.c.) DPT:681
register repairman.
GED: 3 SVP: 6 EC: I PA: L 4 7

Cleans and repairs fareboxes and similar transit company equipment, such as transfer-ticket machines, token-vending machines, ticket registers, and coin sorters and counters:

Disassembles equipment, using hand tools, and inspects parts for defects. Cleans covers, cases and working parts with cleaning solution. Replaces defective parts and adjusts timing and locking devices and machine parts as required. Reassembles equipment, oils mechanism and repaints outside of case, using oil can, brush and spray gun.

May replace locks on equipment, using hand tools.

8589-178 AIR-COMPRESSOR REPAIRMAN(mech. equip., n.e.c.) DPT:684
air-compressor mechanic.
 GED: 3 SVP: 6 EC: I 5 PA: L 4 7

Repairs air compressors according to manufacturers' manuals: Disassembles compressor, and cleans and examines parts for wear or breakage. Installs new parts, such as piston rings, valves, washers, bushings, and wrist pins, using hand tools. Reassembles compressor and adjusts clearances of moving parts, following manufacturers' manuals and using hand tools. Test-operates reassembled unit by connecting it to compressed-air outlet.

8589-182 REPAIRMAN, HAND TOOLS(mech. equip., n.e.c.) DPT:681
 GED: 3 SVP: 5 EC: I PA: M 4 7

Repairs hand tools, such as planes, vises, bit braces, levels and tape rules: Examines defective tool to determine nature of defect or cause of malfunction and possibility of repair. Disassembles tool, using hand tools, such as hammers, chisels, punches and files. Operates power tools, such as drill press and arbor press to remove screws, pins, rivets, bushings, casings and jackets from tools. Replaces defective part, or repairs part, using hand and power tools. Verifies dimensions, straightness, and concentricity of parts, using gauges. Reassembles tool, using hand and power tools. Records nature and extent of repairs performed and repair time involved. Maintains stock of spare parts.

8589-186 VENDING-MACHINE SERVICEMAN(mech. equip., n.e.c.) DPT:681
coin-machine serviceman.
 GED: 3 SVP: 5 EC: I PA: M 3 4 7

Services and repairs coin-operated-vending machines placed in establishments on concession basis: Drives service truck to visit establishments and examine operation of machines. Adjusts and repairs machines, replacing worn or defective electrical or mechanical parts, using hand tools and electrical testing equipment. Arranges for return of machines requiring major repairs. Dismantles and repairs or rebuilds them in shop, using hand tools and electrical tools, such as soldering gun. May collect coins from machine and make financial settlements with concessionaires. May service and repair a specific type of vending machine and be designated accordingly.

8589-190 VALVE REPAIRMAN(mech. equip., n.e.c.) DPT:684
 GED: 3 SVP: 5 EC: I 4 6 7 PA: H 3 4 7

Repairs defective valves and pipefittings removed from pipelines, such as in oilfields and refineries: Clamps valve in vise. Grinds surfaces of valve to specified finish, using portable grinder. Cleans valve parts, using electric buffer and solvents. Verifies dimensions of valve parts, by visual check and using calipers. Routes parts, requiring machining, to machine shop. Assembles and repacks valves, using hand tools. Screws valves on testing device and moves handle of hydraulic pump to test valve at specified pressures. Tightens bolts to stop leaks, using wrench. Removes flanges and pipefittings from pipe, using wrenches and oxy-acetylene-cutting torch. Cleans flanges and fittings, using sandblasting equipment. Paints valves and fittings, using spray gun. Keeps inventory of valves, flanges, and pipefittings, by size and type, and orders new parts from catalogue.

8589-194 FIRE-EQUIPMENT SERVICEMAN(mech. equip., n.e.c.) DPT:364
 GED: 3 SVP: 4 EC: B 6 7 PA: M 3 4 7

Services and repairs fire-fighting equipment, such as fire extinguishers and sprinklers, to secure property against fires: Dismantles fire extinguishers, and examines parts, such as tubings, head gaskets and horns for defects. Replaces worn or damaged parts, such as defective sections of hoses and pipelines, using hand tools. Cleans and recharges fire extinguishers with fire-extinguishing agents, such as soda water and sulphuric acid, carbon tetrachloride, or other patented solutions. Tests extinguishers for conformity with specifications, by turning valves to force water through lines, using hydrostatic-test equipment. Inspects items, such as water pumps, fire

hydrants, water lines and connections, hose-house equipment, valves, fire doors and water level of gravity-feed tanks. Maintains inventory of equipment, and fills out inspection tags. Reports unsatisfactory conditions to fire chief. May clean and maintain gas masks, using hand tools. May be concerned with servicing and repairing fire extinguishers only, and be designated accordingly, Fire-Extinguisher Serviceman

8589-198 BICYCLE REPAIRMAN(mech. equip., n.e.c.) DPT:684
 GED: 2 SVP: 4 EC: I PA: M 4 7

Repairs and services pedal cycles: Examines defective cycles to determine nature and location of defects. Replaces damaged parts or accessories, such as handle bars, speed-change gears, stands, lights and seat, using hand tools. Tightens and loosens spokes to align wheels. Disassembles axle to repair coaster brakes and to adjust and replace defective parts, using hand tools. Adjusts cables or replaces worn or damaged parts to repair hand brakes. Adjusts steering gear, chain-drive, speed-change gears and lights. Repairs tire tubes, using cold or hot patches to cover holes. Lubricates parts. May weld cracked or broken frames together, using oxy-acetylene torch and welding rods. May repair spoked wheels for invalid-wheel chairs, sulkies and home exercisers. May assemble and rent or sell new bicycles and accessories.

8589-202 PUMP-INSTALLER-AND-REPAIRMAN HELPER(mech. equip., n.e.c.) DPT:664
pump-installation-and-service-man helper.
 GED: 2 SVP: 3 EC: O 6 PA: H 3 4 7

Helps install and repair various types of pumps in wells, performing any combination of the following duties: Shovels earth and lays timber and planks to build level runway and foundation for truck-mounted hoist and derrick mast. Drives stakes and attaches guys and struts to brace mast, using hand tools. Bolts pulley blocks to building frame or other anchors and runs hoist cables through pulley blocks. Attaches cable, rope or chain choker to pump parts and secures them to hoisting line. Signals pump erector to raise, lower, and position pump, using hand signals. Couples pipe sections, using wrenches and chain tongs. Inserts airhose into well, attaches orifice meter or electric recorder to pump outlet, and pumps air into well to test well for capacity and water level. See also definition for term title, 02-160 HELPER (any ind.).

8589-206 MINING-SHOVEL OILER(mining & quarrying) DPT:587
shovel oiler.
 GED: 2 SVP: 3 EC: O 5 PA: M 2 3 4

Lubricates crawler-track, stripping and loading shovels used for open-pit or strip-mining operations: Heats dope (heavy duty lubricant) in dope box to improve viscosity, and sprays lubricant onto gears and other moving parts. Greases and oils other specified components, using grease gun and oil can. Inspects shovel for worn parts, and assists operator in making minor repairs, using hand tools. Shovels dirt, rock or coal from working area to prevent fouling of shovel treads or power cables. Records production, repairs and down time. May perform other duties, such as checking slope of grade cuts, using straight edge, and guiding trucks into loading position, using hand signals. May be designated according to type of shovel serviced and be designated accordingly; for example, Loading-Shovel Oiler Stripping-Shovel Oiler

8589-210 OILER AND GREASER(mech. equip., n.e.c.) DPT:587
machine oiler.
 GED: 2 SVP: 3 EC: I 5 6 7 PA: M 2 3 4

Oils and greases moving parts, such as shaft and motor bearings, sprockets, drive chains, gears and pulleys of mechanical equipment: Fills containers, such as oilcan, and pneumatic or hand-operated grease gun with specified lubricant. Squirts or pours oil on moving parts and friction surfaces or into holes, oil cups or reservoirs. Turns

oil cup valves to regulate flow of oil to moving parts. Forces grease into bearings with grease gun, smears grease on friction surfaces, or packs grease cups by hand. Refills or changes oil in wells and sumps of lubricating systems. Reports machinery defects or malfunctions to supervisor or machine operator. Maintains records of activities. May make minor adjustments and assist machine operators or repairmen.

8589-214 FIRE-EQUIPMENT-SERVICEMAN HELPER(mech. equip., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: B 6 7 PA: M 3 4

Helps serviceman to service and repair fire-fighting equipment: Helps dismantle fire extinguishers and replace defective parts, such as hoses and pipelines, using hand tools. Cleans and recharges fire extinguishers with fire extinguishing agents, such as soda water and sulphuric acid, carbon tetrachloride, or other patented solutions. Helps inspect items, such as water pumps, fire hydrants, water lines and connections, hose-house equipment, valves, fire doors, and water level of gravity-feed tanks. Fills out inspection and name of inspector. See also definition for term title, 02-160 HELPER (any ind.). May be concerned with helping to repair fire-extinguishers only, and be designated accordingly, Fire-Extinguisher-Serviceman Helper

8589-218 GARAGE SERVICEMAN(motor vehicle) DPT:687
lubrication man.
GED: 2 SVP: 3 EC: I 6 PA: M 3 4

Lubricates and services automotive vehicles: Injects grease into units, such as universal joints and steering knuckles, using hand or pneumatic grease gun. Inspects fluid level of brake reservoir, steering gear box, power steering reservoir, transmission, differential and rear axle housings, and adds specified lubricants when required. Sprays leaf springs with lubricant, using spray gun. Drains oil from crankcase and refills crankcase with required amount of oil. Adds water to radiator and battery. Replaces oil filter, air filter, windshield-wiper blades, spark plugs and fan belt. Cleans garage floors and work areas, using cleaning equipment.

May refuel automotive vehicles. May repair tires. May keep record of gasoline and oil supplies in storage tanks.

8589-222 SPRAY-GUN REPAIRMAN(mech. equip., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: I 7 PA: L 4 7

Repairs and adjusts spray-paint guns: Disassembles spray gun, using wrenches. Cleans parts in gasoline or other solvent. Replaces valves, jets, and other worn or broken parts. Attaches new hose to guns. Turns thumbscrews, nuts, and other controls on gun to adjust jets and nozzles. May repair agitators of paint-mixing equipment. May mix lacquers, using paddle or electric shaker-agitator, scales, and viscosity cups. May order parts and materials to maintain inventory levels.

8589-226 GREASER, JOURNAL BOX(rail. rolling stock) DPT:687
GED: 2 SVP: 2 EC: B PA: L 3 4

Cleans lubricating pads, and packs them in wheel-journal-boxes of railway cars: Dumps used pads into centrifuge and starts machine. Removes pads after specified time and rejects worn pads. Dumps pads in oil tank to saturate them with oil. Packs lubricating pads around wheel bearings in journal-box receptacles, using notched packing tool.

8589-299 OTHER MECHANICS AND REPAIRMEN
This group includes mechanics and repairmen, not elsewhere classified; for example, those who service, adjust and repair lawn mowers or chain saws, replace glass rods in yarn-winding frames, or repair wheels and casters on rolling equipment, such as racks and carts. Typical examples of occupational titles covered by this residual group definition are:
Chain-Saw Repairman(mech. equip., n.e.c.)
Lawn-Mower Repairman(mech. equip., n.e.c.)
Wheel-and-Caster Repairman(mech. equip., n.e.c.)

859-OTHER PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS

This minor group includes occupations, not elsewhere classified, concerned with building and repairing ships and other metal, wood or fibreglass marine craft; and fabricating, assembling and repairing a variety of products; such as, jewellery, silverware, pens and pencils, musical instruments, games, toys, sporting goods, brooms, brushes, buttons, zippers and miscellaneous paper products. Includes painting and decorating occupations, except those directly concerned with construction; and inspecting, testing, grading and sampling occupations engaged in quality control work primarily related to worker activities in this minor group. These occupations are classified in the following unit groups:

- 8590** Foremen: Product Fabricating, Assembling and Repairing Occupations, n.e.c.
- 8591** Jewellery and Silverware Fabricating, Assembling and Repairing Occupations
- 8592** Marine Craft Fabricating, Assembling and Repairing Occupations
- 8593** Paper Product Fabricating and Assembling Occupations
- 8595** Painting and Decorating Occupations, except Construction
- 8596** Inspecting, Testing and Grading Occupations: Product Fabricating, Assembling and Repairing, n.e.c.
- 8598** Occupations in Labouring and Other Elemental Work: Product Fabricating, Assembling and Repairing, n.e.c.
- 8599** Other Product Fabricating, Assembling and Repairing Occupations, n.e.c.

8590-FOREMEN: PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, N.E.C.

May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Inspection

This unit group includes occupations, not elsewhere classified, as described under the master title, 01-250 SUPERVISOR/FOREMAN (any ind.), concerned with supervising and co-ordinating activities of workers engaged in fabricating, assembling, inspecting and repairing a variety of products, such as jewellery and silverware, musical instruments, games, toys, sporting goods, brooms and brushes, miscellaneous paper products and ships and small boats. Includes: supervising and co-ordinating activities of workers who paint or apply protective, decorative or identifying coatings to various products and equipment. Foremen of construction painters are classified in Unit Group 8780, FOREMAN, OTHER CONSTRUCTION TRADES OCCUPATIONS.

8590-114 FOREMAN, JEWELLERY AND SILVERWARE WORKERS(jewellery & precious metal prod.)

DPT:138

Supervises and co-ordinates activities of workers engaged in fabricating, assembling and repairing jewellery and silverware, (Unit Group 8591):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Jewellery Repairing
Foreman, Silverware Department

8590-110 FOREMAN, INSPECTING, TESTING, GRADING AND SAMPLING OCCUPATIONS: PRODUCT FABRICATING, ASSEMBLING AND REPAIRING, N.E.C.(any ind.) DPT:138

quality-control foreman.

Supervises and co-ordinates activities of workers, not elsewhere classified, engaged in inspecting and other quality control work in the fabrication, assembly and repair of miscellaneous products, (Unit Group 8596):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

8590-118 FOREMAN, MARINE CRAFT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS(ship & boat bldg.) DPT:138

Supervises and co-ordinates activities of workers engaged in building and repairing ships, and fabricating, assembling and repairing other metal, wood or fibreglass marine craft, (Unit Group 8592):

Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).

May supervise workers engaged in a particular activity and be designated accordingly; for example, Foreman, Fibreglass Boats
Machinist Foreman, Outside

Painter Foreman, Shipyard
Pipe-Fitter Foreman, Ships
Rigger Foreman
Shipfitter Foreman
Shipwright Foreman

**8590-122 FOREMAN, PAINTING AND DECORATING
OCCUPATIONS, EXCEPT CONSTRUCTION**(any
ind.) **DPT:138**

Supervises and co-ordinates activities of workers engaged in preparing surfaces, and painting, decorating or applying protective, decorative or identifying coatings to produce finishes on wood, metal or similar surfaces, including transportation equipment, (Unit Group 8595):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a particular activity and be designated accordingly; for example,
Foreman, Buffing and Lacquering
Foreman, Decorating
Foreman, Finishing Room
Foreman, Mirror Silvering(glass)
Foreman, Paint Department
Foreman, Porcelain Enameling

**8590-126 FOREMAN, PAPER PRODUCT FABRICATING
AND ASSEMBLING OCCUPATIONS**(paper prod.) **DPT:138**

Supervises and co-ordinates activities of workers concerned with fabricating and assembling paper products, such as paper bags, boxes, envelopes, containers, liners, labels and similar items, (Unit Group 8593):
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.).
May supervise workers engaged in a specific activity and be designated accordingly; for example,
Foreman, Box Making
Foreman, Coremaking
Foreman, Moulded-Pulp Products

8590-130 DOCKMASTER(ship & boat bldg.) **DPT:138**
dock foreman; docking master.
GED: 4 SVP: 7 EC: O PA: L 4 5

Supervises and co-ordinates activities of workers engaged in drydocking vessels for painting, cleaning and repair:
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). Analyzes vessel's docking plan, structural drawings, and specifications to determine size, shape, and number of keel and bilge blocks required to support vessel. Directs docking crew in assembling, positioning, and securing blocks to floating drydock platform, marine railway, or floor of graving dock. Takes sights to establish reference points for positioning vessel over blocks, using transit, or boot jack and centering wire, and directs crew in aligning vessel over blocks. Directs workers in pumping operations and in positioning, flooding and pumping gate in graving dock. Supervises flooding operations and removal of vessels from drydock. Maintains records of services supplied to ships in dock.
May direct repair work of drydock structure.

8590-134 FOREMAN, MARINE SERVICE(ship & boat bldg.) **DPT:138**
GED: 4 SVP: 7 EC: B PA: L 4 5 6 7

Supervises and co-ordinates activities of workers engaged in repairing, painting, and restoring small craft in boat-repair service establishment:
Performs duties as described under master title, 01-250 SUPERVISOR/FOREMAN (any ind.). Confers with owner or crew of vessel to obtain maintenance history and details concerning condition of craft. Observes and listens to vessel in operation to detect unsafe or malfunctioning equipment and leaks or other flaws in hull superstructure, according to knowledge of maintenance needs of small craft and marine safety requirements. Performs tests on vessel and equipment, using gauges and other standard testing devices. Estimates cost of repairs according to knowledge of labor and materials requirements or fee schedule.

**8590-199 OTHER FOREMEN, PRODUCT FABRICATING,
ASSEMBLING AND REPAIRING OCCUPATIONS**

This group includes miscellaneous product fabricating, assembling and repairing foremen, not elsewhere classified; for example, those who supervise and co-ordinate activities of workers engaged in fabricating brushes, lamp shades and paint rollers, and assembling cartridge primers and other products, such as pens, pencils, toys and games. Typical examples of occupational titles covered by this residual group definition are:
Foreman, Brush Making(misc. prod. fab., n.e.c.)
Foreman, Lamp Shade Fabrication(misc. prod. fab., n.e.c.)
Primer Foreman(explosives)
Foreman, Assembly(misc. prod. fab., n.e.c.)
Foreman, Toy Assembly(sport. & toy)

**8591-JEWELLERY AND SILVERWARE
FABRICATING, ASSEMBLING AND REPAIRING
OCCUPATIONS**

This unit group includes occupations concerned with fabricating, assembling and repairing fine and costume jewellery and precious metal ware. Activities include: examining, cutting, and polishing precious and semi-precious stones for decorative jewellery articles; shaping and setting gems; fabricating and assembling trophies, tableware, dresser sets and ornamental articles, rings, brooches and bracelets of precious or semi-precious metals and alloys; machining, gluing, riveting, soldering, pressing-forging, fitting-placing and abrading, using a variety of hand or power tools, and equipment, chemicals, optical instruments and accessories. Jewellery moulding and casting occupations are classified in Unit Group 8137 - MOULDING COREMAKING AND METAL CASTING OCCUPATIONS. Occupations concerned primarily with the making of diamond dies and cutting tools are classified in Unit Group 8311 - TOOL AND DIE MAKING OCCUPATIONS. Jewellery sample-making occupations are classified in Unit Group 8395 - PATTERNMAKERS AND MOULDMAKERS, N.E.C. Jewellery enameling occupations are classified in Unit Group 8595 - PAINTING AND DECORATING OCCUPATIONS, EXCEPT CONSTRUCTION.

**Precious Stone and Metal Jewellery Fabricating,
Assembling and Repairing Occupations
8591-110 through 8591-130**

8591-110 DIAMOND CUTTER(jewellery & precious metal
prod.) **DPT:261**
GED: 4 SVP: 8 EC: I PA: S 4

Examines, cuts, shapes and polishes diamonds, applying knowledge of diamonds, and using optical instruments, lathe and laps:
Examines diamond, using magnifying lens and marks cleavage, using wooden stylus and china ink, to prepare for cutting. Positions diamond in pre-cemented holder of lathe and lowers holder by turning screw to align sawing disk and diamond. Starts lathe and presses diamond against revolving disk that scribes stone along pre-marked lines to verify alignment of cutting channel with revolving disk. Determines appropriate pressure and sawing speed, according to stone hardness, and varies pressure on sawing disk by sliding weight on arm to saw diamond. Listens to continuous sibilant sound of grinding and cutting equipment to obtain exact friction needed for attainment of standards. Mounts cut diamond in girdle (holding device), using cement, and holds diamond against revolving diamond-dust-impregnated lap for shaping. Mounts shaped diamond in dop (cup-shaped holding device) above polishing machine so that lap is parallel to crystallographic axis of diamond. Starts polishing machine and applies graded-diamond-dust and oil on surface of lap to grind and polish facets. Examines diamond periodically during cutting, shaping, and polishing processes, using magnifying glass and angle gauges to determine progress. Discusses work specifications with clients.

May be designated according to stage of cutting; for example,
Cleaver
Diamond Polisher
Girdler

8591-114 LAPIDARY(jewellery & precious metal prod.)
DPT:261
gem cutter.
GED: 4 SVP: 8 EC: I 6 PA: S 4 7

Examines, cuts, shapes, and polishes precious and synthetic gems, applying knowledge of gems and using optical instruments, cutting disks and laps:

Examines gem with magnifying glass and through liquid solutions to detect defects in colour, quality and physical structure and to visualize requested size and shape of gem after cutting. Discusses cutting difficulties and possible alternatives with client to obtain advanced approval before transforming precious stone. Positions rough stone in holding device and holds stone against edge of diamond saw to cut stone. Removes cut stone from holder and grinds rough edges, using millstone. Affixes stone to dop stick, using lapidary wax to facilitate grinding and polishing. Grinds facets on gem against lead lap coated with abrasive compound or shapes gem into oval form by manually rotating it against grindstone. Examines stone for accuracy of cut, using magnifying glass, millimeter ruler and angle gauges. Polishes stone, using felt or canvas-covered polishing wheel, and polishing compounds, such as tripoli or rouge.
May make or modify tools used in lapidary work.

8591-118 GEMOLOGIST(jewellery & precious metal prod.)
DPT:261
GED: 4 SVP: 7 EC: I PA: S 4 7

Appraises gemstones and diamonds, applying knowledge of precious stones, market values, and utilizing testing equipment:

Examines precious-stone surfaces and internal structure, using optical instruments; such as, polariscope, proportionscope, refractometer, diamondlite, and gemolite, to differentiate between stones, to identify rare specimens and to detect peculiarities affecting stone values; such as, purity, diameter, form, cleavage lines, and colour grading. Immerses stones in prescribed chemical solutions to determine specific gravities which indicate composition of stone for identification purposes. Scratches or cuts surface of stone with styluses and wheels of different hardnesses, to test for durability. Discusses estimates or submits written reports to clients.

8591-122 JEWELLER(jewellery & precious metal prod.)
DPT:281
GED: 4 SVP: 7 EC: I 6 PA: S 4 7

Fabricates and repairs precious and semi-precious metal jewellery articles; such as, rings, brooches, pendants, bracelets and lockets:

Cuts, saws, and files article, preparatory to further processing, using hand and power tools. Drills holes and sockets for stones or hinges in pieces of jewellery. Solders pieces of jewellery together, using soldering torch, iron, special solders, pick and tweezers, to assemble new articles or repair broken parts. Forms rings of specified size and shape either by using arbor-stretching device to expand and stretch rings or by sawing through band, adding or removing metal, and soldering ends together. Finishes article, using hand file, emery paper and buffing machine.

May specialize in shaping and forming models of article from metal for casting workers, using carving tools. May reshape and restyle old jewellery, following designs or instructions, using hand tools and machines; such as, jeweller's lathe, spinning lathe, and drill. May be designated according to type of metal or jewellery worked upon; for example,

Brooch Maker
Goldsmith
Locket Maker
Platinumsmith
Ring Sizer

8591-126 PRECIOUS STONE SETTER(jewellery & precious metal prod.)
DPT:381
GED: 4 SVP: 7 EC: I PA: S 4 7

Sets precious and semi-precious stones in jewellery mountings, according to specifications:

Studies and compares mounting with specified jewellery design to determine most appropriate position of settings. Places item in vise and marks drilling, filing and engraving locations, according to design specifications. Drills, cuts, and files settings to accommodate stones, using power or hand tools. Decorates raised portions of metal, using engraving tools. Positions mountings in sandblasting machine to clean and sharpen design. Positions stones in setting and fixes them in place by pressing prongs around stone, by raising retaining metal ridge around stone, or by tapping edges of setting, using hand tools. Smooths edges of setting, using emery file and pointed steel tool. Examines union of stone and setting, using magnifying glass. Modifies existing mountings to reposition jewels.

May specialize in setting particular type of precious stone or in laying out settings and be designated accordingly; for example,
Diamond Setter
Lay-out Man

8591-130 CHAIN MAKER, HAND(jewellery & precious metal prod.)
DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Forms chains of various shapes and designs from gold or silver wire to make jewellery articles, according to specifications:

Winds wire into coils, using rotating shaft, to shape links. Saws coils through one side to separate links, using handsaw. Joins links together and closes link ends to assemble chain, using pliers. Brushes flux on links to clean chain. Solders links at point of closure to form chain, using solder and gas torch. Immerses chain in chemical baths to descale links coated with flux. Operates hammering machine to produce flattened effect on chains when required. Occasionally curbs chain to obtain twisted contour, using rotating hook device. Ties loops of stainless steel wire to lengths of fine machine-assembled gold chain to form eyelets. Hand solders eyelet ends to bracelet and brooches, using gas torch and tweezers.

Fabricating, Assembling and Repairing Production Jewellery Occupations 8591-150 through 8591-190

8591-150 BENCH HAND(jewellery & precious metal prod.)
DPT:684
GED: 3 SVP: 4 EC: I PA: S 4 7

Cuts out, files, and solders parts for jewellery articles according to clients' specifications:

Cuts out parts, using power saw or handsaw. Shapes, trims, and smooths parts, using files. Joins parts together, using solder and torch. Bends ring prongs and brooch clasps, to secure settings, using pliers. Examines work visually to ensure conformity to specifications.

8591-154 RING MAKER(jewellery & precious metal prod.)
DPT:684
arborer.
GED: 2 SVP: 4 EC: I 6 PA: S 4 7

Forms rings by either of the following methods:

1. Smooths and squares ends of ring band, using file. Inserts ring band in bending device, and pulls lever to bend blank into semi-circle. Places blank on mandrel and hammers it into circular shape, using rawhide mallet. 2. Ties or twists gold or silver wires together and bends to form rings. Solders ends, and files rings to remove excess metal. Cleans and polishes rings by buffing or immersing in acid solution. Measures dimensions of rings, using micrometer or sizing mandrel, to ensure conformity to specified sizes.

8591-158 RING STAMPER(jewellery & precious metal prod.)
DPT:684

blanker.

GED: 2 SVP: 4 EC: I 5 6 PA: L 4 7

Stamps out, shapes and embosses ring blanks, using presses and hand tools:

Aligns and bolts dies on ram and anvil of press, using rule, feeler gauges and hand tools. Positions metal strips on lower die and moves controls to lower ram that cuts blanks, forms contoured ring body, or embosses designs on smooth surface of blanks. Trims excess metal from edges of contoured ring body, using hand file. Occasionally heats metal blanks to soften metal strips, using gas torch. Operates small rolling mill to decrease thickness of certain metal ingots to obtain metal strips.

8591-162 EXPANSION-BRACELET ASSEMBLER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 3 EC: I PA: L 4 7

Assembles metal expansion bracelets, performing any combination of the following duties:

Forms skeleton chain by joining movable ribs together, using pneumatic riveting press. Inserts coil spring in center eyelet of watch-band rib, using pencil-shaped jig. Fastens rib to skeleton by turning in projecting ends of spring. Forces metal shells onto watch-band, using press, to cover springs and skeleton. Smooths and polishes completed bracelet, using polishing wheel and dressing compound, to produce lustre or dull finish.

8591-166 PEARL-EAR-RING MAKER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 3 EC: I PA: S 4 7

Sets natural or synthetic pearls on blanks to form ear-rings, following designs or instructions:

Winds wire-threaded pearls around metal-looped ear-ring blanks, manually. Cuts end of wire thread, using cutters. Twists wire to fasten pearls on loops, using pliers. Pastes single or entire loops of pearls to facings of other loop blanks, according to design.

8591-170 POLISHER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 3 EC: I PA: L 4 7

Trims, smooths, and polishes articles of jewellery, using file, rouge, and polishing wheels:

Mounts polishing wheel on motor driven shaft and places article of jewellery in holding device. Applies rouge to rotating wheel and moves article against wheel to remove surface blemishes and produce lustre. Files excess metal from surface, edges, and soldered joints of jewellery, by holding jewellery article against lapping disk, or using hand tool. Applies dressing compound and rubs article with cloth to remove discoloration and to produce lustre. Buffs jewellery to produce frost finish, using abrasives. Holds jewellery against wire-brush wheel to remove stains, oxide coatings, solder flux and to produce satin-smooth finish. Feels and examines surface of polished articles to ensure compliance with specifications.

May be mainly concerned with finish filing and be designated accordingly; for example, Filer, Jewellery

8591-174 ARTIFICIAL-PEARL MAKER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 2 EC: I PA: L 4 7

Dips plastic beads in glue and pearl lacquer to produce artificial pearls: Sticks beads on toothpicks and mounts them on wooden blocks. Clamps blocks or racks in bead-dipping machine and pulls lever to lower beads into solution. Loads blocks or racks onto rotating holder of drying machine and starts rotating action to avoid dripping of glue or pearl lacquer applied successively to obtain a satin finish. Examines reflective qualities of beads as work progresses to obtain exact tint and colour. Cuts pearls off toothpicks, using knife.

8591-178 CHARGER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 2 EC: I PA: S 4 7

Prepares jewellery findings (pieces for assembly) for subsequent soldering operations:

Positions jewellery article on non-flammable work surface, such as asbestos board or pan of crushed emery stone. Selects findings and positions them on jewellery article, using tweezers. Deftly picks up minute particle of solder, using brush or pick and accurately positions solder (charge) at juncture of jewellery article and finding.

8591-182 FINDINGS FINISHER(jewellery & precious metal prod.)
DPT:684

GED: 2 SVP: 2 EC: I PA: S 4 7

Assembles findings to make costume jewellery articles by either of the following methods:

1. Inserts prongs of one finding into corresponding holes of another and shapes findings with pliers to obtain fit. 2. Positions findings under swedging (riveting) tool in press. Depresses pedal or moves lever to lower swedging tool that spreads and flattens prongs to join findings. Drills holes in findings, using small drill. Assembles findings, using pliers, screwdriver and jeweller's hammer. Finishes costume jewellery article on powered abrasive disk or emery wheel.

May flux and torch-braze jewellery articles. May be mainly concerned with riveting and be designated accordingly; for example, Swedger

8591-186 CHAIN-MAKING-MACHINE TENDER(jewellery & precious metal prod.)
DPT:685

GED: 2 SVP: 2 EC: I PA: L 4 7

Tends one or more automatic machines that produce jewellery chain:

Installs chain-making device on machine to obtain specified size of chain, using hand tools. Places reel of solder-charged wire on machine feeder bracket and feeds end of wire into machine. Turns valve to supply soldering oven with heating gas, and depresses switch to ignite gas flame. Presses automatic control to keep oven filled with inert gas and to start machine. Inspects chain to detect defects, using loupe. Places trays of completed chains on conveyor for further processing. May fabricate and repair tools for chain-making machine, applying machine shop knowledge and using hand and power tools.

8591-190 RIVETER(jewellery & precious metal prod.)
DPT:687

GED: 2 SVP: 2 EC: I PA: L 4

Rivets top, attaches letters, and flattens prongs on articles of jewellery: Bores hole for rivet, using small power drill. Clinches parts of jewellery by either of the following methods: 1. Inserts prongs or rivets in holes and flattens them against steel plate, using hammer. 2. Positions rivets in holes of workpiece and presses parts together, using riveting ram that expands rivet shank.

Silverware Fabricating, Assembling and Repairing Occupations 8591-210 through 8591-299

8591-210 SILVERSMITH(jewellery & precious metal prod.)
DPT:281

GED: 4 SVP: 7 EC: I 6 PA: L 4 7

Assembles and repairs silver hollow-ware such as tableware and dresser sets, using lathe, annealing oven, gas torch and hand tools:

Anneals workpiece in gas oven for prescribed time to soften metal for reworking. Wires parts to body to prepare unit for soldering. Solders parts and seams, using gas torch and holding devices, and joins plastic separators to handles of articles, such as coffee and tea pots, using cold solder. Operates lathe to form articles of silverware out of silver stock or plated sheet, according to sketches. Fills holes and cracks with silver solder, using gas torch. Pierces and cuts open design in ornamentation, using hand drill and scroll saw. Restores dented embossing on articles, using hammer and punches. Hammers out deformities, levels and sets bottoms, using hand tools. Cleans residue from articles with acid solution.

8591-214 HAMMERSMITH(jewellery & precious metal prod.)
DPT:681

GED: 3 SVP: 6 EC: 1 PA: L 4 7

Repairs defects in silver hollow-ware, such as trays, teapots and bowls, using hammers, and tracing punches:
Examines article to determine nature of defect, places article on anvil or holding device and selects hammer with suitable head to pound out dents or bulges. Forms concave depression in bottom of article to improve its stability, using tracing punches and hammer. Verifies levelness of bottom edges of article, using straight-edge, or by rocking article back and forth on flat surface. Hammers out edges of scratches, or holes, using planishing hammer. Straightens twisted articles by hand.

8591-218 POLISHER, SILVERWARE(jewellery & precious metal prod.)
DPT:684
buffer, silverware.

GED: 3 SVP: 5 EC: 1 5 PA: L 4 7

Polishes sterling or silver plated hollow-ware or flatware such as bowls, tea sets and cutlery by turning item against polishing wheel and applying compound:

Selects felt, leather or brush polishing wheel according to article to be polished, type of finish specified or amount of metal to be removed. Attaches wheel to drive mechanism, using wrench. Starts polisher and manipulates article against wheel to smooth surface, produce specified finish and remove metal and surface defects, such as burns, salt deposits or excess solder at joints. Holds buffing compound stick against revolving wheel or manually applies compound of powdered pumice and oil to work piece while turning it against wheel to coat polishing wheel. Replaces worn wheels, using wrench. Examines articles for finish.

May remove scratches, spots or blemishes with pumice stone. May polish other metal products such as copper and pewter. May be designated according to type of abrasive compound used; for example, Grease Buffer, Tripoli Polisher, Sand

8591-222 FLATWARE-BUFFING-MACHINE SET-UP OPERATOR (jewellery & precious metal prod.)
DPT:682

GED: 3 SVP: 4 EC: 1 5 6 PA: M 4

Sets up and operates machine that buffs silver or stainless steel flatware between cloth or felt rolls to impart mirror-like finish:

Loads flatware items into column of racking device and presses switch to feed items from column into individual slots of racking device. Mounts buffing rolls in machine holders, using wrenches. Turns wheel that adjusts pressure, by setting distance between rolls. Turns set-screws and stop nuts to adjust motion of machine table. Presses switch to start rollers. Squeezes handles to open jaws of holding fixture and grip ends of workpieces in position on racking table. Inserts and locks fixture in sleeves of machine table with blades, tines, bowls or handles of workpieces inserted between buffing rolls. Starts machine that closes rolls on workpieces, rocks machine bed up and down and side to side to ensure complete buffing. Separates rolls, and retracts machine bed after completion of preset time cycle. Examines lustre of workpieces. Adjusts pressure of rolls or changes rolls to buff flatware to desired finish. Unloads flatware from holder onto conveyor.

8591-226 PROFILE TRIMMER(jewellery & precious metal prod.)
DPT:684
nibbling-machine operator; profile-saw operator.

GED: 2 SVP: 3 EC: 1 5 6 PA: S 4 7

Trims excess metal from edge of hollow-ware, by either of the following methods:

1. Selects punch according to intricacy of scroll design, and installs punch into nibbling machine, using wrench. Starts machine, and guides hollow-ware under punch to trim metal flush with edge of ornamentation. Files burrs and sharp edges from workpiece. 2. Selects saw blade according to metal composition of workpiece, and mounts blade on driving spindle, using wrench. Measures distance from bottom of workpiece to ridge or scallop on contour. Adjusts height of saw blade, using hand tools. Starts machine and positions hollow side of workpiece over saw blade with top flat against backboard. Guides

workpiece against saw following designated ridge or scallop to cut excess metal to the same height around edge of workpiece.

8591-230 MOUNTER, HOLLOW-WARE(jewellery & precious metal prod.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Assembles silver hollow-ware; such as, lazy susans, teapots, creamers and chafing dishes:

Drills, reams and taps holes in silverware parts, using hand and power tools. Screws, bolts or pins parts; such as, base, legs and lid, to body of hollow-ware, using hand tools. Adjusts length of legs, or flattens base with mallet, to make article stand firmly and level. Solders parts together, using torch.

May buff and polish articles after assembly to remove finger marks, using powered buffer, cloth and polishing compound.

8591-234 TROPHY ASSEMBLER(jewellery & precious metal prod.)
DPT:684
GED: 2 SVP: 3 EC: 1 PA: S 4

Assembles trophies, according to specifications, using power and hand tools:

Obtains parts and pieces from stockroom, according to specifications. Drills holes in trophy base or plaque, using electric drill or drill press. Measures and cuts metal stock to length, using rule and hacksaw. Glues felt to back of plaque, bottom of base, or screws in metal feet. Staples, tapes or screws metal plate to base. Bolts parts together, using screwdriver and socket wrench. Removes protective paper lining used to prevent damage, from plaques or metal stock, and polishes assembled trophy or plaque. Attaches marble or onyx decoration according to specifications, using adhesive tape.

May wrap trophy in tissue paper, preparatory to shipping.

8591-238 HOLLOW-WARE-BUFFING-MACHINE TENDER
(jewellery & precious metal prod.)
DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4

Tends battery of machines that automatically buff shells for silver-plated hollow-ware such as bowls, tea sets, vegetable dishes and gravy boats to remove scratches and press marks, and impart smooth finish prior to plating:

Selects buffing wheel of size and shape to suit workpiece and bolts wheel to drive shaft. Selects jig to match exterior or interior shape of workpiece and bolts it to chuck on lathe arbor. Clamps workpiece in jig and turns stop nuts to position assembly against buffing wheel. Adjusts timing device to regulate buffing time according to type, thickness and surface of metal. Starts machine and holds stick of tripoli or similar compound against wheel to coat wheel with abrasive. Observes operation and removes workpiece at end of timed cycle.

8591-242 CEMENTER, KNIFE PARTS(jewellery & precious metal prod.)
DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Joins knife blades to hollow handles, using cement, and dries in oven: Measures prescribed quantities of water and powder and blends them in mixing vat for specified time to make cement. Pours small amounts of mixture into knife handles and stands them in compartment of tote box. Inserts tang of blades into cement-filled handles and aligns blades, manually. Places assembled knives in spring holder of tote board and pushes loaded tote board into drying oven for specified time. Verifies alignment of dried knives and cleans excess cement, using steam or scraper.

8591-299 OTHER JEWELLERY AND SILVERWARE FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS

This group includes jewellers and silverware workers, not elsewhere classified; for example, those who make beads, assemble compact cases, and brush oxide solution on patterned surfaces of silverware and silver plated ware. Typical examples of occupational titles covered by this residual group definition are:

Bead Maker(jewellery & precious metal prod.)
Compact Assembler(jewellery & precious metal prod.)
Oxidizer(jewellery & precious metal prod.)

8592-Marine Craft Fabricating, Assembling and Repairing Occupations

This unit group includes occupations concerned with building and repairing ships, and fabricating, assembling and repairing other metal, wood or fibreglass marine craft. Activities include: aligning, fitting, erecting and fastening together previously prepared parts and sub-assemblies of metal or wooden ships' structures; laying out and shaping wood and fibreglass parts for marine craft; installing, repairing and adjusting engines, auxiliary machinery, accessories, rigging and equipment, using common or special hand and power tools, jacks, lifting and other equipment. Occupations concerned with forming and shaping metal plates and structural metal parts for ships are classified in Unit Group 8337- BOILERMAKERS, PLATERS AND STRUCTURAL METAL WORKERS. Occupations concerned with moulding, laminating or finishing fibreglass boat hulls or parts are classified in Minor Group 857- FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, RUBBER, PLASTIC AND RELATED PRODUCTS.

Shipbuilding Occupations 8592-110 through 8592-178

8592-110 LOFTSMAN(ship & boat bldg.) DPT:261 GED: 4 SVP: 8 EC: I PA: L 3 4 7

Lays out lines of ship to full scale on mould-loft floor and constructs templates and moulds to be used as patterns and guides for layout and fabrication of various structural parts of ships:

Lays out full-scale portions of ship's plan, working from drawings and tables of offsets. Marks frame lines and other reference lines on loft floor with marking instrument. Measures dimensions between lines and prepares table of offsets. Compares prepared tables with tables on drawings. Constructs template, using knowledge of geometric construction, and hand tools and woodworking machines, such as power saws, jointer, and drills. Marks templates with identifying data and instructions, such as number of pieces to be made, type and weight of stock, and location for installation, following drawing specifications.

May construct full-scale-wood mockups of ship's parts and sections for use as guide in shaping or positioning parts. May lay out and construct wooden plugs (master patterns) used in making moulds for hulls and decks of fibreglass boats.

8592-114 SHIPWRIGHT, METAL(ship & boat bldg.) DPT:261 GED: 4 SVP: 8 EC: B 5 6 PA: H 2 3 4 7

Plots reference points, and erects and aligns framework and other metal parts of ship's structure during construction or repair, following drawings and other specifications:

Sights, plots, and marks reference points and lines on drydock or way to maintain alignment of vessel, using transit, plumb line, tapes, and levels. Aligns keel and bilge blocks, and keel plates on berth. Makes identification marks on structural members such as frames, keel, stem and stern post, to guide assembly and erection. Directs hoisting of members into position and secures them with bolts or clamps for welding or riveting. Directs tack-welding of structural members. Locates and marks datum points and reference lines on ship's hull for locating machinery and other equipment. Aligns and supervises erection of parts and installation of equipment; such as, masts, booms, boat davits, compasses, hawse and chain pipes, anchor windlasses, bow thrusters, stabilizers, fairleads, bollards, shell and deck plates, superstructure houses, and deck fittings.

8592-118 SHIPWRIGHT, WOOD(ship & boat bldg.) DPT:261 GED: 4 SVP: 8 EC: O 5 6 PA: H 2 3 4 7

Constructs and repairs ships, following diagrams and blueprints, using hand and power woodworking tools:

Sights, plots and marks reference points and lines on drydock or way to maintain alignment of vessel during construction or repair, using transit, plumb bob, tapes and levels. Builds supports, such as bilge and keel blocks, cradles, and shoring for ships in drydock, marine railway,

shipway or building dock. Positions and secures blocking and other structures on dock or cradle platform. Aligns vessel over blocks. Establishes reference points and lines on ship's hull for locating machinery and other equipment in accordance with ship's alignment and shape. Fabricates and installs furring pieces, aprons, uprights and other wood framing in ship. Shapes, finishes and installs wooden spars, masts, and cargo and boat booms. Trims wooden frames and timbers, using broadaxe and adze. Spikes or bolts metal fittings, plates and bulkheads to wooden parts of ship, using brace and bits, augers, mauls, and wrenches.

8592-122 PIPE FITTER(ship & boat bldg.) DPT:261 GED: 4 SVP: 7 EC: B 5 6 7 PA: H 2 3 4

Lays out, installs, maintains, and repairs ship's piping systems; such as, steam, heat and power, hot water, hydraulic, pneumatic, and oil lines, following technical drawings, and using hand tools and shop machines:

Plans layout of pipe sections allowing for location of bulkheads, machinery and other obstructions. Bends soft iron rod to make template of pipe layout by hand, to ensure subsequent fitting of pipe sections. Cuts or bores holes in bulkheads and decks, using power saw, or power drill, depending upon type of structure and size of hole required for piping installation. Operates shop machines to cut and thread pipe, and pipe fittings, such as valves, traps and thermostats. Packs pipe with sand to avoid contortion and bends pipe to specified shape, using template and pipe-bending fixture. Bolts pipe-supporting brackets to deckhead or bulkhead. Installs and connects pipes to radiators, laundry and galley equipment, pumps and tanks, using wrench and soldering equipment. Repairs, packs, and adjusts valves. Tests piping system for leaks to ensure system meets specifications, using hydrostatic and other test equipment.

May operate cutting torch and welding equipment to cut holes in steel structures and mount pipe-supporting brackets.

8592-126 SHIPFITTER(ship & boat bldg.) DPT:261 plater. GED: 4 SVP: 7 EC: B 5 6 7 PA: H 2 3 4

Lays out and fabricates metal-structural parts, such as plates, bulkheads, and frames, and braces them in position within hull of ship for riveting or welding:

Lays out position of parts on metal, working from drawings or templates and using scriber and hand tools. Locates and marks reference lines, such as center lines, buttock lines, and frame lines. Positions and aligns parts, using jacks, turnbuckles, clips, wedges and mauls. Marks location of holes to be drilled and installs temporary fasteners to hold parts in place for welding or riveting. Installs packing, gaskets, liners, and structural accessories and members, such as doors, hatches, brackets and clips. Prepares moulds and templates for fabrication of nonstandard parts.

May tack weld clips and brackets in place prior to permanent welding. May roll, bend, flange, cut and shape plates, beams and other heavy metal parts, using shop machinery, such as plate rolls, presses and brakes.

8592-130 RIGGER(ship & boat bldg.) DPT:261 GED: 4 SVP: 7 EC: B 6 PA: H 2 3 4 5 6 7

Installs and repairs rigging and weight-handling gear on ships, and attaches hoists and pulling gear to rigging to lift, move, and position machinery, equipment, structural parts, and other heavy loads aboard ship:

Forms slings and towing bridles by looping and splicing cable or by crimping metal sleeve around cable end and body of cable, using crimping tool. Splices and ties rope to form nets, ladders and other rigging, using marlin spike. Installs hooks, swivels, and turnbuckles in rigging. Reeves lines through blocks and pulleys. Sews canvas or leather covers on rigging at friction points, using sail twine, sailmaker's palm and needle, and sewing machine. Selects and attaches gear, braces and cushions, according to weight and distribution of load, availability of hoisting machinery, and presence of obstacles, such as ships-structural members. Signals workers operating cranes or other equipment to move load. Installs beam clamps, pad eyes, gallow frames and other supporting structures for rigging gear. Controls movement of heavy equipment through narrow openings or in confined spaces, using jacks, pulley blocks, chainfalls, and rollers. Lays out and handles lines, snubs lines on cleats or bollards or hauls in lines with capstans to assist in ship-drydocking operations. Installs and

repairs ships' rigging, such as mast or antenna rigs, small-boat-handling gear, and winch or windlass rigging. Installs masts, booms, yardarms, and gaffs, working aloft as required. Rigs and hangs scaffolds and stages that require blocks and pulleys. Tests cargo gear, such as lines, chains and pulleys, using strength-testing equipment. May layout, cut and assemble sails and tarpaulins. May make rope bumpers and fenders for barges and tugboats by winding layers of rope around steel cable.

8592-134 ENGINE FITTER(ship & boat bldg.) DPT:261
ship-machinery installer.
GED: 4 SVP: 7 EC: B 5 6 PA: M 2 3 4

Installs and repairs ship machinery and auxiliary equipment, working from drawings and other specifications:

Lays out passage holes on bulkheads, decks, and other surfaces for shafting and piping systems. Installs propelling machinery, auxiliary motors, ventilating equipment, steering gear, capstan and winches, using hand and power tools and measuring instruments. Installs below-deck auxiliaries; such as, evaporators, stills, heaters, pumps, condensers and boilers, and connects them to steam-pipe systems. Tests and inspects installed machinery and equipment during dock and sea trials. Dismantles and inspects malfunctioning machinery and replaces worn or defective parts.

May set up and operate machine shop tools, such as lathe and drill press to fabricate replacement parts.

8592-138 JOINER(ship & boat bldg.) DPT:381
boat joiner.
GED: 3 SVP: 7 EC: B 6 PA: M 2 3 4 7

Fabricates, assembles, installs and repairs wooden furnishings in ships or boats, following blueprints and using hand tools, power tools, and measuring instruments:

Lays out, cuts, assembles and installs wooden parts, such as deckhouses, doors, sashes, paneling and refrigerator doors, using hand and power-woodworking tools, scales, square, and calipers. Installs hardware and gaskets, using screwdriver. Cuts, fits and installs glass in skylights, cabins and other parts of ship or boat. Moulds, bends and laminates wood to form parts of ship, using steam chambers, clamps, glue and jigs. Fabricates, assembles, and installs desks, chairs, cabinets, using woodworking machinery; such as, jigsaws, planers, jointers, mortisers and tenoners. Shapes irregular parts to fit, and joins matched-grain wood such as oak, mahogany and teak.

May install fibreglass or cork insulation on sides of ship below waterline to prevent condensation. May lay linoleum on deck or ladder treads, using adhesive, spreaders and linoleum-cutting tools.

8592-142 PNEUMATIC-TOOL OPERATOR(ship & boat bldg.) DPT:684
GED: 3 SVP: 6 EC: O 5 6 PA: H 2 3 4

Chips, cuts, caulks, drills, reams or rivets steel or aluminum plates, beams, or other structural parts of ships under construction or repair, performing any combination of the following duties:

Caulks seams of overlapping plates by guiding pneumatic-hammer chisel along seam to pound edge of overlapping plate into surface of adjoining plate, or packs caulking material between plates prior to riveting, using wedges, hammer, and pneumatic-caulking tool. Gouges out reverse side of welded seam in preparation for second weld, using pneumatic-hammer fitted with diamond-shaped chisel. Drills, reams, and countersinks holes for rivets, bolts, or pipes in plates and beams, using pneumatic equipment. Heats rivets in forge, places rivet in hole, and holds steel bar against head of rivet while shank is hammered down from opposite side. Tests tanks and compartments for leaks, using hydrostatic and pneumatic-testing equipment. Sharpens bits and chisels, using bench grinder.

May be designated according to specific duty assigned; for example, Caulker
Chipper
Chipper and Caulker
Driller
Riveter

8592-146 MARINE-RAILWAY OPERATOR(ship & boat bldg.) DPT:662
marine-slip operator; ways operator.
GED: 3 SVP: 5 EC: I PA: M 4 7

Operates power-driven winch of marine railway to pull ships and other vessels from water preparatory to underwater repairs:

Observes signals, starts winch and pulls lever to control movement of cradle platform down inclined plane and into water to specified depth. Signals ship operator to align and secure vessel over keel blocks fixed to center line of cradle platform. Observes signals and operates winch to haul platform and vessel up inclined plane. Observes gauges or meters, and moves winch lever to start, stop, and alter speed of platform to allow bilge blocks to be positioned. Secures platform in specified location by engaging mechanical-locking devices. Repairs and maintains winch and hauling equipment, using hand tools and lubricants.

May maintain air compressor used for sandblasting, paint spraying and pneumatic tool operations, using hand tools, testing equipment, lubricants and solvents. May operate automatic oil-fired boiler to generate steam that supplies heat or power to shipyard.

8592-150 WOOD CAULKER(ship & boat bldg.) DPT:684
deck filler.
GED: 3 SVP: 5 EC: O 6 7 PA: M 2 3 4 7

Caulks seams in wooden hull or deck planking of ships, performing any combination of the following duties:

Guides power-caulking tool or pressure gun that automatically forces caulking material or compound into seam. Fills seam with oakum, using caulking iron and mallet. Heats marine glue in melting pot, fills runner (funnel), and guides runner along seam to effect seal. Removes excess glue or compound, using scraper. Smears hot pitch over seam with small mop. Removes old caulking from seams, using reaming iron and mallet. Applies prime coat of paint, using spray gun.

8592-154 SHIPWRIGHT HELPER(ship & boat bldg.) DPT:687
GED: 3 SVP: 5 EC: B 5 6 PA: H 2 3 4

Helps in constructing and repairing ships and other marine craft, performing any combination of the following duties:

Holds plumb-bobs, sighting rods, and other equipment to aid in establishing reference points and lines of ship. Positions keel blocks, cradles, shoring, and other structures in drydock or shipways to support ship. Obtains tools, equipment, and materials from storage and carries them to work site. Assembles metal fittings. Drills bolt holes in timbers and tightens bolts, using portable-power drill and wrenches. Shapes and installs wooden masts, spars, booms, and timbers, using adze, axe, plane and spokeshave. See also definition for term title, 02-160 HELPER (any ind.).

8592-158 SHIPFITTER HELPER(ship & boat bldg.) DPT:687
plater helper.
GED: 3 SVP: 4 EC: B 5 6 7 PA: H 2 3 4

Helps in laying out, fabricating and installing metal-structural parts, such as plates, bulkheads, and frames within hull of ship:

Obtains tools and materials from storage and carries them or arranges for their transportation to work site. Aids in establishing reference points on structural members or steel parts for fabricating and assembling. Tightens bolts, using hand and power wrenches. Positions and aligns parts for welding by tightening turnbuckles of guy wires. See also definition for term title, 02-160 HELPER (any ind.).

May assemble and fit gaskets, packing and liners. May assist in fabricating parts by feeding or positioning workpieces on bed of shop machines, such as power rolls, presses and brakes.

8592-162 RIGGER HELPER(ship & boat bldg.) DPT:684
GED: 3 SVP: 3 EC: B PA: H 2 3 4

Helps to assemble lifting devices and to move, lift and position machinery, equipment and structural members of ships under construction or repair:

Positions lifting and moving devices; such as, chain falls, slings, cargo nets, derricks, sheer legs, jacks, rollers, and block and tackle as directed. Heaves in or veers rigging lines, following hand signals, to manoeuvre load in close quarters. Splices rope and wire to fabricate

permanent or temporary rigging, using vise, marlin spike, fid, and mallet. See also definition for term title, 02-160 HELPER (any ind.). May issue and maintain rigging gear in rigging loft.

8592-166 PIPE-FITTER HELPER(ship & boat bldg.) DPT:684
GED: 3 SVP: 3 EC: B 5 6 7 PA: H 2 3 4

Helps assemble and install pipe systems, such as propulsion, heat, power, and fresh water, aboard ships and boats:
Obtains tools and equipment for journeymen. Fills pipe with sand or melted resin to prevent distortion during bending operations. Holds pipe during bending and installation. Fits pipe assemblies into place by screwing or bolting them together and connecting them to pumps, tanks and other systems, following specifications or drawings and using wrenches and other hand tools. Immerses pipe in chemical solution to remove dirt, oil, and scale. Cleans shop machines with solvent and rags. Sweeps work area. See also definition for term title, 02-160 HELPER (any ind.).

8592-170 DOCKMAN(ship & boat bldg.) DPT:684
dock pumpman.
GED: 2 SVP: 4 EC: O 4 5 PA: M 2 3 4

Prepares dock platform, positions ship and controls pumps and valves to regulate water level of dry-dock:
Positions keel blocks on dock platform and builds bilge blocks as directed by supervisor, using hand tools. Opens flood valves in compartments of floating dry-dock to submerge dock. Takes up docking lines, using winch, or snubs lines over dock bollards to position ship over keel and bilge blocks. Starts pumps to remove water from dry-dock compartments and turns pump controls to keep dock platform on even keel. Opens and closes flood valves on dry-dock when removing ship from dock to keep dock platform on even keel as it submerges. Floods or pumps water from caisson of graving dock, and assists in moving caisson in or out of position across dock entrance. Lubricates and makes minor repairs to dock equipment, such as winches, pumps, and piping systems, using lubricating equipment and hand tools.

8592-174 FENDER MAKER(ship & boat bldg.) DPT:684
GED: 2 SVP: 2 EC: I PA: H 4

Fabricates rope bumpers and fenders by hand, for ships, barges, and tugboats, to prevent damage when bumping into piers or other vessels: Cuts steel wire to specified length to form fender core, using wire-cutting machine. Splices or forms eye at ends of steel wire, using marlin-spike, swage, shackles, and hand tools. Winds cordage around steel-wire core until desired shape and size is obtained. Interlaces top layer of rope with half-hitch or continuous walling knots. Splices rope lanyard into eye of wire core, using fid.
May fabricate other types of fenders by lashing used automobile tires onto timber or tree trunk and shackling wire lanyards to ends of timber.

8592-178 ENGINE-FITTER HELPER(ship & boat bldg.) DPT:687
ship-machinery-installer helper.
GED: 2 SVP: 2 EC: B 5 6 PA: H 2 3 4

Helps to remove, repair, and install marine engines; such as, main propulsion, diesel auxiliary, gas, winch, pump, and compressor, using hand tools and lifting devices:
Furnishes worker with tools and materials. Assists co-worker to position engine, using chain hoist, crowbars, or rollers. Tightens or loosens nuts and bolts during installation and removal of engines, using hand tools. Cleans working area, machines, and equipment, using cleaning equipment, solvents, and lubricants. See also definition for term title, 02-160 HELPER (any ind.).

Other Marine-Craft Building Occupations
8592-198 through 8592-234

8592-198 BOATBUILDER, WOOD(ship & boat bldg.) DPT:281
GED: 4 SVP: 7 EC: I 5 6 PA: M 2 3 4 7

Fabricates, repairs or modifies wooden boats to specifications and drawings, using hand tools, power tools and measuring instruments:
Lays out full scale outline of boat on mould-loft floor, using crayon, scales, and protractor, following drawings and table of offsets. Establishes dimensional reference points on layout and makes templates of parts. Scribes dimensional lines on lumber following templates, and cuts and forms parts; such as, keel, stem, stern post, ribs, and sidings, using carpenter's hand and power tools. Assembles shell of boat by forming steam softened sidings on mould, removing mould, and securing sidings to keel, or by securing ribs to keel and covering ribs with planking. Builds and installs structures; such as, mountings for machinery, shafting and propellor supports, pilot house, cabin, and rudder. Installs decking, mast, booms, and ladders, using hand and power tools, scale, calipers, and gauges. Caulks seams with caulking material.
May specialize in a particular aspect of boat construction or repairing and be designated accordingly; for example,
Boat Repairer
Hull Constructor, Wood

8592-202 MARINE-ENGINE MECHANIC(ship & boat bldg.) DPT:281
GED: 4 SVP: 7 EC: B 5 6 7 PA: M 3 4 6 7

Installs, repairs and adjusts gasoline and diesel engines, and electrical and mechanical equipment in boats, such as cruisers, yachts, tugs and trawlers, following specifications:
Positions engine over mounting holes, using chain hoist. Bolts engine to mount and straps fuel and water supply tanks and pumps to cradle, using hand tools. Connects fuel, oil and water lines to engine. Installs and adjusts engine controls, and aligns propellor shaft and propellor. Attaches test instruments, such as tachometer and voltmeter to engine, starts engine, and records and compares operating data for conformity with manufacturer's specifications. Listens to sounds of defective engine to locate faults, and makes adjustments. Dismantles and examines engine, and repairs or replaces faulty parts. Grinds valves, replaces piston rings and fits bearings. Examines boats' fittings and equipment; such as, plumbing, electrical wiring and lighting, pumps, steering gear, propellor and shafting. Replaces defective items or makes repairs, using lathe, drill press and other power and hand tools.

8592-206 OUTBOARD-MOTOR MECHANIC(ship & boat bldg.) DPT:281
GED: 4 SVP: 6 EC: I 5 6 PA: H 3 4 6 7

Analyzes defects, and adjusts or repairs electrical and mechanical components of outboard motors:
Disassembles and inspects engine for defective parts, making reference to equipment manuals and parts lists, and using mechanic's hand tools and gauges. Replaces parts, such as gears, magneto points, piston rings and spark plugs, and reassembles engine. Adjusts carburetor mixture and electrical-point settings while engine is running in water-filled test tank. Installs or repairs steering and engine controls.
May select and change propeller to increase engine efficiency, based on size and shape of boat hull.

8592-210 BOAT BUILDER, ALUMINUM(ship & boat bldg.) DPT:681
GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4

Assembles aluminum boats, performing any combination of the following duties:
Bends edges of precut hull bottom, using roller-bending device and hammer. Fastens sides to bottom, using electric drill and pneumatic rivet gun or welds parts and seams with heliarc-welding equipment. Bolts wooden gunwale strips and transom in place to stiffen hull. Positions parts, such as ribs, stringers, seats and flotation tanks, using rule, template and other measuring devices, and following drawings and work orders. Clamps parts in place, drills holes, and bolts or rivets parts to hull. Drills holes in hull and installs accessories, such as cleats, lights and windshields. Seals seams, using caulking gun and compound. Smooths rough edges and removes excess weld material with hand file or portable grinder.

8592-214 CANOE BUILDER(ship & boat bldg.) DPT:684
GED: 3 SVP: 5 EC: I 5 6 PA: M 3 4

Fabricates wooden hulls of canvas-covered canoes, using hand and power tools, by performing any combination of the following duties: Selects mould according to type and size of canoe to be fabricated and carries mould to work area, or draws full scale outline of canoe on mould-loft floor and establishes dimensional reference points on layout, using measuring instruments. Selects prefabricated wooden parts, according to model specifications, or cuts and shapes rough stock, using band and circular saws. Places parts in steam box or tank for specified interval to facilitate bending. Assembles parts; such as, keelson, stem, transom, ribs and inside gunwales, using clamps, hammer, power screwdriver, and pneumatic stapler. Shapes planking to obtain tight seams, using knife and plane and secures planking to ribs with nails or staples. Trims ribs extending above gunwales, using hand or portable-power saw. Sights over level placed on transom to line up canoe and secures ends of gunwales with screws. Closes in bow of canoe by nailing ends of planking to stem. Sinks and clinches prominent nails, using hammer and swage. Installs outside gunwales, skids and other fittings, using power tools. Sands gunwales, decks, seats and thwarts, using power sander. Sets canoe aside for painting and varnishing. May specialize in particular phase of canoe building and be designated accordingly; for example, Hull Finisher Planker Rib Bender

8592-218 FIBREGLASS-BOAT ASSEMBLER (ship & boat bldg.) DPT:684
GED: 3 SVP: 4 EC: I 5 7 PA: H 3 4

Joins deck and hull sections of fiberglass boats, and installs accessories and parts; such as, hatches, seats, marine hardware and trim: Positions deck on hull and caulks seams, using caulking gun. Lays aluminum gunwale strip along seam and hammers it in place with mallet. Rivets or bolts sections together, using template, electric drill, rivet gun or impact wrench. Locates and marks positions of hardware, seats, hatches and other parts, using rule, template and marking device. Cuts or grinds mounting bases or brackets, using portable electric saws and grinders, and bolts or screws them in place. Drills holes, and bolts accessories, hardware, hatches and other parts in place, using hand tools. Saws, shapes, and fastens trim in place, using jigs, crimping device, adhesives and hand and power tools.

8592-222 OUTBOARD-MOTOR INSTALLER(ship & boat bldg.) DPT:684
motor installer, boat.
GED: 3 SVP: 4 EC: B 5 PA: M 3 4 6

Installs, adjusts, and tests outboard motors for performance according to specifications, prior to delivery of boats: Positions and clamps outboard motor to transom of boat. Drills holes in boat hull and installs steering-cable hardware and cables, using electric drill and hand tools. Connects ignition and fuel-control cables. Examines electrical and mechanical components for missing parts. Operates boat on water during test run to determine engine malfunctions. Adjusts carburetor for optimum performance by turning regulating screws. Sets starter lock, and aligns shift-lever shaft with speed-indicator marks, using hand tools. Writes test report.

8592-226 CANVAS-CANOE COVERER(ship & boat bldg.) DPT:684
canoe canvasser.
GED: 2 SVP: 4 EC: I PA: H 3 4

Covers wooden canoe hulls with canvas: Sinks and clinches any prominent nails in planking, using hammer and swage. Repairs or replaces split or damaged planks, using saw, hammer and nails. Smooths hull, using rasp, spokeshave and power sander. Applies wood preservative to hull, using paint brush. Stretches canvas over hull of canoe by hand, using winch and canvas clamps, or by placing hull into canvas sling and forcing canoe into canvas snugly, using pry and ceiling-mounted shoe. Secures canvas in position with tacks or staples. Trims excess canvas, using scissors. May mix filler (water-proofing solution) in vat and apply filler to canvas, using paint brush and mitt.

8592-230 VENEER LAYER, PLYWOOD BOAT (ship & boat bldg.) DPT:684
layer-up; veneer stapler.
GED: 2 SVP: 3 EC: I 6 PA: M 3 4

Staples successive layers of veneer strips over boat frames preparatory to bonding, to build small laminated hulls: Positions mucilage-faced strips over frames, laying each strip at an angle to lower one and secures strips with stapling machine. Cuts off excess wood, using knife. Inspects hull visually and tactually for gaps. Cuts and fits veneer inserts into gaps, using knife and plane, and secures inserts with staples. Repeats strip laying and stapling until specified thickness is attained.

8592-234 CANVAS-CANOE WATERPROOFER(ship & boat bldg.) DPT:687
GED: 2 SVP: 2 EC: I 4 PA: H 4

Applies filler (waterproofing solution) to canvas-covered canoes, using brush and mitt: Mixes specified quantities of oil, turpentine, white lead and drying compound in vat, using paddle. Brushes waterproofing solution on canvas and rubs solution into canvas, using mitt. May place completed hulls in drying room for specified interval.

8593-PAPER PRODUCT FABRICATING AND ASSEMBLING OCCUPATIONS

This unit group includes occupations concerned with fabricating and assembling paper products; such as, paper bags, boxes, containers, liners and similar items. Activities include: winding, corrugating, facing, folding, creasing, sewing, gluing, cutting, stapling, and fitting interlocking parts.

8593-110 BAG-MAKING-MACHINE SET-UP MAN(paper prod.) DPT:360
GED: 4 SVP: 7 EC: I 5 7 PA: M 4 5 7

Sets up and adjusts bag-making machines to convert materials, such as paper, synthetic film and metallic foil into a variety of containers: Reads work order to determine materials required and details of production run. Directs helper to place rolls of material on machine stands, using overhead electric hoist. Threads material through series of machine rollers. Sets up rollers and nozzles to prepare for interply pasting and side-seam gluing, using hand tools. Installs and adjusts former plate and paper guides, in accordance with specifications. Sets up and adjusts draw rollers to draw paper over former plate, using wrenches. Installs and adjusts cut-off knife and bottom-forming stations, such as blades on splitter bar, transfer roller, center gripper, scoring cylinder, opening roller and fingers, and bottom-forming bars to ensure proper formation of bag bottom. Directs helper to verify that glue reservoirs are topped up and adjusted prior to production run. Aligns guide mark on paper stock under electric eye and sets electric eye to actuate cut-off knife at proper interval. Presses button to start machine, sets automatic counters, and regulates machine speed by adjusting rheostat. Turns hand screw to adjust tension on material feed rate. Inspects finished product for conformance to specifications. Directs helper to lubricate and clean equipment.

8593-114 ENVELOPE-MAKING-MACHINE SET-UP MAN (paper prod.) DPT:680
GED: 3 SVP: 6 EC: I 6 PA: M 3 4

Sets up and maintains battery of automatic machines that make envelopes from die-cut blanks or rolls of paper: Installs gears, plunger, rollers, or other machine parts to accommodate specified size envelopes, using hand tools. Turns setscrews to adjust feeding, folding, gumming, sealing and glassine- applying mechanisms, according to size of envelopes made. Presses button to start machine for trial run and measures dimensions of first piece with rule to ensure conformance to specifications. Observes operation of machines and examines machine parts visually to detect worn parts to prevent machine breakdown. Disassembles machines to replace broken or worn parts, using hand or power tools.

8593-118 CORRUGATOR OPERATOR(paper prod.) DPT:662
corrugating-machine operator.
GED: 3 SVP: 6 EC: 1 5 PA: M 4 7

Operates machine to corrugate and face paperboard for containers: Positions rolls of paperboard on machine feed rack, using hydraulic hoist. Threads paperboard through feed, tension, corrugating and gluing rollers, and fills glue reservoirs. Presses button to start machine and turns dials, wheels and valves to adjust machine running speed, tension on pressure rolls, temperature of drying belt and to synchronize speed and alignment of feed rolls. Maintains close check at both ends of machine to ensure paper produced meets quality standards. Records production data from yardage indicator on machine. Explains procedures to crew members at various work stations, such as loading, off-loading and changing set up to avoid delays or interruptions in production.

May attend production meetings, and plan and set-up production schedules for corrugating machine. May maintain and repair corrugating machine under direction of production foreman. May operate machine that corrugates and combines two or three sheets, or a machine that lines paperboard with paper only and be designated accordingly.

8593-122 CYLINDER PRESSMAN(paper prod.) DPT:680
cutting-and-creasing-press operator; cylinder-press operator.
GED: 3 SVP: 5 EC: 1 PA: M 4

Sets up and operates cylinder press that scores and cuts paperboard sheets into box or container blanks:

Installs specified chase (cutting and scoring die) on flat-bed of machine, using hand tools. Glues sheet of paperboard on machine cylinder by hand or by pushing button, if automatic, to press design of die in sheet, and cuts paperboard from around die impression on sheet, using knife, to form male portion of die. Adjusts feed rollers on automatic stacker, using hand tools, and presses button to start machine. Measures cut-scored blanks to verify dimensions against work order, using tape measure. Feeds odd size paperboard sheets into machine by hand.

May print data on scored box blanks, taping chases on flat-bed with masking tape and replenishing ink supply when necessary. May tend unit that folds scored boxes, and glues side flap closed, aligning folding devices and adjusting feed rollers, according to size of blanks, using hand tools, and filling glue reservoir with premixed glue. May direct helper. May maintain production record sheet.

8593-126 PLATEN PRESSMAN(paper prod.) DPT:680
platen-press operator.
GED: 3 SVP: 5 EC: 1 5 PA: M 4

Sets up and operates automatic platen press to cut, crease or emboss paper or cardboard for such uses as labels, wrappers or carton blanks:

Selects and installs specified chase (cutting-creasing die) or embossing die on upper press bed, using hand tools. Releases, pulls out and turns over upper press bed manually. Positions chase or dies on bed and fastens them to bed with toggle catches, using toggle key to tighten and adjust catches. Turns bed over and slides bed into press. Locks bed into position, turning lever. Pushes button to jog press and manually feed single sheets of paper under chase. Removes and examines proof sheet for registration and depth of embossed, cut or creased parts to ensure conformity to specifications. Resets position of chase or dies, using toggle key to loosen or tighten catches and correct deviation from specifications. Adjusts height of lower press bed surface with glued sheets of paper or matrix board to set depth of cutting, creasing or embossing, using rubber cement brush and knife. Locks bed in position. Adjusts feed bands and guide, according to sheet size, using hand tools. Pushes button to start press and observes sheets travelling from feed end, under dies, to delivery end. Examines sample sheets to ensure constant registry. Turns hand controls to adjust and synchronize rate of feed with speed of press and bed movement. Removes and stores dies or chase at end of run.

8593-130 PARTITION-ASSEMBLY-MACHINE OPERATOR(paper prod.) DPT:582
GED: 3 SVP: 5 EC: 1 PA: L 4

Operates machine that automatically fits pre-cut cardboard sections together to form complete partitions for cardboard cartons: Installs and adjusts stripper bars, feed dogs, side and finger guides,

back stops, and ejector bars on machine table, and receiving fingers and push bars on rotating partition assembling wheel, using rule, gauges, and wrenches. Adjusts timing gear settings to synchronize movement of partition sections from machine table into sections in assembling wheel, using wrench. Fills magazines with partition sections and pushes button to start machine. Observes feeding and assembling operations, and adjusts machine to form partitions to specifications. Maintains production records.

8593-134 CRÊPING-MACHINE OPERATOR(paper prod.) DPT:682
GED: 3 SVP: 5 EC: 1 5 PA: M 4

Operates machine to form crêpe paper from smooth paper:

Mounts roll of paper on machine with assistance of other workers. Turns valves to regulate volume of glue or dye into pans and volume of steam to drying cylinders or steam drum. Starts machine and threads sheet through glue or dye pans, feed rolls, crêping (crinkling) roll and blade, rolls that remove excess glue or dye, drying cylinders or steam drum, tension rolls, and onto belt that travels around drying drum or onto rewinding roll. Moves controls to position crêping blade above crêping roll in proper contact with moving paper to crinkle paper. Turns valves and controls to regulate temperature of steam-heated rolls, tension of paper, and pressure of rolls, to prevent tearing or folding of paper. Cuts paper, using knife, and removes roll of crêpe paper when required amount has been rewound.

8593-138 SAMPLE-CONTAINER MAKER, HAND(paper prod.) DPT:684
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Fabricates sample paper or paperboard products, such as bags, boxes and display packages, by hand, for use by sales staff:

Cuts, folds and fastens together paper or paperboard container parts. Adds eyelets and attaches handles, according to specifications, using drafting tools, rulers, scissors, eyelet and grommet fastener, glue, brushes and hand stapler. Hand paints lettering and decorative designs on sample containers, using paints and brushes, according to customer specifications.

May select materials and make wrappings for paper towels, napkins and tissues to be used as sales samples.

8593-142 CARTON-FORMING-MACHINE OPERATOR(paper prod.) DPT:682
GED: 3 SVP: 4 EC: 1 5 PA: M 3 4

Operates machine that forms continuous rolls of paperboard or flat blanks into finished cartons for packing merchandise:

Adjusts forming bars, roller knives and cutter to accommodate size of box to be shaped, using wrenches and by tightening wing nuts. Fills glue reservoir, and positions and secures rollers, using hand tools, to dispense glue. Mounts paper roll and adhesive roll on machine spindle, using hoist or hydraulic lift. Threads paper through feeding mechanism. Presses button to start machine, and watches operation. Turns dial indicator to synchronize speed with case packing operation. Clears any blockages which may occur. Mounts perforating roll to form pre-cut forming lip on carton.

8593-146 SLITTER-CREASER OPERATOR(paper prod.) DPT:682
slitter-scorer.
GED: 3 SVP: 4 EC: 1 5 PA: M 4 7

Operates machine to slit, crease, cut, score or trim sheets of plain, laminated or corrugated paperboard to specified dimensions:

Turns screws and moves picker feed-bar and feed-table guides to accommodate size of sheets specified. Positions and fastens slitting and slotting disks, cutting knives or dies, according to job specifications, using wrenches. Installs scoring disks on shaft and turns setscrew to adjust pressure. Presses buttons to start machine and synchronize speed of travelling knives, scoring and slitting disks with speed of automatic feed. Measures sample with tape rule to verify dimensions of cut-scored blanks with work order and adjusts position of knives, dies or disks if necessary.

May record number of blanks produced.

8593-150 ENVELOPE-FLAP-CUTTING-MACHINE SET-UP
MAN(paper prod.) DPT:680
GED: 3 SVP: 3 EC: 1 PA: L 4

Sets up machine that cuts edges, flaps, notches, or openings in envelope blanks or envelopes:
Bolts specified cutting die onto machine ram, using hand tools. Turns handwheel to adjust stroke of ram, according to depth of die. Turns setscrews to adjust machine guides and stops to accommodate specified size paper stock, using ruler and screwdriver. Pushes button and depresses pedal to start machine for trial run. Compares first sample against standard to verify accuracy of machine set-up.

8593-154 TUBE-WINDING-MACHINE OPERATOR(paper prod.) DPT:662
core winder; paper-cone winder.
GED: 3 SVP: 3 EC: 1 5 PA: M 4 7

Operates machine that winds continuous strips of paper or cardboard into such products as, containers, cores, can bodier and mailing tubes:
Mounts rolls of paper or cardboard onto feed spindle of machine and locks in place with clamps. Threads paper or cardboard through machine guides onto forming rollers. Positions core or form on chuck of machine and wraps end of paper or cardboard around it. Fills glue reservoir and sets thermostatic control to regulate temperature of glue. Adjusts machine guides, stroke, cut-off, angle of spiral, tension on pressure rollers, and synchronizes speed with rate of feed, using hand tools. Presses button to start machine that rolls, glues and overlaps paper or cardboard to form tubes or other products. Observes operation to make necessary adjustments. Examines tubes for defects. Stops machine to remove jams manually or with knife.

8593-158 AUTOMATIC-PAPER-CUTTING-MACHINE OPERATOR(paper prod.) DPT:684
GED: 3 SVP: 3 EC: 1 PA: M 4

Operates automatic paper-cutting machine to cut paper into smaller sheets:
Loads supply of paper sheets into mouth of machine manually. Pushes button to start main motor drive. Turns control dials and presses buttons to set dimensions of paper, according to specifications. Pulls safety bar up with one hand and cutting control bar down with the other to start cutting operation. Presses pedal to adjust clamp for correct pressure on stock being cut. Stacks cut paper aside. Cleans, oils and greases machine. Changes cutting knives when dull.

8593-162 REVENUE-STAMP CUTTER(paper prod.; print. & pub.) DPT:584
GED: 2 SVP: 3 EC: 1 PA: L 4

Cuts, stores and issues revenue stamps:
Cuts sheets of stamps, using paper-cutting tool, adjusting guides, according to particular stamps, turning hand screws. Turns controls to lower blade that cuts into stamps. Stocks cut revenue stamps and labels in vault and issues them on request.
May keep daily reports on number of sheets cut and sequence of serial numbers for production control purposes. May print code number on revenue stamps, using offset press.

8593-166 BOX MAKER, PAPERBOARD(paper prod.) DPT:684
carton assembler.
GED: 2 SVP: 3 EC: 1 PA: M 4

Fabricates cartons, boxes and other paper products from laminated, corrugated or plain paperboard materials, using automatic gluing or wire-stapling machines:
Feeds blanks or paperboard sheets into machine. Tacks or stitches edges together to form cartons, using stapling or gluing device. Assembles and fits slotted pieces together manually to form partitions for cartons and inserts partitions in open container. Counts specified number of cartons and ties them into bundles for shipment, using twine or wire. Glues linen strips to tops and backs of boxes to form hinges.
May glue strips of cellophane on carton to form windows in container. May paste or glue paper edgings or linings to cartons to form trimmings.

8593-170 BAG-MAKING-MACHINE TENDER(paper prod.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends one or more machines that automatically convert plain or wax paper, or synthetic film to form bags:
Threads material from roll through guides and rollers to printer, cutters, folding device, gluer, or electric sealer. Presses button to start machine, observes operation, and adjusts machine to ensure uniform printing, shearing, folding, gluing, or sealing operations. Selects sample bags and inspects product for conformance to specifications.
May tend machine that wraps paper band around bundles of paper bags. May tend machine that automatically inserts tin ties into tops of bags used to package products, such as coffee.

8593-174 PAPER-BOX-MACHINE TENDER(paper prod.) DPT:665
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machines that fold, cut and glue box blanks or pasteboard rolls to form containers:
Adjusts machine guides and folders for specified size box. Replaces empty tape rolls and refills glue container. Threads pasteboard through machine guides. Feeds scored and cornered box blanks into hopper of machine. Discards blanks that do not meet specifications. Informs crew of details of production run, such as quantity and any special features. Pushes button to start machine and makes necessary adjustments to maintain quality of product. Assists in removing boxes from machine onto shipping pallets to clear machine area for next run. May tend machine that forms particular type of box and be designated accordingly; for example, Caddy-Forming-Machine Tender

8593-178 CORE MAN(pulp & paper) DPT:685
core cutter.
GED: 2 SVP: 3 EC: 1 5 PA: L 4 7

Tends machines that cut, ream and slot cardboard-paper-roll cores, according to work order specifications, performing any combination of the following duties:
Installs and aligns cut-off saw, reamer and slot cutters in machines, and adjusts stops, according to length and diameter of core, using rule and wrench. Cuts core to length with circular saw. Pushes core along feeder trough of reamer to ream out ends. Feeds core into cutters of slotting machine to cut slots in core ends. Inserts metal caps in ends of cores to coincide with slots, using hammer or hydraulic ram. Removes damaged caps from reclaimed cores with puller, and hammers out dents. Maintains inventory of cores available, by length and diameter.

8593-182 FOLDING-MACHINE TENDER(paper prod.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends machines that automatically cut continuous rolls of paper and related material into sheets of specified length, fold, and interlock them to form products, such as paper towels, diapers and napkins:
Threads material through rollers and guides, and tapes end to that of previous roll. Changes embossing rolls, using hand tools, and adjusts tucker, gripper, feed rolls and dial that regulate number of items per bundle, according to type of material and work order. Fills glue reservoir. Presses button to start folding machine, and monitors operation to ensure uniform gluing, cutting, perforating and folding of product. Lubricates machine and makes minor adjustments, using hand tools. Removes product from machine outlet, and places in semi-automatic-banding machine. Fills and seals cases for shipment.
May prepare production reports. May be designated according to type of machine tended, or according to article folded; for example, Diaper-Machine Tender
Towel Folder-Bander

8593-186 PAPER-TWISTER TENDER(paper prod.) DPT:685
GED: 2 SVP: 3 EC: 1 5 PA: M 4

Tends one or more machines that twist paper strips into twine:
Slides roll of paper of specified width onto spindle of machine. Wraps twine leader around spool, and threads end through guide and twisting die. Untwists end of leader and splices it to end of paper strip. Starts machine and observes operation to detect uneven twisting

and winding of twine. Verifies diameter of twine against specifications, using micrometer, and adjusts pressure on twisting die, turning wheel. Cuts twine and removes filled spool. May thread two or more strands of twine through die to make ply twine. May twist paper strips around wire to form protective covering.

8593-190 SCORER(paper prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: M 4

Tends machine that scores cardboard blanks along lines where they are to be folded or cut, to form boxes or containers: Positions scoring disks on shaft, according to work order specifications, turns setscrew to secure them in place, and turns wheel to adjust pressure on disks, using hand tools. Starts machine and loads blanks into hopper or pushes blanks into scoring roll by hand. Removes scored blanks and stacks them on pallets.

8593-194 TAG-MACHINE TENDER(paper prod.) DPT:685
GED: 2 SVP: 3 EC: 1 PA: L 4

Tends machines that automatically cut, print, perforate and punch holes in tags, labels and index cards: Threads paper stock between machine guides that pass paper under printing roll, corner cutter, punch, eyeletter, shears, patch unit and perforator. Turns mechanical counter dial to zero. Verifies all information to be printed on tags, labels or cards, such as number, size and grade. Adjusts machine attachments for specific operation, using hand tools. Starts machine that prints specified data, trims corners, punches and reinforces holes with paper or metal eyelets, cuts size, and records quantity produced, according to counter. Examines products for defects as items drop into boxes from conveyor. Performs minor maintenance on machinery, using hand tools, and notifies supervisor when major repair is necessary. May tend imprinting machine that stencils labels and boxes.

8593-198 BAG MAKER, HAND(paper prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4

Forms bags or specialty covers, by hand, from synthetic film, paper sheet, paper tubing or other materials, by either of the following methods:

1. Folds ends of paper tubes ready for gluing. Opens folds at one end of tube or folds end of sheet and brushes glue around edges. Closes folds along creases and presses them by hand or using wooden block.
2. Seals sides and ends of synthetic film, waxed paper or other materials, using hand-iron or heat-sealing device.

8593-202 COLOUR-CARD MAKER, HAND(paper prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles colour cards, for advertising purposes, from coloured sheets, using paper cutter and glue: Cuts coloured sheets into cards of specified dimensions, using paper cutter. Sorts and stacks cards according to colour. Mounts card on folder by either of the following methods: 1. Positions cards in handpress according to code numbers. Brushes glue on back of cards, positions folder over cards and pulls lever to close press and glue cards to folder. Removes folder from press. 2. Brushes glue on blank spaces of preprinted colour folder. Positions colour cards on blank spaces according to code, and presses cards to folder manually. Stacks cards on table or pallet. May feed electric duplicating machine to print identifying data on labels. May maintain records of number of folders completed.

8593-206 ENVELOPE MAKER, HAND(paper prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Makes envelopes by folding, gluing, and finishing die-cut blanks, by hand, for custom orders: Scores envelope blanks, using spatula or scoring tool. Folds envelope blanks, according to pattern, and creases folds by hand or with spatula. Applies gum to edges of flaps with brush or applicator, and seals flaps before gum dries, leaving one glued flap open. Folds down open flap when dry. Packs completed envelopes in boxes. Stacks boxes on pallet for removal. May tend machines that affix clasps, reinforcing patches, snap fasteners and string or wire ties to envelopes. May attach cellophane strips or other decorations to envelopes by hand.

8593-210 GREETING-CARD ASSEMBLER(paper prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles greeting cards, performing any combination of the following duties: Folds printed sheets or cards into various shapes or designs manually. Attaches seals, lace, sachet bags, ribbon or other paper, metallic or plastic inserts on cards, using glue, tape, or staples. Applies glue to edges or corners of folded cards with brush. Glues and inserts sheets on greeting cards. Examines finished cards for defects. Trims cards to size, using paper cutter. May assemble programs, wedding and business invitations.

8593-214 PAPIER-MÂCHÉ MOULDER(paper prod.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4

Makes papier mâché forms, such as arms, legs or busts used for display of apparel, by hand: Greases inside of mould halves, with brush, to prevent sticking. Pastes one side of papier mâché sheets and tears into pieces to fit mould. Lays unpasted side of sheet pieces against inside of mould and presses them in place by hand, leaving overlap at side of mould to serve as joint with other half of mould. Adds layers of coated paper to build up form to desired thickness, fitting and smoothing each layer to mould. Fits halves of mould together, pastes and presses overlap of each half of form together, and removes completed form from mould. Finishes edges of form by pasting paper to openings.

8593-218 AUTOMATIC-TUBE-MACHINE TENDER(paper prod.) DPT:665
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that automatically forms paper tubes or spools: Threads paper through rollers and guides, and tapes end to previous roll. Adjusts guides, cutting blade and auxiliary devices, according to specifications, using hand tools. Fills glue reservoir and turns valve to regulate temperature and flow of glue. Presses button to start machine and observes operation to detect defects. Adjusts machine to correct malfunctions.

8593-222 PAPER-TUBE-PRODUCTION HELPER(paper prod.) DPT:665
GED: 2 SVP: 2 EC: 1 5 PA: M 3 4

Helps machine operators in production of paper or cardboard tubes: Mounts roll of paper or cardboard on machine spindle, using hoist, and secures in place with clamps, using hand tools. Glues or splices end of new roll to previous roll. Assists in threading paper through machine and in making adjustments to guides and cutting blade. Replenishes glue reservoir and cleans glue pumps. Examines tubes ejected from machine for defects, such as excess glue and open seams. See also definition for term title, 02-160 HELPER (any ind.).

8593-226 BOOK-COVER CREASER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends powered machine that creases book cover blanks along lines where they are to be folded: Positions and secures single blade and pressure rollers on machine, and adjusts machine stops that control length and width of crease. Feeds book cover blanks into machine by hand on upstroke of creasing blade. Removes creased book cover blanks and stacks them on skid.

8593-230 BOOK-JACKET-COVER-MACHINE TENDER (paper prod.) DPT:685
laminating-machine tender.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that glues paper and plastic film together for such uses as, book jacket covers or menu covers: Mounts rolls or sheets of paper or card and plastic film on machine holders, or in feeder trays, using hoist, and installs roll of adhesive tape on either side of machine. Splices ends of paper, plastic and tape to ends of previous rolls. Replenishes glue reservoir. Adjusts feed-bar, fingers and machine guides, and cutting mechanism, according to specifications. Presses button to start machine. Depresses foot lever to

control speed. Observes machine operation as machine glues paper and plastic film together, cuts to size, and tapes edges. Measures sample to verify dimensions. Makes minor adjustments and clears jams.

May mix powder and water in mixer to make adhesives.

8593-234 BOX FINISHER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Finishes paperboard boxes by one or any combination of the following methods, for decorative or protective purposes:

1. Loads cardboard extension pieces into mouth of machine that glues oversized pieces of cardboard to box top or bottom. Replenishes glue reservoir. Pushes button to start machine and observes machine in operation to detect malfunctions and to ensure uniformity of product. 2. Turns wheel to adjust angle and position of guides on machine, according to size of sheet. Positions blanks, labels or sheets against guides under cutter, and depresses pedal to lower blade that cuts out V- or L- shaped corner. Turns stock to bring each corner into position for cutting, according to specifications. 3. Mounts rolls of paper on holder, screwing in correct face plate by hand. Threads paper through guides and over glue roller. Selects and mounts holding block (form) on plate. Positions uncovered box over holding block, draws end of glue-coated paper forward and presses down in line with edge of box. Smooths paper to sides of box. Depresses pedal to lower blade or uses shears to cut paper to specified length. Folds and turns paper over box edges and corners. 4. Places box parts on glued wrapper and positions them under plunger of machine. Presses pedal to lower plunger that forces box part and wrapper down past series of brushes that seal wrapper onto box part. 5. Positions box parts onto glued wrappers conveyed by belt that feeds box parts into machine equipped with automatic plunger that smooths wrapper around box.

8593-238 BUTTON-ENVELOPE-MACHINE TENDER (paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that punches holes, trims or notches ends, and affixes clasps, reinforcing patches, fasteners and string or wire ties to envelopes or paper bags:

Turns screws to adjust guides and stops on machine to accommodate specific product, using hand tools. Mounts rolls of tape on machine spindles or mounts and threads string through eyelets, and cuts to desired length, using fixed blade. Loads clasps, fasteners, buttons or patches into machine hoppers. Places envelopes or bag against machine guides and stops, and positions string or wire ties. Depresses lever to start punching, cutting, fastening or reinforcing operation. May stack finished envelopes or bag on pallet for inspection.

8593-242 CARDBOARD-LINING-MACHINE TENDER (paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that glues paper over cardboard and cuts cardboard to desired length:

Installs roll of paper on machine, using hoist. Turns screws that regulate distance between feeding and pasting rollers to accommodate cardboard, and adjusts end shears that cut board to required length. Replenishes glue reservoir. Threads paper from roll through guide and gluing rollers. Moves lever to adjust thermostat that regulates temperature of heated rollers. Presses button to start machine. Pushes cardboard piece into feed end of machine. Removes and stacks completed pieces.

May dilute prepared glue with water, using electric mixer.

8593-246 COLOUR-CARD MAKER, MACHINE(paper prod.) DPT:685
chip-applying-machine tender; mounting-machine tender.
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Tends machine that cements paint colour samples to colour sample cards or folders:

Loads printed colour card blanks and specified number, size, colour and type of paint colour samples or chips into feed racks of machine, according to work orders. Fills reservoir with liquid adhesive from a container or with cement, using putty knife. Adjusts guides to accommodate cards or folders, using wrench, to loosen or tighten

holding nut. Depresses pedal to start machine, observes operation to detect malfunctions and examines full cards or folders to ensure conformity to standard. Informs supervisor of poor alignment of samples, jammed paper or mechanical failures. Removes completed cards from machine and stacks them aside.

May pack cards or folders in containers for shipment.

8593-250 COMB-CUTTING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends one or more machines that cut bookmatch combs (blanks) from cardboard rolls:

Fastens metal hub to center opening of cardboard roll, using hand tools, and inserts turning-shaft in hub. Pushes roll onto let-off rack. Threads cardboard strip through machine guides and pressure rolls. Adjusts dies that cut and trim cardboard to specified dimensions. Pushes button to start machine and observes operation to detect defects, such as insufficient punch pressure, non-cuts, and incorrect dimensions. Makes minor adjustments to machine, using hand tools.

8593-254 DRILL-PUNCH TENDER(paper prod.) DPT:685
punch-press tender, paper.
GED: 2 SVP: 2 EC: 1 6 PA: L 4 7

Tends press to drill or punch holes and slots in paper goods, such as paper stock, paperboard, envelopes and pamphlets:

Reads work order to determine spacing and number of holes or slots to be made. Starts machine and positions stacks of blanks against backstop and end guides. Depresses pedal to activate ram which lowers drills or die to punch or drill paper. Removes paper from machine and stacks items drilled on pallets. Inspects finished items for conformance to specifications, visually or using gauges or template.

May adjust spacing of drills, depth of stroke, position of backstop and guides, according to size of item, and change dull drills, using hand tools.

8593-258 ENVELOPE-MACHINE TENDER(paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that cuts, forms and glues envelopes from paper blanks, performing any combination of the following duties:

Loads envelope blanks in automatic feed rack, or positions blanks on machine table against guides and stops. Installs roll of transparent paper on machine, using electric hoist, when producing window envelopes. Replenishes glue reservoir. Depresses pedal or moves lever to lower ram which forces cutting die through stock to cut edges, flaps, notches, or openings. Presses button to start machine that glues, folds and dries envelopes. Inspects envelopes to detect defects in cutting, forming, and gluing. Removes jammed envelopes from rollers. Observes operation of machine for malfunction. Counts pack of envelopes periodically to verify accuracy of mechanical counter.

May place envelopes in boxes, and stack on pallets.

8593-262 MATCH-BOOK-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that forms match books:

Aligns combs on conveyor belt to feed machine. Threads end of cardboard roll into feed magazine. Threads stapling device manually, placing roll of wire on spindle, securing in place, threading wire through tension and feed guides. Observes machine operation, and adjusts feeding mechanism by turning knobs to align slitting cutters and feed slot, as necessary. Pulls sample match books apart to examine for faults.

May perform minor maintenance, using hand tools.

8593-266 MILK-BOTTLE-CAP-MAKING-MACHINE TENDER (paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4

Tends machine that automatically prints, cuts and waxes paper caps for milk bottles and staples pull-tabs on caps:

Positions roll of cardboard paper on machine. Sets and clamps type into machine holder. Adjusts level of ink in reservoir and quantity and temperature of wax, by turning valves. Fills slots with staples and

tabs. Starts machine and examines random samples of caps for defects. Performs minor maintenance on machine, using hand tools.

8593-270 PAD GLUER, MACHINE(paper prod.) DPT:685
stripping-machine tender.

GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that glues fabric or paper strip over back edge of unbound paper products, such as legal tablets, notebooks and ledger paper:

Places interleaves with cover at bottom and top of stack of paper. Turns handwheel to adjust machine-head pressure plate, according to thickness of item being processed. Places roll of gummed tape on reel and threads end through feed guide and rolls. Turns screws to adjust tension springs that bring pressure on tape to force sticking, using hand tools. Starts machine and feeds items onto machine-feed conveyors. Removes completed product from machine conveyor and stacks on skids.

8593-274 PAPER-BAG-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 PA: M 3 4

Tends machines to form paper bags, performing one or any combination of the following duties:

Carries stack of paper tubes from pallet to loading tables. Pushes button to start machine, and feeds paper tubes against machine guides. Depresses foot pedal to move mechanism that forms valve in one corner of paper tube. Slides tube under rollers and onto conveyor for reinforcing. Presses button to start machine that cuts and applies glue to sleeves. Glues paper sleeves to valves, to reinforce bags by inserting glued edge of sleeve under edge of valve, refolding and pressing down valve manually. Counts and stacks tubes on pallet for bottoming. Pushes button and feeds tubes into machine that folds and glues bottom ends of tube. Inspects bags for defects in folding and gluing and separates rejected bags. Depresses foot pedal of hydraulic press to flatten bags, and counts bags for baling. Disassembles defective bags, ripping bottom from tube manually and placing aside. Stacks paper tubes ready for sewing, inspects them after sewing, counts them into bale lots and places aside those with defective stitching. Centers plastic handles or inspection tags on ends of bag tubes to be sewn onto bags.

May tend machine that presses prepacked seams and bottom folds to seal bags. May tend automatic machine that stitches glued binding tape to ends of tubes to seal paper bags. May be designated according to type of machine tended; for example, Bottoming-Machine Tender Sleever

8593-278 PAPER-CUP-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that automatically forms flat-bottomed paper cups: Loads roll of paper on machine, using electric hoist. Threads ends of paper through rollers, forming guides and cutting dies. Fills glue reservoir to specified level. Presses button to start machine, and observes operation to detect malfunctioning of machine that automatically forms and glues paper into cups. Examines sample cups for defects. Places specified number of cups into boxes preparatory to packing.

8593-282 PARTITION-SLOTTER-MACHINE TENDER
(paper prod.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that cuts interlocking slots or notches in two strips of cardboard to form multicell partition (divider) for cardboard containers:

Reads work order to determine slotting specifications and quantity of dividers to be produced. Adjusts slotter head and knives to panel dimensions, using wrenches. Sets automatic counter to control number of parts produced in run. Loads blanks into machine hopper by hand. Starts machine and observes operation of feeding, slotting and cutoff mechanisms to detect any malfunctioning. Verifies dimensions, using ruler. Performs minor maintenance to machine, using hand tools.

8593-286 ROLLING-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that winds and cuts wallpaper into rolls of specified lengths:

Adjusts guides to accommodate wallpaper of various widths, using wrench. Threads wallpaper through machine, and presses button to start machine that automatically rolls and cuts paper. Observes wallpaper for tears and other defects. Lifts rolls from discharge end of machine and places specified number into boxes, or ties rolls into bundles.

8593-290 ROLL-SLICING-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 PA: L 4

Tends battery of machines that slice cross sections from rolls of carbon paper or inked plastic sheeting to make narrower rolls:

Places roll of paper or sheeting on arbor of machine, tightens screw on arbor to prevent unrolling during slicing and lifts ratchet into position to lock end of arbor. Presses button to start machine that rotates circular knives against rolls to cut off narrower rolls. Presses button to stop machine and removes sliced rolls from arbor. Examines edges of cut rolls for faults to determine if knives need sharpening. Carries rolls to workbench for completion by helper. May sharpen circular knives by pressing buttons to move grinding wheel against rotating knives, and by holding emery paper against rotating knives for further sharpening.

8593-294 SEALING-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 5 PA: L 4

Tends machine that applies sealing glue, such as latex, to envelope flaps, and dries them by passing envelopes under heat element:

Fills glue reservoir. Turns on drying lamps and loads automatic feed rack with envelopes. Observes machine in operation and examines envelopes to detect malfunctioning in feeding, gluing or drying process. Adjusts rollers to regulate glue flow, and turns rheostat to synchronize rate of envelope feed with flow of glue. Removes material jammed in rollers. Removes envelopes from end of conveyor, and places them into boxes.

8593-298 STAYER-MACHINE TENDER(paper prod.) DPT:685

GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that tapes or glues corners of scored box blanks to form containers:

Adjusts machine according to size of box to be formed, by bolting form to machine ram and adjusting walls of well, using hand tools. Places reel of tape on machine feedrack, and threads tape through feed and moisture rolls. Replenishes glue reservoir. Fastens containers by any of the following methods: 1. Presses button to start machine and loads scored box blanks into automatic feedrack. 2. Bends scored blank around box form with hands or knees and presses pedal to position and glue end-pieces on box. 3. Positions box over anvil, pressing sides of box to form corner. Depresses pedal to lower knife that cuts and applies tape to corners. Rotates box to tape all corners. Stacks formed boxes on pallets.

8593-302 BAG-MAKING-MACHINE-TENDER HELPER(paper prod.) DPT:687
GED: 2 SVP: 2 EC: 1 5 PA: M 4

Helps tend machine that automatically converts plain or wax paper, synthetic film, metallic foil or other materials to form bags: Inserts shaft into core of parent roll and secures it with steel collars, using hand tools. Lifts and mounts roll on machine stands, using electric hoist. Splices new roll to end of previous roll with tape. Replenishes glue and ink reservoirs manually. Assists in making repairs and adjustments, using hand tools. See also definition for term title, 02-160 HELPER (any ind.).

8593-306 CORRUGATOR-OPERATOR HELPER(paper prod.)
DPT:687

GED: 2 SVP: 2 EC: I 5 PA: H 4

Helps operator to corrugate and face paperboard for containers, by performing any combination of the following duties:

Moves rolls to machine, using hand truck. Inserts spindle through core of roll and adjusts collars to center roll on spindle. Attaches electric hoist hooks to spindle, hoists roll onto machine feed rack, and turns wingnuts to fasten clamps over ends of spindle. Splices end of new roll to end of spent roll with tape. Mixes starch powder with water to make adhesive, according to formula, and fills glue reservoirs. See also definition for term title, 02-160 HELPER (any ind.).

8593-310 CARTON-FORMING-MACHINE FEEDER(paper prod.)
DPT:686

GED: 2 SVP: 1 EC: I PA: L 3 4

Feeds machine that shapes flat blanks of cardboard into finished cartons for packing machine:

Feeds stacks of flat carton blanks into mouth of carton forming machine manually. Removes blanks from discharge end of machine individually, straightens and nests them. Discards defective cartons.

8593-314 SLITTER-CREASER FEEDER(paper prod.)
DPT:686

GED: 2 SVP: 1 EC: I 5 PA: M 4

Feeds paperboard blanks or sheets into machine that scores, perforates, prints and slots them for forming into boxes:

Loads pre-cut blanks into automatic machine feeder, or positions stacks of paperboard sheets against guides on feed table and inserts each sheet into machine feed rollers. Fills ink reservoirs with ink of specified colour. Sets counter, prior to feeding machine, to control number of blanks to be processed. Removes scored blanks from discharge end of machine, examines for faults, and stacks on pallets.

May assist in setting up machine. May adjust scoring, perforating and slotting discs or knives, feed guides and rollers, as directed, using hand tools.

8593-399 OTHER PAPER PRODUCT FABRICATING AND ASSEMBLING OCCUPATIONS

This group includes paper product fabricating and assembling workers, not elsewhere classified; for example, those who tend machines that make and coat paper cartridge shells for dynamite, shape box tops, cut and fold crepe paper, and mould wood pulp directly into products, such as egg cartons and food trays. Typical examples of occupational titles covered by this residual group definition are:

Bag Repairer(paper prod.)
Knotting-Machine Tender(paper prod.)
Shell-Machine Tender(paper prod.)

8595-110 FURNITURE FINISHER(furn.)
DPT:681

wood finisher.

GED: 4 SVP: 6 EC: I 5 7 PA: L 3 4 7

Finishes or refinishes new or repaired furniture to specified colour or finish, utilizing knowledge of wood properties, finishes, and furniture styling, performing any combination of the following duties:

Disassembles articles, masks areas adjacent to area being refinished and removes accessories such as knobs and hinges to prepare article for refinishing. Removes old finish and surfaces by abrading with steel wool or sandpaper, or by brushing solvent onto surface to soften finish, removing softened finish by scraping with knife or steel wool. Removes excess solvent by rubbing surface with cloth immersed in paint thinner, sal soda or other material. Applies plastic putty, wood putty or lacquer stick to surface, using spatula or knife, to fill nicks, depressions, holes and cracks. Smooths flat surfaces with sandpaper or using sanding machine. Selects finish ingredients and mixes them by hand or machine to obtain specified colour, or shade. Brushes or sprays successive coats of stains, varnish, shellac, lacquer, or paint on workpiece. Grains woods or paints wood trim using graining roller, comb, sponge or brush. Polishes and waxes finished surfaces.

May brush bleaching acid over surface to restore wood to natural colour, and removes excess acid by applying suitable neutralizer. May spread graining ink over metal portions of surfaces to simulate wood-grain finish. May be designated according to type of furniture finished or finish applied; for example,

Piano-and-Organ Refinisher
Powder Gilder
Television-Cabinet Finisher
Whitener

8595-114 PAINTER(motor vehicle)
DPT:661

GED: 4 SVP: 6 EC: I 7 PA: M 3 4 7

Repaints vehicles, such as automobiles, trailers, buses and trucks:

Removes old paint from vehicle or damaged or repaired portion of vehicle, using liquid paint remover and scraper. Covers bumpers, windows, and chrome trim with masking tape and paper, or removes chrome mouldings and trim prior to painting. Mixes paints to attain specified colour, colour which matches vehicle, or uses pre-mixed colours supplied by manufacturer. Primes base metal with type of primer that suits metal and finish paint. Cleans and smooths surface, using solvent, wet abrasive paper or steel wool prior to painting. Fills scratches and small dents with filler compound. Paints specified portion of vehicle, using spray gun or brush.

May spray undercoating material over bottom of vehicle to prevent corrosion.

8595-118 PAINTER, SHIPYARD(ship & boat bldg.) DPT:661

GED: 3 SVP: 6 EC: B 6 7 PA: M 2 3 4 7

Prepares wood and metal surfaces for painting, and paints parts, equipment, interiors and exteriors of ships, and shipyard buildings:

Mixes solvents according to formula and immerses parts in solution or washes surfaces, to remove grease, rust, scale and dirt. Removes old paint, using blowtorch, sandblaster or paint remover. Smooths wooden and plaster surfaces, using sandpaper, scraper and sanding machines. Fills cracks and holes with patching plaster, putty or plastic wood. Washes and treats surfaces with oil, turpentine and other preparations. Brushes and rubs filler material into grained wood to prepare surfaces for painting. Mixes and matches colours of paint, varnish, stain, shellac and calcimine. Applies paint to surfaces, using brushes, spray guns and rollers. Sands surfaces between coats and polishes final coat to specified finish.

May cut glass and install window and door panes. May hang wallpaper. May cut stencils, and brush or spray lettering and decorations on surfaces.

8595-122 SPRAY PAINTER, SIGNS(misc. prod. fab., n.e.c.)
DPT:681

GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Lays out and paints letters, designs and background detail on plastic and neon signs, by one of the following methods:

Prepares signs for painting by washing surfaces, using lacquer, thinner, coal tar and cloth. 1. Sprays transparent rubber film over plastic sign surface, for later use in applying design and colour to sign, using spray gun. Places full size pattern on illuminated lay-out table, positions plastic sign on top of pattern, cuts design into rubber film,

8595-PAINTING AND DECORATING OCCUPATIONS, EXCEPT CONSTRUCTION

This unit group includes occupations concerned with preparing surfaces for staining and painting; applying decorative and protective materials on wood, metal or similar surfaces of structures and equipment; dipping and coating; polishing and baking. Activities include: applying paint to surfaces, using brushes, rollers or hand-held spray equipment; staining furniture; operating and tending spraying machines, and performing related duties. Construction painting and decorating occupations are classified in Unit Group 8785, PAINTERS, PAPERHANGERS AND RELATED OCCUPATIONS.

using stencil, knife and ruler, to transfer design and letters from master pattern onto plastic sign. Positions plastic sign on hanging bar, using pulley chain blocks and angle iron, to achieve desired height and stability. Tears rubber film off portion of sign to be painted and sponges portion with water to remove static electricity from plastic. Sprays transparent paints over plastic sign, working from darker to lighter colours, and peels rubber film off successive portions of sign, allowing paint to dry between each coating. Sprays background of sign after darker colours have dried. 2. Sprays primer coat on metal background of neon sign to improve adhering and wearing properties of paints, using spray gun. Sets master pattern on carbon paper and traces sign design, using hand perforating wheel, to make pounce pattern. Tapes pounce pattern to metal background of neon sign and sprays black lacquer through holes made by perforating wheel to transfer design to sign surface. Mixes paint to match colour codes specified on master pattern. Paints letters and design onto neon sign background, working from lighter to darker colours, using enamel paints, brushes and masking tape.

8595-126 SPRAY PAINTER, FINISH, LARGE(any ind.)

DPT:664

GED: 3 SVP: 5 EC: I 7 PA: H 2 3 4 5 7

Prepares surfaces and applies protective or decorative coating, such as primer, paint, enamel or lacquer to ships, aircraft, automobiles, trailers, boilers, pumps, smoke stacks and large surfaces of machines and equipment to provide finished surface, using spray gun, performing any combination of the following duties:
Removes rust from metal surfaces, using acid, scraper, wire brush, emery cloth or steelwool. Cleans and smoothes work surface, using solvents, soap and water, air hose, sandpaper or sanding machine. Applies acid to certain metal surfaces to ensure that paint will adhere to surface. Fills cavities and dents with putty or patching compound to assure smooth finish. Applies masking tape over parts and areas that are not to be coated. Selects coating liquid, adds thinner and mixes solution, using paddle or mechanical mixer to attain required consistency and colour, or selects ready to use paint. Pours coating liquid into spray container and connects gun to air-hose, using wrenches. Erects and moves ladder or scaffold to worksite. Climbs ladders or scaffold and climbs onto or moves around workpieces to spray larger items. Turns sprayer valves and nozzle to regulate width and pressure of spray. Pulls trigger to start sprayer and directs spray onto work surface. Coats areas inaccessible to hand sprayer, such as fuel lines and electric controls, using brush. Paints insignia and identifying letters and numbers on surfaces, using stencils and spray gun. Cleans spraying equipment and brushes with solvent. Directs workers in performing duties such as, moving items to work area, and transferring finished pieces to stockroom.

May be designated according to item sprayed; for example,
Painter, Aircraft(air space-craft)
Painter, Boiler(metal fab., n.e.c.)
Painter, Locomotive(rail. rolling stock)

8595-130 CAR PAINTER AND LETTERER(motor vehicle;

rail. rolling stock)

DPT:684

GED: 3 SVP: 5 EC: I 6 7 PA: M 2 4 7

Paints and letters transport equipment, such as buses, locomotives and freight cars:

Lays out areas to be painted, using tape measure, pencil and straightedge, and masks area not to be painted with tape and paper sheets. Applies primers and finish paint to surface of vehicle, using handbrush or spray gun. Cuts stencils by hand or machine, tapes them onto vehicle and applies paint over them, using handbrush or spray gun. Applies decalcomania letters, numerals and motifs to interior and exterior surfaces of vehicle. Paints contrasting line around letters, numerals and motifs to enhance appearance.

May remove old paint, using blowtorch or paint remover and hand scraper. May mix and match paints according to colour charts. May be designated according to type of vehicle lettered; for example,
Railway-Car Letterer(rail. rolling stock)

8595-134 DECORATOR(furn.)

DPT:684

GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Applies decorative designs to furniture performing any combination of the following duties:

Mixes paint or gilt in cans and matches colours according to specifications or uses prepared paints. Draws threadline marks on furniture as guides for striping, using stylus. Prepares and cuts paper

stencils, using stylus and scissors. Marks parts not being decorated with tape and cardboard. Applies paint or gilt over stencil, using spray gun or handbrush. Applies shellac, paint or gilt onto surface of furniture article to form decorative designs or stripes, using brush. Fills production card, recording number of articles completed and style number.

May apply designs to articles by lowering silk screen over workpiece and moving squeegee dipped in paint across silk screen. May be designated according to type of decoration applied; for example,
Striper, Hand

8595-138 ENAMELLER, HAND(jewellery & precious metal

prod.)

DPT:684

GED: 3 SVP: 5 EC: I PA: L 4 7

Applies decorative enamel to jewellery articles, such as pins, earrings, insignia and medals, using hand tools, and bakes articles in oven:

Cleans jewellery in baths of acid and water, and scrubs surfaces with brush. Mixes ground colored enamel and distilled water according to specifications. Places articles in holding device and applies liquid or powdered enamel of various colors to designated areas of jewellery to form specified design, using pick, spatula or spray gun. Removes enamel that has spread beyond design, using brush. Sets oven controls to specified temperature. Places metal tray or rack containing jewellery into oven to fuse enamel to jewellery. Determines baking time according to size of articles and composition of enamel. Observes colour of enamel to determine temperature and avoid overheating. Removes metal tray or rack from oven, using tongs and sets enamelled parts in cooling rack. Immerses jewellery in baths of acid and water to remove oxide scale. Smooths enamelled surfaces of jewellery articles, using abrasive stone or emery file. Reheats enamelled jewellery in oven to produce luster.

May use buffing machine equipped with emery wheel to remove excess enamel. May be designated according to specific task performed; for example,
Enamel Applier
Enamel Buffer
Enamel Burner

8595-142 SPRAY PAINTER, FINISH, SMALL(any ind.)

DPT:664

GED: 3 SVP: 4 EC: I 7 PA: M 4 5 7

Prepares surfaces and applies protective or decorative coating, such as paint, varnish, silver or copper solution, enamel or lacquer to machines, manufactured products or other items to provide finished surface, using spray gun, performing any combination of the following duties:

Cleans grease and dirt from product, using cloth or materials such as, lacquer thinner, turpentine, soap and distilled water. Removes rust from metal surfaces, using wire brush or steel wool. Applies masking tape over parts and areas that are not to be coated. Fills cavities and dents with putty or metal filler and sands surfaces, using hand or powered sander to attain smooth surface. Selects and mixes coating liquid to produce desired colour according to specifications, using paddle or mechanical mixer, or uses pre-mixed coating. Pours coating liquid into spray container and connects gun to airhose, using wrenches. Places items on racks, or presses foot pedal to activate rotating air hoist to raise items into position for spraying. Turns sprayer valves and nozzle to regulate width and pressure of spray. Pulls trigger to admit solution into spray gun. Directs spray through silk screen or directly onto surface of workpiece to apply finish coating. Observes sprayed area to detect spots, streaks and residue colouring. Coats areas inaccessible to hand sprayer, using brush. Places coated items on rack for drying, onto drying oven conveyor or pushes wheeled rack of components into oven. Adjusts electric oven controls to maintain specified temperature. Cleans spraying equipment and brushes with solvent. Assigns painting duties to spray and brush painters and examines finished product for conformance to specifications.

May be designated according to article or surface sprayed; for example,
Cabinet Sprayer(electronic equip.)
Lamp-Base Sprayer(misc. prod. fab., n.e.c.)
Luggage Sprayer(leather goods)
Metal-Spray Painter(metal fab., n.e.c.)
Mirror Painter(glass)

8595-146 FINISH-TOUCH-UP MAN(furn.) DPT:684
finish patcher; touch-up painter, hand.
 GED: 3 SVP: 4 EC: 1 7 PA: L 3 4 7

Repairs defects in finish of furniture and cabinets of home appliances, such as air conditioners, television sets and record players, performing any combination of the following duties:

Checks inspectors markings or examines workpiece for defects, such as holes, cracks or scratches. Wipes, scrapes, sands or applies cleaning solution to surface to prepare surface for retouching or refinishing. Fills holes and cracks in wood with shellac or wax, using heated blade to melt and spread filling material. Applies stain, varnish or other protective coating to match finish, using brush or spray gun. Smooths repaired surface with sandpaper, pumice stone, or steel wool. Polishes wood with oil or wax to match surrounding finish.

8595-150 STAINER(furn.) DPT:684
 GED: 3 SVP: 3 EC: 1 7 PA: M 4 7

Stains parts of furniture, mirror frames or picture frames, using brush, pad or spray gun:

Reads work order for finishing specifications. Pulls article along roller conveyor into staining station and examines article for damage, such as scuff marks and scratches. Masks areas not to be sprayed. Measures and mixes water or alcohol and pigment to prepare stain solution. Sprays, brushes or rubs stain evenly on designated areas. Rubs or wipes stained surface with cloth to remove drips or excess stain. Pushes stained article onto powered roller conveyor to remove from staining station. Cleans spray tank, nozzles, and brushes with solvent. Applies varnish, using spray gun. Smooths and polishes successive coats of finish, using powdered pumice, pumice stone and sandpaper. May use a specific method of applying stain and be designated accordingly; for example, Brush Stainer Pad Stainer Spray Stainer

8595-154 STAINER, SMOKING-PIPE(misc. prod. fab., n.e.c.) DPT:684
 GED: 2 SVP: 3 EC: 1 6 7 PA: L 4 7

Applies stains and lacquers to shanks and bowls of briar pipes: Measures specified quantity of stain, varnish and lacquers, using scales and graduated cylinders, and blends in mixing unit. Heats stain to specified temperature range. Sets pipe in rack, stains exterior, using brush, and allows pipe to dry. Places dried pipes into tray, according to grade and style. Varnishes or lacquers stained pipes, using brush. May recoat pipes according to type of finish required and polish quality pipes to produce a deeper tone finish.

8595-158 BANDER, HAND(glass) DPT:684
 GED: 2 SVP: 3 EC: 1 PA: L 4 7

Paints bands or lines on exterior and interior of glassware, such as tumblers, vases, and bowls:

Marks area on glassware to be banded or lined, using ruler. Centers glassware on wheel or rotating spindles. Holds brush to ware while resting arm on support to steady hand to paint lines or bands. Examines painted lines and bands for straightness, thickness and width. Places painted glassware on moving conveyor or on trays. May work from a sample.

8595-162 FRAME-MOULDING FINISHER(misc. prod. fab., n.e.c.) DPT:684
frame toner.
 GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Imparts finish to mirror or picture frame mouldings performing any combination of the following duties:

Compares colour of pre-mixed coating with sample and adds ingredients to mixture to produce match with sample. Lays strip of moulding face upon table. Dips cloth pad, steel wool or sponge in paint, stain, filler or lacquer and rubs pad over surface to apply or remove coating. Applies coating to portions of moulding, using brush or roller. May smooth surface of moulding prior to painting, using sandpaper and steel wool. May fasten linen to moulding, using glue and pressurized roller to form mat (bordering frame).

8595-166 GILDER, METAL-LEAF(misc. prod. fab., n.e.c.) DPT:684
 GED: 2 SVP: 3 EC: 1 PA: L 4 7

Covers surface of mirror or picture-frame moulding with silver or gold leaf:

Brushes sizing (thin glue) onto surface. Blows leaf from supply book onto palette. Picks up leaf from palette with T-shaped felt-edged tool and positions leaf on surface. Smooths leaf over surface with edge of tool and rubs off excess leaf, using pad of cotton waste. Polishes gilded surface to high lustre by rubbing it with cotton pad or gloved hand. Sprays protective coat of lacquer over gilded surface.

May paint back of gilded frame, using brush and bronze paint. May shellac surface to be gilded, to impart smooth, shiny finish.

8595-170 PAINTER, AIRBRUSH(any ind.) DPT:684
 GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Coats, decorates, glazes, retouches or tints articles; such as, glassware, toys, pottery, artificial flowers, greeting cards and household appliances, using airbrush:

Stirs or shakes coating liquid and thinner and mixes to specified consistency. Pours liquid into airbrush container, couples spray gun to air hose, and starts compressor or opens valve on compressed air line. Turns adjusting sleeve on nozzle of spray gun to regulate spray pattern to size of workpiece or area to be sprayed. Presses button on airbrush to spray coating over workpiece, or to spray specified designs and decorations on workpiece, spraying freehand, or using stencils, masks, screens and tape. Examines articles for runs. Cleans gun and hose with solvent.

May apply decals and stencils to various surfaces. May paint decorative indentations on articles, using brush or airbrush and be designated,

Inlay Painter(any ind.)

8595-174 TOUCH-UP PAINTER(motor vehicle; rail. rolling stock) DPT:684
 GED: 2 SVP: 3 EC: 1 7 PA: M 2 3 4 7

Applies coating to cover up scratches, chips or repairs in painted finish of automobiles or railroad cars, using brush or spray gun performing any combination of the following duties:

Examines vehicle for defects or inspector's markings. Sands defective area, using power sander. Applies thin even coat of finish material, such as paint or lacquer to sanded area, using spray gun. Sprays solvent over finish coats to blend in spots and eliminate halo around repair. Paints chipped spots, using brush. Compares colour of paint supply with colour chart and workpiece and remixes it to attain matching colour. Cleans splattered paint from wheels and other parts of vehicles, using solvent and rag. Applies caulking compound to seal crevices in window and door frames, using hand-caulking gun.

8595-178 PAINTER HELPER, SHIPYARD(ship & boat bldg.) DPT:687
 GED: 2 SVP: 3 EC: B 7 PA: M 2 3 4 6

Helps painter to prepare and paint wooden and metal surfaces of ships and shipyard buildings by performing any combination of the following duties:

Removes barnacles, other marine growth and rust from hull of ship undergoing repairs and prepares surfaces of hull, storage tanks, holds and bilges, using pneumatic chipper, hand scraper, sander, wire brush, steam cleaning equipment and paint remover. Applies preservative, rust inhibitor and primer coatings to surfaces, using paint brush. Cleans spraying equipment, using solvent and hand tools. See also definition for term title, 02-160 HELPER (any ind.).

8595-182 SPRAY PAINTER, ROUGH(any ind.) DPT:664
industrial spray-painter.
 GED: 2 SVP: 2 EC: 1 7 PA: M 3 4 5

Prepares surfaces and sprays protective, sealing or adhesive solution, such as paint or glue mixtures, oxides or chromates onto metal or wood surfaces where finished appearance is not important, using spray gun and performing any combination of the following duties:

Removes rust from metal surfaces, using acid, wire brush or steel wool. Cleans grease and dirt from product, using materials, such as lacquer thinner, turpentine, soap and water. Selects and mixes coating to produce desired liquid suspension, using paddle or mechanical

mixer. Pours coating liquid into spray container and connects gun to air hose, using wrenches. Lowers electric powered spinner to skid level to roll tubular items over spinner and starts spinner to rotate tubular items during spraying. Turns sprayer valves and nozzle to regulate width and pressure of spray and obtain maximum coverage. Squeezes trigger of spray gun and directs spray onto work surface. Stoops and crouches to paint difficult to reach areas or lower parts of workpiece. Cleans and maintains spraying equipment in proper condition and makes minor repairs and adjustments. Reports major repairs to supervisor. Marks identifying information on surface of coated area, using stencil and spray gun. Directs workers engaged in performing duties such as, moving material to work area and transferring finished pieces to stockroom. May be designated according to surface sprayed or coating applied; for example, End-Sealer Sprayer, Wooden Boards(veneer & plywood) Pipe-Spray Painter(iron & steel)

8595-186 SPRAY PAINTER, ROUGH, BENCHWORK(any ind.) DPT:664
GED: 2 SVP: 2 EC: 1 7 PA: M 4 7

Prepares surfaces and applies conductive, protective adhesive or stiffening materials, such as paint, varnish, shellac, rubber cement, or lacquer to surface of television tubes, sporting goods, metal forming plates and home appliances or shoes where finished appearance is not required: Cleans surface of area to be sprayed, using materials such as, lacquer thinner, turpentine, soap and water. Fills cavities and dents with putty to attain smooth surface. Applies masking tape or shield over parts and area that are not to be coated. Selects and mixes coating liquid to produce desired colour, using paddle or mechanical mixer. Pours coating liquid into spray container and connects gun to air hose, using wrenches. Turns sprayer valves and nozzle to regulate width and pressure of spray. Squeezes spray gun trigger and directs spray onto surface of workpiece on assembly line, moving conveyor, rotary table or in spray booth. Coats areas inaccessible to hand sprayer, using brush. Places workpiece under heat lamps, on drying rack or on conveyor that carries them through drying station. Cleans spraying equipment and brushes with solvent. Visually examines surface for spraying defects. Records daily production. Directs workers engaged in performing duties such as, moving materials to work area and transferring finished pieces to stockroom. May be designated according to article sprayed; for example, Forming-Plate Sprayer(rubber) Sprayer, Boots and Shoes(shoes) Tube Dagger(electronic equip.)

8595-190 DECAL APPLIER(cement, stone & clay) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Applies decal designs to surfaces of pottery or dinnerware by moisture process: Cleans surface to be covered, using moist cloth. Submerges decals in water to moisten adhesive and backing paper. Positions moist decal on surface visually or using template and smooths out air bubbles with fingers or roller. Slides backing paper from moistened decal and wipes off excess adhesive with damp cloth. May brush varnish over decal.

8595-194 PAINTER, MOTOR AND GENERATOR SUBASSEMBLIES(electric, equip.) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Cleans and prepares surfaces of electric motor and generator subassemblies and applies paint or insulating coating: Brushes solvent onto parts or dips parts into caustic solutions to loosen paint, grease, dirt and other foreign matter and rinses parts with hot water. Removes loosened paint, using scraper, wire brush, or portable buffer. Brushes grease and masking compound or winds masking tape on areas such as, shafts and leads, inserts cork-plugs into holes, and tightens screws, to keep insulating coating or paint from specified areas. Coats parts with paint or insulating liquid, such as epoxy, using spray gun, or by dipping into tank. May mount identifying data plate on motor, using electric drill and riveter. May stamp date plate with specified identifying markings, using die stamps and hammer.

8595-198 UNDERCOATER(motor vehicle) DPT:684
GED: 2 SVP: 2 EC: 1 7 PA: H 3 4

Sprays rust-proofing compound on underbodies and other parts of motor vehicles, using high pressure spray gun: Cleans rust, scale, grease and dirt from surface to be treated, using wire brush, steam hose and solvents. Sprays compound onto chassis and underbody of vehicle, splash pans, grill extensions, headlight buckets, trunk and hood interiors, using high pressure air spraying equipment. Masks painted or chromed surfaces to prevent exposure to coating spray, using tape. May drill holes in door and other panels to allow entrance of spraying tool, using electric hand drill. May seal holes by inserting plastic plugs, using hand pressure. May remove surplus compound from glass and painted and chromed surfaces, using solvent and cloths.

8595-202 CRESTER(sport. & toy) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4

Decorates (crest) archery arrow shaft, to enhance appearance and facilitate identification of arrow by the archer: Inserts shafts of arrows in cresting device and depresses pedal to bring arrow into rotating position for application of decoration. Applies bands of colours to rotating shaft according to work order, using paint and brush or decals. Depresses foot pedal to repeat operation. May mix paints.

8595-206 PAINTER, BRUSH(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 5 7 PA: M 3 4 7

Applies paint, lacquer, rustproofing or other coating material to metal or wooden fabricated items, using brush or roller: Cleans surface of workpiece, using blow torch, portable sander, hand scraper, wire brush or sandpaper. Prepares surfaces of articles to be painted by applying protective oils, fillers, putties and patching compounds. Covers sections not to be painted with masking tape. Pours and stirs thinners into paints to obtain proper consistency. Paints articles, using brush or roller. Paints stock or part numbers onto workpiece, freehand, or by stencil. Transfers items to and from work area, using hoist or handtruck. Cleans brushes and rollers with solvents. Cleans work area, using brushes or brooms. May paint shop equipment such as work benches, stock racks or machines to improve their appearance. May position ladders and scaffolding when painting large items. May be designated according to article painted or coating applied and be designated accordingly; for example, Car Varnisher(rail, rolling stock) Lacquerer(mach. weld. & forg.) Painter, Drum(mech. mfg., n.e.c.) Pipe Coater(metal fab., n.e.c.)

Painters and Decorators, Machine 8595-230 through 8595-286

8595-230 SPRAY-MACHINE SET-UP MAN, TINWARE(metal stamp., press. & coat.) DPT:380
GED: 3 SVP: 6 EC: 1 5 6 7 PA: M 4

Sets up automatic machines that spray protective coating of lacquer inside tin cans: Adjusts can-feed mechanism, guides, and intake and discharge gates for size of can, using hand tools. Aligns can-holding devices and conveyors, tightens adjusting bolts and runs sample cans through machine to test operation. Adjusts travel of spray-assembly mechanism, using hand tools. Examines lacquer supply lines for leakage, and checks pressure and temperature gauges to ensure correct functioning of lacquer-pumping and heating systems. Starts machine and observes progress of cans through machine, clears stoppages, checks cans for mechanical damage and makes adjustments. Visually examines coating for thickness and defects, and adjusts lacquer supply or spray nozzle mechanism as required. Oils and greases machine. Cleans filters and nozzles, using air hose and solvents. Makes minor mechanical repairs, using hand tools. May monitor operation of drying ovens used in conjunction with spraying machines.

8595-234 SILVERMAN(glass) DPT:382
silver-line operator.
 GED: 3 SVP: 5 EC: I 7 PA: M 4

Operates silvering range equipment that washes, sensitizes, silvers, paints and dries flat glass to produce mirrors:

Weighs or measures, and mixes ingredients, according to formula, to produce tin chloride, silver, copper and paint solutions, or obtains pre-mixed solutions. Pours ingredients or pre-mixed solutions into storage tank mixer of feeding units. Presses switch to start storage tank mixer that agitates mixture continuously. Presses button to start line conveyor, backing paint sprayers and drying ovens. Turns valves to start flow of wash water and coating solutions into spray heads. Observes spray to detect clogged nozzles and uneven or insufficient coating. Reads pressure gauges and turns valves to adjust solution flow and air pressure. Regulates oven temperature as specified. Removes spray nozzles and pipelines, using hand tools and cleans, using solvents. Performs minor repairs to silvering range equipment. Records batches mixed and chemicals used.

May prepare coating solutions in mixing vats, using power mixer or paddle, and transfer them to storage tanks. May measure and record thickness of silver coating, using gauge. May regenerate water softener to obtain required degree of softness of water for solutions.

8595-238 SPRAYER OPERATOR, AUTOMATIC(any ind.) DPT:682
paint-sprayer operator.
 GED: 3 SVP: 4 EC: I 7 PA: M 4 7

Operates and controls paint-spraying and drying units along conveyor line to apply decorative or protective coating on leather, metal, asbestos, plastic, ceramic and wooden products:

Places workpieces on conveyor. Turns valve to regulate water-shield spray. Starts pumps to mix coating materials, such as enamel, oil, lacquer, paint, rust proofing, or varnish to fill tanks and to control viscosity of material. Screws specified nozzles into spray guns and positions nozzles to spray workpiece. Lights ovens, turns knobs and observes gauges on control panel to set specified temperature and air circulation in drying oven, to synchronize conveyor speed with action of spray guns and ovens, and to regulate atomizing pressure in spray guns. Determines flow, viscosity, and quality of coating, visually, or using viscometer or pycnometer. Cleans machine and equipment, using solvent and cloths.

May switch on electric eye that activates spray nozzle.

8595-242 COATING-MACHINE OPERATOR, TINPLATE(metal stamp., press. & coat.) DPT:682
coater operator.
 GED: 3 SVP: 4 EC: I 5 6 7 PA: M 4 7

Operates automatic coating-machine and drying oven to coat tinplate with protective and decorative paint, enamel or lacquer:

Marks specified areas to be coated on sample sheet of tinplate with scriber. Sets up rollers, guides and gauges to specifications, using wrenches and ruler. Sets conveyor speed and oven temperature controls. Loads feeding mechanism with tinplate sheets. Starts machine, runs trial samples and makes adjustments to regulate feeding, coating and drying operations. Clears blockages and corrects machine malfunctions during run. Tests and thins coating material to specified viscosity and replenishes reservoirs. Examines coating for quality and checks thickness. Cleans and changes rollers on automatic coater and lubricates running parts of machines.

May prepare production records. May operate automatic tinplate stacking machine in conjunction with coater machine and drying oven.

8595-246 PAINTER, ELECTROSTATIC(any ind.) DPT:682
 GED: 3 SVP: 3 EC: I 6 7 PA: L 4 7

Operates electrostatic spray painting units to spray negatively charged paint particles on to positively charged work pieces:

Obtains paint supply in colour specified according to order. Fills tanks with paint as required. Moves switches and dials to start current flow and activate conveyor and paint spraying equipment. Observes gauges and turns valves to set pressure and control paint flow to each spray station. Observes panel lights to monitor each spraying unit. Adjusts thermostat to maintain specified temperature in drier unit. Inspects painted units for runs, sags, colour match and unpainted areas. Readjusts pressure valves to control direction and pattern of spray and correct flaws in painting. Drains and cleans cones, spray heads, and

hoses, using solvents and brushes. Hand sprays parts to cover unpainted areas, such as deep seams or to apply rust preventative. May clean ceiling and walls of booth, conveyor belts, hooks and grids using solvents, brushes and rags. May mix paint according to specification or shade desired, using colour chips for shading and tone, and viscometer to regulate consistency according to changes in atmospheric conditions.

8595-250 SPRAY-MACHINE TENDER(any ind.) DPT:685
painting-machine tender.
 GED: 3 SVP: 3 EC: I 7 PA: M 4 7

Tends machine equipped with compressed-air-spray nozzles that coat products or materials with oil, dye, lacquer, paint, shellac or preservatives:

Pours pre-mixed coating material into reservoir of spraying machine and couples hose to spray nozzles. Loads workpiece onto feed conveyor or transfer table. Starts pump to move coating material to spray nozzles and turns valves or moves sleeves on nozzles to attain specified spraying pressure. Turns thumbscrew or positions spray head to direct nozzles to workpiece position and to produce an even coating. Starts conveyor or feed table that moves workpiece under spray. Examines coating to ensure conformity to specifications. Cleans coating equipment, using solvent, steam and cloths.

May start and regulate temperature of drying equipment, such as, ovens, heating cabinets and fans. May tend automatic spraying equipment in enclosed spray booth. May tend machine that coats finished hardboard panels with talc to prevent sticking during subsequent stacking. May be designated according to product or material coated; for example, Glass Container Sprayer(glass) Seasoning Applier, Leather(leather tan. & fur dress.) Sign-Panel Primer(misc. prod. fab., n.e.c.) Spray-Coating Machine Tender, Hardboard(pulp & paper; min. wool & asbestos)

8595-254 PAINTER, TUMBLING BARREL(any ind.) DPT:685
 GED: 2 SVP: 3 EC: I 7 PA: M 4 7

Tends tumbling-barrel painting machine to coat variety of articles with material, such as enamel, varnish or lacquer:

Places articles into tumbling barrel. Mixes coating and thinner as specified and pours over articles in barrel. Starts barrel rotating to coat articles while heated air is blown through barrel to dry them. Stops barrel, examines coated articles for uniformity, adds more coating as required, and restarts barrel. Unloads barrel, separating any articles stuck together.

May transport articles from stock room to machine, using hand truck. May tend electric oven to dry coated articles.

8595-258 PAINTING-LINE TENDER, ELECTROSTATIC(any ind.) DPT:685
 GED: 2 SVP: 3 EC: I 5 7 PA: M 4

Tends equipment that cleans, dips and electrostatically sprays a variety of articles, such as toy parts:

Mixes paint and thinner of specified colour and viscosity, using paint mixing unit, and pours solution into dipping tanks or containers of electrostatic spraying unit. Adjusts controls of cleaning solution tanks for specified temperature, conveyor controls for rate of movement, and sprayer controls for rate of spray and voltage as indicated by dials. Observes conveyor line until run is finished and changes paint colour to meet requirements.

8595-262 WIRE-COATING-MACHINE TENDER(wire prod.) DPT:685
impregnating-machine tender.
 GED: 2 SVP: 3 EC: I PA: M 4

Tends machine that coats continuous rolls of wire or wire screen with enamel or paint:

Places roll of material onto feed spindle of machine, manually or using hoist. Threads end of material through feed and guide rollers into dipping vat, through drying oven or chamber and attaches it to rewind spindle. Fills vats with paint or enamel coating solution. Sews or butt welds ends of material to repair breaks and to form continuous rolls. Observes oven-temperature gauge, foot-speed indicator and

footage counter to detect machine malfunction and adjusts machine controls when necessary.

8595-266 BANDING-MACHINE TENDER, GLASSWARE(cement, stone & clay) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that applies gold or platinum band onto rim or surface of pottery ware:

Selects chuck to hold type of ware to be banded and attaches chuck to machine, using hand tools. Adjusts applicator rollers and arm attachments according to width and location of band to be applied. Pours premixed gold or platinum solution into roller fonts. Inserts article in chuck and depresses pedal to apply band. Removes item and places it on rack to dry.

8595-270 COATING-MACHINE TENDER, PENCIL(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends one or more machines that apply lacquer to pencils: Pours coating fluid into reservoir of machine. Places pencils in hopper of machine. Starts machine that presses pencils through gaskets in sides of reservoir to coat them with quick drying lacquer and drops them automatically on conveyor that carries them into container. Removes coated pencils from container and examines them for evenness of coating.

May tend two or more machines that apply successive coats of lacquer to pencils.

8595-274 COATING-MACHINE TENDER, TIN CANS(metal stamp., press. & coat.) DPT:685
spray machine operator.
GED: 2 SVP: 2 EC: 1 6 7 PA: M 4

Tends battery of automatic spray machines which apply protective coating of lacquer to inside of tin cans:

Adjusts spray nozzle to apply lacquer to inside of revolving cans. Starts machine and observes operation as cans are fed by conveyor onto holding turret for spraying. Removes cans from discharge line and visually inspects coating to ensure conformity to specifications. Removes jammed or defective cans by hand or using pole. Cleans machine parts, using solvents and brush.

May mix lacquer according to formula and fill machine reservoirs.

8595-278 DIPPER(any ind.) DPT:685
dipping-tank tender.
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Dips articles into liquids; such as, paint, lacquer, latex, stain wax or asphalt, by any of the following methods:

1. Fills dipping tank with specified coating mixture and measures consistency with hydrometer, adding thinner to control density or moves controls to maintain temperature, flow and composition of liquid in dipping tank. 2. Loads feed conveyor or transfer rack, that automatically dips articles. Loads wire basket or rack and lifts and dips basket or rack, using hand or powered hoist. 3. Dips articles in liquid, using hoist. Hangs coated articles from overhead conveyor or positions articles on rack to drain excess coating. Removes articles from draining conveyor or rack and places on drying stands.

May test quality of liquid, using chemically treated paper and colour charts, and viscometer and add further coating solution to tank according to test results. May lift and dip baskets of articles in degreasing tank, to clean articles before dipping, using hoist. May tend oven that bakes and dries dipped components. May be designated according to coating applied or article dipped or function performed; for example,

Asphalt Coater(asphalt roof.)
Broom-Handle Dipper(woodworking)
Coil-Spring Dipper(metal fab., n.e.c.)
Dipper-Baker
Enamel Dipper
Varnish Dipper

8595-282 ENAMELLING-MACHINE TENDER(jewellery & precious metal prod.) DPT:685
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends equipment that coats jewellery parts with powdered enamel: Places jewellery on racks or rods or in wire trays. Positions container of parts in machine that sprays jewellery with agar solution so that powdered enamel will adhere to metal. Fills hopper of machine with specified shade of powdered enamel. Places container of parts on conveyor after agar solution is partially dried and starts vibrating machine that shakes powder onto parts as they pass under opening. Sets controls to heat drying oven to specified temperature. Places enamel-coated parts in oven to dry preparatory to firing them at high temperature.

8595-283 LINING-MACHINE TENDER(metal stamp., press. & coat.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: S 4 7

Tends machine that sprays rubber base sealing compound onto edges of tin can ends:

Places stack of tin can ends into feed hopper, and starts machine. Observes operation to detect jamming or improper functioning of equipment, removes jammed ends and makes minor adjustments. Removes ends from discharge end of machine, visually examines ends and discards defective ones. Stacks ends in containers and stamps identification data on containers.

May tend machine equipped with oven dryer or infra-red-baking unit when using water base sealing compound.

8595-286 TIP-BANDING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
tipper.
GED: 2 SVP: 2 EC: 1 PA: L 4

Tends machine that applies decorative or identifying band of paint to metal tips of pencils:

Dumps tips into machine hopper, from containers, and pours paint into reservoir of machine, from cans. Presses button to start machine that feeds tips against paint roller. Observes operation of machine to detect malfunctions. Turns valve to regulate stream of air, that dries painted tip and blows tip from conveyor into tray. Places tray in storage rack. Inspects tips randomly, and removes defective ones.

Other Painters and Decorators and Related Occupations 8595-306 through 8595-399

8595-306 RUBBER(misc. prod. fab., n.e.c.) DPT:684
GED: 3 SVP: 4 EC: 1 7 PA: M 4 7

Finishes wooden furniture and other wooden articles, such as picture frames according to type of finish desired, performing any combination of the following duties:

Fills and seals cracks with size of wood putty. Repairs minor imperfections in finishing, using knife, scraper or wood chisel. Sands article to impart smooth surface, using fine sandpaper or portable sanding machine. Applies oil, wax, or varsol to article, using brush or cloth. Stains wooden articles and rubs to produce highlights. Spreads powdered or paste pumice stone or other buffing compound on surface of article and rubs surface, using portable or bench polishing machine, cloth or steel wool to impart lustre. Polishes surfaces of picture frames, using agate type hand tool. Wipes residue from surface, using solvent soaked cloth to produce final appearance. Feels surfaces to verify smoothness of finish. Paints or shellacs wooden articles. May be designated according to type of finish; for example, Burnisher, Picture Frames
French Polisher, Hand

8595-310 MANNEQUIN FINISHER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Finishes papier mâché and plastic mannequins parts, by smoothing, patching and painting prior to assembly:

Washes wax off mannequin segment using solvent. Removes irregularities from seams using rasp, and smooths surfaces with sandpaper or power sander. Fills holes with plaster or patching compound. Builds

up small areas, such as eyelids and earlobes malformed in moulding. Glues mounting block with adjustable sleeve into wrist opening of hand. Buffs wrist area to size determined by mounting block, using buffing wheel. Rubs body of mannequin with fine sandpaper to obtain smooth finish and coats it with flesh- coloured lacquer, using spray gun.

May be designated according to function performed; for example, Checker and Undercoater Painter, Mannequin Sander and Buffer

8595-314 PAINTER HELPER(motor vehicle) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: M 2 3 4 7

Helps painter in repainting vehicles, such as automobiles, trailers, buses, and trucks by performing the following duties:
Sands rough spots on vehicle, using wet-abrasive paper or power sander. Applies paper and masking tape to protect unpainted surfaces, such as bumpers, windows and chrome trim. Sands intermediate coats of paint, using wet-abrasive paper to ensure adherence of subsequent coat. Polishes final coat of paint, using polishing compound and cloth. See definition for term title, 01-160 HELPER (any ind.).
May remove old paint, using liquid paint remover, torch and scraper. May remove rust and dirt from surface, using sandpaper, wire brush, steam cleaner or acid. May brush or spray-paint areas such as wheels and underside of fenders.

8595-318 OVEN TENDER(furn.; metal fab., n.e.c.; sport. & toy) DPT:685
paint baker.
GED: 2 SVP: 2 EC: 1 3 PA: M 4

Tends oven that bakes freshly painted parts of metal items, such as household appliances, furniture and carriages to harden finish:
Sets oven controls to prescribed temperature. Places workpieces on conveyor rack or hangs workpieces on hooks suspended from overhead- chain conveyor. Opens and closes oven doors, flipping switch. Turns hand wheel to push or pull conveyor rack into and out of oven or starts overhead conveyor and regulates speed of conveyor through oven in accordance with temperature of oven and size of pieces.
May place baked items on storage racks. May set timer to control baking time according to quantity and gauge of metal items. May be designated according to type of oven tended, for example, Batch-Feed-Oven Tender(sport. & toy)
Continuous-Feed-Oven Tender(metal fab., n.e.c.)

8595-322 SPRAY-PAINTER HELPER(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 7 PA: M 3 4

Helps spray painter to coat surfaces of materials or products, by performing any of the following duties:
Moves materials to work area, using hand or motorized truck or dolly. Fills containers with prescribed quantities of paint and thinner. Applies masking to articles. Installs specified nozzles in spray guns. Replaces screens and filters. Mixes body fillers and fills seams and dents. Cleans and prepares surface of articles to be painted, using solvent, sandpaper, wire brush and portable electric sander. Erects ladders or scaffolds to facilitate painting large items. Cleans spraying and drying chamber, sediment collecting tanks, conveyor, tanks, hoses and nozzles, using solvent, brushes and cloths. Transfers finished pieces to stockroom or shipping areas. See also definition for term title, 02-160 HELPER (any ind.).
May count, weigh and record quantity and type of articles sprayed. May print company name on article, using hand stencil and roller. May inspect, mark and segregate defective pieces.

8595-326 CAR SCRUBBER(rail. rolling stock) DPT:687
coach cleaner.
GED: 2 SVP: 2 EC: 1 PA: M 2 3 4

Cleans and strips railroad cars preparatory to re-painting or re-finishing:
Strips car of articles, such as sign frames, signal cords, curtains, seat cushions and window frames, using screwdriver, hammer and chisel. Sweeps or blows dirt from car, using broom or air-hose. Scrubs interior and exterior surfaces of car, using brush, sponge, and cleaning solutions. Scrapes paint from window glass (after window frames have been painted) using putty knife.

May rub varnished surfaces of car after painting to attain smooth even finish.

8595-330 MASKER(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Covers specified parts of motor vehicles, aircraft, boats, canoes, furniture and other items to outline parts to be painted, using masking tape, cardboard and paper by performing any combination of the following duties:
Marks area to be masked on parts or articles, using template or ruler. Cuts or tears paper or cardboard to size. Secures masking in place with gummed tape to protect parts while surrounding areas are spray-painted. Removes masking and gummed tape after painting to prepare article for cleaning. Dips or coats articles with liquid wax when masking tape cannot be used. Cleans articles, using cleaning agents, rags, and vacuum cleaner.
May smooth unmasked surface, using sandpaper. May tape precut masks or stencils to article.

8595-334 STRIPPER(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 7 PA: M 4

Removes paint, enamel, lacquer, stain or other finish from surfaces of furniture, commercial and household appliances and fixtures, motor vehicles and other objects, to prepare them for refinishing:
Inspects surface for defects, such as chips or cracks, dirt and scale, to determine refinish procedures. Removes finish, using cloth, brush, steel wool, scraper and solvent. Smooths rough spots or defects, using sandpaper, sandstone and power sander. Feels sanded area to verify smoothness of finish.
May record model number of unit and nature of defect. May immerse small articles in vat filled with caustic soda solution to facilitate removal of finish.

8595-399 OTHER PAINTING AND DECORATING OCCUPATIONS, EXCEPT CONSTRUCTION

This group includes painters and decorators except construction painters and decorators, not elsewhere classified; for example, those who spray protective coating solution on domestic food containers, operate paint-stripping machines to paint lines on highway surfaces, tend power hoists to lift and dip metal pipes, tend wax-spraying machines to coat paperboard, brush shellac on cartridge primer seals, apply paint to surfaces or objects on stage set, form picture frame mouldings by hand and coat interiors of glass flasks with silvering solutions. Typical examples of occupational titles covered by this residual group definition are:
Frame Moulder(misc. prod. fab., n.e.c.)
Glass-Flask Silverer(scient. & ind. equip., n.e.c.)
Painter, Stage Settings(broadcast, motion pic. & stage)
Shellacker(explosives)

8596-INSPECTING, TESTING AND GRADING OCCUPATIONS: PRODUCT FABRICATING, ASSEMBLING AND REPAIRING, N.E.C.

This unit group includes occupations in inspecting, testing and grading work, as described under the term titles, 02-170 INSPECTOR (any ind.), 02-430 TESTER (any ind.) and 02-150 GRADER (any ind.), concerned with quality control activities in fabricating, assembling and repairing a variety of products such as: ships and boats; munitions and explosives; jewellery and silverware; musical instruments; games, toys and sporting goods; brooms and brushes; and miscellaneous paper products. Includes quality control activities in painting, or applying protective, decorative or identifying coatings to various products or equipment. Inspecting occupations in construction work are classified in Unit Group 8796, INSPECTING AND TESTING OCCUPATIONS, CONSTRUCTION, EXCEPT ELECTRICAL.

8596-110 INSPECTOR, HULL(ship & boat bldg.) DPT:281 hull surveyor.

GED: 4 SVP: 8 EC: B 6 7 PA: H 2 3 4 7

Inspects ships' hulls, compartments, decks, rigging, masts, davits and related equipment during construction, repair, or prior to refit, to verify conformity with plans and specifications, or to determine need for repair and life expectancy:

Examines hulls, hull fittings, plate and framing alignment, riveting, caulked-plate edges, welded seams and painted surfaces for defects and corrosion. Inspects equipment such as anchors, cable, propellers and rudder. Tests lifting devices, using static load-testing equipment. Performs hydrostatic and other tests or observes testing of tanks, compartments, double bottoms, sea chests, decks and structural parts for deterioration, corrosion and water-tightness. Opens and closes doors, manhole covers, hatches and hull valves, manually or by operating remote controls, to verify fit and ease of operation. Inspects heating and ventilation systems to verify size of vent ducts, and that installations conform with specifications. Starts blowers, and measures volume and velocity of air in systems, using measuring devices, meters and gauges. Inspects piping and valves of ship's service system during pressure tests, for leakage and strength of materials. Records inspection data and compiles inspection report.

May make drawings or sketches of structural features of ship to aid in dry docking or ship repair.

8596-114 INSPECTOR, WOODEN BOATS(ship & boat bldg.) DPT:667

GED: 3 SVP: 5 EC: I PA: L 4 5

Inspects small craft, such as canoes and moulded-plywood boats, for flaws in workmanship and materials during manufacture:

Visually examines framing, planking, covering, waterproofing and finish of hulls for defects. Feels finished surfaces to detect rough spots. Indicates defects to workers and instructs them in proper techniques. May keep production and employee-time records.

8596-118 INSPECTOR AND FINISHER, FIBREGLASS BOATS(ship & boat bldg.) DPT:684

GED: 3 SVP: 4 EC: I 5 PA: L 3 4 7

Inspects fibreglass boats for flaws in workmanship and completeness of accessories, and touches up minor surface imperfections prior to shipping:

Examines parts such as deck and hull for scratches and other minor defects. Verifies alignment of spray rails and accessories, using rule and other measuring devices. Reports missing or defective accessories for installation or replacement. Paints, waxes and polishes defects, using brush, spray can and power polisher. Applies trade mark or decals to boat, using water, cloth, ruler and hand roller. Records production data indicating serial number, model and size of boat.

8596-122 LEAK TESTER, ALUMINUM BOATS(ship & boat bldg.) DPT:687

GED: 2 SVP: 2 EC: I 4 5 PA: M 3 4

Tests aluminum boats for leaks, using water tank and pneumatic-testing equipment:

Lifts and places boat in water-filled tank, assisted by other worker, prior to testing. Tests watertightness of welded or riveted areas by guiding pneumatic cylinder (gun) along inside seam or positioning cylinder over rivet, and looking for air bubbles in water to detect and determine location of leak. Marks location of leak, using crayon. Removes boat from tank and carries it to next work station for reworking or packing. Empties, cleans, and refills water tank, using hose, brush and solvent.

Inspectors and Testers, Munitions and Explosives 8596-140 through 8596-156

8596-140 INSPECTOR, MUNITIONS(explosives) DPT:361

GED: 3 SVP: 5 EC: I 6 PA: L 4 7

Inspects bombs and artillery shells and their components for defects, such as cracks or incorrect sizing, and verifies their conformity to specifications:

Verifies critical dimensions such as external diameter and depth of

fuse orifice, using gauges. Ensures integrity of joints by applying vacuum, or water under pressure and reads gauges, to detect leaks. Inspects fuses, primers and detonators to verify homogeneity and level of explosive charge, using magnifying glass. Ensures free movement of fuse plunger and spring. Tests action of interrupter safety pins, using rotating chuck and photo-electric scanning device. Measures boosters and lockpins, using gauges. Verifies accuracy and legibility of data appearing on tags or assemblies. Writes reports on defect patterns or notifies foreman to recommend changes in assembly procedures. Sets aside rejected units for reworking or scrap. May inspect rocket motors, cases and fuel mixtures and be designated accordingly.

Rocket-Motor Inspector

8596-144 INSPECTOR, AMMUNITION-LOADING(explosives) DPT:364

GED: 3 SVP: 5 EC: I 5 6 PA: L 4 7

Inspects and tests small arms ammunition to verify conformance with specifications:

Collects sample quantity of cartridges or shotgun shells as they emerge from loading and assembling machines. Tests crimping of case around bullet, using bullet-extractor that registers force required to withdraw bullet from case. Cuts open shotgun shells, using knife, to verify correct placement of wads, shot, and powder. Weighs powder collected from several individual shells on balance scale and computes average weight. Weighs shot pellet load collected from several individual shells on scale, counts number of pellets in load, and computes number of pellets per ounce. Estimates average pellet size, using graduated device. Examines cartridges and shotgun shells visually for defects such as burrs, scratches, improper printing or sealing and damaged bullets. Measures and gauges cartridges and shotgun shells to ensure conformance to established standards, using dial and ring gauges. Reports patterns in ammunition defects that indicate loading or assembling-machine malfunctions to supervisor. Records test results in tabular or narrative form for quality control purposes.

May inspect mixing, drying, transfer, packaging and storage methods for explosives to ensure conformance to processing standards and safety regulations.

8596-148 TESTER, BALLISTICS(explosives) DPT:384

proof tester.

GED: 3 SVP: 5 EC: B 5 6 7 PA: L 4 7

Measures velocity of projectiles and propellant force of powder charge fired from various types and sizes of weapons to determine ballistic properties of weapons and ammunition, using measuring devices such as micrometer and photo-electric chronograph:

Selects test gun according to type and caliber of projectile to be fired. Secures gun in fixture, using hand tools and gauges. Measure velocity of projectile by loading and aiming gun and firing projectile through electron-beam screens that activate chronograph. Converts chronograph reading of elapsed time to velocity in feet-per-second, using reference chart, and records data on inspection forms. Calculates average velocity of projectiles tested. Measures propellant force of powder charge by firing small arms cartridges or shotgun shells into specified target. Retrieves and measures compressed slug for reduction in slug length and converts measurement to pressure expressed in pounds-per-square inch, using conversion charts. Cools, heats or immerses ammunition before firing to determine performance under extreme conditions. Computes average pressure for specified number of cartridges.

May clean and lubricate guns and equipment, using rags, cleaning agents and oil can. May detonate blasting caps and track signals to verify conformance to specifications.

8596-152 DROP TESTER, CARTRIDGE PRIMERS(explosives) DPT:387

GED: 3 SVP: 3 EC: I 5 6 PA: L 4

Tests impact sensitivity of sample cartridge primers by dropping weight onto primers from specified heights:

Secures primer in test-firing fixture. Presses button to drop steel ball onto firing pin from predetermined height to detonate primer. Determines and records percentages of fires and misfires of sample primers detonated from range of specified drop-heights. Plots test

results on graph paper to produce distribution curve indicating primer sensitivity.

8596-156 INSPECTOR, EXPLOSIVE-DEVICES(explosives)
DPT:687
GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Inspects cartridge primers, detonator tubes or fireworks for conformance to specifications:
Examines items to detect faults, such as cracks, holes, insufficient powder filling or incorrectly inserted components. Verifies depth, internal diameter and absence of foreign matter, using gauges and detector probe. Sets aside defective units for reworking or salvage. May use magnifying glass to inspect primers. May package primers. May light fireworks and measure burning time, using stop watch. May inspect a particular type of explosive device and be designated accordingly; for example, Primer Inspector

**Inspectors, Testers and Graders,
Miscellaneous Products
8596-180 through 8596-399**

8596-180 INSPECTOR, RETURNED MATERIALS(any ind.)
DPT:284
GED: 4 SVP: 6 EC: I PA: M 4 7

Tests, dismantles, and inspects equipment, under warranty, returned as defective, to determine cause of complaint:
Inspects product for defects; such as, cracks, missing components, dents, and faulty alignment or tests unit under simulated conditions to determine nature of problem. Dismantles unit and inspects components for conformance to specifications and to verify dimensional accuracy, using various test instruments. Judges validity of customer's claim of defective parts or workmanship to assign responsibility to particular manufacturing or assembly area, and prepares report of findings.
May specialize according to type of product inspected.

8596-184 MATERIALS AND PARTS INSPECTOR(any ind.)
DPT:284
GED: 3 SVP: 6 EC: I PA: L 4 7

Inspects metal, wood or plastic materials parts or assemblies for conformance to specifications:
Examines materials and parts, such as, extrusions and plates, and assembled or shaped wood, plastic or metal components, for cracks, flaws and dents. Inspects anodized, plated, painted or polished surfaces for uniform finish and for defects, such as, pinholes, blisters or corrosion, by close observation and by using gauges. Measures contours, angles and radii of parts and drilled holes to determine conformity to drawings, using scales, gauges and surface plates. Inspects materials and assemblies after heat-treating, using micrometers and testing devices. Compares quality of welding and brazing in assemblies with samples and by using fixtures or gauges. Observes pressure-testing of laminated materials to verify wall strength. Stamps approved or rejected materials and writes inspection report.
May inspect or review manufacturing processes and techniques to ensure maintenance of standards. May measure thickness of coatings, using gauges. May specialize in a particular type of inspection activity and be designated accordingly; for example, Heat-Treating and Electro-Plating Inspector
Inspector, Polishing
Machined Parts Inspector
Paint and Finish Inspector

8596-188 FINAL INSPECTOR(furn.)
DPT:684
GED: 3 SVP: 6 EC: I PA: M 4 7

Inspects completed furniture for defects in construction, finish, or upholstery to determine conformance to standards:
Verifies colour and pattern of upholstery, using specifications and shop orders. Inspects upholstery cover for rips in fabric or seams. Feels padding for firmness. Manipulates upholstery with hands or picks to improve shape or smoothness. Examines wooden surfaces for defects in wood or finish. Stamps, marks, or attaches adhesive colour-codes tape to inspected furniture to indicate acceptance or rejection.

May repair minor defects in wood finish, using heated blade, wax, lacquer, and stain sticks. May remove loose threads from upholstery, using scissors and air-blower. May be designated according to product inspected; for example, Chair Inspector
Radio and Television-Cabinet Inspector
Sofa Inspector

8596-192 INSPECTOR, FINISHES(electric. equip.; electronic equip.)
DPT:684
GED: 3 SVP: 6 EC: I PA: L 4 7

Inspects painted, plated and other protective finishes on electrical and electronic parts and assemblies, such as cabinets, panels and transformers:
Reads specifications for parts to determine type of inspections required. Visually and tactually examines finishes for defects; such as, stains, corrosion, blisters, oxidation and bare spots. Verifies conformance of finish to specifications, using colour chart, magnifying glass, scratch tester or film thickness measuring instrument. Records types of tests performed and results of inspection.
May brush solutions on parts to remove finish for inspection of base metal or to test resistance of surface. May observe painting and metal finishing processes to ensure conformity to specifications. May prepare paint chip samples and related data for approval.

8596-196 INSPECTOR, JEWELLERY(jewellery & precious metal prod.)
DPT:684
GED: 3 SVP: 6 EC: I PA: S 7

Inspects material received from suppliers, items in process of manufacture and finished jewellery products:
Examines batches of incoming material to ensure conformance with specifications, using micrometers and gauges. Conducts periodic examination of products during manufacture and reports on their suitability for further processing. Examines first completed items from each new production schedule, using hardness and tensile tester, shadowgraph and optical comparator to ensure they are within tolerances set out in specifications as to shape and size and for quality of plating and finish. Verifies weight of article, using scale and prepares articles for microscopic examination. Makes report of findings or issues acceptance or rejection reports. Retains custody of rejected material until disposal instructions are given by supervisor. Keeps files of drawings, samples, reports and documents relating to inspection operations. Prepares inspection reports in conjunction with daily time sheet.

8596-200 INSPECTOR, PIANO(misc. prod. fab., n.e.c.)
DPT:284
GED: 3 SVP: 5 EC: I PA: L 3 4 7

Inspects pianos to ensure conformance to standards, and makes adjustments or replaces parts to correct defects:
Examines completed piano action (mechanisms) and removes and replaces defective or broken parts, using hand tools and glue. Verifies alignment of action parts, using straightedge, ruler and gauges, and observes movement of mechanism to test operation. Adjusts and aligns parts, using gauge to obtain specified performance. Examines fit of cabinet at joints, and finish of pianos for scratches and defects. Corrects defects, using hand tools and polishing and rubbing materials, or notes defects and returns piano to production department.
May specialize in inspecting and adjusting piano actions and be designated accordingly, Inspector-Adjuster, Piano-Action

8596-204 INSPECTOR AND TESTER(plastic prod.)
DPT:284
GED: 3 SVP: 4 EC: I 6 PA: L 4 7

Inspects and tests articles fabricated from plastic materials for surface defects, hardness, and dimensional accuracy, following specifications or drawings, and using measuring instruments and test equipment:
Visually and tactually examines surface of articles for defects or damage; such as, scratches, indentations, scores, burns, stains or discolourations. Compares colour of article with standard. Verifies weight, dimensions or interchangeability of articles, using scales, gauges, calipers, micrometers and templates. Determines hardness and structural strength of articles, using acid bath, or burst, impact, compression and hardness testers. Records test results and grades or labels articles according to type of defects.

May investigate cause of recurring defects and recommend changes in production procedures. May determine optical distortion of transparent articles. May obtain samples for laboratory analysis.

8596-208 INSPECTOR, PAPER PRODUCTS(paper prod.) DPT:484

GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Inspects paper and paperboard products such as bags, cartons and paper board boxes, envelopes and forms, during corrugating, laminating, printing, cutting, scoring, coating, forming, sealing and packaging processes, for conformance to specifications:

Verifies type and quality of incoming bulk supplies of paper against purchase order. Examines products for defects; such as, blisters, wrinkles, improper forming and sealing glue spots, printing overlap and colour distortions. Measures dimensions and thickness of products, using tape measure, automatic micrometer, gauges or templates. Compares products with standard samples to verify printing quality and colour matching. Weighs coated and uncoated products, using scales, and calculates weight of coating. Tests crush qualities, moisture content and warp characteristics, using test instruments. Soaks carton blanks in dye bath to reveal such imperfections as cracks, scratches in coating or overcreasing. Counts number of articles in bundle or shipping container, at random, to verify quantity. Examines rejects to determine salvageable items and routes unusable material to scrap baler. Records findings on inspection report.

May be designated according to type of product inspected, or according to fabricating process involved; for example, Inspector, Assembly Inspector, Cards and Forms Inspector, Folding Cartons Inspector, Paper Bags Inspector, Tubes

8596-212 INSPECTOR, FILTER TIP(tobacco) DPT:664

GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Inspects cigarette filter plugs (tips) to detect imperfections: Removes samples of filter plugs from conveyor of filter-making machine and examines plugs for dirt and irregularities in size, firmness, sealing and cut. Tears paper from plugs, using knife, and examines filter material for defects. Measures and examines plug seams, using magnifying glass and graduated scale. Records findings on control chart. Notifies machine tender or machine adjuster of deviations from specifications.

May compute ratio of rejects and keep production records.

8596-220 SHADOWGRAPH OPERATOR, SMALL-PARTS INSPECTOR(any ind.) DPT:684

comparator operator.

GED: 3 SVP: 4 EC: I PA: L 4 7

Inspects small machine or tool parts; such as gears, bearings, cams, pivots, drills, taps and cutters, for defects in finish and dimensions, using device that projects magnified shadows of parts on screen:

Reads specifications of parts to ascertain form and degree to be magnified. Places chart (celluloid disk imprinted with enlarged outline of part to scale) over translucent glass disk of comparator (shadow-graph) machine. Selects and inserts lens into machine, according to size parts, and manually adjusts mirrors to magnify parts. Positions and secures parts in machine fixture. Turns light on, and moves levers of machine to bring shadows of parts into focus with chart outline. Examines shadows for imperfections of finish and inaccurate dimensions. Places accepted or rejected parts in proper tray or rack. Records findings on work order.

May rotate parts in holding fixture to examine all surfaces and to verify concentricity of parts.

8596-224 TESTER, PACKAGING(pharm. & toil.) DPT:684

GED: 3 SVP: 4 EC: I PA: L 4 7

Tests physical characteristics of containers and packaging used for drug and toilet articles, for conformity to specifications:

Selects containers at random from production lines and carries out dimensional and strength tests, using instruments, such as micrometer, bench or optical comparator, testers and gauges, to ensure compliance with specifications. Performs bottle cap removal tests, using torque meter. Moves mechanical parts of assembled containers to ensure

proper functioning. Records instrument readings of container characteristics, such as height, width, diameter, angles and pit. Verifies and adjusts inspection equipment to maintain calibration, using master gauges.

May provide container production line set-up men and supervisory staff with information on standards and specifications to improve production procedures. May determine loss resulting from rejections. May conduct quality audits on vendors of packaging materials, and analyze variations in sales to detect relationship to packaging defects.

8596-228 CASKET INSPECTOR(misc. prod. fab., n.e.c.) DPT:687

GED: 3 SVP: 4 EC: I PA: H 4 7

Inspects assembled caskets visually and tactually to verify conformance to specifications:

Places caskets on stand for examination. Examines casket lining for irregularities, such as faulty fitting, discolouration of material, unconcealed tacks, and bulges in padding. Opens and closes top panel to determine presence of obstructions. Inspects casket exterior for torn covering, nicks, spots, incompleteness, misalignment, and imperfect finish. Removes spots from lining and cover with solvent. Fastens loose lining to casket body, using glue. Identifies types of defect on job orders or chalks areas of imperfect polish, and returns caskets to workers for repair. Keeps rejection records, noting number of units inspected and rejected, and reason for rejection.

8596-232 GOLF-CLUB INSPECTOR AND WEIGHER(sport. & toy) DPT:687

GED: 3 SVP: 4 EC: I PA: L 4 7

Inspects golf clubs for defects and weighs them to obtain swing weight for matching irons:

Visually inspects golf clubs for damage or missing components. Positions club in holding fixture of scale with grip in holder and head extending over and beyond fulcrum point. Reads pointer on scale to obtain swing weight. Wraps heads of acceptable weighed club in protective bag and tapes bag to shaft, using coloured tape to identify swing weight of club. Places wrapped clubs in tote boxes. Writes rework order for defective clubs.

8596-236 INSPECTOR-GRADER, HOCKEY STICKS(sport. & toy) DPT:687

GED: 3 SVP: 4 EC: I 5 PA: L 4 7

Examines hockey sticks for defects and grades them according to quality:

Examines hockey-stick handles and blades for defects such as splits, faulty edges and imperfectly glued joints. Presses hockey-stick blade sideways on floor to test flexibility of handle. Examines wood grain in handle to determine quality of wood. Places sticks in different hand trucks, according to grade.

May straighten hockey-stick handle, or adjust blade angle, using steam and forcing blade between wood blocks on floor.

8596-240 BALL INSPECTOR AND REPAIRER(sport. & toy) DPT:684

GED: 3 SVP: 3 EC: I PA: L 4 7

Inspects finished baseballs or softballs and repairs defects:

Examines ball for defects; such as, crooked, uneven or raised stitches, lumps, and irregular shape. Straightens crooked stitches by pulling or prying them into place with awl. Places ball into bench press and clamps tops of press to flatten stitches. Pushes curved awl through seams to press and smooths lumps under cover of ball. Rejects non-repairable and out-of-shape balls. Keeps records of accepted and rejected balls.

8596-244 GOLF-CLUB ADJUSTER(sport. & toy) DPT:684

GED: 2 SVP: 4 EC: I PA: M 4 7

Inspects golf-club irons to verify conformance with specifications and adjusts angles of head, using lead mallet:

Measures angle of loft and lie, using gauges, and compares with specification charts. Places head on wooden pad and strikes it with lead mallet, to adjust neck or head to specified angle.

May sand plastic adapter even with chromed hosel and buff surface to reproduce finish polish.

8596-248 INSPECTOR, SLIDE FASTENER(misc. prod. fab., n.e.c.) DPT:687
zipper inspector.
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Measures samples of slide-fasteners (zipper) and links for conformance to specifications:

Measures length of zipper chain, using ruler and counts number of scoops (links) per length. Examines chain and scoops for defects such as smashed, cracked, burred or missing scoops, or for uneven spacing. Opens and closes zipper to determine ease of sliding and smooth action of slider. Prepares report of defects found according to type of defect. Notifies supervisor of machine malfunction, found as a result of identification card accompanying completed product. Examines finish of enameled chains. Sorts defective zippers according to defect, and returns them for repair.

8596-252 TOY INSPECTOR(sport. & toy) DPT:687
GED: 2 SVP: 4 EC: 1 PA: L 4 7

Inspects finished toys, such as dolls, trucks, pedal cars, and other mechanical toys and parts fabricated from a variety of materials, for conformance to manufacturer's standards:

Visually and tactually examines metal, wooden or plastic workpiece for defects; such as, chips, scratches, or mars, faulty operation of moving parts, and missing accessories. Verifies overall product for completeness and accuracy of assembly, and to determine if structural formation meets specifications. Inspects decal application or markings for location and form. Routes defective items for repair, salvage or scrap and transfers accepted workpieces to further processing or packing stations. Keeps rejection records or verbally reports defects. May perform minor repairs such as touching up paint, applying adhesive to loose plastic parts, or tightening screws. May wipe toys with damp sponge or cleaning solution to remove grease or finger marks.

8596-256 WALLPAPER INSPECTOR(paper prod.) DPT:687
GED: 2 SVP: 4 EC: 1 5 PA: L 4 7

Inspects wallpaper for pattern and colour matching, and printing defects:

Lifts slack length of wallpaper from machine rack or hangs newly-printed lengths of wallpaper on suction board. Examines wallpaper for aesthetic effect, pattern and colour matching, accurate registration of colours and printing defects such as, colour splashes, smudges and discolouration. Reports defects to machine operator for correction of printing irregularities. Authorizes winding-up of wallpaper on reel and printing of remaining rolls of paper.

May investigate complaints from customers and arrange replacement.

8596-260 COATING-LINE CHECKER, HARDBOARD
(woodworking) DPT:667
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Inspects finished panels of hardboard for flaws in colour of paint and uniformity of coating:

Examines board emerging from drying stage after coating to detect streaks, brush marks, unpainted areas and presence of foreign matter in paint. Conducts flame and colourimetric tests on coated boards to verify conformity of product to plant standards, using standard test procedures and equipment. Notifies equipment operator or supervisor of coating defects.

May reject faulty boards. May inspect boards for sawing defects.

8596-264 EYEGGLASS-FRAME INSPECTOR AND SORTER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Inspects metal and plastic eyeglass frames and frame parts, such as temples, rims, nose pads and bridge pieces, for scratches or other defects in workmanship or material:

Verifies measurement of temples and bridges, using adjustable gauge. Examines completed frames for chips and flaws, general appearance and for conformity to specifications. Segregates defective frames. Sorts frames according to size, colour and style for packaging. Cleans residue and foreign particles from around eyeglass frames, using sharpened bamboo stick and cleaning tissue. Maintains records of frames inspected and nature of faults found.

8596-268 INSPECTOR, AMPOULE(pharm. & toil.) DPT:687
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Examines ampoules filled with liquid drug products for apparent defects in contents and containers:

Holds ampoules against light source or mat background and examines them, visually or using magnifying glass, to detect discolouration, presence of foreign particles, moisture in dry powders, imperfect sealing of ampoules, leaks and flaws in glass, and to verify specified filling level. Holds ampoules alternately against black and white background to facilitate examination.

May count and record number of inspected units and place in containers. May clear jams on conveyor.

8596-272 INSPECTOR, DRUGS AND TOILET PREPARATIONS(pharm. & toil.) DPT:687
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Examines drug and toilet products and containers for defects:

Selects samples of packaging materials, filled containers or products for inspection. Visually examines tubes, bottles, cartons or cans for defects such as chips, cracks, torn labels and discolouration. Verifies coding and sealing or pull tape. Measures sample of packaging components or containers to verify specified dimensions, using micrometer, gauges, rulers or calipers. Fills product containers with liquid and empties into graduated cylinders to verify container capacity. Tests cap sealers, using hardness tester. Weighs, or counts content of sample containers to verify data on label. Examines sample of products for appearance, colour, odour, flavour or clarity, and rejects those that do not conform to standards. Records inspection and test results. Sorts rejects, according to type of defects, for further laboratory tests, reprocessing or discarding.

May inform packaging and production departments of rejects and reasons. May be designated according to type of product inspected; for example,

Inspector, Medicinal Products
Inspector, Soap and Toilet Goods

8596-276 INSPECTOR, MATCHES(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 3 EC: 1 PA: L 4

Inspects boxed matches to verify conformance with specifications:

Opens sample cases of matches and inspects boxes for labelling and packing. Consults inspection charts for specifications. Examines matches for quality of coating. Ignites several matches to ascertain that they strike and burn efficiently and safely. Routes rejected loads for further inspection or disposal as required. Records results of inspection.

8596-280 INSPECTOR, PAINT SPRAY(any ind.) DPT:687
spray-paint inspector.
GED: 2 SVP: 3 EC: 1 7 PA: L 3 4 7

Inspects sprayed paint, enamel, lacquer, varnish or shellac finishes on metal or wooden articles, such as furniture and household appliances, sporting goods, and communication and transportation equipment:

Examines workpiece for scale, streaks, cracks, scratches, unpainted areas or shade variances, to ascertain conformance to standards. Marks workpiece with symbol to indicate defective area and type of repair needed. Marks or reports other defects to supervisor, such as broken or cracked welds and distortion, incompleteness or misalignment of components. Records number and type of units rejected and reasons for rejection.

May touch up defects, using sandpaper, brush and spray gun.

8596-284 SHIPPING INSPECTOR, FURNITURE(furn.; ret. trade) DPT:687
furniture checker.
GED: 2 SVP: 3 EC: 1 PA: L 3 4 7

Inspects furniture prior to shipment to retailers or customers:

Examines surface of furniture for nicks, scratches and cracks. Opens and closes drawers to ensure fit. Inspects furniture for matching and missing parts such as handles and legs. Touches up scratches with proper coating mixture, by hand. Places keys in cloth bag and ties bags to drawer handle. Rejects defective units and routes them to repair department or factory.

May clean metal units, using soap, water and cloth. May re-pack furniture if container damaged. May verify furniture with bill of lading or invoice to ensure correct shipment, and address and route merchandise.

8596-288 FOUNTAIN-PEN INSPECTOR(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Inspects fountain pens for defects:
Verifies alignment of pen points, using magnifying glass, and inserts feeler gauge to determine whether spacing between points conforms to specifications. Opens and closes pen points to adjust spacing between points, using hand tools. Writes with fountain pen to determine legibility and ease of writing. Feels nib manually to detect surface defects. Rubs nib against leather-pad-burnishing tool to smooth contour.
May inspect fountain pen nibs only to insure that smoothness, contour and dimensions conform to specifications, and be designated accordingly.
Nib Inspector

8596-292 BALL WEIGHER(sport. & toy) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Grades and matches wound softball or baseball cores, covers and thread prior to assembly, to ensure total weight of each ball meets standards:
Weights wound core, cover and thread, using shadowgraph scale. Grades and matches off-standard-weight covers and cores so that combined weight meets standard for assembled balls. Places sets of covers and cores together on rack for assembly by ball stitchers. Keeps production records.
May place sewn balls on rolling machine to flatten seams and iron out imperfections. May sew covers on softballs and baseballs.

8596-296 INSPECTOR, UMBRELLA(misc. prod. fab., n.e.c.) DPT:687
examiner, umbrella.
GED: 2 SVP: 2 EC: 1 PA: L 4

Inspects and prepares umbrellas for packing:
Opens collapsible frame and examines covers for pattern matching, tears and stitching defects. Inspects frames for defects, such as bent ribs and missing tips. Cuts loose threads, using scissor. Stacks rejected umbrellas for repair. Folds accepted umbrellas and presses snap-fastener at end of tie. Inserts umbrella into case to form complete unit.

8596-300 PEN AND PENCIL INSPECTOR(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects ball-point pens and wooden pencils for defects:
Compares colour, style and printed information on pen or pencil with written specifications. Writes with selected sample of ball-point pens to determine that inking mechanism of cartridge is functioning. Examines pens or pencils for defects such as dents, scratches, or misplaced lead. Sorts rejected items according to defects for reprocessing. Packs pens and pencils in boxes.

8596-304 PRODUCTION-LINE INSPECTOR(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Examines a variety of small finished products, such as bottle caps, buttons, tiles, matchbooks, or similar items, passing on conveyor belt:
Observes product passing on conveyor. Removes items having spots, chips, cracks, faulty gluing or other defects and places them on salvage conveyor belt or into containers. Sorts products according to type, colour, size, and other characteristics. Clears jams.
May remove articles from conveyor for examination or measurement to determine conformity to standards or send samples to laboratory for testing. May fill hoppers and control speed of conveyor. May be designated according to type of product inspected; for example, Inspector, Buttons
Inspector, Corks and Bottle Caps
Inspector, Matchbooks

8596-308 STENCIL EXAMINER(paper prod.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Inspects duplicating stencils used to reproduce printed copies of material, for defects, prior to mounting on backing sheets:
Holds stencils over fluoroscope to determine presence of defects such as holes, tears, and imperfect surface. Discards defective stencils. Places layer of paper between stencils to protect them. Measures stencils for conformance to size, using gauge.

8596-399 OTHER INSPECTING TESTING AND GRADING OCCUPATIONS: MISCELLANEOUS PRODUCTS

This group includes miscellaneous fabricating, assembling and repairing inspectors, testers and graders, not elsewhere classified; for example, those who measure, inspect and pack billiard table coverings, inspect and trim fabric buffing wheels, sort and bundle broom corn fibres, or inspect used beer cartons. Typical examples of occupational titles covered by this residual group definition are:
Billiard-Cloth Inspector(sport. & toy)
Broomcorn Grader(misc. prod. fab., n.e.c.)
Buffing-Wheel Inspector(garment & fabric)
Returned-Case Inspector(malt liquors)
Trunk Inspector(leather goods)

8598-OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK: PRODUCT FABRICATING, ASSEMBLING AND REPAIRING, N.E.C.

This unit group includes occupations, not elsewhere classified, in labouring or other elemental work as described under the term title, 02-190 LABOURER/ELEMENTAL WORKER (any ind.) concerned with fabricating, assembling and repairing manufactured products. Activities include: cleaning, blending, dipping, coating, repairing, cutting, trimming and otherwise assembling and finishing miscellaneous products.

Assembling and Finishing Miscellaneous Products 8598-110 through 8598-162

8598-110 GLUER(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Glues material, such as, paper, cloth, leather, wood, metal, rubber, or plastic together, following specified procedures:
Applies adhesive to surface of material by brushing, dipping, holding material against rotating saturated brush, or feeding material through gluing machine. Presses material together by hand or with machine roller, or clamps material in fixture to bond it together. Wipes surplus adhesive from seams, using cloth or sponge.
May mix glue according to specifications, and fill glue reservoir. May be concerned with gluing a particular product and be designated accordingly.

8598-114 LABOURER GENERAL, ASSEMBLY LINE(any ind.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Performs any combination of the following duties in the assembly of a variety of small mechanical, electrical, or other types of products; such as, food grinders or mixers, doll strollers, protective body pads and other items:
Positions parts in specified relationship to each other, using hands, tweezers, or tongs. Bolts, screws, cuts, clips, cements or otherwise fastens parts together, using hand tools or portable powered tools. Uses previously set-up machines, such as arbor presses, punch presses, taps, spot welding machines or riveting machines to fasten, force fit, or trim excess material on assembly line. Examines components, using fixed gauges or test devices. Tests effectiveness of mechanisms, using a variety of simple tests.
May be assigned to various work stations according to production requirements or to reduce fatigue factors. May specialize in a particular assembly procedure or assemble a specific product and be designated accordingly; for example,
Assembler, Sports Headgear(sport. & toy)

8598-118 ASSEMBLER, PENS AND PENCILS(misc. prod. fab., n.e.c.) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Assembles ballpoint pens and mechanical pencils by either of the following methods:

1. Places components, such as barrels, cartridges, caps and end-buttons into hopper of automatic assembly machine. Lifts assembled pens or pencils from machine spindle, and tests mechanism for loose components. Presses button to stop machine when malfunctions occur.
2. Selects pen or pencil parts, according to specifications. Places parts together guided by edges, holes, and slots, and fastens devices, such as clips or prongs on parts. Positions parts in holding device under ram of press and depresses pedal that lowers ram, forcing interlocking parts together, or positions parts in holding device of machine that clinches prongs or clips. Fits interlocking parts together, or screws threaded parts together by hand.

May use pneumatic or screw clamps or rotating table equipped with vertical pegs to hold parts during assembly. May slip band into groove on barrel or insert part in hand squeezer or crimping tool to tighten band in place. May polish metal or plastic pen parts, holding them against buffing wheel.

8598-122 KNIFE ASSEMBLER, HOLLOW HANDLE(jewellery & precious metal prod.) DPT:687
GED: 1 SVP: 2 EC: 1 3 PA: L 4

Assembles hollow handle knives, by performing any combination of the following duties:

Matches stamped halves of knife handle to form hollow handle. Places handle halves on bed of machine and presses pedal to wind and tie several turns of string around handle halves. Places handles on rack hooks and dips them in tank of flux to prepare handle halves for soldering. Loads handles on screen conveyor that carries them through furnace to solder handle halves together and burn string away. Positions soldered handles in fixture of milling machine and depresses pedal to face handle mouths. Fills hollow milled handle with specified amount of bonding compound, using pressure gun. Inserts stub end of knife blade into hollow handle. Places knife onto conveyor leading to bonding furnace. Unloads bonded knives from furnace and places them into trays.

8598-126 ASSEMBLER, SPECIALTY BRUSH AND MOP(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 5 PA: L 4

Assembles various cleaning tools such as brushes, and mops by performing any combination of the following duties:

Arranges plastic, wood, metal or rubber parts in specified order to make products such as squeegees, ice scrapers or snow-brush heads. Fastens parts together with bolts, screws, clips or cements by hand, or by using tools or previously set-up machines such as presses or riveters. Heats butt ends of twisted wire brush heads, using electric heater, and inserts heated ends in hole in plastic handle. Applies glue and inserts plastic bristles by hand into plastic broom or whisk heads. Folds pre-cut piece of sponge or curly brass mesh and inserts in handle to assemble dish mops or pot cleaners. Assembles brass- wire brush, lint-remover roll and plastic handle to make lint-roller brushes. Inserts shaped metal rod through binding material of dust- mop heads and ties binding or closes zipper to secure mop head. Staples spring and lever to handle and inserts ends of wire bail through holes in lever to assemble dust-mop handles. Wraps and packs items for shipment. Mounts products under flaps of display cards and glues on plastic blister covers.

May be designated according to product assembled; for example,

Assembler, Broom
Assembler, Shovel Handle
Assembler, Whisk
Dust-Mop Maker
Lint-Roller-Brush Assembler
Sponge-Mop Assembler
Twisted-Wire-Brush Assembler

8598-130 CURTAIN-ROD ASSEMBLER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Assembles traverse curtain rods for shipment:

Secures rod in bench fixture, manually, and inserts cord, master slides, nylon sliders and pulley into rod slot. Slips retaining brackets over ends of rod to complete assembly. Tightens parts with metal screws, using portable electric screwdriver. Packs completed rod into tube and places tube on handtruck.

May cut cord to specified length, using scissors.

8598-134 FILTER ASSEMBLER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: S 4

Assembles fibreglass filters for use in industrial and domestic heating and cooling units:

Places layer of pre-cut treated fibreglass between perforated metal or treated paperboard sides for reinforcement. Inserts assembly in cardboard or aluminum frame and folds sides of frame over edges of reinforcements. Secures sides in place, using glue and staples. Seals edges of frame, using gummed tape.

May assemble fibreglass bats and aluminum metal sides by sliding bat and sides into outside frame.

8598-138 FOLDER-CEMENTER, SLIDE-FASTENERS(misc. prod. fab., n.e.c.) DPT:687
folder-cementor, zippers.
GED: 1 SVP: 2 EC: 1 PA: L 4

Finishes end of slide fastener by cementing, folding and pressing tape, to reinforce and improve appearance:

Brushes cement onto cloth, folds cemented surface together and inserts folded tape between heated jaws of pneumatic press. Presses foot pedal to close jaws of press. Removes bonded slide fastener from press when jaws open at end of cycle.

8598-142 JEWELLERY-PARTS ASSEMBLER(jewellery & precious metal prod.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: S 4 7

Attaches or fastens jewellery parts to fabricate bracelets, necklaces, brooches or earrings, by hand or machine, by either of the following methods:

1. Grips link and twists link joint open, using pliers. Slides jewellery parts into open link and closes link joint by clinching.
2. Positions jewellery item between jaws of machine, manually. Selects pin or clip and fits end of pin or clip into holes of jewellery item. Depresses pedal to close jaws and squeeze joints together. Visually examines jewellery and rejects defective pieces.

May cut chains or ribbons into specified lengths, using hand cutters.

8598-146 LAMP-SHADE JOINER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Bonds edges of pre-cut parchment together to form lamp shades, using pressing bars:

Depresses pedal to raise top presser bars and positions edge of parchment on lower bar. Brushes cement on edge of parchment. Bends parchment in circle and position opposite edge of parchment on top of cemented edge. Releases pedal to lower and lock top bar onto parchment to bond edges.

8598-150 NECKLACE ASSEMBLER(jewellery & precious metal prod.) DPT:687
bead stringer.
GED: 1 SVP: 2 EC: 1 PA: L 4 7

Strings beads or other items on fine wire or threads to form necklaces: Selects beads according to size, colour or pattern specified. Cleans beads in soap and water or other cleaning solution. Guides wire or thread and needle through beads. Counts beads in length of necklace of ensure conformity to standards. Completes stringing by tying knot in thread or bending wire and attaching fastener.

8598-154 PAINT-ROLLER WINDER(misc. prod. fab., n.e.c.)
DPT:687

GED: 1 SVP: 2 EC: 1 PA: S 4

Spiral-winds and glues fabric on tubing to make paint rollers:
Fills glue spreader reservoir. Mounts tubing on power-driven machine spindles and starts machine to rotate tube. Draws fabric strip past dispensing lip of glue reservoir to distribute glue evenly under surface of fabric, or spreads glue on rotating tube with brush. Positions and feeds pre-cut fabric against glued surface of rotating tube as fabric is spirally wound and glued on tube. Removes wound tube from machine spindle.
May cut fabric to specified length, using power shears.

8598-158 SLIDE-FASTENER-CHAIN ASSEMBLER(misc. prod. fab., n.e.c.)
DPT:687
zipper-chain assembler.
GED: 1 SVP: 2 EC: 1 5 PA: L 4 7

Joins stringers of slide fasteners together, using automatic sliding device:
Aligns two lengths of separate stringers (teeth or scoops). Threads ends of stringers under machine rollers and through jig. Pulls ends of stringers to interlock links. Starts interlocking jig that joins stringer together to form slide fastener. Examines fastener for defects, cuts out defective section, using scissors, and splices sections with adhesive tape or hand stapler.

8598-162 VACUUM-BOTTLE ASSEMBLER(glass) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Performs any of the following duties on production line to assemble vacuum bottles:
Coats threaded section of container with silicone by inverting container over applicator pad, and places container on conveyor. Places plastic tip protector on bottom of filling bottle and inserts glass bottle in container. Slips rubber gasket and plastic shoulder over bottle. Places plastic or cork stopper in mouth of bottle. Screws plastic drinking cup onto threaded mouth of container. Places cardboard wrapper over container and removes it from conveyor. Packs container in cardboard box for shipment.
May glue insulating pad to inner bottle of filling unit, prior to assembly and be designated accordingly,
Padder

Cleaning, Blending, Dipping and Coating Miscellaneous Products 8598-182 through 8598-210

8598-182 BARREL LINER, HAND(woodworking) DPT:687
GED: 1 SVP: 2 EC: 1 5 PA: M 4

Coats inside of barrels and kegs with sealing material, such as hot paraffin and pitch to prevent leakage and contact of stored liquid with wood:
Lifts and carries barrels to work position. Switches on electric pot heater that melts sealer. Applies melted sealer to inside of barrel and barrel head, using brush.
May also coat interior of barrel with sealer, using spraying equipment.

8598-186 CLEANER, PORCELAIN-ENAMEL(any ind.)
DPT:687
GED: 1 SVP: 2 EC: 1 5 6 PA: M 4 7

Cleans metal articles that have been coated with porcelain enamel at various processing stages, by performing any combination of the following duties:
Brushes or scrapes dry porcelain from holes and designated areas of workpiece, prior to firing, using rotary or hand brushes and scraping tools. Visually examines enameled workpiece for defects. Sands workpiece to remove dirt, blisters, and lumps, preparatory to cover coat or respray, using sandstone block, sand paper, or pumice stone. Brushes porcelain into nicks to repair minor defects. Marks or sorts workpiece to indicate routing for further repair or processing. Removes excess enamel from dipped parts by hand or blows off dust, using air hose. Cleans workpiece with cloth or water hose to remove faulty bisque, and hangs it on rack to dry prior to dipping or spraying.

May mark workpiece with production number, unit number, or other code. May be designated according to type of enamel product cleaned.

8598-190 LABOURER, CANDLE(misc. prod. fab., n.e.c.)
DPT:687

wax mixer.

GED: 1 SVP: 2 EC: 1 PA: H 3 4

Blends beeswax and paraffin for candlemaking according to formulas and assists other workers to handle materials:
Measures ingredients, such as beeswax, paraffin, and chemical additives according to formulas, and fills vat. Adjusts thermostat to heat vat. Stirs ingredients to blend melted mixture, using wooden paddle. Cleans wax reservoir, vats, and processing equipment, using water, soap, and detergents. Assists other workers in loading and unloading trucks and equipment. Transports materials, products, and equipment to workers to warehouse by carrying or using handtruck.
May rethread moulds in casting machines with wick material from spools. May mix batches of coloured wax and verify colour for conformity to standards. May keep records of batches and quantities mixed.

8598-194 LABOURER, DIPPING(any ind.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Immerses articles; such as, curtain pole ends, door stops, marking pens or erasing pencils, and other items into bath of paint to form protective or decorative coating on articles, by either of the following methods:

1. Hammers articles onto nail tips protruding from mounting board, using leather faced wooden mallet. Dips articles into bath of paint, manually, holding board in horizontal position. Mounts board on dripping rack, and transports rack to conveyor that carries articles to drying oven. Pulls dried articles from nails by hand.
2. Places articles in jig, manually, and presses two buttons simultaneously to activate pneumatic press that positions articles in slots of rubber dipping board. Pulls handle to lower cage into paint solution. Removes dipping boards and places them on handtruck.
3. Hangs toy parts on hooks of overhead conveyor that passes through paint dipping and spraying operations. Removes painted items from hooks. Changes hooks of overhead conveyor according to type of toy being painted.

May stir paint in vat, with paddle, to ensure shade uniformity.

8598-198 PAPER-CONE DIPPER-AND DRYER(paper prod.)
DPT:687

GED: 1 SVP: 2 EC: 1 PA: L 4

Treats paper cones and tubes in wax and turpentine solution and dries in drying cabinet:
Melts wax in vat and adds turpentine. Loads paper cones and tubes into basket and immerses it in molten solution. Removes basket from vat after specified time, draws mixture from articles and sets it aside for transfer to drying cabinet. Dumps cones and tubes into drying cabinet and starts fan. Packs dried cones and tubes into cartons.
May smooth ends of cones and tubes, using abrasive facing machine.

8598-202 PICKLER AND DIPPER(jewellery & precious metal prod.)
DPT:687
GED: 1 SVP: 2 EC: 1 PA: L 4

Coats jewellery and jewellery fittings with acid solution to protect metal from oxidation during soldering, and cleans soldered articles:
Places jewellery items or fittings in sieve or hangs them on rack. Immerses articles into boiling acid solution for specified time to protect metal from oxidation during soldering. Removes jewellery or fittings from acid bath, lifting sieves or racks, and heats them in oven to harden coating. Dips soldered articles in chemical solutions and water to remove coating. Dries cleaned articles by placing them in oven.
May roll small articles, such as earrings, brooches in heated sawdust to dry them. May load jewellery or plated articles in ultrasonic bath to coat or clean them.

8598-206 MIRROR COATER(glass) DPT:887
GED: 1 SVP: 2 EC: 1 5 PA: H 4

Sprays mirrors with protective coating materials such as copper, shellac and paint:
Removes mirror from drying table and places mirror in spraying booth. Sprays protective coating over silvered surface, using spray gun. Covers mirror with paper to prevent adherence and places mirrors on racks for shipping.

8598-210 SPRAY-BOOTH CLEANER(any ind.) DPT:687
GED: 1 SVP: 1 EC: 1 6 7 PA: M 3 4

Scrapes or scrubs interior surfaces of spray-painting booths and cabinets to remove paint deposits, using hand scraper, brushes, and solvent:
Peels off chemical paint film from interior surfaces of spray booths or cabinets, manually. Brushes with solvent or scrapes surfaces to remove paint adhering to walls or ceiling to clean them thoroughly. Sprays all surfaces with protective coating, using spray-gun-chemical solution. Covers floor of booth or cabinets with protective sheeting.

Repairing, Cutting and Trimming Miscellaneous Products
8598-230 through 8598-246

8598-230 CRAYON CUTTER(misc. prod. fab., n.e.c.) DPT:686
GED: 1 SVP: 2 EC: 1 PA: L 4

Cuts wax stick to make coloured wax crayons, using cutter:
Loads lengths of wax into die and turns handscrew to lock die in place. Starts circular cutter, and runs cutter through holes in die to cut wax to specified lengths. Opens die, places cut length in boxes for storage. Disposes of excess wax.

8598-234 SLIDE-FASTENER REPAIRER(misc. prod. fab., n.e.c.) DPT:687
zipper repairer.
GED: 1 SVP: 2 EC: 1 PA: L 4 7

Repairs and adjusts defective slide fasteners:
Examines rejected fasteners for type of defect and extent of repair required. Pries excess or broken links (teeth or scoops) and damaged slides from chain, using metal pin. Separates prongs of replacement links with pin, and secures links to tape, using hand pliers. Cuts chain to specified length, using hand tool. Inserts and secures bottom stop to tape ends of chain, using pincers, to hold tapes together, and provide stop for slide. Positions slide on chain and crimps sides to mesh links and to provide even sliding action, using crimping tool. Tests slide fastener by drawing slide over links.

8598-238 TRIMMER, BROOM(misc. prod. fab., n.e.c.) DPT:687
clipper.
GED: 1 SVP: 2 EC: 1 PA: L 4

Cuts brooms to specified length, using rotary cutter, and removes rough fibre ends:
Sets indicator gauge according to broom length specified. Positions broom on turntable and pushes table to feed edge of broom into rotating circular knife. Examines brooms and removes defective fibres. Cuts off end of twine used in sewing.

8598-242 TRIMMER, PAPER-DOILIES(paper prod.) DPT:687
GED: 1 SVP: 1 EC: 1 PA: L 4 4

Trims excess paper from edges or centers of paper-lace doilies, by hand:
Lifts bundle of sheets containing paper doilies onto table at end of embossing machine. Pounds edges of bundle with wooden mallet to loosen and remove excess paper. Pulls excess paper from edges of paper doilies, manually. Pokes excess paper from holes in doily design, using blunt-end of poker. Bundles trimmed doilies and places them into cardboard boxes.

8598-246 WALLPAPER PREPARER(paper prod.) DPT:687
GED: 1 SVP: 1 EC: 1 PA: M 4

Prepares wallpaper rolls for printing:
Strips outside wrapper from rolls of wallpaper stock. Cuts away torn, soiled or creased section, using knife. Transfers stock to printing machine, using handtruck, or by rolling stock on floor. Cleans working area at end of shift.
May apply ground coat to paper by running material through coating machine.

Fabricating, Miscellaneous Products
8598-266 through 8598-286

8598-266 BAGGING-MACHINE FEEDER(any ind.) DPT:686
packer-stitcher feeder.
GED: 1 SVP: 2 EC: 1 6 PA: M 4

Feeds bag sleeves into machine that stitches bag ends, or sews glued tape to ends to seal bags or to form overlap for self-sealing bags:
Lifts sleeves from load table and positions them individually on moving conveyor leading to machine that stitches bottom ends and cuts string and tape. Fills individual bag with products, using equipment such as compressing platens and ram. Feeds bags, containing products, into stitching-machine that seals top end of bags.
May verify weight of packages, using scale, and reject overweight or underweight bags. May be designated according to number of ends sewn; for example, Single-End Sewer

8598-270 CRÊPING-MACHINE-OPERATOR HELPER(paper prod.) DPT:687
GED: 1 SVP: 2 EC: 1 5 PA: H 4

Performs routine manual duties to support the operation of crêping machine:
Transports paper rolls from storage area to crêping machine using handtruck. Helps operator to mount paper roll on machine. Carries pails of dye to machine and fills dye pans. Weighs finished rolls. Cleans working area using broom and rags. See also definition for term title, 02-160 HELPER (any ind.).

8598-274 PAD GLUER, HAND(paper prod.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: M 4

Glues one end of stack of paper and slices stack into sections for making such products as notebooks and pads:
Places interleaves with cover at top and bottom of stack. Brushes coat of glue on one end of stack, using brush. Covers end with cheesecloth and brushes with glue. Slices stack of paper into sections, using paper cutter, and carries to skids.

8598-278 PENCIL-BLANK PRESSER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 5 PA: M 4

Performs various duties in the fabrication of wooden pencils:
Places open clamps between jaws of press and positions pre-cemented lead-filled slats in clamps to hold wooden pencil slats while cement dries. Turns wing nuts to tighten clamps and hold pencil blanks firmly. Places stacks of clamps under hydraulic press and depresses pedal to close jaws. Depresses pedal to open press and remove metal clamps. Places blanks in hopper of sanding machine that removes excess glue and lead from blanks. Places sanded pencil blanks in hopper that feeds conveyor to rounding machine. Replaces and adjusts sandpaper straps, using hand tools.

8598-282 PREPARER, CORN BROOM MATERIAL(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 7 PA: L 4

Prepares corn broom materials, prior to assembly, by any of the following methods:
Brushes ends of broomcorn against teeth of rotating cylinder to remove seed and chaff. Shakes stems of broomcorn against table to align ends. Positions stems on table against gauge and lowers blade to cut stems to specified length. Draws broomcorn through comb, to

separate long straws from short straws. Gathers long and short straws into separate bunches and draws them through comb, butt end first, to straighten them. Ties bunches into bundles and stacks them in racks for further processing.

May perform a specific duty and be designated accordingly; for example,

Cleaner and Cutter, Brooms

8598-286 TRUNK COVERER(misc. prod. fab., n.e.c.) DPT:687
GED: 1 SVP: 2 EC: 1 5 PA: L 4

Attaches prepared sheet metal sections to trunk boxes and lids to protect and reinforce trunk parts:

Places box or lid over anvil. Positions sheet metal section on sides or lid of box. Staples section to trunk parts, using pneumatic gun. Places covered boxes and lids on conveyor for further processing.

Other Elemental Occupations 8598-306 through 8598-399

8598-306 CLIP-LOADING-MACHINE FEEDER(explosives) DPT:686
GED: 1 SVP: 2 EC: 1 5 PA: H 4

Feeds machine that positions cartridges into clips, preparatory for use in small arms magazines:

Feeds clips and loaded cartridges into hoppers of machine that automatically forces clip over cartridges for use in small arms magazines. Observes machine operation, stops machine when jams occur and frees jammed clips or cartridges, using metal bar.

8598-310 SILVERING-MACHINE FEEDER(glass) DPT:686
GED: 1 SVP: 2 EC: 1 PA: VH 4

Performs any of the following duties in the silvering of mirrors:
Reads order slip showing dimensions of plate glass to be processed. Lifts, carries, and positions plate glass on floor of truck, using suction cup to help in moving heavy plate glass. Moves loaded truck near silvering machine. Feeds plate glass onto conveyor of glass silvering machine, with the help of co-worker. Removes mirror at extreme end of conveyor, and positions mirror on truck. Places sheets of paper between each mirror to avoid contact of silvered surfaces. Moves loaded truck to next section and pulls empty truck near silvering machine.

8598-314 BANDOLEER STRAIGHTENER-STAMPER(explosives) DPT:687
GED: 1 SVP: 2 EC: 1 PA: S 4

Prepares fabric bandoleer belts for insertion of loaded small arms ammunition clips:

Cuts open bundles of bandoleer belts, using knife and unfolds, straightens and places them into lots of specified quantity. Reads work order and stamps identifying information on each bandoleer for subsequent packing operations by other workers. Records number of bandoleers processed during shift.

8598-318 DECAL SELECTOR-APPLIER(rail. trans.) DPT:687
automatic-car-identification stenciller.
GED: 1 SVP: 2 EC: 1 PA: L 4

Selects and applies adhesive coded decals on railroad freight cars, for automatic identification system:

Consults car identification chart and selects coded decals that match completed railroad freight cars. Cleans surface to be covered by decals, using cloth and solvent. Removes protective paper from back of decals and positions them on clean surfaces, using template. Smooths out air bubbles with roller or edge board. Applies varnish over decals, using paint brush. Records information, such as type and capacity of freight cars, and codes of decals applied on freight cars.

8598-322 ORNAMENTAL-STONE SETTER(jewellery & precious metal prod.) DPT:687
GED: 1 SVP: 2 EC: 1 PA: S 4 7

Sets ornamental stones in metal jewellery articles by either of the following methods:

1. Deposits glue in settings with pick and places stone in each setting, using tweezers. 2. Places stone in setting and presses prongs around stone with hand tool.

May be designated according to method of setting stones or type of stone set; for example,
Pronger
Rhinstone Setter

8598-326 STAMP FILLER(any ind.) DPT:687
GED: 1 SVP: 2 EC: 1 7 PA: L 4 7

Applies letters and fills depressions to provide colour identification, model numbers or designs on articles, using brush, roller or spatula:

Reads work order for filling instructions. Cleans area to be coloured, using solvent-soaked cloth. Fills lettering or design depressions with paint, lacquer or ink of specified colour. Wipes excess material from surrounding surfaces, leaving depressed areas filled with colouring material.

May stamp information on article, using press. May dry filled workpieces in infra-red oven.

8598-330 LABOURER, SHIPYARD(ship & boat bldg.) DPT:687
GED: 1 SVP: 1 EC: O 5 6 PA: H 3 4

Performs any combination of the following duties in a shipyard:

Loads and unloads vehicles, using handtruck or dolly. Washes trucks and other vehicles. Cleans ships, piers, drydocks and other working areas, using broom and water hose. Opens shipping crates, using hammer and pinch bar. Sorts lumber, metal and scrap material. Collects and dumps trash. Pours cement on inner bottom of ships and around joints on decks to prepare surface for tiling, or to make joints watertight. Removes paint and scale from ship's metal surfaces, using hand or powered wire brushes. Aids journeyman workers by gathering and supplying materials.

8598-334 PAINT-BRUSH BONDER(misc. prod. fab., n.e.c.) DPT:687
epoxy-pouring operator.
GED: 1 SVP: 1 EC: 1 PA: L 4

Bonds bristles in metal ferrules to fabricate paint brushes, using epoxy bonding solution dispenser:

Holds several bristle-filled ferrules under outlet jet of tank. Depresses pedal to release a measured quantity of bonding solution into each ferrule. Moves ferrules under nozzle until sufficient bonding solution is delivered to secure bristles. Loads bonded brush heads into trays and places them in drying room.

8598-338 RACKER(jewellery & precious metal prod.) DPT:687
GED: 1 SVP: 1 EC: 1 PA: L 4

Racks jewellery articles preparatory to plating, degreasing and enamelling processes:

Arranges pieces of jewellery in rows, or fastens pieces to racks, or strings beads on fine wire and hooks wire on dipping rack. Removes beads from wire after processing and places them in tray, or fastens articles of jewellery, such as earrings, chains, bracelets to racks with clamps, or hooks and carries racks to plating area.

May brush particles of foreign matter from pieces of jewellery preparatory to painting.

8598-399 MISCELLANEOUS OCCUPATIONS IN LABOURING AND OTHER ELEMENTAL WORK, PRODUCT FABRICATING, ASSEMBLING AND REPAIRING

This group includes miscellaneous fabricating, assembling and repairing labourers, and elemental workers, not elsewhere classified; for example, those who assemble stamp pads, smoking pipes, advertising buttons, eye droppers, and felt tip pens; mount sunglass lenses; and

string paper tags together. Typical examples of occupational titles covered by this residual group definition are:

Assembler, Advertising Button(misc. prod. fab., n.e.c.)

Bag Stringer(paper prod.)

Eye-Dropper Assembler(glass prod.)

Lens Inserter(scient. & ind. equip., n.e.c.)

Stamp-Pad Finisher(misc. prod. fab., n.e.c.)

8599-OTHER PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, N.E.C.

This unit group includes occupations, not elsewhere classified, concerned with fabricating, assembling and repairing a variety of products; such as, ammunition, musical instruments, sporting goods, brushes and mops, zippers, bags and wigs, made from a wide variety of materials. Activities include: regulating, finishing, filling, cutting, slitting, fitting, adjusting, trimming, twisting and winding, by hand or machine. Occupations concerned with the fabrication and assembly of metal products are classified in Minor Group 851/852, FABRICATING AND ASSEMBLING OCCUPATIONS, METAL PRODUCTS, N.E.C. Occupations concerned with fabricating and assembling electrical, and electronic equipment excluding construction work are classified in Minor Group 853, FABRICATING, ASSEMBLING, INSTALLING AND REPAIRING OCCUPATIONS: ELECTRICAL, ELECTRONIC AND RELATED EQUIPMENT.

Ammunition, Explosives and Pyrotechnics Fabricating and Assembling Occupations, n.e.c. 8599-110 through 8599-194

8599-110 AMMUNITION WORKER(gov. serv.) DPT:684
GED: 3 SVP: 6 EC: B 6 PA: H 3 4 7

Inspects, tests, maintains and stores ammunition; such as, bombs, shells, pyrotechnics, rockets and related component parts:

Tests and inspects material for functioning and serviceability, using precision gauges and test equipment. Disassembles, repairs, and reassembles ammunition, using hand and power tools, material handling equipment, and following manufacturers' specifications. Assembles and loads explosive and inert elements to prepare ammunition for use. Cleans, stores, and maintains ammunition according to technical manuals. Checks temperature and humidity of storage rooms, using thermometers and hygrometers. Disposes of ammunition due to deterioration, exudation and expired shelf life, by burning, drowning or exploding, according to regulations.

8599-112 FIREWORKS MAKER(explosives) DPT:684
GED: 3 SVP: 6 EC: I 6 PA: M 4 7

Makes fireworks such as bombs, fountains, coloured lights and special designs according to specifications:

Weights, mixes and sifts explosive chemicals according to formula to produce various firework colours and noise effects, using scales, handmixer and metal screens. Fills casings or tubes with powder and compresses it into place, using wooden rods and mallet or hydraulic press. Assembles and connects fireworks together to form special designs, according to specifications, using wire, cardboard and hand tools.

May use chemicals previously prepared according to formula by other workers.

**8599-114 TRACER-BULLET-CHARGING-MACHINE
OPERATOR (explosives) DPT:682**
GED: 3 SVP: 5 EC: I 6 PA: M 4 7

Operates multiple-station machine that automatically charges and tamps subigniter, igniter, and tracer powder into bullet jackets to form tracer bullets for military ammunition:

Operates multiple-station machine and observes tracks and stations to

detect malfunctioning or jams. Clears jammed dies, funnels and bullets, using fingers or wooden tool. Observes dies at assembly station and inserts bullet jackets by hand into dies missed at feeder tube. Seats jackets in dies, using hand press. Adjusts stroke of tamping punch by turning setscrews and adjusting stopnuts, using hand tools. Replaces worn or damaged punches, dies or knock-out pins, using hand tools. Weighs powder samples from each charging station on grain scale, and adjusts height of scraper or changes size of scooping device, to regulate bullet loading charge. Measures depth of charge in bullet and tests for firmness of pack, using depth indicator. Weighs loaded jackets on floor scale to determine quantity produced and records production data in logbook. Empties carrier pouches of powder into charging bowls and dumps empty bullet jackets into hopper, to replenish machine supplies. Cleans machine, using air hose and wet cloth.

8599-118 SHOTGUN-SHELL-BODY MAKER(explosives) DPT:682

tube-cutter-and-sizer operator.

GED: 3 SVP: 4 EC: I 5 PA: M 3 4 7

Operates battery of machines that cut paper tubes to specified length, compress to size and impregnate with linseed oil for use as shotgun shell bodies:

Selects and measures arbors and dies with micrometers and plug gauges to verify specified shell size. Installs and adjusts sizing arbors, dies, cutting rolls, and spacing of pickup fingers, using hand tools. Turns valve to circulate oil through die holders and starts machine. Observes machines for malfunctions and adjusts oil flow that facilitates passage of tubes through sizing dies and impregnates tubes with oil to waterproof and stiffen them. Clears jammed tubes from dies, arbors and feed channels, using hands or pick, and blows out clogged oil lines with air hose. Examines paper tubes for crushed or torn ends. Verifies inside diameter of tubes periodically, using gauge, and dumps tubes into hopper. Lubricates machines, using oil can and grease gun. May truck barrels of tubes in and out of drying room, and record date and time of entry. May record humidity of drying room.

8599-120 SHOTGUN-SHELL-TUBE MAKER(explosives) DPT:682

GED: 3 SVP: 4 EC: I 5 PA: M 3 4

Operates rolling machine to roll paste into paper tubes used in the manufacture of shotgun shells:

Mixes and cooks paper paste for specified time, using heated-power-mixer. Dumps cooked paste from mixer into hopper of rolling machine, and sets thermostat to maintain required temperature. Installs and adjusts pressure rolls, paper guides and applicator brush according to size of shell to be rolled, using hand tools. Starts machine and observes operation to detect machine malfunction. Selects tubes at random and verifies dimensions, using fixed gauge. Removes tubes from discharge hopper and crates and stores them in curing room.

**8599-122 DYNAMITE-PACKING-MACHINE
TENDER(explosives) DPT:685**
GED: 3 SVP: 4 EC: I 6 7 PA: M 4 7

Tends machine that packs dynamite powder into paper shells to form cartridges:

Installs and adjusts tamping sticks and filling nozzles in packing machine according to diameter and length of paper shells to be packed, using nonsparking hand tools. Fills hopper with dynamite powder and fills shuttle board with paper shells. Starts machine and observes operation to ensure correct filling, tamping and crimping of shells. Examines filled shells to detect splits or faulty crimping. May weigh and pack cartridges in boxes and load boxes in transport vehicles. May tend machine that fills paper shells with gelatin-type dynamite.

8599-126 BLASTING-CAP ASSEMBLER(explosives) DPT:684
GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Assembles blasting caps, by performing any combination of the following duties:

Adjusts and aligns hopper and funnel to control amount of powder being loaded into caps, in accordance with formula. Loads feeder plate with lead azide caps, and dumps powder into hopper. Manipulates remote-controlled arm to open bottom slide of hopper to fill caps with powder. Inserts plate of charged caps into press holder and turns

handwheel that lowers punches to press powder into caps. Dips lengths of wire into insulating compound and wraps them with cloth tape. Cuts and inserts wires into fibre plug. Seals plug with fibre disk. Installs specified dies and adjusts table of crimping press, according to diameter and length of caps being crimped. Places plates of caps on table under dies, starts machine and depresses foot pedal to lower crimping device onto caps to crimp them. Lubricates and adjusts machines. Records data such as quantity of caps assembled, caps rejected and formula used.

May inspect crimped caps by measuring indentations and depth of crimp, using gauges.

8599-130 DETONATOR-AND-FUSE ASSEMBLER(explosives) DPT:684

GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Loads and assembles detonators and fuses used in high explosive shells or bombs, by performing any combination of the following duties:

Loads detonators with explosives, using calibrated scoop, or stands behind safety shield and operates loading machine by remote control. Loads fuse holder with explosive pellets and tamps them into place, using pneumatic press. Crimps delay elements in detonator casings to produce delay detonators, using hand crimping tool. Operates crimping machine to seal ends of detonators with metallic disks such as aluminum or copper. Installs specified components, such as loaded detonators, plungers and activating mechanisms to complete fuse assembly, using power tools and press. Inspects completed fuse and detonator assemblies for conformance to specifications, using special gauges. Tags or labels inspected assemblies according to established procedures and packs them into boxes for shipment or storage.

May perform a specific assembly function and be designated accordingly; for example, Delay-Action-Fuse Assembler Delay-Detonator Assembler

8599-134 FLARE ASSEMBLER(explosives) DPT:684

GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Assembles flares, by performing any combination of the following duties:

Weights and mixes liquid priming mixture according to work order, using scale and mixing bowl. Rolls charge board containing vertical unprimed flares along conveyor to work station. Fills top holes in flares with priming mixture, using syringe, and presses filling hole closed with fingers. Turns flares over on charge board and installs wooden base plug, using hammer, or inserts and glues spiked plug according to specifications. Fills priming hole near base plug with priming mixture, using syringe, and presses filling hole closed with fingers. Applies sealing compound to upper and lower priming holes, using brush. Drills or punches holes in caps for insertion of fuses, using hand tools. Installs fuses in caps and secures caps to flares, using twine and glue. Stencils identifying information, such as type of flare, date of manufacture, or lot number on flares, and packs them in cartons for storage or shipment.

May charge and assemble railway track signals.

8599-138 IGNITER-AND-PRIMER ASSEMBLER(explosives) DPT:684

GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Loads and assembles primer cups or igniters used in small or large bore ammunition or flares, by performing any combination of the following duties:

Receives trays of partially charged upper and lower primer cup sections from other workers. Loads specified amount of primer compound into each section, using calibrated scoop and spatula. Fits primer cup dowel and pin holes together and places primer tray into clamp assembly of punch-press bed. Tends punch press that presses and locks primer cup sections together. Places tray of primer cups on lacquering press and pulls lever to operate press that deposits drop of lacquer onto each cup to seal two mating surfaces. Positions tray of sealed cups on seating machine and clamps tray in place. Stands behind safety glass and operates controls to insert primer cups into shell casings. Assembles flare igniters to specifications by soaking cloth in explosive compound and winding cloth on mandrel to air dry. Inserts igniters into flare canisters.

May fill small arms ammunition primer cups with dry priming mixture by operating remote controlled equipment.

8599-142 MUNITIONS ASSEMBLER(explosives) DPT:684 ammunition maker.

GED: 2 SVP: 3 EC: I 6 PA: M 4 7

Assembles and loads shells, bombs, rockets, mines and similar ammunition, by performing any combination of the following duties:

Weights and loads propellant charges into cartridge cases or cloth bags, using hand scoop or loading machine. Weighs and loads explosive charges into shells (projectiles), bombs, rockets, mines and grenades, using hand scoop or loading machine. Screws fuses into place, by hand or using screw press. Places primers in cartridge cases and screws or crimps them in place, using press. Assembles shells to cartridge cases, using assembling and crimping machine. Brushes band of adhesive sealing compound around point of shell and cartridge. Assembles bombs, rockets and mines, by joining together components, such as body, tail assembly, detonators and boosters, using hand and power tools. Assembles and ties together propellant charge bags. Verifies dimensions of assembled ammunition, using fixed gauges. Stamps or stencils identification on ammunition. Packs ammunition in cardboard or metal tubes, sleeves or containers.

May disassemble ammunition to replace defective components or to recover propellant charge. May be designated according to specific task performed; for example,

Bomb Loader
Shell Assembler

8599-146 CARTRIDGE LOADER(explosives) DPT:685 loading-machine operator; loading-unit operator.

GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Tends machines that load small-arms cartridge cases with powder and bullets and crimp cases, by performing any combination of the following duties:

Places powder in hopper of dispensing unit. Inserts plate of cartridge cases under powder plate, slides powder hopper along powder plate and pulls lever to dump powder into cases, or clamps plate of cartridge cases over powder plate and inverts assembly to dump powder into cases. Taps dispensing plate with mallet to dislodge powder residue and removes plate. Visually inspects powder-filled cases to verify that all cases are filled. Positions plate of bullets over plate of cartridge cases and pulls bottom slide in bullet plate to drop bullets into cases or inserts bullets and cartridge cases in dial feed plates of machine. Positions cartridge plate on press and pushes lever to lower punches that seat bullets to specified depth in cartridge cases or observes automatic seating of bullets by machine. Inserts cartridge plate in crimping press to crimp cartridge cases around bullets. Removes plate from press and examines cartridges for defects, such as dented points, scratches, and loose bullets. Measures sample with fixed gauges to verify conformance to specifications.

May scoop bullets or cartridge cases onto specially holed plates and shake plate manually to cause cartridges or bullets to drop into holes. May fill special orders by loading a variety of small-arms cartridges, using hand-operated equipment and be designated accordingly; for example,

Loading-Unit Operator, Powder Charging
Loading-Unit Operator, Seating

8599-150 PELLET-PRESS TENDER(explosives) DPT:685

GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Tends press that forms pellets of explosives from mixed powder for use in charging bombs, flares, shells and signals:

Lubricates surfaces of table plate and bottom of feed chute of machine to prevent explosion hazards, using graphite-impregnated cloth. Aligns dies and punches of machine, using hand tools and gauges, and adjusts cogwheels to regulate punches to produce specified pellets. Fills machine hopper with powder from special container, using rubber funnel, and manually turns flywheel to make sample pellet. Weighs pellet on balance scale and measures its size, using micrometer. Readjusts machine, using hand tools, to produce pellets according to specifications. Stands behind safety shield and operates press, by remote control, to form pellets. Removes pellets from machine and inserts into charge board. Places board in pouch and carries to wall magazine to store until required for further processing.

8599-154 SHOTGUN-SHELL-ASSEMBLY-MACHINE
TENDER (explosives) DPT:685
 GED: 2 SVP: 3 EC: I 5 6 PA: M 3 4 7

Tends battery of automatic machines that assemble shotgun shells preparatory to loading with powder and shot:
 Fills hoppers with components to be assembled. Starts machines that form and press base wads into shell bodies, press metal heads onto bodies, and crimp heads to form extractor flanges. Observes machines for jams in hoppers and feed mechanisms and removes jammed components, by hand or using wire hook. Examines assembled shells for defects, such as open seams, damaged mouths, and malformed or tarnished heads. Removes defective shells, and stacks filled containers of assembled shells and rejects on truck for further processing. May record number of shells assembled, on time card. May align formed tubes for feeding into moving dial on hand-fed machines.

8599-158 SHOTGUN-SHELL-LOADING-MACHINE
TENDER(explosives) DPT:685
 GED: 2 SVP: 3 EC: I 5 6 PA: L 4 7

Tends battery of automatic machines that load shotgun shells:
 Starts machines and observes mechanisms for jams. Removes jammed shell components with fingers or using wire hook. Examines samples of completed shells at specified intervals to detect incomplete crimping, bulging wads, and blurred printing. Measures length, head thickness, and diameter, using fixed and adjustable gauges. Periodically stops flow of powder and wads, to ensure that automatic warning devices are functioning. Cleans powder, shot, and scrap from machines, using brush and vacuum cleaner. Records production data on time card, such as number of tubes filled and date and number of rejects.
 May cut shell open with knife and weigh powder and shot charge on grain scale to ensure charges are within specified limits and wads are correctly placed in shells. May make machine adjustments; such as, base-wad compression, head diameter, and feed stroke following work order and using hand tools. May fill shotgun shells with powder, pellets and wads by series of hand operations.

8599-162 RIM-FIRE PRIMING-MACHINE
TENDER(explosives) DPT:685
 GED: 2 SVP: 3 EC: I 5 6 PA: L 4

Tends battery of automatic machines that charge rim-fire cartridge cases with priming mixture:
 Rubs priming mixture into holes in charger plate, using rubber hand tool. Positions plate in holding fixture of priming machine. Starts machine that punches pellets of priming powder into cases. Removes jammed cases from feed channels, using air hose or wire pick. Removes empty charging plate when machine stops.

8599-166 SHELL-CAVITY LINER(explosives) DPT:684
 GED: 2 SVP: 2 EC: I 6 PA: M 4 7

Installs shell-cavity liners, loads supplementary explosive charges and prepares shells for shipment:
 Places metallic cavity liner in hole reamed in solid powder of shell by other workers. Operates hydraulic swaging tool to expand cavity liner into shell threads to form seal. Measures depth of cavity liner to verify conformance to specifications, using gauge. Loads supplementary powder pellet into shell cavity to form main detonating train. Installs fuse or metal plug to seal point of shell, using hand or power screwdriver. Packs shells in specified containers and prepares them for shipment, using hand tools or stapling machine.

8599-170 ANVIL-SEATING-PRESS TENDER(explosives) DPT:685
cup-seating operator.
 GED: 2 SVP: 2 EC: I 5 6 PA: L 4 7

Tends power press that forces and seats primer anvils into loaded primer cups to form complete primers for delay caps or small arms cartridges:
 Aligns specially holed plate containing anvils over matching plate of loaded primer cups. Positions assembled plates in holding fixture, pulls lever to lock plates in place on feed table, and presses switch to start machine. Examines assemblies for malformations, discolourations and other defects.

May seat anvils, using hand-operated toggle press. May carry primer components from magazine and return assembled primers to magazine. May record production data on time card.

8599-172 POWDER-CUTTING TENDER(explosives) DPT:685
 GED: 2 SVP: 2 EC: I 6 7 PA: H 4 7

Tends machine that cuts strands of propellant powder into grains of designated size to produce explosives having uniform ballistic properties:
 Starts cutting machine by flipping switch button, and feeds flexible strands of colloidal powder through guide holes into cutter. Starts flow of liquid coolant by opening valve. Plays liquid on cutting area to prevent outbreak of fire. Empties fibre containers of cut powder into cart. Checks quality of powder, noting clean cuts, location of pin hole, appearance of powder and length of cut. Reports to supervisor any deviation from standards or defective running of machine. Cleans equipment and work area, using brass tools, dust-pan and broom, for safety purposes and good housekeeping.

8599-174 PRIMER-INSERTING-MACHINE
TENDER(explosives) DPT:685
 GED: 2 SVP: 2 EC: I 5 6 PA: L 4 7

Tends machine that inserts and seats primers in center fire cartridge cases and shotgun shells:
 Starts machine by pressing switch and feeds cartridge cases or shotgun shells onto pins of rotating dial plate. Observes flow of primers and cases through feed tracks to detect malfunction or jamming of mechanisms. Stops machine to remove jammed primers, shells or cases with fingers or wire hook. Examines primed shells or cases at ejection chute for defects such as dents or scratches, and measures them for conformance to specifications, using fixed gauges.
 May carry boxes of primers from magazine to work area for insertion in cartridges.

8599-178 WAXER(explosives) DPT:685
 GED: 2 SVP: 2 EC: I PA: M 3 4

Coats or impregnates empty cartridges, shotgun-shell tubes or shotgun-shell-filler wads with wax, by one of the following methods:
 1. Weighs and dumps specified amount of wax into steam-heated barrel. Scoops cartridges or tubes into barrel and starts barrel tumbling to coat or impregnate articles with wax. Stops and empties barrel at end of prescribed time and examines articles for dents, gouges and other defects. 2. Turns valves and observes gauges to fill and heat tanks with liquid wax. Lowers baskets of cartridges or tubes into tank of molten wax, to coat or impregnate articles, using chain hoist. Removes articles from wax tank and immerses in cleaning tank to remove excess wax. Dumps waxed and cleaned articles into drums and transports drums to drying room, using handtruck. 3. Scoops wads into barrel and starts barrel tumbling to remove feathery edges. Stops and empties barrel at end of prescribed time and examines wads for smooth edges and specified thickness. Dumps acceptable wads into airveyor that transfers them to lubricator hopper. Turns valves to liquify wax and regulate flow over lubricating plate. Starts feeder plate to arrange wads and feed them between roller and lubricating plate that coats sides with wax. Verifies that correct amount of wax has been absorbed by periodically weighing impregnated wads and comparing weight against chart.
 May dump impregnated wads into tube-loading machine that inserts wads into shotgun shells. May be designated according to article waxed; for example,
 Cartridge Waterproof
 Wad Impregnator

8599-182 FOILING-MACHINE TENDER(explosives) DPT:685
 GED: 2 SVP: 2 EC: I 5 6 PA: L 4 7

Tends automatic machine that punches out disks of foil and presses them over open end of loaded primer cups to seal out moisture:
 Positions and locks plate containing loaded primer cups in holding fixture on feed table. Loads machine with rolls of foil tape and presses switch to start machine. Removes plate when machine automatically stops. Examines sealed primer cups and removes defective ones from plate, using fingers, metal pick or wax-tipped stick.

8599-186 PRESSMAN, PYROTECHNICS(explosives) DPT:685

GED: 2 SVP: 2 EC: I 6 PA: M 4

Tends hydraulic press that compresses powder in cardboard tubes for use as pyrotechnic flares and signals, by either of the following methods:

1. Loads tubes into rack. Slides rack onto machine bed and locks into place. Pushes button to lower hollow punches over tubes that fill and tamp powder into tube bodies to a specified level. Removes rack from machine bed and carries tubes to other workers for subsequent processing. 2. Places tubes in press fixture that locks them in place. Pours specified amount of powder into each tube, using volumetric wooden scoop. Pulls lever or pushes button to force ram-heads into tubes to compress powder. Releases pressure and adds specified quantity of explosive powder to form igniting charge, using wooden scoop. Opens fixture and removes tubes.

8599-190 WATERPROOFER(explosives) DPT:685
varnishing-unit tender.

GED: 2 SVP: 2 EC: I 5 6 7 PA: L 4 7

Varnishes or lacquers parts of cartridges or shotgun shells to form waterproof seal, by either of the following methods:

1. Tends semi-automatic machine that applies lacquer to base and mouth of cartridge cases to form waterproof seal around primer and bullet. Pulls lever to start machine and inserts cases into recesses in dial feedplate. Observes machine for malfunctions. 2. Positions varnishing plate over plate of cartridge cases and inverts to transfer cases to varnishing plate. Positions plate of cases in fixture of manual varnishing device. Moves levers to dip upper and lower blocks of pins into reservoirs of varnish, and then onto primers and into mouths of cases. Wipes excess varnish from cases with cloth and examines for completeness of coverage. Sets plate of cases on air-blown screen for drying.

8599-194 BOX FILLER, CHARGED PRIMERS(explosives) DPT:687

GED: 2 SVP: 2 EC: I 6 PA: S 4 7

Fills linen boxes with charged primers used in production of small-arms ammunition:

Pours chemical solution from pail into catch pan and places sieve tray of charged primers over catch pan. Agitates tray and rubs excess powder mixture from primers with gloved hand so that excess powder falls into chemical solution. Scoops primers from sieve by hand and pours them into linen box to specified level. Stamps identification data on lot ticket, using rubber stamp, and places ticket in box with primers. Empties catch pan into container of neutralizer, and wipes pan dry, using rag.

May inspect anvils in charged primers for conformance to standards by placing tray of primers under magnifying glass and removing defective primers, using tweezers.

**Musical Instrument Fabricating,
Assembling and Repairing Occupations, n.e.c.
8599-214 through 8599-286**

8599-214 HARPSICHORD BUILDER(misc. prod. fab., n.e.c.) DPT:281

GED: 4 SVP: 8 EC: I PA: M 3 4 6 7

Lays out, machines, fits, assembles and finishes wood, metal and plastic parts to build harpsichords, according to drawings:

Measures and marks wood, metal and plastic components according to design specifications. Operates woodworking machines and uses hand tools to form wooden case parts. Sands and scrapes wooden parts and applies varnish or stain to finish surfaces. Fits and assembles parts, using hand tools, to assemble harpsichord case. Drills holes in frame for tuning pins, using template and drill press. Installs bridges on soundboard, using hand tools. Inserts tuning pins, and strings instrument, using various gauges of wire. Cuts and shapes wood, plastic and leather, using cutting machine and hand tools, to form parts of keyboards and actions. Fits, assembles and installs keyboard and action parts. Tunes instrument to specified pitch, using hand tools. Examines completed instrument visually and tactually, and corrects defects.

May apply decorative trim, such as stripes, decals or gilt, to finished instrument. May repair used instruments. May design harpsichords.

8599-218 MUSICAL-INSTRUMENT REPAIRMAN(ret. trade; whole. trade) DPT:281

GED: 4 SVP: 8 EC: I PA: M 4 6 7

Repairs, cleans and refinishes a variety of musical instruments, by performing any combination of the following duties:

Inspects instrument, moves parts, or plays musical scale to determine defects. Disassembles instrument, using hand tools or gas torch. Solders, patches or replaces defective parts. Removes dents in brass instrument parts, using mallet or burnishing tool. Carves or cuts wooden replacement parts for instruments, such as guitars and violins, and fits and glues them into position. Restrings instruments. Retouches or refinishes wooden parts, using sander, stain, lacquer, brush, spray gun and buffer. Cleans accordion mechanisms and other instrument parts, using brush, solvent, cloth and oil. Replaces skin or plastic heads on drums or banjos. Tunes instruments as required, using tuning bar, tuning fork or stroboscope. Utilizes wide knowledge of musical instrument repair and does not specialize in the repair of any one type of instrument. Does not repair pianos or organs. May sell musical instruments and accessories.

8599-222 PIPE-ORGAN TUNER AND REPAIRMAN(misc. prod. fab., n.e.c.) DPT:261

GED: 4 SVP: 7 EC: I 5 PA: M 3 4 6

Repairs, services and tunes pipe organs:

Directs assistant to depress specified organ console key. Strikes tuning fork and listens to tone differential. Adjusts pitch of organ pipe to conform with pitch of tuning fork, and adjusts pitch of remaining pipes by aural comparison to tuned pipe, by any combination of the following methods: 1. Raises or lowers tuning slides and stoppers of metal and wooden pipes, using tuning rod. 2. Rolls or unrolls curled strips of metal across tuning holes of metal pipes by hand. 3. Pinches or spreads metal lips that protrude from mouths of metal pipes. Cleans organ pipes, using vacuum cleaner. Repairs or replaces parts or organ; such as, pipes, console keys, stops, couplers, pedal boards, bellows and blower, using a variety of hand and power tools. Tests, adjusts or repairs electrical components, using test meters and hand tools.

May assist in the assembly and installation of new pipe organs in buildings, such as churches, concert halls and theatres.

8599-226 ACCORDION REPAIRMAN(ret. trade; whole. trade) DPT:281

GED: 4 SVP: 7 EC: I PA: M 4 6 7

Repairs, cleans and tunes accordions:

Disassembles instrument and parts; such as, bass and treble mechanisms, bellows, reed blocks, and manuals (keyboards), using hand tools. Moves parts and observes action to detect defects. Files, realigns, adjusts or replaces parts, using hand tools. Positions reed or reed block over orifice in test stand and activates hand or foot-operated bellows to sound reed. Aurally compares pitch of reed with master reed or tuning bar. Adds solder or files reed until pitch corresponds to master arbor. Replaces defective leather valves. Places reed in reed block and secures with glue or wax. Cleans parts and mechanisms, using brush, solvent, oil and cloth. Recovers bellows with sateen, cloth, or vinyl tape. Glues metal corners on bellows. Reassembles instrument and plays notes to determine accuracy of repair.

May tune reeds, using stroboscope. May operate woodworking machines to make wood replacement parts. May install microphone pickups on electronic accordions.

8599-230 PIANO REPAIRMAN(ret. trade; whole. trade) DPT:281

piano technician.

GED: 4 SVP: 7 EC: I PA: M 3 4 7

Repairs pianos, using specialized tools and gauges:

Tests piano components, such as keyboard, soundboard, frame, pedal and action assemblies, using specialized hand tools and gauges. Levels keys by inserting paper and felt shims. Detaches action mechanism and replaces faulty, worn or broken parts, such as hammers, shanks, dampers, felts and joint connections. Aligns hammers and turns screws to adjust striking action of keys. Replaces strings and tuning

pins. Examines wooden parts for splits, warps and other defects. Repairs or replaces wooden parts, such as bridges and soundboard. May resurface and refinish wooden parts. May tune pianos, using tuning hammer, fork and felt picker, and be designated accordingly, Tuner-Technician

8599-234 PIPE-ORGAN BUILDER(misc. prod. fab., n.e.c.)
DPT:281
GED: 4 SVP: 7 EC: I 5 PA: H 3 4 7

Fabricates and assembles components of electro-pneumatic pipe organs:
Plans layout of organ following drawings, sketches of installation site and customer specifications. Cuts, shapes, fits and assembles wooden components, such as console, wind chest and wooden pipes, using variety of woodworking machines and hand tools. Assembles and installs electrical parts in organ components. Solders connecting wires to leads, using soldering iron. Examines and tests components prior to dismantling and shipping to installation site, using test meter. May be concerned with the fabrication and assembly of a particular component and be designated accordingly; for example,
Bellows Maker
Chest Assembler and Finisher
Frame Maker
Pipe Racker

8599-238 WIND-INSTRUMENT REPAIRMAN(ret. trade;
whole. trade)
DPT:281
GED: 4 SVP: 7 EC: I PA: M 4 6 7

Repairs, cleans and refinishes brass, reed and woodwind musical instruments, by performing any combination of the following duties:
Examines instrument, moves parts or plays musical scale to determine defects. Removes parts, such as rod pins, keys and pistons, using hand tools and gas torch. Reshapes parts and removes dents, using hand tools, mallet and burnishing tool. Fills cracks in wood instruments by inserting pinning wire across crack and covering wire with filler, or by using lathe to cut groove around crack, and clamping retaining band into groove. Solders patches over cracks in brass instruments, using silver or soft solder. Operates lathe to cut off end of metal tubing, or solders attachments onto tubing, to improve instrument's tone or intonation. Washes parts in stripping solutions to remove lacquer coating and tarnish. Polishes instruments, using polishing compound and buffing wheel. Electroplates metal parts or sprays on lacquer to refinish surfaces. Hand laps valves and pistons so they move freely. Heats key cups to melt shellac and remove pads. Glues new pads and cork pieces on key cups, using shellac. Bends and cuts replacement springs, and fits them into place.
May, replace or repair plastic components of instruments. May specialize in repair of one type of wind instrument and be designated accordingly; for example,
Brass-Instrument Repairman
Woodwind-Instrument Repairman

8599-242 ORGAN-PIPE VOICER(misc. prod. fab., n.e.c.)
DPT:381
voicer.
GED: 4 SVP: 7 EC: I 5 PA: M 3 4 6

Adjusts metal and wood organ pipes to obtain specified timbre and strength of sound:
Inserts unvoiced pipes manually in rack of tubing table and starts electric blower. Depresses key to force air through voiced master pipe and unvoiced pipe. Listens to tone difference and determines adjustment required on unvoiced pipe. Raises or lowers lips of metal flue pipes to regulate airflow over lips. Notches languet (inner tongue), using hand tools. Files and adjusts reeds in reed pipes. Scrapes and sands lips in wooden pipes, and raises or lowers them to regulate air flow. Turns air valve, or adjusts opening of toe hole at base of pipe, using hand tools, to regulate loudness of sound.
May perform final tuning and voicing of pipes in newly installed organs.

8599-246 PIPE-ORGAN ERECTOR(misc. prod. fab., n.e.c.)
DPT:381
pipe-organ installer.
GED: 4 SVP: 7 EC: I PA: H 2 3 4 7

Assembles and installs components of electro-pneumatic pipe organs at installation site, according to specifications:
Installs components, such as wind chests, console, blowers and air ducts, using hand and power tools. Wires components, such as wind chests and blowers, using soldering iron. Mounts pipes above wind chests in predetermined pattern, according to specifications. Secures pipes in wooden racks and fastens racks to chest, using dowels and screws.
May tune or voice organ pipes. May repair pipe organs.

8599-250 PIANO-TONE REGULATOR(misc. prod. fab., n.e.c.)
DPT:381
GED: 3 SVP: 6 EC: I PA: L 4 6 7

Regulates tone of pianos, on a production line, by compressing or loosening felt on piano hammers:
Depresses piano key and listens to tone. Compresses hammer felt using hot iron, or files felt, to brighten tone. Loosens felt, jabbing with picker, to soften tone. Ensures that each hammer, when striking piano string, produces a tone of uniform brightness and clarity, consistent with its neighbours.

8599-258 PERCUSSION-INSTRUMENT REPAIRMAN(ret.
trade; whole. trade)
DPT:381
GED: 3 SVP: 5 EC: I PA: M 4 6

Repairs percussion instruments, such as drums, cymbals and xylophones, by any combination of the following duties:
Examines or plays instrument to determine defects. Removes drum tension rods and screws by hand or using drum key. Lifts rim hoop from drum shell and replaces plastic or skin drumhead. Reclamps rim hoop onto drum shell. Tunes drums aurally by playing them and adjusting tension rods. Removes dents in timpani, using rubber mallet and block. Drills hole at inside end of crack in cymbal, gong, or similar instrument, to prevent advance of crack, using drill press or hand drill. Drills holes in cymbals and inserts rivets for sound effect. Repairs or replaces bass drum and timpani pedals and foot mechanisms. Replaces percussion instrument hardware; such as, tension rods, rim hoops, and xylophone and marimba bars, using hand tools. Assembles imported drums for display.
May sell drums and accessories.

8599-262 PIANO-ACTION REGULATOR(misc. prod. fab.,
n.e.c.)
DPT:381
GED: 3 SVP: 5 EC: I PA: L 4 7

Regulates piano actions after installation in piano:
Adjusts action parts to ensure proper operation, using hand tools, buffer, shims or bushings. Aligns actions to obtain specified clearance between components, using fixed gauge and hand tools. Levels, squares and spaces keys, using gauge, shims and hand tools. Depresses piano keys to verify operation of actions and makes adjustments to attain required performance.
May subject piano to pounding-machine test to verify operation of actions and keys.

8599-266 PIANO-BACK ASSEMBLER(misc. prod. fab., n.e.c.)
DPT:681
bellyman.
GED: 3 SVP: 5 EC: I 5 PA: H 4 7

Fits and assembles wood soundboard, cast metal plate, and wood bridges to wood frame to build back panel of piano:
Operates hydraulic gluing press to glue supporting ribs and bridges to soundboard and soundboard to frame. Tends chamfering machine that cuts notches in ribs. Varnishes soundboard and ribs, using brush. Measures and marks back panel, using ruler and calipers, or uses jig to position metal plate that holds strings. Secures plate to back panel, using clamps. Marks panel with punch, removes plate, and drills holes, using drill press. Planes bridges to specified height, using hand plane and templates. Locates and marks holes for bridge pins, using template and punch. Drills holes in bridges, using portable drill, and hammers pins into holes. Replaces metal plate and secures with bolts

and screws. Verifies alignment of plate with bridges, using templates. Inserts shims or removes wood from frame to level and align plate. Hammers wood bushings into tuning pin holes in plate, using hammer and punch. Sizes holes in bushings, using drill press or portable electric drill, and hammers pins into bushings.

8599-270 PIANO SUBASSEMBLER(misc. prod. fab., n.e.c.) DPT:684

GED: 3 SVP: 4 EC: 1 PA: M 3 4 7

Assembles piano parts, or fits and installs piano components into piano cases, performing any combination of the following tasks: Screws, bolts or glues piano parts together to form subassemblies, such as actions and keyboard. Installs components, such as actions and pedal board to piano back assembly, using hand tools, power tools or special assembly presses. Verifies alignment of parts, using straight-edge, ruler and gauges. Planes and files parts, or adds shims, to obtain required fit of components and specified performance of moving parts, using hand plane and file. May machine parts, using machine tools, such as drill press, circular saw or other machine tools.

8599-272 PIANO TUNER(misc. prod. fab., n.e.c.; ret. trade; whole. trade) DPT:684

GED: 3 SVP: 4 EC: 1 PA: L 4 6

Tunes pianos on a production line, in homes, or public establishments: Removes cover from piano to expose strings. Places strips of felt between strings nearest one to be tested to mute them. Strikes note and compares pitch with that of standard tuning fork. Turns tuning pin with tuning hammer to adjust tension on string until pitch of string and that of tuning fork correspond. Tunes remaining strings, by aural comparison to tuned string. May repair and refinish pianos.

8599-274 BASS-STRING WINDER(misc. prod. fab., n.e.c.) DPT:682

string-winding-machine operator.

GED: 2 SVP: 4 EC: 1 5 PA: M 4 7

Operates lathe-type winding machine to wind covering wire over core wire to make piano bass-strings: Places spools of covering wire on spool holder. Takes length of core wire, places looped end of wire over hook at one end of machine, and inserts other end of wire in machine chuck. Selects covering wire of specified gauge, unwinds end from spool and twists around starting point on core wire. Engages clutch to start machine and guides covering wire along rotating core. Stops machine when finishing point is reached, breaks covering wire by hand, and secures end to core by twisting. Winds more than one strand of covering wire over core when heavier strings are required. Opens chuck and removes wound string from machine. May form looped ends on core wires prior to winding operation, using twisting machine. May swage or flatten starting and finishing points on core wires, using flattening machine.

8599-278 ROUGH TUNER(misc. prod. fab., n.e.c.) DPT:684
chip tuner.

GED: 2 SVP: 4 EC: 1 PA: M 4 6

Adjusts piano strings to attain specified pitch, in first tuning of partially finished or finished pianos: Rubs strings to remove kinks and other irregularities, using wood block. Plucks specified 'C' or 'A' string, using pick. Adjusts tuning pin until pitch of string and standard tuning fork or bar are in unison, using tuning hammer. Plucks remaining strings and adjusts to specified pitch, by aurally comparing with previously tuned strings.

8599-282 BOW REHAIRER(ret. trade; whole. trade) DPT:684
GED: 2 SVP: 4 EC: 1 PA: S 4

Replaces bow hair of string-instrument bows: Disassembles bow and removes old hair, using hand tools. Examines and cleans bow parts. Hand carves replacement wedges and plugs. Selects new hairs and binds one end with yarn and resin. Inserts bound end in bow and secures with wedges. Combs hair and binds loose ends with yarn and resin. Secures other end in bow with wedges. Resins repaired bow, using resin bag.

8599-286 PIANO STRINGER(misc. prod. fab., n.e.c.)

DPT:684

GED: 2 SVP: 4 EC: 1 PA: M 4

Installs strings in pianos: Selects specified wire and threads through hole in tuning pin and around hitch pin. Cuts wire with cutters and draws wire taut, using hand tool. Aligns and spaces strings, using hand tools. May insert and hammer tuning pins into bushed holes in back panel, preparatory to stringing. May file steel bar to obtain proper fit for strings.

**Sporting Goods Fabricating, Assembling
and Repairing Occupations, n.e.c.**

8599-306 through 8599-402

**8599-306 BILLIARD AND BOWLING EQUIPMENT
REPAIRMAN**(sport. & toy) DPT:381

GED: 4 SVP: 7 EC: 1 5 7 PA: VH 3 4 7

Installs and repairs billiard tables and bowling alley equipment in commercial establishments, performing any combination of following duties:

Moves table components on rollers to erection site. Bolts legs of table to lower frame, using hand tools. Lifts and positions slates on frame in numbered sequence, assisted by other workers. Levels slates, using level and shim stock. Fits, tensions and tacks precut bed cloth in position. Bolts prefinished side rails and pockets to table. Lays out and marks billiard table cloth to specifications, using template, straight-edge, steel tape and pencil. Repairs damaged tables by replacing or repairing table parts, using hand tools. Moves bowling alley components on rollers to erection site. Assembles and levels alley sub-bed, using hand tools, level, transit and shims. Installs and bolts together precut and predrilled floor boards to form alley into solid unit. Sands alley surface, using floor sander. Performs final inspection of alley surface, using level and transit. Positions and glues plastic-foul-line markers into precut slots. Shellacs alley surface with specified number of coats, using shellacking machine. Installs accessories, such as prefabricated ball returns, gutters, ball racks, pit-back cushions, hydraulically-powered ball retarders and pin-setting mechanisms as required. Smooths and touches up pre-coated accessories, such as gutters, ball returns and racks. Repairs damaged or defective alleys by replacing or reconditioning alley units or accessories.

8599-310 ARCHERY-BOW REPAIRMAN(sport. & toy) DPT:381

GED: 3 SVP: 6 EC: 1 5 7 PA: M 4 7

Repairs damaged or defective archery bows by either of the following methods:

Removes varnish from damaged or defective areas of solid wood or solid fiberglass bow, using abrasive paper. Opens cracks in bow, using hand tools or by heating in oven. Fills cracks with wood filler or matching coloured glue. Places bow in oven to dry. Sands filler material flush with surrounding area, using abrasive paper. Removes damaged or defective fiberglass nocks, using knife and abrasive paper. Brushes adhesive on bow tips and aligns and secures nock blanks on tips. Shapes nock blanks to tips, using files and abrasive paper. Removes damaged or defective fiberglass from laminated bow, using knife and abrasive paper. Brushes adhesive on damaged or defective area and applies fiberglass strip of specified size and colour. Clamps bow in mould and places in oven to cure. Shapes repaired area and adjusts tiller (curve) of bow, using abrasive paper, files and sanding machine. May refinish repaired bows. May customize bows to owner's specifications.

8599-314 GOLF-CLUB REPAIRMAN(sport. & toy) DPT:381
GED: 3 SVP: 6 EC: 1 PA: L 4 7

Repairs or customizes golf clubs by performing any combination of the following duties:

Repairs or replaces worn or damaged parts, or parts specified by customer, such as head, grip, shaft, sole plate or composition inlays, using adhesives, screws, rivets and hand tools. Rewraps part of head where shaft is inserted (hosel), with cord, using whipping machine. Replaces old grips by applying build-up material to handle area on shaft and wrapping with leather strip, or applies adhesive and slips

new rubber grip onto shaft. Removes or adds lead or brass inserts to achieve specified swing weight. Adjusts club heads to desired loft or lie, using hand or power tools. Stains, lacquers and buffs wooden heads, and polishes metal heads and shafts.

May make clubs to customer's specifications and be designated accordingly,
Golf-Club Maker, Custom

8599-318 ARCHERY-BOW MAKER(sport. & toy) DPT:381 bowyer.

GED: 3 SVP: 6 EC: I 5 7 PA: L 4 7

Makes wood, plastic and laminated archery bows by performing any combination of the following duties:

Selects specified material from stock. Preshapes handles, limbs and other parts, using hand and power tools. Assembles parts to form bow, using specified adhesives. Clamps bow in mould, using 'C' clamps and positions mould in steam or electrically heated box to shape bow and cure adhesives. Trims and smooths bow, using hand tools and abrasive paper. Strings bow temporarily and pulls to full draw to determine if bow-limbs draw on parallel plane. Aligns limbs with handle, by adjusting position of string or by trimming limbs, using sander. Scribes lines for string grooves and bow-tips, using template. Cuts and finishes string grooves and tips, using abrasive wheel. Measures bow tiller (curve), using slide gruge. Removes stock from limbs to achieve specified tiller and to relieve stress, using sanding belt. Positions bow in slot of weighing scale and attaches pulley device to bow-string. Pulls stretcher cord to flex bow and records weight of pull. Polishes limbs to reduce weight of pull and scraps bows that do not meet specifications. Flexes bows past specified distance to test for failure of materials. Heats and straightens crooked limbs, manually. Polishes limbs to smooth finish, and chamfers edges, using hand tools.

May be concerned with a particular phase of bow making and be designated accordingly; for example,

Bow-Limb Aligner
Bow Tiller and Buffer
Bow Weigher

8599-322 BILLIARD-TABLE-CUSHION MOUNTER(sport. & toy) DPT:681

GED: 3 SVP: 5 EC: I PA: L 4 7

Attaches rubber cushions to billiard tables:

Glues and tacks rubber side and end cushions to wood mounting strip attached to rail of billiard table. Grinds chamfer on ends of cushions to facilitate installation of billiard table pockets, using belt sander. Glues wood support strip to back of cushions. Grinds entire length of cushions to precise specifications, to ensure correct billiard ball rebound, using belt sander.

May attach wood mounting strips to rails of billiard table. May cover billiard table cushions with cloth.

8599-326 GOLF-CLUB-HEAD FINISHER, IRON(sport. & toy) DPT:382

GED: 3 SVP: 5 EC: I 5 6 PA: L 4 7

Operates one or more metal-working machines to shape and finish iron heads of golf clubs:

Clamps rough casting or iron head in vise. Forms and shapes iron head, using grinder and polisher. Installs head in holding fixture of stamping machine. Depresses button to operate machine that stamps golf club number, trade mark or brand name and face lines on iron head. Installs heads in fixtures of multiple-spindle drill press. Starts press that drills and taps shaft-insertion hole (hosel). Installs head in milling-machine fixture and mills back of head to specified contour, ensuring weight of club head is maintained within tolerances. Grinds and polishes head, using fine grit abrasive. Screws heads onto jigs of polishing mill. Operates mill that vibrates irons with tumblestones and polishing solution for specified time to impart fine finish to iron heads. Tapes ends of iron face and sandblasts centre of face to impart matt finish to assist ball grip. Cleans and buffs all contours of iron head, using buffing wheel. Brushes specified colour paint into stamped recesses of head and wipes paint off surface, using cloth.

May operate machine to decorate hosel. May nickel and chrome plate iron heads.

8599-330 SPORTING-GOODS REPAIRMAN(sport. & toy) DPT:684

GED: 3 SVP: 5 EC: I PA: L 4 7

Repairs a variety of sporting goods, such as fishing tackle, tennis racquets, golf clubs, archery outfits and ski equipment, by performing any combination of the following duties:

Examines article or work ticket to determine nature of defect or repair required. Restrings tennis, badminton or squash racquets with synthetic fibre or animal gut. Replaces defective parts of fishing tackle, such as reels, handles and rod sections, using a variety of hand tools. Replaces fishing line guides and line guide windings, using winding machine. Replaces points or feathers on arrow shafts, using adhesive or crimping machine. Rewinds thread on bows, strings or arrows, using winding machine. Replaces heads and grips on golf clubs. Fits new or replaces worn or damaged ski bindings. Repairs worn or damaged skis.

8599-334 BILLIARD-CUE WEIGHTER(sport. & toy) DPT:484

GED: 2 SVP: 5 EC: I 5 7 PA: L 4 7

Weights, straightens and inspects billiard cues by performing any combination of the following duties:

Measures and trims length of cue, using inset scale and end chamfering machine. Drills butt of cue, using horizontally mounted drill press. Weighs cue on balance scale. Pours molten lead into drilled hole or selects and taps cylindrical weight into hole to obtain specified cue weight. Taps dowel pin into hole to secure weight. Trims dowel pin flush with cue, using saw. Sights and rotates cue to determine if cue requires straightening. Straightens cue as required, using straightening rig. Inspects cues for conformance to specifications. Weighs finished cue and stamps weight on butt end, using dies and hammer. Packs cues in carton and marks carton with length, weight and style.

8599-338 ARCHERY-BOW FINISHER(sport. & toy) DPT:684

GED: 2 SVP: 4 EC: I 5 7 PA: L 4 7

Shapes and smooths final contours of archery bow handles and tips: Clamps workpiece in vise. Shapes final contour of bow handle, arrow rest or tips according to model or work order specifications, using hand and power tools. Removes tool marks from flat surfaces, using scraper. Shapes bow tip nocks, using round file. Smooths surfaces to final finish, using sander and abrasive paper.

8599-342 BILLIARD-TABLE SERVICEMAN(sport. & toy) DPT:684

GED: 3 SVP: 3 EC: I PA: L 3 4 7

Repairs billiard tables in commercial and private establishments:

Dismantles damaged table, using hand tools. Replaces damaged parts such as cushions, table top or cloth covering, using hand tools, tacks and cement. Repairs parts, such as table pockets and cloth covering, using needle and thread. Assembles and levels new tables in private establishments, using hand tools.

8599-346 GOLF-CLUB WEIGHTER(sport. & toy) DPT:484

GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Inserts weights in wooden golf-club heads to obtain specified swing weight:

Weighs head on balance scale to determine weight to be added to obtain specified swing weight. Clamps head in drill press holding fixture and drills hole in designated position to required depth. Ladles molten lead, or selects and screws cylindrical metal weight, into hole to obtain desired swing weight. May tend gas furnace to melt lead.

8599-350 GOLF-CLUB ASSEMBLER(sport. & toy) DPT:684

GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Assembles golf clubs by performing one or more of the following assembly line duties:

Cuts golf-club shaft to specified length, using power saw. Drills head-securing-pin hole in shaft at designated position. Removes chrome finish from ends of shaft to prepare surfaces for cementing grip and head onto shaft, using abrasive paper. Slides decorative ferrules and collar onto shaft. Drills shaft-securing-pin hole in head at designated

position. Secures head in vise and injects adhesive into part of head where shaft is inserted (hosel). Inserts shaft into hosel and aligns shaft and head-securing-pin holes. Taps pin into hole to secure assembly. Brushes adhesive onto shaft above hosel and slides collar and ferrules into position. Grinds collar and ferrules flush with hosel, and brushes on lacquer to impart finished surface. Wraps hosel on wooden heads with cord, using whipping machine. Attaches grips either by applying build-up material to handle area and wrapping leather strip over material, or by brushing on adhesive and slipping rubber grip onto shaft. Cleans grip, collar and ferrules, using solvent. Polishes shafts, iron and wooden heads, using buffing wheel. May thread bottom end of metal shaft and screw into tapped hosel to provide assembly with additional strength.

8599-354 GOLF-CLUB-HEAD ADJUSTER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Adjusts loft and lie on golf-club irons:
Reads work order to determine model and number of club and reads chart to determine required loft and lie angle. Inserts shaft into iron head and hangs it on large, vertically-mounted protractor to determine difference between the angle of the head being adjusted and the specified lie angle. Positions and secures lead-block former in vise. Places head on lead-block former and hammers head to open or close angles as required. Repeats operations until specified angle dimensions are achieved. Removes shaft from iron head.

8599-358 ARCHERY-BOW-STRING MAKER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Makes archery bow strings:
Loops synthetic-fibre string around posts of jig and ties ends together. Applies wax to string manually. Holds one end of string and spins hand-winding device to twist string and form loops at both ends. Places string on post and winds bow string at loops and in centre with abrasive resistant thread, to reinforce and hold strands together.

8599-362 BASKETBALL COVERER(sport. & toy) DPT:684
inflated-ball coverer.
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Applies leather panels to moulded basketball carcasses:
Positions carcass (foundation structure) in holding fixture. Brushes adhesive on moulded carcass and examines wet adhesive for dried lumps and missed spaces. Aligns and applies leather panels between raised ribs on carcass and presses and smoothes panels, using hand roller. Cuts off air valve nipple flush with ball, using scissors or knife. May cover volleyball or soccer ball carcasses with leather or rubber panels. May repanel worn or damaged balls.

8599-366 FISHING-ROD ASSEMBLER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Assembles fishing rods preparatory to guide winding:
Applies adhesive to specified positions on fishing rod blanks. Positions and presses parts, such as ferrules, rod tips, handles and reel seats onto rod blanks. Allows adhesive to dry and smoothes and removes excess, using abrasive paper. Clamps specified pattern board to work bench. Positions rod on or against pattern board and marks position of guides on rod, using crayon, paint or tape. May roughen part positions on rod blanks preparatory to gluing, using grinding wheel. May replace damaged or defective ferrules, rod tips, handles or reel seats.

8599-370 FISHING-ROD-GUIDE WINDER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Attaches line guides and applies decorative trim to fishing rods:
Places spool of thread of specified colour and gauge on winding-machine holder and feeds thread through dispenser. Clamps fishing rod in holding fixture or rotating device. Depresses pedal to rotate rod, or to rotate thread dispenser around rod. Wraps rod for specified distance, moving thread guide as each wrap is completed, to control spacing. Holds or tapes guide in specified position and continues

wrapping until guide is bound to rod. Brushes wrapping with shellac to hold loose ends.
May wind thread on golf clubs or on billiard cue handles for decorative purposes and be designated accordingly; for example, Billiard-Cue Winder
Golf-Club Winder

8599-374 FLETCHER(sport. & toy) DPT:684
arrow featherer.
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Secures feathers to arrow shafts:
Positions and secures arrow shafts in fletching (feathering) jigs of rotating table. Inserts cut feather into fletching clamp, leaving edge of split quill exposed. Dips quill edge in glue. Positions fletching clamp in feathering jig to locate and glue feather onto shaft. Rotates table manually to next and subsequent stations and repeats operations until specified number of feathers are glued to each arrow shaft. Removes feathered arrows from fletching jigs and places them in cartons.

8599-378 RACQUET STRINGER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Strings tennis, badminton, and squash racquets with synthetic fibre or animal gut:
Clamps racquet in stringing stand. Threads main strings through holes in bow. Clamps ends in jaws of tensioning device and depresses pedal to tighten string to specified tension. Inserts wedgingawl into holes to lock string in position until next set of holes are strung or string is tied. Threads cross strings through holes in bow and weaves them through main strings. Tensions and secures cross strings, using tensioning device and wedgingawl. Weaves coloured string (trebling) through gap in top of racquet above cross strings, and around bow, for decorative purposes.
May restring damaged racquets.

8599-382 SNOWSHOE WEAVER(sport. & toy) DPT:684
GED: 2 SVP: 2 EC: 1 PA: M 4

Weaves strips of cowhide on wooden snowshoe frame:
Places snowshoe frame in holding jig or between knees, preparatory to weaving. Threads thin strip of cowhide through holes in toe and heel sections to provide attachment points for heavier cowhide strips. Weaves heavier cowhide strips on frame to form toe, centre and heel sections of snowshoe. Knots, and cuts end of strips, using knife. Wraps frame and stress-bearing strips with cowhide to strengthen snowshoe.
May lace lacrosse-stick frames with rawhide and be designated accordingly, Lacrosse-Stick Lacer

8599-386 BASEBALL-CENTRE WINDER(sport. & toy) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4 7

Tends machine that winds thread or yarn around softball or hardball moulded centres:
Positions centre in winding machine. Starts machine that winds thread or yarn around ball centre to specified size. Breaks winding material and ties loose end. Changes winding direction and repeats operation to obtain required circumference. Verifies size of centre, using gauge or tape measure and weighs ball on scale. Removes empty spools and rethreads machine as required.

8599-390 INFLATED-BALL MOULDER(sport. & toy) DPT:685
GED: 2 SVP: 2 EC: 1 PA: M 4 7

Tends moulding press to shape and cure volleyballs, soccer balls, basketballs and footballs:
Positions uncured ball in bottom half of heated moulding press. Inserts inflating stem in valve plug of ball. Closes and locks mould and inflates ball to specified air pressure. Removes inflating stem and turns dial to set heating cycle. Inserts deflating stem through hole in mould and into valve of ball, on completion of heating cycle, and deflates ball. Opens mould, pulls out stem and removes ball.
May tend moulding press to shape inflatable carcasses preparatory to covering.

8599-394 STUFFING-MACHINE TENDER(sport. & toy)
DPT:685
GED: 2 SVP: 2 EC: 1 7 PA: L 4

Tends machine that inserts stuffing into toys and sporting equipment:
Fills stuffing machine hopper with stuffing material. Installs specified nozzle on machine and places workpiece shell over nozzle. Depresses pedal to start machine that forces stuffing material into workpiece to obtain required firmness. Packs stuffed workpiece into box or carton and records production.
May insert supporting wire or fibreglass strip into work piece shell prior to stuffing.

8599-398 ARROW ASSEMBLER(sport. & toy) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles metal, wood and fibreglass arrows by performing any combination of the following duties:
Mixes adhesive, paint or lacquer according to specifications. Aligns arrows in rack and dips rack of arrow shafts into coloured adhesive. Presses and aligns nock manually over end of shaft and removes excess adhesive. Fits and secures metal point to tapered end of arrow, using adhesive or crimping machine. Spins arrow manually to ensure point and shaft are true and adjusts point as required. Records number of arrows processed.
May be concerned with a particular operation of arrow assembly and be designated accordingly; for example,
Arrow-Point Assembler
Nock Assembler
Racker

8599-402 FISHING-ROD FINISHER(sport. & toy) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Finishes fishing rods after assembly by performing any combination of the following duties:
Removes loose ends of line guide and decorated thread windings, using clippers and alcohol lamp. Aligns bound line guides along length of rod or rod sections, manually. Stamps model number on rod or rod section, using hand stamp and pad, and applies specified adhesive decals. Brushes protective coating onto thread windings. Places rod or rod sections in oven to cure coating. Matches sections of rods and crimps ferrules to ensure snug fit, using crimper. Inspects finished rods for defects and places them in plastic containers.
May package complete fishing outfits.

**Broom, Brush and Mop Fabricating
and Assembling Occupations, n.e.c.
8599-422 through 8599-470**

8599-422 BRUSH-MAKING-MACHINE OPERATOR(misc.
prod. fab., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: 1 5 PA: L 4

Operates machine that drills holes in brush base, and inserts and staples bristles into holes to form hair brushes, wire brushes and similar products:
Mounts roll of wire on machine spindle and threads wire through stapling mechanism. Fills magazine with material, such as horsehair, nylon, wire or plastic filaments, according to type of brush being made. Positions and clamps wooden or composition brush base in machine jig. Presses pedal to start machine that drills holes in blank base and inserts and staples bristles into holes. Adjusts machine to accommodate varying angles of holes in brush base. Holds brush over rotary trimmer or clipping machine to trim bristles, according to prescribed standards. Places finished brush on storage rack or into boxes.
May attach trim to brushes. May stain brushes. May operate machine that inserts and staples bristles into predrilled brush base and be designated accordingly.
Filling-and-Stapling-Machine Operator.

**8599-426 ROTARY-BRUSH-MAKING-MACHINE
OPERATOR**(misc. prod. fab., n.e.c.) DPT:682
GED: 3 SVP: 4 EC: 1 6 PA: M 4 7

Operates machine that binds bristle material between wire cable and steel strip, and spiral-winds resulting flat brush strip on drum, to form brushes used on street-sweeping machines:
Loads reel of flat steel strip onto holder, and threads through machine. Mounts wire cable in machine, turns cranks to wind specified amount of cable onto holding spool, and staples end of cable to revolving drum onto which brush is spiral wound. Turns cranks and adjusts levers and bars, using hand tools, to set rates of feed and depth of trim of bristle material. Selects and weighs bristle material, and loads into machine feed slot. Sets spool brake to maintain tension between spool and revolving drum, using wrench. Aligns carriage-wheel guide in spiral groove of wire cable and adjusts material guides and conveyor to feed material onto drum, according to size of brush. Starts machine that forms wire cable, metal strip, and bristle material into flat brush strip, and spiral winds flat strip onto revolving drum to make rotary brushes. Shears brush strip at completion of winding process and trims bristle ends. Removes completed brush from winding machine, using small crane. Makes brushes used in car-wash equipment, by hammering and peening flat brush strips into slotted aluminum core, using air hammer.

8599-430 PAINT-BRUSH-HEAD MAKER(misc. prod. fab.,
n.e.c.) DPT:684
GED: 2 SVP: 4 EC: 1 PA: S 4

Fills metal ferrules with hog bristles, horsehair, vegetable fibres or nylon, to make paint-brush heads preparatory to bonding and handle fitting:
Weights out specified amount of bristles, using balance scale, and inserts base end of bristles into ferrule. Separates bristles with metal blade, and inserts rubber or wooden wedge into bristles to press them against sides of ferrule, to form brush head. Strikes protruding bristles, using wooden paddle, to achieve uniformity of spread and depth of bristles. Combs bristles to remove kinks. Places brush head aside for epoxy bonding.

8599-434 BROOM WINDER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 6 PA: M 4 7

Wraps and fastens broomcorn fibres to broom handles with wire, preparatory to stitching:
Dips ends of fibres in water to render them pliable. Inserts and clamps broom handle in winder. Threads end of wire from reel through hole in handle and ties wire to handle. Places initial layers of fibre on handle and presses pedal to rotate handle to wrap wire around fibre. Spreads fibre around handle under wire as winder turns. Trims excess fibre from each layer, using knife. Hooks leather strap around body of broom to secure it while winding subsequent layers. Pounds fibres to pack and shape broom shoulders. Wraps and fastens wire around neck of broom handle, using stapler.
May fill plastic holding cups with setting compound and insert corn fibres, manually, to form brooms.

8599-438 BRUSH FINISHER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 7 PA: L 4 7

Finishes brushes by performing any combination of the following tasks:
Sands and polishes parts of brushes, using sanding wheel and buffer. Trims and shapes brush-filling material, according to prescribed standards, using trimming or clipping machine. Removes dust and loose filling material, using cleaning or combing machine. Hangs brushes on rack and applies lacquer to brush handles by dipping or spraying. Imprints or stamps identifying name on brush handles. Inspects brushes and repairs defects.
May pack finished articles for shipping.

8599-442 BRUSH MAKER, HAND(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4 7

Fills predrilled brush heads with hog bristles, horsehair, nylon, vegetable fibre or other materials by hand, to make brushes by either of the following methods:

1. Secures brush base in bench fixture. Selects appropriate amount of bristles required to form single tuft and wraps base end with twine. Dips base end of tuft into glue and inserts it into hole in brush base. Repeats process until all holes are filled. 2. Threads wire through hole in brush head. Loops end of wire around tuft of filling material, pulls material through hole in brush head, and ties wire to secure tuft. Repeats process until all holes are filled.

8599-446 BRUSH-MATERIAL PREPARER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I 3 6 PA: L 4

Prepares hog bristles, horsehair, nylon and other brush-filling materials, for use in brushes:
Opens cases of hog bristles, using hand tools. Aligns bristles to ensure that butt ends are together, and discards defective bristles. Ties bundle of bristles to prevent bending, using rubber bands, and places bundle in rack. Lowers rack of bundles into vat of boiling water to sterilize and remove curl of bristles. Removes rack after specified time and places on dolly to dry. Places bundles in cartons, and labels cartons according to length, origin, grade, and colour of contents. Prepares other brush-filling materials by straightening, combing, cutting, and tying them into bundles according to type of material and intended use. Trims and flags butt ends, and polishes material, using grinding machine.

8599-450 PAINT-BRUSH FINAL ASSEMBLER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4

Completes assembly of paint brushes, by performing any combination of the following duties:
Positions brush head under pouring nozzle of epoxy machine, and depresses pedal to pour epoxy into head, securing bristles in metal ferrule. Places brush head in tray to dry. Trims brush head bristles to specified length, using trimming machine. Forces brush handle into ferrule of brush head, using power press. Operates nailing machine that drives nails through ferrule and into brush handle to secure assembly.
May cut and form metal ferrules, using shear and forming jig. May be designated according to operation performed; for example, Epoxy-Pouring-Machine Operator

8599-454 TWISTED-WIRE-BRUSH MAKER(misc. prod. fab., n.e.c.) DPT:684
twisting-machine operator.
GED: 2 SVP: 3 EC: I 6 PA: L 4

Operates machine that twists wire around brush-filling material to make twisted-wire brushes:
Fastens specified chuck in twisting machine to accommodate diameter of wire used. Sets stops on machine bed at specified distance from chuck, using hand tools and rule, to stop twisting action when wire is twisted to required length. Selects specified size of precut looped wire and places looped end over hitching post on machine bed. Inserts straight ends of wire into machine chuck and depresses pedal or moves lever to tighten chuck. Weighs out specified amount of horsehair, nylon, vegetable fibres or other brush material, using scale, or feeds preweighed material into magazine of machine filling unit. Spreads or distributes material evenly between straight ends of wire. Depresses pedal or moves lever to start machine that twists wire around brush material. Removes finished brush from machine and places in storage bin or container.

8599-458 BROOM-STITCHING-MACHINE OPERATOR(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I 6 PA: L 4

Operates machine that stitches twine through broom fibres to strengthen and shape body of broom:
Attaches specified ratchet to stitching machine, using wrench. Turns lever to set number, rows, and length of stitches. Installs and tightens broom holding jaws in vise. Positions and clamps brush end of broom in vise. Cuts specified length of twine, using knife. Wraps twine around broom, pulls one end between fibres, using hook, and threads other end through needle of stitching machine. Pushes vise into stitcher and depresses pedal to start machine that stitches twine through fibres.

May operate machine that bends and attaches heavy metal clamp to strengthen and form broom.

8599-462 MOP MAKER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: I PA: L 4

Assembles mop heads and attaches them to handles by one of the following methods:

1. Positions butt end of handle on tape sewn to strands of yarn. Wraps tape around handle and secures with nails. 2. Places spool of wire in holder and inserts mop handle into chuck of winding machine. Threads wire through hole in handle and positions yarn strands around handle. Starts machine that rotates handle and winds wire around yarn strands, securing yarn to handle. Drives nail into handle and twists wire around nail. 3. Glues precut sponge to metal backing plate and attaches assembly to mop holder to form mop head. Attaches mop head to handle, using hand or power tools.

8599-466 BROOMCORN DYER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: I 4 5 PA: M 4

Dyes broomcorn used in making brooms:
Turns valves to admit water into dye vat and pours specified amount of dyestuff into vat according to instructions. Starts conveyor and places bundles of broomcorn fibre on metal prongs of conveyor belt that immerses bundles of fibre in dye solution. Removes bundles of dyed fibres from conveyor and places on drain rack.

8599-470 PAINT-ROLLER-COVER TRIMMER(misc. prod. fab., n.e.c.) DPT:686
GED: 2 SVP: 2 EC: I 6 PA: L 4

Trims and bevels ends of paint roller covers to prevent lap streaks when painting:
Selects and positions specified mandrel vertically in trimming machine. Tightens screws by hand to secure mandrel. Fastens knife blade at proper angle at base of mandrel to trim paint roller cover at specified bevel. Presses button to start knife rotating. Slides cover down mandrel onto rotating knife to trim end of cover. Removes cover from mandrel and repeats operation to trim opposite end of cover.
May pack trimmed covers in cartons.

Zipper Fabricating and Assembling Occupations, n.e.c. 8599-490 through 8599-510

8599-490 ZIPPER-CHAIN-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: M 4 7

Tends battery of automatic machines that cut metal-slide-fastener links from wire and crimp them onto beaded edge of tape to form side of zipper chains:
Mounts coil of wire on machine and threads beaded tape and wire through guides, automatic-feeder mechanism and into forming dies. Turns set-screws to adjust die jaws for height of lug, using wrenches. Starts machine and observes operation to detect malfunctioning. Verifies fastener dimensions; such as, length, width, spacing, and height of lug, using rule and micrometer. Examines finished product for defects, using eye loupe.
May tend automatic hopper-loaded machines that attach preformed scoops to tape.

8599-494 ZIPPER-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
slide-fastener-machine tender.
GED: 2 SVP: 3 EC: I 3 5 PA: L 4 7

Tends automatic machine that deburrs, irons, paints, dries and wax-coats chains of zippers:
Threads ends of continuous chain through guides, rollers, spray and heating chambers, brushes and counter. Adjusts tension, pressure and spraying or heating action by turning nuts, screws, valves and wheels, using hand tools. Starts and observes operation of machine that automatically deburrs metal scoops beneath rotating wire brushes,

closes fastener by meshing scoops of both stringers in closing device, rolls chain to uniform thickness, steams and presses tape to remove wrinkles, prints directional arrow on edge of tape, brushes or sprays chain with lacquer or enamel and wax to waterproof and improve appearance, counts and measures scoops and chain, and inspects chain electronically for defects. Replenishes and changes reservoirs with lacquer or enamel and wax, according to specified colour. May tend machine that removes wrinkles and coats chain of nylon zipper with waterproof wax.

8599-498 ZIPPER-CUTTING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: 1 5 PA: L 4

Cuts zipper chains into specified lengths, by either of the following methods:

1. Measures chain against machine-mounted ruler to determine number of scoops to remove to shorten zipper to specified length. Positions chain under die of press and presses pedal to lower cutter. Rubs cut scoops against edge of press to remove them from tape. Examines zipper for broken or missing scoops and discards defective zippers. 2. Threads end of strip through machine guides and under blade and punch. Adjusts stop on calibrated scale according to specified length of zipper and adjusts end of strip with stop. Depresses pedal that lowers blade and punch onto strip to cut zippers and remove excess links from end of zipper, for attachment of stops. Examines zippers for short or long ends, malformed scoops, and other defects.

May tend machine that also serrates tape ends and be designated accordingly.
Zipper-Pinking-Machine Tender

8599-502 SLIDER ASSEMBLER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: 1 PA: L 4

Attaches slides and bottom stoppers to zippers: Clamps slide in holding device on work table, and threads bottom-end links of zipper chains through slide. Grasps end of zipper and pulls chain through slide, meshing the links to close zipper. Removes slide from holding device and positions zipper on machine bed with zipper bottom against guide. Depresses pedal that lowers pneumatically-operated-machine-head to fasten metal clamp or staple around bottom of chains.

May depress pedal that causes rollers to grasp end of chain and close zipper, by pulling it through machine.

8599-506 ZIPPER FINISHER, HAND(misc. prod. fab., n.e.c.) DPT:687
slide-fastener finisher.
GED: 2 SVP: 2 EC: 1 PA: S 4

Trims zippers to length and salvages repairable zippers: Measures chain against bench-mounted ruler to determine number of scoops to remove according to specified length. Cuts each scoop from tape, using pincers. Cuts tape between chains to separate into individual zippers, using scissors. Examines defective zippers to determine if repairable and method of repair. Counts and records number of rejected zippers.

8599-510 ZIPPER-STOP ATTACHER(misc. prod. fab., n.e.c.) DPT:687
GED: 2 SVP: 2 EC: 1 5 PA: S 4

Attaches metal stops to zipper-stringer chains: Fills hopper of press with zipper stops. Inserts stringer between press jaws and depresses pedal to drive prongs of stop through tape. Pulls chain through dies to machine stop to position stringer for next stroke. Removes jammed or defective stops from feeder tube or hopper, using metal pick or tweezers.

Ophthalmic Goods Fabricating and
Assembling Occupations, n.e.c.
8599-530 through 8599-538

8599-530 LENS MOUNTER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 4 EC: 1 PA: S 4 7

Inserts eyeglass lenses into plastic or metal frames, and adjusts frames by performing any combination of the following duties: Selects frame according to size and shape of lenses and prescription specifications. Heats plastic frame in hot glass beads or over heated cone to soften and expand eye-pieces. Snaps lenses into eye-pieces with fingers. Shapes bridge of frame to specified contour, over heated cone. Allows frames to air-cool or immerses them in ice-water, to contract frame and set plastic. Bends eye-wire to approximate curve of lenses with fingers. Places lens in eye-wire and shapes frame to seat lens in grooves. Tightens eye-wire screws to secure lenses, using jewelers' screwdriver. Verifies measurements of frames, using gauges. Attaches and adjusts temple pieces and nose pads, using screwdriver and pliers. Cleans and polishes frame, using buffing machine. May tend electric-oven which hardens lenses used in safety eyeglasses. May assemble safety eyeglasses, using standard size lenses and frames.

8599-534 MULTIFOCAL-LENS ASSEMBLER(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: S 4 7

Assembles and prepares multifocal lenses for fusing, by performing any combination of the following duties: Stamps identifying code on back of counter-sunk lens-blanks. Selects tray of matching multifocal buttons. Dips buttons and blanks in cleaning solution and wipes them dry. Brushes parts to remove dust and lint. Positions button on polished surface of countersunk blank. Performs Newton's Ring test to detect foreign matter between surface of button and blank as indicated by wavy rings when pressure is applied to outside edge of button. Wipes surfaces and performs test until rings remain free of waves. Dips metal pegs or pins in cement, and inserts between button and blank with tweezers to allow air to escape during fusing, and to hold button in place. Places assembled unit on tray.

May use spring clamp to hold button in position on blank. May load trays of assembled units onto conveyor of furnace that fuses multifocal-lens parts. May assemble multifocal-button parts and secure with asbestos strips prior to fusing and be designated accordingly.
Multifocal-Button Assembler

8599-538 ASSEMBLER, EYEGLASS FRAMES(scient. & ind. equip., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles plastic or metal eyeglass frames, by performing any combination of the following duties: Places parts in machine fixture. Depresses pedal or moves lever to start and stop machine that cuts, drills, slots, pierces or bevels parts. Places plastic eyeglass bridge-frame or temple piece in oven to soften it. Shapes heated part to specified curve and contour, using jig press. Inserts heated temple piece into machine and pulls levers to imbed reinforcing wire longitudinally into temple. Assembles parts; such as, bridge-frame, temple piece, clips, hinges and nose pads, to form complete eyeglass frame, using hand tools, power tools, rivet press or brazing equipment. Embosses identifying information on frame, using embossing press.

Wig Making and Hairwork Occupations, n.e.c.
8599-558 through 8599-574

8599-558 WIG MAKER, HAND(misc. prod. fab., n.e.c.) DPT:681
GED: 3 SVP: 5 EC: 1 PA: S 4 7

Makes wigs by hand, to customer specifications, performing any combination of the following duties: Draws and cuts out pattern of hairpiece according to customer's head measurements or draws pattern directly on model head. Draws lines on model head with crayon to indicate position of foundation. Stretches and pins or tacks wet lace or gauze over foundation area. Cuts, pins and sews ribbon around outer edge of lace or gauze to bind foundation. Inserts metal stays and elastic into ribbon to hold wig in place on head. Fits and sews netting to lace or gauze to complete foundation. Trims ragged edges and protruding threads, using

scissors. Positions selected hair for wig between cards that are equipped with rows of wire teeth to prevent tangling. Pulls several strands each time, through teeth of cards and cuts ends with scissors to make strands even and eliminate split ends. Forms loops in ends of strands. Inserts strands of hair through holes of foundation, using ventilating needle, and brings ends through loop, to knot and fasten hair securely. Combs out hair when wig is finished.

May work on particular phase of wig making and be designated accordingly.

Wig-Foundation Maker

8599-562 MANNEQUIN-WIG MAKER(misc. prod. fab., n.e.c.)
DPT:684

GED: 3 SVP: 5 EC: I 7 PA: S 4 7

Makes mannequin wigs of synthetic fibre according to style specifications:

Selects appropriate model head. Places layer of cellophane or wax paper over model. Molds sheet of wet buckram over paper to form wig foundation. Places model head in drying chamber. Trims dried buckram to shape using scissors. Selects strands of synthetic fibre, and combs, cuts and blends them according to length and colour. Folds ends of strands and cements short side of fold to foundation. Pins tape over cemented section to secure hair in position, on foundation. Styles hair, using tape, pins, comb and curling rollers. Dries wig under electric drier and sprays with lacquer to set style.

8599-566 WIG-HAIR PREPARER(misc. prod. fab., n.e.c.)
DPT:684

GED: 3 SVP: 4 EC: I PA: L 4 7

Selects, matches and dyes hair for wigs and hairpieces:

Combs hair to be used as stock for wigs and hairpieces by passing it through teeth of stationary metal comb to remove tangles. Separates hair according to length, colour and texture and washes it with shampoo and water. Dries hair in oven or with warm air blower unit. Compares sample of customer's hair with hair in stock. Selects and combs strands to blend variations in colour to match sample. Ties hair with string to facilitate handling. Mixes dyes and bleaches by hand, according to formula. Dips strands in solution to obtain required colour and dries hair in oven. Attaches sample and selected hair to customer's order for wigmaker.

8599-570 ROOTING-MACHINE OPERATOR(misc. prod. fab., n.e.c.)
DPT:684

GED: 2 SVP: 3 EC: I PA: S 4

Operates machine that automatically attaches prescribed quantity of hair to doll head:

Places one or more cones of precurled synthetic hair at rear of machine. Pulls single strand of hair from cone. Threads needle with hair and positions doll head on machine post. Depresses pedal to activate needle and manoeuvres doll head under needle in prescribed pattern until machine stops at end of rooting cycle. Releases pedal to activate device that cuts strand at specified length from doll's head. Places doll's head in containers for removal to finishing department. May tend machine equipped with more than one needle. May set hair, using brush, comb and water.

8599-574 DOLL-HAIR STYLIST(sport. & toy)
DPT:684

GED: 2 SVP: 2 EC: I 7 PA: S 4 7

Styles doll hair to specifications:

Places doll head on stand. Smooths and untangles hair, using brush and comb. Sprays on hair setting solution or water. Cuts and sets hair to specified style. Removes smudges from doll face, using damp cloth. Covers doll head with plastic bag to prevent damage to hair and face.

8599-594 ASSEMBLY-LINE EXPEDITER(any ind.) DPT:364
utility man, line assembly.

GED: 3 SVP: 5 EC: I 5 6 PA: M 4 5 6 7

Expedites flow of material and assists workers, on assembly line of manufacturing establishment, to improve efficiency and production:

Determines conditions impeding flow of work on assembly line and notifies foreman of defective tools, equipment and material, or other conditions which hinder assembly process. Ensures that each assembly station has sufficient material and notifies materials-handling personnel or foreman of impending shortages. Serves, temporarily, as assembler in work-congested areas. Instructs new workers by demonstrating new or changed operations. Substitutes for workers at moving line-assembly operation, so they may temporarily leave work station without interfering with production.

May inspect assembled products and initiate necessary changes to ensure product is assembled to manufacturer's specifications.

8599-598 INSULATION-BLANKET MAKER(asbestos & min. wool)
DPT:684

GED: 3 SVP: 5 EC: I 7 PA: M 4 7

Fabricates heat retention or heat protection blankets to cover equipment, such as boilers, tanks and turbines, performing any combination of the following duties:

Lays out asbestos cloth or wire-mesh according to pattern, template or dimensions. Cuts casing material, using scissors or tin snips. Sews edges of material to make blanket casing, using fine wire, thread or cord. Fills casing to specified thickness with insulating materials; such as, rock wool, asbestos, cork or fibreglass. Threads wire through evenly spaced blanket hooks or sews blanket with thread or wire to hold insulation in place.

May install and fasten blankets or casings in position on turbines, using clamps or fine wire. May fabricate pipe insulation from foam plastic blocks, using power saws, and overwrap insulation slab with cloth, kraft paper or foil. May fabricate heat insulation blankets for aircraft jet engines from wire screens and insulation materials, using spot-welder and hand tools. May be designated according to material used or product fabricated; for example,

Asbestos-Blanket Maker
Heat-Shield Maker, Aircraft
Pipe-Insulation Fabricator

8599-602 ORNAMENTAL-DESIGN CASTER(misc. prod. fab., n.e.c.)
DPT:684

compo caster.

GED: 3 SVP: 5 EC: I PA: L 4 7

Compounds and casts ornamental putty into designs, and attaches them to picture mouldings:

Measures out, heats and mixes glue, resin, whiting, linseed oil and water into pot to make putty according to formula. Casts moulded putty forms by either of the following methods: 1. Stirs, kneads and shapes putty into loaf, manually. Places loaf in mould. Clamps board over filled mould, places in press and activates press by pulling handle. Removes casting, trims design, and places on table to harden. Dips hardened ornament in water and lays it in place on blank picture moulding. 2. Installs specified die roller in hand press and adjusts die, guides, and scrapers, using hand tools. Loads putty into feed hopper and turns handle of press to produce moulded forms. Places picture moulding on feed roller and observes feeding, shaping and attaching of putty to moulding.

8599-606 REFLECTIVE-SIGN FABRICATOR(misc. prod. fab., n.e.c.)
DPT:684

GED: 3 SVP: 5 EC: I PA: M 4 7

Applies adhesive luminous coating on metal plates, and paints lettering and designs on plates to produce reflective signs, using either of the following methods:

1. Places backing plate on bed of machine. Cuts required amount of adhesive material from roll, using shears, and positions it on plate, adhesive side down. Positions heated vacuum head over plate and activates machine to press and bake for specified time. Raises head and removes plate. Paints lettering and designs on sign backing by hand or using silk-screen imprinting device. 2. Mounts roll of adhesive material on machine spindle and feeds material through pressure rollers and machine guides. Starts machine and feeds metal backing plate between feed rollers that apply adhesive material to plate. Paints

lettering and designs on sign backing by hand or using silk-screen printing device.
May apply adhesive luminous-coated letters to sign backing, using hand roller.

8599-610 EMBOSSEER OPERATOR(paper prod.; textile)

DPT:682

GED: 3 SVP: 4 EC: I 5 PA: M 4

Operates machine that embosses designs on textiles or paper to produce, such items as lace-paper doilies and place mats:

Positions rolls of paper or fabric around shaft of machine, using hoist. Secures dies and cutters on machine, or embossing disks on embossing rollers, and fastens collars on shafts to secure rolls, using hand tools. Threads material through rollers and around cutters, manually, and turns handwheels to adjust feed guides, tension and pressure on feed rolls. Presses button to start machine, observes feeding, embossing, piercing and cutting of material, and makes necessary adjustments before starting production run.

May turn valve, regulating flow of steam into rolls to counteract paper curling and obtain desired depth of embossing and surface shine on material. May print place mats on embossing unit. May clean machine parts with solvent.

8599-614 SIZING-MACHINE OPERATOR(non-metal. min. prod., n.e.c.)

DPT:682

GED: 3 SVP: 4 EC: I 7 PA: L 4 7

Operates machine to apply adhesives to abrasive-coated paper or fabric:

Mounts rubber take-up roll on machine spindles, using hand tools. Fills glue reservoir. Controls conveyor speed and roll tension in accordance with delivery rates from abrasive-coating machine, and regulates thickness of adhesive coating applied onto base material. Coordinates speed of machine with material delivery, to prevent stoppages.

May adjust controls to regulate temperature of pre-cure oven, depending upon type of adhesive used in previous production stage. May start conveyor which carries material away from machine.

8599-618 PICTURE FRAMER(misc. prod. fab., n.e.c.)

DPT:684

GED: 3 SVP: 4 EC: I PA: L 4 7

Frames pictures by performing any combination of the following duties:

Fabricates custom frame, or requisitions standard frame from stock. Mounts picture on backing, using glue. Measures and cuts mounted picture to fit frame, using papercutter. Cuts materials, such as fabric or paper, to form bordering mat of specified size and width, using hand tools. Cuts glass to fit frame, using glass-cutter. Cleans glass and places it in frame. Places picture on glass. Cuts cardboard to fit frame and places it on back of picture. Fastens cardboard back to frame with staples or brads to hold picture in place. Glues paper cover to back of frame. Attaches eyelets and hanging wire to frame, using hand tools. May frame oil paintings or tapestries. May frame pictures without glass.

8599-622 ABRASIVE-BELT JOINER(non-metal. min. prod., n.e.c.)

DPT:682

belt-press operator.

GED: 2 SVP: 4 EC: I 6 PA: M 4

Operates hydraulic press to join and cure ends of abrasive belts used on sanding machines:

Reads work order to determine specifications, and mixes adhesives according to instructions. Sets controls on hydraulic press for pressure, temperature and curing time specified. Takes length of abrasive belt, spreads adhesive on prepared ends, using brush, and overlaps ends to form endless belt. Places belt in hydraulic press and moves controls to close press. Removes belt from press at end of curing cycle and places on rack or nests on floor.

May set belt ends in cold press before curing in hot press.

8599-626 AWNING MAKER, CANVAS(garment & fabric)

DPT:684

awning framer and rigger.

GED: 3 SVP: 3 EC: I PA: M 4 7

Fabricates canvas awnings by performing any combination of the following duties:

Pulls canvas from bolt and cuts to specified length, using hand shears. Cuts canvas to shape following pattern, and operates sewing machine to join parts. Selects specified metal for frame and marks cutting and bending locations, using tape measure and marker. Secures metal in vice to cut it to length, to thread ends and bend to specified angle, using hand cutting, threading and bending tools. Assembles frame by screwing and bolting metal frame parts together with hand tools. Installs grommets in awning cover, using grommet machine. Inserts frame into pockets of awning cover and secures, using needle and thread. Sews rings and snaps on awning cover. Selects pulleys, and measures and cuts rope for installation according to specifications. Folds, ties and bundles finished awnings.

May fabricate awnings, using vinyl or rubberized fabric.

8599-630 CHALK-BOARD-AND-BULLETIN-BOARD

FABRICATOR(misc. prod. fab., n.e.c.)

DPT:684

blackboard maker.

GED: 3 SVP: 3 EC: I PA: M 4

Fabricates and partially assembles component parts of chalk boards and bulletin boards, for use in schoolrooms and offices, performing any combination of the following duties:

Fills machine trough with glue. Feeds sheets of vitrified steel, cork, fibreboard or vinyl into rollers of glue spreading machine. Removes coated sheets from machine and places glued sides of sheets together, according to specifications, to form single laminated sheets. Cuts laminated sheets, preformed aluminum channeling and chalk troughs to specified dimensions, using hand or power saw for fabrication of boards, frames and chalk holders. Punches holes and notches mitres in aluminum channeling, using punch press. Bends lengths of channeling by hand at mitred points to form corners, and fits channeling around edges of laminated boards. Places partially assembled board units in plastic bags prior to shipping.

May fabricate and assemble custom made boards from various materials.

8599-634 DRAPERY INSTALLER(ret. trade)

DPT:684

GED: 2 SVP: 3 EC: I PA: M 2 4

Assembles drapery rods, and installs rods, drapes, curtains or blinds in customer's residence or place of business:

Assembles and installs rods to fit windows or walls, using hand tools. Installs drapery pull cords, carriers and end pulleys on draper rods and screws and bolts brackets and hangers onto wall, using hand tools. Hangs and arranges curtains, drapes or blinds according to specifications.

8599-638 LUGGAGE FINISHER(leather goods)

DPT:684

GED: 2 SVP: 3 EC: I PA: M 4 7

Attaches hardware and trim to luggage and trunks by performing any combination of the following duties:

Positions templates on luggage or trunk to locate attachment holes for hardware or trim; such as, protectors, clasps, locks, handles, valances and hanger clips. Drills or punches holes, using drill or awl. Attaches hardware or trim with rivets, fasteners or nails, using hand or power tools. Inserts hanger bracket and hangers in clips. Locates divider and strap attachment holes, using template. Drills holes and rivets dividers or straps to interior of luggage or trunk. Assembles luggage or trunk sections to form complete unit, with rivets or nails, using hand or power tools.

May repair damaged luggage or trunks.

8599-642 MIRROR ASSEMBLER(glass)

DPT:684

mirror backer.

GED: 2 SVP: 3 EC: I PA: L 4

Attaches backing and hardware to mirrors:

Cuts masonite backing to specified size and shape, using bandsaw. Places backing on table. Places template over backing or measures with ruler and marks points where holes for clips or hangers are to be

drilled. Drills holes with portable drill. Attaches clips or hangers to backing, using riveting machine. Presses clips attached to backing over edges of mirror to secure mirror to backing, using hand tools. Cleans surface of mirror with cloth. Glues label on mirror and packs in carton.

May drill through backing and mirror with portable drill to insert rosettes. May attach hinges, clips and hangers on masonite backing to make folding mirrors.

8599-646 MIRROR FRAMER(glass) DPT:684
GED: 2 SVP: 3 EC: 1 PA: M 4 7

Installs mirrors in metal, wood or moulded plastic frames:

Assembles mirror frames from precut pieces of metal, wood or plastic and bolts or screws pieces together, using wrench or power screwdriver. Examines mirror for defects and places it in frame. Inserts wooden strips between mirror and frame or covers mirror edge with rubber stripping to secure mirror and prevent breakage. Places framed mirrors on wheeled trucks for removal to backing assembly area.

May bolt mitre-cut mirror strips to frame to form border of shadow-box mirrors.

8599-650 SURFACE PREPARER, PRE-FINISHING(any ind.) DPT:684

putty glazer.

GED: 2 SVP: 3 EC: 1 7 PA: M 4 7

Applies filling or coating material to imperfections in manufactured articles to provide smooth surface, preparatory to application of paint or other final coating:

Examines surface of article for defects, such as holes, cracks or indentations. Spreads and presses dough, putty, mastic or similar material into and over flaws or nail holes, using dauber, spatula or knife. Sands surface, using steel wool, wire brushes, sandpaper or portable grinder, to remove nicks or rough edges and to prepare surface for finishing. Feels surface of article for smoothness.

May brush or spread thinned putty or sealer over surface. May touch up surface with matching colour paint to conceal marred or discoloured spots. May be designated according to article surface prepared; for example,

Pre-Finisher, Wooden Furniture Parts(furn.)

Tire Dougher(rubber)

8599-654 MATCH-HEAD DIPPER(misc. prod. fab., n.e.c.) DPT:685

GED: 2 SVP: 3 EC: 1 PA: M 4 7

Tends equipment that applies flammable tips to safety matches:

Adjusts machine to immerse matches to specified depth in matchhead compounds. Sets thermostat, or turns valves to regulate compound temperature and viscosity. Observes size and shape of match heads passing on conveyor, and indicates rejects by inserting paper marker between match books. Replenishes compounds in dip tanks. Drains and washes dip tanks to remove thickened compounds.

8599-658 CASE ASSEMBLER AND FINISHER(leather goods) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles and finishes jewellery and instrument cases:

Attaches hinges and locks to lid or base of case, using punch press or pinch pliers. Cuts specified lining or covering material to size, following pattern and using shears. Brushes glue on area to be covered. Positions material on inner or outer surfaces of case and smoothes out wrinkles by hand. Trims excess fabric from joints, seams and edges, using knife. Glues or nails bracing blocks to case and covers blocks with material. Presses cushion or pad into upper and lower sections of case. Examines case for alignment of edges and action of hinges and lock.

8599-662 CONCRETE-POLE MAKER(cement, stone & clay) DPT:684

GED: 2 SVP: 2 EC: 1 4 5 7 PA: H 4

Forms concrete poles used for lamp standards or structural columns, performing any combination of the following duties:

Assembles wire cage, used for reinforcing concrete pole, by fastening longitudinal wires to inner support rings with soft steel tie-wires.

Positions cage in bottom half of pole mould and fastens in position with tie wires. Pulls lever to pour concrete from batch tank spout into mould or shovels concrete from wheelbarrow. Completes filling of mould by mounding concrete by hand. Places top half of mould in position, using overhead crane and bolts assembly together, using wrenches. Lifts filled mould into spinning machine with crane and starts machine to compact and remove excess moisture in concrete. Fastens steam line to filled mould and opens valve to cure concrete. Strips moulds from cured poles, using hand tools. Finishes exterior of poles, using hammer and chisel.

8599-666 COVERED-BUTTON MAKER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4

Covers buttons with fabric or other material:

Cuts covering from layers of material, using die-cutting machine. Places cover over face of metal button and inserts metal back. Positions assembly in kick press. Depresses pedal to lower plunger and clamp covering and metal parts together. Releases pedal and removes covered button.

8599-670 STAMP-PAD MAKER(misc. prod. fab., n.e.c.) DPT:684

GED: 2 SVP: 2 EC: 1 PA: L 4

Fabricates inked stamp pads:

Places precut piece of muslin in fixture and places precut pieces of felt, wooden block and rubberized backing on muslin. Applies glue to extended edges of muslin, folds edges around backing and staples corners of muslin to block. Places completed pads in wire basket and lowers into reservoir to saturate pads with ink. Removes basket from ink and allows pads to drain. Feeds pads through hand-operated wringer to remove surplus ink. Places inked pad in metal case.

8599-674 UMBRELLA FINISHER(misc. prod. fab., n.e.c.) DPT:684

GED: 2 SVP: 2 EC: 1 PA: L 4 7

Finishes umbrellas by attaching handles and pre-sewn covers to assembled frames, performing any combination of the following duties:

Cuts umbrella rod to length and shapes end of rod to fit into handle, using electric cutting and deburring machines. Attaches handle by spreading cement or glue inside socket of handle and inserting rod of assembled frame into handle or fastens handle to rod with rivet or screw, using drill or riveting machine. Attaches pre-sewn umbrella covers to assembled frames, using either of the following methods: 1. Positions frame in machine fixture and holds cover in position to be sewn. Tacks cover to ribs at hinge points and sews corners to tips of ribs, with tacking machine. 2. Positions tips in machine fixture and holds corners of cover in position over rib ends to receive tips. Presses pedal of machine to release and secure tips to corners of cover and ribs.

May repair umbrellas by replacing broken handles or securing loosened covers by sewing in place with needle and thread.

Miscellaneous Product Assembling

Occupations, n.e.c.

8599-690 through 8599-722

8599-690 ASSEMBLY-PRESS SET-UP OPERATOR(any ind.) DPT:360

GED: 3 SVP: 5 EC: 1 6 PA: L 4 7

Sets up and operates press to assemble parts or products made of materials, such as metal, plastic, rubber, or glass by such means as crimping, locking, staking, or press fitting:

Installs specified dies or fixtures in press, using hand tools. Adjusts mechanism to regulate stroke of ram. Aligns parts between dies or positions them against fixtures. Operates controls to actuate ram that bends, clinches, or forces parts together. Examines assembled parts for conformance to specifications. Directs other workers in the assembly of parts and products.

May install continuous feed mechanism and synchronize actions of automatic press.

8599-694 RIVETING-MACHINE OPERATOR(any ind.)

DPT:682

GED: 3 SVP: 4 EC: I 5 6 PA: H 4 7

Operates riveting machine to rivet together parts fabricated from sheet metal, steel plates, bars, castings or synthetic materials:

Positions, aligns and installs specified dies over anvil and ram of machine, using rules, gauges, shims and wrenches. Turns knobs and setscrews to adjust depth of hammer or pressure limit of ram stroke. Lifts and positions workpiece onto machine. Aligns holes of workpiece and inserts shanks of rivets into holes or onto anvil of machine. Depresses pedal to lower ram or start hammer that expands rivet shank to clinch workpiece. Inspects workpieces for defective riveting. May synchronize action of clinching post of lower die with stroke of hammer, by adjusting air-valve. May fill machine hopper with rivets when operating semi-automatic machines. May set up machine equipped with turret to punch and dimple holes for countersunk rivets and to reposition workpiece after each operation.

8599-698 MANNEQUIN ASSEMBLER(misc. prod. fab., n.e.c.)

DPT:684

GED: 3 SVP: 4 EC: I PA: L 4

Assembles moulded parts to form complete mannequins:

Trims openings to fit socket blocks, using knife. Inserts resin- saturated blocks, or adjusts face-plates of pre-installed socket blocks with screwdriver. Attaches or inserts and secures arms and hands into corresponding openings, using screwdriver. Joins trunk of mannequin to legs and hip section by inserting pins into socket fittings. Selects wig according to specifications, and positions it on head of mannequin. May inspect completed mannequin for surface defects.

8599-702 ASSEMBLER, PRODUCTION(any ind.) DPT:684

assembly worker, medium; bench assembler, medium; production worker, medium.

GED: 2 SVP: 3 EC: I PA: M 4 7

Assembles a variety of parts or components of machinery, household appliances and similar items to liberal tolerances at bench or on assembly line, performing any of the following duties:

Reads work order, drawings or other instructions to determine assembly sequence. Positions parts in specified relationship to each other, using hands or fixtures. Bolts, screws, clips, solders, cements or otherwise fastens parts together by hand, or using power tools. Tends previously set-up machines, such as arbor presses, drill presses, punch presses, riveting machines, spot welders or milling machines to perform press-fitting, fastening or cutting operations. Fits and adjusts parts to meet operational specifications. See also Unit Group Definition 8599, OTHER PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, N.E.C.

May be assigned to different work stations according to production requirements. May be designated according to product or part assembled; for example,

Automotive-Radiator Assembler(motor vehicle)

Gate-Valve Assembler(mech. equip., n.e.c.)

Pipe-Fittings Assembler(metal fab., n.e.c.)

Refrigerator Assembler(electric. equip.)

8599-704 ASSEMBLY-PRESS OPERATOR(any ind.)

DPT:684

GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Operates previously set-up press that assembles parts or products made of materials, such as metal, plastic, rubber or glass:

Positions workpieces in specified relationship in dies or fixtures under ram. Operates controls to lower ram that assembles parts. Examines assembled parts for conformance to specifications.

May tend machine equipped with continuous feed mechanism.

8599-706 ASSEMBLER, SMALL PRODUCTS(any ind.)

DPT:684

assembly worker, light; bench assembler, light; production worker, light.

GED: 2 SVP: 2 EC: I PA: L 4 7

Assembles a variety of parts or components to mass produce small products or subassemblies, adeptly performing one or more repetitive tasks, at bench or on assembly line:

Positions parts in specified relationship to each other, using hands, tweezers or fixtures. Bolts, screws, clips, solders, cements or otherwise fastens parts together by hand, or using hand tools or power tools. Tends previously setup machines; such as, arbor presses, drill presses, punch presses, riveting machines, spot welders or milling machines to perform press-fitting, fastening or light cutting operations. Performs simple fitting and adjustment. Frequently works as member of assembly group, assembling two or three specific parts and passing unit on to another worker. See also Unit Group Definition 8599, OTHER PRODUCT FABRICATING, ASSEMBLING AND REPAIRING OCCUPATIONS, N.E.C.

May clean, paint, trim, or otherwise finish products. May be assigned to different work stations according to production requirements. May be designated according to product or part assembled; for example,

Dust-Brush Assembler(electric. equip.)

Fishing-Reel Assembler(sport. & toy)

Lock Assembler(metal fab., n.e.c.)

Ornament Maker(misc. prod. fab., n.e.c.)

Toy Assembler(sport. & toy)

8599-710 HAND RIVETER(any ind.)

DPT:684

GED: 2 SVP: 2 EC: I 5 PA: L 4

Rivets together light-gauge metal, leather or plastic parts to assemble articles, such as kitchenware, hardware, luggage, household appliances and metal furniture:

Aligns predrilled holes in parts, and inserts rivets into holes. Positions parts with one end of rivet against anvil or dolly (metal block). Places rivet gun or rivet set on other end of rivet. Presses trigger of gun, or strikes end of rivet set with hammer to spread rivet shank over hole and join parts.

May predrill holes in parts, using drill press or portable drill.

8599-714 POWER-SCREWDRIVER OPERATOR(any ind.)

DPT:684

GED: 2 SVP: 2 EC: I 5 PA: L 4

Operates power screwdriver to tighten bolts and nuts or drive screws to assemble products fabricated from wood, metal or other materials:

Installs specified torque chuck onto machine spindle. Inserts shank of specified wrench or screwdriver bit into chuck and tightens, using chuck key. Inserts screw or bolt through holes of workpiece, or nut onto threaded stud, and starts threads manually. Positions workpiece in clamp. Depresses lever to lower spindle, and tightens screw or bolt to specified torque.

8599-718 RIVETING-MACHINE TENDER(any ind.) DPT:685

GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends riveting machine to rivet parts together, fabricated from materials; such as, sheet metal, wood, plastic, cloth or leather:

Aligns holes of workpieces. Inserts rivet shanks through holes or onto anvil of machine. Positions rivets or holes in workpieces over anvil or against fixtures. Depresses pedal to activate hammer or ram that expands rivet shanks to clinch workpieces. Fills automatic riveting-machine hoppers with rivets. Inspects riveted joints for defective heads, distorted shanks or other defects.

May tend machine equipped with rotating die.

8599-722 STAPLING-MACHINE TENDER(any ind.) DPT:685

GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that staples parts together to produce products made from plastic, paper, leather, felt, canvas and other materials:

Loads machine with wire staples or spool of wire, manually. Positions workpiece under head of machine. Sets machine-table flat for side stitching or tent-shaped for saddle (back) stitching. Steps on pedal to lower ram that cuts off wire staple and forces it through material and clinches it.

May be engaged in stapling a specific product and be designated accordingly; for example,

Box Stitcher(paper prod.)

Shell Stapler(leather goods)

Miscellaneous Product Repairing
Occupations, n.e.c.

8599-742 through 8599-770

8599-742 SURVIVAL-EQUIPMENT REPAIRMAN(bus. serv.; gov. serv.) DPT:684
GED: 3 SVP: 4 EC: 1 PA: M 4 7

Inspects and repairs aircraft or marine survival equipment, such as life rafts, inflatable jackets and seat belts:
Activates gas cylinder to inflate life raft and tests pressure, using watch and monometer. Brushes bubble-fluid on fabric to detect perforations or to test patch seal. Repairs holes in fabric, using repair kit. Tests and records tensile strength of sample seat belts, using tensile test machine. Inspects other life raft equipment and replaces those items which have exceeded their life-cycles. Repacks life raft into container, sprinkling talc on fabric to prevent sticking when folded. Records relevant information in logbook and signs entries in accordance with authorized regulations.

8599-746 REPAIRMAN, METAL FURNITURE(furn.) DPT:684
GED: 2 SVP: 4 EC: 1 5 6 7 PA: M 3 4 7

Repairs or replaces parts of damaged or defective metal furniture:
Welds cracks with acetylene torch. Files, scrapes or sands parts to remove dirt, paint or rust. Fills in holes, cracks, nicks, welding marks and other imperfections with solder or quick drying metal filler. Rubs or grinds filled spots smooth, using abrasive cloth or portable grinder. Bends or hammers dented or twisted parts to original shape. Replaces defective furniture parts that are not repairable.
May reassemble metal furniture. May uncrate, assemble, install and repair metal or wooden furniture, office equipment or fixtures in customer's residence or place of business and be designated accordingly; for example,
Furniture Installer(furn.; ret. trade)
Furniture Set-Up Man(furn.; ret. trade)

8599-750 CIGARETTE-LIGHTER REPAIRMAN(misc. prod. fab., n.e.c.) DPT:584
GED: 2 SVP: 3 EC: 1 PA: S 4 7

Repairs and cleans cigarette lighters:
Examines lighter to determine nature of defect or repairs required. Disassembles lighter and adjusts or replaces parts, such as spark-wheels, injector valves, and clutch gears, using hand tools. Removes cotton and defective wick from lighter, inserts new wick and repacks cotton, using tweezers and picks. Cleans lighters, using solvent. Polishes and refinishes surfaces, using hand polisher. Inserts flint and fills lighter with fuel. Records repair information.

8599-754 BELT REPAIRMAN(mech. equip., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 5 PA: H 4

Repairs belts used to drive machinery and convey materials:
Places belt in let-off rack, using chain hoist, and unwinds belts onto inspection table. Visually examines belts, and cuts out defective sections, using knife. Installs replacement patches by fitting patches to belting. Applies cement, and cures belt section in portable vulcanizer.
May replace damaged section of drive belts by cutting and inserting strip of belting, using metal-clamp fasteners. May repair conveyor belts, using splicing jig, hand and power tools, and be designated, Conveyor-Belt Repairman

8599-758 PEN AND PENCIL REPAIRMAN(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Repairs and adjusts ballpoint pens, fountain pens and mechanical pencils by performing any combination of the following duties:
Examines pens or pencils or reads repair tag to determine nature of repair or adjustments. Disassembles pens or pencils, using hand tools. Replaces defective parts and reassembles units manually or using special devices. Straightens or aligns pen points, using straightening block, mandrel, magnifying lens or hand tools. Polishes pens and pencils, using electric buffer. Washes pens and pencils, using solvent.
May operate pantograph or stamping machine to inscribe lettering on pens and pencils. May operate small lathe to fabricate or modify parts for pens and pencils.

8599-762 SCAFFOLD REPAIRMAN(struct., plate & ornam-metal) DPT:684
GED: 2 SVP: 3 EC: 1 6 7 PA: H 4

Repairs metal scaffolding:
Examines scaffolds to determine extent of damage. Replaces damaged rods, using burning equipment and welding torch. Paints scaffolding, using spray equipment, or dips sections into paint tank, using hoist. Scraps severely damaged scaffolding.
May dismantle and assemble scaffolding prior to and after repair.

8599-766 UMBRELLA REPAIRMAN(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 3 EC: 1 PA: L 4

Repairs umbrella frames and covers:
Replaces springs, ribs, rods, handles, and other defective parts of umbrella frame, using hand tools and electric drill. Reassembles frame, using hand tools. Sewes small rips in umbrella cover, manually, and attaches cover to frame.

8599-770 DATE-STAMP ASSEMBLER AND REPAIRER(misc. prod. fab., n.e.c.) DPT:684
GED: 2 SVP: 2 EC: 1 PA: L 4 7

Assembles or repairs date or number hand stamps:
Selects parts according to specifications. Cements and joins ends of rubber letter or number strips to form bands. Positions bands around metal bar and fits bar onto end of stamp frame. Positions band-turner wheels and washers inside circular bands and inserts rivet pin through stamp frame and band wheels, using holding-jig while assembling parts. Nails wooden handle to frame. Repairs or replaces date or number bands on stamps returned by customer.
May grind grooves in back of type to fit notched wheel that advances numbers or dates.

**Miscellaneous Cutting and Slitting
Machine Occupations, n.e.c.
8599-790 through 8599-810**

8599-790 SLITTING-MACHINE OPERATOR(any ind.) DPT:662
GED: 3 SVP: 4 EC: 1 5 6 PA: M 3 4 7

Operates slitting machine to cut materials; such as, adhesive-coated fabrics, abrasive-coated materials, paper products, metallic foil or synthetic materials into strips or specified widths:
Selects and verifies type of material to be cut, according to work order. Spaces rotary blades on machine shaft, according to cutting widths specified and secures blades into position, using hand tools and turning setscrews. Signals helper to mount material onto machine stand to place take-up tubes on re-wind shaft, and to thread material through machine. Starts machine and adjusts controls to regulate cutting and winding of material. Signals helper to remove finished rolls from machine at end of production run. Records production data and equipment performance in log book.
May slit a specific product or material and be designated accordingly; for example,
Abrasive-Coated-Material-Slitter Operator(non-metal. min. prod., n.e.c.)
Adhesive-Coated-Material-Slitter Operator(misc. prod. fab., n.e.c.)
Aluminum-Foil-Slitter Operator(non-ferrous metal)
Film-Slitter Operator(chem., n.e.c.)
Linoleum-Slitter Operator(linoleum prod.)
Paper-Slitter Operator(paper prod.)

8599-794 CUTTER OPERATOR(any ind.) DPT:682
sheet-cutter operator.
GED: 3 SVP: 4 EC: 1 5 6 PA: M 3 4 7

Operates cutting machine, equipped with rotary or reciprocating blades, to cut rolls of material; such as, paper, paperboard, synthetic or coated materials into sheets, of specified size:
Inserts shaft into core of roll manually and positions roll on cutter rack, using electric hoist. Threads end of material through feed rollers, under or across cutting blades, and aligns material against machine guides. Turns controls to adjust tension of material, to synchronize

timing of cutting blades with rate of material feed and to regulate length and width of cut. Starts machine and verifies size of cut material, using rule, or observes that knife has cut through pre-printed mark on paper. Re-adjusts machine, as required, to produce sheets of specified dimensions, using hand tools. Pushes button to begin production run and observes operation for conformance to standards. May replace worn cutting blades, using hand tools. May stack cut sheets on pallets and remove them, manually or using hoist.

8599-798 DIE-CUTTING-MACHINE OPERATOR(any ind.)
DPT:682
clicker-machine operator; die-cutter.
GED: 3 SVP: 4 EC: 1 5 PA: M 4 7

Operates machine to cut parts from multiple layers of cloth, leather, paper, synthetics, or other materials:
Reads work order and selects specified dies. Positions material on cutting bed of machine to obtain maximum number of parts according to size, grain, thickness, or weight. Straightens edges of material layers to prevent partial cuts. Positions one or more cutting dies on material, or clamps dies to head of machine and positions material under dies. Depresses pedal and moves lever to activate ram that forces single or multiple dies through material. Removes cut parts from machine. Selects sample and verifies conformance with standard pattern. Places cut parts in storage area according to size, shape and quality.
May perform test-cutting operations to ensure correct die alignment. May lubricate machine periodically. May be designated according to material cut; for example,
Abrasive-Disk Cutter(non-metal. min. prod., n.e.c.)
Glove Cutter(garment & fabric)
Label Cutter(paper prod.)
Lining Cutter(shoes)

8599-802 CUTTER, MACHINE(any ind.)
DPT:685
guillotine tender; shearer.
GED: 2 SVP: 3 EC: 1 5 6 PA: L 4 7

Tends machine that cuts coated fabrics, paper products, synthetic film, leather, or other materials to specified dimensions by one or the following methods:

1. Spaces guide or stop gauge along calibrated scale of cutting table, according to length of cut specified, and turns knobs to secure guide or gauge in position. Pulls single or multiple layers of material across cutting table, up to guide and trips lever to clamp material in position. Lowers lever-type blade by hand to cut material. 2. Spaces stop gauge along calibrated scale, according to length of cut specified, and secures gauge in position. Places single or multiple layers of material on bed of machine with edges against stop gauge. Depresses pedal to activate power-driven lever-type blade that lowers and cuts material. 3. Mounts roll of material onto shaft or positions flat-folded material on automatic-feeder. Threads end of material through guides and automatic-feeding device. Turns knobs to regulate feeding device according to length of cut specified. Starts machine that automatically feeds material under lever-type blade and cuts material into lengths. Stacks cut material on table or handtruck.

May change machine blade, using hand tools. May cut a particular material or article and be designated accordingly; for example,
Abrasive-Belt Cutter(non-metal. min. prod., n.e.c.)
Corrugated-Box Cutter(paper prod.)
Leather Cutter(leather goods)
Paper Cutter(paper prod.)
Tile Cutter(rubber)
Wrapping Film Cutter(paper prod.)

8599-806 TUBE-CUTTING-MACHINE TENDER(misc. prod. fab., n.e.c.; paper prod.)
DPT:685
cut-off-machine tender.
GED: 2 SVP: 2 EC: 1 5 6 PA: L 4

Tends machine that cuts heavy fibre or cardboard tubing to specified lengths:

Mounts mandrel of specified size on chuck of machine. Spaces cutters and adjustable end-stops along supporting shaft, using gauge and wrenches. Adjusts height of shaft according to size of mandrel. Slides long tube over mandrel. Depresses lever to raise blades that cut tube into lengths. Places cut pieces onto revolving tray or conveyor.

8599-810 SLITTING-MACHINE-OPERATOR HELPER(any ind.)
DPT:687
GED: 2 SVP: 2 EC: 1 5 6 PA: M 3 4 7

Helps operate slitting machine by performing any combination of the following duties:

Positions roll of material, such as adhesive-coated fabrics, abrasive-coated materials, paper products, metallic foil or synthetic materials at rear of machine, using handtruck or hoist. Assembles cores, collars and shafts on roll, and positions roll in machine brackets or delivery mandrel, using hand tools and hoist. Places take-up tubes of specified widths on rewind shaft. Threads material over tension bar, between feed rollers, under rotary blades, and laps end of material around take-up tube. Helps splice new or flagged rolls, using tape. Places finished roll on bench and removes shaft from slit rolls, using hand tools and hoist. Moves load to next process station or to storage, using handtruck. See also definition for term title, 02-160 HELPER (any ind.).

May space cutting blades on machine shaft and adjust side guides and tension coil, according to width specified, and secure parts in positions, using hand tools.

**Miscellaneous Machine Operating,
Tending and Feeding Occupations, n.e.c.
8599-830 through 8599-999**

8599-830 BOTTLECAP-SEAL-MACHINE SETTER(misc. prod. fab., n.e.c.)
DPT:380
crown-assembly-machine set-up man.
GED: 3 SVP: 6 EC: 1 5 PA: M 4 7

Sets up and operates battery of machines that insert and glue cork, paper or aluminum foil into bottlecap shells:

Installs punches and dies in crown assembly machines, following drawings and specifications, and adjusts stroke of punches that force lining material into caps. Turns adjustment screws to regulate feed mechanism, rate of glue flow, and heating flame. Starts machine and examines sample caps to verify conformance to specifications. Observes operation of machine to detect faults and diagnose causes of malfunctions. Disassembles machine and replaces broken or worn parts, using hand tools.

May set up and operate similar machines, fitted with injection moulding device, to insert molten plastic seal in caps. May repair broken machine parts, using welding equipment. May repair machine conveyor belts.

8599-834 PENCIL-MACHINE SET-UP MAN(misc. prod. fab., n.e.c.)
DPT:380
GED: 3 SVP: 6 EC: 1 5 6 PA: H 3 4 7

Sets up and adjusts battery of machines that fabricate, tip or trim wooden pencils:

Installs and adjust feed mechanisms, guides, rollers, tracks, machine fittings and attachments, according to size and shape of pencils specified, using hand tools and gauges. Adjusts controls, such as setscrews and cams, to synchronize machine mechanisms. Disassembles machines and replaces worn or defective parts, such as circular knives, grinding wheels, rollers and machine belts. Sharpens machine punches and blades, using files and bench grinder. Starts machines and examines pencils for splintered ends, nicks or other defects. Makes final adjustments to machine to produce pencils according to specifications.

May be designated according to machine set-up, for example,
Pencil-Making-Machine Setter
Pencil-Tipping-Machine Setter

8599-838 EMBOSSING-IMPRINTING-PRESS OPERATOR(any ind.)
DPT:682
GED: 3 SVP: 6 EC: 1 5 6 PA: L 4 7

Operates press to emboss or imprint lettering or designs on paper, leather or plastic articles by performing any combination of the following duties:

Selects and installs embossing or imprinting plate on press head, using bolts or adhesive. Cuts piece of cardboard or plastic to appropriate size of plate. Positions cardboard or plastic sheet on machine bed. Depresses pedal to lower plate and impress cardboard or plastic to form counter-die. Trims counter-die, using compass, square and knife

or cutting machine. Aligns and secures counter- die on machine bed. Turns valves or operates switch to heat plate to specified temperature. Sets guides and positions article on machine bed over counter-die. Pulls lever or depresses pedal to emboss or imprint article. May operate automatically fed press. May make counter-die from embossing compound and glue. May emboss goldleaf lettering or designs on articles.

8599-842 INSULATION-PANEL MAKER(asbestos & min. wool) DPT:682
GED: 3 SVP: 5 EC: I 5 6 7 PA: H 4 7

Operates machine that combines mineral wool and paper coverings and sews them together to make insulation panels:
Reads work order and adjusts position of sewing heads and trim and cut-off saws. Loads twine and paper according to specifications. Threads paper through feed rollers. Starts machine and synchronizes speed of paper feed rollers and mineral wool conveyors, using hand tools. Observes combined materials feeding into section of machine equipped with roller cutters, that stitches and trims parts to make insulation panels of given dimensions. Removes finished panels from machine and places them on pallet for transfer to storage area.

8599-844 TABLET-COATING-MACHINE OPERATOR(pharm. & toil.) DPT:682
GED: 3 SVP: 4 EC: I PA: M 4 7

Controls battery of machines that apply coatings to pharmaceutical tablets to flavour, colour, preserve, add medication, or control their disintegration rates:
Dumps uncoated tablets into rotary pans of machines and starts machine by pressing button. Pours measured amounts of liquid coatings, according to formula or production order, over tablets to form base or successive coats. Sprinkles dusting powder over tablets and stirs them to prevent their sticking together and to produce uniform coating. Examines coated tablets for defects, such as chips and discoloration. Measures and weighs randomly selected tablets to ensure compliance with specifications, using gauge and scale. Dumps coated tablets and measured amount of liquid wax into canvas-lined pan and starts pan revolving to glaze tablets.
May compound and mix coatings according to formula, using steam-jacketed-agitator tank.

8599-846 CIGARETTE-FILTER-MACHINE TENDER(tobacco) DPT:685
GED: 2 SVP: 4 EC: I 5 PA: L 4 7

Tends machine that wraps and cuts cigarette filter tips:
Installs rolls of filter material and paper on spindles of machine and threads ends between rollers. Starts machine by depressing button and observes machine operation to detect malfunction. Turns handwheel to adjust feed mechanism and cutting knives. Examines them for defects in size cutting, gluing and filling. Removes and replaces empty paste cylinders. Cleans folder block, beater blades, paste wheel, cut-off blades and inner glue nozzle, using rags and alcohol.
May repair or replace worn, damaged or broken parts, such as pulley belts and cutting knives, using hand tools.

8599-850 DESIGN-AND-LETTERING STAMPER(any ind.) DPT:684
GED: 2 SVP: 3 EC: I PA: L 4 7

Operates machine that stamps or imprints designs or lettering on paper, cloth, rubber, wood, leather or plastic articles by performing any combination of the following duties:
Sets type in type bar and positions and locks bar in machine or installs and locks type die in machine. Turns on heating element over die or bar. Positions article on machine bed or fills machine hopper. Presses button or depresses pedal to lower die or bar that stamps or imprints design or lettering on article. Inspects article for stamping or imprinting defects, alignment and clarity, and adjusts machine as required. Records, wraps and packs stamped or imprinted articles. Cleans and lubricates machine.
May plan layout of design or lettering on material. May be concerned with coloured-leaf or hot-die stamping and be designated accordingly; for example,
Gold-Leaf Stamper
Hot-Die Stamper

8599-854 RETUBULATOR(glass) DPT:684
GED: 2 SVP: 3 EC: I 6 PA: L 4 7

Replaces defective glass exhaust-tubes on outer piston of vacuum-bottle-filler units:
Prepares filler unit for retubing by breaking off defective tube and filing down remaining sprue. Places filler on preheating rolls to prepare glass for fusing. Removes filler from preheating rolls and inverts it on retubulating machine. Lowers lever to feed replacement tube into fixture, and depresses pedals to fuse tube to filler. Removes retubed filler from machine and places over annealing fires to relieve internal stress. Packs fillers in carton with tubes protruding. Inspects fusing location to detect voids, using spark-testing device, and discards rejects.

8599-858 COMPRESSOR, TABLET(any ind.) DPT:685
table-making-machine tender.
GED: 2 SVP: 3 EC: I 5 6 PA: M 4 7

Tends machine that compresses granulated ingredients into tablets of specified size and shape:
Installs dies in machine and adjusts spring tension and ram pressure of air or hydraulically-operated press according to specifications, using hand tools. Scoops or dumps ingredients into hopper, and presses button to start machine that compresses ingredients into tablets. Examines, feels and crumbles tablets, periodically, to detect imperfections, such as chips, soft centers or excessive brittleness. Measures, weighs and tests samples, using micrometer, scale and hardness tester, or routes samples to laboratory for analysis. Readjusts machine tension and pressure, as required, to produce tablets according to specifications. Removes and cleans dies and compression chambers, using hand tools, air hose, water hose and cloth.
May blend ingredients preparatory to compressing into tablets. May weigh and package tablets. May be designated according to type of tablet produced; for example,
Compressor, Candy(confection.)
Compressor, Medicinal Tablets(pharm. & toil.)
Compressor, Salt Tablets(food & bev., n.e.c.)

8599-862 CORN-PLASTER-MACHINE TENDER(pharm. & toil.) DPT:685
GED: 2 SVP: 3 EC: I 5 PA: L 4 7

Tends machine that assembles components of corn and bunion plasters:
Loads spools of adhesive, felt and plastic-film strips into holders and inserts ends of strips into machine. Fills reservoir with medication. Depresses switch to start machine. Adjusts cycling of machine to synchronize placement of adhesive strip, felt ring, medication and overlapping protective film. Inspects product for conformance to specifications, periodically.
May tend machine that assembles adhesive bandages, cuts them to length and seals them individually in paper wrappers and be designated accordingly,
Adhesive-Bandage-Machine Tender

8599-864 MARKER(any ind.) DPT:587
stenciler.
GED: 2 SVP: 2 EC: I PA: L 4 7

Marks, stencils or affixes identifying data on products, merchandise, materials or containers, according to specifications:
Marks, stencils or affixes trademarks or other identifying information such as size, weight, colour, grade or process code on merchandise, material, container or product, using one or more methods such as metal punch and hammer, labels, stencil, brush, roller, rubber stamp, spray gun, ink, crayon, branding iron or tags.
May clean items before marking. May use printing mechanism or labeling press. May be designated according to product or item marked; for example,
Barrel Marker
Pipe Marker
Stamper, Carton

8599-866 ABRASIVE-WHEEL BINDER(non-metal. min. prod., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: H 4

Tends machine that winds reinforcement wire around abrasive wheels:

Positions spool of specified wire on machine feed rack, using hoist, and threads wire through machine guides. Mounts abrasive wheel on arbor and positions in fixture of machine, using hand tools. Starts machine that winds wire in groups of turns on sides of abrasive wheel for reinforcement. Crimps and solders wire to maintain specified tension, using hand tools and soldering iron. Examines completed assembly, visually, to ensure close fit around wheel. Lifts wheel from machine for removal to inspection area.

8599-870 BOTTLECAP-SEAL-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
crown-assembly-machine tender.
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that inserts and glues cork, paper, plastic or aluminum foil into bottle cap shells:

Pours glue into machine glue container. Turns valves to adjust gas flame to heat glue and to regulate flow of glue into machine. Mounts roll of lining material on machine spindle and threads material through feeder rolls. Dumps supply of bottlecap shells into machine hopper. Starts machine and observes flow of shells from hopper into machine. Pries jammed shells free, using hand tool. Examines glued shells leaving machine to detect defects, such as bent shells, defective linings, or chipped shells. Selects sample shells at random, pries glued disk free with pick, and observes quantity and texture of glue. Records production data on work sheet.

8599-874 CARPET-TAPE-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that cements cloth stripping to paper tape and inserts metal staples in laminated product to make seam-joining carpet tape: Installs metal stripping, paper tape and cloth rolls on let-off racks. Threads metal stripping into die opening, to punch out staples, and turns valve to fill glue reservoir. Places cardboard core on wind-up spindle. Jogs machine, using start and stop buttons, to thread cloth over glue-applicator brush onto paper tape, over stapling hammer and onto wind-up core. Starts machine and observes operation to detect malfunction. Removes defective sections of tape and splices ends. Cements label band around full roll.

8599-878 HEADING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that trims and smooths ends of pencils, marking crayons or pencil erasers, to specified length:

Dusts ends of products with cornstarch or similar powder to prevent them from sticking together, using brush. Places pencils, pencil erasers or marking crayons in hopper of machine and presses button to start machine that trims and smooths ends of product. Examines product for chips, splits and other defects. Boxes or bundles product at work station.

May maintain machine by sharpening rotary knife with grinding wheel or replacing worn sandpaper or knives, using hand tools.

8599-882 INSULATION-TUBE WINDER(asbestos & min. wool) DPT:685
GED: 2 SVP: 2 EC: I 5 6 PA: M 4 7

Tends machine that winds insulating material around mandrel to form insulated pipe covering:

Places mandrel, of designated size, in winding jig and attaches end of sheet of insulating material, such as glass fibre or asbestos, to mandrel. Turns mandrel wheel or depresses pedal of automatic winder to wind and bond specified number of layers of insulating material around mandrel. Lifts and turns mandrel to vertical position. Removes tube from mandrel. Inspects finished tubes for uniformity of wall thickness and smoothness of surface. Stacks tubes on skids, handtruck or conveyor and replaces mandrel in jig.

May paste and wrap completed tube in canvas or paper jacket.

8599-886 PENCIL-ERASER-MAKING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
crayon-making-machine tender.
GED: 2 SVP: 2 EC: I 5 PA: M 4

Tends machine that rolls paper around coloured lead or rubber sticks:

Installs rolls of paper and string on mandrels, manually inserting rod through center of each roll. Threads paper between guides and rollers, and turns screw to adjust pressure on scoring knives. Fills hopper with sticks of coloured lead or rubber. Presses button to start machine that rolls glued-paper sheets around coloured lead or rubber sticks, and inserts peeling-string. Observes operation to detect malfunction. Replaces knives and makes machine adjustments as required, using hand tools.

8599-890 PENCIL-MAKING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
lead-laying-and-gluing-machine tender.
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Tends machine that places pencil leads in grooves of wooden slats and glues slats together to form pencil blanks:

Places pencil leads in feed hopper of machine, manually. Fills reservoirs of machine with glue. Presses button to start conveyor that supplies machine with wooden slats. Starts automatic machine that applies glue to grooved surface of slats, places lead in grooves and joins cemented slats to form pencil blanks. Observes machine operation to detect malfunction. Stops and clears machine of jams.

8599-894 RIBBON INKER(misc. prod. fab., n.e.c.) - DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends machine that impregnates typewriter ribbon with ink:

Fills machine pans with ink of specified colour. Loads machine with roll of silk, cotton or nylon ribbon. Starts machine to rotate rollers that dip into ink and press ink on ribbon. Adjusts speed of machine according to absorption properties of ribbon material. Inspects inked ribbons, using densitometer.

May shape inner curve of divider that separates inks of bi-coloured ribbons, using file and emery cloth, until curve matches that of inking roller.

8599-898 RIBBON-LOOPING-MACHINE TENDER(misc. prod. fab., n.e.c.) DPT:685
rosette-machine tender.
GED: 2 SVP: 2 EC: I PA: L 4

Tends automatic machine that folds and binds ribbon into loops for making rosettes:

Places roll of ribbon on spindle, and inserts end through machine guides. Installs two spools of plastic string on posts and threads strings into machine-feeding mechanism. Starts machine that forms ribbon into loops, twists two strings through one end of each loop, and cuts ribbon to predetermined length, to make ribbon blanks. Places filled trays of ribbon blanks in designated area. Observes machine operation and reports malfunctions to supervisor.

8599-902 RIBBON WINDER(misc. prod. fab., n.e.c.) DPT:685
typewriter-ribbon winder.
GED: 2 SVP: 2 EC: I PA: S 4 7

Tends machine that winds typewriter ribbons onto spools:

Sets yardage indicator on machine, according to ribbon length specified on work order. Places ribbon supply reel on mandrel and draws ribbon around rollers and through ribbon guide. Adjusts ribbon guide, according to width of ribbon. Places empty spool on spindle and attaches end of ribbon from supply reel to spool. Depresses pedal to start machine that winds ribbon onto spool. Examines ribbon during winding for defects in fabric, inking and winding. Removes completed spool from spindle and attaches hooks or eyelets onto ends of ribbons. Attaches fasteners over end of ribbon to prevent unwinding.

8599-906 STAKING-MACHINE TENDER(plastic prod.)
DPT:685
hot staker.
GED: 2 SVP: 2 EC: I 7 PA: S 4

Tends hot-staking machine to insert or imbed metal pins or studs in plastic component:
Positions plastic component in locating device. Clamps and locks metal pin or stud in heated holder. Pulls machine lever to bring hot metal pin or stud in contact with component and applies pressure to force hot pin or stud into plastic. Releases pin or stud from holder and operates trip lever to raise holder. Removes plastic component from locating fixture. Examines staked component and places it on tray.

8599-910 TWISTING-MACHINE TENDER(misc. prod. fab., n.e.c.; paper prod.)
DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that twists strands of metal foil, cotton, wire, plastic or paper to produce items, such as twisted-paper cord or tinsel strands:
Places spools of metal foil, wire, plastic or cotton on spindles or bobbins and threads materials through machine guides. Starts machine that automatically weaves and twists materials into items, such as twisted-paper cord or single strands of tinsel. Cuts twisted material at end of each cycle, using shears. Removes filled rolls from machine for further processing or packaging operations. Observes machine operation and reports defects to supervisor.
May assemble light paper and metal decorations, using cutters and adhesives. May package tinsel decorations, according to specifications.

8599-914 VACUUM-BOTTLE-SILVER-MACHINE TENDER(glass)
DPT:685
GED: 2 SVP: 2 EC: I PA: L 4 7

Tends equipment to silver filling unit of vacuum bottle:
Obtains filling unit from annealing oven conveyor and inserts processing tube of unit into funnel of silvering machine. Presses button to start machine that combines and pumps silvering chemicals through processing tube into cavity between walls of filling unit. Removes unit on completion of silver-filling cycle. Places filler on rollers that rotate unit to cover interior surfaces completely with precipitated silver, through chemical reaction. Removes silvered unit from rolls. Inserts processing tube into suction hose of machine and presses button to start cycle that removes excess solution and rinses silvered cavity with de-ionized water. Removes filling unit and examines silvering. Discards damaged units, returns rejects for re-silvering and places acceptable units on conveyor to drying oven to evaporate remaining moisture.
May tend machine that automatically washes, silvers and drains vacuum bottles.

8599-918 WINDOW-SHADE MOUNTER(misc. prod. fab., n.e.c.)
DPT:685
GED: 2 SVP: 2 EC: I PA: L 4

Tends machine that cuts plastic-window-shade material to specified length and glues material to wooden rollers:
Reads work order to verify cutter settings and fills glue reservoir. Pulls shade material through machine guides and under cutter blade. Places roller in holding device which moves roller under glue spreader. Depresses pedal to cut plastic to specified length, and presses button to apply glue to roller. Removes roller from holding device, aligns and smooths material along glued edge of roller, manually, to affix material to roller. Positions roller in winding device that rolls up shade.
May mount window shades to customer's specifications by cutting wooden roller to specified length with circular saw, stapling designated material to roller and rolling up shade in winding device.

8599-922 BUTTON-SORTING-MACHINE FEEDER(misc. prod. fab., n.e.c.)
DPT:686
GED: 2 SVP: 2 EC: I PA: L 4

Feeds battery of machines that sort button blanks or buttons, according to size or thickness:
Loads buttons or button blanks into machine hopper, using hand scoop or by tilting container. Presses switches to start machines that remove polishing media and move buttons or button blanks through

series of screening cylinder to sort them, according to size or thickness. Removes filled containers from sorting machines and moves them to inspection department, using dolly or handtruck.
May unload buttons from polishing barrel into container.

8599-926 PENCIL-TIPPING-MACHINE FEEDER(misc. prod. fab., n.e.c.)
DPT:686
GED: 2 SVP: 2 EC: I 5 PA: L 4 7

Feeds automatic machine that fastens metal tips or caps and eraser plugs to ends of wooden pencils:
Lifts and dumps pails of caps, tips and plugs in machine hoppers. Places pencils in hopper, and presses button to start machine. Removes tipped pencils from bin of machine and examines them for defects such as broken plugs or loose tips. Places tipped pencils on conveyor or ties them into bundles for further processing.
May feed tipping machine that rounds pencil ends.

8599-930 TUBULATING-MACHINE FEEDER(glass)
DPT:686
GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Feeds tubulating machine that automatically fuses glass exhaust tube to outer piston (outer-glass shell) of vacuum-bottle-filler unit:
Removes outer piston from container. Inverts piston on fixture of automatic-tubulating machine, each time machine indexes. Observes automatic operation as glass tube is fused to outer piston. Lifts tubulated piston from machine and places it on annealing rolls to relieve internal stress. Removes annealed piston and examines it for defects. Records production data.
May place outer piston on preheating rolls over gas flame for specified time, prior to tubulation if machine does not preheat automatically. May feed neck-sealing machine that fuses outer piston to inner piston to form vacuum-bottle-filler units and be designated accordingly, Neck-Sealing-Machine Feeder

8599-934 VACUUM-BOTTLE-EXHAUST-MACHINE FEEDER(glass)
DPT:686
GED: 2 SVP: 2 EC: I 6 PA: L 4 7

Feeds machine that removes air from between inner and outer pistons, of vacuum-bottle-filler units, and seals them together:
Removes filler unit from drying oven. Examines unit for defects. Inserts and secures unit in chuck of exhaust machine, each time machine rotationally indexes. Removes exhausted and tipped filler unit from discharge end of machine. Observes vacuum gauges during operations to detect machine malfunction.
May seal filler-unit cavity, using hand torch, and be designated accordingly, Vacuum-Bottle-Hand Tipper

8599-936 IMPREGNATOR, HAND(misc. prod. fab., n.e.c.)
DPT:687
GED: 2 SVP: 2 EC: I 7 PA: L 4

Impregnates cork products, such as floats, washers and gaskets by immersing them in resin or graphite solutions:
Pours premeasured quantities of liquid ingredients into tank or tumbler to prepare coating solution. Dumps cork products into solution to soak. Determines soaking cycle of products, using knowledge gained through experience. Scoops cork products from tank or tumbler, using strainer. Drains off excess solution and dumps cork products into containers or places them on racks on dolly to dry. Pushes dolly into drying room or oven.

8599-938 WINDER, SUTURE MATERIAL(pharm. & toil.)
DPT:687
GED: 2 SVP: 2 EC: I PA: S 4 7

Winds single or multiple lengths of suture material onto reel:
Pulls out holding flaps on reel, inserts end of strand under one flap, and places reel on power-driver wheel. Presses pedal to start wheel, guides strand as wheel spins, to wind specified lengths of suture material onto reel. Observes strands as they pass under inspection light to detect thin or weakened areas. Rejects lengths that do not conform to specifications. Cuts material from spool, using scissors. Inserts wound reels into plastic envelopes for subsequent sterilization.

8599-942 STRINGING-MACHINE FEEDER(paper prod.)
DPT:686
GED: 2 SVP: 2 EC: 1 PA: L 4

Feeds machine that automatically threads and fastens string or wire to paper tags:
Loads punched paper tags and rolls of string or wire into machine-feeding mechanisms. Presses button to start machine that fastens and secures wire or string through hole in tag. Removes discharged tags and packs them into boxes for shipment. Observes machine operation and reports malfunctions to supervisor.

**8599-999 FABRICATORS, ASSEMBLERS AND
REPAIRMEN, MISCELLANEOUS PRODUCTS,
N.E.C.**

This residual group includes other occupations not elsewhere classified; for example, those concerned with fabricating, assembling or repairing sporting goods, toys, brooms, brushes and mops, buttons, sunglasses and a variety of other products. Typical examples of occupational titles covered by this residual group definition are:

Button Cutter(misc. prod. fab., n.e.c.)
Doll Repairer(sport. & toy)
Mophead Trimmer(misc. prod. fab., n.e.c.)
Paint-Roller-Sleeve Attacher(misc. prod. fab., n.e.c.)
Plastic-Lens Dyer(scient. & ind. equip., n.e.c.)
Rubber-Stamp Assembler(misc. prod. fab., n.e.c.)
Seamless-Ball Moulder(sport. & toy)
Tile Paster(cement, stone & clay)
Towel-Cabinet Serviceman(mech. equip., n.e.c.)

ALPHABETICAL INDEX
OF
JOB AND OCCUPATIONAL TITLES

Refer to the Alphabetical Index in the most recent edition of the CCDO GUIDE for a complete listing of all job and occupational titles appearing in CCDO publications.

4721
